Meanwhile, U.S. authorities implemented stringent rules regarding citizenship and the right to own land. Since most of the Sikhs were engaged in the agricultural sector, these regulations created the new phenomenon of Sikhs marrying Mexican American women so they would be able to own land. Sikh immigration to the United States tapered off gradually in the years before India became independent in 1947. Sikhs had settled in the United States primarily for economic reasons, and they enjoyed a harmonious relationship between their homeland and their host land.

Crisis in India

However, the Sikhs’ situation in their Punjab homeland started to unravel after India became independent. That year, the Punjab province was partitioned between India and the newly created Pakistan. Based on linguistic criteria, the Indian government did not recognize the state of Punjab, as it did 14 other states, which were formed in 1956. This led to tensions between the government and Punjab. Finally, in 1966, Punjab was recognized as a state.

However, there were a number of unresolved issues, and relations between the federal government and the state continued to deteriorate in the wake of the internal emergency imposed in 1975 by Indira Gandhi, then prime minister of India.

On June 3, 1984, Gandhi ordered a military attack, Operation Bluestar, to remove Sikh separatists from the Harimandir Sahib (Golden Temple) in Amritsar, the Sikhs’ holiest shrine. The separatists were accused of amassing weapons in the temple and starting a major armed uprising. The operation outraged not only the Sikh community in India but also Sikhs abroad. A number of diasporic organizations arose in North America and parts of Europe, advocating secession from India and creation of Khalistan, a separate state for the Sikhs. These organizations lobbied Congress, protesting alleged Indian violations of human rights and discrimination against the Sikhs. Gradually, peace returned to Punjab.

Sikhs in the United States

Sikhs also had to face their own identity battles in the United States, particularly after the terrorist attacks on September 11, 2001, when some people questioned the Sikhs’ patriotism because of their appearance. Sikhs had to fight for their right to wear turbans at many of their workplaces, and they were victims of hate crimes. On August 5, 2012, a gunman attacked a *gurdwara* (Sikh temple) in Oak

The Five Ks are items of faith that all baptized Sikhs must wear at all times: kesh (uncut hair usually tied in the Sikh turban), kanga (a wooden comb usually worn under the dastar), katchera (a pair of shorts used for increased mobility), kara (a heavy iron bracelet used as a weapon), and kirpan (a curved sword or dagger that comes in many sizes).

Creek, Wisconsin, killing six people and wounding four others. This incident underlines the identity issues and prejudice with which the Sikh community in the United States is grappling.

The Sikhs have been active in the political, social, economic, and cultural spheres in the United States. The major challenges that the Sikhs in the United States now face are related to identity issues, and a number of organizations have arisen to educate the American public and safeguard Sikh interests in the face of hate crimes and discrimination. In addition, maintaining the tender balance between the sociocultural traditions of their homeland and the values of a Western liberal country is another issue with which many Sikh families grapple.

Sioux

The word *Sioux* refers to a large group of people residing in the United States and Canada and also the Siouan language, one of the largest language groups in North America. The Sioux comprise three groups: The Lakota are western or Teton Sioux, which can be broken down into the Oglala, Sicangu or Brûle, Hunkpapa, Minneconjou, Itazipco or Sans Arc, Sicasapa or Blackfeet, and O’ohenonpa or Two Kettles. Dakota refers to the eastern Sioux or Santee Sioux that include Sisseton, Wahpeton, Wahpekute, and Mdewakanton. The final group is the Yankton and Yanktonai, or the middle Sioux. The name Sioux comes from the French adaptation of the Odawa word *Natowessiwak*.

At the time of European contact, the Sioux lived in a region that included Minnesota, Wisconsin, and Iowa. By the late 19th century, many Sioux had been pushed west onto the northern Plains. They were primarily hunters and gatherers, whose lives centered on the buffalo as a source of food, shelter, and material items. Each tribe was organized into bands composed of families related by blood, marriage, and adoption. Warfare was a matter of political and social importance, not about acquiring land or controlling other people. Warfare focused on gaining individual honors connected with activities like capturing other tribes’ horses, outsmarting the enemy, or counting coup—striking or touching an enemy without killing him.

Cultural Conflict: Land, Treaties, and War

Although first contact with Europeans began with the Spanish and the introduction of the horse, followed by positive encounters with French trappers and fur traders, the most significant and negative impact of contact occurred with westward expansion as European Americans sought control

over the vast territory occupied by the Sioux, particularly the Black Hills.

Historically, the Sioux or Great Sioux Nation called itself Oceti Sakowin or Seven Council Fires, which referred to its seven political divisions. According to tribal tradition, the Sioux originated within the Black Hills, emerging from underground through Wind Cave. The Black Hills (called *Paha Sapa*) hold strong religious significance for the Sioux, particularly the Lakota (designated as the caretakers of the Black Hills), who have a long, protracted history of fighting to retain and reclaim the Black Hills. The entire region is known as the sacred center or heart of everything, and numerous places within the hills are of religious significance (Harney Peak, Devil's Tower, and Bear Butte); the creation of each is recounted in stories, and each is the site of religious practices. Although the Sioux did not reside in the Black Hills, they conducted religious ceremonies at these sites and others, returning throughout the year for worship.

Throughout the mid-1900s, the United States secured Sioux land through a series of treaties. Although the Mendota and Traverse des Sioux treaties of 1851 were not the first signed with the Dakotas, they may well have precipitated the Great Sioux Uprising (U.S.-Dakota War) of 1862. The Lakota and Yankton signed the 1851 Fort Laramie Treaty, which ended intertribal warfare on the plains by establishing territorial boundaries and protected the overland routes to the Pacific coast. This was followed by the 1868 Fort Laramie Treaty, which ended Red Cloud's War, guaranteed the Lakota ownership of the Black Hills, and established the Great Sioux Reservation. It also closed off the Powder River Country from military posts and white settlement.

After gold was discovered in the Black Hills, the United States unsuccessfully attempted to purchase them from the Lakota. Unable to legally acquire the hills, the United States engaged in military campaigns that resulted in the Great Sioux War of 1876 (in which one of the battles was the Battle of Little Bighorn) and the forced confinement of many Sioux onto reservations. In 1877, the terms of the 1868 Fort Laramie Treaty were altered, which allowed the United States to seize the Black Hills, and a final treaty, the Sioux Bill of 1889, dramatically reduced the size of the Great Sioux Reservation, dividing it into small units.

Throughout much of the 20th century, the Sioux Nation has tried to reclaim the Black Hills under the provisions of the 1868 Fort Laramie Treaty. In 1980, the U.S. Supreme Court ruled (in the case *United States v. Sioux Nation*) that the United States had illegally seized the land and was ordered to pay the Sioux monetary restitution with interest. The Sioux refused payment (over \$100 million) and have continued to argue for the return of the sacred Black Hills.

Contemporary Sioux

Today, the federally recognized Sioux occupy numerous reservations and communities in the Dakotas, Nebraska, Minnesota, and Montana in the United States (and reserves in Manitoba and southern Saskatchewan in Canada), where they maintain separate tribal governments and adhere to modern tribal constitutions. Many practice traditional ceremonies like the Sun Dance and the Sweat Lodge and maintain their cultural identity and historical records through oral tradition, as well as art forms such as architecture, beadwork, and drawing and painting, the latter of which originates in the pictographic arts of hide painting, ledger art, and winter counts.

Historically, winter counts were made of animal hide, and later cotton muslin, and painted with symbols chosen to represent the most significant event of the year for that particular group. Created by tribal historians in consultation with elder men, winter counts served as records of the tribe's history. According to the 2010 U.S. Census, 170,100 individuals identified themselves as Sioux. These figures do not include Sioux residing in Canada or those not enrolled with one of the federally recognized tribes.

65th Infantry Regiment

Since the final days of the Spanish-American War, when Puerto Rico became an American colony, Puerto Rico has played a significant role in the American military. The 65th Infantry Regiment began as an all-Puerto Rican regiment of the U.S. Army. Throughout its history, the regiment supported the United States in all of its conflicts, playing a particularly significant role in the Korean War.

The Spanish-American War put America on the global radar as a country with reach beyond its borders. Puerto Rico and Guam were annexed by the United States as part of the peace treaty with Spain. The outcome of the Spanish-American War helped form the modern Puerto Rican mind-set, replacing 400 years of allegiance to Spain with a new allegiance to the United States.

Puerto Rican scouts aided the Americans during the Spanish-American War by sharing valuable strategic information with U.S. Army generals occupying their islands. A military government ruled Puerto Rico from August 1898 to May 1899. During this time, Puerto Rican civilians were first considered as possible additions to the American military.

Establishment of the Regiment

On May 20, 1899, the 65th Infantry Regiment was officially established. It consisted of four companies with no more than 100 men in each company, for a total of 400 men. Recruitment was by order of Major General Guy V. Henry. He sent out a request to each American military outpost in Puerto Rico to recruit 25 men for the new regiment. To qualify for the regiment, prospective soldiers were required to have basic military skills, a reasonable command of the English language, and the ability to pass the U.S. Army's

health requirements. Each soldier would enlist for two years and receive the same salary as a comparable soldier in the mainland U.S. forces.

In the beginning, the regiment's officers were Americans. However, on August 30, 1899, a command was issued to the military outposts to recruit Puerto Rican officers. The first Puerto Rican officer was Major Lorenzo P. Davison. That same year, the 65th Infantry Regiment became a unit of the U.S. Army. The appointment of officers was made by Congress instead of by the president, as in previous years. This was in accordance with the appointment procedures for American officers on the mainland. The first officer appointed in this manner was Jaime Nadal, who was the only person to pass the first round of examinations. The second round of testing provided seven more Puerto Rican officers.

A mounted Puerto Rican battalion was organized on February 12, 1900. The battalion was not a part of the 65th Infantry Regiment but would work closely with it in the future.

In 1904, the regiment became officially known as the Puerto Rico Provisional Regiment of Infantry. There were two battalions, one of which was mounted. On May 27, 1908, the regiment became an official part of the U.S. Army and was called the Puerto Rico Regiment of Infantry USA.

World War I

With the onset of World War I, the 65th Infantry Regiment had its first call to service as a branch of the U.S. Army, and 18,000 Puerto Rican men were recruited through selective service. On May 3, 1917, the 65th Infantry Regiment, with 4,000 men, was sent to defend the Panama Canal. The regiment stayed in Panama until March 1919. It never had a chance to see action in Europe, as the war ended on November 11, 1918. On June 4, 1920, the regiment officially became the 65th Regiment of the U.S. Army.

World War II

After the attack on Pearl Harbor on December 7, 1941, the regiment was assigned to protect the island from invasion. On January 7, 1942, it returned to the Panama Canal to protect American shipping interests. During this period, the troops received combat training for jungle environments. On December 30, 1943,

the regiment was sent to the U.S. mainland to prepare for action in Europe. The Puerto Rican troops began their World War II action in North Africa in March 1944. After a brief stint in Italy, they headed to Marseille, France, in September of that year. On December 13, 1944, the Third Battalion of the 65th Regiment was sent to the Maritime Alps and suffered 47 casualties, its first official losses as a regiment of the U.S. Army. The regiment ended up in Germany, where it stayed until its troops were sent home. Over 65,000 Puerto Ricans served in the military during World War II.

The Korean War

In 1950, the 65th Regiment was one of the first American regiments to be deployed to Korea. The regiment's first mission was to aid the United Nations' forces already stationed there. Colonel W. W. Harris commanded the force in Korea. This was the first time the regiment made a name for itself because of its excellent soldiers and its battle integrity.

The regiment arrived in Pusan, Korea, on September 23, 1950. By September 28, after aiding the Ninth Infantry, the regiment had six casualties. While in Korea, the regiment spent most of its time on patrol, frequently encountering Korean guerrilla forces.

On October 17, 1950, the E Company of the 65th Regiment saw conflict in Kunpchon, where 11 soldiers were killed and 13 others wounded. On the North Korean side, 79 soldiers were killed, and the regiment acquired 85 prisoners of war (POWs). On November 6, 1950, the second battalion of the regiment engaged with North Koreans near Yonghung. It was another victory for the Americans, in which the North Koreans were forced to retreat and the 65th suffered only light casualties. On February 14, 1951, the 65th Regiment was attacked by a North Korean regiment. In this battle, 537 North Korean soldiers were killed, and another 268 became POWs. On the American side, the 65th Regiment lost only one soldier.

During its time in Korea, the regiment was assigned to rescue a division of U.S. Marines near Chosin. Its crowning achievement during the conflict was the establishment of a defense line along the beach at Hungnam. This defensive line served

as the evacuation route for all United Nations forces in Korea.

Segregation and Integration During Korea

By April 1951, the 65th Infantry Regiment had a surplus of 1,400 personnel. The army began to experiment with desegregation by integrating the surplus troops into other units. This meant that Puerto Rican natives were interspersed among Anglo units in the hope that the skill set of the 65th Regiment would be integrated into the larger American fighting force. Because of the placement of the Puerto Rican bilingual soldiers in other units, the 65th Regiment had fewer interpreters and a lack of leadership. The lack of bilingual noncommissioned officers (NCOs) to relay orders between American officers and Spanish-speaking troops became particularly serious by the middle of 1952, just before the disastrous battle at Outpost Kelly, in which the regiment on two occasions was overwhelmed by Chinese artillery.

In 1952, 1,500 bilingual NCOs were rotated throughout the army, but the 65th received only 435 sergeants in return. Commanders were forced to place inexperienced men in NCO positions, men who were often incapable of speaking Spanish and relaying orders accurately. Over the course of the entire war, approximately 2,000 Puerto Rican NCOs and sergeants were serving in units other than the 65th Regiment.

The hope was that the regiment's near-legendary troop morale would carry it through the worst of the conflict, but this was not the case. Soldiers were unclear as to their orders, and battle units could not sustain attack momentum. According to military historians, the difficulties the regiment encountered were not because of integration but because of the timing of this integration in the middle of the war. They argue that integration of the U.S. military should have occurred before or after the Korean War to ensure the soldiers' safety.

The 65th was the first American regiment to cross the Han River deep into North Korean territory. During the Korean War, 61,000 Puerto Rican soldiers served in the conflict; 756 died, and another 2,300 were wounded. Puerto Rico lost more people during the war per capita than any of the American states. All members of the regiment received high praise, including recognition by General Douglas MacArthur, for their accomplishments during the

war. On November 19, 1954, the regiment left Korea and returned home.

Post-Korea

On April 10, 1956, the 65th Infantry Regiment was disbanded. In 1958, it became a permanent part of the Puerto Rican National Guard Unit. Although no longer officially the 65th Infantry Regiment, 48,000 soldiers from Puerto Rico fought in the Vietnam War, and 332 were killed. Since that time, Puerto Rican soldiers, affectionately nicknamed Borinqueneers, have seen combat during the Gulf War, the war in Afghanistan, and the Iraq War.

Slave Narratives

It was against the unfathomable enslavement experience that blacks began to raise their voices in protest. African Americans can trace their literary tradition from Olaudah Equiano and Phyllis Wheatley to the countless narratives of formerly enslaved African Americans who, during the late 18th and 19th centuries, wrote of their experiences.

Most critics agree that the African American literary tradition found its original expression in the narratives authored by formerly enslaved blacks who helped bring an end to the peculiar institution of slavery. The narratives bring to the fore the authorial voice of the black literary tradition, which, according to Henry Louis Gates, was used to "indict both those who enslaved them and the metaphysical system drawn upon to justify their enslavement."

In expressing the brutality of the enslavement experience, the slave narratives give voice to those who had, for the most part, been the silenced other, while simultaneously advocating for the humanity of the enslaved. Likewise, the slave narratives serve as the platform that launches the voice of protest that infuses the literary tradition of African Americans and people of color in the United States.

Early Slave Narratives

Prior to emancipation, teaching enslaved blacks to read or write was strictly prohibited. Although the experience of people of African descent in the land that would become the United States began in indentured servitude, by the late 17th century, perpetual enslavement became the fate of enslaved Africans and their posterity in the New World. In the years following the Stono Rebellion (1739), South Carolina would be the first of the colonies to outlaw teaching a slave to write or read. Others followed suit, making it illegal to teach an enslaved black to read or write. Harsh penalties were imposed on whites as well, but if an enslaved black was caught learning to read and write without the expressed permission of her or his master, by law the punishment was death. It is well documented in *The Narrative of the Life and Times of Frederick Douglass* how learning to read or write "spoiled" a slave.

First Slave's Autobiography

In 1750, the first account of a former slave's autobiographical story was released in the *Gentlemen's Magazine*. Ten years later, in 1760, Briton Hammon's *A Narrative of Uncommon Sufferings and Surprising Deliverance of Briton Hammon, a Negro Man—Servant to General Winslow, of Marshfield, in New England; Who Returned to Boston after Having been Absent*

Almost Thirteen Years, while not commercially profitable, appealed to a Christian readership and opened the door for future narratives of formerly enslaved blacks.

In 1789, Olaudah Equiano's *The Interesting Narrative of the Life of Olaudah Equiano; or Gustavus Vassa, the African; Written by Himself* would be the first profitable and renowned autobiographical account of an enslaved African's journey through slavery into freedom. Since its publication, Equiano's account of his exploits of capture, exchange, slavery, and eventual freedom has been a hotly contested firsthand account of slavery. Venture Smith's *A Narrative of the Life and Adventures of Venture, a Native of Africa: But Resident Above Sixty Years in the United States of America, as Related by Himself* (1798) tells of Smith's capture, and enslavement, the purchase of his freedom (also his family's), and his ascendance as a propertied citizen of Rhode Island. These narratives by Equiano, Smith, and Hammon are as different as night and day in terms of tone, use of language, and other literary elements, but they lay the groundwork for the formulaic nature and appeal of the slave narratives.

Impact of Abolitionist Movement on Slave Narratives

Through indentured servitude and the eventual establishment of slavery, black resistance was constant. As slavery lurched toward becoming a fixture in the United States, the conflict over its usefulness began in earnest as early as discussions of a new nation emerged. Even though the abolitionist movement began in England, formal challenges to the practice, ideology, and system of slavery found its most vocal opponents in the accounts and life histories of formerly enslaved Africans who had managed to escape slavery's clutches.

Running away, absenteeism, breaking tools, work slowdowns, and other forms of individual resistance against slavery were used to diminish its immediate impact. These individualized efforts brought some relief and may have resulted in a lessening of slavery's harshness in the short term for some, but they did little to upset the institution of slavery. It was one thing for individual efforts to result in gaining a tenuous hold on freedom (however brief), but it was another thing to launch

(and coordinate) a multilayered assault on the infrastructure of the "peculiar institution." Blacks (enslaved and free) and whites found fault with slavery's hold on the economic, political, and spiritual essence of the country, but black resistance to and white displeasure with slavery did little to dissuade the countless Americans who accumulated large profits off the backs of unpaid slave labor.

Antislavery Discourse and Hope for Freedom

Antislavery sentiments reached a crescendo as the colonies agitated for freedom from the tyranny of British rule. As the rhetoric of freedom from the slavish rule of England fueled the patriotic spirit of the Revolutionary War, it also fueled enslaved Africans' hopes for freedom in the land that would become the United States of America.

As early as the 1750s, John Woolman and Anthony Benezet began the antislavery discourse among the Society of Friends, or Quakers. As a result of their efforts, by 1784 Quakers, as a whole, were philosophically entrenched against slavery. Did the abolitionists' purpose affect the stories that appeared in print? In many instances, the authenticity of the narratives was questioned, in terms of both the story and authorship. Because of the restrictions on teaching blacks to read and write, many of the narratives were ghostwritten or dictated by blacks and then written by whites. Also, the abolitionists' strict adherence to form, which included repetitive types, plots, stories, and schemes, created a vein of American thought that saw the narratives as imitative. The politics of the abolitionist movement dictated that the narratives accentuate the negative, subjugate content and form to the necessities of propaganda, and embellish events in order to display slavery in a particularly negative light.

Antebellum Period and the Slave Narrative

Despite the persuasive and powerful writings of David Walker in *David Walker's Appeal in Four Articles; Together with a Preamble, to the Coloured Citizens of the World, but in Particular and Very Expressly to Those of the United States of America* (1829); Robert A. Young in *Ethiopian Manifesto Issued in Defence of the Black Man's Rights, in the Scale of Universal Freedom* (1829); Martin Delany in *The Condition, Elevation,*

Emigration, and Destiny of the Colored People of the United States (1852); and Henry Highland Garnet in *An Address to the Slaves of the United States of America* (1843), the narratives were a potent weapon in the arsenal against slavery's nefarious hold on the nation's political, social, and economic conscience.

Taking advantage of the burgeoning news press and the development of antislavery societies in the United States, the die was cast for the story of African Americans' struggle from slavery to freedom. In 1793, Congress passed the first Fugitive Slave Law, and by 1807, the United States began honoring the ban on the International Maritime Slave Trade. Over the next two decades, wars, slave unrest, revolts, and the passage of the Missouri Compromise led to mixed feelings among the American public about the peculiar institution. By the 1830s, the growing number of whites who opposed slavery took the battle to the American people. Petitioning congressmen, writing pamphlets and treatises, and attending conventions for antislavery societies were the order of the day. Also, the various societies began to invite formerly enslaved Africans to their meetings and conventions for firsthand accounts of slavery's brutality.

Antislavery Publications

In 1831, William Lloyd Garrison would launch the *Liberator*, which would become one of several viable publishing outlets for antislavery tracts and eventually serialized versions of the slave narratives. Antislavery publications like the *Philanthropist*, *Manumission Intelligencer*, *Emancipator*, *Patriot*, *The Anti-Slavery Bugle*, *Quarterly Anti-Slavery Magazine*, *Freedom's Journal*, Garrison's *Liberator*, and eventually Douglass's *North Star* served as a constant source of agitation against slavery and the seedbed for increased dissemination of the stories of formerly enslaved Africans. Likewise, former slaves went on the lecture circuit, telling their stories to mixed crowds of freed blacks and sympathetic and skeptical whites.

In the wake of a more radical approach to ending slavery, numerous revolts (and plots to revolt) were organized. Black and white abolitionists risked life and limb assisting enslaved blacks to travel north along the circuits that would be

dubbed the Underground Railroad. After escaping slavery, Harriet Tubman would be the most prolific conductor of enslaved blacks to freedom along the Underground Railroad. The successful buying of freedom or escaping north led to the proliferation of slave narratives by Frederick Douglass, Henry "Box" Brown, Josiah Henson, Henry Bibb, James Williams, William Wells Brown, Solomon Northrup, Harriet Jacobs, and Elizabeth Keckley. All would be published during the antebellum period.

Prior to the publication of *Uncle Tom's Cabin* in 1852, Frederick Douglass's *Narrative of the Life of Frederick Douglass* (1845) was published with the able assistance of William Lloyd Garrison. Douglass's narrative would launch him into international celebrity in abolitionist circles. In his narrative, Douglass details his rise to consciousness as he learns to read with the unknowing assistance of his master's wife, Mrs. Auld, and his rise to manhood in his legendary battle against Mr. Covey. Because of the sensitive nature of the times, his freedom, and the need to guard the secrecy of his escape, Douglass did not tell much about his fortuitous escape from slavery. William Wells Brown's *Narrative of William Wells Brown, a Fugitive Slave Written by Himself* (1847), while not as widely known as Douglass's narrative, served as a springboard for an otherwise prolific career as an orator, activist, and writer.

Because of their contribution to the abolition movement and the development of African American letters, the writings of Josiah Henson, Henry "Box" Brown, Harriet Jacobs, and Elizabeth Keckley deserve mention. Brown's *Narrative of the Life of Henry Box Brown, Written by Himself* (1852) is noted for the creative means by which Brown escaped. In essence, Brown "mailed" himself from Richmond, Virginia, to Philadelphia, Pennsylvania, thus earning him the nickname Box. Henson's *The Life of Josiah Henson, Formerly a Slave, Now an Inhabitant of Canada, as Narrated by Himself* (1849) chronicles how he fled slavery with his wife and four children. His story served as the model for Harriet Beecher Stowe's *Uncle Tom's Cabin*.

Harriet Jacobs, writing under the pseudonym Linda Brent, would go on to pen the first slave narrative by a woman of African descent. Jacob's

Incidents in the Life of a Slave Girl (1861) is a testament to the hardships, strength, and tenacity of black women during the enslavement experience. Despite the incredulity of her sacrifice to remain near her family, Jacobs's story renders the untold dilemma many enslaved women encountered as they were exploited for their productive and reproductive labor. Her decision to lay claim to her reproductive rights are by far one of the strongest cases for agency among the slave narratives. Although released after the Civil War, Elizabeth Keckley's *Behind the Scenes or Thirty Years a Slave and Four Years in the White House* (1868) offers readers a different story. Like Jacobs, she notes her exploitation as an enslaved woman. Instead of focusing on her exploitation, Keckley uses her narrative to detail her success as a businesswoman and seamstress for the wealthy in Washington, D.C., including a stint as the seamstress of Mary Todd Lincoln.

Neoslave Narratives

During and after the Civil War, several writers continued to write about slavery's atrocities. William Wells Brown, Martin Delany, Frances Ellen Watkins Harper, Charles W. Chesnutt, and Booker T. Washington provided the first wave in the development of the genre of neoslave narratives in African American letters. Delany's *Blake; or The Huts of America* (1859-62), Harper's *Iola Leroy; or Shadows Uplifted* (1892), and Chesnutt's collection of stories in *Conjure Women* (1899), are fictional (mainly because these authors were born free), but unlike the second and third waves of the neoslave narratives (those produced by 20th-century writers), William Wells Brown's 1866 publication of *Clotel; or The President's Daughter* and Booker T. Washington's *Up From Slavery* (1901) address the authors' recollections of the enslavement experience.

In the 20th century, the slave narratives took two separate but very important literary turns. The second wave consisted of the Federal Writers' Project (funded by the Works Progress Administration during the Great Depression), which collected, collated, and compiled the narratives of the increasing elderly (and dying) population of formerly enslaved African Americans, whose recollections were a treasure trove of cultural and historical memories of those precious moments

once freedom was realized and the sense of betrayal that followed the failure of Reconstruction. As a result of these works, a number of publishers have collected and reprinted the state slave narratives of various southern and northern states.

The third wave consists of the growing corpus of contemporary fictional texts that borrow from the slave narratives' authorial I. James Weldon Johnson's *Autobiography of an Ex-Colored Man* (1912), Zora Neale Hurston's *Their Eyes Were Watching God* (1937), Malcolm X's (and Alex Haley's) *Autobiography of Malcolm X* (1965), Ishmael Reed's *Flight to Canada* (1976), Sherley Anne Williams's *Dessa Rose* (1986), Margaret Walker's *Jubilee* (1966), Ernest Gaines's *The Autobiography of Miss Jane Pittman* (1971), Alice Walker's *The Color Purple* (1982), Charles Johnson's *Oxherding Tale* (1982) and *Middle Passage* (1990), J. California Cooper's *In Search of Satisfaction* (1994) and *The Wake of the Wind* (1998), Toni Morrison's *A Mercy* (2008), and Nancy Rawles's *My Jim* (2005) are a few of the neoslave narratives that include memories, passed-on stories, or fictional reminiscences of slavery's past, present, and future marking of the collective I of African Americans.

Conclusion

Although exploitation and oppression first brought blacks and whites together on the shores and in the fields of the New World (via the system of indentured servitude), greed would pit white against black in the struggle between slavery and freedom. Nevertheless, sympathetic whites helped runaways escape slavery. It was one thing for whites to rage against the evils of slavery, but it was quite another thing to see the concerted effort of whites (particularly in Pennsylvania, New Jersey, and Massachusetts) to take advantage of the firsthand accounts of formerly enslaved Africans to tell the horrifying story of degradation and dehumanization for both master and slave.

What do the slave narratives reveal about contemporary and future trajectories of American multiculturalism? The connection between the slave narratives and the autobiographical I of people of color is paramount to understanding the struggle for black, red, yellow, and brown claims to personhood and citizenship in the United

States. The autobiographical narratives of Asian and Hispanic Americans may not have their origins in slavery, but they are based in a shared history of exploitation, oppression, and struggle for inclusion. Autobiographical narratives of Native Americans share a history of oppression, exploitation, and even slavery with African Americans. Their first-American status adds another layer of complexity to the autobiographical I for Americans and marginalized people of color that bears further investigation.

Slave Revolts

Many societies have embraced some form of slavery or unfree labor, and in each, enslaved people have engaged in various forms of resistance. In British North America, the first enslaved people were taken from Africa and arrived in Virginia in 1619. The expansion of slavery ebbed and flowed during the colonial era, but it eventually had a profound impact upon the culture, politics, and economy of the United States. Slavery in the Caribbean and in Central and South America has had an even longer history, extending back to the 15th century and forward to the end of the 19th. Brazil, in 1888, became the last nation in the Western Hemisphere to abolish slavery.

Although historians debate the precise numbers, most believe that at least 10 million Africans survived the trip across the Atlantic and were then sold into slavery, and perhaps as many died in transit. Historians also agree that rebellion was ubiquitous in the Americas. Revolts by enslaved people took several forms, each demonstrating the particular context from which they emerged. Some revolts occurred at sea, on the slave ships, while other uprisings originated on plantations.

Another type of revolt by enslaved people was the day-to-day resistance that many enslaved people engaged in throughout their lives. These acts seldom captured the headlines, but daily resistance displayed the creative ways in which enslaved people consistently undermined the institution and built a culture of liberation in opposition to oppression. Finally, revolts by enslaved people sometimes took the form of open warfare and resulted in an entirely new social order. This was particularly true in the examples of the Haitian Rebellion and the U.S. Civil War.

Commodities for People

After slave ships docked at the holding stations (also known as factories) of the west African coast, European slavers traded weapons, spices, and other commodities for people and then disembarked for the Americas. Aboard the slave ships, captured Africans first came under direct and permanent European control. With vessels tasked with transporting human cargo between 1,500 and 3,000 miles across the Atlantic Ocean, rebellions occurred with enough regularity that crews took extreme caution. In fact, hundreds of documented rebellions occurred at sea, almost always within sight of the African coast. Some west Africans, notably the Coromantee and other Akan people from the Gold Coast region (modern day Senegal, the Gambia, Ghana, Guinea, Ivory Coast, and Sierra Leone), had a long history of rebellion and were generally feared by white plantation owners and slavers alike. Slavers limited their purchase from the Gold Coast and traveled farther north or south for additional people to fill the ships. This ensured that the enslaved cargo did not share a common language or culture, thus minimizing the chances of a mutiny or rebellion. Slavers also engaged in terroristic violence so as to make examples of anyone who did rebel. Tools of torture included toe- and thumbscrews and the cat-o'-nine-tails.

The *Meermin*

Despite the attempts of slavers to suppress rebellion, they were not always successful. One famous instance of a revolt aboard a ship of enslaved people involved a Dutch ship named the *Meermin* and occurred off the coast of southern Africa in 1766. To avoid the spread of disease in the lower deck, Dutch India Company slavers took the unusual

step of unshackling their human cargo, allowing them some freedom of movement on the above decks. Eventually, the enslaved people seized the crew's weapons and took over the ship, demanding safe return to their native home of Madagascar. However, after the enslaved people mutinied, the slavers deceptively led them back to southern Africa. There, the white crew secured reinforcement from Dutch militias who had colonized the region. Upon reasserting control over the ship, Dutch authorities killed the participants in the rebellion while others were re-enslaved.

The Most Famous Slave Ship Revolt

Although the enslaved people who led the mutiny aboard the *Meermin* failed to return to Madagascar, those who rebelled on *La Amistad* did gain their freedom. As a result, theirs remains among the most famous and celebrated of all slave ship revolts. In 1839, Spanish colonists in Cuba were transporting several dozen enslaved people from one end of the island to the other when enslaved people seized the ship and demanded safe return to Africa. As on the *Meermin*, the crew misled the enslaved people, deliberately sending them in an unfamiliar direction in an effort to suppress the rebellion and commandeer the ship back to Cuba. Instead, *La Amistad* eventually made landfall on Long Island, New York, more than 1,000 miles north. A controversy with serious constitutional implications ensued over whether or not the enslaved people were free or should be returned to Cuba as property. The enslaved people appealed to the U.S. Supreme Court for their freedom in the famous case *The United States v. the Amistad* (1841). The court's majority opinion, delivered by Justice Joseph Story and joined by Chief Justice Roger B. Taney, declared that since the transatlantic slave trade had been abolished in 1808, the Spanish settlers had transported the enslaved people illegally and those people were thus within their rights to seek freedom. In 1842, the surviving 36 rebels returned to Africa. As the sectional conflict intensified in the United States, the case became a rallying point for abolitionists, who argued that people of African descent were more than property.

These two rebellions received extensive coverage, but the willingness of slavers to engage in brutal repression had an impact, and slave

ship mutinies were relatively rare. More typically, enslaved people revolted in other ways that threatened the profits of European traders. Some jumped from the deck into the ocean, committing suicide rather than submitting to a life of permanent enslavement. There are no reliable data on how many enslaved people jumped overboard, but it was enough of a problem that many slave ships equipped their ships with netting to prevent the enslaved people from jumping to escape the auction block. Others refused to eat, perhaps knowing that their malnourishment brought a lower price and lower profits for their captors. To address this form of revolt, many slave ships contained a separate room where enslaved people who refused to eat could be held and tortured until they accepted food.

Still, most enslaved Africans arrived in the Americas alive, and depending upon where they were sold, their life expectancy ranged from as little as a few years to several decades. Slavery was exceptionally brutal in the tropical Caribbean, where many of the largest plantations grew sugar and coffee. Here, as well as in parts of Central and South America, enslaved people greatly outnumbered whites. The demographic imbalance and miserable conditions led to widespread violence and rebellion. Not surprisingly, the Caribbean was the site of some of the most successful and turbulent slave revolts. In 1760, enslaved people in Jamaica, led by a man known as Tacky, from the Coromantin region of west Africa, rose up against British planters. The revolutionaries successfully killed many of the plantation owners, but they failed to seize the island before heavily armed British militiamen put down the rebellion. At the time, it was the largest rebellion of enslaved people to have occurred in the Atlantic.

Growth of Revolutions

During the last quarter of the 18th century, shortly after Tacky's War, revolutions spread throughout North America, Europe, and the Caribbean. In the French colony of Saint-Domingue, an even larger rebellion than Tacky's broke out. Led by Toussaint L'Ouverture and Jean-Jacques Dessalines, 150,000 enslaved black people targeted French settlers and army forces numbering roughly 50,000. L'Ouverture and other insurrectionists demanded freedom and equal representation. The

rebellion began in earnest in 1791, within years of the ratification of the U.S. Constitution and amid the French Revolution. The upheaval caused by the latter partly explained the inability of French settlers to successfully quash the rebellion, and by 1804, France relinquished control of the colony, renamed Haiti. This was the only slave revolt from which there emerged an independent nation governed by men of African descent.

Haitian Revolution

The Haitian Revolution was exceptional in its success, but many other enslaved people in North America also attempted overthrow the institution. In fact, several hundred rebellions occurred in the British colonies and, after independence, the United States. The largest population of enslaved people in any North American city during the early years of the 18th century was in New York City, and not surprisingly, enslaved people conspired to seize the city on two separate occasions, in 1712 and 1741. But the largest rebellion of enslaved people in the North American colonies occurred in South Carolina in 1739. Led by a Catholic man named Jemmy, 60 enslaved people from several plantations along the Stono, Ashley, and Edisto Rivers seized weapons and ammunition and marched with a banner that read "liberty." Their goal was to liberate the enslaved people of South Carolina and resettle on the Florida peninsula, a region known for its many maroon communities and as a safe haven for runaway enslaved people. Within hours, however, word reached white authorities. The ensuing battle left about 20 whites and over 40 blacks dead.

Following the suppression of the rebellion, colonial lawmakers passed a series of measures that more tightly restricted the autonomy of enslaved people. The legislature made it more difficult for slaveholders to manumit their enslaved people, it became illegal in most instances for enslaved people to learn how to read and write, and a 10-year moratorium was placed on the importation of enslaved African people. The latter provision reflected the belief among many white South Carolinians that enslaved people from the Kingdom of Kongo, such as Jemmy, were especially predisposed to rebellion. South Carolinians adopted these measures as part of the so-called Negro Act of 1740.

After the American Revolution, and despite the hopes of many of the nation's founders, slavery, rather than petering out, rapidly spread across the southern half of the continent. Cotton joined tobacco, rice, indigo, and hemp as the south's staple commodities. By committing to an agricultural economy, slaveholders also committed to unfree labor. But as slavery spread, so too did dissent. One famous figure, a man named Gabriel, enslaved on the Prosser Plantation in Henrico County, Virginia, orchestrated a rebellion of enslaved people with profound consequences. In 1800, just as the balance of power shifted to the enslaved people in Saint-Domingue, white authorities in Virginia received information that Gabriel was conspiring to seize the plantations and liberate the enslaved people in a manner similar to the Haitian rebels. Virginia Governor James Monroe called out the militia and ordered them to capture over two dozen would-be participants. After he refused to divulge details of the plot, Gabriel, along with several other suspects, was hanged by white authorities. In the aftermath of the conspiracy, slaveholders in Virginia, like those in South Carolina, tightened restrictions on both enslaved people and free blacks. Although the uprising never reached fruition, its timing, coming on the heels of the Haitian Revolution, the French Revolution, and the American Revolution, suggests the way in which revolutionary ideologies circulated not only among Europeans and white settlers but also among enslaved African people throughout the Atlantic world.

Threat of Rebellion

Over the next 30 years, as slavery gained traction in the south, the threat of violent rebellion increasingly occupied the minds of many slaveholders. After all, every few years a high-profile conspiracy came to light. In 1822, in Charleston, South Carolina, an African American named Denmark Vesey purchased his freedom and shortly thereafter sought to initiate another revolution. Significantly, Vesey studied the French and Haitian revolutions and even planned his rebellion in the middle of July to commemorate the storming of the Bastille during the French Revolution. Unfortunately for Vesey, however, South Carolina authorities caught wind of the plot, quickly took Vesey and 45 others into custody, and executed all of them. After the conspiracy, South

Carolina cracked down on the limited autonomy that enslaved people previously enjoyed. Additionally, the legislature funded a barracks and an arms depot to more efficiently centralize the deployment of militiamen in the event of a rebellion. Over the next 20 years, the post grew, and in 1842 it was renamed the Citadel. Today, it is a senior military college affiliated with the nation's armed forces.

The Most Violent Revolt in U.S. History

Notably, Gabriel and Vesey, both thwarted by informants, failed to move their rebellions beyond the planning stages. In contrast, Nat Turner's 1831 revolt proved to be the most violent in U.S. history. By all accounts, Turner was a gifted orator; he allegedly knew the Bible well and emphasized its most liberatory passages. He also relayed horrific stories of the slave trade and had reportedly tried to escape on at least two occasions. During the summer, Turner enlisted between 50 and 100 enslaved people and free blacks from Southampton, Virginia, and on August 21, they set out to liberate the nation's enslaved people. He believed that slavery was an inherently violent institution that required the use of violence to end it. Just as men, women, and children of African descent were enslaved, the men, women, and children of European descent who reaped the benefits of the unjust system, Turner claimed, needed to be killed. Thus, Turner and his forces targeted several slaveholding families, ultimately killing 60 whites. Turner's men struck with brutal force, but within hours, the Virginia militia and other whites from the area, heavily armed and willing to use deadly force, outnumbered the insurgents and quashed the rebellion. Turner escaped into the woods and was not found until October. When he was finally captured, Turner, after a perfunctory trial, was found guilty and executed; his skin was flayed and burned as a warning to other would-be insurgents.

Turner remains a controversial figure, especially noteworthy for his bold attempt to gain freedom, his willingness to deploy violence, and perhaps most of all, for the panic that occurred across the south after the rebellion. Dozens and perhaps hundreds of innocent black men and women were killed in dozens of white reprisals throughout the south. White slaveholders acted with impunity, murdering at

Sengbe Pieh was the leader of the La Amistad uprising. The schooner was taken over by a group of captives who had been kidnapped in Africa and illegally sold into slavery. The ensuing court case helped the abolitionist movement.

will if they even suspected an enslaved person was conspiring to rebel. Turner, a charismatic preacher, used the church as a space for himself and others to think about liberation. As a result, many white slaveholders in Virginia and elsewhere insisted that at least one trusted white person (usually an overseer) examine the each week's sermon and monitor all church services attended and led by enslaved blacks. In sum, Vesey, Gabriel, and Turner were determined to gain their freedom and end slavery in North America. However, whites used tremendous levels of physical violence to stop these rebellions and to punish all alleged conspirators. The result was a hardening of the racial order in the decades before the Civil War.

Although revolts such as Turner's, Vesey's, and Gabriel's dominated the attention of slaveholders

and cast an unyielding suspicion upon blacks, enslaved and free, widespread rebellions never occurred with high frequency, and successful ones were rarer still. After all, slavery in the Americas was a system held together by violence. As long as slaveholders used extreme force, open rebellion was not commonplace. Indeed, the punishments for rebellion included death, whippings, maiming, or being permanently separated from one's family. Instead of open and violent revolt, most enslaved people rebelled through collective slowdowns, feigning illness, and sabotage. These small acts of rebellion took place daily and represented a constant drag on the efficiency and dynamism of the southern economy. Enslaved people who engaged in these acts may not have gained freedom in their own lifetimes, but through a sustained and collective culture of rebellion, they slowly eroded the foundation of the nation's racial caste system, and over time, they exposed the volatility and the unsustainable nature of chattel slavery.

These acts of rebellion—violent and non-violent, collective and individual—culminated in what many historians have interpreted as the largest and most comprehensive revolt by enslaved people in U.S. history: the Civil War. Between the years of 1861 and 1865, nearly four million enslaved people across the U.S. south emancipated themselves amid the massive dislocation caused by the conflict.

Historian W. E. B. Du Bois long ago argued that the Civil War was, at its most dramatic, a general strike whereby millions of enslaved people withheld their labor and effectively abolished the plantation system. Some refused to work, others fled from their masters, and many thousands more volunteered with the Union Army, taking up arms against the new southern government. Although the United States did not initiate the conflict with the Confederacy to purposefully foment a revolt by enslaved people, halfway through the war, this was precisely the outcome. Within a mere four-year period, southern enslaved people, free blacks, and their white allies abolished an institution that had predominated for nearly 250 years.

Conclusion

Overall, revolts by enslaved people have occurred in each society that has embraced slavery. In 1619, the first known enslaved African people arrived in

the British colonies of North America, bringing with them the hopes and dreams of freedom and the spirit of rebellion. Beyond North America, slavery was integral to the Atlantic world as well as to the development of modern, global capitalism. But in every setting, rebellions, small and large, threatened the institution, and slaveholders resorted to a variety of totalitarian methods to ensure control. These revolts reveal the specific contexts and day-to-day negotiations that enslaved people faced. Some succeeded, and many others failed. The tactics varied widely; some enslaved people preferred violence, whereas others preferred subtle acts of subversion. Regardless of the context, however, the repression deployed by slaveholders was met with an equal or greater persistence among enslaved people to secure their freedom and revolt against a system rooted in racism and inequality.

marched to the coast of Africa and forced to board slave ships that would take them across the Atlantic to the Caribbean and North and South America. This forced migration is also commonly referred to as the triangular trade, in which African captives were among the “goods” being traded among European, American, and African traders. A great number of the captives never arrived in America, and almost 15 percent died during the horrific Middle Passage. The percentage of enslaved people transported to North America was relatively small. Between 1501 and 1870, fewer than a million Africans arrived in the United States.

However, the specter of the slave trade has had a profound impact on life in America. For example, the trade and its attendant realities contributed to the social construction of race and racism. Despite the fact that the strength, ingenuity, and perseverance of the captives and their descendants built America as we know it, they were designated as subhuman and therefore unfit for freedom. The dispersal of Africans throughout America completely changed the Atlantic world and contributed to the development of a distinct and lasting African presence in America.

The International Roots of the Trade

The slave trade began as a complex relationship between international powers, hungry for political domination and eager for economic gain. During the early 16th century, Portuguese traders operated the Atlantic trade on a relatively small scale specifically designed to supply domestic servants to Portugal and Spain. In contrast, other European nations had large workforces and therefore had little need for foreign labor. However, the Age of Exploration dramatically changed the intentions and the scope of Atlantic trade. The Spanish and the Portuguese—along with the Dutch, English, and French—developed colonies in the Caribbean, Mexico, and North and South America. American Indians were the primary source of labor in these newly formed colonies, and as their numbers began to decline, traders turned to the Atlantic slave trade to satisfy the growing need for free labor.

A crucial turning point in the institutionalization of slavery in the New World began in the 1600s, when the cultivation of rice, tobacco, and indigo in British North America added to the increasing

Slave Trade

The transatlantic slave trade was the largest forced migration in world history. Over three centuries, between 9 million and 11 million African men women and children were forcibly

trade for slave labor. European nations continued to jockey for dominance in the trade, and England and France competed with the Dutch to control the trade. England eventually gained control of the Atlantic trade and succeeded in driving the Dutch out of the trade by 1674. By 1713, England had gained the exclusive right to provide enslaved people to all of Spain's American colonies. English ships continued to dominate the trade and transported about 20,000 enslaved people per year from Africa to the Americas. During the peak of the slave trade in the 1790s, English ships transported up to 50,000 enslaved people per year.

The trade relationship was a three-part system or circuit of exchange between Europe, Africa, and the Americas that involved African traders willing to sell captives in exchange for English goods. The first leg of the triangular route was from a European port to the west African coast. The ships on this route carried goods for trade, such as cloth, guns, and ammunition. The cargo would then be sold or bartered for African captives. The second leg of the trip, known as the Middle Passage, ended in the New World, where the enslaved people were sold to Caribbean or North American owners. The ships returned to England on the final leg of the trip.

The European traders did not capture people themselves; instead, they purchased enslaved people from African traders. Beginning in the 16th century and over the course of the trade, many of the captives were taken as prisoners of war acquired during battles between warring African countries. Europeans relied on trade relationships with African leaders that were regulated by African governments. For many, the fact that Africans sold other Africans into slavery is akin to racial treachery. However, it is important to understand that the notion of racial solidarity, or a loyalty to people of similar racial backgrounds, was not a widely held belief before the 19th century. In other words, African traders did not believe they were selling their own kinsmen. Further, because various forms of slavery existed in Africa prior to the beginning of the transatlantic slave trade, the selling of enslaved people was not a completely foreign idea. African leaders sold enslaved people for a variety of reasons, including the economic and political strength brought about by trade with foreign nations.

Ship inventories and other trade documentation indicate that African captives came from eight regions along the western coast of the continent. Captives came from Senegambia, Sierra Leone, and the Windward Coast, which is modern-day Liberia and the Ivory Coast. Other sites include the Gold Coast (now Ghana), the Bight of Benin (coastal Togo, Republic of Benin, and southwest Nigeria), the Bight of Biafra (southeast Nigeria and Cameroon), west central Africa (Angola), and southeast Africa. Records show that the majority of captives destined for American shores came from the nation of Angola, which is believed to have been the home of 1.3 million captives transported via the transatlantic slave trade.

Perhaps what was most damaging about this desire for free labor was the way in which it formalized the definition of a slave. A different and more dangerous form of slavery emerged once the trade began to grow in size and scope. Unlike slavery in other parts of the world—namely Africa, Asia, and Europe—slavery in America was solely based on race. Moreover, enslaved people became known as chattel, or the personal property of their owners, thereby losing their rights as human beings. For example, Virginia began to legislate the status of enslaved people during the 1660s. A 1662 decree stated that a child's condition followed that of the mother, thereby ensuring that any child born to a female enslaved person would also be enslaved. Other bills declared servitude to be the natural condition of Africans. This final point is central to any discussion of race in America, and resistance to the ensuing dehumanization of Africans and African Americans eventually led to the abolition of both the slave trade and the peculiar institution of slavery.

The Middle Passage

The initial capture by African armies was just the first step of the hellish journey referred to as the Middle Passage. African armies would capture the inhabitants of conquered villages. Raiding groups would also capture isolated families or kidnap individuals. As the interethnic fighting spread deeper into the interior, captives were forced to march for hundreds of miles to the coast to meet European traders. The captives were made to march single-file and were tied together with rope or with wooden yokes around their necks.

The march to the coast was dangerous, and many of the captives died from hunger and exhaustion. Some killed themselves, while others were killed if they tried to resist.

Although the captives were not yet officially classified as enslaved people, every aspect of the ordeal was designed to strip them of their humanity. Once they reached the coast, they were housed in fortified structures called factories or slave castles. The first and perhaps best-known slave castle was Elmina, on the Guinea Coast. The Elmina slave castle was constructed by the Portuguese in 1481. The Dutch captured the site in 1637. These factories served as the traders' headquarters and warehouses for their goods and supplies. These trade depots also included dungeons, or outdoor holding pens, for the captives. The traders used the dungeons to prepare the captives for travel aboard slave ships. These preparations usually included the separation of families and ethnic groups in an effort to prevent rebellion. The enslaved people were also stripped naked and inspected for disease or other physical defects. Once captives were deemed fit for purchase, they were branded with a hot iron that bore the symbol of a trading company.

Captives were held in slave factories for periods of time ranging from a few weeks to a few months. During this period, the captives were forced to realize that they would soon be leaving their homeland. The captives were transported on large canoes to slave ships off shore. Once aboard, the enslaved people began their hellish journey to the New World.

The Middle Passage is the second and best-known leg of the triangular trade. Captives were transported across the Atlantic in deplorable conditions on ships that were often filled to capacity. The plans for travel across the Atlantic were carefully calculated so that captains and their crews could maximize profit and minimize loss. Slave ships generally weighed 100 to 300 tons and were capable of holding 100 to 500 or more enslaved people. While the trading was done at African ports, carpenters were busy preparing the ships for travel. The cargo space in slave ships was usually only five feet high. Carpenters cut this space in half by building shelves, so that captives could be packed above and below on planks that were only five and a half feet long and 16 inches wide. The captives were left with about 20 to 25 inches

of headroom. Men were chained together and held away from women and children in an effort to prevent shipboard rebellions. The separation also made women easy targets for sexual abuse. African men, women, and children were forced to endure these conditions for the duration of the crossing, a period that usually lasted between two and three months.

Mistreatment Aboard Slave Ships

The ship captain's desire to protect his cargo did not mean that the captives were treated well. Captives received the bare minimum of necessities to stay alive. Crews prepared porridge and stews that would be distributed in buckets when enslaved people assembled on deck during good weather. During bad weather, the captives were fed below deck or sometimes not at all. At the beginning of the voyage, each captive received a wooden spoon to be used for dipping into a food bucket to be shared among 10 individuals. However, the spoons were often lost, thereby forcing the enslaved people to eat from the buckets with their unwashed hands, a practice that contributed to the spread of disease. The poor quality of food often led to malnutrition and weakened immune systems.

The food was only one of the many scourges aboard slave ships. A range of diseases was also a constant threat for both captives and crew. The unsanitary and overcrowded conditions provided ample opportunity for the spread of diseases such as malaria, yellow fever, measles, smallpox, dysentery, and scurvy. Prior to 1750, mortality rates were very high. During the early years of the 17th century, as many as 20 percent of the captives died during the crossing. Traders realized that slave deaths decreased their overall profit, so they began to make adjustments in order to improve the material conditions of the captives. For example, captains provided improved food and water. The ships were also cleaner and better ventilated than before. Ship sizes were standardized, allowing slightly more room for the captives. The ships were also faster and reduced the time at sea from three months in the early 16th century to about one month by the 19th century. By the 19th century, the mortality rate dropped to 5 percent.

Shipping ledgers and commercial records document the material improvements on slave ships;

however, these texts do not reveal the extent of the fear and suffering that the captives experienced. Not surprisingly, the captives longed for the past and feared the future. This mixture of sadness and fear often served as motivation for resistance. Although many captives died as a result of the conditions, others died by jumping overboard. The suicides were indicative of the captives' refusal to accept the inhumanity and cruelty of the slave trade. Likewise, shipboard revolts also revealed the captives' refusal to accept their fate, and crews were forced to remain vigilant. Uprisings usually occurred before the ship sailed too far from the African coast and at a point where enslaved people could hope to return to their homeland. A few revolts occurred on the open sea. The most famous maritime resistance efforts include the 1839 revolt aboard the Spanish ship *Amistad*, in which the captives were successful in their efforts, thanks in large part to their leader, Joseph Cinque. An 1841 revolt led by Madison Washington aboard the *Creole* was yet another example of the refusal to accept a future of servitude.

Sale and Seasoning

For the 10.5 million Africans who survived the Middle Passage, arrival in the West Indies most likely brought a confusing mix of relief and fear. Once the crossing was complete, captives had the opportunity to move around, bathe with fresh water, and consume fresher food. However, the arrival also marked a new phase along the inhumane continuum of New World slavery. Ships were carefully inspected once they arrived in the West Indies. Because inspectors could quarantine ships and delay disembarkation, crews worked hard to erase the physical ravages of the crossing. Baths and exercise were just the beginning of the process enslaved people had to endure in order to disembark and prepare for the slave auction. Slaves were required to oil their bodies to cover rashes and bruises. Ship surgeons also employed questionable practices to hide evidence of disease. After these initial preparations, the enslaved people were sent to market, where they endured yet another round of invasive and humiliating inspections. The auctions would take place on the deck of the ship or in a sale yard offshore.

After the sale, enslaved people entered the "seasoning" process, or a period of acculturation

that prepared them for plantation life in the New World. The duration of the seasoning process varied but could sometimes last up to three years. During this period, enslaved people had to adjust to Euro Americans of the ruling class and to members of the ethnically diverse slave population. Slave owners used this period to discipline and alter the behavior of the enslaved people so that they would become productive laborers. During this process, enslaved people were given new, Christian names. Slaves also learned European languages. Although they had to learn these new languages under duress, it did allow them the opportunity to learn to communicate with one another. Though they may have spoken different languages when they crossed the Atlantic, after a short period in the New World, they spoke a common language and developed bonds with one another. As a result of this cultural and linguistic blending, the enslaved people and their descendants became New World Creoles. In other words, their experience reflected the cultural mixing that often took place during the seasoning process.

Seasoning also prepared the enslaved people for the intense labor that awaited them on New World plantations. Owners separated enslaved people into work gangs. Men were usually assigned to a group responsible for heavy field work. Women and older men were in groups assigned to do lighter field work. The third group was usually composed of children who worked shorter hours and did tasks such as taking food and water to the other groups.

Africans in America

The seasoning process could also be thought of as a test that judged not only enslaved people's physical endurance but also their cultural adaptability. At the end of the seasoning period, owners based the success of the process on several key factors. The first factor was survival. Many of the enslaved people were still suffering from the trauma of the Middle Passage and did not survive the seasoning period. The second factor was the extent to which enslaved people adapted to the material life of the New World. For example, owners wanted to ensure that enslaved people could adjust to new foods and a new climate. Owners also needed to know whether or not they

could effectively communicate with their enslaved people, so language acquisition was also a key determining factor.

Perhaps the most tragic factor involved the enslaved person's psyche. Owners had to believe that enslaved people had accepted their condition as enslaved people. However, owners' satisfaction with the process did not always mean that enslaved people were successfully seasoned. Indeed, such success would mean that enslaved people had lost all connection to one another and their respective pasts. The historic reality is that the captives retained many of their customs and much of their culture. African elements in American dance, food, and folklore speak to the captives' ability to retain and pass on important facets of their past.

The unspeakable cruelty of the slave trade led to its eventual demise. The emergent abolitionist

movement, coupled with England's decreasing need for foreign labor, contributed to the end of the slave trade in 1807. The following year, the U.S. Congress outlawed the trade. American, Spanish, and Brazilian traders defied the ruling for many years; however, the forced migration from Africa to America dropped to a small percentage of what it was at its peak. The captives who survived the Middle Passage and the seasoning process were indeed resilient. In the face of extreme adversity, their labor built a nation, and their relationships built a community. This collective past now lives on in regions all across America and in the lives of the 38.9 million people of African descent who now call America home.

Cowrie shells were used as money in the slave trade. Shells of certain species have historically been used as currency in several parts of the world. Huge amounts were introduced into Africa by Western nations during the slave trade.

Slavery

Slavery was at its core a system of coerced labor. Those who were captured, sold, or even born into this system mainly provided the necessary labor to enable agricultural production. The enslaved also performed a host of other tasks needed to

stimulate various local and regional economies—from work in private homes, mines, and factories to providing essential manpower on public works projects in cities and towns.

In the United States, especially, slavery emerged to ensure the production of several valuable staple crops. Depending on the region, enslaved laborers grew tobacco, indigo, rice, sugar, and perhaps most famously, cotton as major staple crops. Specifically, tobacco and indigo transformed the Chesapeake region throughout the 17th and 18th centuries, while rice aided the development of the Low Country (South Carolina and Georgia). Ultimately, sugar, long the crop that firmly entrenched slavery in the Americas, made its way to southern Louisiana in the 1790s and on to parts of east Texas in the early 1800s, while cotton dominated much of the Deep South, eventually earning the name “King Cotton.”

Though primarily a labor system, slavery also proved instrumental in establishing and undergirding a series of rather complex and fluid racial and gender ideologies in America. This key and distinguishing component of American slavery continues to define, if not overshadow, the institution’s imprint on the nation’s economic development. Though abolished in 1865, the legacy of American slavery lives on, and the nation continues to uncover new and exciting findings about the institution and those who lived through it.

Arrival of Slavery and Enslaved Africans

Within the scope of U.S. history, and especially in terms of American slavery, 1619 marks the introduction of the first African laborers in the nascent British colonies. Shortly after Dutch traders unloaded a man-of-war vessel containing 20 Africans at Jamestown, Virginia, the number of Africans in the mainland British colonies grew at a rather slow rate, but it was later bolstered by a robust transatlantic trade in enslaved people that lasted until its abolition in 1808.

Those early African laborers, like many of their European counterparts, worked primarily as indentured servants on the first Virginia tobacco plantations. It took some time, though, before racial distinctions marked these early Africans as the ideal group suited for a lifetime of bondage. Experiments with Native American enslavement proved less promising over time.

Moreover, as indentured servants, these African laborers toiled side-by-side with European indentured workers and largely enjoyed the same privileges. Together, African and European bound workers performed many of the same tasks and even faced similar punishments when doled out by their masters.

Thus, skin color did not necessarily provide European indentured servants with a set of enviable circumstances. Oppression touched all early indentured servants similarly. Over time, perceived gender and racial differences erased that sense of rough equality among the indentured class. Darker skin and African lineage became wrong in the eyes of early American colonists and their European counterparts.

By the mid-17th century, Europeans believed that they had a Christian right to enslave non-Christians. Although Africans could easily convert to Christianity as a means of declaring immunity from slavery, these strategic conversions would only work for a limited time in the colonies. Soon, physical difference, rather than religious persuasion, would serve as the ultimate marker of enslaved and freed persons. For example, Maryland, in 1639, decided that Christian baptism did not make a slave free or prevent an African or Native American from being enslaved. Instead, European “blood” made all the difference. Whiteness had its privileges.

Colonial Slavery

In 1641, Massachusetts became the first British colony to recognize slavery as a legal institution. Connecticut, Virginia, and other colonies soon followed. By the eve of the American Revolution, slavery had existed in all 13 colonies. In the 1660s, Virginia and other Chesapeake colonies began laying the foundation for a legalized and racially organized system of slavery. Maintaining a stable workforce was a high priority for tobacco and indigo planters reaping great profits from these burgeoning industries.

In 1662, the Virginia colony rejected a long-standing English common law tradition. Rather than allow a child’s status to follow that of the father, Virginians declared that any child born to an enslaved mother would also be enslaved. Eventually, this practice became commonplace throughout the colonies, and once more, Virginia

led the way in ensuring bondage as a lifelong condition imposed on Africans.

Now, under Virginia law, Englishmen could easily replenish their supply of bound workers, and could more systematically maintain a racial caste system in the colony. Consequently, race provided the distinction between the enslaved and the free. By the end of the 17th century, Virginia further highlighted perceived racial difference by banning interracial relationships. Soon, a host of similar prohibitive laws appeared in Massachusetts, Pennsylvania, and other colonies. South Carolina, home of a black majority during most of colonial times and thereafter, provided British North America with its first comprehensive slave code in 1691. Borrowing heavily from British slave laws in Barbados, South Carolinians were among the first to establish slaves as a form of chattel. Like cows, houses, or farm equipment, enslaved people were considered as forms of property that could be bought and sold at one's discretion.

As the British colonies matured and grew in size and number, so did the transatlantic slave trade. Throughout the 18th century, the triangular trade between Europe, Africa, and the New World led to the importation of hundreds of thousands of Africans into the colonies and other parts of the Americas. Millions of enslaved Africans traveled across the Atlantic on a perilous journey known as the Middle Passage. For weeks, shackled African captives sojourned in the most abject conditions aboard crowded, unsanitary slave vessels before reaching their new homes in the Americas. For decades, the British dominated this transatlantic trade in enslaved people, but only after the Dutch and Portuguese began to dedicate their attention to slavery in the West Indies and Latin America. By 1680, through both natural increase and extensive importation, enslaved people constituted 17 percent of the colonial population; by 1720, that number jumped to about 70 percent. Slavery was now a part of the American experience.

Still, in some places, mainly the middle colonies of Pennsylvania and New Jersey and in some parts of New England, slavery proved controversial from the very beginning. Quaker Pennsylvanians had religious misgivings about the seemingly violent practice, while many New Englanders preferred to keep the number of blacks in their midst

relatively low. Vermont, for example, banned slavery well before the end of the Revolution. Some northern colonies and later states turned to manumission, or the practice of emancipating the enslaved, either gradually or immediately. Moreover, poor farming conditions and the lack of a plantation complex continued to keep the size of the enslaved population in the northern colonies well below that found in many southern colonies. On the eve of the American Revolution, in 1770, there were as many as 460,000 slaves living in the American colonies, more than 410,000 living in the southern colonies.

The American Revolution and its lofty rhetoric of equality and liberty provided a final blow to slavery in the north. Blacks and whites began to see some of the contradictions in the colonists' declaration of independence from Britain. Fully advocating freedom and liberty and the protection of one's "inalienable rights" seemed rife with hypocrisy, especially since a sizable number of persons inhabiting British North America were held in bondage. Blacks and some whites took every available opportunity to expose the great American paradox: the coexistence of slavery and freedom. In fact, a free black man, Crispus Attucks, became the first colonist to die at the outset of violence between the British and the Americans in the years leading up to the Revolution.

Blacks—enslaved and free—participated and marched in protests against British taxation and imperial policies, and black enslaved women proved crucial to the homespun campaign in the midst of colonial boycotts of British goods. Even before Thomas Jefferson penned those famous words in the Declaration of Independence, enslaved blacks in Massachusetts and other colonies busied themselves drafting petitions to colonial governments seeking their freedom. In many ways, the early antislavery and abolitionist campaigns emerged out of the revolutionary fervor that swept through colonial America before, during, and after the War for Independence.

Freedom, therefore, was not the exclusive domain of white American colonists; blacks also took every open opportunity to experience liberty. During the Revolution, Lord Dunmore, the royal governor of Virginia, lured hundreds, if not thousands, of enslaved blacks and indentured

servants to the Loyalist side. Hoping to capitalize on the slaves' yearning for freedom, Dunmore offered freedom to those who picked up arms to fight against their white masters. Though raising an armed black regiment was neither acceptable nor popular in America or Britain, Dunmore's Ethiopian Regiment quickly filled its ranks with about 800 black soldiers, and Dunmore earned the reputation as "the most dangerous man in America," according to George Washington.

Americans recognized the benefit and expediency of Dunmore's Proclamation, so by early 1778, several northern colonies began to enlist black soldiers in the Revolutionary Army. Those black soldiers joined the fight with the promise of compensation for their masters and freedom for themselves. While the northern colonies grappled with the procedural and political fallout from this bold act of military courage and strategy, southern colonies proved resistant to arming enslaved people. Even after the British hammered the southern port cities of Savannah and Charleston, there was little movement in the direction of enlisting blacks in the fight for independence. Maryland was the only southern colony to eventually incorporate blacks into its militia, and Virginia offered freedom to any slave who would serve in his master's stead in a law passed toward the end of the war.

Once both sides concluded the long, drawn out fighting and signed the Treaty of Paris in 1783, thousands of newly freed blacks left America with the British soldiers. Some estimates put the number of blacks—both enslaved and free—who retreated with British troops at around 14,000, and the number of blacks who simply sought refuge with the British but did not serve in the army ultimately found themselves re-enslaved on some Caribbean island or in Latin America.

Nonetheless, the strong antislavery sentiment that permeated many of the American colonies during the Revolution did not die after the war. In fact, many colonies expressly banned the importation of enslaved Africans, but many did not until the federal government ban in 1808. Virginia once more led the way in this matter, and in 1778, it closed its borders to the transatlantic slave trade. South and North Carolina quickly followed. Years later, Congress also prohibited the westward expansion of slavery by passing the

The internal slave trade in the United States had become a major economic activity by 1815 and lasted until the 1860s. Slave traders established markets like this one as the slave trade became the largest enterprise in the south.

Northwest Ordinance in 1787, and shortly thereafter, a national debate over slavery swept through the Constitutional Convention in Philadelphia as the new nation attempted to establish a federal constitution. Southerners, particularly Georgia and South Carolina, threatened to bypass joining the nation if slavery were abolished.

Ultimately, the delegates agreed not to meddle with the system and even voted to uphold the Three-Fifths Compromise as a means of counting the enslaved population for the purpose of congressional representation and taxation. Meanwhile, as those constitutional disagreements over slavery settled, the enslaved population continued to increase. Eli Whitney's 1793 invention of the cotton gin only led to the further growth of slavery and proved instrumental in expanding slavery to the southwest. Thomas Jefferson's 1803 Louisiana Purchase also paved the way for slavery's entrance into lands west of the Mississippi. Furthermore, by the dawning of the 19th century, slavery was becoming an unshakeable, mostly southern institution.

Antebellum Slavery

In 1804, New Jersey became the last northern state to abolish slavery. By 1810, more than one million enslaved blacks called America home, and the vast majority of them lived in the south. Even after easing some of the previous restrictions on slave importation, many southern states benefited from a robust domestic slave trade, whereas bondsmen, primarily from the upper south, were sold south for a handsome price. Some slaveholders in the Chesapeake region especially resorted to hiring out their bound laborers as a means of generating income from a slowly dying institution in that region. But throughout the Deep South, not only did slave numbers increase, but slave prices also increased.

By some accounts, in the early years of the 19th century, slave prices more than doubled as the demand for enslaved labor continued to increase, and one's personal wealth was also tied to the value of his or her human property. Still, the large, bustling cotton and sugar plantations in the Deep South always needed a replenished labor supply, especially as the global demands for the two commodities soared. Slave auctions, estate sales, and the mere facts of life, namely marriages and deaths, led to a complex and cruel web of buying and selling of human property. New Orleans and other major southern cities and port towns became lively slave trading centers. In the eyes of many bondsmen, the threat and attendant agony of being "sold south" or further south loomed large. The profits earned by slaveholders only gave way to the disruptions and dislocations of enslaved families.

While plantation owners pursued their business interests and continued to hold a race of people in bondage, enslaved people attempted to carve out spaces for autonomy and sought to resist subjugation whenever possible. Although slavery varied by region and from plantation to plantation, it still retained some common threads. Many enslaved Africans held on to certain Africanisms—from agricultural practices to naming and religious customs—and many new cultural practices were created especially for conditions in America. Living in the slave quarters away from white surveillance also gave bondsmen a degree of freedom to develop kin networks, mating rituals, moral codes, and coping mechanisms for the brutality that often accompanied enslavement. More

than anything, the black church was perhaps the strongest cultural form to develop during slavery, and it remains a foundational institution within black communities today.

As the national conversation about slavery intensified by the 1830s, the slave population climbed to nearly 2 million. Despite its steady growth, northern politicians and an energetic abolitionist movement sought to contain slavery, if not end it altogether. Led by some of the nation's most prominent speakers, like Frederick Douglass and William Lloyd Garrison, the abolitionists made numerous arguments about the immorality and corrosive effects of slavery.

This multiracial coalition of reformers pushed the debate over slavery to the forefront of the nation's conscience. Congressional compromises and a series of state and federal court decisions did little to settle the slavery issue up to 1860. The election of Abraham Lincoln to the presidency proved decisive in slavery's ultimate demise. Southern planters viewed Lincoln's victory as the final assault on their way of life and the southern states' rights. After seceding from the Union, beginning in the winter of 1861, the 11 southern states that would compose the Confederate States of America saw war as a necessary means to preserve slavery in the south. So, for four long years, the nation endured a bloody civil war, and the fate of nearly 4 million enslaved blacks hung in the balance.

During the Civil War, black slaves used the widespread chaos to once more press for freedom. While thousands flocked to the Union lines throughout the war, hundreds more joined Union soldiers to fight for their freedom. Those who could not enlist or join the military ranks found other ways to serve. At the start of 1863, President Lincoln issued the Emancipation Proclamation, freeing those slaves in the rebellious territories throughout the south. Two years later, Congress ratified the Thirteenth Amendment, officially ending slavery. Though free, the long road to liberty stood littered with obstacles. Freedmen would have to call for greater equality before the law and in society well into the 20th century. Thus, the transition from slavery to freedom remains the defining experience of black life in America.

Sleepy Lagoon Case

On the Williams ranch outside Los Angeles, one of the irrigation reservoirs was known as the Sleepy Lagoon. Named for a popular song of the time, the lagoon served as a swimming hole by day and a lover's lane by night. On August 1, 1942, the Sleepy Lagoon became notorious after the murder of a young man on the property generated a violent police clampdown against Mexican American youngsters known as *pachucos*.

Most of those who went to the Sleepy Lagoon were the city's young Mexican Americans, who were denied access to the city's public recreational facilities. The Mexican American community used the reservoir in a gravel pit on the ranch as a substitute for the city's off-limits swimming pools. Among the users were members of the 38th Street

Boys, a South Los Angeles street gang whose turf was about five miles from the Williams ranch in East Los Angeles.

The Murder

On the night of August 1, 1942, several people associated with the 38th Street Boys, including Hank Levayas and Dora Barrios, came to the lagoon for a bit of romance. Levayas was one of the oldest of the gang's members, and many of the others both feared and respected him. Barrios was his girlfriend.

As Levayas and Barrios sat in a car, a gang from a rival neighborhood in Downey attacked and beat them. Levayas was popular, and the rival gang had violated the unwritten rule against beating a girl. Levayas went to 38th Street and collected a gang of nearly 30 boys and girls. By the time they returned, the Downey gang was gone.

Sounds of a party given by Amelio and Angela Delgadillo drew the group's attention. Levayas was convinced that party attendees included the rival gang members who attacked him and Barrios. After converging on the Delgadillos' house, the 38th Street gang members beat some of the partygoers for 10 minutes. When the fight was over, Jose Diaz lay on the ground, beaten and stabbed. He died later that night.

Diaz, Mexican-born but American reared, went to the party held that night by his friends the Delgadillos, immigrant workers on the ranch where he also lived. Although Diaz was a Mexican citizen and exempt from the draft, he had volunteered for the U.S. Army. Diaz was to join the army in a few days, so a party was in order. He felt drunk at about 1 A.M., left the party, and was attacked by parties unknown, stabbed in the stomach with an ice pick, and his pockets turned out. He was found shortly after by Betty Zeiss and Barrios and taken to the hospital, where he died 90 minutes later.

Cuthbert L. Olson, the Democratic governor of California, believed juvenile delinquency was out of control, and he used Diaz's death as justification for aggressive action. The governor's call for action led to a city crackdown with massive police-encouraged publicity and a sustained dragnet. After authorities tied Levayas and the 38th Street gang to the crime scene, indictments and a trial followed.

The Los Angeles Police Department (LAPD) rounded up more than 600 “zoot suiters,” mostly Mexican Americans, and the district attorney indicted Leyvas and 21 other members of the 38th Street Boys. The LAPD also jailed female members of the gang on suspicion of wrongdoing. With the exception of one person, all of the accused were Mexican American.

The Trial and Aftermath

The trial in the case of *People v. Zamora* began on October 13, 1942, the largest mass trial in California history. The press encouraged an atmosphere of prejudice, as did the prosecutor, who frequently pointed to the pachuco hairstyles and clothing of the defendants as evidence of guilt. For months, the Sleepy Lagoon murder trial made headlines, the tabloids proclaimed the 38th Street Boys guilty, and a jury eventually agreed. On January 12, 1943, five of the 17 defendants were found guilty of assault and sentenced to six to 12 months in jail. Nine received sentences of five years to life for second-degree murder. Leyvas, Jose Ruiz, and Robert Telles were convicted of first-degree murder and received life sentences. The 12 convicted of murder went to San Quentin State Prison.

The women defendants refused to testify against gang members, and for this refusal were sent to the Ventura School for Girls, the women’s reformatory, without trial or jury. Among the five sent to the reformatory was Barrios.

The Sleepy Lagoon Defense Committee (SLDC), formerly the Citizen’s Committee for the Defense of Mexican American Youth, was organized by the community and headed by Carey McWilliams, author and attorney. The SLDC attracted citizens from the community, film industry, labor, politics, and education. The committee spearheaded the effort to appeal the case and educate the public. Alice McGrath became executive secretary, and she visited the inmates every six weeks, tracked SLDC progress, and issued news releases. By 1944, the SLDC had enough money to appeal the convictions. On October 4, 1944, Judge Clement Nye of the Second District Court of Appeals overturned the verdicts because of insufficient evidence, denial of counsel, and obvious bias by the trial judge.

There was no retrial, and the murder remains unsolved. One of the 38th Streeters did beat Diaz

about the chest and legs, but his blows were not the cause of Diaz’s death. It is more likely that one of the Downey gang members tossed out of the party before the arrival of the 38th Streeters was the murderer,

The fad of wearing zoot suits faded not long after the trial and subsequent Zoot Suit Riots, which took place in Los Angeles a few months after the trial concluded. Sleepy Lagoon was eventually filled in to accommodate urban sprawl. Author Eduardo Obregón Pagan argues that neither the convictions nor the riots were the result of simple anti-Mexican sentiment. Rather, they were the result of a mix of demographic pressure, worry about the new youth culture, and the stress of the war effort. In combination, these generated social tension that provoked violence.

Slovak Americans

The first Slovak immigrants arrived in the United States in the 18th century, before the Revolutionary War. Slovak Americans are now the second-largest Slavic ethnic group in the United States, numbering 762,030 in the 2010 Census, although other sources claim the actual figure is 50 percent greater. The numbers of Slovak Americans may have declined because of low birth rates and repatriation, as many Slovak émigrés returned to Slovakia after it regained sovereignty. The larger figure may include a number of Americans whose ancestors immigrated from Czechoslovakia and were not identified as, or do not consider themselves, Slovak. In either case, the United States has the largest Slovak population outside Slovakia, by a significant margin.

The Slovak Republic is bordered by the Czech Republic, Austria, Poland, Ukraine, and Hungary, and at various points in history was part of Moravia, Hungary, the Austro-Hungarian Empire, and Czechoslovakia. After the fall of European communism, Czechoslovakia peacefully separated into two geographically and ethnically distinct states, Slovakia and the Czech Republic. Along with Estonia and Slovenia, Slovakia is one of the few formerly communist states to join the European Union and the North Atlantic Treaty Organization (NATO). The population of Slovakia is predominantly composed of Slovaks, who are a Slavic people.

Waves of Immigration

There were only a handful of Slovak immigrants before the 19th century, and some of them were itinerants who moved on to other countries or returned to their homeland. Others were soldiers, including Major Jan Polerecky, who fought for the Americans in the Revolutionary War and then settled down to public life in Maine. Slovaks were also included in the Lincoln Riflemen of Slavonic Origin, a volunteer unit from Chicago that fought for the Union in the Civil War as part of the Twenty-fourth Regiment of the Illinois infantry.

Sustained immigration from Slovakia began in the 1870s, as a result of the Austro-Hungarian Empire's policies, which attempted to impose Magyar culture on the non-Magyar population.

At the time, neither the U.S. Census Bureau nor immigration policies differentiated among the constituent peoples of the Austro-Hungarian Empire. A popular estimate of the number of Slovak immigrants in the 19th and early 20th centuries, before immigration was restricted in 1924, is 500,000. Most settled in Pennsylvania, others in the mid-Atlantic states. Not all Slovaks identified themselves as Slovaks; the empire's policies had taken hold, and many Slovaks had begun to think of themselves as Hungarian.

About a third of the Slovak immigrants in this period were "birds of passage" who came to America to work long enough to make the money they needed to purchase land or other property back home. About 20 percent made repeat trips—working in the United States for several years, returning to their homeland for a period of time, returning to the United States to earn more money, and eventually returning home for good. Because of this, men outnumbered women significantly in the immigrant population. Those who remained sometimes married American women.

The reasons to stay in the United States varied. Some Slovak immigrants enjoyed their new country more than they expected. Others found opportunities too good to pass up. Others formed attachments or started families that they did not want to displace, especially children who thought of themselves as Americans. Still others were simply unable to follow through with their original plan—there were so many Slovaks working in the United States, earning money to buy land back home, that prices rose and the supply of land diminished.

Slovak immigrants stayed in the United States despite the reception they received. Slovaks began immigrating to the United States at a time when anti-immigration and "antiforeigner" sentiment was high, and some political parties made their prejudices the centerpiece of their political platforms. Labor unions and workingman's parties regularly opposed immigration on the grounds that importing workers hurt the prospects of American workers, particularly before the institution of the minimum wage. Many Americans openly decried the way in which the ethnic makeup of the United States had changed in a few decades. When immigration reforms were enacted in the 1920s, eastern

European immigration was severely restricted, and less than 3,000 Czechoslovakians—perhaps half of whom were Slovaks—immigrated to the United States annually until immigration policy was liberalized in 1964.

Slovak American Life and Culture

In part because so many Slovaks did not come to the United States to farm or to homestead, they settled in places where there was industry, especially where there was a demand for labor. For at least half of the immigrants, this meant western Pennsylvania, where they worked in the coal mining industry. After the first two decades of settlement, nearly all Slovaks migrated to communities where they had relatives or acquaintances—communities with existing Slovak populations. In addition to Pennsylvania, they settled in New Jersey, New York, Illinois, and Ohio.

These Slovak Americans assimilated without abandoning their culture. Many continued to observe feast days important to the Slovak Christian community, such as the April 25th feast of Saint Mark. Christmas has always been an important celebration in Slovakia, a tradition that certainly posed no difficulties in assimilating in the United States. Though most religious ceremonies among Slovak Americans are broadly similar to those of the American mainstream, Slovaks often “bonnet the bride”—a special occasion held three days after the wedding.

Prominent Slovak Americans include musician Jon Bon Jovi, actors Jim Caviezel and Paul Newman, artist Andy Warhol, Department of Homeland Security Secretary Tom Ridge, former governor of Minnesota Jesse Ventura, and Marvel Comics artist Steve Ditko, co-creator of Doctor Strange and Spider-Man.

Slovene Americans

There are 171,923 Slovene Americans as of the 2010 Census. Slovenes are a south Slavic people, primarily residing in the central European country of Slovenia, with Slovene minorities in the neighboring countries of Austria, Hungary, and Croatia. Slovenia was part of both the Roman Empire and the Holy Roman Empire, and it was later a constituent state of Yugoslavia, which split apart after the fall of European communism in the 1990s. Slovenia has been an independent democracy since 1991.

Slovenes began settling in the state of Georgia in the 1730s, two generations before the Revolutionary War, and bilingual Slovene Germans were among the first settlers of communities in Wisconsin and Minnesota. Sustained Slovene immigration began in 1880 and continued until 1924 legislation imposed nationality-based quotas on immigration. Because of the vagueness of the language used by both immigration officials and the Census Bureau at the time, it is difficult to pinpoint exact numbers; Slavonic, Slavic, Austrian, Croat, and simply European were all labels that could be and were attached to the incoming Slovenes. By and large, Slovenes settled in industrial counties and the mining communities of western Pennsylvania, West Virginia, and Ohio. Another wave of immigration came after World War II, in part due to the devastation of that war in Europe and in part as Slovenes fled the newly communist Yugoslavia.

Slovene Americans are the most concentrated in Ohio (by far, with over 60,000 Slovenes), Pennsylvania (a third as many), and Illinois (about 16,000). The Chicago Slovene community established the first Slovene American newspaper,

Amerikanski Slovenec, and numerous other communities established fraternal organizations and social clubs, providing social networking, insurance, and other services. Cleveland has become the largest Slovene American community and the cultural capital of Slovene America; Pittsburgh, Chicago, and Milwaukee are all large as well.

Slovenian Identity

Popular symbols of Slovenian identity, which have experienced a revival in the Slovenian diaspora since Slovenian independence, include not only the white, blue, and red flag of Slovenia and the coat of arms that adorns it, but also the red carnation; the Lipizzaner horse, which is endemic to Slovenia; the legend of the Zlatorog, a magical chamois (related to the antelope); cartographer Peter Kozler's 19th-century map of Slovenia, which symbolically represents Slovene culture today; and the Carinthian heraldic black panther, which is especially used by Slovene nationalists, which include some repatriated Slovene Americans.

The Slovene community in Cleveland developed Cleveland-style polka, or Slovenian-style polka. A traditional Central European dance-music style, polka originated in the 19th century and was one of the more popular folk music genres at the time many Slovene immigrants came to the United States (and remains popular today, of course). Cleveland-style is one of several distinct American styles of polka and features a fast tempo and the use of the piano accordion, diatonic button box accordion, or chromatic accordion. It was originally played in Slovene American clubs and union halls, often accompanied by a saxophone and rhythm section, with English lyrics that are generally translations of Slovene folk songs. Elements of early jazz and contemporary classical music were incorporated, a distinct American influence, and the style became popularized by Slovene American Frankie Yankovic (no relation, contrary to urban legend, to contemporary recording artist "Weird Al" Yankovic).

At the height of its popularity, the Cleveland-style polka was well known to American audiences from Yankovic's appearances on *The Tonight Show With Johnny Carson*, among other venues. In the mid- to late 20th century, when radio stations were more diversified, many midwestern cities had at least one

radio station broadcasting a significant amount of polka music, and in some communities it remained more popular than rock music for much of the century, just as country music has done in parts of the south. Cleveland-style polka continues today with artists such as Joey Tomsick, Don Wojtla, Eddie Rodick, Bob Kravos, and Eric Noltkamper, and Cleveland has added the Cleveland Style Polka Hall of Fame, though the city remains better known for its Rock and Roll Hall of Fame.

Other American styles of polka include the Chicago Honky, using trumpet and clarinet, and the Chicago Push, using an accordion, upright bass, two trumpets, drums, and concertinas. Both, of course, originated in the Chicago community. The Dutchmen-style polka comes from the midwest and uses a tuba and banjo. Since the 1980s, a number of punk polka bands have formed in the Slavic American community, some of them featuring Slovene Americans; punk polka combines elements of early 1980s punk influences and rock tropes with polka and instruments traditionally associated with polka.

Prominent Slovene Americans include Micky Dolenz, of the Monkees; actor Frank Gorshin, best known as the Riddler in the *Batman* TV series; football player and sports radio personality Mike Golic; journalist Charles Kuralt; astronauts Sunita Williams and Ronald Sega; Senator Tom Harkin; and Donald Trump's third wife, Melania, born Melanija Knavs.

Smith v. Allwright (1944)

In 1944, the U.S. Supreme Court decided *Smith v. Allwright*, a landmark civil rights case that held that the Texas Democratic Party's white primaries violated the Fifteenth Amendment to the U.S. Constitution. This important decision was a watershed moment in the battle against the disenfranchisement of African Americans and a key precursive case for the civil rights movement. Consequently, *Smith v. Allwright* is an essential example of a Supreme Court case that has had widespread implications on multiculturalism in America.

History

In this case, Lonnie E. Smith, an African American citizen of Harris County, Texas, brought suit against the election judges of the 1940 Democratic primary for his precinct after they refused his right to participate in the election solely because of his race. Specifically, Smith alleged that this action violated his constitutional rights, as guaranteed by Article I and the Fourteenth, Fifteenth, and Seventeenth Amendments to the Constitution. The district court and the Fifth Circuit Court of Appeals denied the relief sought by Smith by relying on *Grovey v. Townsend*, a 1935 Supreme Court case that found that a Texas county clerk's refusal to furnish an absentee ballot in a primary election to an African American was not a violation of the Fourteenth or Fifteenth Amendment, as a primary was not state action. Subsequently, the Supreme Court of the United States granted certiorari in *Smith v. Allwright*, and future Supreme Court Justice Thurgood Marshall, as an attorney for the National Organization for the Advancement of Colored People (NAACP) Legal Defense and Educational Fund, argued on behalf of Smith for the case.

At the outset of its decision, the Supreme Court provided the background of the Democratic Party of Texas, which had resolved in 1932 that only white Texans who were qualified to vote were eligible for membership in the party and, therefore, entitled to vote in its primaries. Furthermore, the Supreme Court explained that the Texas Supreme Court had deemed the Democratic Party of Texas to be a voluntary association. The Harris County precinct judges based their arguments on these facts, claiming that the Fourteenth, Fifteenth, and

Seventeenth Amendments did not apply to primaries, because primaries were "political party affairs" and not state affairs. In doing so, the judges heavily relied upon the Supreme Court's earlier decision in *Grovey v. Townsend*.

Although the Supreme Court recognized that "Texas [was] free to conduct her elections and limit her electorate as she may deem wise," it also found that the state could not do so if it violated the U.S. Constitution. The court proceeded to find that the right to vote in a primary, "like the right to vote in a general election, is a right secured by the Constitution." In expanding upon this statement, the court stressed that the Fourteenth Amendment provides equal protection under the law for all people and that the Fifteenth Amendment provides constitutional protection for the right to vote, regardless of race or color.

Thurgood Marshall, representing the NAACP, argued this case in favor of Lonnie E. Smith in 1944. Marshall was an associate justice of the U.S. Supreme Court from 1967 until 1991. He was the first African American justice.

First Steps to the Civil Rights Movement

With this foundation in place, the Supreme Court proceeded to examine whether the acts of the Democratic Party of Texas in denying the right to vote in its primary to an African American was state action (and thus regulated by the U.S. Constitution) or private action. The court found that these actions were state action, given that state statute authorized primary elections, the primary elections were the mechanisms for the selection of candidates for the general election, and state courts had jurisdiction over contested primary elections. As a result, the court found that the discriminatory practice of the Texas Democratic party in the white primaries was violative of the Fifteenth Amendment. The opinion, authored by Justice Stanley F. Reed, eloquently pronounced the following:

The United States is a constitutional democracy. Its organic law grants to all citizens a right to participate in the choice of elected officials without restriction by any state because of race. This grant to the people of the opportunity for choice is not to be nullified by a state through casting its electoral process in a form which permits a private organization to practice racial discrimination in the election. Constitutional rights would be of little value if they could be thus indirectly denied.

Thus, this case overruled *Grovey v. Townsend* and reversed the lower Fifth Circuit Court of Appeals decision.

Smith v. Allwright had a substantial effect on elections throughout the south by eliminating white primaries and by serving as the genesis for a significant increase of voter registration by African Americans. The case is considered to be a first step in the origins of the civil rights movement as well as an early example of a Supreme Court decision that ultimately led to the decision in *Brown v. Board of Education* (1954). Consequently, this case is an incredibly important one in American jurisprudence. It stands as a core example of a victory against racism in American governance and as a decision that supports the flourishing of multiculturalism in this country.

Soccer and Ethnic Diversity

Soccer, called football or association football outside the United States, is a sport that grew out of numerous ball-and-foot games, which have been played throughout the world for thousands of years. The modern form of the game originated at Cambridge University in the United Kingdom in 1848, at a time when a large number of sports, all called football, were being played in Britain's public schools, each with mild variations in the rules. Of those sports, soccer and rugby proved the most enduring, whereas American football developed independently in the United States, resulting in the American use of the term *soccer* for the British game. American soccer history seems to begin with Boston's Oneida Football Club, founded in 1862 and consisting of boys from the city's most elite schools, including the Boston Latin School. Despite its very WASPish origins, soccer has become at least as diverse as the major American sports of baseball, basketball, and football.

Growth of Soccer in the United States

The United States Soccer Federation, founded in 1913, organized American soccer on the

national level for the first time, superceding earlier regional organizations. Soccer at the time remained popular primarily in the northeast, but professional soccer soon expanded to the midwest. Still primarily white, the game attracted players and fans from a variety of ethnic backgrounds, including German, Finnish, and Swedish Americans in the midwest. The growth of early professional soccer was stifled by the Great Depression, but even as the sport declined at the national level, it became increasingly popular in New York City, midwestern cities such as St. Louis, and ethnic enclaves in New England, such as among the Portuguese and Brazilians of the coast and the Quebecois of the mill towns. The perception of soccer as an ethnic sport, especially (in most parts of the country) for central Europeans and Italians, persisted until the 1970s.

In 1923, the German American Soccer League was formed by five semiprofessional soccer teams in the New York/New Jersey area: S.C. New York, Wiener Sports Club, D.S.C. Brooklyn, Hoboken FC 1912, and Newark SC. The teams were primarily made up of German Americans and other European immigrants, and the league soon expanded to include other teams, a junior division, and several lower divisions. In 1927, it was renamed the German American Football Association (GAFA). During and after World War II, GAFA prospered as an influx of central and eastern Europeans fleeing first the war and later the eastern European communist regimes filled both the stadiums and the player rosters.

GAFA team names continued to reflect the ethnic origins of their players, including the German-Hungarian SC, New York Hungaria, the Brooklyn Italians, and Greek American AA, in addition to the founding teams. When the North American Soccer League (NASL) formed in 1968, GAFA was invited to let one of its teams join. The eventual decision was for the GAFA All Star team to join as the New York Cosmopolitans (or Cosmos for short), a name meant to imply something grander than the New York Metropolitan baseball franchise. The Cosmos became a NASL team in 1971.

In the 1960s and 1970s, one of the most prominent sports figures in the world was Pelé, the Brazilian soccer star whose dominance of the game raised interest in the sport and helped inspire renewed

efforts at popularizing it nationally in the United States. When Pelé's career in Brazil declined, he was acquired by the New York Cosmos in 1975. The team already consisted of a large number of foreigners and was coached by Englishman Gordon Bradley. Pelé's presence, though he was no longer at the peak of his skills and 20 years into his professional career, propelled the Cosmos and the NASL into true commercial success, despite the fact that the Cosmos didn't even make it to the playoffs.

Other soccer stars such as Italian forward Giorgio Chinaglia, West German defender Franz Beckenbauer, and Dutch midfielder Johan Cruyff also contributed to the rise of soccer in the United States. At the height of the league in 1978, the New York Cosmos played to a sold-out crowd at Giants Stadium (over 73,000 people). This was in large part because of Pelé and Beckenbauer—both past their prime, but still significant figures in the game. However, the league did not last long due to low attendance rates and the loss of its television deal. Even though the league survived for only 16 years, it provided an avenue for individuals from every ethnic group to be a part of professional soccer in the United States, if they were talented enough to do so. The decline began only two years later, when Pelé retired. NASL folded in 1984, succeeded by Major League Soccer (MLS), which was founded in 1993.

GAFA changed its name to the Cosmopolitan Soccer League in reference to its famous offshoot. Teams were given one year to change their names to ethnically neutral ones. Not all complied. The Brooklyn Italians, who briefly called themselves the Dodgers after this rule, reverted to their original name in 1991. The name changes were part of an attempt to "Americanize" the sport, as the NASL was doing. The Cosmopolitan Soccer League was the de facto first division soccer league in the United States in the interim between the folding of the NASL and the founding of MLS, but operates today as an amateur league.

Immigration has played a large role in the popularity of soccer in the United States and in the demographics of its fans. In the 2010 World Cup, for instance, a dozen players who were children of immigrants played on the U.S. national team. According to Major League Soccer, the professional soccer league in the United States,

about a quarter of the fans who describe themselves as “loyal Major League Soccer fans” are Hispanic. The sport is more popular among first- and second-generation Americans—many of whom come from countries where soccer is the leading sport—than among the general population. Soccer is also more popular among African Americans than whites. Major League Soccer has described its fan base as significantly more African American than the general population, and the U.S. team in the 2010 World Cup was 30 percent black.

There are several reasons for the increasing popularity of soccer. Major League Soccer has made a major marketing push since the 1990s to draw attention to the sport. The significantly vaster cable television landscape has made it easier for American fans to not only watch the World Cup but also watch foreign soccer games such as those of the Premier League and the MLS. The advent of digital video recorders has allowed them to do so even if there is a scheduling conflict. Furthermore, the population groups among which soccer is most popular are steadily growing. Specifically, the Hispanic population in the United States grew from 35.3 million in 2000 to 50.5 million people in 2010, which constitutes a 43 percent growth rate. About three-quarters of all Hispanics reported they were of Mexican, Puerto Rican, or Cuban backgrounds. Other ethnic group populations, such as people of Salvadoran origin, grew by 152 percent (accounting for 3 percent of the total Hispanic population), and those of Guatemalan descent grew by 180 percent (representing 2 percent of the Hispanic population) from 2000 to 2010.

With the influx of immigrants to the United States, the game of soccer is gaining popularity on American fields and in stadiums. The importance of having opportunities to play soccer without regard to the race, religion, class, or ethnic background of the players is a major priority for many people around the world, including those living in the United States. Soccer has undergone many changes and will continue to do so as the number of immigrants and first-generation Americans continues to increase. The game of soccer can absorb these changes and embrace people from different groups who come together to play the game they love.

Immigration and Soccer

The increase in the total number of immigrants and the identification of ethnic groups is important to the game of soccer because each ethnic group brings with it a certain style of playing the game and its application to their way of life. For example, individuals from Hispanic ethnic backgrounds seek out opportunities to continue playing the game once in the United States and pass the game on to their children (particularly boys, but this is slowly changing to also include girls). It is not uncommon to see pickup games on fields or in parking lots in which people from Mexican and Puerto Rican backgrounds are playing against each other with the vigor of representing their national team. These games serve as an avenue to showcase talent and style, which is something to take pride in and pass along to younger generations.

As soccer serves as a means to engage with individuals of the same ethnic identity, it can be a source of support, especially for new immigrants. In large metropolitan cities, one can routinely find soccer teams that define an ethnicity. For example, on the fields in Philadelphia, it is easy to find players of Ukrainian descent playing against people of German descent. Each team will come from a larger community that endorses the culture and style of play passed down from earlier generations. This socialization process carries on the importance of soccer in the lives of immigrants.

Individuals who are new to the United States face the difficulty of having to blend in with their new communities and surroundings while also trying to maintain their customs and traditions. Local soccer clubs centered on specific ethnic groups are designed to help individuals stay connected to their roots while also gaining an understanding of the many other ethnic groups that are also assimilating into American society (ethnic diversity). Soccer serves as a way to fit in and stick out at the same time. The players try to fit in by playing the game on organized teams, but many times immigrants have learned a higher level of soccer than their American counterparts, so they stick out in their superior ability to play the game.

Refugees in particular can rely on soccer to help create a sense of community. For example,

individuals fleeing from war-torn areas of the world come to the United States seeking a better life and use soccer as a means to meet new people, interact with others that are like them, and find a way to be a part of a new world. Although players may come from different ethnic groups, soccer is a common and inclusive language. Often, specific ethnic groups will host soccer tournaments for teams of the same ethnic group around the region or nation. These tournaments provide the means to pass on the style of play specific to an ethnic group. The influx of immigrants and refugees impacts multicultural America by increasing the ethnic diversity of the player pool.

U.S. National Teams

The ethnic makeup of full national soccer teams and youth teams has changed in recent years. The full men's national team has seen names such as Edu, Bornstein, and Gomez listed on its roster. Carlos Bocanegra, an American of Mexican descent, rose to become team captain. The men's national soccer team has embraced multicultural America, and the roster reflects this commitment of giving an opportunity to the best players in the country, regardless of their heritage. Even the head coach is not a native-born American. Jurgen Klinsmann, who was born in Germany, was appointed head coach in 2011 and brings with him tactics, skills, and an understanding of the game that stem from this ethnic background. The impact of players' ethnic histories on the game of soccer cannot be overlooked when examining the evolution of the game in the United States. Multicultural America is resulting in a multicultural game of soccer being played in the United States.

Similarly, national youth teams are increasingly more diverse as children of immigrants are rising to elite levels of ability. However, the national youth teams and women's full teams are not as far along in terms of diversity as the men's program. Many individuals of ethnic descent often play for other national teams (such as Mexico) but rarely appear on the roster of the U.S. team. The women's national team is not reflective of the ethnic diversity of the country and thus does not provide many role models for the millions of girls of different ethnic backgrounds who want to play professional soccer. The feeder system to the full national team needs to be more cognizant of the diversity of players who

are available in the United States. This may require scouts to go to large-scale tournaments in which elite teams play, but also to fields in large and small cities to find those athletes who cannot afford to play on expensive teams but have the skills to be a part of a national team.

Social Media

Since its first iterations, social media have been used by a diverse array of people to express themselves, articulate community, and create alternative pathways to public visibility and fame. With an emphasis on audience participation and user-generated content, social media have the potential to allow a multitude of voices to enter public discourse. However, despite this democratizing potential, social media can also reflect and reinforce hegemonic power structures, often resulting in unequal usage of different sites by different groups, as well as the circulation of stereotypical racial discourses.

Broad Definitions and Usage

Social media is an umbrella term that refers to a broad array of Internet-based computer programs and applications that invite user-generated content and audience participation, enable direct peer connection and networking, and offer a highly customizable information stream. The term *social media* comprises other, more specific concepts, such as Web 2.0 and social network sites (SNSs).

“Web 2.0” refers to the development of Internet-based applications that run in a Web browser, use of programming language that allows for dynamic in-browser interaction without hitting “reload,” and user-generated content. SNSs are Web sites on which users create profiles and articulate connections with other users. Notable social media include Facebook, YouTube, Twitter, Yelp, and Wikipedia.

The mid-2000s saw an explosion in the usage and influence of social media. The 2005 sale of MySpace for \$580 million to News Corp., a large transnational media conglomerate, was an early sign that the commercial mass media landscape would change as a result of the influence of social media. Facebook, which opened to the public in 2006, claimed more than 900 million users per month worldwide as of April 2012. Other important historical events that highlight the growing influence of social media in the late 2000s and early 2010s include the 2008 presidential campaigns, during which Barack Obama announced his running mate over text message directly to Obama Web site subscribers before contacting members of the press, as well as the 2010 to 2011 Arab-world revolutions collectively known as the “Arab Spring,” which relied heavily on information dispersal over social media in the face of state-controlled traditional media.

Some of the earliest forms of social media were devoted to people of color. BlackPlanet, Asian Avenue, and MiGente in the early 2000s served as networking, dating, and community issues sites for minority populations. Since then, people of color have actively cultivated a presence on social media that takes advantage of their participatory qualities and democratizing potential. In contrast to traditional media, which require huge resources to produce and distribute to a wide audience, social media have a very low barrier to entry coupled with the potential for massive visibility. This has enabled a wider diversity of people to gain large followings over social media than via traditional media such as television or film, where people of color are often relegated to bit parts and stereotypical portrayals. Asian Americans, for example, claimed four of the top 20 YouTube channels in 2012, with comedian Ryan Higa alternating between the number one and number two most-subscribed

channels on YouTube that year, with over 4 million subscribers. Michelle Phan, whose YouTube channel is devoted to beauty and makeup tips, was the most-subscribed-to woman on YouTube in 2012, with 1.5 million followers.

Use and Ethnic Diversity

Not all groups use social media equally. In 2007, researchers found that Hispanic college students preferred MySpace over Facebook as their SNS of choice, and that white and Asian American college students overwhelmingly preferred Facebook. Internationally, different social networking sites are popular in different countries and cultural contexts. Orkut, a social networking site that was developed by Google in 2004, was highly popular in Brazil throughout the late 2000s, though rarely used in the United States; Cyworld was launched in 1999 in South Korea and claimed that 90 percent of all South Koreans in their late teens and early 20s were members by 2006.

Twitter, the short-format microblog service, has a high popularity among African American and Hispanic Internet users. In 2011, one-quarter of all African Americans who used the Internet also used Twitter, as well as 19 percent of Hispanic Internet users, compared to 9 percent of white Internet users. African Americans are far more active than whites on Twitter, with 11 percent visiting the service every day in 2011 compared with 3 percent for whites. Whites made up 79 percent of users of Pinterest, an image-and-link-sharing social network site, in 2012, with its users also being overwhelmingly female.

At the same time that social media afford a wide array of people the ability to express themselves and connect with others, real-world racial divisions and prejudices are often ported online via social media, making it a complex space that mirrors society as a whole.

Souls of Black Folk, The

The Souls of Black Folk is a collection of 14 interdisciplinary essays penned by W. E. B. Du Bois—one of the major intellectuals in the 20th century—with an emphasis on the black condition and experience in the post-Reconstruction era. Nine of these essays had previously appeared in the pages of prestigious magazines or journals of the day, including *Atlantic Monthly*, *Dial*, *World's Work*, *Annals of the American Academy of Political and Social Science*, and *New World*. In the new text, Du Bois strengthens his arguments by restructuring and polishing these "fugitive pieces" and blends the old pieces with the five new or unpublished essays in order for *Souls* to become an integrated and unified narrative. Each chapter in *Souls* is prefaced by two quotations. The first is a citation from a famous writer, usually a Western poet; the second is a bar of music from a black spiritual, what Du Bois calls "the sorrow songs"—the title of the last chapter of the book—which valorizes African cultural heritage as a gift to America. With brilliance and creativity, *Souls* underscores the longings of African Americans for political freedom and rights, economic equality, social justice, and educational opportunity, as well as their yearnings for self-expression in a nation that had been hostile to them.

Since its publication in 1903, *Souls* has quickly become a founding text of black studies and one of the most important books in American intellectual history. In underlying the significance of *Souls* in black life, poet and activist-intellectual James Weldon Johnson states that "this remarkable

book . . . had a greater effect upon and within the Negro race in America than any other single book published in this country since *Uncle Tom's Cabin*." African American poet and novelist Langston Hughes singled out this seminal text in reminiscing that "my earliest memories of written words are of those of Du Bois and the Bible."

Souls paints with clarity and grace the culture, the history, the sociology, and the spirituality of the African American people. In seeking to explain to "the white world" the strivings of black Americans, Du Bois develops the major intellectual motifs and theoretical concepts throughout the book, such as "double-consciousness," the "two-worlds," "the veil," and "the Talented Tenth," which he associates with American identity and mentality, American democracy and freedom, black leadership and self-determination, and America's racial dilemma. Whether the white world would listen to Du Bois as he plays the role of intellectual-activist and the champion of American democratic ideals, he nevertheless wants white America to ponder the arresting question, "How does it feel to be a problem?" underlying the psychological experience and "the souls" of black America and the complex relationships between black and white Americans.

Purpose of the Essays

In the prefatory "forethought" of *Souls*, Du Bois describes his purpose as "to sketch, in vague, uncertain outline, the spiritual world in which ten thousand Americans live and strive." He is also interested in fleshing out the manifold contributions and prodigious cultural gifts of Africans to the American civilization, as well as challenging the prevailing ideological myth that "Africans were on the bottom rung of the great chain of being and that blackness was a badge of shame." He articulates with rhetorical force,

We the darker ones come even now not altogether empty-handed: there are to-day no truer exponents of the pure human spirit of the Declaration of Independence than the American Negroes. . . . Here we have brought our three gifts and mingled them with yours: a gift of story and song—soft, stirring melody in an ill-harmonized and unmelodious land; the gift of sweat and brawn to beat back the wilderness,

W. E. B. Du Bois and Mary White Ovington, a suffragette and journalist, were honored with a commemorative medallion in The Extra Mile. The Extra Mile is a national monument set in the sidewalks of Washington, D.C., with the markers forming a one-mile walking path. The monument honors individuals who helped others through their personal sacrifices .

conquer the soil, and lay the foundations of this vast economic empire two hundred years earlier than your weak hands could have done it; the third, a gift of the Spirit. Around us the history of the land has centred for thrice a hundred years. . . . Would America have been without her Negro people?

The first essay, "Of Our Spiritual Strivings," outlines the "strange experience" of isolation and alienation of African Americans in the American nation that Du Bois summarizes with this provocative question: "Why did God make me an outcast and a stranger in mine own house?" Du Bois argues that the goal of black life is to attain self-consciousness and to be true to itself. The next chapter, "Of the Dawn of Freedom," describes

the history of blacks after slavery and highlights the significance of emancipation for the formerly enslaved people. "Of Mr. Booker T. Washington and Others," the most controversial part of the book, rebukes the leadership style of the most powerful black man at that time, associating with his vision for the destiny of the black population.

"Of the Faith of the Fathers" is the first systematic and historical survey of the significant role of religion in black life and the shaping black cultural identity. It is through black religion distinctively that Du Bois is able to draw links between American Africans and their ancestral land, Africa, as well as to show continuities between them and African lingering "survivals" in the New World. "Of the Passing of the First-Born" is one of the most moving chapters in the book, recounting in

poetic style the passing of Du Bois's young son, who died of nasopharyngeal diphtheria in 1899. "Of Alexander Crummell" is written in elegiac prose, affirming the sacrificial life of this extraordinary figure whose multifaceted contributions to the black community in North America and Africa toward their freedom and autonomy is remarkable.

Souls is also memorable for Du Bois's prophetic declaration, "The problem of the Twentieth Century is the problem of the color line." The book still reminds us today about the strivings of thousands of Americans to experience in their everyday life the fundamental American democratic ideals of justice, liberty, and equality for all.

Sounder

Sounder is a 1969 young adult novel, written by William H. Armstrong, about a young African American boy, his family, and their hunting dog named Sounder. Written in a simple, direct narrative style that is reflected in James Barkley's illustrations, Armstrong's novel won the Newberry Award in 1970 and was adapted into a film in 1972. *Sounder* is a valuable part of the children's literature canon, not only because of its representation of sharecropping in the American south but also because it raises provocative questions about multicultural literature and authorship.

Armstrong's novel tells the story of an African American boy whose parents work as sharecroppers and whose father is arrested for stealing a

ham and some pork sausages. At the same time, the novel also tells the story of Sounder, the family's coon dog, who got shot by one of the deputies arresting the father. After his father's arrest, the boy spends much of his time trying to find the injured Sounder, but to no avail. Sounder finally returns home, horribly disfigured, several months after the father's arrest, on the morning after the boy visits his father in jail. Although Sounder has returned, the boy still feels restless and spends much time each year after the harvest trying to find his father on one of the chain gangs around the state. During his travels, the boy meets a teacher who offers him a job and a place to live during the winter, a position that enables him to learn how to read.

After several years, the father returns home, having been severely injured in a mining accident. He and Sounder go out on one last hunting trip, during which the father dies peacefully in his sleep. Sounder dies shortly thereafter, also peacefully, and the boy is able to make sense of both Sounder and his father's deaths because of what he has read with his teacher.

Throughout the novel, there is a strong connection made between Sounder and the boy's father. Although the whole family loves Sounder, the dog belongs to the father; their close connection is made clear from the beginning of the novel. In the first pages of the story, the boy asks his father where he got Sounder, and the father replies, "I never got him. He came to me along the road when he wasn't more'n a pup." The boy frequently tries to connect with his father by talking about Sounder, and his desperate search for Sounder after his father's arrest can be read as a way of trying to help his father in the only way he can.

Sounder is written in a very straightforward style, with an emphasis on vivid sensory details, such as the crisp feel of the boy's pillowcase, the sound of the mother singing in the cabin, and the smell of ham cooking. The most notable element of Armstrong's narrative, however, is the overall lack of names, dates, and places. The only character throughout the entire novel to have a name is Sounder, and although the boy lists several county names as he searches for his father, the reader never learns for certain where the family's farm is located. Although the appearance of sharecropping and chain gangs places the story in the first

half of the 20th century, the lack of names, dates, and places gives the story a timeless, mythical feeling as well.

William H. Armstrong

Sounder's author, William H. Armstrong, worked for much of his life as a history teacher at Kent School in Connecticut. Much of his early education, including his love for stories, came from an African American teacher whom his father, a farmer, employed after school and during the summer. Armstrong credits this man with the story of *Sounder*, writing in the introduction to the novel, "It is the black man's story, not mine. It was not from Aesop, the Old Testament, or Homer. It was history—*his* history." Armstrong followed *Sounder* with several more works for young adults, including the sequel to *Sounder*, *Sour Land* (1971). Despite the popularity of *Sounder*, the fact that it is a story about an African American family as told by a white man has received some criticism and raises questions about which works of literature can or should be considered multicultural.

Illustrations

The original illustrations for *Sounder* were done by James Barkley, an artist from New York. There are eight full-page illustrations scattered throughout the text, and in each one, Barkley uses a combination of pencil and watercolor to create an image with blurred edges and indistinct faces, all in a completely black-and-white color palette. The abstract nature of these illustrations captures the mythical quality of Armstrong's narrative, particularly in the final illustration, which shows a man, a boy, and a dog far off together in a field.

Film Adaptation

Sounder was made into a movie in 1972, directed by Martin Ritt and starring Kevin Hooks as the boy, Paul Winfield as his father, and Cicely Tyson as his mother. The movie was very well received, earning Academy Award nominations for Best Picture, Best Actor, Best Actress, and Best Adapted Screenplay.

This film, however, is milder than Armstrong's original novel; the most obvious change is that both the father and Sounder are still alive at the end of the movie. There are a number of

subtler differences as well, including the addition of names for the human characters in the film. Another notable change is that the young boy (named David Lee in the film) receives help from a white woman named Mrs. Boatwright during his search for his father, whereas in the novel, this search was primarily undertaken on his own initiative. Furthermore, although the novel is clearly written from the perspective of the young boy, the film has a broader focus on the family as a whole. Although such changes make the movie appealing as a family film, they also temper the original story's portrayal of the young boy's agency, as well as its provocative indictment of racism.

Southern Christian Leadership Conference

The Southern Christian Leadership Conference (SCLC) is an African American civil rights organization founded in 1957 in the wake of the Montgomery Bus Boycott. The SCLC began in the U.S. south, connecting local chapters and affiliates and drawing on the strength of black churches. The group was created to spread the use of direct action to end segregation beyond Montgomery and beyond buses. Until his death in 1968,

Martin Luther King, Jr., led the organization as its president, most important voice, and primary fund-raiser. The efforts of the SCLC were important to the passage of the Civil Rights Act of 1964 and the Voting Rights Act of 1965.

Principles and Strategy

The SCLC was based on the principle of nonviolence. King espoused nonviolence as a means of persuading or coercing businesses and local governments to desegregate. Beyond its use as an effective tactic, he practiced nonviolence as a total way of life. The group also believed in black leadership in the struggle for civil rights. By design, the organization was to be composed of and led by southern blacks. The experience of the Montgomery Bus Boycott showed those who would form the SCLC that protest for black civil rights was most effective when it was organized and carried out by African Americans. The group was also an explicitly Christian organization. Most of the men serving on the SCLC's board came from the Baptist ministry. Religious belief guided the leaders of the SCLC, and the organization was primarily based in Christian churches. Moreover, concerns about communism at the time led the group to include "Christian" in its name to make it clear that it was free of "subversives."

In its early years, the group stressed nonpartisanship. It hoped to influence both parties to support civil rights. However, by the time Lyndon Johnson took office, the SCLC had become more partisan, as it had a supportive Democratic president.

The SCLC used a "hit and run" strategy in its civil rights protest. The organization was one of the foremost practitioners of nonviolent direct action. The members looked for local situations to which to lend their support and shine a national spotlight. At its best, the group chose places with strong local leadership, a unified black community that favored direct action, and repressive white authorities. It would gradually build up protest efforts, dramatizing injustice through nonviolence and generating positive attention from the media. It hoped this would convince local businesses and city governments to negotiate an end to segregation or persuade federal authorities to intervene to remedy the situation. The group would then move on to its next campaign.

The SCLC also focused on voter registration, often as election years neared or in cases where nonviolent direct action appeared to be ineffective. It also served as an important bridge between local, grassroots activists and national political leadership. The SCLC was often criticized for activating local bases for political ends and then leaving them vulnerable to white racist reaction when they left. However, the organization's goal of spreading the movement required it to ignite local campaigns and then move on. The SCLC was also criticized for provoking violence while claiming to be nonviolent. King responded that his group gave witness to evil; it did not cause that evil.

Structure and Leadership

The charismatic leadership of Martin Luther King, Jr., was central to the SCLC. King's views largely guided the SCLC's actions. He helped raise the SCLC's status to that of other major civil rights organizations like the National Association for the Advancement of Colored People (NAACP). King's public appearances were also a major source of funds for the SCLC.

The group was governed by a board composed of 33 African Americans, most of whom were preachers and all but one of whom were male. The board members all came from the urban south, were members of the upper middle class, and possessed a strong interest in citizenship.

The SCLC was a collection of local chapters and affiliates rather than individual members. Its affiliates were primarily black churches but also included various civic organizations and voter registration groups. The SCLC would often choose the locations for its campaigns based on the strength of its affiliates in the area. However, the SCLC was often criticized for having weak connections with its local groups and leaving them behind after a brief period of protest.

Although King was central, there were a number of other individuals who were also essential to building the organization and influencing the direction of its campaigns. For the first few years, Ella Baker was the sole staff member. The all-male governing board did not want to appoint a woman as executive director. They searched for a black minister to accept the position, but many were reluctant to leave their pulpits. John Tilley was appointed executive director but failed

to build the organization and was relieved of his duties in 1958. Baker then ran the organization for most of that year and the next.

Eventually, the group was able to secure Wyatt Tee Walker as executive director in May 1960. Walker was able to start the Citizenship Education Program, the SCLC's voter registration project. Walker also harnessed King's fund-raising potential by increasing his speaking engagements. He left the group at the end of 1963 primarily because of the lack of organizational discipline.

Andrew Young, King's second-closest advisor after Ralph Abernathy, then took over as executive director until 1968. Young was able to better work with other civil rights groups like the NAACP and Student Non-Violent Coordinating Committee (SNCC). He was also effective in negotiating with white leaders.

Although the SCLC was primarily southern, northerners were also important to the organization. Bayard Rustin organized the conference at which the the SCLC was created. Stanley Levison initiated the SCLC's direct mail fund-raising campaign, which was essential to keeping the group afloat. Both acted as key advisors to King and later became part of his informal research committee. Along with Ella Baker, these three northerners were indispensable to the SCLC in its early years.

Fund-raising was important to the survival of the organization. Since the group did not collect individual membership dues, it relied on fund-raising from King's speeches and outside donations. In its early years, the SCLC struggled to build its budget. Although it was well-funded in the early to mid-1960s, it struggled to maintain revenue when many white benefactors stopped donating in the wake of numerous urban riots.

The SCLC was criticized for its lack of structure and internal discipline. Although it often lacked an effective bureaucracy, the group was able to be fast and flexible and adapt to the times.

Major Campaigns

Following the Montgomery Bus Boycott, the SCLC was unable to spread the bus boycott movement to other cities. Many of the boycotts lasted little more than a day. Given the lack of enthusiasm for direct action before 1960, the SCLC turned to a voter registration campaign in February 1958, called the Crusade for Citizenship. However, the

group lacked the local organizational base and budget necessary to make the campaign a success.

Even when the sit-ins of 1960 and the Freedom Rides of 1961 boosted enthusiasm for direct action, the SCLC was not at the forefront of these campaigns. This was partially because the organization did not yet have a steady source of funds, full-time field organizers, or the necessary administrative capabilities. Even so, local the SCLC affiliates were important in assisting students with sit-ins, and the SCLC did help finance Freedom Rides.

The SCLC continued to expand its voter registration efforts until 1963. Through its Dorchester Center and the work of Septima Clark, the SCLC gave many African Americans an education in the political system and the basics of voter registration. Those individuals would then return to their communities and teach classes of their own.

The campaign in Albany, Georgia, in late 1961 and 1962 marked the SCLC's first participation in mass nonviolent protest. However, the effort fell short of many of its goals because the city repealed segregation laws and closed public places, the police did not use violence, local leadership remained weak and divided, and federal authorities did not intervene.

At the same time, the experience in Albany was essential to paving the way for the success of Birmingham. The SCLC realized it would need to carefully plan to move to a place with a strong local base, start with small-scale protest and build up to mass demonstrations, elicit a hostile response from white authorities, and use media attention to its advantage. During the Birmingham campaign, the SCLC gradually escalated protests and the police made mass arrests, employing dogs and fire hoses. The jailing of King, numerous bombings, and the expulsion of more than a thousand students who participated in the Children's Crusade elicited a response from federal authorities. The Birmingham campaign was successful in speeding up the desegregation of the city, pushed President John F. Kennedy to introduce civil rights legislation, and became a model for other groups.

The SCLC joined in the March on Washington in 1963, which aimed to get Congress to pass civil rights legislation. Although it may not have had much effect on legislators, the march was important to making churches a larger part of

the movement and relaxing fears that black protest might lead to violence.

The group then moved into St. Augustine, Florida, in anticipation of the city's 400th anniversary. It felt the ultrasegregationist city government, Klan presence, and strong black opposition made conditions ideal for protest. Although the SCLC was able to bring the Klan out in the open, it underestimated the hostile response, and federal intervention never came. Moreover, the SCLC overestimated enthusiasm for direct action among local African Americans and the benefits that desegregation would bring.

The SCLC's biggest success came with the Selma campaign in 1965, which led directly to the passage of the Voting Rights Act. Selma presented an excellent opportunity to dramatize voting rights, as white people were 99 percent of voters but less than half the population. Moreover, the sheriff used harsh methods, and the White Citizens' Council in Selma was the first in Alabama. At the same time, it was the site of an organized black community.

In response to violence and repression, the SCLC proceeded with a march from Selma to

Montgomery. State troopers responded by attacking marchers at Edmund Pettus Bridge on "Bloody Sunday," which produced a national response to the call for another march. King led a second group to the bridge, held a prayer, and turned around so as to not violate an injunction against the march. This was enough to prompt President Johnson to present the details of his voting rights proposal and promise to submit it to Congress within days. Shortly thereafter, the injunction was lifted and the third march traveled all the way from Selma to Montgomery, with 30,000 participants on the final day.

Activities in Chicago

The SCLC then decided to move into the north, away from its southern base. Its major initiative focused on open housing and school integration in Chicago. The SCLC was thwarted in many of its proposals. Its plans to improve tenements, increase voter registration, and get fair housing legislation passed all met with great difficulty. Its marches through white communities resulted in open hostility. The Chicago Real Estate Board

The wreckage of the 1963 bombing of the Gaston Motel in Birmingham, Alabama. Leaders of the Southern Christian Leadership Conference, including Martin Luther King, Jr., stayed at this motel during the Birmingham campaign of the civil rights movement. King was the president and guiding force behind the SCLC until his death in 1968.

remained intransigent, and after Mayor Richard Daley's reelection, he ignored the movement. Also, many of the SCLC's erstwhile allies were more concerned about the war in Vietnam, and the Chicago campaign resulted largely in defeat.

One bright spot in Chicago was the SCLC's Operation Breadbasket, led by Jesse Jackson. The campaign picketed stores that received black business but failed to hire a proportionate number of black workers. The SCLC worked to open up many jobs and monitored compliance.

In 1966, while the SCLC was working in Chicago, it also embarked on the Meredith March. James Meredith vowed to march from Memphis to Jackson and was soon shot and hospitalized. The SCLC, the SNCC and the Congress of Racial Equality (CORE) joined together to complete his march. Though they experienced violence and disagreement along the way, the march took the movement to many new towns in Mississippi and gave the SCLC a foothold in the state. During this time, the civil rights coalition was fracturing over the issue of black power. Moreover, the SCLC faced major debt and had to cut much of its staff.

In the face of a foreign war that King believed was hurting domestic progress, he tried to push the SCLC to oppose the conflict in Vietnam. However, many in the organization opposed that path and believed it would lose black support and turn Johnson against the movement, so King acted largely on his own. However, he found the anti-war movement divided and questioned the ability of nonviolent direct action to halt the conflict.

The Poor People's Campaign would be King's last. The SCLC decided to bring thousands of poor people to Washington, D.C., to live in a shantytown called Resurrection City, lobby legislators, and protest federal agencies. This campaign emphasized King's emerging belief in the importance of addressing the economic roots of inequality. It was also unique for the SCLC, as it had to build a movement from scratch and focus more on developing interracial alliances. Though it faced internal opposition and was slow to start, the campaign did find the necessary volunteers. At the same time, King supported a sanitation workers' strike in Memphis. While there, he was assassinated.

Following King's death, Ralph Abernathy took over as president. The movement made gains with

the recognition of the sanitation workers' right to unionize in Memphis and the inclusion of fair housing in the Civil Rights Act of 1968. At the same time, many riots broke out, and the cause of nonviolence was weakened. Abernathy continued the Poor People's Campaign, which ended in failure. A revolving door of leadership in Resurrection City and problems with crime drew much negative attention. Lobbying efforts were largely ineffective as Congress cut social spending for the third consecutive year.

Thereafter, much of the SCLC's leadership left the organization. Although the organization occasionally had some successes after 1968, it was clear that the group had been largely dependent on King's leadership. The SCLC continues to exist as a national organization of chapters and affiliates, though its stature has declined considerably.

Southern Poverty Law Center

The Southern Poverty Law Center (SPLC) is a non-profit organization that uses educational and legal strategies to reduce discrimination and prejudice in the United States. It is best known for its efforts to combat hate crimes. The SPLC also promotes awareness of civil rights activism and history, especially through classroom and extracurricular activities intended to reduce prejudice in young people.

Headquartered in Montgomery, Alabama, the SPLC emerged from pro bono legal work done in the late 1960s by lawyers Morris Dees and Joe Levin. Both assisted in cases involving racial segregation or other forms of racial discrimination, especially in the south. When that volunteer work revealed to them the wide-ranging nature of prejudice in the United States, Dees and Levin expanded from this volunteer work to incorporate officially as the SPLC in 1971.

The SPLC initially focused on providing legal assistance to wrongly convicted criminals and to prisoners experiencing inhumane treatment within the criminal justice system. Early victories included a successful lawsuit against the Alabama prison system (*Pugh v. Locke*, 1976) and numerous successful appeals of convictions in cases involving racial prejudice or tactics that manipulated juries into wrongful verdicts. The SPLC continues in the 21st century to provide legal support to selected prisoners and to use lawsuits and lobbying to push for reforms in prison and detention programs, especially in the states of Alabama and Mississippi.

Other Victories

The SPLC also developed a legal strategy to hold hate groups like the Ku Klux Klan financially accountable for the violent actions of their members and leaders. This resulted in a series of highly publicized victories that began in the 1970s and continued into the 1990s. SPLC lawyers, usually with Morris Dees personally leading the way, fought to obtain financial compensation for people harassed or attacked by members of such hate groups. Decisions in cases like *Donald v. United Klans of America* (1987), *McKinney v. Southern White Knights* (1988), *Mansfield v. Church of the Creator* (1994), *Berhanu v. Metzger* (1990), and

Keenan v. Aryan Nations (2000) resulted in millions of dollars in court-ordered payments to victims and often led to the financial dissolution of the hate groups themselves.

Another SPLC strategy for disarming white supremacist organizations involved actively collecting and disseminating data about their membership, beliefs, and harms to society. In 1981, the SPLC launched Klanwatch, which helped draw media attention to offshoots of the Ku Klux Klan. This project expanded to monitor all organized hate groups, and in 1998 it was renamed the Intelligence Project.

By the end of the 1980s, the SPLC had complemented its legal focus on hate with educational programs and activities that emphasized the importance of civic activism as a tool to reduce prejudice. SPLC headquarters in Montgomery grew in 1989 to include a civil rights memorial designed by noted architect Maya Lin, and in 2005 the SPLC opened a Civil Rights Memorial Center in Montgomery to expand visitors' understanding of antiracist activism in the past. Reaching out to schoolteachers, in 1991 the SPLC created Teaching Tolerance, which develops free curricular materials that stimulate greater awareness and appreciation of multiculturalism and diversity in young people. Teaching Tolerance also produces documentary films on selected themes related to civil rights and fairness, including *A Time for Justice: America's Civil Rights Movement* (1995), *Mighty Times: The Children's March* (2005), and *Bullied: A Student, a School, and a Case That Made History* (2010).

The success and high media profile of the SPLC also drew some skeptical attention to its operations. Beginning in the 1990s and continuing into the 2000s, critics argued that the organization had significant faults. Some suggested that it was hypocritical, noting that it decried racism but had mostly white staff members and administrators in its ranks. Others disliked the personal style of Morris Dees, claiming that he inflated his accomplishments by exaggerating the actual danger to society posed by hate groups. Some of these critiques came from publications or writers associated with the political right wing, but a few came from more liberal journalists who faulted the SPLC for targeting small hate groups and doing too little to combat widespread, systemic problems like poverty. Few of the

criticisms did much damage. Charity Navigator, a prominent evaluator of nonprofit organizations, consistently gave good to exceptional ratings to the SPLC for its financial practices, accountability, and transparency. By 2012, the SPLC had assets worth well over \$200 million.

Current Status

In the 21st century, the SPLC has increasingly diversified its focus on prejudice in the United States and devoted energy to securing fair treatment for undocumented laborers, immigrants, sexual minorities, and low-income voters. One of its cofounders, Joe Levin, became an emeritus member of the board of directors in 2009. As of 2012, cofounder Morris Dees remains an active leader in his role as chief trial attorney.

Southwest Voter Registration Education Project

The Southwest Voter Registration Education Project (SVREP) is a nonprofit, nonpartisan organization founded in 1974 by William C. Velasquez and other Mexican American activists to empower Latinos by educating them in the democratic process and stressing the importance of voter registration. The SVREP combined door-to-door registration drives

with research on the Mexican American electorate to achieve its goals. By 1991, it was chartered in 13 southwestern states. With the motto *Su Voto Es Su Voz* (Your Vote Is Your Voice), the organization has focused on voter education at every level from the local to the international. The roots of the SVREP go back to the Citizens' Voter Research and Education Project, which Velasquez organized when he was serving as an assistant field director and fund-raiser with the National Council of La Raza, the largest Hispanic civil rights and advocacy organization in the United States, from 1971 to 1972. Velasquez worked full time on the project for two years before he made it independent and christened it the Southwest Voter Registration Education Project. In July 1974, Velasquez opened the doors of the SVREP. He was the organization's first executive director.

A year earlier, there were only 565 elected Hispanic officials in Texas. Fewer than 500,000 Hispanics were registered to vote in Texas, a state with a substantial Hispanic population. Underrepresentation was not unique to Texas. In California, Arizona, New York, Florida, and Texas combined, all states with significant Hispanic populations, there were only 1,280 Hispanic elected officials. From the beginning, Velasquez had the SVREP focus on building power at the local level. The SVREP's own research had shown that Mexican Americans were most dissatisfied with the poor quality of municipal services and education.

Hispanic Voters

The SVREP played a major part in increasing Hispanic voters and officeholders in the 1970s and 1980s. Within the first decade of the SVREP's operation, the organization was averaging more than 100 voter-registration campaigns a year. By the late 1980s, the SVREP had completed 1,000 such drives. By Velasquez's death in 1988, the number of Mexican Americans registered to vote in Texas had reached 1.2 million, more than double the number in 1980. The number of Hispanic elected officials in the United States had increased 82 percent. The SVREP had grown as well. In addition to half a dozen directives engaged in voter registration and education, the organization had a research arm and a litigation arm.

Research had been an important part of the SVREP from the beginning. The first person

Velasquez hired Andrew Hernandez as the young organization's research director. In 1984, the SVREP formed a polling and research unit, the Southwestern Research Institute. Within two years, the institute was reporting the results of studies on redistricting and election exit polls. In 1988, it organized a fact-finding tour to Nicaragua and Costa Rica. The group's findings were reported to the Hispanic Congressional Caucus. The institute became the most highly respected source of information on Hispanic voters and voting patterns. In 1997, the institute was renamed the William C. Velasquez Institute to honor Velasquez.

Hispanic Officials

Andrew Hernandez led the organization from 1988 to 1994. He continued to focus SVREP activities on voter registration drives and voter education and on monitoring possible voting rights violations. By 1993, the number of Hispanics in elected offices had increased 259 percent since the SVREP's founding. In California, Arizona, New York, Florida, and Texas combined, the number of Hispanics in public office was 3,999, an increase of 312 percent. Although most of these officials served at the county or municipal level, the increase in voter registration among Hispanics, from 2.4 million in 1974 to 7 million in 1998, reflected a stronger Hispanic influence on state and national elections. Hernandez's tenure also saw the SVREP develop a greater international presence. The organization monitored elections in Nicaragua, conducted a voter registration and education drive in El Salvador, and directed training sessions for election workers in South Africa.

Activity in the SVREP's litigation arm increased after the Voting Rights Act of 1965 was extended to the southwest in 1975. The SVREP worked with the Mexican American Legal Defense and Education Fund, the National Association for the Advancement of Colored People (NAACP), the League of United Latin American Citizens, and both the Hispanic and black caucuses of the state legislature to defend citizens from voting law violations. By 1991, the SVREP had won 85 lawsuits against local jurisdictions, victories that persuaded other offenders to negotiate and avoid court action.

Antonio Gonzalez, a veteran SVREP worker, became president of the organization in 1994.

During his tenure, the SVREP has seen the number of registered Hispanic voters reach 10 million (2006). The number of Hispanics in elected office has risen to more than 6,000 across the nation. The 2005 election of Antonio Villaraigosa as mayor of Los Angeles, the second-largest city in the United States, in a contest that inspired a record turnout of Hispanic voters, was particularly meaningful. Villaraigosa was elected to a second term in 2009.

Spanglish

A portmanteau of "Spanish" and "English," Spanglish refers to the hybridized linguistic practice of code switching between these two languages while communicating. Spanglish also entails the blending and interchanging of phonological and grammatical elements of Spanish and English in the formation of words, phrases, and questions. Linguists consider Spanglish to be neither a creolized language nor a pidgin, as Spanglish operates simply as an informal linguistic practice that relies on transitioning between English and Spanish during the course of communication. Spanglish lacks set or standardized rules that govern the syntax of formal languages. As such, Spanglish represents a style of communication rather than a formal, specific language in and of itself.

Although language purists sometimes attempt to dismiss Spanglish as a “broken language” unworthy of scholarly analysis, such a description is inaccurate and reflects the prescriptive bias that dominated language study throughout much of the 20th century. Anthropologists and sociolinguists use a descriptive approach to the study of language, noting that language is a malleable and fluid creation of human ingenuity and that social and linguistic contact between cultural groups has taken place since the dawn of humanity, resulting in the development of new linguistic practices. Spanglish has begun to generate considerable academic study in recent years, although it has been spoken in the United States for many decades. Today, Spanglish can be seen and heard in many cities throughout the nation with large Latino populations, such as New York City, Los Angeles, Chicago, Miami, San Antonio, Houston, and Phoenix.

A singular uniform or standardized form of Spanglish does not exist, in large part because many different ethno-national dialects of Spanish are spoken throughout the United States. These various dialects of Spanish are largely geographically concentrated, with Puerto Rican and Dominican dialects spoken predominantly in the urban northeast, Cuban-style Spanish concentrated largely in southern Florida, and Mexican dialects of Spanish heavily concentrated in the southwestern border states.

These contrasting dialects of Spanish are marked by their own idiosyncrasies, such as distinct vocabulary, phonology, and differing cadences and rhythms that mark the speech process, all of which, in turn, shape the style of Spanglish spoken by persons of a particular Latino ethnic background or in a particular region of the United States. In the southwest, for example, many urbanized Mexican Americans speak a highly stylized Spanish-English hybrid known as *caló*, a linguistic form that has gained notoriety through Chicano films such as *Stand and Deliver* (1988) and *My Family/Mi Familia* (1995) and the comedy routines of George Lopez. In Florida, where Cuban Americans constitute the largest Spanish-speaking community, the predominant local style of Spanglish is sometimes referred to as *Cubonics* (a portmanteau of “Cuban” and “Ebonics”).

Communication in Spanglish merely requires one to code switch (alternate) between Spanish and English when producing speech or writing; however, there are no standardized rules that dictate this process of code switching. For example, one could potentially construct the phrase “Juanita is my younger brother’s girlfriend” in Spanglish several different ways, including “Juanita *es mi* younger brother’s *novia*,” “Juanita *es mi hermanito*’s girlfriend,” or Juanita *es la novia de mi* younger brother.” As a result, Spanglish is a highly creative linguistic style whose originality lies with the discretion of its speakers.

Spanglish also features hybridized words that have been formed by blending its two parent languages. Such words, sometimes described as Hispanicized English or Anglicized Spanish, include *chequear* (to check), *clikear* (to click), *lonche* (lunch), *parkear* (to park), *troca* (truck), and *yarda* (yard). The merging of Spanish and English to create new words has taken place in the United States for many years, since the annexation of the southwest at the conclusion of the Mexican-American War (1846–48) and the acquisition of Puerto Rico and Cuba following the Spanish-American War (1898). Both of these key historical events led to a significant increase of cultural and linguistic contact and crossover between English and Spanish speakers, a phenomenon that has only accelerated in the years since, with the advent of modern technologies such as radio, television, and the Internet.

Present and Future Status

As of 2010, 37 million Spanish speakers resided in the United States. Of this total, 20.5 million (55 percent) also spoke English “very well,” indicating a bilingual identity that suggests Spanglish will continue to be spoken for some time to come. During the early 21st century, Spanglish entered American pop culture and emerged as a marketable consumer product. In Los Angeles, for example, street vendors sell T-shirts emblazoned with the logos “Los Doyers” (“The Dodgers”) and “Los Leikers” (“The Lakers”) to express Latino pride in the city’s professional sports teams. Another popular comical T-shirt features the Kellogg’s logo aside the label “Corn Fleis” (“Corn Flakes”). Latino hip-hop artists, such as Big Pun, Fat Joe, Daddy Yankee, and N.O.R.E., utilize Spanglish lyrics, while Taco Bell’s slogan “Yo

Quiero Taco Bell” and the U.S. Army’s tagline “Yo Soy El Army” reflect the significance of Spanglish in the recruitment of Latinos as the nation’s consumers and protectors. Spanglish seems to be particularly common among younger Latinos who are either completely bilingual or who are English dominant and have at least a rudimentary knowledge of Spanish.

Spanish Americans

The story of immigration from Spain to the United States is a very long one. Immigration from Spain predates that of other European countries. Spanish Americans have had a continuous presence in what is now the United States since 1565. Spain established permanent settlements more than 40 years before the British arrived at Jamestown in 1607. Today, Spanish Americans or Spaniard Americans are one of America’s smallest ethnic groups, with almost 636,000 Americans identifying as being of Spanish decent.

Long before the United States gained independence, the Spaniards reached the Appalachians, the Mississippi, the Grand Canyon, and the Great Plains. They sailed along the east coast as far as Maine, and up the Pacific coast to California and as far as Oregon. During the colonial period, there were a number of Spanish populations. As late as 1783, at the end of the American Revolutionary War, Spain held about half of today’s continental United States.

St. Augustine, Florida, which was founded in 1565, is the oldest European permanent settlement in the United States. Martin de Arguelles, born in 1565, was the first child of European ancestry born in what became the continental United States. Santa Fe, New Mexico, founded in 1598, also predates the initial permanent English settlement of Jamestown. Santa Fe is the oldest capital city in North America and also the oldest European community west of the Mississippi River. Between 1607 and 1692, Spanish soldiers and officials attempted to conquer and convert the Pueblo Indians of New Mexico. The Pueblo Indians revolted against colonial rule and its many abuses in 1680.

In New Mexico, the number of Spanish settlers during the 17th century probably never surpassed 4,000. Between 1692 and 1821 Santa Fe grew and prospered, although the city and surrounding countryside was threatened on several occasions by wars with Comanche, Apache, and Navajo Indian tribes. Between 1821 and 1846, Mexico gained its independence from Spain and Santa Fe became the capital of the province of New Mexico. In addition to St. Augustine and Santa Fe, early settlements also included Albuquerque, New Mexico; San Diego, San Francisco, Santa Barbara, San Jose, Monterey, and Los Angeles, California; El Paso, Texas; and settlements in Arizona and Louisiana.

Although approximately 200,000 Spaniards immigrated to the New World (including Mexico and South America) and founded 200 settlements by 1650, few were drawn to the isolated and backwater provinces of Florida and New Mexico. The earliest settlers also included Sephardic Jews and Iberian Moors who fled conditions in Spain during the Inquisition. Major sources of immigration came from the southern provinces of Spain, which include Almeria, Malaga, Granada, and the Canary Islands. Others came from Galicia and the Basque provinces and from the Balearic Islands. These were among the poorest provinces of Spain.

Loss of Spanish Colonies and Immigration

The Spanish population reached about 10,000 in the 1840s. Mexico gained its independence from Spain in 1821, which brought to a close three centuries of Spanish rule in North America. During these years of Spanish immigration, there were important contributions in language (especially in

Famous Spanish Americans: David Farragut, Manuel Dominguez, Vicente Martinez Ybor, Rita Lydig, Leo Carrillo, Adele Mara, Rita Hayword, Bob Martinez, Hector Elizondo, Martin Sheen, Raquel Welch, Frank Lorenzo, Kenny Ortega, Daisy Fuentes, Mary Joe Fernandez, Lilian Garcia, Julian Casablancas, and Jerry Garcia.

New Mexico), religion, political administration, and laws. Several enduring legacies of the Spanish colonial experience still exist in the United States. These include the places founded by the Spanish, cities such as San Antonio, San Diego, Los Angeles, and San Francisco. A great part of the west from Texas to California has missions, villages, and ranches that owe their existence to the Spaniards. Ranching, often thought of as a peculiarly American way of life, was invented by the Spaniards. The words bronco, rodeo, lariat, cinch, mustang, and chaps are all based on Spanish words.

There remained a constant trickle of migrants from Spain to the United States between 1860 and 1899. The emigration of Spaniards from Spain in the last decades of the 19th century and the first decades of the 20th century was significant enough to place Spain among the highest immigrant streams of Europe, behind the United Kingdom and Italy, ranking closely with Germany and Austria-Hungary. At least 150,000 legal immigrants left Spain for the United States between 1900 and 1929. Some scholars estimate that as much as 40 to 50 percent of Spanish emigration was clandestine, so these numbers may vastly underestimate the number of immigrants who settled in the United States. The reasons for Spanish emigration appear to center on economic pressures and an inheritance system that favored the first-born male.

In the third decade of the 20th century and onward, Spanish immigration accounted for a negligible amount of immigrants, less than 1 percent. Official American figures estimate that approximately 72,000 Spaniards returned to Spain from the beginning of the 20th century to 1940. Many reverse immigrants left after the initial impact of the Great Depression of the 1930s. In 1936, dictator Francisco Franco took over Spain, and a small group of liberals immigrated to the United States. Under the National Origins provisions in 1929, the Spanish quota was set at 252 per year. Consequently, the number admitted dropped to fewer than 4,000 for the decades between 1930 and 1950. Legal Spanish admissions remained relatively low, reaching a peak of 42,000 in the decade from 1970 to 1979.

Social Mobility and Diversity

The majority of Spaniards in the early 20th century were young and single. In comparison to the average eastern and southern immigrants of this period, they were highly literate (85 percent of those 14 and over), fairly affluent, and a skilled immigrant cohort (36 percent were either skilled craftsmen or professionals).

Most Spaniards lived in the vicinity of New York City. This was the major port of entry after the colonial period. There was a heavy concentration in Brooklyn and in communities in New Jersey and Connecticut. There were mutual benefit societies organized to help the new immigrants. Most of the first generation were laborers, restaurant workers, cigar salesmen, seamen, and small shopkeepers. There was a large representation of immigrants from Galicia. By the 1930s, these neighborhoods had largely dispersed, with the second generation moving to suburbs and assimilating into the mainstream of American life. At the height of Spanish immigration, there were over 20 Spanish organizations in New York City.

At the end of the 19th and early 20th centuries, Florida attracted the second-largest group of Spaniards in the United States. This was largely related to the Cuban cigar industry. Most of the factory workers were originally from Asturias. In 1901, there was a short-lived Spanish immigration to Hawai'i to work in the sugar plants. This was a clandestine emigration from Spain composed primarily of workers from Andalusia. By 1920, most

of the Andalusians had moved on to California. Many settled in San Francisco and the Bay Area. Basque shepherders and to some extent Spaniards from other shepherding provinces started coming to the northern Rocky Mountains, centering on Idaho and Nevada around 1910. Spain has engaged in sheep-raising for hundreds of years. Boise, Idaho, is the Basque capital of this region. There are still Basque restaurants and Basque ranchers in this area. The steel and metalworking centers of the midwest also attracted northern Spaniards to the United States.

Integration and Assimilation

Spanish colonial history was characterized by small colonies and extensive exploration of what is now the United States. During the Spanish colonial period, the Spanish Empire was huge, encompassing much of North and South America, with the exclusion of Canada and Brazil and the American north and midwest. However, Spaniards had a strong preference for predominantly Latin colonies in Mexico, Argentina, Cuba, and Uruguay, among others. Probably no more than 10 percent of Spanish émigrés went to the borders of the current United States.

During the mid-16th to mid-17th century, the civilian population of Spain's major colonies in Florida and New Mexico faced external enemies. The chief challenges were from Native American tribes and European powers vying for land and wealth in what is now the continental United States. Spanish emigration was predominantly male throughout the 19th century. This means there was significant racial and ethnic mixing.

In the postcolonial period of Spaniard immigration from 1821 to 2010, the newcomers were relatively invisible. About half the Spaniards who came to the United States since 1820 arrived between 1900 and 1929. The Spanish who immigrated to the United States in the early 20th century had a relatively smooth assimilation to American life, in contrast to other Spanish-speaking populations, particularly Mexicans and Mexican Americans. The 20th-century Spaniard immigrants were viewed as white southern Europeans, which made it easier for Spanish Americans than for more recent Hispanics to assimilate to American culture. Spaniards typically identified more with the region they came from than with their home country.

The Spanish communities developed regional centers for different ethnic groups, so they posed less of a risk to the white American citizens. This is a consequence of strong regional diversity in Spain; immigrants were less likely to regard themselves as Spaniards than as Galicians, Basques, Asturians, or Catalonians. There is little evidence that the Spaniards in the United States have ever worked to maintain a separate identity or community.

Other reasons for the relatively rapid assimilation of the Spaniard immigrants are related to their social class status, migration history, and settlement pattern. The Spaniards who immigrated to the United States were on the whole literate and skilled workers. Most of the settlement pattern was urban, with few compact Spanish communities.

The Contemporary Scene

As of 2010, one-third of Spanish immigrants held at least a bachelor's degree, and about 80 percent had finished high school, as compared with 85 percent of the total American population. Spaniard Americans are slightly wealthier than the average American, with a median income of \$54,275 as compared with a national average of \$52,029.

Among Spanish Americans in the labor force, 39 percent work in management and professional field, 28 percent in sales and office work, 17 percent in service occupations, 8 percent in production and transportation, and 9 percent in construction and similar work. More than 60 percent of Spanish own their own homes. Spanish Americans are an unrecognized model Hispanic minority.

Spanish Land Grants

Spanish land grants were issued first under the Spanish government and then continued under Mexican rule in New Mexico, Texas, and Alta California (which included Arizona) to ensure economic stability and foster continuous wealth for the nation granting titles. The geography of New Mexico, Texas, and California required slightly different approaches to address ethnic diversity.

In New Mexico, the earliest grants were recorded in 1680 (and dated back perhaps to 1598) through 1821, and continued under the Mexican government from 1821 to 1846. Land grants went to individuals (heads of families) who were deemed able to establish sustainable communities, and communal grants were allotted to pueblos for tribal lands. Ironically, the Pueblo of Acoma (the oldest extant pueblo west of Albuquerque, New Mexico) was not granted title to its tribal lands (95,791.66 acres) until 1877.

In Texas, land grants from the Spanish Crown for the purpose of establishing missions and military presidios dates back to 1716. Parcels closest to waterways with easy access to agricultural irrigation were the most prized. Provincial governors later issued grants for a small fee, and during the late 1760s, the Spanish government started surveying and recording grant title transaction. In 1821, officials tested policies aimed at enticing foreigners, including Americans. Later, the Republic of Texas under the 1836 Texas Constitution issued provisional headright grants (to heads of households) for 4,605.5 acres, excluding individuals of African and Native American ancestry.

Land Grants in California

In California, the Spanish government between 1769 and 1821 and the Mexican government between 1833 and 1846 reflected cultural diversity in granting land, livestock, and farming equipment for rancheros, thus supporting their presidios and maintaining stability and growth in local economies. Lands were granted contingent upon the grantee's ability to develop the land within one year, serving Spain's interests by securing and cultivating vibrant economic networks. Later, single, immigrant men with no dependents who choose to remain in California under the Mexican Naturalization Law of 1828 were required to live in

Mexican territory for two years to establish residency. They could apply in writing for residency, present written proof of being a Roman Catholic, and evidence that they practiced a useful trade, along with verification of good moral standing. Plentiful and cheap land drew early settlers willing to adhere to the Spanish-Mexican practice of converting to the Roman Catholic faith and marrying Californians.

California was characterized by the most ethnic diversity because it was adjacent to Pacific Rim maritime populations. The first Spanish penetration into Alta California occurred in July 1595, and the Spanish governed with a missionary/military system. California is unique because it is home to more tribes with diverse cultural characteristics than any other state. Russians arrived in 1803 to enter the fur trade. The Russians did nothing to coercively alter indigenous culture and were perceived as a more benevolent alternative to Spanish domination. Camilo Ynitia was the first indigenous Californian to sign a peace treaty with the Mexican government and was one of a few Native Californians to receive homelands as a Mexican land grant.

Californios/Californianas, the people born in California from the time of the first Spanish colonization, were people of mixed racial heritage, including Europeans, indigenous Mexicans, Africans, indigenous Californians, Anglo-Canadians, Russians, Creoles, Aleuts, and Kanakas (indigenous Hawai'ians). Juana Briones, a divorced Californiana, was granted land to establish a rancho. By obtaining a grant for land and cattle, Briones, a single mother, had no further need of assistance or relief from the government. Briones developed her land promptly, building San Francisco's earliest tavern for sailors and Latin American travelers. Danish Creole businessman William A. Leidesdorff juggled allegiance to the Mexican, British, Russian, and American governments and received a large land grant near gold country.

An influx of Americans with Jonathan D. Stevenson's New York Regiment of Volunteers, including Henry Wager Halleck, arrived in California in early 1847, introducing aggressive land speculation to San Francisco. Halleck studied the Mexican archives composed mainly of *expedients* and title documents for land grants. California governor Bennett Riley sent his "Report on Laws

and Regulations Relative to Grants and the Sale of Public Lands” to Washington, D.C., and it became the most widely read chronicle of California landholdings for the U.S. Land Commission. When California was admitted into the Union in 1850, Halleck purchased an estate in Nicasio, California. Subsequently, the county persuaded remaining tribes to leave their small reservations when they were denied funds for leaving their poor farm.

The California law firm of Halleck, Peachy & Billings initiated over one-half of the cases decided by the U.S. Land Commission, which adjudicated more than 800 cases regarding contested land titles during the mid-1850s. The average case lasted 17 years, favoring Americans, and plunged many families into bankruptcy. Forty percent of the land held by Californios prior to 1846 was transferred into American hands through legal wrangling. Halleck, Peachy & Billings became one of the largest antebellum law firms in America.

During the Civil War, the U.S. Congress passed legislation terminating titles to most Indian land in California, thereby stripping most California tribes of lands. In 1920, the U. S. Bureau of Indian Affairs established a 15.45-acre tract of land in Graton, California, to become the “village home” for the traditionally interacting Coast Miwok and southern Pomo tribes. The U.S. Congress in 1958 terminated the California rancherias that were held in trust and returned the land to private ownership with passage of the California Rancheria Act.

Spanish Missions

Spanish missions were settlements established in the New World and run by priests and other religious authorities with the dual goal of prospering from the local natural resources and “civilizing” the Indian populations. Missions, many of which were fortified by battalions of troops and operated ranches, mines, and other commercial concerns, were established throughout much of what is now the United States, including California, Arizona, New Mexico, Texas, Florida, Georgia, and the Carolinas. Founded by Franciscan, Jesuit, and Dominican missionaries, they were instrumental in the history of America’s Hispanic population, relationships with the Indian population, and introducing European livestock and plants to the continent.

Start of the Mission Era

Where the Spanish landed, missionaries followed, though in regions such as Georgia and the Carolinas, the missions they founded were abandoned when the lands were ceded to British control. In the 16th century, Franciscans founded missions along the Atlantic coast in those regions and along the Gulf Coast in Florida. The first missions in what is now New Mexico followed, beginning in 1598.

The presence of the French inspired the building of missions on the Texas coast, with many established by 1716. The establishment of missions in California beginning in 1769 was similarly established by territorial concerns, as Spain wanted to strengthen its claims on the Pacific coast, which it felt were threatened by the presence of Russian and British settlers in the northwest.

Indian encampments were kept close to the missions so that missionaries could both oversee

their labor and instruct them in the Catholic faith. The proximity exposed Native Americans to European diseases for which they had no immunity, which in some cases had disastrous results. A 1640 epidemic, for instance, wiped out 3,000 Indians living near missions in New Mexico.

End of the Mission Era

Missions were intended as temporary endeavors: Institutions would convert and educate an Indian population, which could then join Spanish colonial society. Having served their purpose, the missions were intended to become secularized and turned into regular Spanish communities without priestly rule. During secularization, the common lands of the mission would be redistributed to the local Indians, now Spanish citizens, in the form of land grants. In the 1830s, Mexican governor Jose Maria de Echeandia began the process of secularizing the missions in the California districts of Santa Barbara, San Diego, and Monterrey. The local missionaries protested that the native populace was not equipped for self-sufficiency in Spanish communities yet, and indeed some mission communities were heavily dependent on resources imported by the mission government, despite the goal of self-sufficiency. This was the norm in Baja California, for instance.

Further, the secularization process had been formulated based on experiences with tribes that were already sedentary, while nomadic tribes like the Apaches and Comanches had proven less amenable to conversion. Secularization continued regardless, and in California many former mission lands were converted to *ranchos*, with land grants issued to their inhabitants. By the middle of the 19th century, the mission period had come to a close. In the 1840s, just before the region entered into American control, many California mission lands that had been transferred to Indian control were sold from beneath them by Governor Pio Pico, the last Mexican governor of California. Pico himself purchased the Mission San Fernando Rey de España in what is now the Mission Hills district of Los Angeles.

Even after the mission period, the paternalistic approach to relations with the Native American population continued and was adopted by the Americans as Spanish and Mexican lands were ceded to them. Nineteenth-century reformers and

social activists spoke of civilizing and assimilating Native Americans, usually with little concern for preserving Native American culture, language, religion, or traditions. Colleges for Indians to learn European culture and Western academics had been established since the 17th century but became more common in this period, and in the west they took the form of missionary-run schools located near Indian settlements. Boarding facilities were provided with increasing frequency as more and more Indian communities were forced onto reservations. Just as the mission communities had the end goal of turning Native Americans into Spanish citizens, so too did these schools have the goal of turning Native Americans into assimilated Americans.

Mission life has been romanticized and sentimentalized in popular entertainment since the 19th century. The 1884 novel *Ramona*, by social activist Helen Hunt Jackson, was intended to shed

Mission San Xavier del Bac is located just outside Tucson, Arizona. It was founded in 1692 and still serves the Native community by which it was built. The architecture of San Xavier is considered by many to be the finest example of Spanish mission architecture in the United States.

light on the mistreatment of Native Americans, but what readers primarily took away from it was its romantic view of the Spanish aristocracy that ruled California. It was instrumental less in raising awareness of the plight of Native Americans and more in drawing tourists to southern California, as numerous locations named themselves in honor of the bestseller or claimed some connection to it. Today, charges are often levied that textbooks and history classes downplay the role of the Spanish missions in the treatment of Native Americans. In California especially, the native population was significantly impacted by epidemics caused by European diseases, but the clash of cultures had other negative effects as well.

Spanish-American War

The Spanish-American War was a conflict fought in 1898 between the United States and Spain primarily over the autonomy of the then-disputed territory of Cuba, but also of Puerto Rico and the Philippines. The war would lead to the eventual independence of each of these nation-states. For decades, the United States had been cautiously observing the resistance movement for Cuban independence, but following the sinking of the battleship USS *Maine* in Havana under mysterious circumstances, many in both Congress and the popular press pushed for intervention. The

war would last only four months, settled by the Treaty of Paris, a document that would be widely considered to symbolize the end of the century-long decline of the Spanish Empire.

However, the effects of the war would be substantial to the next century of global geopolitics, eventually leading to a fundamental reframing of the culture and identities of each of the involved nations' cultural identities. Most notably, the Spanish-American War served as a political referendum on the Spanish monarchy, as it would symbolize the entry of American political, military, and cultural expansionism into 20th-century world affairs. It is also notable for the role that the American popular press played in the lead-up to war.

The Path to War

After more than four centuries of global expansionism, the Spanish Empire at the end of the 19th century had been reduced to three distinct regions: Cuba, Puerto Rico, and the Spanish East Indies (consisting of the Philippine Islands, Guam, and several other smaller Pacific regions). Spain's sense of national identity had been entrenched in its preservation of empire. Cubans, though, were reluctant to accept such political or cultural designations and fought several struggles for independence throughout the latter half of the 19th century, most notably the Cuba Libre movement.

From 1897 to 1898, the Cuban revolt occurred alongside the destabilizing assassination of the Spanish prime minister, Canovas del Castillo, in Basque country, along with growing American military and cultural expansionism and American industrial firms' economic interest in Cuba's natural resources. War was not desired by any of the involved nations, and a degree of Cuban autonomy was declared in 1898 by the new Spanish prime minister, Praxades Sagasta, in negotiations with the William McKinley administration in the United States, which favored political and economic stability in the region.

The Sinking of the *Maine*

The fragile coalition would be undermined by a series of events just 11 days following Cuban autonomy. A series of violent revolts had broken out on the island, and President McKinley agreed to send the USS *Maine* to Havana harbor to attempt to ensure stability. On February 15,

1898, there was an explosion in the ship's powder magazines. The ship would sink in Havana harbor, killing 266 of its U.S. military personnel. The cause of the explosion was in dispute at the time and remains so today, either an onboard accident or the ship hitting a mine in the harbor that ignited the magazines. Although the sinking of the *Maine* would provide hawks in Congress with cause for war, the public was generally ambivalent in the immediate aftermath of the sinking.

However, New York City-based newspaper publishers William Randolph Hearst and Joseph Pulitzer were in the midst of a long-running circulation battle in the city that had led to the rise of yellow journalism, a form of tabloid journalism characterized by sensationalistic and exaggerated stories, large incendiary headlines, and often-fabricated stories. Each realized that the *Maine* story would sell and decided independently that the Spanish were at fault. The papers began to publish remarkable accounts of Spanish atrocities, from strip-searching female Americans on passenger ships to the torture of American prisoners of war. Headlines would scream, "Remember the *Maine*, to Hell with Spain!" A likely apocryphal but nonetheless representative story states that a Hearst illustrator was sent to Havana to cover the story and reported that there was no war. Hearst, in reply, stated "You furnish the pictures; I'll furnish the war."

Political and Cultural Outcomes of War Declaration

The press would fan the populist and political flames of war, leading to a formal declaration by the U.S. Congress in April 1898. The war would be fought primarily in Cuba but also in the Philippines and Puerto Rico through sea and land campaigns. Fighting would cease on August 12, 1898, and the Treaty of Paris would be signed two months later. Over 5,000 Americans and Cubans were dead, and over 50,000 Spanish. Approximately 90 percent of the dead on each side were the victims of disease, including yellow fever, typhoid, malaria, and dysentery.

After the war, Puerto Rico and Guam would become American territories, along with the Philippines, which would fight two wars for independence before achieving autonomy in 1946. Cuba

would become a sovereign nation in May 1902, albeit with diplomatic restrictions and a perpetual American lease on Guantanamo Bay for military purposes. Perhaps most important, for the first time, the American military's actions would foreshadow its future capability of expanding its political, economic, and technological power as a key player in global politics, leading to the rise of American empire in the 20th century.

Cultural Significance

The Spanish-American War would result in a number of lasting cultural shifts, particularly in terms of the cultural identities of the involved nations. In the United States, the war notably served to mend North-South relations in the post-Reconstruction era following the end of the Civil War in 1865. There had been no major international conflict in which the United States was involved in the years since, and the Spanish-American War served as a uniting bond between the North and South as the nation attacked a common enemy, with northerners fighting alongside southerners in the same units.

Furthermore, the war was among the first to allow African American units to fight in battle. The Ninth Cavalry Regiment was created with the political support of Booker T. Washington and would play a critical role in a number of battles in Cuba. The African American units' success in this war would lead to slow, but continued, racial integration into the U.S. armed forces.

Culturally, the war was viewed in the United States as both a success and a call for increased American expansionism, politically, economically, and culturally. The rising popularity of the motion picture camera, a relatively recent invention, brought home newsreels to American audiences across the nation, allowing for a mass audience to experience film in both urban and rural parts of the country. Cultural narratives would emerge as well. The Rough Riders, then-Colonel Theodore Roosevelt's First Cavalry Brigade, would emerge as a heroic myth from the war, relating tales of victory from the conflict that would be told through wild west shows, minstrel shows, and eventually film and television throughout the 20th century.

Finally, the war would lead to differing degrees of Cuban, Philippine, and Puerto Rican autonomy, certainly in a political sense, but also in a

The wreckage of the USS Maine in 1898. The catastrophic loss in Havana harbor killed nearly three-quarters of her crew when the ship suddenly exploded and sank. Popular U.S. opinion blamed Spain for the incident. The sinking of the Maine served as a catalyst, accelerating the diplomatic impasse between the United States and Spain.

melding of a number of disparate cultures through hybridization. Cuban and Puerto Rican cultures, for example, are still today strongly influenced by their roots as Spanish colonies, but also by their physical proximity to North America and its cultural products and ideas.

Puerto Rican culture, in particular, had been a hybrid of several others from its long history of colonialization and immigration, from native Taino culture to other European, African, or Caribbean cultures, but it was the legacy of Spanish colonialization that was among the most profound influences. Following the Spanish-American War, however, the territorial status of Puerto Rico as an American colony would begin a century of further hybridization in the nation through the introduction of a different set of political and economic influences, as well as new cultural forms and ideas. American culture would also see the effect of Puerto Rican migration following the war and throughout the century as emigrants would migrate to Florida and several

northeastern states, establishing hybridized cultural practices.

The question of identity for these cultures is one of disparate cultures (particularly in Cuba's Communist government). However, as the rise of multicultural national identities becomes increasingly rooted in the globalization of space and place, the lasting effects of the Spanish-American War are still seen in geopolitical and cultural identities in each of the involved nation-states.

Special Education

Special education is a set of free instructional and related services offered in U.S. schools to qualified individual students with identified disabilities. Originally enacted by Congress in 1975 under the title Education for All Handicapped Children Act (EAHC), or Public Law (P.L.) 94-142, the legislation established the foundation of special education services to meet the needs of students with disabilities who had traditionally been disenfranchised from the public school system. Seen as a significant win for the civil rights of individuals with disabilities, the legislation initiated the structure, funding, and delivery of instructional and related services in neighborhood schools across the country. The legislation has been reauthorized several times since 1975 and in its current state is known as the Individuals with Disabilities Education Improvement Act (2004).

Federal Legislation to Serve Students With Disabilities

Prior to EAHC, children and adolescents with disabilities often received a low-quality formal education or were excluded entirely from the public school system. However, passage of the legislation aimed to address the more systemic concerns of individuals with disabilities, such as access, formal identification of disabilities, and locating of resources for families of children with disabilities. One of the most significant provisions of EAHC was the principle of a free and appropriate public education for students with disabilities. This principle has been foundational in terms of providing funding to public schools for the acquisition and

establishment of administration, specially trained personnel, curricula/materials, and related services (e.g., physical therapy, speech-language therapy, at-home autism services). EAHC also provided specific administrative and legal protocols to settle disputes with schools over the delivery of services.

Since the passage of EAHC in 1975, the legislation has evolved to meet the growing needs and awareness of children and adolescents with disabilities, and this evolution was demonstrated in the name change to the Individuals with Disabilities Education Act (IDEA) in 1990. In each of its four reauthorizations, the legislation has expanded to include early childhood initiatives, postsecondary school planning for individuals with severe disabilities, extended coverage of student rights, and creation of new disability categories, bringing the total number of recognized categories to 13. In addition, IDEA was crafted in three specific parts to address different services and age groups. Part A established the foundation and structure of special education services, Part B addressed services offered to individuals with disabilities between the ages of 3 and 21 years, and Part C provided services to children younger than 3 years of age.

Six Principles of Special Education

Throughout the development of federal special education legislation, school professionals, families, and advocates for students with disabilities have continuously reshaped IDEA to reflect the growing diversity of students with disabilities and critical topics in education. An examination of the history of IDEA demonstrates that six specific principles have held constant in the development of the legislation and of special education services in public schools. These principles include zero reject, nondiscriminatory evaluation, appropriate education, least restrictive environment, due process, and parent participation.

The principle of zero reject ensures that all students, regardless of the type and severity of their disability(ies), have the right of access to a free and appropriate public education. Prior to 1975, children with severe or multiple disabilities were often turned away from public schools because of the perceived expense and difficulties of their integration into the general curriculum. Nondiscriminatory evaluation establishes specific, unbiased

protocols in the academic and behavioral assessment of students referred to special education evaluation, including the informed consent of parents and the opportunity to seek third-party evaluations in cases of disagreement between parents and schools. The principle of appropriate education establishes specific practices that direct the creation of an individualized education plan (IEP) for the student with disabilities by a committee composed of the parents, school professionals, and other necessary members (including the child himself or herself when deemed age- and development-appropriate).

The principle of least restrictive environment (LRE) ensures that the student is placed in an academic and behavioral classroom setting that is not excessively restrictive and the student is not unnecessarily separated from same-age peers and the general curriculum, unless it is deemed appropriate for the student based on the severity of his or her disability and needs. Due process establishes formal protocols and opportunities for parents to challenge school decisions regarding the development and implementation of the IEP, including evaluation results, placements, and related services. Finally, parent participation, addresses the parents' rights to access school records and ensures the safekeeping of confidential information. This principle also strongly encourages home-school collaboration in the planning and delivery of special education services by reversing historical practices of school-centered decisions and emphasizing a student-centered or family-centered process. Unfortunately, the inclusion and quality collaboration of parents and families from ethnically diverse backgrounds remains a critical issue in special education and the field of education.

Special Education Practices and Implications for Diverse Populations

Over the past several decades, U.S. schools have seen a significant increase in the number of students from ethnically diverse backgrounds. However, traditional educational practices have failed to address the academic and behavioral needs of students from multicultural backgrounds as evidenced by the disproportionate number of students from ethnically diverse backgrounds who are identified with disabilities and receive

special education services when compared to their white peers. The phenomenon of disproportionality occurs when one specific ethnic/racial group is either over- or underrepresented in a disability category based on population, disability prevalence, and occurrence. Disproportionality remains one of the most critical issues in special education regarding students from ethnically diverse backgrounds.

Several investigations have indicated trends of overrepresentation based on the overreliance of referrals to special education and disability (mis) identification. Over the past four decades, several ethnically diverse populations have become significantly overrepresented in disability categories. African American students are overrepresented in the categories of intellectual disability and emotional disturbance. Latino and Native American students are overrepresented in the categories of specific learning disabilities and speech-language disorders, with trends indicating a growing Latino overrepresentation in emotional disturbance. Conversely, Asian/Pacific Islander students are underrepresented across all disability categories. Underrepresentation carries a similar concern as overrepresentation, as students experiencing academic and behavioral difficulties are not being identified and may be denied access to necessary services and support.

Misidentification of students with disabilities and inappropriate placement into special education settings have documented detrimental effects. Misidentified students will have limited (if any) access to the general curriculum and challenging instruction, which will inhibit their development of academic skills. They also may lack quality planning for college and other postsecondary education and career planning (e.g., vocational training). Additionally, misidentified students with limited interaction with their same-age peers in the general curriculum will often have limited development of appropriate social and interpersonal communication skills.

Past educational practices and the lack of educator experience in working with students from ethnically diverse backgrounds have directly contributed to disproportionality, particularly in the category of specific learning disabilities. As a means to assist struggling students from ethnically diverse backgrounds, educators often exercised

one of the few options available to them, the referral to special education evaluation. Referred students from diverse backgrounds experiencing academic difficulties were evaluated with psychometric instruments that were typically designed for students who were both white and native English speakers. The few psychometric instruments designed for diverse populations and non-native English speakers were often developed with limited student sampling and/or lacked statistical validity and reliability. The use of biased and/or limited instruments yielded a significant number of false positives among students from ethnically diverse backgrounds.

To address the growing concern of disproportionality in the category of specific learning disabilities, the reauthorization of IDEA in 2004 provided schools the opportunity to adopt alternate methods of identification, as well as a systematic method to deliver and document scientifically based academic interventions prior to special education referral. Many schools implemented the process of Response to Intervention (RTI) as a means to deliver academic interventions across multiple settings for struggling students. The RTI process provides educators the opportunity to incorporate three tiers of academic interventions based on the number of struggling students with different levels of intensity. Although investigations on the effectiveness of RTI with diverse student populations are relatively new (and in current development), initial results have been promising.

Educator Preparation in Working With Students From Diverse Backgrounds

In addition to addressing the method of identifying disabilities, researchers and children's advocates have called for educators to become more experienced and knowledgeable in working with students from ethnically diverse populations. As classrooms in schools have become more diverse and reflective of the general U.S. population, the teaching force has remained mostly static, with over 86 percent of current faculty white and female. This juxtaposition indicates a diversity rift between teachers and students that can greatly influence the quality of academic and/or behavioral interventions struggling students from ethnically diverse backgrounds may receive.

Unfortunately, many university and college teacher preparation programs continue to offer one (if any) course in working with diverse populations as part of required coursework. Often, such courses are based on superficial understandings of diverse populations with little in-depth analysis on how to teach to different learning styles based on culture and experiences, incorporate cultural relevance into academic curricula, and meet the needs of students learning English as a second language.

This lack of foundation in working with students from ethnically diverse backgrounds significantly increases the likelihood that such struggling students will be referred to special education evaluation, thus continuing the trend of disproportionality despite intervention measures such as RTI. In addition, educators lacking experience and knowledge in working with diverse populations will continue to have a detrimental impact on the overall quality of education for students from ethnically diverse backgrounds.

Speech Codes

First emerging in the United States in the late 1980s, speech codes restricted or banned certain kinds of speech on college and university campuses. Legal definitions and criminal procedures for cases of harassment, libel, slander, and fighting words already existed. However, universities sought to further restrict undesirable speech in classrooms and shared campus spaces, including racist, sexist, and homophobic speech. The resulting school codes placed sanctions on students and faculty for offensive speech that might not be considered legally actionable. Private schools with speech codes do not have to allow their students First Amendment rights and protections, but public universities must allow their students due process of law. As a result, speech codes proved controversial from their earliest days, as the American ideals of equality and freedom came into conflict.

Several reasons are commonly given for the creation of speech codes. First, they aim to combat discrimination by protecting vulnerable minority students from hateful speech and harassing actions. Second, they are designed to encourage campus climate change and promote social justice through support for racial and gender diversity on college campuses. Third, the "hate speech" sanctioned by such codes is generally aimed to incite violence and to cause emotional harm, rather than to provoke debate. Finally, such "hate speech" is usually used by people of an ethnic or sexual majority group with the goal of discouraging minority voices and preventing them from using their own First Amendment rights.

Speech code opponents also put forth several arguments. First, speech codes illegally prioritize civil liberties over the First Amendment right to the freedom of speech. Second, they create an artificial environment on campuses where campus administrators, rather than encouraging frank and critical dialogue on civil liberties issues, may silence unpopular opinions. Third, code enforcement may lead campus officials to reframe political or moral disagreements as personal attacks. Finally, they are often vaguely worded and impossible to enforce in practice. U.S. courts to date have generally overturned speech codes in multiple rulings, stating that speech containing offensive ideas remains protected by the First Amendment.

First Amendment Rights

In 1988, the University of Michigan at Ann Arbor implemented its "Policy on Discrimination and Discriminatory Harassment." In 1989, the University of Michigan was taken to court for that policy. In *Doe v. University of Michigan*, Judge Avern Cohn found that the school's code was unconstitutional because it had the potential to violate faculty and students' First Amendment rights. The plaintiff in the case, referred to as John Doe, was a university graduate student in biopsychology who wanted the code overturned on the basis that it was vague and overbroad.

Doe's legal counsel successfully demonstrated that the code's sanctions on sexist and racist speech had the potential to keep Doe from freely discussing theories about biologically based differences between sexes and races in the classroom where he served as a teaching assistant. The *Doe* decision indicated that a university could not maintain antidiscrimination policies that prohibited certain speech because it disagreed with the ideas conveyed, or because it found the ideas in such speech offensive, even to large numbers of people.

A speech code violation at the University of Pennsylvania in 1993 again focused national media attention on these codes. The incident involved a Jewish student, Eden Jacobowitz, who was sanctioned for yelling "Shut up, you water buffalo!" at a group of African American sorority sisters making noise outside his dormitory room window. Penn charged the student with

racial harassment and violation of university policies, asking him to write a letter of apology and admit wrongdoing, among other sanctions. (Part of Jacobowitz's defense was that he was studying Hebrew, a language in which "water buffalo" is an epithet for a rude or annoying person.) The charges were later dropped but led to heated discussions about the university's limits on free speech and whether the freshman's speech was meant to be a general insult or a racist epithet.

In spite of past legal rulings, 65 percent of American college campuses surveyed by the Foundation for Individual Rights in Education in 2012 have some sort of speech code policies that surpass the restrictions on freedom of speech outlined in existing U.S. law. Many of these speech policies are part of larger anti-harassment policies or codes of conduct on college campuses.

In recent years, religious believers have invoked such policies to protect their own freedom to speak on public university campuses about religious views unpopular in the secular sphere of the academy, creating a new round of litigation in the courts. The lines between offensive and illegal speech will remain a source of controversy in decades to come, as will university efforts to create diverse multicultural communities through policy-making and enforcement.

Spokane

The Spokane Tribe of Indians is a sovereign nation with its own tribal government located in eastern Washington State. Spokane is a name that was given to the tribe in the 1800s and translated as Children of the Sun, although the tribe refers to themselves as "sqeliz," meaning "the People." The Spokane Tribe previously inhabited over 3 million acres of land in what is today eastern Washington, northern Idaho, and western Montana, where they seasonally fished, hunted, and gathered. This slowly changed with the presence of the early-19th-century fur traders, who then gave way to an increasing missionary presence. By the late 19th century, a flood of European and U.S. settlers into tribal lands further hindered the Spokane Tribe's ability to successfully inhabit their world as they increasingly suffered through disease, war, and cultural destruction.

Struggling to Remain Autonomous

The Spokane Tribe is in recovery after two centuries of struggle to remain autonomous. This is evidenced by successes in the courts, economic development projects, and cultural preservation initiatives. Today, the Spokane Tribe has a membership of just over 2,700 members, a third of the precontact population. The Spokane Indian Reservation is approximately 159,000 acres surrounding the town of Wellpinit, Washington, where the Spokane tribal headquarters are located.

For millennia, the areas around the Spokane River and the upper reaches of the Columbia River were especially important to tribal members, who used the salmon, roots (especially camas), berries, and other plants for food, as well as the deer, elk, and moose for meat, clothing, and shelter. With the introduction of the horse in the 18th century, the Spokane went on buffalo hunting and trading expeditions across the Rocky Mountains to the Great Plains Tribes. The relationship the Spokane had with these resources changed once European fur traders arrived and the Spokane began participating in the commercial beaver and gun trades by 1810. Soon after, in the 1830s and 1840s, the arrival of both Protestant and Catholic (especially Jesuit) missionaries further altered the tribe's relationship with their natural and spiritual world. The final major change to the Spokane Tribe in

the 19th century came as the Spokane lost a key encounter with American troops in 1858, which resulted in an increasing number of European American settlers, who, with the support of U.S. government policy (especially the 1862 Homestead Act), dispossessed the Spokane Tribe of their traditional homelands.

In 1881, an executive order by President Rutherford B. Hayes established the Spokane Reservation, onto which many Spokane were directed to move, although other Spokane moved onto the reservations set up for the Coeur d'Alene, Colville, and Flathead Tribes. Beginning in 1906, Spokane tribal members were assigned allotments by the U.S. government, who then opened up even more Spokane land for white settlement. Throughout the first half of the 20th century, tribal members were supposed to remain on the reservation unless they had special permission to leave. Also during this time, off-reservation boarding schools were set up for Spokane children, who were forcibly removed from their homes to be taught all aspects of European American culture and separate themselves from traditional Spokane culture. Although attempts had been made by a variety of European Americans to assimilate the Spokane to

white American ways, the Spokane have instead adapted, with varying degrees of success, to living in two worlds.

Current Success

Recently, the Spokane Tribe has achieved several successes from the U.S. government, including compensation for some of the environmental, cultural, and geographic destruction of the prior century. In 1967, the Spokane Tribe settled with the Indian Claims Commission for \$6.7 million for the mismanagement of tribal funds, as well as to reimburse the tribe for the original cessation of their lands to the United States. Since 2000, the Environmental Protection Agency and the Spokane Tribe have begun work to clean up the mining pollutants on the Spokane Reservation. From 1955 until 1981, the Dawn Mining Company operated an open-pit uranium mine on the Spokane Reservation. A second mine, the Sherwood open-pit uranium mine, operated on tribal lands from 1976 through 1984. The pollutants left by these mines have seeped into the groundwater and contaminated it with heavy metal, threatening the health of creeks, marshes, fisheries, wildlife, and the tribe members themselves. In 1994, an agreement between the Spokane Tribe of Indians and Washington Power recognized the sovereign status of the tribe and the company's responsibility toward their wishes regarding the river on their reservation. The Spokane Tribe is still working toward compensation for the destruction caused to their lands and culture by the creation of the Grand Coulee Dam in the 1930s.

Today, the Spokane Tribe is experiencing a significant recovery of their economic and cultural autonomy. The first reservation casino in Washington State, Two-Rivers Casino, opened on the Spokane Reservation at the confluence of the Spokane and Columbia Rivers in 1994. The tribe opened a second casino, the Chewelah Casino, in 2000, and the Spokane Tribe Economic Project (STEP) is currently working to build a third. In 1991, the tribe opened a fish hatchery to renew the fish population struggling since the construction of the Grand Coulee Dam.

A cultural preservation program began on the reservation in 1995 to preserve cultural sites and history and includes an archive and library. The Spokane Tribal College (a branch of Salish

The Spokane Indian Reservation includes two small parcels of land and part of the Spokane River. Spokane territory once sprawled out over 3 million acres and now consists of 154,000 acres, of which they own only 10 percent.

Kootenai College) opened in 1995 with the goal of supporting the social, economic, and political status of the tribe. The curriculum reflects and relates to the Spokane Tribe's traditions, culture, history, and language. The Spokane have worked for many years to revitalize their native language and will open a language/culture immersion school in the near future. Salish is the language shared by all Spokane area tribes, including the Spokane, Coeur d'Alene, Kalispel, and Colville, who all speak similar dialects. Today, Salish is a highly endangered language, with only a few elder speakers remaining.

Sports and Ethnic Diversity

Given that sports are an important component of American ethnic and national identity, it is essential to identify their achievements in terms of diversity, as well as to note areas in need of improvement. Although great strides have been made in the last 50 years, American sports must continue to become more inclusive in regard to opportunities for players, leadership positions, and marketing and branding.

Until the 20th century, nonwhite people were generally excluded from organized sport leagues. Racism, segregation, social class, and other factors

prohibited many ethnic groups from participating in or even attending major events. Many ethnic groups were involved in sports, but generally within their own communities.

For example, ball games have always been popular with Native Americans, who originated the sport of lacrosse. Irish and German immigrants dominated baseball in the 1880s. Jewish, German, Irish, and Italian immigrants, especially in large cities such as New York, participated in many sports as a way to assimilate and to show they would not be bullied by whites or by other immigrant groups. Unlike other racial and ethnic groups, Jewish European immigrants were able to dominate basketball leagues in the early 20th century.

Teams often grew out of these different ethnic communities. For example, the Golden State Warriors basketball team was formerly the Philadelphia Warriors, and before that, the South Hebrew All Stars, a Jewish team. Other groups established their own leagues, like baseball's Negro Leagues.

High-profile athletes, such as Jackie Robinson and Roberto Clemente in Major League Baseball, Sammie Lee in swimming and diving, Arthur Ashe in tennis, and Jim Thorpe in track and field, as well as legislation enacted in the 1960s and 1970s, helped break down the barriers to participation. For example, the Civil Rights Act of 1964 and Title IX of the Education Amendments of 1972 helped usher in new opportunities for various groups.

Participation Today

Today, nonwhite athletes are still breaking barriers and shattering records in other sports. Gabby Douglas was one of only a few black gymnasts to ever compete on a U.S. Olympic team when she won the all-around gold medal in the 2012 Games, while Lia Neal became the second black woman to win an Olympic swimming medal. Latina Dara Torres earned 12 Olympic swimming medals and made the U.S. team for the 2012 games at age 45. Throughout the late 1990s and early to mid-2000s, Tiger Woods, who identifies with multiple ethnic groups, dominated men's professional golf.

Baseball is still one of the more ethnically diverse sports, with players from Latin America and the Caribbean dominating the league.

According to the Associated Press, 243 of the 856 players on Major League Baseball (MLB) rosters are immigrants. The percentages are higher in the minor leagues, with players from the Dominican Republic, Venezuela, Canada, and Japan making up a substantial portion of rosters.

Women's professional golf has become Asian-dominated in recent years. Between January 2001 and November 2009, players of Asian descent won almost 30 percent of events sanctioned by the Ladies Professional Golf Association (LPGA). South Korea is second to the United States in terms of LPGA Tour winners.

Racial Report Card

In other sports, however, diversity remains a challenge. Automobile racing, for instance, has struggled to become more diverse. The National Association for Stock Car Auto Racing (NASCAR) developed in the south and has historically been popular among white men. However, NASCAR created a diversity committee to address the issue in 2000. Similarly, sports such as ice hockey and sailing remain largely white, with few racial or ethnic minorities participating.

Sport scholars have noted that although some sports in America are now ethnically diverse in terms of participation, members of ethnic groups remain underrepresented in coaching, managing, and ownership positions. Scholars argue that there remains a fairly pronounced color line, or a structural and cultural barrier, that limits or blocks opportunities for nonwhites and ethnic minorities within coaching and administrative ranks. One argument for the continued need to diversify sport leadership is that teams that are dominated by members of particular ethnic groups might perform better if they were coached and led by someone from the same demographic group.

The National Basketball Association (NBA) has been a leader in breaking down ethnic and racial barriers in coaching and management, and the National Football League (NFL) has enlisted an affirmative-action approach, requiring teams to interview at least one minority candidate for head coaching opportunities.

In 1992, Richard Lapchick founded The Institute for Diversity and Ethics in Sport (TIDES), which produces an annual Racial and Gender Report Card. This card provides an important

look at the ownership, hiring, coaching, and participation of minorities in various sport organizations. The 2012 report card showed that people of color held more administrative positions at colleges than in previous eras, although only about 15 percent of collegiate athletic administrators are nonwhite.

College football has more minority head coaches than ever before. This increase is the result of the focused efforts of the late Myles Brand, president of the National Collegiate Athletic Association (NCAA), and his successor, Mark Emmert. Eighteen of the 30 new hires graduated from NCAA coaching academies that focus specifically on providing assistance to enable coaches of color to become head coaches. Divisions II and III of NCAA are less diverse in their hiring, and only nine schools had coaches of color during the 2012 season.

In 2012, the NFL received an A grade for its racial-hiring practices. In terms of ownership, 2012 saw Pakistani American Shahid Khan become the first majority owner of color when he bought the Jacksonville Jaguars. Half of the teams that made the 2011–12 playoffs had a minority coach or general manager. The NBA also received an A grade for racial hiring practices, including a record-high 53 percent of coaches of color in 2012. The report called 2012 a remarkable year in that Eric Spoelstra became the first coach of Asian descent to lead a team to the NBA championship, and Richard Cho became the first Asian general manager in a professional sports league. In regard to players of various ethnicities, Jeremy Lin (of Asian descent) of the New York Knicks sparked a short-lived but frenetic “Lin-sanity” before he was injured.

The Women's National Basketball Association (WNBA) earned an A+ for race on the 2012 report card. Lapchick calls the WNBA the standard for racial and gender diversity in professional sports. College basketball also saw an increase in the number of head coaches of color, both for males and for females.

Major League Soccer received a B+/A– for its minority hiring practices and an A+ for the diversity of its players and administration. MLB, which received an A for racial hiring practices, became the only major professional sports league to have two teams owned by a person of color when Magic

Johnson acquired part ownership of the Los Angeles Dodgers.

Cultural Controversies

One continued controversy involves the naming and mascots selected for college and professional sports teams. The issue gained mainstream attention in the 1990s. Teams often select names related to ethnicity. The Cleveland Indians and the Atlanta Braves (whose fans regularly did the tomahawk chop) baseball teams, the Washington Redskins and the Kansas City Chiefs of the NFL, the Chicago Blackhawks of the National Hockey League (NHL), and the NBA's Golden State Warriors maintain that their mascots are protected as free speech and they intend to honor Native Americans. Some teams with Native American names have consulted extensively with tribal members to ensure their support. This is the case with the Florida State Seminoles and the Central Michigan Chippewas. Others, however, continue to use names and mascots that tribes find offensive.

The American Psychological Association (APA) has issued a statement denouncing American Indian mascots in places of learning, and in 2005 it called for all Indian mascots to be retired. According to the APA, these mascots are insulting and reinforce stereotypes. Critics contend that mascots such as Notre Dame's fighting Irish remain generally free from controversy because they reflect the ethnic heritage of university founders.

Racial profiling or stacking involves identifying players as more or less capable based on proposed genetic ability. The turn of the 20th century eugenics movement reinforced the notion that nonwhites were intellectually inferior yet more muscular and aggressive, which made them better suited for sports. So, for example, black males have been stereotyped as best suited to boxing, making this a sport in which white athletes are in the minority. Studies have documented that in football, baseball, volleyball, and soccer, black athletes and other ethnic minorities are overrepresented in peripheral, nonleadership positions. Similarly, some have assumed particular ethnic groups as only being able to excel at particular sports. For instance, Asian Americans are often assumed to be martial arts experts, while Hispanics are presumed to excel at boxing. These

stereotypes can become harmful, self-fulfilling prophecies, making it difficult for these athletes to envision themselves in other sports.

The dominance of the Ladies Professional Golf Association (LPGA) by Asian women has not always been well received. For instance, Hall of Fame LPGA professional Jan Stephenson asserted that the Asians' lack of emotion and limited English was hurting the tour. Stephenson was criticized by LPGA Commissioner Ty Votaw and ostracized by many. Yet, in the fall of 2008, the LPGA instituted an English-only policy, which mandated that foreign players learn functional English within two years or face suspension of their tour cards. The LPGA claimed sponsors were unhappy that some foreign players were not engaging in much dialogue during events. Although short-lived, the policy ignited controversy. Critics note that the policy fails to consider cultural traditions and norms.

Sports have also been leveraged in controversial assimilation policies and programs. For example, sports were viewed as a way to assimilate Native American youth at boarding schools in the early to mid-20th century. Running, boxing, football, and wrestling were the primary activities.

Ethnic athletes have occasionally used the platform of sport to speak out about social injustices. When ethnic athletes challenge the status quo, many times they suffer significant repercussions. Boxer Muhammad Ali, formerly Cassius Clay, was known for speaking out about race, politics, and other issues. He even went to prison rather than fight in the Vietnam War. When, during the 1968 Olympics, U.S. track and field competitors Tommie Smith and John Carlos, who identified as black and Hispanic, raised their gloved fists on the podium for the 200-meter dash, a Black Power gesture, they were vilified by the International Olympic Committee (IOC) and many American athletes and fans. More recently, when black Olympic gymnastics champion Gabby Douglas spoke out about racist remarks she endured while training, she was criticized by other gymnasts and commentators for painting herself as a victim.

The NBA has struggled with how to handle athletes who were deeply immersed in the hip-hop culture, like Dennis Rodman, Alan Iverson, and Latrell Sprewell. These players were often fined for their behavior, and in 2005, after a riot broke

out between Detroit Pistons and Indiana Pacers players and fans, NBA Commissioner David Stern responded to what he saw as a “gangster” image rampant in the league by instituting a dress code for players. Players were required to dress in business or conservative attire while playing, while on the bench, and during NBA-related events. Critics complained that the policy targeted black and urban athletes.

Cultural Competence and Sports Commentators

Sports commentators have demonstrated their lack of cultural competence by saying degrading things about ethnic athletes. Jimmy “The Greek” Snyder, a CBS football announcer, proclaimed that blacks were bred to be superior athletes, attributing black athletic success to slavery and arguing that black athletes were pushing whites out of sports. Snyder was fired immediately.

Tiger Woods was a breakthrough athlete in men’s golf. He proclaimed himself “Cablinasian” (for Caucasian, black, American Indian, and Asian), and his multiple ethnicities prompted discussion in the Professional Golfers’ Association (PGA), not all of it positive. As Woods was wrapping up his victory in the 1997 Masters Tournament, fellow professional Fuzzy Zoeller suggested that Woods would be celebrating by eating fried chicken and collard greens, stereotypically “black” foods. Zoeller apologized publicly and attempted to personally contact Woods, but he ended up losing his corporate endorsements from Kmart and Dunlop Tires.

On September 8, 2003, talk radio host Rush Limbaugh had just been hired by ESPN’s *Sunday NFL Countdown* when he asserted that black quarterback Donovan McNabb was overrated. McNabb said little in response but went on to lead the Philadelphia Eagles to 12 wins out of the remaining 14 in the season and a playoff win against the Green Bay Packers.

One day after the Rutgers University women’s basketball team played for the NCAA title in 2007, radio commentator Don Imus referred to team members as “nappy-headed hos” and giggled while executive producer Bernard McGuirk called the title game against Tennessee “the jiga-boos versus the wannabees.” Imus apologized two days later and was suspended for two weeks. After

Korean American golfer Angela Park during the Pro-Am before the June 2009 LPGA Championship in Havre de Grace, Maryland. The success of Asian golfers has resulted in ostracization and discriminatory statements from other golf professionals.

outraged calls from high-profile activists like Jesse Jackson, Jr., and Al Sharpton, and withdrawal of corporate support from General Motors, Procter & Gamble, and American Express, CBS fired Imus. He later settled with CBS on a wrongful termination suit.

Sri Lankan Americans

Sri Lankan Americans are a small group, 25,263 in the most recent census figures. The number is probably slightly larger than that if one accounts for the Sri Lankan-born or -descended Americans who do not self-identify as “Sri Lankan American” but instead identify either more broadly as South Asian Americans or especially more specifically as Tamils, Moors, Burghers, Malays, or Sinhalese. Before 1975, Sri Lankans were simply classified as “other Asian.”

Sri Lanka is a multiethnic country in south Asia, of which the Sinhalese are the largest portion of the population. The Tamils, the largest minority, have frequently opposed the Sinhalese government, and a recurring insurgency has been fought since 1983 between the government and the Liberation Tigers of Tamil Eelam. This instability has been a major factor in immigration out of Sri Lanka. In older history books, Sri Lanka is referred to as Ceylon, and the first immigrants therefrom were called Ceylonese. Sri Lanka is also the geographic and cultural center of the Buddhist faith.

Sri Lankans have been coming to the United States in small numbers since shortly after World War II. Large-scale immigration did not begin

until the late 1980s and 1990s; it resulted from the conflict with the Tamils and the general instability of the region. Many of the Sri Lankan immigrants to the United States are admitted as refugees; a significant number, relative to the small size of the population, are winners of the immigration diversity lottery offered to countries with low rates of immigration.

Sri Lankans primarily settle in large cities, and the largest communities are in New York City, Chicago, Los Angeles, and Miami, where there are existing Indian communities; Hindu Sri Lankans generally prefer to move to areas with a Hindu community, since their numbers are too small to support one themselves. For the same reason, some Buddhist Sri Lankans have settled in the Tampa Bay area, where there is a Buddhist community of about 30,000.

First-generation immigrants often have difficulty adjusting to life in America, though they are usually at least somewhat fluent in English, the biggest obstacle to navigating the hurdles of American life. Assimilation and acculturation sometimes depend on whether the Sri Lankan considers himself or herself an immigrant or an exile; exiles intend to return home once the chaos ends and may be reluctant to take steps to put down roots in America, or lack the motivation to assimilate. Sri Lankan American parents are also likely to put a priority on maintaining a connection with Sri Lankan culture; they express concerns about their American-born or American-raised children growing up lacking the cultural touchstones and ideas that they themselves grew up with. Often, they encourage their children to take religion courses in order to better understand Hinduism or Buddhism.

Cultural Connections

The United Indian Student Alliance, based in Atlanta, Georgia, is an organization connecting students in America from Sri Lanka, Nepal, Bangladesh, and India. It holds yearly conferences in addition to other events and online networking.

Astrology is important in Sri Lankan culture, and an astrologer is intended to determine the correct details for the ceremony called the Akuru Kiyaweema, which celebrates a child’s mastery of his or her first letter. The astrologer is consulted to determine not only the proper time of

day to conduct the ceremony but also the direction the child should face and what colors he or she should wear. During the ceremony, the child is taught the letter—usually the first letter of the alphabet—after which a snack is consumed.

Sri Lankan food is broadly similar to Indian food, and cooking and eating follow the south Asian custom of not touching food with the left hand. Typical meals include curries, soup, fish, and vegetables, served with rice and condiments like chutneys and sambals (hot relishes). *Pol sambol*, one of the cuisine's most characteristic dishes, is a relish made from onion cooked with coconut milk and red chili. There are pronounced Portuguese, Dutch, and Malay influences on Sri Lankan cuisine, from contact with those cultures, and the food is heavily seasoned and often very spicy to the American palate.

Notable Sri Lankan Americans include Ras Ceylon, a rapper from Oakland, California; DeLon, the first Sri Lankan American with a *Billboard*-charting hit; actress Thushari Jayasekera, of the NBC sitcom *Outsourced*; actor Bernard White; Harvard anthropologist Stanley Tambiah; Columbia University professor Pathmajeewa Ganepola; diplomat Patrick Mendis; college basketball player Eric Obeysekere; and Mary Anne Mohanraj, author of *Bodies in Motion* and founder of Strange Horizons and the Speculative Literature Foundation.

Mohanraj was born in Sri Lanka but moved with her family to Connecticut at the age of 2. Her parents intended for her to have an arranged marriage to a Sri Lankan boy they had chosen; she refused. The generational conflict was not uncommon among Sri Lankan immigrant families. Mohanraj, who is an academic like her parents and younger sisters, has written extensively on the complexities of cultural identity, the meaning of Sri Lankan identity, and the meaning of a Catholic upbringing to an agnostic.

St. Augustine

St. Augustine, Florida, is the oldest continuously occupied European-settled city in the continental United States. According to the U.S. census, in 2010, the population was 12,975. The population is about 84.2 percent white, 11.6 percent black, 1.2 percent Asian, and 0.4 percent American Indian, with 1.6 percent reporting two or more races. Approximately 5.1 percent of the population is Hispanic. The city is somewhat whiter and much less Hispanic than Florida as a whole.

St. Augustine is on the First Coast, a name derived by marketers for the Jacksonville Chamber of Commerce in the 1980s and useful for referring to the first area of Florida colonized by Europeans. Juan Ponce de Leon's expeditions brought him to the First Coast in 1513, and a French colony was established on the site of present-day Jacksonville in 1563. In 1565, 40 miles away from Jacksonville, St. Augustine was established by Spanish explorer Admiral Pedro Menendez de Aviles and named for the feast day of Augustine of Hippo, which was the day that Aviles sighted land. A year after the city's founding, the first European child was born in the New World, Martin de Arguelles.

It is likely that the first enslaved people were brought to the lands of the United States during these early years. Many today remember the story of Roanoke, the first English settlement in the United States, in the colony of Virginia; not everyone remembers that when its disappearance was discovered, the English blamed St. Augustine, about 600 miles away, which was attacked in retribution by privateer Francis Drake. St. Augustine was established as a base from which to launch expeditions throughout Florida and the Gulf Coast, but the hostility of Native Americans made this difficult, and the French colonizers were

also near enough to pose problems, launching an attack on Spanish colonies in 1568.

Freed Slaves in St. Augustine

Slavery was not very important to the Spanish colonies in Florida, and the Spanish permitted enslaved people who escaped from British colonies to take sanctuary in Florida. If they swore allegiance to the Spanish Crown and converted to Catholicism, they would be given supplies and even arms. When British settlements encroached ever further south, the Spanish in 1738 established a legally recognized community of free blacks, the first in North America, in northern St. Augustine, known as Fort Mose. St. Augustine also successfully repelled a British attack in 1740. However, after the end of the French and Indian War, Florida was ceded to British control in return for the British removing their occupying forces from Havana, Cuba. Most of St. Augustine's Spanish population, about 3,100 at the time, left.

The Treaty of Paris in 1783 ceded Florida back to Spain, before it was ceded to the United States in 1821. Florida later became a state in 1845. After the Civil War, freed slaves of St. Augustine established Lincolntonville, a 1,400-acre district of St. Augustine in an area then surrounded by orange plantations. The district was originally called Little Africa, then renamed Lincolntonville in 1878. St. Augustine was a focal point for the civil rights movement. A sit-in protest held at a St. Augustine Woolworth's lunch counter over civil rights violations, including the violence of local segregationists, led to the arrest of 23 black protesters: 16 adults and seven juveniles. Four of the juveniles were sentenced to reform school for their political activism and became known as the St. Augustine Four: Joe Ann Anderson, Audrey Nell Edwards, Willie Carl Singleton, and Samuel White. They were kept in reform school for six months, during which time their case commanded national attention, until a special meeting of the governor's office resulted in pardons for all of them.

In September 1963, a Ku Klux Klan rally was held in St. Augustine, resulting in the beating of several National Association for the Advancement of Colored People activists. Although Klansmen and their victims both were arrested, the charges against the Klansmen were dropped, whereas one of the activists, dentist Robert Hayling, was

convicted of criminal assault. The following spring, Hayling made a public announcement, inviting northern college students to spend their spring break in St. Augustine as part of the civil rights movement. The St. Augustine movement was given international publicity, with Hayling leading a nonviolent, direct action campaign. Visiting activists included Dr. Martin Luther King, Jr., and Ralph Abernathy. Protesters were regularly beaten and assaulted, and national sentiment in their favor grew as they endured the abuse without striking back. The St. Augustine movement is often credited with helping the passage of the 1964 Civil Rights Act.

Today, St. Augustine is a popular tourist destination, particularly for its architecture, which includes Victorian-era buildings (especially in Lincolntonville) and Spanish colonial-era architecture, both original and reconstructed. The Old Spanish Trail, a tourist attraction developed in the 1920s, consists of about 3,000 miles (4,800 kilometers) of roadways linking St. Augustine to San Diego, California.

St. Patrick's Day

St. Patrick's Day is one of the most widely celebrated holidays in the United States, despite lacking legal recognition in nearly every jurisdiction except Suffolk County, Massachusetts (the seat

of which is Boston). Marked with parades, foods like the distinctively Irish American corned beef and cabbage, and drinking, St. Patrick's Day has become a celebration of Irish American culture that is even held by Americans with no Irish ancestry. St. Patrick's Day is perhaps the most popular celebration of ethnic identity in the United States.

Celebrated on March 17, St. Patrick's Day is the Catholic feast day of Patrick (387–461 C.E.), the patron saint of Ireland (born Maewyn Succat, in Scotland). It is officially observed by the Catholic and Anglican churches, the Eastern Orthodox Church, and the Lutheran Church, though as a secular celebration it is widely recognized in the United States. For Catholics, the Lenten fast is lifted for St. Patrick's Day, though technically, this is supposed to apply only to the Irish or those who attend a church consecrated to Saint Patrick. Patrick is credited with introducing Christianity to Ireland and is best known for the apocryphal tale of his using the shamrock to explain the concept of the Trinity to the pagan Irish. The shamrock tale may have led to the association of green with Patrick. He was originally associated with the color blue, but from the 18th century on, the day has been celebrated with "the wearing of the green."

St. Patrick's Day and Irish Americans

The importance of St. Patrick's Day in the United States has shifted over time in response to the character of the Irish American and the status of Ireland. The first Irish immigrants to the United States were Ulster Scots, who arrived in the colonial era fleeing the persecution of their Presbyterian faith in Northern Ireland; Patrick for them had far less resonance than he did for the Irish Catholics from southern Ireland, who followed in the 19th century. The first St. Patrick's Day celebrations in the United States were Protestant, organized by the Charitable Irish Society of Boston in the colonial era. Their 1737 parade was the first St. Patrick's Day parade in the world. Further, as the cause of Irish nationalism was taken up and garnered the support of many Irish Americans, the idea of celebrating Irish heritage and culture took on a greater fervor. Similarly, celebrating Irish heritage in the 19th century amid "Irish Need Not Apply" signs and the activities of groups like the Know-Nothing Party that sought to expel Irish immigrants from the United

States were very different acts from celebrating Irish heritage a century later.

Despite this ill treatment of Irish immigrants in the 19th century and the lingering anti-Catholic sentiment that persisted at least until John F. Kennedy's presidency, Irishness was incorporated into the American identity. This is most true in parts of the country where the Irish have had a major role in the formation of settlements and institutions, such as the northeast and New Orleans. Both Boston and New York have celebrated St. Patrick's Day since the colonial era, and both cities boast large Irish populations and parades of significant size. In Boston, schools close on March 17 for a double celebration: it is not only St. Patrick's Day but also Evacuation Day.

New Orleans has a sizable Irish population. As a predominantly Catholic city in the 19th century, it was a popular destination for Irish immigrants. The St. Patrick's Day celebration in New Orleans is the largest outside the northeast and is ranked second after New York City by Fodor's. Though the holiday usually falls in Lent, which begins the day after Mardi Gras and thus falls outside the Carnival season, it is celebrated much like Mardi Gras, with an elaborate parade of floats. In New Orleans, parades are interactive, with paraders on floats shouting and yelling to the spectators, others singing, and many of them throwing beads and other "throws" (generally small gifts and treats, typically green or otherwise associated with Irishness). There is not just one but several St. Patrick's Day parades in New Orleans, including several in the French Quarter, a downtown parade, a parade in the Irish Channel neighborhood, and a combined parade with Italian Americans celebrating St. Joseph's Day.

St. Patrick's Day Foods

The most distinctly American element of St. Patrick's Day, other than the participation of non-Irish, is the serving of corned beef at dinner. Corned beef is not a traditional food in Ireland. Throughout the United Kingdom, corned beef is difficult to find, except in canned form mixed with gelatin. In northeastern cities and Chicago, Irish and Jewish families often lived close together. Corned beef brisket is popular among Jewish Americans as an acceptable alternative to ham, or to the Irish-style bacon that Irish immigrants would have eaten. It

may have been easier to find or more affordable. Today, even though ham is widely available and often cheaper than corned beef, most Americans would look askance at the idea of serving it on St. Patrick's Day, with or without cabbage.

Other foods associated with the day include cabbage and root vegetables, especially if simmered in the same pot as the corned beef; colcannon, mashed potatoes cooked with greens; white pudding, an Irish sausage using oats as filler; champ, mashed potatoes cooked with green onions; and stew or steak and kidney pie made with Guinness stout. Chicago dyes its river green, and Savannah and Columbia dye the waters of their city fountains green; many cities temporarily repaint the street lines of their parade routes green.

Stand and Deliver

Stand and Deliver is a 1988 American drama film based on the true life story of math teacher Jaime Escalante, who inspired students to succeed, and the controversy surrounding their Advance Placement (AP) Calculus test results in 1982. Directed by Ramón Menéndez, *Stand and Deliver* was produced by Tom Musca, written by Menéndez and Musca, and distributed by Warner Bros.

Stand and Deliver takes place in 1982 at James A. Garfield High School in East Los Angeles, a primarily Mexican neighborhood. Jaime Escalante

was assigned to teach mathematics to low-income, low-achieving students. Escalante sets standards high and challenges their *gananas*, or desire, to succeed, while also teaching them discipline. He develops a rapport with students with jokes and teaches basic math and algebra with practical applications to real-life scenarios. Soon after, Escalante announces he will teach Advanced Placement Calculus. The mathematics chair, who represents the voice of doubt and dissent throughout the film, states that if Escalante's AP Calculus students try and do not succeed, not only will they be shattered, but their fragile self-esteem will not bounce back. This comment hints at the undercurrent of discrimination and racism Escalante's students will face in life, as he reminds them, because of their last names and complexion, and resurfaces again later with the Educational Testing Service (ETS).

The students featured in the film are composites, including Angel, a smart student with a tough gangster facade, and Lupe, a student who runs the household in the absence of working-class parents. In preparation for the AP exam, "Kimo," as Escalante is affectionately referred to by his students, makes students and parents sign a contract committing to classes during summer school, before and after school during the year, and on Saturdays. After all 18 students celebrated passing the AP exam, the ETS put Garfield on notice, suspecting all students of cheating because similar mistakes were found on the exams.

The earlier issues of discrimination and racism come to the foreground when Escalante confronts ETS officials, stating that his students' scores and achievement are in question because of their Spanish surnames and the barrio school they are from. After much conflict with ETS officials, Escalante's students decide to retake the exam and prove the ETS accusations false. As a result, all 18 students pass the AP Calculus exams with scores of 3s, 4s, and 5s (the highest ranges), reinforcing the assertion that despite the dark realities of discrimination and racism, Escalante's students have achieved success yet again, and will carry their success with them in their bright futures.

High Acclaim

Stand and Deliver opened on March 11, 1988, starring Edward James Olmos as Escalante and featuring Lou Diamond Phillips as Angel and

Andy Garcia as Dr. Ramirez, the ETS official. Olmos was nominated for Best Actor during the 1989 Academy Awards. Both Olmos and Phillips were nominated respectively for Best Actor and Best Supporting Actor in a Motion Picture Drama during the 1989 Golden Globe Awards. The film had a diverse cast and production crew that included Menéndez, who is Cuban born; actor Olmos, who is Mexican American and plays Bolivian-born Escalante; actor Garcia, who is Cuban American and plays a Hispanic ETS official; and actor Phillips, who is Filipino American and plays a young Chicano, Angel.

After reading a front-page article in the *Los Angeles Times* about Jaime Escalante in 1983, Ramón Menéndez, a new graduate from the University of California Los Angeles film school and American Film Institute, was inspired to develop a film on Escalante. Menéndez immediately recruited his friend and fellow UCLA film school alumnus, writer, and producer, Tom Musca, to collaborate on the project. Menéndez and Musca courted Escalante for half a year until Escalante allowed the director to buy an option on his story for \$1 in 1984. Later that October, Lindsay Law, producer of American Playhouse on PBS, gave Musca and Menéndez \$12,000 to develop a script. In November and December, they observed Escalante's classes, and over the winter break, they interviewed 12 students involved in the 1982 controversy. A year later, in 1985, American Playhouse funded an additional \$500,000, coupled with ARCO Foundation's \$300,000 and \$3.5 million from Warner Bros. for the rights. In preparation for the role, Olmos shadowed the real Escalante daily, recorded conversations, and gained 41 pounds.

The real Jaime Escalante joined Garfield in 1974 when it was in danger of losing its accreditation. In 1979, he taught his first AP Calculus class of five students, with two passing the exam with a score of 3 or better; in 1980, nine students with seven passing; and in 1981, 15 students with 14 passing. *Stand and Deliver* depicts the 1982 ETS controversy at Garfield. In a 2002 interview, Escalante describes the film as "90 percent truth and 10 percent drama." In reality, it took Escalante 10 years to build Garfield's math program, and its success resulting in part from the full support of principal Henry Gradillas, and Escalante's handpicked math

colleagues, Ben Jimenez and Angelo Villavicencio, who taught feeder math classes necessary for calculus preparation. Escalante also convinced Garfield's feeder junior high schools to teach algebra to eighth and ninth graders. After the film, instant celebrity, professional jealousies, and threats plagued Escalante, who left Garfield in 1991. He continued to teach at Hiram Johnson High School in Sacramento and later at Universidad del Valle in Bolivia. Escalante passed away in 2010 from cancer; he was 79.

Today, *Stand and Deliver* is part of the Hollywood canon of biographical teacher-inspired films, alongside *Lean on Me* and *Dangerous Minds*. The film is also included in educator training programs, inspiring teachers as agents of change and for Escalante's lessons, program model, and vision. In 2001, *Stand and Deliver* was added to the National Film Registry for the Library of Congress.

Statue of Liberty

No other landmark serves as a more prominent symbol of the United States' proud tradition as a nation of immigrants than the Statue of Liberty. Officially presented to the nation as a gift from France on October 28, 1886, the statue stands atop a 155-foot stone pedestal on Liberty Island in the Upper Bay of New York Harbor. The statue

itself is 111 feet tall and weighs more than 22 tons. During the late 19th and early 20th centuries, millions of immigrants from societies on the opposite side of the Atlantic Ocean gazed upon the Statue of Liberty en route to their official registration at Ellis Island. Despite popular misconception, however, the Statue of Liberty is not located on Ellis Island, but rather on Liberty Island. Ellis Island is a separate island located just northeast of Liberty Island. The United Nations declared the Statue of Liberty a World Heritage Site in 1984. Approximately 4 million people from around the world

The Statue of Liberty was dedicated on October 28, 1886. A gift to the United States from the people of France, the robed figure represents Libertas, the Roman goddess of freedom.

visit the Statue of Liberty and Ellis Island annually, making these historic landmarks two of the most popular tourist destinations in the United States.

French Influences, Design, and Dedication

Edouard de Laboulaye, an influential French political philosopher and France's leading expert on the U.S. Constitution, suggested the idea of presenting the United States with a monument symbolizing the special French–American friendship in 1865. France had been one of the United States' staunchest allies during the American Revolution, and the democratic ideals and personal freedoms enshrined in the nation's founding documents inspired Laboulaye, who desired such liberal reforms in French society. A committed abolitionist, Laboulaye served as president of the French Anti-Slavery Society and an honorary member of the Philadelphia chapter of the Union League Club, an abolitionist group that supported President Abraham Lincoln and the Union cause during the Civil War (1861–65). Laboulaye regarded the Union's victory over the Confederacy and the subsequent ratification of the Thirteenth Amendment in 1865, which abolished slavery, as fulfillment of American democratic ideals espoused in the U.S. Constitution. He also firmly believed that the construction of a French monument that valorized American democracy would muster public support for democratic reforms within France.

In 1870, Laboulaye commissioned the French sculptor Frederic Auguste Bartholdi to design his monument to the United States. Bartholdi proposed a statue titled "Liberty Enlightening the World," which featured a robed woman raising a torch overhead. During a trip to the United States in 1871, Bartholdi decided that the ideal location for his statue would be Bedloe Island in New York Harbor, because of the small island's location at the major U.S. point of entry. Bartholdi, Laboulaye, and American supporters founded the Franco American Union in 1872 to raise funds for the construction of the statue. The French agreed to build the statue, while Americans would bear the responsibility for constructing its base pedestal. Bartholdi hired Alexandre Gustave Eiffel, architect of the Eiffel Tower, to construct the statue's massive frame.

Upon its completion in 1884, the Franco American Union presented the statue to the U.S.

ambassador to France, Levi P. Morton, during a Paris ceremony on July 4 of that year. The statue was then disassembled and shipped to New York City via the French navy ship *Isere* in the spring of 1885. To transport the monument, French shippers separated the statue into 350 pieces that were packaged into 214 crates. At the time of its arrival on American shores in June 1885, the pedestal had not yet been completed, as lack of funding had stalled construction efforts, prompting noted newspaper publisher Joseph Pulitzer to print calls for financial donations in the editorial pages of *New York World*. Pulitzer's efforts generated more than \$100,000 in contributions, leading to the successful completion of the project. Reassembly of the statue atop its pedestal occurred from July to October 1886.

Official dedication of the Statue of Liberty took place on a rainy, foggy day on October 28, 1886, amid a festive atmosphere. An estimated 1 million spectators attended the ceremony, as parades on land and in New York Harbor provided music and a sea of American flags. Bartholdi culminated the dedication ceremony by ascending to the statue's crown and removing the French flag that covered its face, unveiling Lady Liberty to the American public.

The National Parks Service obtained control over the Statue of Liberty and Bedloe's Island in 1937, prompting the transition of the site into a tourist attraction. President Dwight D. Eisenhower renamed Bedloe's Island "Liberty Island" in 1956, and in May 1965 nearby Ellis Island became part of the Statue of Liberty National Monument.

Emma Lazarus and Immigration Symbolism

The United States is often referred to as a nation of immigrants, and the largest waves of immigration to American shores occurred during the late 19th and early 20th centuries. Between 1880 and 1924, more than 13 million immigrants entered the United States through New York Harbor. Hailing from Ireland, Italy, Poland, Armenia, Greece, Russia, Great Britain, the Austro-Hungarian Empire, the Ottoman Empire, and other Eurasian societies, Lady Liberty served as the impressive first glimpse of a new life awaiting these newcomers in the United States. As the steamships carrying immigrants passed the

Statue of Liberty, they docked at nearby Ellis Island for the inspection and processing of their passengers.

One of the Statue of Liberty's best-known features is the inspirational poem, written by Emma Lazarus, inscribed on its pedestal. Lazarus, a poet of Portuguese-Sephardic Jewish heritage, was active in charitable causes assisting Jewish immigrants who had been detained by New York immigration inspectors. Her experiences working with Jewish migrants profoundly impacted her social conscience, which is reflected in her writings. In 1883, the American Committee for the Statue of Liberty asked Lazarus to craft a poem for a public creative arts auction designed as a fund-raiser for the construction of the statue's pedestal.

Reflecting on her own ethnoreligious ancestry and her experiences assisting immigrants, Lazarus penned "The New Colossus" on November 2, 1883. The poem describes the Statue of Liberty as a beacon of freedom and a safe haven for downtrodden and dispossessed peoples the world over. Her poem proved popular at the auction, and Pulitzer published it in the *New York World* shortly afterward. The *New York Times* also published "The New Colossus," generating mass exposure.

Lazarus died at the age of 38 in November 1887. In 1903, authorities inscribed a stanza from "The New Colossus" onto a plaque and placed it on an interior wall within the statue's pedestal. The famous segment of the poem inscribed on the pedestal reads,

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the tempest-tost to me,
I lift my lamp beside the golden door!

Both the Statue of Liberty and "The New Colossus" remain iconic symbols of America's immigration past and present. Interestingly, both pro-immigration advocates and anti-immigration restrictionists invoke these symbols to advance their respective positions regarding U.S. immigration policy. Pro-immigration advocates use the symbolism of the statue and Lazarus's poem to contend that the United States should not

forget its legacy as a nation of immigrants and to counter nativist rhetoric by pointing out that contemporary immigrants and refugees, like their 19th- and 20th-century counterparts, settle in the United States out of hope for a better life.

Immigration-control advocates, on the other hand, invoke the symbolism of the Statue of Liberty and “The New Colossus” in an effort to contrast present-day immigrants with those from earlier periods in the nation’s history. Such exclusionary use of these symbols have been invoked during protests by members of grassroots immigration-control organizations such as the Long Island-based Sachem Quality of Life and the southern California-based American Patrol, among others, to visually depict present-day immigrants, particularly those from Mexico and Latin America, as an alleged “threat” to the United States and its way of life and as allegedly differing sharply from earlier waves of European immigrants. In short, pro-immigration advocates see these symbols as reflecting the humanity of contemporary immigration, whereas proponents of immigration restriction view these very same symbols as glorious emblems of the nation’s immigrant past that, allegedly, is threatened today by newer waves of immigrants.

Throughout American history, various presidents have invoked the Statue of Liberty’s immigration symbolism for political purposes. President Franklin D. Roosevelt commemorated the statue’s 50th anniversary in October 1936 with a speech that praised immigration as a fundamental component of national identity. Roosevelt also lauded immigrants for enriching American society. With the Statue of Liberty as his backdrop, President Lyndon B. Johnson signed the Immigration and Nationality Act of 1965 (also known as the Hart-Celler Act) into law on October 3 of that year. This act ended discriminatory national-origins quotas enacted in the 1920s that drastically reduced immigration from southern and eastern Europe and virtually eliminated immigration from Asia. Signed into law one year after passage of the Civil Rights Act of 1964 ended racial discrimination in public accommodations, the Hart-Celler Act led to a dramatic increase in immigration from Asia, Latin America, the Caribbean, Africa, and the Middle East over the next four decades. The 1965 act is thus a major catalyst of America’s pluralistic demographics in the early 21st century.

Restoration and Hurricane Sandy Impact

In May 1982, President Ronald Reagan appointed Chrysler chairman Lee Iacocca as head of the Statue of Liberty–Ellis Island Foundation, a privately run venture to raise funds for the preservation and renovation of the Statue of Liberty in preparation for its 100th anniversary. An \$87 million renovation effort over the next four years resulted in the replacement of the statue’s iron bars with stainless steel bars, the complete replacement of the torch, and repairs of holes that punctured the statue. The renovated statue reopened to the public on July 5, 1986.

The Statue of Liberty closed from October 2011 to October 2012 for another restoration project. The \$30 million upgrade included the addition of 39 steps inside the statue, new granite staircases near the pedestal, wheelchair access to the statue’s observation deck, and improvements to the internal elevators. On November 1, 2012, the National Parks Service announced that the Statue of Liberty and Ellis Island had been closed indefinitely as a result of the destruction wrought by Hurricane Sandy. Although initial investigations revealed no hurricane damage either to the statue itself or to the Ellis Island immigration museum, federal authorities initiated thorough examinations of each site to uncover any possible damage to the infrastructure.

Stereotype Threat

The term *stereotype threat* was coined in 1995 by Claude Steele and Joshua Aronson and refers to being at risk of confirming a negative stereotype about one's group. When people are placed in a situation in which a bad stereotype about one of their social identities could be applied to them, they know that anything they do that fits the stereotype could be taken as confirming that particular negative stereotype. People know they will be judged based on their behavior, physical characteristics, dress, social mannerisms, and speech and treated according to a particular stereotype.

Stereotype threat has been found to affect an individual's psychological, physiological, intellectual, and emotional state of being when he or she is placed in a situation that leads to stereotype threat. Most people do not experience stereotype threat until they reach the age of 11 or 12, when they typically first experience evaluations of ability levels and when they first start to experience high levels of stress as a result of fear of underperformance. As a society, everyone can identify with a group or groups that have been labeled with negative perceptions. As a result, everyone runs the risk of being judged by these negative stereotypes and perceptions. Therefore, no one is immune from stereotype threat.

Impact on Ethnic Groups

Stereotype threat appears to negatively impact members of ethnic minority groups when they encounter tests or tasks that focus on cognitive abilities. Research has found this is most likely to occur with members of groups identified as poor, Latino, and African American. Performance tends to shift in the direction of the stereotype, particularly for members of socially stigmatized ethnic groups, when situational cues implicate group identity. For example, when taking a standardized test, students often need to share their identities. For students who are members of socially stigmatized ethnic groups, providing this information impacts their performance on the exam because they believe they are being evaluated based on a stereotype tied to their identities. Researchers have speculated that students from ethnic groups who experience stereotype threat during tests of a diagnostic nature may question their abilities and

withdraw from these kinds of situations based on low expectations for success. Additionally, as a result of experiencing stereotype threat, students from ethnic diverse backgrounds are more likely to withdraw from school.

Stereotype threat may have a profound impact on the achievement gap that exists between certain groups of students in various contexts. Stereotypes based on ethnic characteristics can impact students' grades, test scores, and academic identities. This identity threat can affect a student's sense of academic competence and sense of belonging in the classroom and in higher education.

Reducing Stereotype Threat

Recognizing that stereotype threat does exist and making an effort to reduce it can bring about changes or some improvement to social problems, such as intergroup tensions that impact the relationships among individuals and groups of people. Education about various cultures helps promote cultural knowledge, creativity, and intercultural understanding.

Additionally, educating others and informing them that intelligence and critical abilities are learned and expandable—and are not fixed as once believed and touted—is critical to help reduce stereotype threat and to increase the number of positive experiences members from groups identified as poor, Latino, and African American have when it comes to tasks or exams that focus on cognitive abilities. When members of these groups have positive experiences in any activity, especially testing, the likelihood for them to be concerned that they will be evaluated based on a negative stereotype will decrease.

Stereotypes/ Generalizations

A cultural generalization is a statement about a group of people. For instance, saying that Americans (used in this entry to refer to U.S. citizens) tend to be more individualistic compared to many other cultural groups is an accurate generalization about that group. A cultural generalization may become a stereotype if it is definitively applied to individual members of the group. For instance, it would be stereotyping a particular person to assume that he or she must be individualistic by virtue of being an American.

The term *stereotype* refers to a metallic template used in printing repetitive copies of a document. As it is used in the context of intercultural communication, a cultural stereotype is a rigid description of a group (all people of Group X are like this) or, alternatively stated, it is the rigid application of a generalization to every person in the group (you are a member of Group X; therefore, you must fit the general qualities of Group X). Stereotypes can be avoided to some extent by using cultural generalizations as only tentative hypotheses about how an individual member of a group might behave.

We cannot and should not avoid making cultural generalizations. Generalizations are an inherent part of human perception. Every describable object of perception has been assigned to a category that associates it with other assumedly similar objects and contrasts it with other assumedly different objects. For instance, horses may be assigned to the category of domesticated work animals, similar to oxen and camels, but different from pets such as cats and parrots. Horses may also (or alternatively) belong to the category of food animals (along with cows and goats) in contrast to the category of competitive animals such as roosters and dogs. But there cannot be a horse or any other object of perception without some set of associations.

The idea of "culture" is itself a categorization of people. In fact, it is impossible to refer to a group at all without making a generalization about what qualities are shared by members of the group. But like horses, people could be assigned to different cultural categories depending on which criteria are used to compare them to other groups. Also, individual members vary in the degree to which they share the group's common characteristics. To deny that variation—to assume that every individual is a static representative of a single group—is the essence of stereotyping.

It is possible to make accurate generalizations about prevalent qualities of a group without stereotyping individuals in the group. Accurate generalizations are based on the measurement of a chosen set of cultural criteria (for instance, styles or values) in a large number or a random sample of individuals. This process either generates groups based on similar patterns of criteria or it describes the patterns that exist within a group based on other criteria, such as national boundaries.

If the generalization rests on too small a sample, it may describe some unusual quality that is not represented widely in the group as a whole. This is why it is not a good idea to generalize from having met a few members of an existing group; they probably are not representative of the group. Basing a generalization purely on personal experience is likely to be inaccurate, but inaccuracy is not the basis of stereotyping. It is when generalizations—accurate or inaccurate—are rigidly applied to individuals that they become stereotypes.

Level of Analysis for Generalizations

For the purpose of making cultural generalizations that are useful for analyzing interaction, it is important to define what level of analysis we are using in observing human behavior. Culture, in the sense that it is used in intercultural work, refers to a group level of analysis, in which the concern is with the prevalence of defined qualities, such as values or styles within defined groups, such as a national societies, ethnic groups, or geopolitical regions. By contrast, an individual level of analysis refers to individual characteristics and personality. It is generally assumed that genetically driven personality traits and personal characteristics such as intelligence are more or less equivalently distributed in different cultural contexts. Following this assumption, we cannot say that one culture has more of a personality trait like extroversion than another, and similarly, we certainly cannot say that one cultural group is less intelligent than another. In other words, we cannot make cultural generalizations about individual characteristics; to do so constitutes a “confusion of level of analysis.”

It is important for intercultural work to not confuse these two levels of analysis. If, for instance, we are trying to analyze a conflict between two people, the individual level of analysis would lead us to consider differences in personality (e.g., extroversion/introversion), intelligence, learning style, leadership style, and other characteristics that are treated as personal variations. However, we could also analyze the conflict at a group level of analysis, looking for differences in cultural worldview such as communication style, nonverbal expression, or cultural values (e.g., individualism/collectivism). It may well be that the conflict can be explained adequately with reference to only personal differences—a “personality clash.” In many situations, however—particularly cross-cultural ones—clashes in worldview may be as important, or more, in explaining the conflict. Since much of popular and even academic lore regarding communication is posed in psychological terms (at the individual level of analysis), it takes a conscious effort to maintain focus on worldview issues at the group level of analysis.

At an institutional level of analysis, focus is on human behavior in terms of institutions such as political, economic, or religious systems. Events can be analyzed at this level by understanding how

institutions channel human behavior into certain patterns of interaction. For instance, the conflict mentioned earlier might be approached usefully by analyzing the status and power relationships of the participants, or by understanding their possibly different allegiances to competing organizations. Some forms of cultural studies combine the institutional and individual levels of analysis, seeking to position individuals in social organizations in terms of power, privilege, and oppression. A wide range of behavior (e.g., dominant/nondominant group relations) is then explained in terms of the roles (and thus the relative power) people have in society.

Without denying the importance of power relationships, the institutional level of analysis may nevertheless be conceptually dangerous ground for cultural generalizations. Institutions such as political and economic structures, architecture, and literature are artifacts of culture; that is, they are the products of groups of people who are coordinating meaning and action among themselves. Once created, institutions become “objective” in the sense that they exist as relatively stable “objects” in our environment. When we define behavior in terms of objective institutions, the behavior itself becomes objectified, and role relations among people in institutional terms become static. In explaining human interaction exclusively in institutional terms, we are in danger of saying that whoever we are personally, and whoever we are culturally, our behavior is essentially determined by our position in society. This is the ultimate stereotype, using social role as an essentialized label.

The key to using cultural generalizations without stereotyping is to use them at a group level of analysis, seeking to understand individual behavior as, to some extent, a manifestation of cultural worldview, and to understand interaction among individuals as, to some extent, a clash and coordination of those worldviews. We can also analyze personality and power dimensions of interaction, but to confuse those levels of analysis with the cultural level is to risk overwhelming cultural generalizations with individual or social stereotypes.

Scope Conditions for Generalizing Culture

The level of specificity of a cultural generalization depends on the scope of the group being generalized. Using the definition of culture as “the

coordination of meaning and action among people interacting within a boundary," the scope of a culture group is defined by its boundary. A typical boundary follows the national border, so we can speak of "Italian" culture or "American" culture. However, the scope of most national groups is already quite broad, and the accurate generalizations that can be made are therefore relatively broad (abstract) as well. For instance, one might accurately generalize that Italians are more relationally focused than Americans, who are more task-focused, even though that true statement includes a huge variation in both groups. If we wanted to make a more specific generalization such as "people of culture X tend to be more hospitable than people of culture Y," then we need to refer to a more specific group. For instance, southern Italians tend to be more hospitable than northern Italians, and African Americans are more hospitable than European Americans.

At the extremes, generalizations become very vague or very sharp. At an extremely wide scope, we might compare "the West" to "the East," but we can make only rather vague generalizations about this contrast. For instance, one might generalize that Asians tend to be more sensitive to context than are Europeans or Americans. But the variation is so great in these groups that such a statement is not very useful for specific cases of communication. At an extreme, narrow scope, we might compare the culture of one department in a company to that of another; for instance, the departments may differ in their preference for e-mail or telephone communication. Beyond understanding interaction between those specific groups, such a narrow-scope generalization is not very useful. The most useful generalizations are those that are positioned at a middle level of abstraction, neither so broad as to be only vaguely true nor so narrow as to be only trivially true. Good midlevel cultural generalizations generate cultural contrasts that are relevant to intercultural communication and transferable to various other cultural contrasts.

For instance, we can accurately generalize that North Americans use a more linear (low-context) communication style than do South Americans, who use a more circular (high-context) style. This contrast is immediately relevant to intercultural communication, in that it can predict a likely mutual negative evaluation: A North American

may find the South American unfocused and time-wasting, whereas a South American may find the North American simplistic and arrogant. The simple act of bringing this difference in communication style into perception may be enough to ameliorate the negative evaluation and possibly provide some ground for mutual adaptation. This mid-level generalization is about two rather broad regional cultures, but it is reasonably applicable to national and ethnic variations within the regions. Most important, the generalization is transferable to other cultural contrasts, such as more linear Dutch versus more circular Italians, or more linear European Americans versus more circular African Americans.

Culture-General Frames

Culture-general frames are constructed for the purpose of creating useful cultural generalizations. Unlike culture-specific information, culture-general frames do not claim to describe cultures exhaustively, as an anthropological ethnography might. Instead, the frame is constructed to guide perception toward distinctions and contrasts that are useful to interaction, and that are general enough to be applied to a wide range of cultural contexts. A frame defines a domain and a continuum: The domain defines a focus such as non-verbal behavior, and the continuum is a variation in some specific behavior in the domain, such as eye contact. Generalizations are then made about how the behavior is distributed among the population of different cultural groups. Following are some examples of how culture-general frames can be used to generate useful generalizations about cultural differences without creating stereotypes.

Language Use

The domain here is not language systems, but instead the way language is used in ritualized ways to coordinate social relations. Continuums typically include greeting, leave-taking, and other rituals, such as arguing, negotiating, complimenting, or criticizing. For example, verbal greeting rituals might be contrasted in terms of length (short to long), general content (impersonal to personal), and style (joking to serious). To contrast European American men's culture with European American women's culture, for example, European American men tend to verbalize short greetings in passing,

emphasizing impersonal common experience such as sports-viewing, and sometimes using a teasing style. European American women are more likely to engage in longer greetings, emphasizing personal relational experience, and perhaps including a compliment on each other's appearance.

A potential misunderstanding arising from the above contrast in greeting ritual might go like this: The woman may perceive the man as brusque and unfriendly, and maybe even hostile in his use of "baiting." The man, on the other hand, may perceive the reception of unexpected personal revelations and compliments from the woman as unusually intimate and even flirtatious. These perceptions are likely to be inaccurate because they flow from the wrong level of analysis. Because the greeting rituals were not identified as cultural patterns, they were mistakenly taken as indications of personal traits. Actions taken on the basis of these misperceptions will probably exacerbate the situation. For instance, the man might feel justified in "flirting back" to the woman. In the context of her perception of the man, the woman might find his sexual attention particularly distasteful or even frightening.

Nonverbal Behavior

Even more than ritual use of language, nonverbal behavior eludes cultural explanation. This can be illustrated with the eye contact frame, which includes continuums for eye-contact length (short to long) and for use of eyes in conversational turn-taking (strong to weak). In a cultural contrast between Americans and people of some northern European countries such as Holland or Germany, Americans tend to make medium-length eye contact before looking away, and they use a longer, direct gaze as a cue for changing speakers. Germans and Dutch people tend to make longer and more direct eye contact, and turn-taking is more likely to be cued by looking away.

There are several potential misunderstandings arising from this difference in nonverbal behavior. Many Americans interpret strong eye contact as indicating either sexual or physical aggressiveness, depending on the situation. Germans, on the other hand, tend to interpret weaker eye contact as indicating lack of interest or attention. These misinterpretations are likely to be exacerbated by Germans intensifying eye contact in an attempt to engender

attention, whereas Americans may weaken eye contact to reduce the perceived threat. Things may get even worse, since the shifting American eyes send unconscious cues to Germans that it is always their turn to talk, whereas the steady gaze of Germans sends the same message to Americans. Consequently, both participants in an intercultural interaction may go away convinced that the other was trying to dominate the conversation.

Communication Style

There are several forms of this frame, many of them based on Edward T. Hall's distinction between high-context and low-context styles. The high-context side of the continuum is where a lot of meaning is derived from the surrounding situation rather than from what is said explicitly. Populations that are mainly distributed on the high-context side may have various language use patterns (e.g., they may be very talkative or mostly silent), but they share a reliance on "reading between the lines" to communicate the real meaning. In contrast, people on the low-context side rely more on explicit statements to convey meaning. Such people may also be either talkative or relatively silent, but they will usually look to whatever is actually said for the real meaning. On this continuum, people with European roots tend to be low-context, as compared with the high-context style used by many people of African, Latin American, and Asian roots.

Misunderstandings along the high/low context continuum are quite common. European Americans may wait for Asians to request something explicitly before they offer it, leaving the Asians to wonder (silently) at American insensitivity and obtuseness. Some Asians, on the other hand, may create relational confusion by reading unintended meaning into European American behavior. In the face of confusion, European Americans are likely to become more direct and explicit, which may lead people who use a higher-context style to become more indirect and circumspect, thus creating a spiral of increasingly incompetent exchanges.

Cognitive Style

The domain of this frame is patterns of thinking, or how people process perceptions. The basic continuum runs from concrete, in which people use more

description and physical metaphor to capture their perceptions, to abstract, in which people are more likely to use theory and explanation to organize perception. On this continuum, people in many Asian cultures tend to be concrete, stressing accurate description and direct experience of events. In contrast, many northern European cultures tend to be abstract, stressing coherent explanation and the historical context of events. Americans tend to be mid-range on this continuum, stressing action-oriented procedures that are neither particularly accurate nor particularly coherent.

Given their position along the continuum, Americans tend to be impatient with both theory and relationships, preferring to focus on tasks. Within the United States, Americans of European heritage are more tolerant of abstraction compared with Americans of African or Asian heritage, who are more likely to attend to the relational aspects of task-completion.

Cultural Values

This is one of the best-known intercultural frames. Its domain is how people assign goodness to ways of being in the world. For instance, many Westerners think it is good for people to act as individuals, with stress on self-reliance, independent decision making, and individual achievement. Many Asians place more value on the family or other group, stressing responsibility to others, contextual decision making, and collective achievement. In addition to this continuum of individualism/collectivism, other typical value continuums include time orientation (learning from the past to planning for the future), activity (letting things happen to making things happen), social roles (stressing status difference to stressing role equality), and tolerance of ambiguity (low avoidance of uncertainty to high avoidance of uncertainty).

A common clash of values between Americans and people of many other cultures occurs on the value continuum of social roles. Americans tend to be uncomfortable with the overt recognition of role and status differences, even though such differences obviously exist. Many Asians, Africans, South Americans, and Europeans (that is, everyone outside North America, including those of non-European heritage within the United States) are more comfortable with the acknowledgment

of status differences, as indicated by their more frequent use of titles.

Stormy Weather

Stormy Weather is a lavish 1943 Hollywood musical, produced by 20th Century Fox. A biopic of song-and-dance man Bill “Bojangles” Robinson, it also starred Lena Horne and an assortment of the nation’s most popular African American performers. The film is named for the 1933 Harold Arlem–Ted Koehler torch song, which is performed by Horne in an elaborate set piece late in the movie. Although set in a period of de jure segregation, *Stormy Weather* depicts African Americans realizing fame, success, and other elements of the American dream via hard work, determination, and talent. In 2001, it was selected by the Library of Congress for preservation in the United States National Film Registry for its cultural, historical, and aesthetic significance.

Bill Robinson’s Biopic

Producer William LeBaron contracted Andrew L. Stone to direct a biographical musical about

Robinson, who had risen to fame as a hooper on the vaudeville circuit and in a number of 1930s films from 20th Century Fox, Paramount, and RKO. Although Stone had helmed a few musical comedies, including 1937's *The Girl Said No* and *The Great Victor Herbert* in 1939, he was mostly known for his work on gritty dramas; he was not an obvious choice for *Stormy Weather*.

The plot of the film, developed by songwriter Koehler, Frederick J. Jackson, H. S. Kraft, Jerry Horwin, and Seymour B. Robinson, is simple: Bill Williamson, recently returned from World War I, is pursuing a career as a dancer. He meets a beautiful aspiring lounge singer, Selina Rogers, and the two immediately fall in love. Bill's desire to settle down with Selina is compromised by the ups and downs of their careers. They separate for a number of years, and each finds success before they agree to reunite.

Though marketed as biographical film about Robinson, its primary function was to showcase the virtuosity of a number of African American performers. For example, neither Robinson's upbringing in Richmond, Virginia, details about his military service, nor his career struggles is depicted. Furthermore, Robinson never actually had any romantic relationship that resembled the two-decade-long affair of Williamson and Rogers.

The studio hired an unprecedented assemblage of African American stars for the film: Dooley Wilson, Harold and Fayard Nicholas, Vivian Dandridge, Florence O'Brien, Ada Brown, Emmett "Babe" Wallace, and vaudevillian comedic duo F. E. Miller and Johnny Lee. Thomas "Fats" Waller and Cab Calloway, alongside his Cotton Club Orchestra, performed a few songs as themselves. In addition, Katherine Dunham and her dance troupe executed a dream ballet to the title song.

A number of popular songwriters contributed to the film's score, including Nat "King" Cole, Dorothy Fields, Harold Arlen, Jimmy McHugh, Johnny Lange, Benny Carter, Irving Mills, Andy Razaf, Leon René, and stars Robinson, Waller, and Calloway. Indeed, in less than 80 minutes, there are more than 20 songs, including "That Ain't Right," "I Can't Give You Anything but Love," "Camptown Races," "Over There," "The Jumpin' Jive," "Rang Tang Tang," "I Lost My Sugar in Salt Lake City," "There's No Two Ways

About Love," "Geechy Joe," "Columbia, the Gem of the Ocean," and "Ain't Misbehavin'."

Premiere and Reception

Recognizing the film's appeal to African American audiences, 20th Century Fox dually premiered it at the Roxy Theatre in midtown Manhattan and at the RKO Alhambra Theatre in Harlem on November 17, 1943. Most of those who bought tickets for the film's theatrical release were African American. The film received positive notices, even though many reviewers noted the banality of the plot. In general, the performers all were lauded; the Nicholas Brothers' acrobatic dancing in "Jumpin' Jive" and Horne's sophisticated delivery of the title number were extolled especially.

Stormy Weather was not the only all-black movie musical to be released that year. Several months prior, the film adaptation of Broadway's *Cabin in the Sky*, which also starred Lena Horne and featured songs by Harold Arlen, premiered on April 9, 1943. Unlike *Cabin in the Sky*, which depicts elements of everyday life for black Americans, *Stormy Weather* presents an idealistic, if not entirely implausible, image of African American success in Hollywood.

Behind the scenes, the film's stars still struggled with the entertainment industry's glass ceiling: The Nicholas Brothers reported being relegated to segregated accommodations at the studio's commissary; in the cakewalk number, chorines wore costumes adorned with Sambo heads; more than half of Fox's theaters refused to show the film; and in spite of having two hit films that year, Horne would not be offered another leading role until the 1969 western *Death of a Gunfighter*.

Although *Stormy Weather* won no major awards, its cultural significance has been recognized many times. The movie has been featured in a number of documentaries that salute Hollywood's Golden Age, including *That's Entertainment! III*, *It's Black Entertainment*, *Hollywood Rocks the Movies: The Early Years*, and *AFI's 100 Years . . . 100 Songs: America's Greatest Music in the Movies*.

Streetcar Named Desire, A

A Streetcar Named Desire, Tennessee Williams's 1947 play, is considered to be the quintessential Southern gothic opus and has won numerous awards, been produced on Broadway six times, and been adapted into a motion picture, two telefilms, a ballet, and an opera. *A Streetcar Named Desire* depicts the tensions that exist in American culture: the decline of the aristocracy versus the rising proletariat; decorum as opposed to carnality; melodrama compared with naturalism; urban against rural; and delusion contrasted with reality. Although many in the audience found the grittiness of the play shocking, *A Streetcar Named Desire* received universal adulation when it opened.

The Development

Set in the French Quarter of New Orleans in 1952, *A Streetcar Named Desire* chronicles the life of Blanche Du Bois, a fading Southern belle from Mississippi who affects a chaste façade to mask her disillusionment and alcoholism. Blanche's open-ended visit disrupts the home of her pregnant sister, Stella, and her brutish husband, Stanley, a working-class man of Polish descent. Blanche and Stanley engage in a power struggle that results in a fistfight, a rape, accusations of homosexuality, and a mental breakdown. At the end of the play, Blanche is institutionalized, and uncertainty exists in the relationship between Stanley and Stella.

While he was writing the play, Williams had actress Tallulah Bankhead in mind for the role of Blanche. (Bankhead eventually played the role in a production at New York City Center in 1956.) Some literary scholars have theorized that Blanche was inspired by Williams's older sister, Rose, whose issues with schizophrenia led to her being lobotomized. His dysfunctional childhood in Mississippi and Missouri, as well as his alcoholic, emotionally abusive father, the ill-fated same-sex relationships of his youth, and coworkers from his time employed in a factory in the 1930s all animated his construction of the world of *A Streetcar Named Desire*.

Blanche and Stanley: A Changing America

Socioeconomic and ethnic stratification, and the clashes between characters that they created, were woven into the very fabric of the play. Stanley's working-class roots and ethnic dissimilarity to other characters had its basis in reality, as the character was inspired by Pancho Rodríguez Gonzalez, a Mexican laborer-cum-boxer with whom Williams had been involved romantically. Many theorists have postulated that Blanche was a stand-in for Williams; the interracial tensions between him and Rodríguez Gonzalez paralleled those in the relationship between Blanche and Stanley.

Polish American Stanley represents America's shift toward the heterogeneous; he seeks to obliterate the exclusive, traditional society that Blanche represents. He is pragmatic and earthbound, while Blanche is self-deluding and fragile. Further, Stanley is given few redeeming qualities, as he grows increasingly resentful, lacking in contrition after he assaults Blanche. Class conflict is realized fully onstage in the climax, when Stanley brutally rapes Blanche, signaling the dramatic social shift occurring in postwar America. In referring to Stanley as an ape and a Polack, Blanche means to dismiss and dehumanize everyone in his social class and ethnic group. Harold "Mitch" Mitchell, Stanley's best friend, shares his working-class background but not his ethnicity; accordingly, he is depicted as less boorish, belligerent, and brutish. And with its mélange of ethnic groups, New Orleans was the perfect setting for this battle of old versus new America.

The Original Production

The original production of *A Streetcar Named Desire* opened on Broadway on December 3, 1947, at the Ethel Barrymore Theatre, where it played 855 performances over the course of two years. Jessica Tandy, Marlon Brando, Kim Hunter, and Karl Malden were cast in the leading roles, and Elia Kazan directed the production. The play's success led to a film version in 1951. Williams cowrote the screenplay with Oscar Saul; in order to appease the National Legion of Decency, some of the more controversial themes, especially related to homosexuality and rape, were softened for the motion picture. An instant classic, the film went on to win four Academy Awards.

Perhaps reflecting mainstream society's thinking about ethnic minorities at the time, critics reviewing both the original Broadway production and the 1951 film found Stanley to be a wholly unsympathetic, yet profoundly accurate, rendering of a working-class minority. Many reviewers were resolute in associating Stanley's personal viciousness with his ethnic background; he was compared consistently to wild animals and was labeled with primitive descriptors.

Subsequent Incarnations

The play was revived on Broadway in 1973, 1988, 1992, 2005, and 2012. The 2012 Broadway revival featured actors of color in the leading roles, including Blair Underwood, Nicole Ari Parker, Daphne Rubin-Vega, and Carmen De Lavallade. *A Streetcar Named Desire* has been filmed for television twice, in 1984 and 1995. An operatic adaptation, with a score composed by Andre Previn and a libretto by Philip Littrell, was completed in 1995. It received its premiere production at the San Francisco Opera in 1998, with Renee Fleming and Rod Gilfry in the leading roles. The opera received strong reviews, was filmed for DVD release, and later spawned productions in New Orleans, Los Angeles, Washington, D.C., San Diego, London, Dublin, Turin, and Tokyo. John Neumeier's balletic adaptation of the play was first produced in 1995; American ballerina Bridget Breiner won raves dancing the role of Blanche Du Bois.

Student Non-Violent Coordinating Committee

The founding seeds for the Student Non-Violent Coordinating Committee (SNCC) were planted during the 1950s following a groundswell of black political activism. Led by the efforts of Ella Baker, SNCC formally emerged in 1960 to fight for black civil rights and primarily employed nonviolent methods. As the organization matured and changes within the national landscape seemed slow in eradicating racism, non-violent tactics became less attractive and a growing militant rhetoric developed. SNCC reached its height during the 1960s, and the organization ended in the 1970s because of divisiveness and government infiltration.

Establishing SNCC

The impetus for the organizational development of SNCC grew after Izell Blair, Franklin McCain, Joseph McNeil, and David Richmond, all North Carolina A&T College students, challenged Jim Crow laws in a local F. W. Woolworth store in February 1960. The four young men sat down at the lunch counter reserved for whites and waited for service. After being refused, the students remained seated until the store closed. They repeated their demonstration in the following days, which attracted local reporters. As news spread about their defiance, students on campuses

throughout North Carolina organized similar sit-ins, with some demonstrations leading to student arrests. Protests soon developed in Virginia and quickly spread to other southern states such as Alabama, Kentucky, Maryland, and Tennessee.

Noting the efforts of these young activists, Ella Baker gained approval from the Southern Christian Leadership Conference (SCLC) to sponsor a meeting of the protest leaders. This meeting was convened in April 1960 at Shaw University in Raleigh, North Carolina. More than 200 students attended and expressed their impatience with the leading civil rights groups for an overreliance on challenging legal statutes to effect change. The students desired to use civil disobedience, and they refused to accept token gains. The meeting resulted in a Temporary Student Non-Violent Coordinating Committee with a separate structure from the SCLC.

In October 1960, the students declared SNCC a permanent organization and voiced nonviolent methods as their primary tactic. With its formation, SNCC brought a new dynamic to the civil rights movement that established a new phase of activism. Instead of relying on the traditional modes espoused by the major civil rights organizations at the time, SNCC employed a distributive leadership model that helped galvanize southern blacks in their own efforts at political activism.

Development of SNCC

SNCC's development has been traced traditionally within three phases. During the first phase, the goals of SNCC were identified in a string of activities that sought to disassemble the legalized racism that thwarted the advancement of blacks. SNCC adopted and operated under Gandhian and American Christian Ideals, and its initial direct action campaigns targeted disenfranchisement and desegregation. In attempting to dismantle discrimination and segregation in the Deep South, SNCC embarked on Freedom Rides and voter registration. Both of these attempts resulted in violent white backlash. At the March on Washington, John Lewis, the SNCC chairman at the time, delivered a collective SNCC statement—which he was forced to edit in order to partake in the program—about the lack of progress in race relations. In 1964, SNCC began larger and notable black voter registration campaigns in

Mississippi. Many whites aided in these efforts, but their involvement was continually questioned and eventually led to internal struggles about the role of whites within the organization.

During the second phase, a sense of urgency and crisis swept through SNCC. This was initiated by growing frustrations with the federal government's lack of protection of civil rights activists and the Mississippi Freedom Democratic Party's defeat at the 1964 Democratic National Convention. Also crucial were the assassination of Malcolm X and the Watts Rebellion in 1965. Responding to these developments, SNCC staff reassessed their strategies and potential effectiveness at creating the desired social changes. Members also reflected on the utility of a multiracial coalition, nonviolent direct action, and reliance on white liberal support and federal interventions. In addition, SNCC condemned the Vietnam War and pledged support to colonial struggles throughout the world in fighting against racism and economic exploitation.

In the third phase, with Stokely Carmichael as chairman, SNCC promoted black power as its new ideological focus. The organization concerned itself with empowering blacks, sought to raise black consciousness, and separated itself from whites. SNCC's internal strife divided the group, and it was unable to sustain earlier progress. Additionally, the organization lost support from mainstream civil rights organizations and white financial backers who rebuked its adoption of black power. In the late 1960s and early 1970s, SNCC was infiltrated and harassed by the U.S. government and, with the continued divisions and extreme measures being levied, the organization collapsed.

Legacy

SNCC emerged during a period of extensive student protest activity and initially attracted southern black college students. Later, SNCC became a community of diverse activists that crossed racial, regional, and educational lines seeking to improve the plight of blacks, especially those who lived in the Jim Crow South. In addition to those mentioned, other prominent members included Marion Barry, Julian Bond, Charlie Cobb, James Foreman, Fannie Lou Hamer, James Lawson, Charles McLaurin, Bob Moses, and Diane Nash. These individuals, along with a host of others, led

a direct attack on racism in the United States in which they mobilized black communities, revived racial consciousness, and helped spawn radical ideas of equality and leadership that ultimately transformed American society.

Supreme Court, U.S.

The United States' highest judicial body, the U.S. Supreme Court was established by the U.S. Constitution and came into being pursuant to the Judiciary Act of 1789. Comprising a chief justice and eight associate justices, the Supreme Court is the final arbiter of federal court cases and state court cases that involve federal law. Pursuant to Article III of the U.S. Constitution, justices of the Supreme Court are nominated by the president and confirmed by the U.S. Senate for life terms, serving until they choose to resign or retire or until they are impeached. As a result of their life tenure, Supreme Court justices have historically been viewed as willing and able to take up difficult issues, including many of those that address multicultural citizens and issues, which the executive and legislative branches of government are hesitant to address. During the civil rights movement,

the push for gender equity, debates involving the rights of ethnic minorities, and many other times, the Supreme Court became involved in decisions that greatly affected policies and procedures affecting multicultural America. Although the court receives about 10,000 writs of certiorari each year, it generally grants only 75 to 80 of these, requiring the submission of appellate briefs and oral arguments regarding the merits of the case.

Background

Established by the Judiciary Act of 1789, the Supreme Court first heard cases in the Merchants Exchange Building in New York City, where the federal government was situated at the time. When the U.S. Capitol was moved to Philadelphia in 1790, the Supreme Court moved there as well. Until the establishment of Washington, D.C., as the nation's capital in 1800, the Supreme Court heard cases in Independence Hall and other Philadelphia locations. After 1800, the Supreme Court relocated with the rest of the federal government to the new capital city, taking up its home in a variety of spaces located within the Capitol Building, where it remained for over a century. Initially situated in what is now known as the Old Supreme Court Chamber, after 1860 the court moved to what is now known as the Old Senate Chamber, which was larger and more conveniently located.

Through the work of Chief Justice William Howard Taft, sentiment began to build for the Supreme Court to have its own building, one that was separate from the Capitol. This desire for a new building was in part caused by a need to recognize the court's independence as well as a desire for more space. Taft was successful in persuading Congress to approve a new building for the court in 1929.

The Supreme Court's Influence

Although John Marshall was also considered a founding father, his background in the Virginia House of Delegates provided him with a uniquely different perspective from his predecessors as the Supreme Court's chief justice. Appointed to the Supreme Court in the waning days of John Adams's presidency, Marshall was confirmed by the Senate on January 27, 1801, and received his commission one week later.

Marshall greatly expanded the power of the judiciary with a handful of influential cases, such as *Marbury v. Madison*, 5 U.S. 137 (1803). *Marbury v. Madison* established the principle of judicial review in the United States, namely holding that the Supreme Court could overturn a law passed by the Congress as unconstitutional. In *Marbury* and other related decisions, Marshall and his colleagues established the Supreme Court as the ultimate arbiter of whether a governmental act or a law was constitutional or not. Marshall also changed the method in which the Supreme Court delivers opinions, establishing the practice of delivering a single opinion, thus enabling the court to present unambiguous rulings that could be used as precedent by lower courts. The Marshall court's decisions concerning the constitutionality of both federal and state laws and actions were important to all who formulated laws, devised policy, or tried cases. The single opinions of the majority of the justices provided direction to those working on such matters, and the market for published opinions grew rapidly. At the time of his death in 1835, Marshall had served as chief justice for 34 years and had irreversibly changed the Supreme Court.

The U.S. Supreme Court frequently plays a significant role in making decisions that affect multicultural groups. Many Supreme Court decisions have had an immense impact upon pressing matters of the day, as evidenced by such cases as *Dred Scott v. Sandford* (the 1857 decision that held that people of African descent were not protected by the U.S. Constitution and could never be citizens), *Brown v. Board of Education of Topeka* (the 1954 decision that held that segregated schools violated the Equal Protection Clause of the Fourteenth Amendment), and *Miranda v. Arizona* (the 1966 decision that held that a defendant's statements made in response to police interrogation were admissible at trial only if the defendant was informed of the right to counsel prior to questioning and then waived that right). Supreme Court justices were aided in writing their increasingly important opinions through the assistance of law clerks who served at their pleasure.

Shaping Multicultural America

Throughout American history, the U.S. Supreme Court has helped shape and guide how those from

multicultural backgrounds are treated. There have been times when the rights of multicultural groups have been constrained as a result of the Supreme Court's rulings. Because of the lifetime tenure enjoyed by Supreme Court justices, however, the rulings in cases involving civil rights have often taken the lead in an expansion of those rights for African Americans, Asians, Latinos, and other non-Caucasians. During the era when treatment of multicultural groups varied greatly based upon the specific region of the nation in which one was located, the national nature of the Supreme Court permitted decisions that would have proven impossible to obtain in certain areas.

For over 150 years, the Supreme Court was comprised exclusively of Caucasian males. Although some consideration was paid to diversity among the justices, this was solely focused upon geographic diversity. In 1916, President Woodrow Wilson nominated Louis Brandeis to serve as an associate justice on the court. Brandeis, who was Jewish, was the first Supreme Court justice who was not a Christian. Partly because of this, and partly because he was an ardent advocate for social justice, Brandeis's nomination was hotly contested. The U.S. Senate ultimately confirmed Brandeis by a vote of 47 to 22, but throughout his tenure on the Supreme Court, he was criticized by some for his "radicalism." Brandeis was joined on the court by a second Jewish justice, Benjamin Cardozo, in 1932. Because Cardozo was succeeded by fellow Jews Felix Frankfurter (1939), Arthur Goldberg (1962), and Abe Fortas (1965), this seat was sometimes referred to as the "Jewish seat" on the court. Other Jewish justices have included Ruth Bader Ginsburg (1993), Stephen Breyer (1994), and Elena Kagan (2010).

The first non-Caucasian justice was appointed to the Supreme Court in 1967, when President Lyndon B. Johnson nominated prominent civil rights attorney, U.S. Court of Appeals judge, and U.S. solicitor general Thurgood Marshall to serve as an associate justice. Serving through 1991, Marshall was known for his support of the civil rights of multicultural individuals and groups. In 1991, Marshall was succeeded on the court by fellow African American Clarence Thomas, whose conservative voting record has proven to be the opposite of Marshall's. President Ronald Reagan appointed Sandra Day O'Connor as the first

woman to serve on the court in 1981. O'Connor was an associate justice until 2006, often serving as a swing vote in closely contested cases involving the rights of multicultural groups and criminal defendants. Ginsburg, Kagan, and Sonia Sotomayor were other female justices later appointed to the court. Sotomayor, who was named to the court in 2009 by President Barack Obama, is the first Latina to have served as an associate justice. The varied perspectives these individuals have brought to the bench have not been consistent, but as the members of the court more accurately represent the American population, perceptions of equity have improved.

Decisions Affecting Multicultural Interests

A number of Supreme Court cases address a variety of issues facing those living in communities containing multiple cultures, including issues related to gender, ethnicity, race, language, and other matters. Over the past half century, the U.S. population has become increasingly diverse. This diversity, combined with a growing awareness of their rights by members of traditionally underrepresented and oppressed groups, as well as a willingness to pursue those rights in a judicial setting, has caused the number of Supreme Court cases addressing multicultural issues to have grown considerably. Indeed, because of the lifetime tenure of the justices, during the civil rights movement, the Supreme Court often was able to take a lead role in effecting change that the legislative or executive branches of the federal government were unable or unwilling to undertake. The Supreme Court has also had to address a series of its own decisions that limited the rights of many Americans because of their race, ethnicity, or gender.

Many of the protections granted Americans of multicultural backgrounds stem from a series of constitutional amendments passed to remedy past decisions of the Supreme Court. In *Dred Scott v. Sandford*, 60 U.S. 393 (1857), the Supreme Court examined the status of individuals of African descent who had been brought to the United States as slaves. In its holding in this case, the Supreme Court determined that those brought to the United States as slaves, and their descendants, were not citizens, and thus were not protected by the U.S. Constitution. After the conclusion of the American Civil War, the U.S. Congress proposed,

and the states ratified, a series of constitutional amendments to address the problems presented by the *Dred Scott* decision.

The Thirteenth Amendment, which was proposed and ratified in 1865, abolished slavery and involuntary servitude. The Fourteenth Amendment, proposed in 1866 and ratified in 1868, contained a citizenship clause that overturned the *Dred Scott* decision, extending citizenship to all born in the United States, and also included equal protection and due process clauses that required all states to provide equal protection under law to all citizens and defined safeguards necessary to protect these rights. The Fifteenth Amendment, proposed in 1869 and ratified in 1870, prohibited any governmental entity from denying citizens the right to vote based upon their race, color, or previous condition of servitude. Although these constitutional amendments in theory extended equal rights to all citizens, including African Americans, in practice this was not the case, with the situation being especially difficult in the former slave states. In time, however, these three constitutional amendments served as the foundation for many of the proactive steps the Supreme Court took to protect the rights of multicultural Americans.

During the course of World War II, President Franklin D. Roosevelt issued an executive order that resulted in the internment of over 110,000 Japanese Americans. Roosevelt's executive order permitted local military commanders to exclude any or all persons from certain military areas, known as "exclusion zones," on the grounds that this was necessary for national security. Although facially neutral with regard to race, in practice the executive order was used almost exclusively against those Americans of Japanese heritage. The Supreme Court heard a challenge to the constitutionality of this program in *Korematsu v. United States*, 323 U.S. 214 (1944). *Korematsu* examined discrimination against Japanese Americans as a result of actions taken pursuant to Roosevelt's executive order.

Views of Discriminatory Practices

Fred Korematsu was born in the United States and was raised near San Francisco. He was of Japanese heritage but was also an American citizen. When the Japanese internment began in May 1942, Korematsu was employed and was involved in a

relationship with a girl of non-Japanese descent. As a result, Korematsu decided against turning himself in to the detention camps and instead opted to hide his Japanese ancestry. He relocated to a town close by, where he changed his name to conceal his heritage. Korematsu claimed he was of Mexican American descent and had facial surgery to change his appearance. Despite these actions, Korematsu eventually was apprehended and received a sentence of five years, immediately beginning his internment in Utah. In deciding his case, the Supreme Court did not consider the constitutionality of internment camps but ruled on whether or not Korematsu complied with the law. A majority of six justices opted to support the government's ability to protect national security during a time of a war. The three justices in dissent, however, asserted that internment camps were unconstitutional and that, as a result, the steps taken to enforce policies regarding these camps were ineffective and cumbersome.

Views regarding discriminatory practices changed rapidly after the conclusion of World War II. For example, the U.S. Supreme Court decided the case of *Shelley v. Kraemer*, 334 U.S. 1 (1948), which is regarded as one of the restrictive covenant cases, a group of four that were heard simultaneously. *Shelley v. Kraemer* was a landmark decision insofar that it was the first indication that the Supreme Court would not countenance the racial segregation that existed in many towns across the United States. The discrimination examined in *Shelley v. Kraemer* was not the result of statutes but rather private covenants entered into between the buyers and sellers of real property. Landowners in *Shelley* had been requiring potential homeowners to enter into agreements that required them not to sell their property to those of certain racial or religious groups in an attempt to sidestep municipal zoning laws that banned racial segregation.

In a unanimous 6 to 0 opinion, the Supreme Court stated that although purchase agreements between the seller and buyer are a private matter, and therefore could not be regulated by the Constitution, enforcement of the covenants by the judicial system was a different matter. If the courts were to enforce racially restrictive covenants, this would violate the civil rights of those citizens who were members of racial and religious

minority groups. Specifically, enforcing racially restrictive covenants would deny minority groups their equal protection rights, since enforcing such agreements would serve to exclude such individuals from living in certain communities. As a result, the Supreme Court held that courts may not enforce restrictive covenants if doing so would violate the civil rights of one of the parties.

Whereas the *Shelley* case addressed discrimination that occurred as the result of private action, the Supreme Court next examined the types of segregation that were the result of government action. By the 1950s, it was long established that transportation, schools, hospitals, and other public accommodations could be segregated. Indeed, such segregation had been authorized by prior Supreme Court decisions. In *Plessy v. Ferguson*, 163 U.S. 537 (1896), the court held that state laws requiring separate accommodations for African Americans and Caucasians on trains, which resulted in blacks and whites sitting in different railroad cars, were constitutional. Specifically, the court ruled that so long as a law demanded separate but equal accommodations, the law was not treating African Americans as inferior. This reasoning was supported by a demonstration by the railroad that the cars required for each group were identical. More than a decade later, in *Berea College v. Kentucky*, 211 U.S. 45 (1908), the Supreme Court upheld a statute that barred a private institution from teaching black and white students in an integrated setting.

However, in *Brown v. Board of Education of Topeka*, 347 U.S. 483 (1954), the Supreme Court decided that separate facilities for members of a certain racial group were inherently unequal and overruled its prior decisions in *Plessy* and *Berea College*. Although some disputes regarding implementation of the *Brown* decision would continue to exist, from this point forward the court supported integration and desegregation.

Defining Civil Liberties

The Supreme Court's role in expanding definitions of civil liberties that benefited minorities, women, and others continued in other cases. In *Griswold v. Connecticut*, 381 U.S. 479 (1965), the Supreme Court examined a Connecticut statute dating from 1879 that made it a criminal act to use any means of contraception. Although the statute had been

challenged twice before, it had never been overruled. By a 7 to 2 majority, the court overturned the statute as infringing upon fundamental personal freedoms, in this case the right of privacy. The court also explored the right to marital privacy in *Loving v. Virginia*, 388 U.S. 1 (1967), which examined a situation in which Loving, a white man, married a black woman in Virginia, in violation of that state's antimiscegenation law, which made interracial marriage illegal. In a unanimous decision, the court held that the freedom to marry was held by the individual and could not be infringed upon by the state. These cases furthered a string of decisions that supported the rights of individuals over those of the majority to impose moral or behavioral standards on others.

Not all cases decided by the Supreme Court buttressed the civil rights of children of all ethnic, racial, and socioeconomic backgrounds to receive an equal education in the public schools. In *San Antonio Independent School District v. Rodriguez*, 411 U.S. 1 (1974), for example, the Supreme Court examined a challenge to the way in which Texas state law appropriated tax funds to school districts. Texas law mandated that property taxes generated within a certain independent school district were to be used to fund the independent public schools within that district. As there existed a wide range of wealth among the hundreds of independent school districts, the Texas law left some schools with a high level of funding per pupil, while others received a much lower level. The Texas Supreme Court had examined the issue and found that this financing system violated the U.S. Constitution insofar as it did not provide poorer students equal protection under law.

When the U.S. Supreme Court heard an appeal of this decision, however, it reversed the Texas Supreme Court's ruling. In a majority opinion agreed to by five justices, the court ruled that education was not a fundamental right, nor one guaranteed by the U.S. Constitution. As a result, the quality of a child's education cannot be constitutionally guaranteed. So long as Texas provided a free education meeting minimum standards to the children of the state, which it did, the court would not second-guess the decisions of the Texas legislature.

Other decisions by the Supreme Court supported the rights of multicultural students. In

Plyler v. Doe, 457 U.S. 202 (1982), the court examined Texas's right to deny state funding for the children of undocumented immigrants and a policy that planned to charge these children's parents \$1,000 for each child enrolled in the public schools. In overturning the state statute, the Supreme Court cited the grave harm that could occur should immigrant children become part of a "subclass of illiterates" who are denied the education that is provided to all other students. Dismissing the state's assertion that excluding immigrant children from schools would reduce taxes, the court stated that any such savings would likely be consumed in additional expenditures in the future for unemployment, welfare, and crime.

Other Issues

Other issues, such as affirmative action, have continued to bedevil the court. In *Regents of the University of California v. Bakke*, 438 U.S. 265 (1978), the Supreme Court held that although affirmative action programs are a constitutional means by which an organization may pursue diversity, a strict quota system violates the concept of equal protection and cannot be allowed. Two 2003 cases, *Gratz v. Bollinger*, 539 U.S. 244, and *Grutter v. Bollinger*, 539 U.S. 306, affirmed the *Bakke* decision.

Specifically, the *Gratz* and *Grutter* decisions held that although a ranking system that gives automatic points to minority candidates is unconstitutional, admissions policies that give members of certain ethnic groups special consideration in order to ensure a diverse student body are acceptable. Affirmative action policies continue to arouse great passions and engender debate regarding their merits.

Swann v. Charlotte-Mecklenburg Board of Education (1971)

Swann v. Charlotte-Mecklenburg Board of Education (1971) is considered a landmark school desegregation case in which the Supreme Court ruled constitutional the use of busing to dismantle vestiges of segregation in Charlotte-Mecklenburg, a southern urban school district. The district formed in 1960 when the Charlotte City Public Schools and the Mecklenburg County Public Schools were consolidated, forming one of the largest school districts in the United States. *Swann's* development and its ultimate implementation in Charlotte-Mecklenburg were informed by the continued legal battles following *Brown v. Board of Education* (1954), the governing politics of the city of Charlotte, and the reactions of black and white citizens to school desegregation.

Swann was part of a series of court cases that called for full implementation of school desegregation. In 1954, the Supreme Court in *Brown v. Board of Education* overturned the *Plessy v. Ferguson* (1896) precedent of “separate but equal” and declared unconstitutional segregated schooling. Yet in *Brown v. Board of Education II* (1955), the Supreme Court declared that southern school districts could move “with all deliberate speed” in determining how and when schools were to desegregate. As southern school districts in large part evaded school desegregation and protesters engaged in massive resistance, the legal team of the National Association for the Advancement of Colored People (NAACP) continued to challenge school segregation in the courts. Aiding the

NAACP efforts was increased federal pressure with the 1964 Civil Rights Act. School districts’ failure to comply with Title VI would result in loss of federal funding. In 1968, in *Green v. County School Board*, the Supreme Court ruled that school boards had to desegregate schools above and beyond such plans as freedom of choice, which put the onus of school desegregation on African Americans and did not result in significant dismantling of separate schools. Ultimately, federal district court judge James McMillan’s interpretation of *Green* was central to his decision in *Swann* and that of the Supreme Court in upholding it.

City Control Over Economics

Following *Brown*, Charlotte city leaders sought to maintain the city’s economic viability and to limit the ways in which the federal government interfered with the local desegregation policies. Yet the NAACP in 1955 and 1956 called for immediate desegregation of Charlotte and Mecklenburg County schools, although some African Americans questioned desegregation out of fear of the harmful effects on their children. In 1957, with consideration of city politics and economic viability as well as the threat of litigation from the NAACP, school board leaders in Charlotte, North Carolina, decided to accept the transfer requests of four black students. In comparison with other locales, the entrance of black students to white schools in Charlotte went smoothly. However, Dorothy Counts, the daughter of Herman Counts, a professor at Charlotte’s Johnson C. Smith University, was taunted, spat upon, and harassed at Harding High School. Within two weeks, she left for an integrated school in Philadelphia. The other three students who desegregated Charlotte public schools faced less harassment because their principals intervened.

Challenging School Desegregation

In the late 1950s and early 1960s, African Americans continued to challenge the implementation of school desegregation. For example, in 1959, African American parents filed a case about the denial by the Mecklenburg County School Board of eight African American students’ transfer requests to a white elementary school. The parents lost the case because it was ruled that proximity to a particular school was not reason enough to

have a child attend the school. Therefore, token school desegregation continued, and the number of black students attending formerly all-white schools in Charlotte remained low, even with the formation of the Charlotte-Mecklenburg school district. Additionally, black schools were overcrowded and under-resourced. Because of these low numbers, residential segregation, and the use of school assignment based on race, 10 African American parents, including Darius and Vera Swann, who were organized by African American attorney Julius Chambers filed suit in January 1965. Interestingly, the Swanns, who were missionaries and civil rights activists, left Charlotte in 1967 and never returned, but their last name remained as the lead plaintiff on the case.

Initially, federal district judge Braxton Craven ruled against the plaintiffs, who called for a more widespread school assignment plan based on geography, and the Charlotte-Mecklenburg school board proceeded to implement its desegregation plan, based on limited geographical assignment that had been approved by the Office of Health, Education, and Welfare (HEW). Over the few next years, Charlotte moved to eliminate school assignments based on race. Black schools were closed, and the city spent \$10 million on new schools. In 1968, the percentage of black students attending majority-white schools had increased from 3 percent in 1964 to 28 percent. Yet with HEW calling for actual measurements of desegregation and the ruling in *Green*, Chambers and the *Swann* plaintiffs pursued further litigation.

In 1969, Judge McMillan, relying on his interpretation of *Green* and achievement test data of white and black students, ruled that the Charlotte-Mecklenburg school board needed to adopt a complete desegregation plan to account for residential desegregation, to which it had contributed with segregated schooling and the continued identification of schools by race following *Brown*. The school board, believing that it had sufficiently desegregated schools, being aware of Charlotte's reputation for positively handling racial issues, and knowing that white parents—while comfortable with limited desegregation—would not be so with widespread desegregation, appealed McMillan's decision. In 1971, the Supreme Court upheld McMillan's verdict and the plan to use busing as a means to desegregate an urban school district.

Although other southern locales would immediately adopt new desegregation plans, it would be four years before McMillan's plan took effect in Charlotte and control of the schools was returned to the school board.

Sweat Lodge

A sweat lodge is a structure and the ceremonies associated with that structure, in which steam is produced for the purpose of creating a hot, moist environment in which participants congregate to sweat. Structures such as this include the sauna of Scandinavian and eastern European cultures, but the term is more familiarly used to refer to the structures of Native Americans and Canadian First Nations. The *temazcal* is a similar structure used in Mexico and Central America. Sweat lodges, saunas, and similar structures, when used for ceremonial purposes, are examples of ritual purification, a practice found in many cultures and religions that predates the modern germ theory of disease. Ritual purification practices include the baptism ceremonies of Christianity and the use of holy water for purification; *misogi*, the ritual bathing of Shinto; the many ritual washing practices of Judaism; the washing before prayer mandated by Islam; and the

bathing in the Ganges River in Hinduism. Although not all forms of ritual purification involve a source of water, it is notable that many do.

Across cultures, the specific form of the sweat lodge varies from a permanent standing structure to a temporary or mobile structure to a hole dug in the ground and covered in planks. Steam is usually produced much as in a sauna: by heating stones and pouring water over them to create steam. The use of the sauna by Finnish immigrants in the American colonies has been credited as the catalyst for the friendship between Finns and the local Native Americans. Although not all Native American cultures use sweat lodges, they are found throughout the United States and are not limited to one region, religious group, or language group.

Among Native Americans, the sweat lodge may be a ceremony unto itself or it may be conducted as part of a larger ceremony. It may be reserved for special purposes or it may be used as a healing remedy; early European reports commented on the frequency with which some tribes used the sweat lodge for most physical ailments. The sweat lodge is usually attended in simple clothing, and offerings of special or sacred plants are typically made. Because of the danger of participants passing out from the heat and from dehydration, a helper usually remains outside the lodge, monitoring the proceedings. In some cases, the helper is also the fire keeper, though this is usually an inside participant. Risks of the sweat lodge include not only heat exhaustion and dehydration but also smoke inhalation or suffocation in cases where the fire is kept inside or upwind from the lodge. Using the wrong kind of rocks can result in explosions, caused by expanding air pockets or moisture.

The hot-rock method described above is the most common sort of Native American sweat lodge and was the method used by central Plains tribes, as well as by tribes throughout the Southwest, the Great Basin, and the woodlands of the east. Structures could be either temporary or permanent; usually they were permanent, unless the culture was a nomadic tribe, in which case they were usually made from pliant tree branches driven into the ground and bent into a dome shape before being covered with skins. Rocks were heated in a fire outside the structure, carried into the structure on sticks or with other tools, and placed in a

depression dug in the ground. Within this broad description, specifics were usually of significant symbolic importance. For example, among the Lakota, the entrance to the sweat lodge faces east, the direction of the dawn, associated with wisdom and the source of life. The Kiowa build their sweat lodges with a specific number of reeds, 12, because of the ritual significance of the number in their belief system. Farther west, in California, the creation story of the Wintu tribe includes a sweat lodge built by the creator deity. Among the Ute, sweat lodges were used to prepare for the peyote ceremony.

In the cold regions of Alaska and the Pacific northwest, and also among the Pueblo Indians of the southwest, a direct-fire lodge is built instead of a hot-rock lodge. These lodges are larger than most hot-rock sweat lodges and may be used for purposes other than the sweat lodge, at which times the fire is kept lit but small, as a pilot light. When it is time for the sweat lodge ceremony, the fire is built up until the heat becomes almost unbearable. The dangers of the direct-fire lodge are considerably greater because of smoke inhalation—chimneys are rare in this sort of lodge, so a large percentage of the smoke remains in the lodge. It is common for participants to lie on the floor when smoke becomes unbearable, as the smoke rises and air at ground level is fresher. Among many tribes that use direct-fire sweat lodges, the sweat lodge is for men only (though this is true in some hot-rock tribes as well).

The Pueblos used their kivas for the sweat lodge ceremony. The Pueblo Indians lived in adobe cities in which many dwellings had been constructed, and the kivas were square-walled underground rooms used for a variety of ceremonies. The direct-fire method may have been easier to adapt to the kiva than the hot-rock method. Farther north, many of the Alaska Natives who used sweat lodges, including the Aleuts, were actually introduced to the practice by Russian traders. Some Eskimo tribes observed a sweat lodge ceremony during an autumn festival during which, for a month, the men lived apart from the women, in preparation for the winter hunts.

The men built a fire in the evening, sweating and washing themselves with their own urine, which was saved during the week for this purpose (the urine, mixed with oils on the skin, formed

This framework of a sweat lodge is located at the Daybreak Star Cultural Center in Seattle, Washington. Sweat lodges consist of a ceremonial or ritual event, particularly among Native American cultures. Stones are typically heated and then water poured over them to create steam, accompanied by ritual actions such as traditional prayers and songs.

a natural soap). When the heat became unbearable, they went outside naked and rolled in the snow. Many of these Eskimos wore respirator masks to protect them from the smoke, fashioned from spruce shavings compressed into a pad that covered the mouth and filtered out some of the smoke. The *temezcal* in Mexico and Central America is also a direct-fire sweat lodge and is used by some California tribes.

In many areas, the sweat lodge was abandoned as Native American culture was disrupted by incursions by white settlers and the resettlements that followed. In many cases, if a tribe was seen as a threat, sweat lodge ceremonies were outlawed or banned under some pretense of trying to civilize the tribe. It is in no small part for this reason that sweat lodge ceremonies have experienced a revival among some Native American communities, in which they are emblematic of Indian identity. The National Indian Unity organization, a pan-Indian group, uses sweat lodges at its annual conference.

James Arthur Ray

New Age author James Arthur Ray was convicted of three counts of negligent homicide after three people died and 21 were injured following his leading them in a sweat lodge ceremony on October 8, 2009, in Sedona, Arizona. Attendees fasted for 36 hours in preparation for the sweat lodge, for which they paid \$10,000 each plus travel expenses, and \$250 for those who wanted a Peruvian poncho. The sweat lodge had been constructed without a permit. Ray did serious damage to his reputation when, in the aftermath of the incident, he held a conference call with some of the survivors in which a spiritual channeler claimed to be in contact with the deceased who, the survivors were assured, were enjoying their afterlife.

In addition to Ray's arrest and a lawsuit against him by the victims, he faced a lawsuit by the Lakota Nation, which also named the United States and the state of Arizona as defendants,

demanding Ray's punishment under the terms of the Sioux Treaty of 1868. The point made by the lawsuit was that the sweat lodge is a part of Native American culture, not an element to be adopted by others as they wished.

To charge money for a sweat lodge ceremony is extremely inappropriate in Lakota culture. Serving as a sweat lodge leader requires eight years of apprenticeship. The lawsuit did not seek monetary damages but rather an acknowledgment of the nature and extent of Ray's wrongdoing. In 2011, Ray was sentenced to two years in prison for three counts of negligent homicide and settled his civil suits for a total of \$3 million.

Sweatt v. Painter (1950)

In 1950, the U.S. Supreme Court heard two desegregation cases that challenged the long-held principle of "separate but equal" established in *Plessy v. Ferguson* (1896). Thurgood Marshall and W. J. Durham, lawyers for the National Association for the Advancement of Colored People's (NAACP) Legal Defense and Educational Fund, used the Texas case *Sweatt v. Painter*, and its partner, *McLaurin v. Oklahoma State Regents* (1950), to establish a foundation that would help them, four

years later, to overturn *Plessy* through *Brown v. Board of Education of Topeka* (1954).

Marshall and Durham developed a strategy that fell into line with Charles Hamilton Houston and the NAACP's larger plan of dismantling "separate but equal" and eventually building precedent to challenge and overturn *Plessy v. Ferguson*. In the interwar years, Houston, the NAACP's litigation director, had turned Howard University's law school into a training center for African American lawyers to be the front line in the fight for civil rights. Marshall and Durham's argument in *Sweatt*, therefore, focused on the inherent inability of communities and states to provide equal accommodations for African Americans at professional and graduate schools at state universities.

Background of the Case

No law school in the state of Texas admitted African American students, and in 1946, Herman Sweatt applied to the School of Law at the University of Texas. A letter carrier in Texas, Sweatt was frustrated because his employer continued to pass over him for promotion to a clerical position, a job that was more lucrative and less physically taxing. Sweatt believed he would be better able to help himself and others like him with a law degree. He sought help from the NAACP in the hope that the association would select and help fund his case.

Though Sweatt had graduated from an unaccredited college, Marshall felt that the University of Texas had denied Sweatt admission not because of the quality of his education and preparedness for law school but instead solely on the basis of race. The School of Law refused Sweatt admission, stating in its rejection letter that the Texas Constitution prohibited integrated education. Marshall and Durham filed suit in Texas on behalf of Sweatt, arguing that since the state had no law school for African Americans and made no financial arrangements for African Americans to attend a black law school out of state, the state had violated Sweatt's right to separate but equal accommodations.

Instead of issuing a writ of mandamus, commanding the university to admit Sweatt, the district court in Travis County continued the case for six months, allowing the state time to establish the Thurgood Marshall School of Law, a separate law school at the historically black Texas Southern University in Houston, Texas. After six months

the district court ruled against Sweatt, arguing that the new law school provided in-state legal education for African American students, as per the spirit of the separate but equal doctrine. Sweatt took his case to the Court of Civil Appeals and the Texas State Supreme Court, but both courts refused to overturn the lower court's decision.

Supreme Court Decision

Sweatt's lawyers then filed the case in federal court, and the case eventually was heard by the U.S. Supreme Court in April 1950 and argued within days of a similar segregation case out of Oklahoma. Marshall and Durham argued that the University of Texas violated both Sweatt's Fourteenth Amendment rights and the spirit of separate but equal. Marshall and Durham focused on two inequities, the physical and the psychological. They argued that by quickly constructing a law school 165 miles away from the School of Law at the University of Texas, the state had failed to provide what Marshall and Durham considered "substantive equality," the part of graduate and professional-level education that took place outside the classroom. Creation of this new law school, they argued, did not take into consideration the importance of intangibles, such as distinguished faculty, long-standing reputation, alumni support, and connections, when considering graduate education. In addition, the lawyers pointed out that the new law school lacked adequate facilities, such as a library with up-to-date books, a moot court, a law journal, and small class size, and therefore could not be considered equal to the law school on the Austin campus.

On June 5, 1950, the Supreme Court reversed the Texas court's decision, maintaining that the Houston school failed to provide quantitative and intangible equality to African American students seeking a law degree. Furthermore, the court established that the physical and intellectual isolation from their future peers permanently damaged African American students' chances obtain career opportunities similar to those of their white counterparts. Finally, the court held the intangible elements of graduate and professional school education to be essential and unable to be replicated in the newly built Houston school. Thus, separate but equal was impossible to achieve in graduate and professional schools.

The NAACP viewed its twin victories in *Sweatt* and *McLaurin* as foundational precedent to overturning *Plessy*, setting the stage for the broader desegregation of public kindergarten-through-twelfth-grade schools throughout the United States in 1954's *Brown v. Board of Education of Topeka* decision.

Swedish Americans

Immigration from Sweden dates back to the early phases of European settlement in North America. A great power in the 1600s, Sweden also participated in the transatlantic expansion of the era. The colony of New Sweden at the mouth of the Delaware River survived only from 1638 to 1655, however, when it was taken over by the Dutch and subsequently the English. Although its small population of approximately 500 Swedes and Finns was soon assimilated and left only a few architectural and toponymical traces in the region, it

established a distinct American mythology in the public imagery of Sweden.

History

Mass migration from Sweden to North America did not start until the middle of the 19th century. The country's climatic conditions made it difficult to expand agricultural areas in accordance with the growing population, which rose from under 2.5 million in 1815 to over 4 million in 1865; in spite of massive emigration, another million people had been added by the end of the century. After modest beginnings in the preceding decades, the number of Swedish arrivals in the United States skyrocketed to over 20,000 in 1868 and even more the year thereafter. These figures were not reached again until the 1880s, when as many as 330,000 Swedes landed on American shores, peaking at 46,000 in 1887.

Since another approximately 200,000 each arrived during the final decade of the 19th century and the first of the 20th, the census of 1910 reported more Swedish-born Americans than any other ethnicity. The changes in American immigration policy in the 1920s, which ultimately limited the regular admission of Swedes to 3,314 per year, and the social and economic transformation of their home society marked the end of Swedish mass emigration.

Altogether, more than 1.2 million immigrants from Sweden were registered in the United States between 1820 and 1950. This put the sparsely populated nation on Europe's northern periphery eighth among all countries of origin during that period. The relatively low rate of return migration among Swedes as well as other Scandinavians further increased their impact on American society. Especially important for this impact was the regional concentration of the immigrants in select states. Even though Swedes were not as fully clustered as their Norwegian neighbors, they, too, settled predominantly in the upper midwest. In 1910, the number of foreign-born Swedish Americans amounted to 665,000, with another 699,000 belonging to the second generation. A majority of them had their residence in a belt stretching from western Illinois to the northern plains. In absolute numbers, Minnesota's 268,000 Swedes constituted the biggest contingent in 1910, followed by 230,000 in more populous Illinois; in relative

terms, Minnesota's almost 13 percent far outdistanced the 4.9 percent in Nebraska and Washington State. A substantial minority of Swedes had also been drawn to the industrializing cities of the eastern seaboard, with close to 90,000 of them having settled in New York State in 1910 and almost 70,000 in Massachusetts.

As the largest group of immigrants from Scandinavia, Swedes displayed considerable diversity in regional, social, and professional background. Since religious practice remained highly regulated in Sweden until the middle of the 19th century, early emigration contained a visible religious component. The utopian settlement of Bishop Hill in Illinois, founded by the spiritual rebel and prophet Erik Jansson in 1846, constituted its most sensational example. Designed as a new Jerusalem based on Christian communitarianism, the settlement attracted over 1,000 settlers, but it was marred by the assassination of its leader and economic setbacks and dissolved in 1861.

In the following decades, many arrivals belonged to marginal agricultural families in search of land. As late as 1870, over 70 percent of Sweden's labor force was employed in the primary sector, which was also reflected in the social composition of the emigrants. Vilhelm Moberg's novel *The Emigrants* (subsequently made into a film) has acquainted a wider audience with this phase of Swedish migration to the rural midwest. By the end of the 19th century, in turn, momentum had shifted toward younger individual migrants in search of work in a more urban and industrial America.

Networking Organizations

Wherever they lived in denser concentrations, Swedish Americans established a broad network of ecclesiastical and secular institutions, including an ethnic press. In the religious sphere, Lutherans predominated, but Baptists, Methodists, and other Protestant denominations founded Swedish congregations as well. The Lutheran Augustana Synod, closest in tradition to the Swedish state church, formed the single largest ecclesiastical body among Swedish Americans. With a membership of approximately a quarter million, it had organized a substantial segment of the population by the 1920s. It also founded significant educational institutions, among them Gustavus

Adolphus College, in southern Minnesota, and Augustana College, in western Illinois. In addition, the revivalist tradition, as represented by the Covenant Church and other free churches, attracted many followers. At the same time, a wide range of secular associations grew to over 100,000 members.

The increasing communicative and institutional integration of American society, the lack of new immigrants, and the successful adaptation of American-born generations to mainstream society contributed to the gradual assimilation of Swedish Americans in the 20th century. This development was especially pronounced in the linguistic sphere. Even distinctly Swedish American institutions increasingly switched to English, as the number of native speakers continued to decline. At the beginning of the 21st century, only slightly more than 50,000 Americans listed Swedish as the language of their home, which largely corresponded to the number of people born in Sweden.

Americans of Swedish descent have been well represented in the public sphere, especially in the midwest. In the field of politics, they repeatedly held the Minnesota governorship. A number of Swedish Americans, among them Congressman Charles Lindbergh and his celebrated aviator son and namesake, became nationally known for their opposition to American intervention in the world wars, whereas labor organizer Joe Hill entered American lore as a romantic rebel. As chief justices of the Supreme Court, Earl Warren and William Rehnquist demonstrated the wide range of political opinion among later generations of Swedish Americans. In addition, cultural figures such as writer Carl Sandburg and singer Kris Kristofferson, as well as business leaders such as Charles Rudolph Walgreen, trace their roots to Sweden.

Notwithstanding their successful social and cultural integration, which also expresses itself in an above-average level of educational and economic attainment, Swedish immigrants and their descendants have left a distinct mark on American life. In the census of 2010, over 4 million Americans list full or partial Swedish ancestry. Even though more recent arrivals and internal migration patterns have increased the share of Swedish Americans in other regions, especially the Pacific west, they are still overrepresented in their traditional midwestern heartland, where the memories

of Swedish immigration continue to influence regional identity to this day.

Swiss Americans

The Swiss were among the earliest European immigrants to arrive in the United States. Today, the Swiss are one of the smallest ethnic groups, with about 570,000 Americans identifying themselves as being of Swiss descent in 2010. They have played a role in the founding and development of the United States disproportionate to the size of their immigration.

Swiss immigrants come from a small country in the middle of western Europe and belong to four different ethnic groups. They speak either German dialects, French, Italian, or Romansch. They have remained nearly invisible, since they are taken for immigrants from their larger neighbors. Before the United States gained independence, about 25,000 Swiss immigrants entered British North America, mostly settling in Pennsylvania (which included 4,000 Swiss Mennonites) and the Carolinas. Economic pressure was the main reason Swiss wanted to immigrate to the United States. A few, such as Albert Gallatin, came from noble French Swiss families; Gallatin became the secretary of the Treasury in Thomas Jefferson's administration and undertook a diplomatic mission that ended the War of 1812.

In general, the British were eager to promote immigration to their American colonies. Many booklets vaunted the advantages of the New World. One of the early Swiss settlements was led by Swiss Christoph De Graffenried, who is credited with settling New Bern, North Carolina, in 1710. His fellow settlers were primarily German Palatines and Swiss refugees.

Swiss Immigration: 1820 to 1930

Between 1820 and 1930, about 270,000 Swiss immigrated to the United States, with over 81,000 in the decade between 1880 and 1889. During the next four decades, almost 170,000 immigrants arrived from Switzerland. Swiss left for rural villages and towns in the midwest or large industrial cities such as New York, Philadelphia, Pittsburgh, Chicago, and San Francisco. Switzerland is a small country, and one-fifth of its territory is covered with high mountains and is uninhabitable. Some immigrants were adventurers or wanted to start a new life. Good land and working conditions were no doubt important factors as well. Swiss immigrants also saw the United States as a kindred nation with democratic ideals.

In the early 19th century, some predominantly Swiss settlements appeared, such as Highland, Illinois; New Glarus, Wisconsin; Gruetli, Tennessee; Bernstadt, Kentucky; and Geneva, Alabama; as well as in Idaho, New York, and Ohio. The Italian Swiss immigrated to California and engaged in viticulture. Johann August Sutter (1803–80) was a Swiss pioneer of who settled close to what is now Sacramento, California. Sutter called his colony and fort New Helvetia—the female personification of Switzerland. He became famous when gold was discovered near his sawmill in 1848. Other individuals with Swiss roots became fabulously rich. Meyer Guggenheim, a Jewish Swiss, immigrated from Canton Aargau to Philadelphia in 1847. The family was known for its global successes in mining and smelting. During the 19th century, the Guggenheim family possessed one of the largest fortunes in the world. It later became known for its philanthropy.

Agricultural crisis and industrialization influenced the immigration of Swiss, particularly from German-speaking cantons. Swiss in 1900 tended to be overrepresented in just a few occupations.

Only 0.25 percent of male breadwinners in the United States were Swiss; however, they represented 9.6 percent of all dairymen, 5.9 percent of butter and cheese makers, 3.25 of the silk industry, and 2.5 percent of the watchmakers.

There is little indication that the Swiss experienced prejudice and discrimination from the Anglo American population. The Swiss immigrants undoubtedly experienced homesickness. Although there are no reliable figures for return migration, it was probably substantial. Nearly 7,000 of the more than 8,200 Swiss of military age who came to the United States between 1926 and 1930 returned to Switzerland.

Swiss were dispersed both geographically and economically. The socioeconomic status of newcomers ranged from poor to wealthy. In 1915, an analysis of 5,000 Swiss men in the United States found a third in the lower income groups, approximately 44 percent in middle income groups, and about 22 percent in higher income groups. Louis Chevrolet, a French Swiss from the Canton of Neuchatel, immigrated to the United States from Montreal in 1900. He was a race-car driver and founder of the Chevrolet Motor Company in 1911. Another notable individual of Swiss descent on his father's side of the family was Herbert Hoover, the 31st president of the United States, between 1929 and 1933.

Swiss benevolent societies and clubs helped in the adaptation to the new country. The Swiss Benevolent Society of New York, the oldest Swiss benevolent organization in the United States, was founded in 1932 with the purpose of caring for the poor and organizing social events for the Swiss population of New York. The society played an active part in helping new immigrants establish themselves. For many years, the benevolent society also housed an employment agency.

The Immigration Act of 1924 reduced the number of Swiss immigrants—from 3,752 in 1921 to 1,707 in 1929. Other factors also influenced the flow of Swiss to the United States in the decades after the 1920s.

Later Immigration, Assimilation, and Diversity

The Great Depression and World War II decreased legal immigration considerably. Between 1930 and 1960, almost 35,000 Swiss immigrants arrived in

the United States; for the decades between 1960 and 2010, the number increased to about 48,000. The later immigrants were primarily professional and business individuals, often employed in branches of Swiss firms. Many did not stay permanently in the United States.

The descendants of the first 18th- and early-19th-century immigrants are fully assimilated in American society. The Swiss Mennonites and Amish show various degrees of assimilation depending on orthodoxy and isolation from the American mainstream. Some Amish still speak an old form of German. Dwight D. Eisenhower was of German and Swiss Pennsylvania Dutch ancestry and was reared in a large family in Kansas. The Eisenhower family migrated from Karlsbrunn, Germany, to Switzerland in the 17th century because of religious persecution, and a century later came to the United States. The word *Dutch* is related to the German word *deutsch* (which means German). Many Pennsylvania Dutch are descendants of refugees from the Palatinate of the German Rhine. Some Amish and Mennonites came to the Palatinate and surrounding areas from the German-speaking part of Switzerland, where, as Anabaptists, they were persecuted. Many Americans were not aware of Eisenhower's German and Swiss ancestry. Primarily, it is the most recent arrivals and their children who have joined Swiss clubs and maintained their Swiss and American identity.

Culture

Swiss Americans have successfully integrated into the American mainstream. Widespread intermarriage among Swiss has aided assimilation. Since Swiss immigrants came from Europe's oldest democracy, they also found commonalities in the new immigrant country. At least some Swiss identified with an idealized rural tradition. New Glarus, Wisconsin, has become an important tourist attraction, with chalets and a William Tell and Heidi festival each year. The majority of individuals identifying themselves as Swiss were born in the United States; of the foreign born, 54 percent are naturalized citizens, and over 90 percent of Swiss Americans speak only English.

Although Swiss cuisine varies with language group and region, it has entered the American mainstream. Fondue is now served in restaurants

and homes. Swiss cheeses are sold in American supermarkets. Many children read about Heidi and William Tell. The Swiss American family today is not distinguishable from other American families. It has changed from a patriarchal family to a more egalitarian and child-centered family. Coming from a small country with a diversity of languages, Swiss are aware and comfortable with American diversity. In their homeland, they were confronted with a variety of languages and were familiar with having to acquire at least a rudimentary knowledge of languages other than their own.

The Contemporary Scene

As of 2010, 40 percent of adult Swiss immigrants held at least a bachelor's degree, and about 94 percent had finished high school, as compared with 85 percent of the total American population. Swiss Americans earn considerably more than the average American, with a median income of \$63,682, as compared with a national median of \$52,029. Among Swiss Americans in the labor force, 49 percent work in management and professional fields, 23 percent in sales and office work, 12 percent in service occupations, 9 percent in production and transportation, and 8 percent in construction and similar work. Almost 80 percent of Swiss own their own homes. Swiss Americans have certainly arrived in America, despite their small number.

Syrian Americans

Syrian immigrants are the oldest of the Arab American groups that migrated to the United States seeking economic opportunities and political freedom. The earliest wave of Syrian immigrants arrived in the United States in 1880.

As Albert Hourani explains, Syria was a name commonly used in the Western world to denote the area that is now included in the states of Syria, Lebanon, Jordan and Israel, and it is not always easy to discover from the records of the emigration whether those who referred to as “Syrian” were, to use modern terms, Syrians, Lebanese, or Palestinians. Elizabeth Boosahda and Jennifer Leila Holsinger state that before World War I, Arab Americans who emigrated from Syria were identified as Turkish, Syro-Arab, Arab, or Syrian.

History

Most early Syrian immigrants were Orthodox or Catholic Christians. However, there was also a smaller number of Muslim Syrian immigrants, predominantly Sunnis, in addition to Alawite and Druze minorities. Today, the distribution of Syrian Americans in the United States, according to the Census Bureau’s 2009 American Community Survey, is as follows: northeast, 38 percent; midwest, 19 percent; south, 25 percent; and west, 18 percent. Syrian Americans reside mainly in New York, New Jersey, Louisiana, Massachusetts, California, and Michigan.

Between 1899 and 1907, some 41,404 Syrians were admitted to the United States. According to Alexa Naf, by 1910, the number reached 65,909. Syrian immigration to the United States was restricted by the U.S. Immigration Acts of 1921 and 1924. However, the migration to the United States increased in the 1960s, after the Immigration Act of 1965, as well as after Syrian–Israeli

conflicts that ended with Israel’s occupation of the Golan Heights in 1967.

In the 2000 Census, the population of Syrian Americans was 76,000, constituting 8.9 percent of Arab Americans and ranking third in the Arab population, after Lebanese and Egyptian Americans. In 2009, the number of Syrians reached 159,000, maintaining its third rank with the overall Arab population. Syrian Americans, like the Lebanese, are characterized by low percentages of foreign-born immigrants, at 22 percent, whereas the percentage of Syrian Americans born in America is 60 percent.

The early Syrian immigrants worked as peddlers and were quick to interact with Americans. Syrian Americans were good in trading and business but showed less interest in the domains of construction, farming, and transportation. In 1999, the income of Syrian Americans was among the highest, with the median family income being \$58,204, ranking second overall among Arab Americans. Educated Syrian Americans work in management, such as in the auto industry, as well as in related professional domains including computer science, medicine, banking, and teaching. Such occupations constituted 42 percent of the Syrian occupation distribution in 2000.

Political Activities

Early Syrian immigrants were not politically active. However, Elizabeth Boosahda states that they showed their patriotism by serving their new home in 1917, when the United States joined the Allies in World War I. The second generation of Syrian Americans, however, succeeded to be the first among the Arab Americans to be elected for political positions. Politically, Syrian American traders and businessmen support the Republican Party, but most of those who serve in public sectors support the Democratic Party.

Syrian Americans have also been active in establishing social and cultural organizations. For example, Alexa Naf explains that they founded the first Arabic newspaper in the United States, *Kawkab Amireca*, in 1892. They also established the Syrian American Club in 1908, as well as the *Syrian Daily Eagle* in 1914 and *Al-Bayan*, a Muslim newspaper published in America. Mary Ann Haick DiNapoli states that additional institutions

include the Syrian Education Society, established in 1916 and the *Syrian Review*, a New York-based English-language magazine founded in 1917. Elizabeth Boosahda also mentions the United Syrian Christian Association of North America, founded in 1920. Among more recent organizations are the National Association of Arab Americans, the Syrian Arab American Association, the Syrian American Women Association, and the Arab American Institute.

Within the American multicultural context, some Syrian Americans show a sense of hybrid identity, as represented in phrases such as half Syrian and half American, signifying their cultural diversity. Syrian Americans have shown adequate assimilation over several generations and are successfully mainstreamed within the U.S. society. Many Syrian Americans have lost their tradition of speaking Arabic. According to the 2000 Census, 46 percent spoke only English at home, and only 20 percent of Syrian Americans did not speak English fluently.

Western clothing is generally adopted by Syrian Americans. Women, however, tend to wear Islamic clothing, along with a head scarf covering their hair and ears. Like other Arab Americans, Syrian Americans highly value family and kin relationships. Like most Arab Americans, Syrians consider sharing food a significant means of socializing and demonstrating hospitality. Syrians share famous Levant dishes such as *kibbeh* (a shell made of ground meat mixed with bulgur and spices), pita bread, shawarma, *fattoush* or tabbouleh salad, hummus (made with chickpeas), and stuffed eggplant or zucchini.

Christian Syrian Americans celebrate Christmas, Easter, and Thanksgiving Day. Muslim Syrian Americans celebrate many religious occasions, mainly *Eid ul-Fitr* (the feast following the fast of

Ramadan) and *Eid ul-Adha* (the feast of sacrifice). However, both Christian and Muslim Syrian Americans enjoy good relationships, exchanging social visits and participating together during celebratory occasions such as Thanksgiving Day and Ramadan, among other religious festivals.

T

Taiwanese Americans

Comprising mainly post-1965 immigrants and their descendants, Taiwanese Americans share Confucian traditions similar to those of other Chinese and east Asian groups. Taiwan is an island, roughly the size of Maryland, located 96 miles east of the southern China coast. It has a population of 23 million. In 2010, there were 358,460 Taiwanese immigrants living in the United States, which is comparable to the number of Italian and Brazilian immigrants.

Taiwanese Americans are the most educated ethnic group in the United States. Both men and women typically achieve high education, high socioeconomic class, and high professional status. A significant number of Taiwanese Americans work in technology, management, and finance. Examples of high-profile Taiwanese Americans include Elaine Chao, secretary of labor in the George W. Bush administration, cellist Yo-Yo Ma, film director Ang Lee, and NBA player Jeremy Lin.

Population and History

The 2010 Census reported 196,691 Taiwanese Americans and 358,460 Taiwan-born residents living in the United States. These numbers, however, are underestimates: some immigrants from Taiwan identify themselves as ethnically Chinese; because many were born in China and moved

to Taiwan before migrating to the United States, they are often included in the category of Chinese Americans or Chinese immigrants.

From 1980 to 2000, the Taiwan-born population in the United States quadrupled (changing from 81,300 to 326,215). However, the growth of this population over the past decade has drastically dropped; it increased by only 10 percent from 2000 to 2010. Possible explanations for this decline include Taiwan's better economic opportunities and its growing number of higher educational institutes in recent years. The majority of Taiwanese Americans were naturalized through employment-based routes.

Two ethnic groups compose the Taiwanese immigrant community: *waishengren*, post-1949 immigrants who were born in China and migrated to Taiwan before relocating to the United States, and *benshengren*, pre-1949 Chinese immigrants and their offspring who lived on the island for generations. The two ethnic groups differ in terms of spoken language, ethnic identity, and gender relations. In general, *waishengren* speak Mandarin Chinese, identify with China, and are more egalitarian. In comparison, *benshengren* speak Taiwanese or Hakka, identify with Taiwan, and are more patriarchal.

Most Taiwanese immigrants live in suburbs that are typically white areas and fairly spread out in various regions. No particular landscapes

or ethnic enclaves mark this community. Approximately half of this population lives in California. The San Jose–Sunnyvale–Santa Clara area had the highest share of this population in 2010. A great number of Taiwanese Americans reside in metropolitan areas such as Monterey Park, California; Flushing, New York; Houston, Texas; Seattle, Washington; and Chicago, Illinois.

Migration through education signifies the major pattern of Taiwanese immigration. Most Taiwanese immigrants pursue advanced education in the United States and then find employment opportunities outside the United States. This trend is evident from the 1960s to the 1980s, when more than 80 percent of Taiwanese students who completed their graduate study did not return. Since the late 1980s, the number of businesspeople and working-class families has increased, adding diversity to this population. In recent decades, there has been a considerable proportion of Taiwanese transnational families, in which the mother and children migrate to the United States while the father remains in Taiwan to work. The purpose of such an arrangement is to pursue better education for the children.

Education and Socioeconomic Outlook

Taiwanese Americans are the most educated ethnic group in the United States. In 2010, 73.7 percent held a bachelor's degree or higher, considerably exceeding all Americans on average (17.6 percent.) Their high education level is reflected in their high socioeconomic status. Almost two-thirds of adult Taiwanese immigrants are employed as professionals and managers; more than half of men and almost one-quarter of women work in business-related fields. Taiwanese immigrant men and women both earn significantly more than their foreign-born counterparts. They also have a higher rate of homeownership and a lower rate of poverty than both U.S. natives and immigrants overall.

Culture

Taiwanese American culture is largely influenced by Confucian philosophy. The family is the foundation of ethnic Chinese societies, including Taiwanese Americans. Close family ties are typical, and three-generation cohabitation is common among first-generation families. Confucian morality ascribes to gender relations a patriarchal

nature in which men's social status is considered higher than women's. This gender ideology is more evident among the first generations. Education is highly valued for both boys and girls.

Folk beliefs that blend Buddhism and Daoism remain the mainstream religion in modern Taiwan, but a noteworthy number of Taiwanese convert to Christianity after emigration. Approximately 20 to 25 percent of Taiwanese immigrants in the United States are Christian, largely exceeding the percentage of Christians in Taiwan (3.9 percent). Attending church helps Taiwanese immigrants find a sense of belonging, security, and self-worth, and many second-generation youth are associated with Taiwanese churches. Buddhist organizations can be found in metropolitan areas where a large number of Taiwanese immigrants reside. Buddhism provides Taiwanese immigrants with an emotional connection with their home country. Moreover, a variety of social organizations are formed in the Taiwanese American community to facilitate ethnic networks and celebrate their cultural heritage.

Tanamoshi

Tanamoshi is the traditional Japanese practice of mutual financial assistance. In Japanese, *tanamoshi* means “dependable.” Tanamoshi members loan money to each other when a tanamoshi meeting is held. This mutual financial assistance

tradition was brought to the United States by the Japanese immigrant generation, called Issei. Issei used the practice to buy farmland or to start a business. They needed the practice because loans from American banks and governmental assistance were not available for Issei because of discrimination against them. Since the practice required a sense of trust among its members, tanamoshi tightened ties among Issei. Thanks to tanamoshi, Issei, most of whom had few financial means, could settle down in the new land and develop a Japanese American community.

Issei

Some Issei came to the United States as students with the hope of studying English or pursuing higher education at American schools. Others came as farmers or laborers with the hope of finding better working conditions, since the Japanese economic situation was terrible at the time they came to the United States. Many women came as family dependents. Since many lacked English ability, they had to engage in low-paying jobs, yet they worked very hard. Their hard work threatened white Americans' sense of economic security and dominance, and Issei were harassed and discriminated against. In this hostile environment, tanamoshi gave Issei a way to survive in the United States.

A System of Tanamoshi

In general, to start a tanamoshi, members pool a certain amount of money at designated intervals. For example, if 10 tanamoshi members pay \$5 a month, the total amount will be \$50. If they save their money for a year, they can accumulate \$600. In a year, each member can get \$60. Before reaching a year's savings, if a member needs money, the person in charge of a tanamoshi holds a *ko* (meeting), and a member who bids the highest interest rate can get the principal, but the member must return the interest to other members. Once a member bids and gets money, that member cannot bid again but has to continue to pay for the tanamoshi. If a member can delay taking his or her share, that member can get more and more interest from the other bidders' payments. Some members therefore use the system to augment their investment.

Tanamoshi was used for various purposes. It is reported that some women started a tanamoshi to

buy a wristwatch with a small investment. Others used a large sum of money to purchase real estate for farming or business purposes.

Tanamoshi members were bound by mutual trust, since money was involved, yet some did not fulfill their commitment, and after getting some money, they left their community. They then became a disgrace of the community. Shares they did not pay were taken care of by the person in charge of a tanamoshi. To secure the trust among members of a tanamoshi, *kenjinkai* played an important role in operating tanamoshi.

Kenjinkai

Tanamoshi members were usually composed of friends, especially friends from the same *ken* (prefecture). Issei from the same *ken*, such as Hiroshima-ken, Kumamoto-ken, or Fukuoka-ken, shared the same dialect and cultural habits. It was easier for them to get along with people from the same *ken* than with people from other *kens*. Since a tanamoshi dealt with large sums of money, its members needed to be trustworthy, and Issei felt that members from the same *ken* were more trustworthy. Issei created *kenjinkai*, associations of Japanese immigrants from the same *ken*. When they first came to the United States, many Issei were not familiar with the English language and American customs, and they became the target of racial prejudice and discrimination in the United States. They needed a community to survive together in the white-centered American society. *Kenjinkai* functioned as a buffer to protect Issei from difficulties they faced in the United States.

Kenjinkai provided many services to Issei. When new Japanese immigrants first came to the United States, they needed a place to live, so Japanese immigrants ran boardinghouses that had a Japanese atmosphere. *Kenjinkai* introduced jobs to newcomer immigrants. When a family member died, *Kenjinkai* made funeral arrangements. *Kenjinkai* occasionally hosted get-together occasions such as picnics and festivals. Through these occasions, Issei could meet people from the same *ken*, speak in their own dialect, and assuage their homesickness.

When an Issei started a business enabled by tanamoshi, *kenjinkai* members supported the business. Since many Issei lived in ethnic enclaves separated from American mainstream society because

of residential segregation, their businesses were limited within the enclave. However, a mutual support of businesses in the enclave developed into the creation of Japantowns in some locales. Japantowns helped preserve Japanese culture and develop a Japanese American economy.

Tanamoshi gave Issei financial support so they could start new lives in the United States. Kenjinkai gave Issei human interactions with other members from the same ken. Kenjinkai's mutual support helped lessen the difficulty of Issei's lives in the United States. Tanamoshi and kenjinkai together functioned to strengthen Japanese American solidarity and community in the United States.

Taos Revolt

The Taos Revolt was an 1847 battle in the Mexican-American War, in which Mexicans and Pueblo Indians unsuccessfully fought the American forces that occupied the territory that is now New Mexico. The Mexican-American War was one of numerous Mexican–American conflicts from roughly the 1820s to the 1920s, but the war generally is dated from 1846 to 1848. Anglo American immigrants had been settling in Texas while it was in Mexican control, originally at the invitation of the newly independent Mexican

government, which needed a denser population in the area and suffered from problems with the local Native Americans. As the Anglos quickly became the majority, they often disagreed with conditions of Mexican rule, including a plan to end slavery. Texas declared its independence, and though it successfully won the resulting war, Mexico did not give up the fight, nor did it stop disputing border issues. When the United States annexed Texas in 1845, it inherited this conflict, in part because the treaty annexing Texas deliberately did not specify its southern border, in an attempt to avoid the controversy over the dispute.

History

Troops were dispatched to Texas to ward off a Mexican invasion. Meanwhile, a federally commissioned explorer, John Frémont, took a group of armed men to California, where he assisted with a revolt in Sonoma by American immigrants seeking to declare California's independence from Mexico. This, combined with the wars that Mexico was simultaneously fighting with Native Americans, did not put Mexico in a diplomatic mood. Mexican forces killed an American patrol in the contested Texas-Mexican border region, and Congress approved a declaration of war.

Over the course of the war, in April 1846, the territory of New Mexico fell to American forces after the governor surrendered at the Battle of Santa Fe. New Mexicans worried that their land titles would not be honored by the American government, and resented their governor's capitulation. Insurrectionists and their local Pueblo Indian allies broke into the home of the occupying governor, scalped him, and killed and scalped several other officials. An army of about 500 made further attacks. The American military was quick to respond, dispatching 300 troops, who, with less than 100 volunteers, were able to subdue a force of about 1,500 Mexicans and Pueblos.

A total of 19 Americans and at least 100 Mexicans and Pueblos were killed. The insurrectionists were tried, and 28 of them were hanged for treason. This was perceived as an incredible presumption on the part of the American government—to conquer a territory and consider resistance to its occupation as treason. A subsequent federal investigation found that one of the 28 had been wrongfully convicted, but the Supreme Court upheld the

The San Geronimo Church at Taos Pueblo. It was built in 1850 after the original church was destroyed in 1847 by the U.S. Army during the Taos revolt, during which the Pueblo Indians fought America forces during the Mexican-American War.

remaining 27 verdicts. Resistance to the American occupation continued through several more battles in New Mexico, including the Battle of Red River Canyon, Battle of Las Vegas, and Battle of Cienega Creek, each of which resulted in an American victory.

The Mexican-American War was widely opposed throughout the United States. Southern Democrats were the most ardent supporters of manifest destiny, but northerners were not enthusiastic about the annexation of Texas, the rise in power of slave states, nor the idea of warring against a neighboring state newly independent from European powers. Northern Democrats who wanted to expand as much as southern Democrats favored doing so in the northwest. Abraham Lincoln, a Whig, was one of the vocal dissenters of the war, as was former president John Quincy Adams. Perhaps the most famous dissenter who was not a statesman was Henry David Thoreau, who refused to pay taxes because of his objection to the war. He was jailed accordingly, and wrote *Civil Disobedience*, an essay that remains famous today.

Conclusion

The Taos Revolt was the last incident of major resistance to American control of New Mexico, and the area changed rapidly thereafter. In northern New Mexico, many of the shared pasturelands used by local communities were lost, either through claims by unscrupulous business owners when prior claim could not be proven, seizures by the new government, or by new arrivals to the community who insisted on private ownership rather than communal lands. As in other territories acquired by the United States after European settlement, the local demographics and culture changed quickly as Americans established settlements. Citizenship was granted to any non-Indian local inhabitants who remained for the first year. Statehood was delayed because of disputes outside the territory over whether New Mexico would be admitted as a free or slave state.

Teachers of English to Speakers of Other Languages

Teachers of English to Speakers of Other Languages (TESOL) is a global education association for instructors who teach the English language to speakers of other languages. Founded in 1966, the association has individual and institutional

members and extensive affiliations worldwide. TESOL's corporate headquarters are in Alexandria, Virginia, and the staff there deal with the logistical aspects of the organization.

TESOL Goals

TESOL was established for several reasons, including the need for a professional organization devoted to the problems of teaching English to speakers of other languages; the need for a pedagogical journal to serve the TESOL profession; and the need for a register of specialists who would help foundations, government agencies, and universities find qualified TESOL personnel. As a nonprofit organization, TESOL aims to advance professional expertise in English language teaching and learning for speakers of other languages worldwide. It is also committed to research and improvement of education and training, promoting professional standards in language education, networking and cooperation internationally, and advocacy of language rights and access to quality language education.

Nonprofit Structure

As of 2012, TESOL had over 13,000 members in more than 120 countries. It was also affiliated with 98 independent organizations worldwide (41 in the United States and 57 throughout Asia, the Pacific, Europe, Latin America, the Middle East, and Africa).

In an attempt to improve public policy and understanding, TESOL takes official positions on a broad range of issues related to the field of English-language teaching. These positions are published as statements and papers and become official when they are approved by the TESOL board of directors. Areas of concern include English as a global language, learning diversity, education advocacy, immigration policy, discrimination against non-native English speakers, assessment and accountability, English-only legislation, teacher qualifications, U.S. citizenship exams, teachers' work and employment conditions and status, professional development, language varieties, and multilingualism.

Continuing Education

In particular, TESOL pays attention to issues relating to linguistic and cultural diversity and

is concerned with promoting the importance of multilingualism and multiculturalism in the profession. For example, the association values individual language rights and encourages multilingualism in all learners at every age and level. TESOL supports and encourages programs that foster skills in both first and additional languages. Additionally, in view of the rise of English as a global language, TESOL encourages the recognition and appreciation of all varieties of English, including dialects, Creoles and world Englishes. In terms of language teaching, the association does not advocate one standard or variety of English over another.

Furthermore, TESOL is committed to promoting equal opportunities in the profession. For example, it opposes any forms of discrimination against nonnative English speakers in the field and acknowledges the problematic distinction between native and non-native speakers of English, either/or classification system that fails to capture the range of possibilities in a world where English now serves a global language. It stresses that although all English language teachers should be proficient in English regardless of their first language backgrounds, proficiency in English should only be seen as only one of the criteria in evaluating a teacher's professionalism. Teaching skills, teaching experience, and professional preparation should be given as much weight as language proficiency when hiring decisions are made.

In addition to publishing over 90 books for educators teaching English as a second or foreign language, TESOL also publishes two refereed publications devoted to improving English language teaching and learning, *TESOL Journal* and *TESOL Quarterly*. Both journals aim to provide a forum for TESOL professionals to share their research findings and explore the practical applications of current theory and research in the field. In addition, TESOL has a number of interest sections, special interest groups that seek to promote research and continuing education in areas of key concern to TESOL members.

At present, interest sections include Adult Education; Applied Linguistics; Bilingual Education; Computer-Assisted Language Learning; Elementary Education; English as a Foreign Language; English for Specific Purposes; Higher Education; Intercultural Communication; Intensive English

Programs; International Teaching Assistants; Materials Writers; Nonnative English-Speaking Teachers; Program Administration; Refugee Concerns; Second Language Writing; Secondary Schools; Social Responsibility; Speech, Pronunciation, and Listening; Teacher Education; and Video and Digital Media.

TESOL Annual Conference

In addition to its publications and interest sections, TESOL convenes an annual conference featuring papers, keynote speakers, workshops, and annual meetings for the interest sections. The first TESOL conference was held in 1966, and the event is now attended by about 10,000 people annually.

As what may be the world's largest gathering of TESOL professionals, the annual conference offers professional development opportunities to English language teachers at all levels through the exchange of ideas and practices in interactive sessions featuring TESOL's global perspective. Presenters speak on a variety of topics ranging from practical advice for classroom teaching to theories in language acquisition, and conference participants acquire knowledge of current trends in the field and develop a professional network. In addition, the event features a large book fair, with exhibits from most of the major book publishers.

Teatro Campesino, El

El Teatro Campesino, or the Farm Workers' Theater, was founded in 1965 as the cultural, educational, and theatrical arm of the incipient farm workers' union being organized by the late César Chávez and Dolores Huerta in Delano, California. Best-known for its participation in the early unionizing efforts of the 1960s, the Teatro has continued to produce important theatrical works that illuminate the sociopolitical condition of Mexicans, Chicanos, and other marginalized peoples living in the United States. Furthermore, El Teatro Campesino inspired a national network of Chicano theater groups, encouraging actors, playwrights, directors, and other theater and media artists to find their artistic and socially relevant voices.

It is impossible to discuss El Teatro Campesino without also discussing the founding director, playwright, and producer of the troupe, Luis Miguel Valdez (1940–). Although the majority of Chicanos of his generation did not complete high school, this son of migrant farm workers graduated from San Jose State College in 1964 with a degree in English. After a year of working with the San Francisco Mime Troupe, Valdez returned to his birthplace and, with the blessings of Chávez and Huerta, met with a group of striking farm workers. Together, they formed El Teatro Campesino. Having learned the benefits of political street theater that employs broad, often exaggerated comic techniques with the mime troupe, Valdez guided the farm workers in improvising short, comic sketches he termed *actos*. The *actos* demonstrated the importance of joining and supporting the farm workers' union. They became the staple of the Teatro as the troupe performed at the edges of fields, attracting workers with popular Mexican *corridos* (ballads) as well as original songs supporting the union cause, punctuated with their *actos*.

Most important, the *actos* were created collectively, through improvisations that dramatized and demonstrated the struggles of the humble *campesino* against the powerful growers and their henchmen. These *actos* were modern "morality plays," with roots in the Spanish religious folk theater that has been performed in the Spanish-language communities of the United States for generations.

Commitment to the Cause

Within a matter of months, El Teatro Campesino was performing away from the fields, at universities and community centers, educating the general public about the farm workers' struggle and earning money for the union. In those formative years, Valdez described his theater as "somewhere between [Bertolt] Brecht and Cantinflas," alluding to the Marxist politics of the 20th-century German director and playwright and to the physical humor of the little tramp-like character called Cantinflas, created by Mario Moreno, Mexico's Charlie Chaplin. By 1967, Valdez and a core of Teatro members had left the union in order to focus on their theater rather than on the demands of a struggling labor organization. The members of the evolving company needed to distance themselves in order to evolve both artistically and politically. However, the Teatro has never swayed in its commitment to the farm workers' union, performing whenever called upon.

In 1971, the troupe moved to its permanent home in the agricultural town of San Juan Bautista, California's first capital. In a shrewd strategic move that aided the Teatro in establishing a place in this politically conservative town, the Teatro produced an adaptation of a centuries-old Mexican play about the appearances of the Virgin of Guadalupe to the humble Indian, Juan Diego, in 1531. Actors from the Teatro performed alongside the locals in this pageant honoring the patron saint of Mexico, performed in the 18th-century Spanish mission. The play, titled *La Virgen del Tepeyac*, continues to be produced in the mission every other year, alternating with a Spanish religious folk play, *La pastorela* ("The Shepherd's Play"), which has also been performed at Christmas in many Spanish-speaking parishes for generations.

Corridos on the Stage

Also during this period, Valdez and his troupe began adapting traditional Mexican *corridos* to the stage. A singer would sing the lyrics, and the actors would act them out, adding dialogue from the *corridos'* texts. The *corrido* style was to appear again, altered to suit the needs of a full-length collectively created piece, *La gran carpa de los Rasquachis* ("The Great Tent of the Underdogs"), first produced in 1973. This is an epic piece that follows a Cantinflas-like Mexican

character from his crossing the border into the United States and the subsequent indignities to which he is exposed until his death. The production toured nationally and internationally to great acclaim in the late 1970s.

It is important to note that El Teatro Campesino has coproduced many plays with major professional theater companies, continuing to make important contributions to the evolution of a professional Chicana/o and Latina/o theater. The landmark play *Zoot Suit*, written and directed by Luis Valdez and coproduced by El Teatro Campesino in Los Angeles and Broadway from 1978 to 1979, helped open the doors of professional theaters to Chicana/o and Latina/o theater artists from all backgrounds, adding to the multicultural outreach of El Teatro Campesino.

National Recognition

Most important, Teatro Campesino inspired a national network of Chicano theater groups from San Diego to Chicago, Seattle to San Antonio. Initially, these groups were mostly untrained in theater, and the *acto* served them well as basic training for future aesthetic and sociopolitical growth and development. By the beginning of the 21st century, there were professional and community-based *teatros* in every major center of Chicana/o and Latina/o population, and many of the individuals involved in these companies were inspired by the groundbreaking work of El Teatro Campesino.

Tecumseh's War

Tecumseh was a Shawnee leader who inspired and led one of the most ambitious pan-Indian resistance movements against the United States, often referred to as Tecumseh's War. Although the so-called war was neither the first nor the last Native American attempt to unite a pan-Indian confederacy against the encroachment of colonial powers, it was unique in its scale and message. Tecumseh's influence at its pinnacle spread into Canada and New York, to the Gulf of Mexico and as far west as Nebraska. The message was one that linked pan-Indian politics and policy with religious fervor. Ultimately, the efforts failed, but the movement had a significant impact in revitalizing Indian pride and identity.

Childhood and Young Manhood

Tecumseh was born around 1768, and his life bore witness to suffering caused by various colonial powers' continual displacement of and war against his people. His parents met in the Alabama/Georgia area and migrated to the Ohio area around 1759 as part of a Shawnee movement to reunite in their homelands. Tecumseh was born on the Scioto River in or near Chillicothe, Ohio. He was the fourth of eight children, and his name identified him as a member of the panther clan. The shortened translation of his name is "shooting star," but more accurately it refers to the tribal myth of his clan's spiritual patron, the celestial panther that jumps across the sky.

There was no time that Tecumseh's life was not profoundly impacted by the horrors of war. During his youth, he experienced forced displacement on many occasions as his people were driven from their land by armies destroying everything in their path. His early life experiences were shaped by loss, grief, hunger, insecurity, and constant movement. His father was killed during a battle at Point Pleasant when he was young. The oldest son, Cheesekau, was charged with training the younger boys and providing for the household, and he was an important role model and mentor, teaching Tecumseh not only the skills of the hunter and warrior, but also the values and principles of leadership. Tecumseh began exhibiting his strength in these areas first as a raider attacking boats traveling the Ohio River and later with

his brother along the Cumberland River during a two-year stay with the Chickamauga Cherokee. Tecumseh not only excelled as a strategist but also demonstrated compassion, particularly in his aversion to torture, one of his hallmark traits.

Confederacies and War

When Tecumseh returned to the Ohio area, there was a strong sense of hope because of the recent defeat of General Arthur St. Clair's army. The Indians wanted to annul the 1789 treaty at Fort Harmar, which ceded two-thirds of the Ohio territory, to the United States and to reestablish the 1768 border along the Ohio River. Throughout 1792 and 1793 a confederacy began to solidify, drawing a wide array of Native stakeholders to a group of Native American towns in northwestern Ohio known as Glaize. Although the numbers were large, intertribal conflict occurred and the much-needed alliance with the British was unreliable.

Confrontation between the confederacy and the American army, under the leadership of Major General Anthony Wayne, occurred at Fallen Timbers outside Greenville, Ohio, in 1795. Outnumbered nearly three to one, the Natives fought valiantly but eventually lost the battle. The most difficult incident for Tecumseh occurred as his group of warriors reached the gates of Fort Miami, a British fort, on their retreat and were denied entrance. As a result, the Treaty of Greenville was signed in 1795 and the Natives lost even more land. Although some were permitted to hunt on ceded lands, others were treated harshly and were forced to cede village sites. Major chiefs, such as Blue Jacket, signed the treaty, but Tecumseh refused. An uneasy peace settled in, and Tecumseh searched for a site for a permanent summer village for his band. Moving to four different locations in four years, he finally settled on a fork of the White River close to bands of Munsee and Delaware, where his band remained for eight years.

Epidemics and Visions

By 1804, the population in Indiana Territory made it eligible for statehood. Territorial Governor William Henry Harrison established new approaches to force Indian land cessions, including bribery, withholding treaty annuities, liquor, and exploitation of Native poverty. The years of 1804 and

1805 were particularly difficult, as one crisis after another struck the people—extreme cold, dwindling game, floods, and a smallpox epidemic.

Lalawéthika, Tecumseh's younger brother, functioned as a healer but was not respected in the community, which described him as lazy, deceitful, egotistical, frequently drunk, and abusive. In November 1805, however, this changed when he received a vision. Some stories tell that he fell into a coma, and many thought him dead. When he awoke, he shared the dream, in which he was shown that Indian people could choose one of two paths. The first was filled with suffering and agony; the second, peace and joy.

Testimony describes Lalawéthika as completely transformed, which he acknowledged by taking a new name, Tenskwatawa, "the open door." He began preaching a message of personal reform, rejection of Western goods and ideals, and a return to Native traditional practices. Indian people flocked to hear the words of the man they came to call the Prophet.

There was nothing new or unusual about the Prophet's message, but the timing and the combination of his message and the strength of Tecumseh's charisma, diplomacy, and astute strategists in political and military arenas set the stage for a powerful intervention to the republic's settler-colonial project.

The Turning Tide

In the early years after the Prophet's first vision, the band under Tecumseh sought peace. In 1806 they established a village, Greenville, along the treaty line between U.S. territory and unceded Indian land. Many Natives traveled to the town to hear the messages of the Prophet. In 1809, Harrison, in his continued efforts to obtain the remaining lands for Indiana, invited Native peoples to a meeting in Fort Wayne to negotiate the cession of more lands, resulting in the loss of approximately 3 million acres along the Wabash River. Outraged, Tecumseh revived an idea previously advocated by previous Native leaders, claiming that all Native lands were owned in common by all tribes and no land could be sold without the agreement of all. Although he was not ready to confront the Americans directly, he identified his principal adversaries as the Native leaders who signed the treaty. Tecumseh

expanded his brother's teachings to return to ancestral ways and connected this to the idea of pan-tribal alliances. He urged others to abandon those chiefs who had relinquished land and join the resistance movement now established at Prophetstown (1808).

Harrison thought Tecumseh a genius who could potentially inspire a large tribal federation and British alliance. The two met at Vincennes on several occasions. The talks ended in stalemates, with neither side conceding on any point, but both sought to maintain communication. Tecumseh had begun his quest to inspire and build a pan-Indian confederacy as early as 1809, with a focus on tribal alliances to the west, north, and east. Only the south remained. By 1811, he was ready to head south, the longest leg of his journey. He cautioned Tenskwatawa to avoid any conflict during his absence. His first stop was Vincennes, where he informed Harrison of his plans in a surprisingly candid move.

Tecumseh's southern trip lasted six months, during which time he traveled 3,000 miles, beginning his mission with the Five Civilized Tribes. The Creek were initially receptive because of kinship ties, but Tecumseh also promised a sign that would demonstrate that the confederacy

Tecumseh's actions in the War of 1812 cost him his life but showed his continued efforts to secure Native American independence from outside dominance. He is commemorated here on a Shawnee Nation dollar.

was divinely sanctioned. It came in the form of a comet that was visible during September and October, while he stayed with the Creek, and vanished when he left the area in November.

Meanwhile, as pilgrims arrived in Prophetstown to hear from the Prophet, hostile warriors from nearby areas increased their raids on white settlers. Harrison sent word for the pilgrims to withdraw or they would be considered hostiles. He also demanded return of the stolen goods, a demand that the council at Prophetstown could not meet. In November, Harrison amassed a large army and marched upon Prophetstown, making camp one mile north of the village. Assured by the Prophet that their cause was blessed, warriors crept out of the village to circle behind the American troops for a surprise attack on an army that had twice as many men. Although the Americans suffered greater casualties, the Natives lacked the ammunition to sustain the fight and withdrew, leaving Prophetstown open to plunder and destruction.

As Tecumseh left the Creek, he promised yet another sign, which appeared in December 1811 in the form of a tremendous earthquake. The strength of the quake was such that it caused the Mississippi River to briefly flow backward. The epicenter was in Missouri, where Tecumseh had recently arrived on the next leg of his journey. The shocks were felt far and wide, and subsequent aftershocks continued until February 1812. The phenomenon was interpreted in many ways, but the majority of Natives opined that the Great Spirit was displeased. Natives in Ohio saw it as a sign of condemnation of the tragedy at Tippecanoe. The combination of comet and earthquake took on legendary proportions and contributed to Tecumseh's rise to iconicity.

It was during this time that word reached Tecumseh of the destruction of Prophetstown. He arrived home in January 1812 to a very different landscape. Angry with the Americans and his brother, Tecumseh faced a starving people and destroyed confederacy. He sought to reinvigorate the momentum of the confederacy movement and renew confidence in the message of the Prophet while offering conciliation toward the Americans, but he faced difficulties on other fronts, as violence erupted when warriors from other tribes intensified their raids.

War of 1812

Although Tecumseh certainly had cause for misgivings about the British, the U.S. declaration of war against Great Britain in June of 1812 opened a window of opportunity to expel the Americans and secure Shawnee homelands, so he allied with Britain. In the early months of the war, the British, with the aid of Tecumseh, enjoyed considerable success in the Lake Erie region. The largest American defeat took place on the River Raisin in January 1813, when a detachment of Harrison's army was routed by the alliance. The British left the prisoners with inadequate guards, and Natives killed 60 before the slaughter was stopped by Tecumseh. This became a rallying cry for Americans.

The alliance began a campaign against American forts in northern Ohio. In May 1813, the Natives set siege to Fort Meigs, in northern Ohio. American reinforcements arrived and were defeated by the Natives, but the fort held. A second offensive in July failed as well. Lastly, Tecumseh's forces were repelled at Fort Stephenson on the Sandusky River, marking the end of the Ohio campaign.

Lake Erie was decisively won by Americans in September 1813, after which time the British fell back from Detroit. Harrison launched a campaign into Upper Canada that ended with a U.S. victory at the Battle of the Thames on October 5, 1813, where Tecumseh was killed, effectively ending the Indian–British alliance.

Tejanos

Texas is home to the nation's second-largest Mexican American population, after California. The 2010 Census counted just under 8 million persons of Mexican ancestry within the Lone Star State, representing approximately one-quarter of the nation's total Mexican American population. The term *Tejano* (female variant *Tejana*) is often used, particularly by members of this community themselves, to refer to a Texan of Mexican descent. The label conveys a sense of regional pride in being a Texan while also acknowledging one's ethnic Mexican/Hispanic heritage. Additionally, *tejano* (loosely translated into English as "Tex-Mex") refers to a specific genre of Spanish-language music deriving from the Texas borderlands region that blends *norteño* musical styles from Mexico with country/western and rock 'n' roll influences from the United States, with lyrics often sung in Spanish. *Tejano* music plays regularly on Spanish-language radio stations throughout the United States, particularly in the southwest.

Like other segments of the Mexican American community, Tejanos vary tremendously in their acculturation, linguistic capabilities, and degree of ethnic consciousness. Acculturation varies according to the length of time one (or one's ancestors) has lived in Texas, with more recent migrants often retaining a relatively strong degree of cultural influences from Mexico and their home communities and those whose families have lived north of the Rio Grande for generations often retaining a strong cultural orientation toward Texas and the larger U.S. society. Similarly, some Tejanos are fluent in both Spanish and English, whereas others are English dominant, with little to no knowledge of Spanish. Although many Texans of Mexican ancestry choose to self-identify as Tejanos or Tejanas, others may prefer to identify as Mexican, Mexican American, Hispanic, Latino/a, American, or any combination of these ethnic and national labels.

History

The roots of Tejano heritage derive from the indigenous cultures of Texas and the Spanish settlers who colonized Texas during the 16th and 17th centuries. Tejano identity was further

reshaped by Mexico's independence from Spain (1821), the Texas Revolution (1835–36), and the Mexican-American War (1846–48). Texas existed as an independent republic for nine years prior to its admission to the Union as the 28th state in December 1845. A substantial portion of the Anglos (non-Hispanic whites) who settled in Texas during its time under Mexican rule through its early years after gaining statehood were current or former slaveholders who held views of racial inferiority toward their Mexican neighbors. After Texas gained statehood, Mexicans in Texas experienced an increase in social, economic, and educational discrimination at the hands of Anglos. During the early 20th century, the Mexican Revolution (1910–20) brought thousands of additional immigrants from Mexico into Texas, and the Lone Star State remained the home of the largest Mexican American population until it was surpassed by California prior to World War II.

Tejanos differed in their approaches toward combating the prejudice and discrimination they faced. Some, particularly those who were lighter complexioned and middle-class, advocated assimilation as a means of countering racism. The League of United Latin American Citizens (LULAC), established in Corpus Christi in 1929, strongly promoted an assimilation-based ideology prior to the 1950s and even accepted proposals to restrict immigration from Mexico. Other Tejanos took a more aggressive approach against anti-Mexican discrimination. Hector García, a World War II army veteran and LULAC president, founded the G.I. Forum in 1948 to challenge the Veterans Administration's neglect of Mexican American servicemen. The landmark 1954 U.S. Supreme Court case *Hernández v. Texas*, in which prosecutors contended that Mexicans Americans in Texas experienced widespread and systematic inequalities, ruled that the Equal Protection Clause of the Fourteenth Amendment also applied to Mexican Americans.

Famous Tejanos

At the time of her murder in March 1995, *tejana* music star Selena Quintanilla Pérez had just recorded her first English-language hit single, "I Could Fall in Love" and was poised to become a major Latin crossover sensation, drawing comparisons to Gloria Estefan from cultural critics.

Texas Governor George W. Bush declared April 16, 1995, to be Selena Day in Texas to commemorate the slain singer. Another Tejana recording artist, Vikki Carr, has produced songs for more than 40 years and is well known for her involvement with charities. Other notable *tejano* musicians include Latin legend A. B. Quintanilla (Selena's father), country singer/guitarist Freddy Fender, folk singer Trini Lopez, and Christian recording artist Jaci Velasquez.

Tejanos have also influenced the U.S. television and film media industries. John Quiñones, a native of San Antonio, has had a stellar career as a news anchor, journalist, and correspondent, earning seven Emmy Awards and a Peabody Award throughout his career. Quiñones appears on the ABC network's *Primetime*, *20/20*, and *Good Morning America* programs. Corpus Christi native Eva Longoria is a 14th-generation Texan who has achieved fame as an actress, best known for her role on the television series *Desperate Housewives*. Longoria is also a committed social activist who has extended her support to causes such as children's rights, women's rights, and fighting hunger, and who has produced a documentary, *The Harvest*, that illustrates the lives of minors laboring as migrant workers in the United States. San Antonio-born film director and screenwriter Robert Rodriguez has entertained moviegoers for two decades with films such as *El Mariachi*, *Desperado*, *From Dusk Til Dawn*, and *Machete*. Many of Rodriguez's films are set in the Texas-Mexico borderlands region and incorporate Mexican or Mexican American characters and themes into their narratives.

Tejanos have also served in key positions within the federal government in the administrations of presidents of both major political parties. Former San Antonio mayor Henry Cisneros was appointed secretary of housing and urban development by President Bill Clinton in 1993 and held the position until 1997. President George W. Bush appointed Alberto Gonzales as U.S. attorney general in 2005, the first Latino to hold this position. Tejano professional athletes include golfer Lee Trevino, wrestler Eddie Guerrero, and boxing champions Orlando Canizales, Jesse James Leija, and Juan Diaz.

Telemundo

Telemundo, owned by NBCUniversal, is the second-largest Spanish-language television network in the United States, reaching 58 percent of Hispanic households. Unlike other Spanish-language television networks in the United States, like rival Univision, Telemundo produces most of its own telenovelas and is the second-largest Spanish-language content producer in the world. The English subtitles provided for many Telemundo programs have contributed to the popularity of the network's telenovelas. It is headquartered in the Miami suburb of Hialeah, Florida, with affiliates in 27 states, Puerto Rico, and the District of Columbia, and studios in Miami.

History

Telemundo was founded by Angel Ramos in 1954. Ramos owned Puerto Rico's major newspaper, *El Mundo*; owned its first radio station, Radio El Mundo, WKAQ; and founded WKAQ-TV, branded as Telemundo. In its early years, WKAQ-TV was best known for its variety shows, like *La Taberna India* and *La Farandula Corona*. Soap operas eventually overtook variety shows as the channel's staple.

In the early 1980s, NetSpan was the second-largest Spanish-language television network in the United States. A part owner of one of the network's affiliates (Los Angeles's KVEA), Reliance Group Holdings, purchased NetSpan and a number of Spanish-language channels, including Blair

Broadcasting, which by then was the holding company that owned WKAQ-TV/Telemundo. These channels were reorganized into the Telemundo Group in 1987, replacing NetSpan and quickly expanding. Coverage included the New York metropolitan area, Puerto Rico, Miami, Los Angeles, San Jose (California), Texas, New Mexico, Washington, D.C., Arizona, and San Francisco.

For a time, Telemundo outsourced its news to CNN, which produced *Noticiero Telemundo CNN* in Atlanta beginning in 1988. This changed as 24-hour news networks became more popular, prevalent, and profitable following the attention CNN drew during the Gulf War; and Telemundo launched Telenoticias, its Spanish-language 24-hour cable news network. A joint venture with Reuters, Spain's Antena 3, and Argentina's Arter, it was not successful and was sold to CBS, then was sold back to Telemundo and rebranded as Telemundo Internacional.

NBC Purchase

In 2002, after attracting attention with its increasingly successful telenovelas, Telemundo was purchased by NBC for \$2.7 billion. Additional news programs were created, and local affiliates began to offer local news programs in the early morning. It was under NBC that Telemundo began subtitled many of its telenovelas in English and also began the practice of product placement. Fewer telenovelas were imported from Latin America as the network began producing a greater percentage of its own content, as it does today, though famous actors from Latin America, familiar to audiences through Latin American telenovelas, were hired. The network also now casts Spanish-speaking American-born actors. In 2009, Telemundo introduced high-definition programming in prime time, the first Spanish-language network to do so, as well as a Mexican cable network jointly owned with Televisa.

Telemundo's prime-time schedule uses the Turner Time strategy, named for the Turner Broadcasting System's 1980s and 1990s strategy whereby programs begin and end several minutes after the hour in order to encourage viewers to remain on Telemundo by forcing them to miss the first few minutes of competitors' programming. Weekday prime-time programs are subtitled in

English, which not only encourages viewership among curious non-Hispanics but also encourages viewing by households in which some members are fluent in Spanish and some are not. English-subtitled shows are also available during the day in some cases, particularly when the programming includes reruns of shows that originally ran in prime time.

Popular Fiction

Although English-language, American-scripted television is geared toward the goal of reaching a 100-episode run, the threshold beyond which a series can command a greater payout in syndication, and so favors sitcoms and procedural dramas (in which a protagonist faces a similar challenge every week, such as a court case or a murder mystery), Spanish-language programming is structurally more similar to popular fiction. The Telemundo schedule is a mix of Spanish-dubbed or -subtitled foreign fare, anthology shows featuring short stories, and telenovelas. Often compared to soap operas, telenovelas are significantly different from American soap operas in that they have a distinct beginning, middle, and end. They are an adaptation of the earlier radionovela (just as English-language procedurals are an adaptation of a similar format used in radio dramas).

Recent telenovelas produced by Telemundo include *Pasión Prohibida*, which adapts a 19th-century Turkish novel about forbidden love, *Ask-i Memnu*, to 21st-century Miami; *El Rostro de la Venganza*, about a man who has assumed a new identity 20 years after committing a school shooting as a young boy; *Pablo Escobar: El Patrón del Mal*, about the life of the Colombian drug lord; and *Marido en Alquiler*, a remake of the Brazilian telenovela *Fina Estampa*, about a woman who becomes a "handyman" after her husband is lost at sea.

Betty, the Ugly One

One of Telemundo's most famous imported telenovelas aired for only two years. *Betty La Fea* ("Betty, the Ugly One") was produced in Colombia and aired on Telemundo beginning in 2000. Its wild popularity on Telemundo and in other countries where it aired led to spin-offs (aired on competing networks) and an American adaptation,

Ugly Betty, that aired on ABC from 2006 to 2010 and won a Golden Globe Award.

One of the most popular anthology shows aired by Telemundo was *Decisiones*, filmed in its Miami studios. The series told a complete one-hour story every episode, claiming to be based on true stories, each of which was a melodrama with a strong focus on sex and passionate relationships. After the original two-year run from 2005 to 2007 (consisting of 323 episodes), a second run filmed in Puerto Rico began in late 2007, concurrent with a daytime spin-off called *Decisiones de Mujeres*.

The first late-night Spanish-language variety show in the United States, *A Oscuras Pero Encendidos* (“In the Dark but Turned On”), began broadcasting in 1995 on WJAN-CA, an independent Spanish-language station in Miami. Telemundo outbid Univision for the national broadcast rights and began broadcasting it in 2000.

The late-night time slot and format, which has been the subject of intense attention on English-language networks, with programs like *The Tonight Show* becoming important parts of networks’ brand identity, was previously unexplored by Spanish-language channels and inspired a number of other shows, including Telemundo’s own *Mas Vale Tarde* (“It’s Better Late”), which aired from 2007 to 2008. Whereas *Mas Vale Tarde* hewed closely to the format of English-language late-night shows—focused on a monologue by the host followed by a mix of skit material and a small number of short interviews with celebrity guests, followed by a musical guest—*A Oscuras Pero Encendidos* more obviously shows its Hispanic variety show influences. Segments include interactive phone games and vaudeville acts; celebrity guests are as likely to participate in games as to be interviewed, and there is a decided focus on the sex appeal of host Paul Bouche’s female cohostesses. The original *A Oscuras* ceased producing new episodes in 2001 but continued to air reruns, and in 2007 it was succeeded by *La Boca Loca de Paul*, with the same host and essentially the same format.

A Oscuras, like *Betty La Fea*, represented a shift in programming focus that Telemundo was leading and that rippled across Spanish-language programming in the United States. Until the mid-1990s, Spanish-language programming was aimed almost exclusively at Mexican Americans and Mexican resident aliens.

Children and Young Hispanic Americans

Sunday nights, Telemundo airs *El Maravilloso Mundo de Disney*, an anthology program based on *The Wonderful World of Disney*. The show presents Disney content, including movies and TV shows, dubbed in Spanish. The theme music for the opening credits is the Louis Armstrong song “What a Wonderful World,” which was used occasionally for the 1997 to 2002 version of the English-language program. Saturday and Sunday mornings, Telemundo used to air *Qubo*, a block of semi-educational children’s programming, to fulfill the Federal Communications Commission’s (FCC) educational programming content requirements. Produced as a joint venture by NBCUniversal, Nelvana, the Scholastic Corporation, DreamWorks, and Ion Media, *Qubo* had been replaced with *NBC Kids* as of July 2012. Produced by PBS Kids Sprout, the Telemundo version of *NBC Kids* includes *Barney and Friends*, *Super Why!*, *Play With Me Sesame*, *LazyTown*, *Noodle and Doodle*, and *Fireman Sam*.

Under NBCUniversal’s ownership, Telemundo has added a cable complement to its channels: mun2, pronounced “Mun Dos.” Operating out of Telemundo’s west coast studios in Universal City, California, it is aimed at young Hispanic Americans, primarily offering music videos, sports programming, and shows from other NBC networks, usually with Spanish subtitles.

Unlike Telemundo, a large portion of mun2’s programming airs in English, reflecting the common bilingualism of its audience. The channel originated as GEMS Television, a Columbia Pictures venture aimed at Hispanic women, but it was purchased by Telemundo in 2001 and rebranded. One of mun2’s popular recent series is *I Love Jenni*, a reality show about the life of Mexican American entertainer Jenni Rivera.

Television

Television is a centrally important factor and an inescapable part of modern American culture; it is arguably the most important of all the mass media. Network television of the early 1990s tended, as it had done for the previous 40 years, to present race and ethnicity as a spectacle that bore particular social content as understood to be proper to African American, Latino/a, and Asian communities. These representations conflated “race” with black or brown persons either mired in or courageously transcending scenarios such as poverty, drug addiction, criminality, or racial oppression.

Race has also been used as a backdrop in which to feature and highlight whiteness as seen in, for example, the hit 1970s show *Kung Fu*, which centered on a white actor who performed Chinese martial arts. By the end of the 1990s, this logic of race had been increasingly displaced by a competing understanding in American television: Racialized bodies—black, brown, and yellow—had now become decoupled from undesirable social contexts and instead became both themselves commodified and linked to other commodities.

Racial and ethnic humor of the 1950s through the 1970s was made at the expense of racial and ethnic groups. Until the late 1980s, a popular form of social whiteness was consistently naturalized in U.S. television as a means for all Americans to understand national identity. The television landscape from *The Amos 'n' Andy Show* (1951–53) to *The Cosby Show* (1984–92) is littered with ethnic shows and characters who have entertained audiences and troubled antidefamation groups. A long line of Italian mafiosi, black servants, and Hispanic banditos, to name a few stereotypes, have attracted condemnation from community organizations.

Images of African Americans

Some of television’s earliest nonfictional representations of African Americans arose in relation to the emergence of the Civil Rights Movement of the 1960s. News coverage of the movement tended both to generate and to record spectacular violence against black people engaged in nonviolent protest. Such coverage brought the problem of southern racism into stark relief, thus collating the black body in pain with that of a suffering national body still wounded by sectionalism and southern intransigence. During the same period, network documentaries such as CBS’s *The Harlem Temper* (1963), NBC’s *Sit-In* (1960), and ABC’s *Cast the First Stone* (1960) explored the effects of racism in an extended exercise of national soul-searching. In general, then, informational programming during the early 1960s tended persistently to link depictions of racial identity to broad social ills.

Shows that were much more optimistic about race relations tended to link individual black characters to the fortunes of their race, as exemplified by *The Bill Cosby Show* (1969–71). This program, Cosby’s follow-up to *I Spy* (1965–68), told the story of Chet Kincaid, an athletic coach in an integrated urban high school. In the 1970s, the various sitcoms produced by Norman Lear’s Tandem Productions, including *All in the Family* (CBS, 1971–79), *Sanford and Son* (NBC, 1972–77), *Good Times* (CBS, 1974–79), and *The Jeffersons* (CBS, 1975–85), definitively established the link between racial representation and social problems. This link developed because of these series’ “liberal” intentions, as the project of representing racism (*All in the Family*); racial striving, deracination, and assimilation (*The Jeffersons*); or raced poverty (*Sanford and Son*, *Good Times*) effectively combined racial subjects and race-as-problem.

This tendency was reinforced by a series of made-for-TV movies and miniseries on racial topics that punctuated the 1970s. These included *The Autobiography of Miss Jane Pitman* (1974), *Roots* (1977), *A Woman Called Moses* (1978), *King* (1978), and *Roots: The Next Generations* (1979). In each of these, blackness was equated with its capacity to suffer or transcend the trials imposed by racism. With considerable success, conservatives sought to undo many of the gains made by

racial minorities during the previous two decades by broadly undermining the legal bases on which programs like affirmative action had been based.

Latinos, Hispanics, and Television

The *I Love Lucy* show was groundbreaking not only for featuring a woman in its lead role but also for casting Cuban Desi Arnaz as her husband, Ricky Ricardo. Born in Santiago, Cuba, as Desiderio Alberto Arnaz y de Acha III, Arnaz played Ricky Ricardo in *I Love Lucy* from 1951 to 1957 on CBS. Arnaz was both the real-life and stage husband of Lucy (Lucille Ball). On the popular quiz show *You Bet Your Life*, host Groucho Marx grilled actor Pedro Gonzalez in 1953. *¿Que Pasa, USA?* (1977–80) was the first bilingual sitcom on television, with an almost equal mix of English and Spanish in each episode. The show centered on a multigenerational Cuban American family in Miami struggling to hold on to its heritage and also learning to adapt in America. The show was produced thanks to a federal grant and a local public television station and aired throughout the United States.

Condo, a 1983 television series, lasted only about a dozen episodes and was canceled after TV ratings dropped. It was the first show in which a Hispanic cast played an upwardly mobile middle-class Hispanic family alongside a white middle-class family, interacting with one another as equals. The children of the families fell in love and eloped, drawing the two families closer together. ABC tried to replace *Condo* the next year with *a.k.a. Pablo*, a show about a stand-up comic named Paul Rivera and his struggling Mexican American family. Many Hispanics took offense and protested the show's jokes and promotion of stereotypes, leading to its early demise after only about a month on the air.

Based on the Colombian soap opera *Yo Soy Betty, La Fea*, the U.S. version of the show, *Ugly Betty*, with executive producer Salma Hayek, became a hit upon its release in 2006. After only its first season, the show won two Golden Globes, one for Best Comedy and another for Best Comic Actress on TV for the show's star, America Ferrera. In 2007, Representative Hilda Solis, a Democrat from California, congratulated Ferrera on the floor of the U.S. House of Representatives for "breaking down barriers for

Archie Bunker, played by Carroll O'Connor in the long-running sitcom *All in the Family*, was an outspoken bigot, prejudiced against everyone, including his African American neighbor, Lionel Jefferson, played by Mike Evans.

Latinos in prime-time television.” The daughter of Honduran immigrants, Ferrera played a Mexican American assistant with horrible fashion sense who was determined to make it in the publishing business. The show, which ran for four seasons, was groundbreaking in that it was produced by Latinos, had a Latino cast with a Latino story line, and was adapted from a script that originated in Latin America.

Representations of Race

Much of television's news, documentary, and “reality” coverage has aligned minorities with welfare fraud, drug abuse, bad parenting, and a “culture of poverty,” as well as with fictional representations of middle-class or affluent blacks like *The Cosby Show*, which suggested that the fight for racial equality had been won. These two very different types of programming, which conveyed dramatically different pictures of race in America, relied on each other as opposites that somehow produced the same social meaning: that, whether because blacks have “made it” or because they are hopelessly corrupt, culturally or morally, aggressive civil rights measures were no longer

necessary or appropriate. Thus, while the terrain of the nation's racial imagery shifted considerably during the Ronald Reagan–George H. W. Bush period, television's racial representation was still very much bound to race-as-problem.

In the 21st century, contemporary scholars and viewers of the television medium find themselves in a changing televisual landscape with respect to race and ethnicity. Though televisual racism is certainly still part of the terrain, it is less likely than ever before to take the familiar stereotyped forms. Instead, the dominant mode of television's racism now lies in the ways its representations tend to wrench persons of color out of the still pervasive political context of white dominance and out of the still relevant social context of communities of color. In the process, real political, social, and economic inequalities disappear. In their place, television offers up racialized figures as consumers first and last, producing a powerful if misleading alibi for existing racial formations.

Televisual Advertising

Media images provide a diffuse confirmation of one's worldview, promote acceptance of current social arrangements, and reassure people that things are the way they ought to be. Television commercials, in particular, make race and gender stereotypes readily available. The Frito Bandito was the cartoon mascot for Fritos corn chips (manufactured by Frito-Lay) from 1967 to 1971. The character was voiced by Mel Blanc, who used an exaggerated Mexican accent not unlike another cartoon character of his, Speedy Gonzales. The Frito Bandito spoke broken English and robbed people of their Frito corn chips, a reference to the "Mexican bandit" stereotype in western movies. He also complained that he was being pursued by the "Frito Bureau of Investigation." Pressure from the National Mexican-American Anti-Defamation Committee and others prompted an update to the character; his gold tooth and stubble were eliminated and his hair combed. The character was completely retired in 1971. The history of blacks in advertising is quite troubled to this day. For example, the caricatures of Aunt Jemima's syrup and Uncle Ben's rice are still used to promote their related household brands in the 21st century.

Sesame Street and Multiculturalism

Sesame Street is a long-running children's television series created by Joan Ganz Cooney and Lloyd Morrisett that has been on the air via public television since 1969. The program is known for its educational content and its creativity, communicated through the use of Jim Henson's Muppets, animation, short films, humor, and cultural references. The show may not have intended to be revolutionary, but in 1969, with its use of diverse Muppets, cast members, and hosts, it was. The show depicted a multicultural universe.

Having a black actor as part of the cast—a cast that has also featured, throughout the years, Native American, Asian, and Latino/a cast members—helped create its culturally embracing tone. All of *Sesame Street*, from the skits teaching the number five through doo-wop songs and encouraging friendship through break-dancing, to guests like Patti LaBelle singing the ABCs in a gospel style, Tito Puente playing timbales, Ziggy Marley encouraging viewers to set their piggies free by going barefoot, Michelle Obama urging viewers to eat healthy foods during the show's 40th anniversary and, most recently, U.S. Supreme Court Justice Sonia Sotomayor discussing career goals to little girls, projects a diversity that is rarely represented in most other television programs.

Contemporary Scene

Various ethnicities of all backgrounds have a rich history in the development of television to this day, along with mixed-race individuals in recent lead roles such as Steve Byrne (of Irish and Korean descent) on the TBS sitcom *Sullivan & Son*. Although there have always been mixed-race individuals in lead television roles, it was not until the late 20th and 21st centuries that these identities were openly acknowledged within the programs and viewing public. In the last decade, the growth in cable television (particularly reality television) has allowed for a higher growth in television shows depicting white Americans of different ethnic and cultural backgrounds, such as Persians in Bravo's *The Shahs of Sunset*, Mormons in TLC's *Sister Wives*, Amish Country in *Breaking Amish*, Romanichals in *My Big Fat American Gypsy Wedding*, Greek Americans in *My Big Fat Greek Wedding*, Italian Americans in

MTV's *Jersey Shore* and its spin-offs (*Snooki and JWow* and *The Pauly D Project*).

HBO's *The Sopranos* is as famous for its writing as it is for its controversial depiction of an Italian American mob boss and his family living in New Jersey. Although the show garnered groundbreaking praise for its writing, acting, and production, the National Italian-American Foundation, The National Ethnic Coalition of Organizations, and the antidefamation arm of the Order Sons of Italy in America all protested its portrayal of Italian Americans as mobsters. Indeed, some were so disturbed that U.S. Representative Marge Roukema of New Jersey proposed a resolution calling upon the entertainment industry to refrain from this kind of stereotyping, likening the show's portrayals to a kind of "ethnic profiling."

Though these organizations give the impression that they stand as the voice of their representative communities, it was evident that this is not always the case, given the show's wide reception; if anything, the polarizing effect demonstrated that there is no ethnic group with one mind.

Today, there are people of color both in front of and behind the scenes of television programs. In 2012, Indian American comedienne Mindy Kaling moved from a top writing position and a featured role on the hit show *The Office* to produce, write, and star in her own show, *The Mindy Project*. Asian American Ken Jeong successfully manages life on television as well as the big screen with his recurring roles in *The Hangover* series as well as NBC's critically acclaimed *Community*.

The popular Mexican American comedian George Lopez produced and starred in his own show, *George Lopez*, from 2002 to 2007. This situation comedy was the first show with a Mexican American actor as the star and the first successful Latino comedy since *Chico and the Man* (1974–78). In the show, Lopez played an assembly line worker who was promoted to manage a Los Angeles airplane parts factory. Lopez also became the first Hispanic to host a late-night talk show, *Lopez Tonight*, on an English-language network in the United States.

Textbook Treatment of Ethnic Groups

Historically, textbooks have been written by members of powerful mainstream groups. In the United States they have been written primarily by white, Protestant, middle- or upper-class men. The authors' major goals included helping students understand and appreciate U.S. history, embrace an American identity, and develop a sense of unity and patriotism. The textbooks they constructed presented an idealized image of the United States and its people, reflected mainstream values and beliefs, and presented democracy as the world's best form of government. Mainstream Americans were portrayed as a fiercely independent and patriotic people who championed freedom and justice. These images and perspectives supported the role textbooks were expected to play in schools. The idea that textbooks should encourage students to reflect on and critically examine the nation's history and the role ethnic groups have played in building the United States was largely unspoken by mainstream educators and historians until the 1960s.

During the 1960s, the intended audience for textbooks expanded to include racial and ethnic groups, who challenged mainstream interpretations of U.S. history and demanded that their perspectives on American history, and their stories and images, be included in textbooks. Over

time, as questions were raised and debated about whose history should be included in textbooks and how ethnic groups should be portrayed, the textbook treatment of African Americans, Asian Americans, Native Americans, Hispanics, and white ethnic groups such as Jewish and Italian Americans became more positive and comprehensive.

History of American Textbooks

In the 17th and early 18th centuries, the Bible served as a primary school text. Later, other school texts, such as the *New England Primer*, Noah Webster's *Blue Back Speller*, and the *McGuffey Reader*, were used in schools. These texts were written or heavily influenced by preachers and teachers. They presented an idealized image of the United States as a virtuous nation built on Protestant values of honesty, obedience, and hard work. Individuals who were not white were generally omitted from the textbooks or were portrayed in ways that reinforced beliefs about their inferior status and lack of success.

Throughout the 19th and much of the 20th century, certain European ethnic groups, such as the English, Scots, and Swiss, were described in textbooks as groups that exemplified positive American characteristics. Germans were also held in high regard, but their portrayal in textbooks had both positive and negative characteristics. Discussion about their military character, which was considered a negative characteristic, was balanced with their positive personal characteristics, such as honesty and diligence.

Not all European ethnic groups, however, were positively portrayed in textbooks. It was widely assumed that certain nationalities, ethnic groups, races, and civilizations were innately superior to others. Italians, Greeks, Russian Jews, and other immigrants from eastern, southern, and central Europe who came to the United States at the turn of the 20th century were considered inferior to northern Europeans. The children of immigrants were encouraged to repudiate their native cultures and adopt mainstream American values and culture. Textbook writers embraced those perspectives and drew clear distinctions between Americans who had immigrated to the United States from northern and western Europe and immigrants from eastern, southern, and central Europe.

Characteristics, values, and religions that favored northern Europeans were described positively in textbooks. Catholic nations, which were typically associated with southern and eastern Europeans, were described as inferior to Protestant nations, which were typically associated with northern Europeans. Catholicism, which was practiced by most southern Italians, was portrayed as mysterious and filled with superstition.

Images of African Americans and American Indians in textbooks varied depending on the years in which the textbooks were published. In the early and mid-1700s, terms like "princess" and "noble savage" were commonly used to describe American Indians.

However, as Europeans moved west and conflicts between European immigrants and American Indians occurred, American Indians were portrayed as an obstacle to America's manifest destiny and westward expansion. Within that context, terms like "warlike" and "enemy" were used to describe American Indians. European immigrants were described as pioneers and heroes who fought the Indians to win the west.

African Americans also had two different images in textbooks. Before the Civil War, African Americans were typically portrayed as childlike, happy slaves who were cared for by their kind masters. Although the image of the happy slave persisted in textbooks into the 1950s, it was juxtaposed against a very different image of the freed slave. During and after Reconstruction, African Americans were commonly portrayed as lazy, unsavory, and even dangerous individuals who had criminal tendencies. These images persisted until the civil rights movement, when more positive images of African Americans were included in textbooks.

Prior to the civil rights movement, ethnic minority groups such as Asian Americans and Hispanic Americans were rarely included in textbooks. When they were included, they typically were portrayed in limited ways that did not give students an opportunity to learn about the diversity within their groups or their contributions to American society. For example, it was not uncommon for Chinese immigrant communities to be described as places where illegal behavior took place, containing temples with idols that were worshiped. Immigrants from Mexico and South American nations were typically portrayed as

intellectually weak people who lacked ambition and spent their time loitering.

Textbook readers were presented with a hierarchy of ethnic groups that reinforced societal perspectives on the groups. That image was captured in David Saville Muzzey's best-selling textbook *American History*. Caucasians were at the top of the social, political, and economic hierarchy of American society, and all other groups were beneath them. *American History* was first published in 1911 and continued to set the standard for textbooks into the 1970s.

By pointing out the extent to which some people were a critical part of and were contributors to American society and others were not, textbooks like *American History* reinforced the belief that immigrants and ethnic minorities had not made major contributions to American life and were legitimately on the margins of American society. In 1949, the American Council on Education conducted a review of U.S. textbooks and found that the texts did not help students understand and appreciate intergroup relations.

Changing Images

By the 1950s, most of the children of immigrants who had come to the United States at the turn of the 20th century had assimilated into mainstream American society, and the textbook treatment of southern, eastern, and central European immigrants began to change to reflect their new status. Immigrants from those countries, such as Frank Capra, Albert Einstein, and Irving Berlin, were celebrated in textbooks as people who had enriched American society. This is also when the term *melting pot* began to be used more extensively to suggest that everyone could become a part of American mainstream society if they were willing to work hard, speak English, and embrace the dominant culture. Significant changes in the image of ethnic minorities in textbooks begin to occur in the 1960s, when civil rights activists argued that the negative image of ethnic minorities in textbooks prevented ethnic minority children from developing positive self-concepts, and limited all children from having access to complex and accurate descriptions of U.S. history and the American people. Several studies of textbooks that were conducted during the 1960s supported the idea that ethnic minorities were not accurately portrayed in American textbooks.

In the early 1960s, Lloyd Marcus examined 48 textbooks for their treatment of Jews, African Americans, and other minorities. He concluded that although the treatment of ethnic groups in textbooks had improved since 1949, the treatment was still uneven. In 1969, James A. Banks reviewed 36 elementary history textbooks for their treatment of African Americans. He also examined the books to find out how race relations were discussed. He found that the treatment of African Americans had marginally improved, although information on race relations was problematic. For example, many authors rarely depicted the violence inflicted on African Americans and in some instances failed to explain prejudice and deliberate acts of discrimination. These and other studies were used by civil rights activists to pressure educators and textbook publishers to implement curricular changes in schools and to make textbooks available that presented ethnic minorities more accurately and comprehensively.

Land of the Free, which was published in 1971, is an example of the first textbooks to include a more comprehensive treatment of African Americans. John Hope Franklin, a distinguished American historian who was also African American, was one of the three authors of the text. The trend to include more comprehensive coverage of ethnic minorities has continued to the present and has resulted in textbooks that typically include information on the histories and contributions of the major ethnic groups. However, it is important to note that content about groups is often presented from mainstream perspectives and points of view.

Textbooks and a Common Identity

As the coverage of ethnic groups in textbooks increased, old concerns were raised about the ability of the schools to help students develop an American identity and a deep understanding of U.S. history. While acknowledging that racism was a common characteristic in textbooks published in the 1920s and 1930s, scholars such as Nathan Glazer and Reed Ueda argued that textbooks published after the 1960s had gone beyond providing a more positive image of ethnic minorities in textbooks and were elevating ethnic minorities above whites and portraying ethnic minorities as victims. They believed that this

was as bad as the negative portrayals of ethnic minorities in earlier textbooks.

Historian Arthur M. Schlesinger echoed a similar perspective in his best-selling book *The Disuniting of America: Reflections on a Multicultural Society* (1992). Schlesinger argued that the United States was losing its common identity and shared history, purpose, and values and becoming a fragmented nation of groups. These perspectives were supported by a 1987 study of textbooks conducted by Gilbert Sewall. In his study, Sewall concluded that although the histories and contributions of ethnic groups should be included in textbooks, the centerpieces of textbooks should be those stories that mark the nation's political and economic development.

Contemporary Textbooks

Textbooks today look very different from textbooks of the past. They are much more multi-ethnic and multicultural. They include information on ethnic minority groups and women, and in many ways they have woven their stories into mainstream American history. For example, Harriet Tubman and the role she played in freeing enslaved Africans and the story of Texas's fight for independence are presented as parts of the ongoing march of Americans toward an ever-expanding free society. It is important to note, however, that even though most modern textbooks include more information on ethnic groups, some ethnic groups are underrepresented. For example, American Indians are rarely presented as part of contemporary American society, and Hispanics, who are the largest minority group in the United States, were until the last few years rarely mentioned in history textbooks. In a 1986 study on textbooks, O. L. Davis noted that Hispanics were largely ignored in U.S. history textbooks.

Textbooks and Multiculturalism

Even when more content on ethnic groups is included in textbooks, multicultural scholars have raised concerns that the content in textbooks is not organized and is presented in ways that encourage students to draw insights from the past in order to understand contemporary issues such as immigration, social dislocation, and institutionalized racism. For example, with the significant changes that have been made in textbooks, students may

conclude that the United States, perhaps more than any other nation, has acknowledged negative elements of its past, such as enslaving Africans and supporting segregation, and made valiant strides toward its goal of freedom and justice for all. How those gains were made and the ongoing struggle for inclusion of people on the margins of U.S. society remains largely invisible.

The central story line in textbooks remains one in which the United States is a land of opportunity in which the only limits to success are an individual's lack of ambition and refusal to work hard. Racial conflict and controversy, when mentioned, are presented as minor episodes in the grand narrative of American exceptionalism. This perspective is reflected in the titles of the texts and the photographs that adorn their covers. The American eagle, the Statue of Liberty, and the Lincoln Memorial are common images on social studies and U.S. history textbooks. When these are paired with titles such as *The Great Republic*, *The American Way*, *Land of Promise*, and *Rise of the American Nation*, students are prepared for a triumphant and patriotic story about U.S. history.

Textbook authors and publishers confront a number of barriers that limit their ability to tell a more complex story about U.S. history. Those barriers include groups who advocate for textbook publishers to present U.S. history from their perspectives and highlight heroes they believe all students should know and admire. Although ethnic groups advocate for their groups to be included in textbooks, conservative groups have built effective organizations that advocate for textbooks to limit their coverage of ethnic minorities, include content on topics like Creationism, and eliminate what they believe are inaccurate depictions of historical events, such as segregation and lynching.

In an effort to make their products acceptable to as wide an audience as possible, textbook publishers have responded by increasing the number of topics covered in textbooks and in some cases by preparing editions of their textbooks that cater to the specific requirements of advocacy groups in states like Texas, which have huge textbook adoptions. The wider coverage often increases the length of textbooks but rarely increases the depth in which topics are covered. In addition, the special editions of textbooks call into question the validity of the information included in them. As

a result, textbooks have lost stature and credibility and are now viewed as providing inadequate information on important historical events and people by an increasing number of scholars and citizens.

The textbook treatment of ethnic groups reflects the images and perspectives on ethnic groups within the mainstream society. They are in some ways a mirror of U.S. society. They project the progress that has been made in broadening perspectives on U.S. history and including more comprehensive coverage of white ethnics and people of color. They also project the ongoing challenges that a diverse society, such as the United States, confronts as it works to build a common identity while acknowledging the role that diversity has played in its creation.

began during the Vietnam War and has been slow for Thai Americans. Today, Thai Americans remain a vibrant, if a relatively new and small, ethnic group, with nearly 238,000 Americans identifying themselves as being of Thai descent. Thais have influenced American culture by infusing Thai cuisine, religion, and holidays into American ways of life.

Following the enactment of the Immigration and Nationality Act Amendments of 1965, which eliminated the national origins quota system, the initial wave of Thais coming to the United States was part of a larger southeast Asian movement of immigrants in the late 1960s and early 1970s. About 27 percent of all Thai Americans came to the United States prior to 1975, and the majority of these Thais consisted of students and professionals.

Between 1970 and 1980, a second wave of Thais immigrated to the United States as a result of political dissatisfaction with the Thai government. In addition, when the last military base from the Vietnam War was closed in Thailand in 1976, an influx of Thai women married to American servicemen resulted. A shortage of nurses in the United States during this decade also attracted large numbers of nurses to emigrate from Thailand.

Since the 1980s, the third wave of Thai immigration has continued to see the number of professionals and students rise. Concurrently, an increase in undocumented Thai immigrants, particularly for sweatshops, has also occurred as economic opportunities in Thailand have decreased.

Thais faced linguistic isolation that was typical of most of the later groups of immigrants. As acculturation increased, fluency in Thai disappeared, with nearly a third of Thai Americans speaking only English in 2010. Thais also encountered racial discrimination based on their physical appearance whenever they were conflated with other Asian ethnic groups, even though Thais make up only the 10th largest ethnically Asian population in the United States.

Culture: Cuisine, Celebrities, Religion, and Holidays

Thai cuisine has become one of the most popular in the United States, influencing even non-Asian

Thai Americans

The Thai were among the later groups of Asian immigrants into the United States. Immigration

restaurants. Nowadays, Thai restaurants may be found in every urban city, with the acceptance of Thai food evident by the plethora of Thai restaurants nationally.

Chang and Eng Bunker, who were the original “Siamese twins,” became the first Thais known to come to the United States, in 1830. Johnny Damon, a well-known baseball player, is also of Thai descent. Nearly 3 percent of Thai Americans have served in the United States military, including national politician Tammy Duckworth. Arguably the most famous Thai American is Eldrick “Tiger” Woods, a golf professional whose mother is Thai.

Because the national religion of Thailand is Buddhism, Thais brought Theravada Buddhism with them to the United States. Thais established *wats*, or Thai Buddhist temples, in many cities, especially as their numbers grew. In North Hollywood, California, Wat Thai is the largest Thai Theravada Buddhist temple in the United States. Another prominent Thai Buddhist temple is in Silver Spring, Maryland. Thai temples are more than just religious centers; they also serve as educational and cultural centers for connecting Thai Americans with their Thai heritage. Well-known holidays are often celebrated at Thai Buddhist temples. For example, Songkran is the Thai new year, which is celebrated with much splashing of water to symbolize a fresh start and is based on the lunar calendar, whose new year generally occurs in April. The king of Thailand’s birthday is on December 5 and is a national holiday in Thailand on which all Thais honor their fathers. Similarly, the queen of Thailand’s birthday falls on August 12 and is a holiday for paying tribute to all Thai mothers.

The Contemporary Scene

According to the 2010 Census, the Asian population grew faster (in percentage terms) than any other race group in the United States between 2000 and 2010. In that decade, the Thai American population grew nearly 60 percent. Now, more than 40 percent of Thai Americans were born in the United States. In 2010, Thais made up only 1.4 percent of the Asian population in the United States, while the Asian Indian, Chinese, Filipino, Vietnamese, Korean, and Japanese populations all exceeded millions in number and ranked as the largest Asian ethnic populations.

Generally, Thais quickly clustered into urban neighborhoods in big cities, particularly in the west, where other Asian populations were already concentrated. In 2000, slightly over 150,000 Thais lived in the United States. Like other Asian immigrants, Thais tended to congregate in self-contained ethnic neighborhoods. Los Angeles, California, has the largest number of Thais living in one place outside Thailand and is the home of the first Thai Town in the United States. In 2011, an estimated 80,000 Thais and Thai Americans lived in Los Angeles and southern California. Other large Thai communities exist in Chicago, Las Vegas, and Washington, D.C.

As of 2010, nearly 42 percent of Thai Americans held at least a bachelor’s degree, while some 84 percent had finished high school, very close to the 85 percent of the total American population. As of 2000, Thai Americans earned as much as the average American, with a median family income of \$49,635, as compared with a national family average of \$50,046. On the other hand, the poverty rate for the Thai population, at 14 percent, was higher than the total population’s poverty rate of 12 percent. In 2000, about 70 percent of both Thai men and all men aged 16 and over, and about 61 percent of Thai women (compared with only 58 percent of all women of the same ages), were in the labor force. Among Thai Americans in the workforce in 2000, some 33 percent were in management and professional fields, some 26 percent in service occupations, 23 percent in sales and office work, 14 percent in production and transportation, and 4 percent in construction or similar work. In 2000, more than 48 percent of Thai Americans owned their own homes, a much smaller proportion than for the United States as a whole, at 66 percent.

Though Thai Americans are a newer Asian population to the United States, the Thai population has national influence through Thai cuisine, employment, religion, holidays, and culture.

Theater and Ethnic Diversity

The American theater has been contoured by the performance styles and traditions of a number of different ethnic groups. Innovations from Latin America, the Caribbean, Africa, eastern and southern Europe, the Middle East, and Asia have given rise to a distinctly American form of theater. Social matters related to race, gender, and sexual orientation have infused the works of playwrights of color since at least the dawn of the 20th century.

Early American Theater

There are records of Native American theatrical performances since European settlement in America in 1607. In 1640s Massachusetts, the Puritans wrote of similar indigenous ceremonial performances, which they moved to prohibit. Resident theater companies became commonplace by the end of the 18th century. They produced significant works of theater in cities such as New York, Boston, Philadelphia, and Charleston. New York City's African Grove, founded by William Henry Brown and James Hewlett in 1821, was one of the first all-black theater companies in the United States.

After the Revolutionary War, the American theater first established its own unique aesthetic with blackface minstrelsy. From the 1830s to the 1910s, minstrelsy was the most popular and pervasive performance genre in the United States. The shows, which initially starred white performers in blackface, and then after the Civil War featured

African American performers in the same types of roles, were composed of songs, dances, and slapstick comedic skits that parodied black culture. Its stock characters, including the mammy, the clever slave, the dandy, the bumbling soldier, the savage native, the Sambo, and the jezebel, remain influential in American comedies and dramas. Many of America's most popular early plays concerned the experiences of people of color. Dion Boucicault's melodrama about an ill-fated biracial woman, *The Octoroon*, debuted at the Winter Garden Theater in New York City in 1859. Furthermore, María Ruiz de Burton, the first Mexican American woman author to write in English, adapted *Don Quixote* for the stage in 1876.

Twentieth-Century Innovations

Immigration, and the contact with disparate cultures that it brings about, contributed to the diversification of the American theater in the 20th century. The Yiddish theater, which has its origins in the celebrations of the Jewish holiday Purim, was imported to the United States—specifically, the Lower East Side of Manhattan—by Ashkenazi Jews from central Europe in the second half of the 19th century. It was the Yiddish theater that launched the careers of influential theater practitioners and theorists Lee Strasberg and Stella Adler, as well as animating the performance aesthetics of Fanny Brice, Mel Brooks, Molly Picon, and Barbra Streisand. Its conventions were instrumental in the development of vaudeville and musical theater. Folksbiene, the National Yiddish Theatre, was founded in New York City in 1915, and as of 2012 it was one of the oldest theater companies in continuous operation in the city.

The community theater movement of the 1910s accorded individual communities the opportunity to explore the peculiarities of their experiences through the theater. Two decades later, the Federal Theatre Project served a similar purpose. The first significant black theater performer in the United States was Charles Sidney Gilpin, an actor originally from Richmond, Virginia, who went on to play a number of leading roles on Broadway. Most notably, he originated the eponymous role in Eugene O'Neill's *Emperor Jones* in 1920. That same year, he became the first African American to be awarded the Drama League of New York's annual award for his contributions to theater in

the United States. Lynn Riggs's experiences as a Cherokee man were the subject of some of his plays in the 1920s; his 1931 play *Green Grow the Lilacs* served as the source material for the musical *Oklahoma!*, adapted by Richard Rodgers and Oscar Hammerstein II.

During the Harlem Renaissance of the 1920s, African American and Afro Caribbean playwrights, including Langston Hughes, Zora Neale Hurston, Eulalie Spence, and Richard Bruce Nugent, worked to define the black experience on their own terms, after decades of dramas about black people being written by whites. During the 1930s, the Group Theatre created works of social protest that raised awareness of many societal ills.

Ethnic Theater and Mainstream Success

After World War II, people from a larger number of ethnic backgrounds were striving to achieve the American Dream. *A Raisin in the Sun*, the landmark play written by Lorraine Hansberry, opened on Broadway on March 11, 1959. It was Broadway's first play written by a black woman and the first directed by an African American, Lloyd Richards.

Act IV from *The Octoroon*, a play about residents of a plantation and a biracial woman. It played at the Winter Garden Theater in New York City continuously for years, sparking debate about the role of theater in politics.

The 1960s' social turmoil and progress were conducive to a period of avant-garde theater, in which playwrights of color experimented with form and content. María Irene Fornés, Miguel Piñero (cofounder of the Nuyorican Poets Café), Ntozake Shange, Ed Bullins, Adrienne Kennedy, and others addressed social and identity issues through fantasy, satire, allegory, and other new forms. Accordingly, much of the Latino/a theater of the 1970s grew out of civil rights activism. A significant figure in the Chicano movement of the 1960s, Luis Valdez, founded El Teatro Campesino in 1965 and wrote plays, including *Zoot Suit* and *Los Vendidos*, to combat negative images of Latinos in the American media.

Groups like the East West Players, formed in 1965 by a group of Asian American actors that included Academy Award nominee Mako Iwamatsu, and playwright Frank Chin's Asian American Theatre Workshop have worked to ameliorate the manner in which Asian Americans are represented onstage by augmenting the number of Asian American-penned plays. Frank Chin's *The Chickencoop Chinaman* (1971) was the first play by an Asian American to receive a mainstream production in New York City. Philip Kan Gotanda's numerous plays, including *Wash* and *Yankee Dawg You Die*, have explored the Asian American experience. Carl Hartmann, a playwright-poet of Japanese and German descent, was an early proponent of modernism, and his works influenced New York's bohemian movement in the early 20th century.

During the Black Arts movement, which was the artistic corollary of the Black Power movement of the late 1960s and early 1970s, playwrights like Maya Angelou, James Baldwin, Charles Gordone, Amiri Baraka, Barbara Ann Teer, Ed Bullins, and Joseph A. Walker (whose *The River Niger* was lauded as the season's best play by the Tony, Drama Desk, and Obie Awards), produced unabashedly pro-black plays that challenged previous characterizations of African Americans in the theater. August Wilson, Dan Kwong, Sandra Maria Esteves, Charles Fuller, Milton Murayama, Anna Deavere Smith, Wakako Yamauchi, Samm-Art Williams, E. Donald Two-Rivers, George C. Wolfe, and Chay Lew continued addressing social issues that concerned people of color in plays and solo shows in the 1970s and 1980s. Henry

David Hwang was the first Asian American to win a Tony Award for Best Play for *M. Butterfly* in 1988; his work has confronted directly perceptions of Asian Americans in the theater, as well as in society in general.

Theater at the Turn of the Millennium

By the 2000s, plays that examined nuanced facets of gender, ethnicity, sexual orientation, and national identity had been composed by a number of award-winning playwrights, including Akbar S. Ahmed (*Noor*), Noel Alumit (*Mr. and Mrs. La Quest Go Dancing*), Tammy Haili'opua Baker (*Kupua*), Julia Cho (*Durango*), Nilo Cruz (*Anna in the Tropics*), Eisa Davis (*Bulrushes*), Kristoffer Diaz (*The Elaborate Entrance of Chad Deity*), Diane Glancy (*Man Red*), Katori Hall (*The Mountaintop*), Quiara Alegría Hudes (*Water by the Spoonful*), Rajiv Joseph (*Bengal Tiger at the Baghdad Zoo*), Carlos Lacámara (*Nowhere on the Border*), Rohina Malik (*Unveiled*), Ken Nara-saki (*No-No Boy*), Lynn Nottage (*Ruined*), Dael Orlandersmith (*Yellowman*), and Suzan-Lori Parks (*Topdog/Underdog*). Relatedly, many of Naomi Iizuka's and Velina Hasu Houston's plays concern multiracial identity in 20th-century America.

Color-blind casting is the process by which the most appropriate actor is cast in a role, irrespective of that performer's ethnicity and what the script might indicate. Nontraditional casting is a related practice by which actors are cast systematically in a manner atypical of expected conventions; this type of casting extends to ethnicity, gender expression, age, and body type. By the 2010s, the numbers of people of color attending Broadway shows were increasingly markedly. Nontraditional casting has increased opportunities for black actors with a much greater frequency than for Latino/a or Asian American performers. Between 2006 and 2012, the number of performers of color working on Broadway increased by 9 percent, with African Americans accounting for 12 percent, Latinos/as for 4 percent, Asian Americans for 3 percent, and Native Americans for less than one-tenth of a percent. As of 2012, African Americans were the most likely group of performers to be cast in roles that did not specify race.

Thriller

Celebrated as the King of Pop, musical artist Michael Jackson arguably cemented his place at the forefront of the pop genre with his 1982 album *Thriller*. Prior to *Thriller*, Jackson had spent much of his childhood singing with his brothers in The Jackson 5, a Motown group that rose to popularity in the late 1960s to mid-1970s. In the late 1970s, the group signed a new contract with CBS Records, but their popularity was waning with the emergence of other genres. Jackson decided soon after to work on his own music, and he released several well-received individual albums, most notably the multiplatinum *Off the Wall* (1979). Jackson began to construct his image during the making of this album, but it was *Thriller*, his sixth studio album and the successor to *Off the Wall*, that accomplished many feats by revolutionizing pop and challenging racial barriers exhibited in the music industry.

Jackson began working on *Thriller* in 1982 after enlisting the help of Grammy Award-winning producer Quincy Jones, whom he had worked with on *Off the Wall*. In November of the same year, Jackson completed the album, and it was released that month. The final track listing of the original 1982 album is as follows: "Wanna Be Startin' Somethin,'" "Baby Be Mine," "The Girl Is Mine," "Thriller," "Beat It," "Billie Jean," "Human Nature," "P.Y.T. (Pretty Young Thing)," and "The Lady in My Life." Jackson was significantly involved in the songwriting of the album by

contributing four songs, and he also assisted Jones in the production of these songs. Other songwriters on the album included Rodney Lynn Temperon, Steve Porcaro, John Bettis, James Ingram, and Jones. The album spawned seven top 10 hits and won seven Grammy Awards. *Time* magazine estimated that the album has sold 104 million copies worldwide, placing it in the *Guinness Book of Records* as the best-selling album of all-time.

But *Thriller* was more than a critically acclaimed and commercially successful album; it was an album that chipped away at racial barriers in television. In the early 1980s, music videos were rising in popularity and being played on the newly created Music Television (MTV) channel. However, the majority of the videos were by white artists; black artists were not given recognition by the channel. It was not until *Thriller* was released that industry pressure was exerted on MTV, and its executives finally agreed to run Jackson's music video for "Billie Jean." The video was extremely popular and went into heavy rotation. This helped Jackson market his style and identity to mainstream audiences of all races. The album's crossover appeal, which refers to its ability to reach different audiences regardless of race and culture, is one of its defining characteristics. Throughout his career, Jackson made music that would be celebrated by artists from all genres and backgrounds.

Thriller was also well known for blending various genres, primarily rock and rhythm and blues (R&B). "Beat It" is an example of this fusion. Jackson wrote the track and worked with producer Quincy Jones to turn the song into a crossover single. Well-known musician Eddie Van Halen, the former guitarist of the rock band Van Halen, provided the guitar riffs that are heard throughout the song. This collaboration between Jackson and Van Halen helped make *Thriller* a landmark album that would promote genre crossing. At the time of its release, genres were largely racialized, with R&B being seen as a "black" genre and rock music being seen as a "white" genre. It was this distinction that made it hard for black artists to get airplay on MTV, which was marketed as a channel for rock music videos. Though Jackson could not remove these barriers, he continued to challenge them and create more opportunities for other black artists to follow suit.

The Album's Impact

The impact of *Thriller* cannot be understated. It was released when there was a noticeably racialized climate in the music industry. For years, race had been seen as a factor in marketing; black artists were judged as being less marketable to white audiences and as having less crossover appeal. But Jackson's success demonstrated the flawed nature of this assumption. Before *Thriller*, Jackson could not persuade *Rolling Stone* magazine to put him on the cover because the editors were afraid the issue would not sell. After *Thriller*, the marketability of black artists to multiracial audiences was apparent. To achieve this crossover, Michael Jackson did not have to put only whites in his music videos or shy away from stereotypically black music. It is apparent in his autobiography and other writings that he was conscious of racial barriers and identified himself as a black man, but he fervently promoted multiculturalism as well. It can be said that he pioneered a burgeoning post-racialism in music, and audiences were attracted to this message.

With the *Thriller* album, Jackson not only introduced trends with his iconic personal style and shaped performance aesthetics, but he also demonstrated that music had no race and paved the way for other black artists to become recognized as crossover stars.

Time, Differing Cultural Conceptions of

A consequence of the increasingly diverse racial and ethnic makeup of the U.S. population is an inevitable diversity in the understanding of time and its value. The implications for a multicultural society with very different views of time are great.

The major conflicting conceptions of time are “monochronic” and “polychronic,” as characterized by Edward T. Hall in his 1959 work *The Silent Language*. Monochronic time, often known as M-time, perceives time as individual units on a linear continuum. There is a set beginning and a set ending to an event. Polychronic time—or P-time—conceptualizes time as a simultaneous concurrence of activities with relationships taking precedence over time on task.

Monochronic and Polychronic Perspectives of Time

The dominant Caucasian culture of the United States uses monochronic time; more collectivist cultures, such as Asian, Hispanic/Latino, Native American, and various refugee and immigrant groups from Africa, have a polychronic perspective of time. The effects of these conflicting views of time can be seen in mundane daily events such as being on time for school, appointments, or social events.

More significant conflicts can be seen in such arenas as business, education, media, health care, logistics, and special celebrations like weddings and funerals. Consequences can be severe for those failing to meet cultural expectations of time, whether deviating from schedules; being late for work, social engagements, or appointments; missing deadlines for completion of work; or exceeding time allotments.

Medical settings with diverse cultures lend themselves to serious misunderstandings. The dominant U.S. medical culture sees illness as having a trajectory in time and treatment, views patients as billable units of time, and follows a timetable in the administration of drugs. People from collectivist cultures, such as Latinos and Hispanics, Chinese, Vietnamese, and Hmong, may view the cause of illness from a more

spiritual perspective or attribute it to an imbalance of elements. Thus, medical treatment might require significantly more time and attention to the patient in order to restore the spirit or the balance of elements.

School systems serving a culturally diverse population have special challenges, as perceptions of time can affect work completion rates, time spent on or off task, the expectation of individual expenditure of time versus collective group expenditure of time on a project, and parents' involvement in and compliance with homework. A good example of this cultural diversity is the Los Angeles public school district, which serves 1 million students, with Asians and Hispanic/Latinos predominating.

Social and group gatherings provide additional examples of collisions in perceptions of time. The starting and ending times of the event; the length of time a guest is expected to stay; and the time allotted to eating, speeches, and other customary behavior can vary widely among cultures. For example, a white Protestant church service may last 60 minutes, whereas an African American Protestant service may last two hours. A Hindu wedding or Divali celebration may begin an hour or two after the published start time, whereas a municipal Fourth of July celebration can be expected to start on time. A civic Thanksgiving dinner may be scheduled for two hours in a hotel, whereas a community Eid celebration among Muslims might go on for four hours. If people are unaware of potential differences in the perception of time, they can feel frustrated, insulted, or confused.

Differing approaches to time in such life transitions as weddings and funerals can be especially difficult. The wedding industry in the United States is oriented to a special event at a special set time—a polite window of 10 minutes lateness might be understandable to guests, although not the wedding planner or bride. However, if the wedding party includes family from a polychronic culture (e.g., Ghana), sparks may fly when the family of the polychronic culture shows up two hours after the scheduled time for the wedding, a time acceptable in one culture but an unforgivable breach of etiquette in the other. Neither is right nor wrong, just different and something to negotiate.

Clashes in time orientation may be seen in the perception of death. For those from a monochronic time culture, birth is the beginning of a human life, death is the end. However, for those from a more polychronic culture, death may not be the end of life but the beginning of another life or a continuation of life. The time taken to mourn may be ritually prescribed—from the Jewish practice of sitting *shiva* for seven days, to the Buddhist practice of waiting three days for the soul to leave this existence and travel to a new one, to the Muslim dictum to bury the deceased within a day.

With the increasing ethnic diversity within the United States, there will be continual adjustments and negotiations about the meaning and use of time within the fabric of U.S. commerce, social institutions, and daily life.

Tipping

The tipping point hypothesis is a theory that once an urban neighborhood achieves a certain percentage of African American residents—that percentage being the neighborhood's tipping point—white residents will quickly move out in a phenomenon known as "white flight," and the neighborhood will become entirely or primarily African American. The tipping point hypothesis was first articulated in 1958 by University of Chicago political scientist Morton Grodzins, who predicted that American cities would become increasingly poor and African American, while American suburbs would become increasingly affluent and white.

Although Grodzins did not specify a percentage that constituted the tipping point for a neighborhood, it has been commonly interpreted as 25 to 35 percent of the population. In a less restrictive statement of the hypothesis, no particular tipping point is specified, but a more general theory is posited that racially mixed neighborhoods are unstable and prone to becoming all or nearly all non-white. Although the tipping point hypothesis has been used to justify various urban planning decisions over the years, several surveys of the evidence supporting this theory have found limited to no support for it, while also identifying a number of other factors that better explain observed patterns of change in the demographic makeup of cities.

Modifications and Other Applications

Grodzins was concerned primarily with white and African American residents, the two major racial groups in Chicago when he was forming this theory. Leah Platt Boustan cites evidence that it is specifically the presence of African American neighbors, rather than minority neighbors in general, that influenced white Americans' evaluation of a home's desirability, because the presence of Asian or Hispanic neighbors had no influence on this judgment. However, there are a few examples of the application of the tipping point hypothesis beyond the African American/white dichotomy.

One is a 1974 decision in *Otero v. New York City Housing Authority*, in which a court of appeals ruled that the New York City Housing Authority could refuse to rent an apartment in a new housing project to a nonwhite person (not

Malcolm Gladwell, speaking at a 2008 conference, has been a staff writer for The New Yorker since 1996. He has written four books and expanded on the tipping point hypothesis.

just an African American) in order to preserve the racial balance of the neighborhood. In a different case, in 1976, Hasidic residents of the Williamsburg neighborhood of New York City argued that a new public housing project, expected to house about 75 percent Puerto Rican residents and 25 percent white residents, would destroy their neighborhood by causing white flight; they cited a tipping point of 30 percent minority residents as having been proven to cause departure of white residents.

The tipping point hypothesis was originally formulated to explain residential segregation, but it has also been applied to other fields, including education and business. For instance, Gregorio Caetano and Vikram Maheshri studied school segregation in Los Angeles from 2001 to 2006 and concluded that 54 percent of the schools had a tipping point that was between 25 and 75 percent minority. The hypothesis has also been

broadened, for example, by Malcolm Gladwell, to explain rapid change that may come about as the result of a relatively minor change in conditions if an organization, neighborhood, business, or other entity is at the tipping point.

Refutation of the Theory

A 1978 review of the evidence by John Goering and a 1995 review by John R. Ottensmann found little evidence in favor of the tipping point hypothesis in the narrow sense of a theory explaining the rapid increase of racial segregation once the percentage of minorities in a neighborhood reaches a certain level. At the time of its original statement, the hypothesis was based on limited and impressionistic evidence, and the study of demographic movements in the following decades also provided little support for it. Even in Chicago, where the hypothesis originated, the example of the Cabrini Houses could be countered by that of the Racine Courts project: Whereas the former began with a mix of 75 percent white and 25 percent African American residents, but rapidly became primarily African American, the latter maintained a stable balance of about 76 percent African American to 24 percent white residents.

Data collected in hundreds of metropolitan areas from 1970 to 1990 found some evidence of racial change, but not necessarily in terms of inevitably increasing percentages of nonwhite residents in mixed neighborhoods. In fact, many studies found overall decreases in racial segregation in U.S. cities in the 1970s and 1980s. As a whole, demographic studies in the years following 1958 also provided little support for a specific tipping point. Instead, the changing racial makeup of cities and neighborhoods was found to be a continuous phenomenon with a number of factors potentially contributing to it.

Goering identified three macrolevel inputs relating to demographic change in cities: population growth, employment, and housing stock. Most central cities in the United States lost population in the 1950s and 1960s, and whites left at a higher rate than nonwhites, often being replaced by immigrants. However, within individual neighborhoods, sometimes white residents displaced African Americans rather than the other way around, particularly in periods of heavy foreign immigration. Loss of population was found to be related to loss of

jobs and also to the cost and availability of housing elsewhere; when lower-cost housing and mortgage funding is available in suburban areas, it creates an incentive to move out of the city. The availability of mortgage insurance from the Federal Housing Administration has been shown to favor white residents moving to new housing in the suburbs, opportunities not available to African Americans, thus increasing the concentration of African American in central urban areas.

Goering found that factors at the neighborhood level could also affect the changing racial makeup of an area. One such factor is real estate activity, including blockbusting and housing speculation, both of which can facilitate white flight. The relative concentration of homes versus apartments in an area can also influence neighborhood stability: Renters move more frequently but have also been shown to be more tolerant of nonwhite residents. Proximity to another area undergoing racial change can influence racial change within a neighborhood, as can the quality of services available in a neighborhood.

To Kill a Mockingbird

Winner of the Pulitzer Prize for Fiction in 1961, *To Kill a Mockingbird* (1960) has garnered both staggering critical acclaim and fiery controversy. An immediate international success, the best seller (over 30 million copies worldwide) has been translated into 40 languages and has never been out of print. It was made into an Academy Award-winning film in 1962. The literary classic continues to spark debate and reflections about race in the United States.

The only published novel by author Harper Lee, *To Kill a Mockingbird* incited a torrent of literary excitement. This eager public reception secured its place in the annals of classic American literature. Many Americans cited *To Kill a Mockingbird* as their most influential book, second only to the Bible. Written at the height of civil rights and integration struggles in the United States, the novel was instrumental in opening a public dialogue about race relations in the 1930s American south, even if it constructed the racial conversation as a primarily black and white dichotomy. In doing so, it forestalled a more multicultural conception of America.

The intensely private author was born as Nelle Harper Lee in Monroeville, Alabama, on April 28, 1926, a descendant of Civil War Confederate Army General Robert E. Lee. She studied law at the University of Alabama and as an exchange student at Oxford before she began her writing career in New York with aspirations to become "the Jane Austen of south Alabama." Although the plot of Lee's magnum opus resembles Lee's own childhood as a self-proclaimed tomboy who grew up as a close friend of writer Truman Capote, the author, in her three interviews since the novel's publication, has denied any direct autobiographical connection to her young protagonist, Jean Louise "Scout" Finch.

Themes and Issues in the Novel

The plot of *To Kill a Mockingbird* bears a striking resemblance to the Scottsboro Boys Trial of 1931, in which nine African American young men were accused of raping two white women on a freight train in Alabama. The novel blends in some southern gothic elements and humor to address the themes of injustice, prejudice, racism, lynching, and the impossibility of a fair trial for African Americans in the Jim Crow south, which forms the dramatic center of the book. Like Richard Wright's *Native Son* (1940), the trial scene constitutes the majority of the second half of the novel. The Boo Radley story encompasses the first part.

Set in the fictional, small rural town of Maycomb, Alabama, from 1933 to 1935, the novel relates the story of prominent attorney and widowed father Atticus Finch and his two young children, Scout and Jem. Although the frame tale presents the reflective point of view of an adult Scout, the preadolescent Scout narrates the core of the novel, using the language, thoughts, and memories of her 6- to 8-year-old self.

The first part of the book begins as an often-humorous coming-of-age tale, in which enchantment, imaginative play, curiosity, and discovery prevail. Scout, Jem, and their inquisitive summertime childhood companion Dill experience many amusing adventures as they investigate the mysteries of their town. Of greatest mystique to the threesome is the dilapidated house at the end of one block, where the enigmatic neighbor, Arthur "Boo" Radley, resides. Their progression from innocence to knowledge centers on their investigation of people different from themselves.

The highest drama centers on African American Tom Robinson's alleged rape of a white woman, Mayella Violet Ewell. After Atticus takes on the controversial case, the racist members of the town ostracize and taunt Scout and Jem and call Atticus a "nigger lover." Calpurnia, their black cook, helps the children find refuge within the mostly accepting black residents of Maycomb; Scout and Jem even sit in the black-only section of the courtroom during the trial.

The racial landscape of Maycomb is primarily black and white (besides the "Indian heads" the children find in the knothole in the tree in Boo Radley's front yard and a few sympathetic references to Jews). The defendant's first name, Tom,

connects him to the eponymous martyred protagonist of *Uncle Tom's Cabin*, Harriet Beecher Stowe's classic 19th-century novel. The attempted and aborted lynching, the trial in the courthouse, the verdict, and its violent aftermath form a dramatic centerpiece. Atticus unsuccessfully defends Tom in a trial with an all-white jury, and the accused man is ultimately shot to death in prison. When Bob Ewell, Mayella's father, delivers his shockingly vulgar eyewitness testimony in court ("I seen that black nigger yonder ruttin' on my Mayella!"), he exemplifies the ways race, class, and gender are powerfully bound up in the narrative. On Halloween night, the aggrieved and publicly humiliated Bob Ewell attacks Scout and Jem; Boo emerges and defends the children, killing Bob.

In the midst of this racial drama, an implausible moment occurs in the gripping scene when Atticus rescues Tom from a seething lynch mob. Ironically, it is Atticus's benevolent action—and the portrayal of Maycomb's inactive black community in comparison—that often disturbs critics, as it seems to silence a history of black agency.

Atticus's advice to Scout encapsulates one of the major themes of the novel: "You never really understand a person until you consider things from his point of view . . . until you climb into his skin and walk around in it." This image of climbing into another person's "skin" is particularly apt given the urgent black-white racial divisions in the town.

The mockingbird emerges as a compelling symbol. Similar to the captive bird in African American literature, the vulnerable mockingbird stands in for both Boo Radley and Tom Robinson, and perhaps the other marginalized persons in the small rural town. This symbolism bears a resemblance to Paul Laurence Dunbar's poem "Sympathy" (1899), in which a bruised and battered bird, confined to a cage, sings a plea and prayer heavenward. Maya Angelou borrows from this evocative concept for the title of her autobiographical fiction, *I Know Why the Caged Bird Sings* (1969).

Miss Maudie Atkinson, the Finches' neighbor, explains to Scout "Mockingbirds don't do one thing but make music for us to enjoy. They don't eat up people's gardens, don't nest in corncribs, they don't do one thing but sing their heart out

for us. That's why it's a sin to kill a mockingbird." When Uncle Jack, Atticus's brother, teaches Scout and Jem to shoot their air rifles, he echoes this sentiment as he warns "Shoot all the bluejays you want, if you can hit 'em, but remember it's a sin to kill a mockingbird." The reader is left to ponder if the innocent Tom Robinson could have survived in the moral universe of this novel and, if he had, if it would have been so popular.

Challenges and Criticism

In nearly every decade since its publication, *To Kill a Mockingbird* has been challenged by numerous school boards throughout the United States and Canada amid allegations of racism against African Americans, the promotion of white supremacy, the use of the word *nigger* (which appears 48 times in the novel), and other language deemed offensive, profane, and immoral.

Many parents denounced the inclusion of adult themes such as rape, incest, and sexual intercourse, which they considered inappropriate, divisive, and damaging for young readers. African American students, these critics argue, may feel marginalized by the racial epithets. Critics also opposed what they viewed as racial paternalism in Atticus's relationship with Calpurnia, considering him a flawed hero at best.

Although ardent proponents of the novel contend that it represents the complexities of race, racism, social inequalities, and legal injustices in the south through the child-voiced narrator, others suggest that it perpetuates stereotypes around race, sex, and poverty even as it attempts to advance an overarching message of tolerance and empathy. That the novel continues to arouse debate about race, gender, regional stereotyping, a heroic character, censorship, and what constitutes antiracist literature attests to its enduring relevance.

Tolerance

Tolerance has a rich presence in the history of the United States. Today, the word *tolerance* is commonly used to refer to a person's acceptance of other people with different religious beliefs, opinions, gender, race, and/or culture. The word is used in classrooms, workplaces, and communities across the United States to describe the ways in which people interact with one another. Tolerance connotes nonjudgmental actions and reactions to people and circumstances that arise within multicultural and diverse environments.

This definition of tolerance evolved from a drastically different conceptual base from when it was used in the British colonies and in the founding documents of the U.S. government. Whereas America's founders staunchly believed in religious freedom and separation of church and state, they also believed that the rights to equality and justice pertained only to male, white citizens of good moral character. The influx of immigrants from around the world and the establishment of multicultural communities and institutions stimulated the evolution of tolerance to include not only religious tolerance but also tolerance of race, ethnicity, culture, gender, and beliefs. The evolution of acceptance and appreciation, while still plagued with discrimination, began to take shape as part of the transformation of tolerance from a separatist acceptance of differences to a platform of understanding and empathy.

History of U.S. Religious Tolerance

The notion of tolerance dates back to the colonial era and the first British settlements in North America. In England, people disagreeing with the Church of England were unable to obtain careers in the government or other esteemed professions. John Locke's *Letter Concerning Toleration* elucidated the plight of the people during the

Protestant Reformation in England, and the view of many regarding the unfair and inappropriate power the church had over the government and politics. Locke's view was that life, liberty, health, and prosperity as civil interests superseded the importance of religion.

Separation between church and state became the first instance of tolerance in the colonial framework. The Toleration Act of 1649 in Maryland was passed in an effort to reduce the religious conflicts between the Catholics who founded Maryland and the Protestants moving to the colony for new opportunities. In an effort to maintain civility and respect for all colonists, the government tried to protect the right to freedom for minority religious groups.

Religious tolerance in the United States was riddled with stipulations. Tolerance was applicable for citizens, which only included free white men. Groups like the American Protective Association, the Know-Nothing Party, and the Immigrant Restriction League took a nativist approach to the diversity of the nation and were highly influential in government policy. Newcomers and immigrants, especially Catholic immigrants, were seen as threats to the cultural norms and values established within the nation.

Historical Factors Contributing to Racial Tolerance

During the Industrial Revolution, the immigrant population rose from 2.2 million in 1850 to 14.2 million in 1930. The U.S. government had implemented additional rules and regulations, such as the Naturalization Act of 1790 and the Alien and Sedition Acts of 1798, to ensure that American citizens maintained their dominance in political and economic situations. As the influx of different racial groups increased, the separatist views of nativists served as a means to disseminate racial, religious, and cultural intolerance in the nation.

Tolerance toward the African American population played an integral role during the Civil War. While many northerners favored the abolishment of slavery, citizens were also fearful of an influx of former slaves to the north that would impinge on their rights and opportunities. Political parties often gained support on the platform that tolerance was noble, but granting citizenship to minorities would threaten the status quo.

Economic advantage often played a role in the levels of tolerance existing in the United States. President Andrew Jackson's Indian Removal Act of 1830, which resulted in the Trail of Tears, was passed to force Native Americans to migrate out of the Union and also resolved land disputes between the Cherokee Nation and the state of Georgia. The Chinese Exclusion Act of 1882 provided an absolute 10-year moratorium on Chinese labor immigration, based on the premise that Chinese immigrants would endanger the prosperity of currently established communities. Entire racial groups became targets for immigration reform and regulation, which further oppressed immigrant populations.

Increased intolerance of racial minorities in the United States reached its pinnacle during wartime. During World War II, President Franklin D. Roosevelt in February 1942 interned over 127,000 Japanese Americans because of fear of Japanese attacks on the mainland. Once released from the internment camps, Japanese Americans were ostracized from their former communities and forced to relocate across the United States. During the Cold War that followed World War II, U.S. fears of a communist menace led to the execution of Ethel and Julius Rosenberg, along with Senator Joseph McCarthy's Red Scare tactics, leaving many fearful of retaliation if they expressed opposing views or beliefs. The U.S. government preemptively aborted possible communist threats and, as a result, created a climate of fear and a massive demonstration of intolerance.

The civil rights movement was a monumental turn of events in the way the U.S. government viewed multiculturalism and diversity in the political context. The U.S. Supreme Court decision in *Brown v. Board of Education of Topeka* in 1954 denounced racial segregation and demanded that all people be given the same opportunities. Although the government made strides to promote tolerance during the civil rights movement, the continued existence of the Ku Klux Klan and Martin Luther King, Jr.'s assassination in 1968 indicated that some people denounced tolerance and equal rights. Although the Fair Housing Act of 1968 prohibited redlining—the practice of denying housing, jobs, and services to African Americans and other nonwhite people—it continued to be practiced in cities across the nation. The

backlash and fear that surfaced during the civil rights movement was a blatant reminder of intolerance in the United States. The lack of appreciation, understanding, and empathy toward racial minorities resulted in hate crimes and denouncement of government reforms.

Understanding and Empathy

Acculturation is the cultural modification of an individual, or group of people, by adapting to another culture, or the merging of cultures to create a seemingly uniform society. This idea of the “melting pot” of cultures was widely accepted during the immigration waves of the 18th, 19th, and early 20th centuries. The belief was that America would become a nation blind to race, culture, and religion, in which everyone would be equal. However, the melting pot approach failed to acknowledge fundamental differences in populations and perpetuated the issues of intolerance already afflicting the United States.

The movement toward understanding and empathy became more prevalent as society began to transition from acculturation to appreciation after the civil rights movement. The definition of tolerance indicates that people should work and live in the same places without prejudice. These people may disagree with or dislike each other’s views, but they allow these differences to exist without animosity toward one another. Understanding, on the other hand, means that people comprehend each other’s experiences, opinions, and cultural, racial, and religious differences, and they work to create an environment conducive to cohabitating respectfully. Empathy requires an emotional investment by all parties to be aware of, to be sensitive to, and vicariously experience the feelings, thoughts, and experiences of others. The experience of living in a multicultural society then becomes an emotional investment for all people, with respect and sympathy for all people. The United States is often portrayed as a diverse nation in which differences are celebrated and widely accepted, yet the history of the nation is filled with proclamations and laws that are overtly intolerant.

After the terrorist attacks on September 11, 2001, hate crimes against the Muslim population increased in the United States and abroad. Concurrently, however, public displays of empathy and understanding for the Muslim population

increased, and non-Muslim people mourned alongside Muslims for the loss of lives at the Pentagon, in Pennsylvania, and at the World Trade Center. These public displays of mourning were meant as a statement that all Americans empathized with the loss of life and that the Muslim community was not responsible for the heinous acts of rebellious terrorists.

While the movement toward empathy and understanding is taking shape in many ways, a dichotomy of beliefs and attitudes toward tolerance is emerging. Hate groups, motivated to promote animosity and malice toward people based on religious beliefs, opinions, gender, race, and/or culture, are proliferating across the United States. Between 2008 and 2009, the number of hate groups increased by 40 percent. Continuing on this trend, hate groups rose from 1,753 groups in 2009 to 2,145 in 2010, a 22 percent increase. As the polarity between members of hate groups and citizens embracing diversity increases, the United States will experience a continued struggle to transform hate to tolerance, understanding, and empathy.

Tomás Rivera Policy Institute

The Tomás Rivera Policy Institute is one of the more prominent research centers dealing with the areas of education, discrimination, housing, electoral politics, and other societal issues specifically as they pertain to Latinos.

Founded by prominent academic Arturo Madrid and long housed at Claremont Graduate University, the Tomás Rivera Policy Institute is now housed at the University of Southern California's Sol Price School of Public Policy, with a satellite office at Columbia University. The institute was relaunched in the fall of 2011, led by Professor Roberto Suro. Under Suro's direction, the institute is broadening its reach beyond the traditional focus on Latino issues. The Tomás Rivera Policy Institute was a pioneer in conducting research regarding Latinos and has sought to provide accurate information through public events and publications.

Creation of the Institute

The Tomás Rivera Policy Institute was founded in 1985 and housed at Claremont Graduate University. It was named for Tomás Rivera, who was born in Texas to migrant farm workers and rose to become a prominent author, academic, and administrator, serving as chancellor of the University of California, Riverside. Rivera was the first Mexican American to serve as chancellor in the University of California system. The institute was founded shortly after the death of Rivera, who died in 1984 at the age of 48.

First supported by a grant of \$1.3 million from the Carnegie Corporation and the Times Mirror Foundation, the Tomás Rivera Policy Institute initially focused on problems faced by Latinos in education, with additional attention to the social and economic problems of the community. The

institute was affiliated with Claremont Graduate University but received independent funding.

The academic studies produced by the Tomás Rivera Policy Institute have made a substantial contribution to the understanding of Latinos in the United States and to the awareness of various issues throughout the past several decades. The institute has produced many working papers authored by the institute and reports authored by prominent scholars affiliated with the institute.

Beginning in 1993, the Tomás Rivera Policy Institute was led for many years by Harry Pachon, a pioneer in conducting research regarding Latinos. His research in Orange County, California, revealed that archconservative Republican Congressman Robert Dornan's district contained a significant number of both Latino and female voters. Orange County had long been considered a sacrosanct stronghold of the Republican Party, but Pachon pointed out Dornan's vulnerabilities. Providing information that belies conventional wisdom regarding Latinos has always been a hallmark of the Tomás Rivera Policy Institute and those affiliated with it.

Prominent contributors have included political scientists such as Rodolfo O. De La Garza, Louis DiSipio, Gary Freeman, and Jorge Chapa. The institute conducts research in many areas in which Latinos are little understood or studied. Latinos operate in between the black-white binary, with differences on the basis of race, language, citizenship status, and culture that are difficult to clarify. In addition, societal conceptions of Latinos tend to focus on them as a disorganized group with little interest in the political process. Institute studies have helped to demonstrate that a lack of information is often the reason for a lack of Latino electoral participation and incorporation. From its beginnings with a primary focus on education, under Pachon's leadership, research at the institute was done in such areas as bilingual education, immigration, and social policy. The research has varied from broad national studies to particular explorations of specific communities. Studies of problems facing areas with large Latino populations such as San Antonio, Texas, and the Inland Empire region of Southern California have been conducted. Areas such as the study of the underclass that have tended to focus on African Americans have been reframed with Latino perspectives.

Like many policy institutes, the Tomás Rivera Policy Institute has influences beyond academia. Throughout the past several decades, studies have been read by academics, elected officials, and policy makers. Research centers and policy institutes have the ability to play a unique role in connecting the public, government officials, and academia in a way that changes attitudes and introduces new perspectives.

One example of the way the Tomás Rivera Policy Institute combines policy research and practical concerns is a study conducted at the impetus of the Sallie Mae Fund. Virtually all Latino parents interviewed were aware that financial aid was a major concern in regard to sending their children to college, but half of the interviewees were unaware that programs such as Pell Grants and Stafford Loans were available. Continuing the institute's focus on education and information, this research has widespread applications for policy makers and the public.

Roberto Suro, the current head of the Tomás Rivera Policy Institute, founded the Pew Hispanic Center in 2001. Suro has described himself as being influenced by the Tomás Rivera Policy Institute in seeking to found a research center.

Current Focus

The current focuses of the Tomás Rivera Policy Institute include language access in education, language access in health care, naturalization, higher education, civic maps, and student research. Without abandoning previous commitments made to the study of Latinos, the institute is seeking to support research that focuses on these particular issues.

One recent example of the work of the institute is a map on its Web site that provides a spatial representation of the potential beneficiaries of the federal government's deferred action program for undocumented immigrants. The program, announced by President Barack Obama and the Department of Homeland Security in June 2012, allows young, undocumented immigrants who meet certain criteria to obtain work permits. This map is emblematic of the work of the Tomás Rivera Policy Institute and shows how research centers have the potential to use increased technological resources to expand their potential influence and impact.

The Tomás Rivera Policy Institute has worked over several decades to provide insight and devote attention to issues such as language, education, and incorporation, particularly as they pertain to Latinos. Although Latinos are the largest community of color in the United States and account for a large share of population growth in the nation, they remain a group that is understudied and often misunderstood. Providing information and education regarding little-known realities of this group remains a paramount goal of the institute.

Tong

In North America, a tong is an organization found in the Chinatowns in American and Canadian cities. In the Chinese language, *tong* means "hall" or "meeting place." In the North American Chinese immigrant community, the term *tong* came to refer to the secret societies or fraternal organizations that would become a greatly influential part of the Chinese immigrant community during the late 19th and early 20th centuries. The structure of a tong can be most closely compared to that of fraternal organizations of the Western world; in fact, members of some tongs are known as Chinese Freemasons. Tong halls were (and continue to be) marked clearly in Chinese in most American Chinatowns. Starting with the first major wave of Chinese immigration in the 1800s, tongs helped

establish and protect the interests of Chinese immigrants when others were overtly hostile to these individuals. Tongs claim simply to be benevolent community organizations, and indeed, some are, but many are also involved in organized crime. Contemporary tongs have street gangs associated with them instead of being blatantly attached.

Origins

After settling in west coast cities, Chinese workers faced hostility from non-Chinese Americans. Because of such hostile conditions, some Chinese immigrants moved east. This is why Chinatowns can be found in many east coast cities. No matter where they finally settled, Chinese soon organized voluntary associations for support and protection.

American tongs were modeled on Chinese secret societies that formed to overthrow the Qing Dynasty and restore the Ming Dynasty, although activities of American tongs were mostly apolitical. Tongs were organized based on home province, family name, native dialect, or preexisting sworn brotherhoods. These groups were structured similarly to southern Chinese secret societies and sworn brotherhoods, and they often included initiation ceremonies paying respect to various deities.

Originally, tongs provided critical community services such as representing individuals who lacked surnames and establishing Chinatowns in cities with sizable Chinese populations. Unfortunately, many tongs did not have resources to stage community events or outreach, so they turned inward for support. Although some tongs remained uncorrupted, many without hereditary finances turned to illegal activities. The illicit goods and services typically provided by criminal tongs included gambling, prostitution, opium, and “protection” services. Such black-market activity firmly transitioned certain tongs from community organizations to providers of illegal services.

Tong Wars

As tongs and their corresponding territories grew in size, they inevitably came into conflict with each other. The high point of these conflicts, known as the Tong Wars, ranged the 70-year period between the 1850s and the 1920s. Although conflicts

could include issues surrounding turf, business, and long-standing feuds that could be traced back to China, the primary cause of conflicts between tongs of this era centered on prostitution.

To understand the Tong Wars period, one must understand the male-to-female ratio of Chinese enclaves in America in the 1800s. Labor offered in the United States was male dominated; additionally, immigrant laborers could not typically afford to bring their families with them. These factors combined to result in very few Chinese women in the United States. As a result, the highly patriarchal tongs attempted to alleviate this situation by “importing” prostitutes from China, bringing them either willingly or unwillingly. Interviews with former gang members in the mid-20th century revealed that if an individual paid off the debt incurred by a woman’s indentured servitude to the individual she owed that debt, conflict between tongs would not result. Thus, these were not conflicts over romance; they were conflicts over property. The involvement of the tongs only aggravated these prostitution-centered property

Chinatown’s Friendship Archway is seen looking west on H Street in Washington, D.C. The area is known for its annual Chinese New Year festival and parade. Tongs provide essential services for communities such as these.

disputes, with an end result of violent street brawls with hatchets and knives, as opposed to fistfights behind bars.

Tongs in Contemporary Society

Although criminal tongs enjoyed a great deal of power between 1850 and 1930, they never regained that power. As the Chinese population became better integrated into American society, Chinese became less dependent on tongs for critical services. Through this process, criminal tongs began to disappear, but they did not simply fade away. During the Red Scare of the 1950s, tongs capitalized on American anticommunist policies, and a slight resurgence in immigration during the 1960s helped maintain the power of the tongs. The 1990s saw a resurgence of tong-related criminal activity. However, this criminal surge was not associated with the tongs themselves, but with criminal gangs affiliated with the tongs.

Most of the remaining, currently existing tongs are tied to the Chinese Consolidated Benevolent Associations. Through these associations, tongs continue to provide essential services for Chinatown communities. Services include immigrant counseling, Chinese schools, and English classes for adults.

In the modern era, most tongs have attempted to transition into fraternal or community organizations. However, street gangs are often tied to tongs; these gangs pick up the illegal activity that the tong itself once engaged in and share much of the culture and problems of gangs of other ethnicities. Although it would be easy to dismiss these gangs as simply delinquent youth organizations, they are just as dangerous as other criminal organizations. In fact, the Federal Bureau of Investigation (FBI) and other crime prevention organizations have devoted significant resources to stopping these gangs. Like other crime organizations, well-established tongs usually have chapters in multiple cities while having a headquarters in a specific city. Notable American tongs include Bing Kong Tong (based in San Francisco), Hip Sing Tong (based in New York City), On Leong Tong (based in New York City), and the Four Brothers Association (based in San Francisco).

Track and Field and Ethnic Diversity

Sports are a reflection of society, sharing its primary features while demonstrating the duality and paradox that categorizes its existence. Sports can serve as a bridge to cross barriers to obvious multicultural differences, and the sport of track and field in particular provides an enlightening look into issues of sports diversity and multiculturalism. Various noteworthy individuals and watershed moments have left an indelible mark on American society.

Great Track and Field Athletes

One renowned athlete who greatly exemplified facets of the sport's diversity was Jim Thorpe. Over the past century, the legacy of Thorpe's athletic accomplishments has received great recognition and served to install him as a Native American icon and role model. Thorpe has been widely recognized as one of the greatest all-around athletes of all time. In addition to his accolades in other sports, he won multiple gold medals in the 1912 Olympics.

Jesse Owens showed, perhaps like no other athlete, how the Olympic Games provide a highly visible platform to demonstrate ways that track and field is able to impact not just individual nations but the world as well. Owens, an African

Jesse Owens shown at the beginning of his record-breaking 200-meter race during the Olympic Games in 1936 in Berlin. Owens was the most successful athlete at the summer games that year and won four gold medals.

American, won four gold medals in the 1936 Berlin Olympics, making a monumental impact on the “Nazi Olympics,” as German führer Germany Adolf Hitler was hoping to use the games to further his Aryan supremacy ideals and further promote his country’s visibility and propagandized supremacy.

The Rafer Johnson–C. K. Yang rivalry also drew attention to the social significance of the story of multicultural America. This rivalry was composed of two UCLA teammates: Johnson, who was an African American who excelled on the track from a young age, and C. K. Yang, who was raised in Taiwan and represented that country in the games. The two individuals competed for national supremacy in the 1960 Olympic decathlon in Rome and, along with Vasili

Kuzbetsov of the Soviet Union, vied for dominance on a global scale.

Billy Mills, like Jim Thorpe before him, has served as a Native American role model and sports hero. Mills attained fame with his unlikely emergence as gold medal winner and world record holder for his performance in the 10,000-meter run at the Tokyo Games in 1960. He was further immortalized in the 1983 motion picture *Running Brave*.

One of the most visible events in track and field history occurred when elite athletes Tommie Smith and John Carlos made their “Black Power” salute on the 200-meter race medal stand at the 1968 Mexico City Games. Although very controversial, the event sparked great discussion and reflection about human rights as associated with the sport, the Olympic Games, and beyond. Carlos and Smith were aware of the impact that the Olympics have on the entire world as well as the fact that millions of people would be watching as they took the stand representing the United States. The “Black Power” salute was to protest against racism in the United States and uphold the importance of human rights.

Olympic hero Florence Griffith-Joyner was an embodiment of the drive for athletes to promote themselves. This drive, coupled with contemporary celebrity culture, has allowed track and field athletes to regularly seek ways to “brand” themselves through their vividly displayed combinations of athleticism, individuality, and fashion. An African American noted for her innovative fashion sense, “Flo-Jo” was easily recognizable for her stunning looks, exceptionally long nails, and trademark track uniforms. Many aspiring track and field stars hope to obtain such a level of adulation.

Contemporary Diversity

The diversity in track and field sheds some light on the factors that impact this prominent sport. Track and field is a popular genre within the world of sports, and the diversity of participation makes the sport one of the most unique and time-tested athletic competitions.

Through a kaleidoscope of different races, ethnicities, abilities, cultures, and other defining attributes—establishing and celebrating the differences that bring competitors together—the

sport provides a gathering place for persons from various backgrounds to display superb skills and represent their cultures.

Trail of Tears

Often associated with Cherokee removal, the term *Trail of Tears*, a rough translation of the Cherokee *nunna dual tsuny*, meaning "Trail Where We Cried," refers to the migration route and the removal experience that members of the Five Civilized Tribes (Cherokee, Choctaw, Muscogee/Creek, Chickasaw, and Seminole) endured between 1831 and 1859 as they were relocated from their ancient homelands in the southeastern

United States to Indian Territory in present-day Oklahoma. The U.S. government's removal policy, which culminated in the 1830 Indian Removal Act, sought to open up Native American land in the east for settlement by European Americans while also providing permanent settlements for Native Americans on land west of the Mississippi River. Relocation, often by force and sometimes in chains, was undertaken on foot, by wagon, on horseback, and sometimes via steamboat. Most groups who made the difficult journey suffered incredible loss of life, as thousands died from disease, exposure, exhaustion, and starvation.

Although the Indian Removal Act of 1830 was passed during Andrew Jackson's presidency, the federal government's policy of Indian removal began with President Thomas Jefferson some 30 years earlier. Both presidents favored the idea of removing all American Indian tribes in the east to unoccupied land west of the Mississippi River in order to make way for European American settlements. To accomplish this, Jefferson and Jackson had to extinguish Native American claims to lands in the southeast, the ownership of which was guaranteed by existing treaties between the various sovereign American Indian nations and the U.S. government. This was often done through fraudulent treaties.

Moreover, Jefferson (and George Washington before him) was also an early advocate of "civilizing" American Indians, which required them to give up their culture, religion, and lifestyle in favor of European customs, such as Western-style education and dress, Christianity, and a sedentary, agricultural lifestyle. One anticipated outcome of the civilization process was that Native American tribes would give up their collectively owned ancestral homelands in exchange for smaller tracts of land and other necessities. This did not happen, and in the southeast, where the American Indian tribes embraced the "civilizing" process (resulting in their being dubbed the Five Civilized Tribes), they did not willingly cede their land. Some fought removal through legal actions and even war. Ultimately, federal and state authorities forcibly removed all eastern tribes that did not comply voluntarily. By 1837, 46,000 Native Americans were removed from their homelands in the southeast, opening up 25 million acres of land for settlement.

Choctaw Removal

At the time of removal, the Choctaw lived in the present-day states of Alabama, Mississippi, and Louisiana. Between 1801 and 1830, numerous treaties reduced Choctaw land significantly, but the Treaty of Dancing Rabbit Creek ceded their remaining land to the United States and also negotiated the relocation of the Choctaw Nation to Indian Territory. It also made exceptions for Choctaw who wished to remain in Mississippi, which included state citizenship and land ownership. According to the Treaty of Dancing Rabbit Creek, one-third of the Mississippi Choctaw would leave their homes (without personal possessions) and move west of the Mississippi River beginning in 1831. The remaining Choctaw would emigrate in two stages over the next two years.

The first group of approximately 4,000 Choctaw to relocate made the 555-mile journey in one of the harshest winters in the Arkansas–Mississippi area in November 1831 (with most reaching Indian Territory in March of 1832). Flash floods, freezing temperatures, and snow and sleet delayed their progress, with conditions exacerbated by dwindling food rations, illness, and some serious mishaps in government planning for the removal operation (such as steamboats not being ordered and the Choctaw being deposited at the wrong locale, where basic supplies such as shelter and food were inadequate for their numbers). Although agents recorded that most had survived (3,749), the journey cost the government two to three times more than originally estimated, a fact that would impact all subsequent removals.

The second mass removal of Choctaw, of more than 5,000 people, occurred in 1832. Plagued by the cholera epidemic that spread from the north as well as by torrential rains and flooding, many in this group died of exposure. The third and final removal of the Choctaw took place between October and December 1833. In addition, many Choctaw moved of their own accord, as the government encouraged, but many never received the benefits promised because the removal books or accounts had been closed. In total, approximately 12,500 Choctaw relocated, while 6,000 stayed in Mississippi, as permitted by the Treaty of Deer Rabbit Creek (which stipulated that they register with agent William Ward, who reportedly refused most of them). Most of those who remained in

Mississippi were eventually removed because they didn't have any legal rights to land, after agent Ward failed to fulfill the treaty obligations. Some of those who were allowed to register have descendants living there to this day.

Muscogee (Creek) Removal

The Muscogee (Creek) removal, which followed Choctaw relocation, was not peaceful. To prevent individual Muscogee leaders from ceding more land to Georgia, the Creek Confederacy enacted a law making further land cessions a capital crime. The 1825 Treaty of Indian Springs, signed by Muscogee leader William McIntosh and others, ceded all Creek land in Georgia and portions of Creek land in Alabama in exchange for money and land in Indian Territory. The Creek National Council protested that the treaty was fraudulent. It was later nullified and revised in the 1826 Treaty of Washington, but the Creek were unable to recoup their land in Georgia. In addition, Governor George M. Troup of Georgia ignored the new treaty and began forcibly removing the Creek under the terms of the previous one.

After the Creeks in Georgia were removed, Alabama began exerting the same pressure upon the Creeks living there. Followed the signing of the Muscogee removal treaty in 1832 (the Treaty of Cusseta), which divided Creek land into allotments, conservative factions refused to leave, resulting in the Creek War of 1836–37. Finally, Commander Winfield Scott and the U.S. Army captured 14,500 Creeks and forcibly marched them to Oklahoma (at least 2,500 made the trip in chains). Many perished along the way, and many more, approximately 3,200, died from exposure and disease after arriving in Oklahoma. In total, 23,000 Creeks were removed from Alabama and Georgia to Oklahoma between 1825 and 1838.

Chickasaw Removal

The Chickasaw underwent removal from their homelands in present-day Kentucky, Tennessee, Alabama, and Mississippi in 1837, under the Treaty of Doaksville. Unlike the other tribes, who received land in Indian Territory in exchange for their current land, the Chickasaw negotiated a monetary settlement. In 1837, the Chickasaw were resettled on land leased from the Choctaw Nation in Indian Territory. The Chickasaw were one of the last of

the Five Civilized Tribes to undergo removal, and relatively few died during the process. The Chickasaw were not able to establish their own territory and form their own government until 1856.

Cherokee Removal

Numerous land cessions made between the Cherokee, the British, and the United States from 1721 and 1835 had greatly reduced their ancestral homelands. At the time of removal the Cherokee were part of the educated, agricultural, feudal society in the south. Many were land and homeowners, owned slaves that worked their plantations, and had participated in the civil war (the south had promised them the return of tribal land for their support). The Cherokee had no desire to give up their land or way of life. However, after the 1829 Georgia gold rush—and the discovery of gold on Cherokee land in Georgia—the state of Georgia endeavored to force Cherokee removal by imposing state law over their lands. The Cherokee fought removal in the courts. In *Worcester v. Georgia* (1832) the U.S. Supreme Court ruled that Georgia could not extend its laws in Cherokee territory. Despite the Cherokee's legal success, Georgia continued to force the Cherokee off their land through activities like the illegal land grab of 1832, while President Andrew Jackson pressured the Cherokee to sign a removal treaty.

The first group of Cherokee voluntarily emigrated in April 1832. The second group, approximately 2,000, relocated after the U.S. government enforced the controversial 1835 Treaty of New Echota, which was signed by a small group of Cherokee known as the Treaty Party. It provided for the cession of all Cherokee territory east of the Mississippi in exchange for financial compensation and land in present-day Oklahoma. The majority of Cherokee, represented by Chief John Ross, opposed the treaty. Nonetheless, the U.S. government gave them two years to voluntarily relocate, which some did. The majority did not, and between 1838 and 1839, 14,000 Cherokee were rounded up and placed in internment camps, while their homes and property were plundered and destroyed. Many died in the camps awaiting removal. Countless others perished along the 1,500-mile-long journey. It has been estimated that at least one-quarter of the Cherokee perished during removal, resulting in the phrase *Trail of Tears*.

Seminole Removal

Eleven years after the United States acquired Florida from Spain, the Seminole signed the Treaty of Payne's Landing in 1832, requiring them to move west and become part of the Creek Nation. Although the treaty was signed and suitable land was identified, once back in Florida, the Seminole refused to leave, arguing that the treaty had been signed by unrepresentative chiefs and was therefore fraudulent. Many also expressed reservations about merging with the Creek. By 1838, approximately 1,500 Seminole had been rounded up and forcibly moved to Indian Territory.

Two-thirds died along the way from disease, starvation, and attacks by whites. The Seminole refused to leave their homeland and continued to fight federal authorities over removal, sparking the Second Seminole War (1835–42). After the war, most of the Seminole, approximately 4,500, were relocated to Indian Territory. The Third Seminole War, which took place between 1855 and 1858, ended with another, much smaller group of Seminole forcibly removed in chains in February of 1859. Some Seminole remained in Florida, but by that point the United States chose not spend any more than it already had (\$30 million) fighting to relocate the Seminole.

Translators/Interpreters

The 2012 statistical abstract compiled by the U.S. Census Bureau shows that there are at least 382 categories of language families spoken in households in the United States. These categories are the most frequently spoken languages other than English in the nation and can be further categorized into four major language groups: Spanish, other Indo-European languages, Asian and Pacific Island languages, and all other languages.

The number of people who speak a language other than English at home has grown by more than 50 percent over the last three decades, according to the U.S. Census Bureau. During this time, the percentage of speakers of non-English languages grew by 140 percent. The Spanish-speaking population accounted for the largest numeric increase, and Vietnamese speakers accounted for the largest percentage increase. The consistent increments in immigrant populations and native languages in the United States, as well as the Court Interpreters Act (1978)—which states that “the United States Courts shall establish a program to facilitate the use of certified and otherwise qualified interpreters in judicial proceedings instituted by the United States” for speakers of languages other than English—have fueled the need for professional interpreters and translators in all institutional fields.

Difference Between Translators and Interpreters

The use of formal and informal interpreters has existed since humans formed cultures and began to interact with different groups. In many societies, bilingual individuals interpret and translate for relatives or friends who do not speak the local language. Today, translators are identified as professional communicators who use the written language to convey messages from one language to another, and build bridges between people, organizations, and cultures.

Interpreters are specialists in spoken or verbal communication between people and/or organizations. The work of a professional interpreter is to convey, as accurately as possible, the content and essence of a spoken message from one language into another. Interpretation is used extensively in the United States in government, medical, and

court settings, as well as in business and international conferences, press conferences, educational settings, and other places. There are certified court interpreters and conference interpreters in the United States, but many work informally. Sign language is also considered a language and a category of interpretation.

According to the Association of Translators and Interpreters, there are three types of interpretation: (1) consecutive interpretation, in which the interpreter speaks after the speakers; (2) simultaneous interpretation, in which the interpreter speaks at the same time as the speaker; and (3) escort interpretation, in which the interpreter accompanies the client to events. Nowadays, simultaneous interpretation may be performed using advanced technological equipment, such as headsets and microphones. Sign language is usually performed simultaneously. Consecutive interpretation tends to be restricted to more intimate settings and smaller groups, simultaneous interpretation is the most widely used technique.

In order to provide accurate translation, interpreters and translators must possess a profound knowledge of language as well as ample intercultural experience. To be able to convey the essence of a message in another language, interpreters and translators must concentrate on precision, impact, and specialized terms, while taking into consideration textual and contextual nuances. Translators and interpreters may work independently or be employed in organizations in the public and private sectors.

Machine-Based Interpretation

Although there has been a great amount of research and development of machine-based interpretation and translation, the results continue to prove unsatisfactory at many levels. As Marc Seligman indicates, the difficulties involved with machine-based simultaneous speech interpretation relate to the necessity to effectively integrate different types of knowledge, such as cultural, semantic, phonological, lexical, and syntactic. Although there recently has been improvement in the quality of machine translation, as Gregor Thurmair explains, translation machines are still based on sets of linguistic rules and models, with limited scope of cultural knowledge. Therefore, they have not been able

to match the psychological and cultural differences and inflections of human speech, in both its verbal and written forms.

Translation Theory

As the concept of intercultural exchange and globalization has grown in academic circles, cultural studies and literature scholars have explored the uses of translation as a point of departure from which to analyze the changes and exchanges in cultures around the world. Translation theory has taken root and evolved as translation of postcolonial literature arose in academic circles, reflecting the need at large for deeper understanding of other cultures. From the point of view of Translation theory, many scholars find problems with the principle of translatability, or the extent to which concepts can be translated. Mikhail Bakhtin and his followers, for example, have argued that a text is never completely translatable.

Whereas some scholars emphasize language as a fluid system to express culture, other scholars find that language is a way to organize knowledge systematically. Nevertheless, there is no general consensus today as to the particulars of interaction in which language and culture take place. The practical consequences of these views for interpreters and translators are multiple. Professionals must possess in-depth knowledge not only of the target languages involved but also of at least two cultures in the areas of linguistic relevance. They must also be skilled in comprehending the limitations of word-by-word translation while adhering as much as possible to the essence of the concepts in the message.

Tree Grows in Brooklyn, A

Set in Williamsburg, Brooklyn, at the beginning of the 20th century, the 1945 film *A Tree Grows in Brooklyn* (based on Betty Smith’s 1943 novel of the same title and debuting as a stage musical in 1951) centers on the experiences of the Nolan family; their desperate struggles against poverty, made worse by the alcoholism of the charming and loving but feckless, or “pipe-dreaming” father, Johnny (James Dunn); and the eventual prospect of a better life as the widowed mother, Katie (Dorothy McGuire), is courted by a kindly and reliable neighborhood policeman, Officer McShane (Lloyd Nolan). Throughout, the family’s indomitable spirit is symbolized by a neighborhood tree. At the film’s outset, it has seemingly been cut down and killed, but at the close, as Katie has agreed to keep company with McShane, it has once more begun to grow; both sprouting from the cement, the family and the tree survive the travails of city life. The new growth of the tree also represents the blooming of daughter Francie (Peggy-Ann Garner), in many ways the central character, as she enters the cup of womanhood.

Ethnic Stereotypes

The tenements of *A Tree Grows in Brooklyn*’s Williamsburg teem with “hyphenated” Americans from around the globe, epitomized by the Nolan family’s Austrian–Irish partnership. To some extent, ethnic stereotypes abound; the barber is Italian, garment workers are Jewish, and

the Irish are cops, bartenders, or alcoholics. But in contrast to the prejudices and confrontations explored by director Elia Kazan in *Gentlemen's Agreement* and *Pinky*, the bringing together of nationalities, which the Brooklyn melting pot facilitates, is seen as representing hope for the future. Katie's mother, Grandma Rommely (Ferila Beros), who still speaks with a heavy Austrian accent and is herself illiterate, has a strong reverence for books and insists that Francie and her brother Neeley (Ted Donaldson) read every evening, even if the meaning escapes them. She says to Katie in the presence of the children:

To this new land your father and I came long ago because we heard it is something good. In that old country a child can go no further than his father's state. But here in this place, each one is free to go as far as he is good to make up himself. This way the child can be better than the parent. And this has to do with the learning which here is free to all people.

This paean to America as a land of opportunity was later captured in Kazan's film *America, America* (1963), which tells the story of his own uncle's trials in emigrating from a Turkish village to America, and founding the family fortune; but in this instance it is Francie, an aspiring writer, who we feel represents the family's future.

A Tree Grows in Brooklyn is a richly layered film. It explores the poverty that beset the working classes of whatever ethnicity, and it was one of the first Hollywood films to sensitively address the issue of alcoholism. The children are trained to refer not to their father's drunkenness but to his "sickness," and Katie persuades the doctor (George M. Carleton) to omit chronic alcoholism from Johnny's death certificate. The film also explores feminist issues, even if the characters might have been unfamiliar with the term.

All the strong players are female: Grandma Rommely; Katie, who is determined that "my kids is gonna be somebody if I have to turn into granite rock to make 'em"; her unconventional thrice-married sister, Sissy (Joan Blondell), who has an earthy sexuality but also a sensitive understanding; the schoolteacher, Miss McDonough (Ruth Nelson), who inspires Francie's writing; and, of course, Francie herself. Francie is the microcosm

of hope, fusing the best elements of a multicultural family. She brings to life her grandmother's reverence for books; her determination to read through every book in the public library in alphabetical order because she wants "to know everything in the world" reflects her mother's "granite" aspiration, but also she has her father's loving sensitivity. It is Miss McDonough who makes Francie realize that the difference between "pipe dreaming" (her father's curse) and "imagination" is the addition of hard work.

Contemporary Metaphor

The females in *A Tree Grows in Brooklyn* have to be strong because of the poverty of their day, but in fact their strength, unity, and struggles have a contemporary metaphor. In 1945, America remained at war, many husbands and fathers were away fighting or had been killed in action, and across the country women on the home front had to take jobs and support their children, just as widowed and pregnant Katie did. Again, the issue of multiculturalism is important.

Films made during World War II portrayed America as a universal nation, with representatives of every race, ethnicity, and locale pulling together for the greater good. So, too, the melting pot of Brooklyn not only set an example of bravery to endure hard times but also, through the model of Francie, pointed the way that the youth of America would rebuild a better nation in the peaceful time to come.

Tribal Enrollment

In contemporary discourse, there are a number of issues surrounding American Indian identity. Currently, there are many alternative criteria for identification and qualification for tribal enrollment, such as individual self-identification, genealogical gradients, and political affiliation. Accordingly, the issue of tribal enrollment is sometimes contentious. Enrolling in a particular tribe is often considered a cultural and political right to express a citizenship-based membership rather than a purely racial one. In the light of treaties and other historic agreements, the relationship between the U.S. government and tribal communities is almost entirely political and effectively international. To benefit from treaty agreements, an individual must be an enrolled member of a tribe, a citizen of

that nation. Qualifications for tribal membership vary, and regulations have changed significantly in the past 150 to 200 years. Although each tribal nation has a sovereign right to decide upon its membership regulations internally, U.S. government policies have influenced tribal decisions in the historical past as well as in the modern era.

Pre-Columbian Era to the Dawes Act

In pre-Columbian times, tribes did not conceive of themselves racially—this was a concept introduced through colonialism. Instead, tribes tended to view the world as consisting of “us” and “everyone else.” Intermarriage was a common means of forging political alliances between tribes, and ethnic boundaries tended to be fluid between different tribal groups. Membership in a tribe was based purely on social custom; it was

A young Native American boy in tribal gear dances during a powwow. Some tribes have begun to embrace lineal descent to ensure future existence of their culture, language, and ceremonial practices. This means that anyone directly descended from the original tribal enrollees could be eligible for tribal enrollment, regardless of how much Indian blood they have.

not until colonialism, particularly the expansion of the 1800s, that racial definitions of tribal membership began to take hold.

Beginning in the 1860s a number of census records were taken, distinguishing members of tribal communities via blood quantum measures. Blood quantum identifies racial membership as a product of ancestry. A person with two Indian parents, for example, is considered to be a “full-blood”; a person whose parents are Indian and white is considered a “half-blood”; and a person with a half-blood parent and a non-Indian parent would be considered a quadroon or “quarter-blood”; and so on. This means of judging a person’s identity is seen as quantitative ancestry, and such distinctions were initially used by the U.S. government as a means of excluding individuals from being considered indigenous, thereby severing the government’s obligations to them.

One particularly influential moment was the enactment of the Dawes Act in 1893, which marked the first instance when blood quantum was used as a means of assigning allotments of land. Documents, later called the Dawes Rolls, were created as a result of this process, and these rolls were the first instance when tribal enrollment began to officially exist as a legal form of tribal citizenship.

Although these methods of qualifying identity were first introduced by the U.S. government, many tribes began to use them willingly to determine their own membership during this period. The Choctaw government, for instance, began to use blood quantum in the late 1800s and early 1900s. This period, which saw the first indigenous adoption of colonial definitions of tribal citizenship, marked an important point in history; Choctaw definitions of membership within the tribe changed completely as a direct result of the enrollment process, with older, more amorphous notions of belonging being eradicated in favor of legal classification.

The Indian Reorganization Act Era

The allotment period was merely the first period of tribal enrollment regulation. Official enrollment for most tribes began between the 1930s and 1950s, after the Indian Reorganization Act (IRA) of 1934 was passed. This legislation reversed a number of Dawes Act regulations and

returned tribes to a status of self-government. The act encouraged (but did not require) tribes to adopt a constitution, and the Bureau of Indian Affairs (BIA) played an important role in designing many of the tribal constitutions adopted during this period, with templates being provided by the administration and distributed among tribes. One infamous clause included in the standard document stipulated a one-quarter blood quantum requirement for enrollment.

In the wake of these ready-made constitutions, a large number of tribes began to adopt blood quantum regulations as a necessity for tribal enrollment. Aside from the BIA influence, the proliferation of blood quantum regulations during this period can also be attributed to the lack of federal census taking. After the 1930s, the federal government ceased taking records of tribal populations, meaning that many tribes did not have the appropriate records to institute base enrollment (descent enrollment), which would allow individuals to enroll in a tribe if they were related to an ancestor from a historic base roll. Parental enrollment, or lineal descent, rules were also instituted during this period; this type of regulation states that individuals are eligible for membership only if a parent had been an enrolled member. Some tribes even go so far as to stipulate which parent must be enrolled. For instance, the Santa Clara Pueblo enroll only members with paternal descent, whereas the Seneca Tribe requires maternal membership.

Self-Determination Era

The third major period of high tribal constitution and enrollment activity is marked by the self-determination era during the 1970s and 1980s. Between the IRA and the self-determination eras came a period commonly referred to as the termination policy era. During this period, over 100 tribes had their federal recognition revoked by the U.S. government; subsequently, over 12,000 American Indians were stripped of their tribal affiliations. In the 1960s and 1970s, however, a number of civil rights movements began to gain momentum, resulting in the U.S. government adopting a policy of tribal self-determination, beginning with the Indian Civil Rights Act in 1968 and the Indian Self-Determination and Education Assistance Act of 1975.

Because of this direct shift toward self-determination, tribes were again encouraged to create and modify their constitutions and enrollment requirements. It was during this period that regulations were added to many tribal constitutions that prohibited members from enrolling in more than one tribe. Additionally, restrictions on lineal descent and blood quantum increased during this period. As a result, nearly 70 percent of all American Indian tribal constitutions now have blood quantum rules, a drastic increase from 44 percent in 1950.

Statistics

The 2010 Census reported official population numbers for the American Indian population as 5.2 million people; 2.3 million of these people identified as “American Indian in combination with another race” (AC), meaning that 2.9 million are “American Indian alone” (AO). The American Indian population seems to be continually increasing, with the AC group increasing by 39 percent and the AO population increasing by 18 percent according to census statistics. Despite this increase, however, tribal enrollment numbers are in decline.

Discrepancies between enrollment and census numbers result from several factors. First, enrollment in a tribe is based on individual tribal requirements, whereas census numbers are based on self-identification, meaning individuals may identify racially but not qualify politically (especially in the AC group). However, even if one examines solely the AO population, the numbers still differ significantly. As of 2005, 1.9 million people were enrolled in federally recognized tribes, a difference of at least 1 million people—even without including AC Natives.

Reasons for this decline in enrollment numbers vary. One is a high rate of endogenous marriage (even to a person from another tribe), which can result in children who are ineligible for enrollment; some tribes have begun to promote even stricter enrollment requirements in response to resource shortages and an inability to provide for their existing members. There is also a fear among some tribes that if requirements are loosened, “wannabe Indians” (people who are not related to the tribe but wish they were) and “per-cap Indians” (members who only want to enroll

only for monetary reasons) will be entitled to enroll. However, these worries can sometimes go too far in the opposite direction, and a number of tribes have begun to actively disenroll members as well. Tribes with high gaming interests have been known to disenroll individuals in order to enable higher payouts for existing members, despite the legitimacy of an individual’s right of enrollment; other tribes, such as the Cherokee Nation, have also intentionally altered membership requirements to produce mass disenrollment based on racial distinctions. In 2007, the Cherokee Nation adopted the lineal definition of the Dawes Rolls, in which Cherokee members were separated from “freedmen” by lineage and blood—a separation that reflected racist beliefs that one could not be both Cherokee and African.

Despite these complex problems of sovereignty and cultural versus political belonging, based on current requirements, most tribes will be unable to enroll new members in about 50 years. Accordingly, some tribes have begun to embrace lineal descent as one of the few ways to ensure their future existence. Some traditionalists, however, see this approach as leading to a loss of tribal identity. Others propose using cultural restrictions such as language, residence, or ceremonial participation, despite some claims that these regulations are overly subjective. Regardless of the approach, one thing remains true: current regulations must change if tribal nations are to continue to exist.

Trinidadian and Tobagonian Americans

According to the 2010 U.S. Census, there are an estimated 188,852 Trinidadian and Tobagonian Americans. There is a margin of error for this count of plus or minus 5,242; this is in part because Caribbean immigrants, including those from Trinidad and Tobago, accounted for more than 3 percent of illegal immigrants in the United States as of 2009. The Trinidadian and Tobagonian American community is the second-largest English-speaking Caribbean community in the United States, second to Jamaican Americans. Trinidadian and Tobagonian Americans have had a substantial impact on American culture and continue to thrive as their own unique community, as part of the larger community of Caribbean Americans and as Americans.

First-Wave Immigration and Early History

Christopher Columbus landed on Trinidad in 1498 and met with indigenous peoples there: the Arawaks and Caribs. Not long thereafter, Trinidad and Tobago were colonized by the Spanish and used for their natural resources. A booming sugar industry as well as a cocoa industry grew up in Trinidad and Tobago, first under the Spanish.

Trinidadian and Tobagonian immigration to the United States has generally followed the trends of Caribbean immigration to the American colonies. The first known instance of Afro-Caribbean immigration to the American colonies was in 1619. That year, a Dutch ship docking in Virginia arrived with a small group of voluntary indentured workers from the Caribbean. These immigrants worked as free people until 1629,

when the slave ships of Portugal began to deliver slaves captured off of Africa's western coast.

Trinidad served as a clearinghouse for slaves en route to the United States, as did much of the British West Indies. This location was ground zero for "breaking" captured peoples and readying them both physically and psychologically for a life of brutal slavery. These West Indies training grounds were ridden with European diseases. Those captured people who survived went on to the American colonies with new immunity to deadly diseases.

By 1783, the king of Spain, recognizing the need for more labor in a controllable setting, passed the Cedula of Population law, which promised Europeans free land in Trinidad so long as they agreed to work it. This brought French settlers with Creole slaves to the area, primarily on the sugar plantations, and this accounts for the French and Creole aspects of today's Trinidadian and Tobagonian and Trinidadian and Tobagonian American cultures. The two nations came under British rule in the early 19th century. The sugar and cocoa industries were quite lucrative until damaged by the emancipation of slaves in 1834.

Soon after the abolishment of slavery in Trinidad and Tobago, contract laborers from India came to the islands to reenergize the flagging sugar and cocoa production. This period of Indian influx stretched from 1845 to 1917. Trinidad and Tobago were united as one country in 1888 while still under British rule. Oil was discovered on Trinidad in 1910, and this added a crucial export to the economy.

Second-Wave Immigration and Recent History

In 1962, Trinidad and Tobago gained independence from Great Britain. From 1966 to 1970, more than 23,000 Trinidadian and Tobagonian immigrants, from both the educated elite and rural poor classes, legally migrated to the United States. This immigration came as the black power movement gained momentum in the country. Undergraduate students at the St. Augustine campus of the University of the West Indies formed political organizations, including the National Joint Action Committee (NJAC). The NJAC engaged in political demonstrations advocating for black power and a return to, and understanding and appreciation of,

traditional African cultural mores. This movement was aided by the path of immigration, as close ties were maintained between Trinidadian and Tobagonian Americans and their friends and relatives back home. This is one of the reasons the work of Americans like Malcolm X and Stokely Carmichael was important to the local Trinidadian and Tobagonian political scene.

Trinidad and Tobago experienced political tumult in 1970. On April 6, Basil Davis, an activist, was killed by police. A. N. R. Robinson, a member of Parliament (and future president of the nation) resigned from Parliament to protest the killing and founded the Action Committee of Democratic Citizens (ACDC). On April 18, sugar workers went on strike, grinding much of the economy to a halt; other industries threatened to follow suit. A state of emergency was declared on April 21, and 15 black power leaders were arrested. This prompted a mutiny within the Trinidad Defense Force, which included the taking of hostages. After negotiations were held to resolve the situation, the crisis ended on April 25.

Perhaps in response to this internal turmoil, emigration increased, and from 1971 to 1975 approximately 33,278 Trinidadian and Tobagonians relocated to the United States. The rate of emigration dropped somewhat between 1976 and 1980, and again from 1981 to 1984, as U.S. immigration policy tightened. At this point, immigration numbers were fairly small but were definitely tied to the loss of power in traditional Trinidadian and Tobagonian circles and the rise of nationalism.

Petroleum and natural gas processing have been a major part of the Trinidadian and Tobagonian economy since the discovery of these resources, and when oil prices fell in the late 1980s the nation spiraled into a deep recession. This spurred a greater number of people to emigrate to the United States.

Modern Trinidadian and Tobagonian culture reflects influences from Africa, Spain, France, Portugal, India, and the United Kingdom, as does Trinidadian and Tobagonian American culture. The English language is the official tongue of Trinidad and Tobago, but Hindi, French, Spanish, and Chinese are also spoken both there and within Trinidadian and Tobagonian American communities. This interesting multicultural mix accounts for Trinidadian and Tobagonian

Americans having one of the most diverse cultural heritages in the world.

Notable Trinidadian and Tobagonian Americans

Trinidadian and Tobagonian Americans have become an integral part of the American music scene, most commonly as rap and hip-hop artists: Foxy Brown, Phife Dawg, The Mad Stuntman, MF Doom, and Nicki Minaj are all Trinidadian and Tobagonian Americans. Kareem Abdul-Jabbar is probably not only the most famous Trinidadian and Tobagonian American athlete but also one of the most famous basketball players in the world. Anantanand Rambachan is a noted Hindu scholar. Anya Ayoung-Chee, a former Miss Trinidad and Tobago Universe, went on to win Project Runway in 2009.

Turkish Americans

Turkish Americans are one of the growing group of immigrants in the United States, with an estimated almost half a million Americans identifying

themselves as being of Turkish descent. Although the Turkish American population in the United States is relatively small, it is becoming significant part of the American tapestry, and its members take great pride in both their American identity and their Turkish heritage and traditions.

Despite the growing visibility of Turkish people in North America, in fields from arts to science, the population remains largely unknown and undocumented. The actual number of Turks in North America is estimated to be larger than the official statistics. There are 117,575 Americans who claimed Turkish ancestry according to the 2000 Census. In addition to Turkish people from Turkey, a number of ethnic Turks from the Balkans, Bulgaria, Cyprus, and the former Soviet Union have migrated to the United States. The largest populations of Turkish Americans are in New York City and Rochester, New York; Paterson, New Jersey; Washington, D.C.; and Detroit, Michigan.

Turkish migration to the United States took place in three phases: 1820 to 1921, 1950 to 1970, and post-1970s. The motives behind each phase are complex, and each reflects the history of the Ottoman Empire, the sociopolitical evolution of Turkey, and the search for a better life. As the Ottoman Empire started declining during the 18th and 19th centuries and lost Greece, North Africa, Romania, Bulgaria, and the Middle East, early Turkish immigrants began to emigrate from the Ottoman Empire to North America in significant numbers around 1900.

Turkish immigrants to the United States were predominantly from rural communities in Turkey. They settled in large, industrial cities and found employment as unskilled laborers. Approximately 20,000 immigrated during this period, more than 90 percent of these immigrants being men. Muslim Turks were about 5 percent of the total emigration in this phase. Many returned to Turkey to participate in the Turkish War of Independence in the 1920s, and others returned when the Republic of Turkey was established in 1923. It has been estimated that 80 percent of Turkish immigrants to the United States between 1899 and 1924 returned. In this phase, most immigrants were ethnic minorities from the Ottoman Empire: the majority of the first-phase migrants were of Greek and Armenian origin; migrants were also

Sephardic Jews, Serbs, Bosnians, Bulgarians, Romanians, Ukrainians, Azeri, Georgians, and Arab Christians. They settled the industrial cities of the northeastern and midwestern United States, such as Detroit, Michigan. Because of their common cultural practices, similar cuisine, and use of Turkish language, these immigrants stayed close, keeping strong connections among one another.

1940s Migration

Beginning in the late 1940s, a skilled and highly educated group immigrated to the United States, the majority being medical doctors, engineers, and scientists. Because they spoke fluent English and were highly educated, they were relatively affluent. They were few in numbers and were professionals with Western social values who adapted to American society. These newer immigrants have organized a new network of Turkish American associations and provide social support as well as a political lobbying network that has started to challenge the Greek and Armenian lobbies.

Until the Immigration and Nationality Act of 1965, Turkish immigration was mostly confined to a few students who were sponsored by the Turkish government in order to gain greater technical skills. After the lifting of the quotas in 1965, a substantial number of Turkish people came for the better job opportunities and university system. This third group of Turkish immigrants started coming after the 1960s and 1970s. Most came for educational and economic opportunities, resulting in what has often been called "brain drain."

Some started to immigrate due to various political reasons and conflicts in Cyprus and eastern Turkey with the Kurdish. The majority were Muslims; over 200,000 migrants settled mostly in the mid-Atlantic states. After World War II, there was mass unemployment in Turkey and a higher demand for labor in western Europe. When the need for labor in Europe decreased around the 1960s, the Turkish again started to immigrate to North America. These migrants were literate, but with limited education and English language skills. At first, they worked in semiskilled jobs, such as at gas stations. Later, some started small businesses, hoping to move back to Turkey after retirement, but not all did so. Compared with the second-phase secular Turkish immigrants, this group considered themselves Turkish Muslims, established mosques, and

raised the next generation for Turkish Americans, who are well integrated into North America.

Current Status

Current immigration rates of Turkish Americans total several thousand a year. In addition to these immigrants, however, are nonimmigrants such as students, who come to study or find employment in the United States with a work visa; some later may receive permanent residency status, and some may eventually become U.S. citizens. Most Turks maintain dual citizenship. With the advent of new technologies, Turkish Americans can access news, movies, and TV shows from Turkey and keep in touch with friends and family in Turkey.

Today, Turkish Americans are visible in almost every community and walk of life, from education to politics, from medicine to literature. Numerous Turkish Americans have made a significant impact on American society, particularly in the fields of medicine, education, arts, and science. Major figures include playwright and dramatist Tunç Yalman; scientist and entrepreneur Kenan Sahin; news photographer Osmar Karakas; CEO of the Coca-Cola Company Muhtar Kent; Atlantic Records founder Ahmet Ertegun; contemporary classical and electronic music composer Bülent Arel; World Bank consultant Selcuk Ozgediz; cardiothoracic surgeon, author, and TV show host Mehmet Oz; one of the founders of social psychology, Muzafer Serif; and J. Willard Gibbs Professor Emeritus of Physics Feza Gursey.

The establishment of Turkish American associations and organizations has enabled Turks to organize Turkish cultural and social activities focusing on different aspects of Turkish American communities and involving Turkic peoples such as Azerbaijanis, Uzbeks, Turkmen, Kazaks, Kirghiz, Karachays, and Tatars. The American Turkish Society promotes economic and commercial relations; the Assembly of Turkish American Associations creates cohesion and cooperation among Turkish American organizations; the Turkish American Scientists and Scholars Association encourages scientific collaboration between Turkey and the United States; the Turkish Cultural Foundation promotes and preserves Turkish culture and heritage; and some organizations are focused on the Islamic faith, such as the

Turkish-American Islamic Institute. There are a growing number of Turkish student associations, as American universities have more Turkish students; there is also a growing demand for Turkish cultural centers and heritage language schools for Turkish children born in the United States.

Tuskegee Airmen

During World War II, the men known as the Tuskegee Airmen were the first African American flying unit to serve in combat in the U.S. military. The Tuskegee Airmen envisioned a twofold mission that was frequently referred to as the Double V campaign, in which they sought victory over military enemies abroad and over racism and prejudice at home. The deployment of black pilots to aid in the war effort—and their many successes—helped create a groundswell of support to desegregate all branches of the U.S. military.

The Tuskegee Airmen inspired unprecedented reform in the armed forces as they paved the way for full racial integration in the post-World War II years. Although challenges did continue to exist, the Tuskegee Airmen broke down the racial color line in the armed forces and overcame challenges of prejudice and discrimination. They ultimately opened the door for black advancement at all levels of military service.

African Americans and the U.S. Military

Black participation in U.S. military excursions has a long and distinguished history, as blacks have provided military service in every U.S. war effort dating back to the American Revolution in the late 18th century. Issues of racial discrimination and denial had always existed prior to World War II, to the extent that black military service opportunities were severely limited. Within this racialized system, black military personnel received inferior pay, were recognized less often for military service, were blocked from advancing in military rank, and were assigned to duty with great reservation.

In October 1925, the War College of the U.S. Army issued a memorandum, "The Use of Negro Manpower in War." The memorandum noted that blacks were inferior to whites, unfit for leadership roles, and incapable of aviation. As a result, the memorandum encouraged continued segregation within the army. Many military leaders feared that integration would lead to inefficiency, reduce combat effectiveness, and ultimately increase racial tensions among military personnel. As a result of these beliefs, many have considered the training of the Tuskegee Airmen as an experiment established to prove black inferiority and blacks' lack of aviation skills.

Establishment

In 1941, President Franklin D. Roosevelt issued Executive Order 8802 to create an all-black flight training program with military purposes. In part, this action was initiated by a lawsuit filed in federal court by the National Association for the Advancement of Colored People (NAACP) on behalf of Howard University student Yancy Williams and others who sought to force the Department of War to accept black pilot trainees. Prior to this, blacks were denied many military opportunities because

Colonel Benjamin O. Davis, Jr. (left) and Edward C. Gleed wearing flight gear and standing with their airplane at an air base in Rametti, Italy, during World War II. Davis was made the first black U.S. Air Force flag officer.

of racism and conjectures of presumed black inferiority. President Roosevelt's initiative also was aimed at garnering much-needed support of black voters toward his goal of being elected to a third term in office. Some have argued that President Roosevelt had no intention of changing racial segregation in the military.

In 1941, the War Department and the Army Air Corps constituted the 99th Pursuit Squadron, which was the first all-black flying unit. Because of the rigid system of racial segregation that prevailed throughout the United States at the time, black military pilots were trained at a separate airfield facility. Initially, the new aviation training base was located in central Alabama; it was later

moved to Tuskegee, Alabama. African Americans began their pilot training for the U.S. Army in 1941 at the already established Tuskegee Institute Civilian Pilot Training School; thus, Tuskegee soon proved to be an ideal location. As a result, the Tuskegee Airmen were formally trained at Tuskegee Army Airfield and, thus, the Tuskegee Airmen were named after the airfield where they did their initial flight training.

The African American community did not fully embrace the segregated nature of the black pilots' flight training, as many desired to see even wider opportunities made available to blacks throughout U.S. society. Many civil rights and other civic organizations were similarly opposed. In addition, there was much resistance and hesitation directed at the choice of Tuskegee for flight training. Although many African Americans and civic organizations did not enthusiastically support the choice of a training location in the heart of the Jim Crow South, most African American pilots welcomed the opportunity. The first class of cadets in the pilot training program of the Tuskegee Army Airfield began in July 1941 with 13 airmen, all of whom had college degrees and all of whom had pilot's licenses.

In response to continued pressure from civil rights organizations, the Army Air Corps authorized the creation of three other black fighter squadrons, the 100th, 301st, and 302nd, in addition to the original 99th Pursuit Squadron. Together, the four squadrons composed the 332nd Fighter Group. Training for African American pilots at Tuskegee later expanded with the creation of the all-black 477th Bombardment Group. The 477th did not see military duty, as the war ended before these pilots began their service.

The Tuskegee Airmen, sometimes referred to as Red Tails, painted the tails of their aircraft red, as was common custom among the 15th Air Force; other escort groups had distinctly colored tails as well. The assigned colors for each group helped distinguish it from other groups in large formations flying to, from, and over enemy targets. Additionally, the variously colored tails helped bomber crews tell which groups were escorting them, and it helped them determine whether distant fighter groups were supporters or combatants.

Performance

Overall, nearly 1,000 black pilots graduated from the training program, with 450 serving in military combat. One of the graduates was Captain Benjamin O. Davis, Jr., a U.S. Military Academy graduate. Four aviation cadets were commissioned as second lieutenants, and five received Army Air Corps silver pilot wings. By all accounts, especially given the prevailing racial assumptions of black inferiority, the efforts of the Tuskegee Airmen were a resounding success. A total of 450 black fighter pilots fought in World War II, and they flew over 15,000 sorties and 1,500 missions. They were commanded by then-Colonel Benjamin O. Davis, Jr., who later became the first black flag officer of the U.S. Air Force. Davis retired as a three-star general and was honored with a fourth star in retirement by President Bill Clinton. Additionally, two other officers were commissioned to flag rank, including General Daniel "Chappie" James, who was the first black four-star general, and Major General Lucius Theus, both of the U.S. Air Force.

The 99th Fighter Squadron distinguished itself in combat, and in forming the 332nd Fighter Group, it was part of the largest fighter unit in the 15th Air Force. The major military accomplishment of the Tuskegee Airmen was providing close escort for bombing missions over strategic targets in Europe. Their efforts were crucial to destroying many enemy targets, including those on the ground, those at sea, and aircraft. The Tuskegee Airmen returned from duty with 150 Distinguished Flying Crosses, Bronze Stars, Silver Stars, and Legions of Merit; one Presidential Unit Citation; and the Red Star of Yugoslavia.

The Legacy

The distinguished performances and military records of the Tuskegee Airmen cannot be understated, especially given the prejudice, discrimination, and obstacles they faced simply by joining the military. After overcoming these challenges in the United States, the Tuskegee Airmen performed admirably throughout their war effort in helping defeat fascist dictators abroad. Upon return to the United States, they continued to push for racial equality. Their efforts eventually led to the end of racial segregation in the military. Fighting successfully for the right to fly combat missions in defense of the United States, they proved

unequivocally that black men could succeed in a field from which they had been excluded. Many Tuskegee Airmen lost their lives in combat duty, and their sacrifices resonate in the continued celebration of their efforts.

In 1972, Tuskegee Airmen, Inc., was founded in Detroit, Michigan. This entity exists primarily to motivate and inspire young people to become participants in American society and its democratic process, and to preserve the history of the airmen's legacy. The Tuskegee Airmen have been memorialized in significant ways, including the Tuskegee Airmen, Inc., National Scholarship Fund for high school seniors who excel in mathematics but need financial assistance to begin a college program; a museum in Fort Wayne, Detroit; a Memorial Park at the Air Force Museum at Wright-Patterson Air Force Base in Dayton, Ohio; a statue of a Tuskegee Airman in the Honor Park at the U.S. Air Force Academy in Colorado Springs, Colorado; and a National Historic Site at Moton Field, where primary flight training was performed under contract with the Tuskegee Institute. In addition, an Oral History Project has been commissioned with the National Park Service to allow the Tuskegee Airmen to narrate—and preserve—their experiences.

Additionally, the Tuskegee Airmen have been the focus of two films. In 1995, Home Box Office produced *The Tuskegee Airmen* as a television movie based on the exploits of the 332nd Fighter Squadron. Lucasfilm produced the movie *Red Tails* in 2012 as a fictionalized portrayal of the airmen's World War II experiences.

Tuskegee Normal and Industrial Institute

Tuskegee Normal and Industrial Institute was established in 1881 by Alabama lawmakers, who enacted a bill sponsored by a former slave owner, George Campbell, as part of a deal for his reelection campaign. Campbell negotiated with a skilled tradesman and community leader named Lewis Adams in order to secure the African American vote in Macon County during his campaign to retain a seat in the Alabama senate. Despite a lack of formal education, Adams longed to see the community of former slaves obtain access to education; therefore, Adams requested support for a school for Negroes in return for his involvement in the campaign. Campbell's victory was based in part on the support of black

voters in the county, and he fulfilled his promise to Adams.

Ultimately, Campbell and Adams worked together on the first board of commissioners to organize the school. The Alabama legislature appropriated an annual budget of \$2,000 for teachers' salaries. Campbell was also responsible for contacting Hampton Institute in Virginia about his desire to hire a white teacher for the newly appropriated school. Samuel C. Armstrong, the principal of Hampton at that time, wrote back that he did not have a white teacher, but he did have one who would do an excellent job. Armstrong went on to extol the accomplishments of one Booker Taliaferro Washington, who was teaching in a new program for Native American students. Consequently, Washington became the first principal of Tuskegee Normal and Industrial Institute in 1881

Booker T. Washington and Tuskegee

Booker T. Washington believed the aim of education was to determine the needs of the people and to design programs of instruction to meet those needs. In preparation for the design of the Tuskegee institute, Washington spent a month traveling through Macon County to learn about the people and their respective challenges. His guiding principle was that leadership consisted of finding people where they were and guiding them to where they ought to be. This educational philosophy was summed up as "lifting the whole life to a higher level." During this monthlong tour, Washington recruited Tuskegee's first class of 30 students, who were primarily teachers from the cotton belt area. His two primary criteria for this cohort were the students' ages and their ability to read. As the state senate appropriation did not include funding for land, buildings, or supplies for the institute, Washington was faced with a new challenge. Campbell and Adams helped identify a location for the school. Adams persuaded Butler Chapel African Methodist Episcopal Zion church to help, and the school was opened in a facility provided by the church that was basically a dilapidated shanty.

On the morning of July 4, 1881, Washington began the first day of classes with a roll call and a clothing inspection. He maintained high standards of cleanliness and respect for the dignity of labor from the first day to the last. The school

eventually relocated to an abandoned plantation owned by Cora Varner of Tuskegee. Varner agreed to allow the school to take possession of the remaining buildings for only half of the agreed upon \$500 purchase price. The remaining balance was to be paid within six months. These buildings included a cabin, a henhouse, a stable, and a wooden kitchen. Washington secured the deposit with a personal loan from the treasurer of Hampton Institute. By this time, the school had 50 students enrolled.

Another marker in the development of the institute was the acquisition of a female principal named Olivia Davidson. Davidson was trained in the theory of teaching, and she initiated many new projects and programs to raise funds for the institute within the local Tuskegee community. As a result of Davidson's creativity, the institute repaid the loan for the plantation and the final installment to Varner within three months.

At the end of its first year, Tuskegee Normal and Industrial Institute was invested in building its first schoolroom. Throughout this time, Washington used student labor to clear the land, to grow crops for food, and later to build the structures and furnishings the school needed. This use of student labor allowed Washington to practice a foundational principle of the "dignity of labor" while also transferring marketable skills to the student body. Although some initially resisted this, Washington was himself the most skilled and efficient worker in these endeavors.

Vocational Education

Another example of Washington's ingenuity at Tuskegee was the creation of a bricklaying program. At that time, the entire Tuskegee community needed a kiln in which to bake the bricks, and the school especially needed bricks to build classrooms, dormitories, and workshops. The institute not only supplied bricks for its own building needs but also sold millions of bricks to neighboring communities and business owners. More important, the Tuskegee students who worked in this endeavor were in demand across the southern states as a result of this specialized vocational training. Washington also used the bricklaying enterprise as an opportunity to build positive relationships, which ultimately earned widespread support among whites and blacks in

the area. Many skeptics were converted as a result of their impressions after a visit to the campus and a tour with Principal Washington.

In time, Tuskegee became famous for its vocational education, which combined literacy, mathematics, and agricultural or technical trades for men and home economics for women. Washington was also successful at securing financial support for the institute. Julius Rosenwald, president of Sears, Roebuck and Company, was one such supporter of Tuskegee's building program, and he served on its board of trustees. Washington's philosophy of self-help was compelling to philanthropists in the northern states who were concerned about education. Within the first decade of existence, the institute provided instruction not only in bricklaying but also in several other trades, including carpentry, printing, mattress making, wagon building, wheelwright work, tinsmithing, and harness- and shoemaking. In 1892, the school gained institutional independence from the state of Alabama. Under the leadership of Washington, the school gained national prominence and became a source of great pride and responsibility for all involved in its mission.

George Washington Carver and Tuskegee

The legacy of Tuskegee Normal and Industrial Institute includes many notable educators and scientists. In 1896, Washington invited George Washington Carver to join the faculty. Washington and Carver shared a belief in practical education and the goal of creating self-sufficiency and independence for African Americans. Carver was known for commitment to the philosophy of "learning by doing." Carver's research interests involved experimenting with seeds, soil, feed grains, and clay. His focus on hybridizing and recycling was a generation ahead of its time. Carver developed over 500 different products from the peanut, the sweet potato, and other native plants in Alabama; his discoveries led to major economic redevelopment for farmers that were also good for the land.

At Washington's death in 1915, the institute had 100 buildings, 200 faculty members, 1,500 students, and more than 40 different trades or majors, as well as an endowment of more than \$2 million. The life and legacy of its founder, Booker T. Washington, is celebrated with a special monument called Lifting the Veil. This monument,

dedicated in 1922, sits at the center of the campus community, and its inscription reads, "He lifted the veil of ignorance from his people and pointed the way to progress through education and industry."

In 1930, Carver invented a "movable school" called the Jesup wagon, after the man who funded the project. This horse-drawn wagon eventually grew to become a mechanized truck whose passengers included a nurse, an agricultural specialist, and an architect; it provided home demonstrations in rural towns in order to teach skills that would improve the community. Carver gained international recognition in agricultural research and teaching while at Tuskegee. His understanding of the forces of nature and their role in agriculture led to great scientific innovation. In 1941, the George Washington Carver Museum was dedicated at Tuskegee Institute by Henry Ford, Sr., to honor Carver's lifetime of scientific contributions. Today, the Carver museum is run by the National Park Service, is available for tours, and is housed on the campus of what is now Tuskegee University.

The Twentieth and Twentieth-First Centuries

In the beginning of the 20th century, Tuskegee Institute played the vital role of breaking down racial barriers and providing hope for a new and better America by equipping the local community with critical skills necessary to become self-sufficient. For example, Tuskegee's airfield became the site where over 1,000 African Americans trained as pilots who fought in World War II. The pilots, known as the Tuskegee Airmen, were the first African American flying unit to serve in combat in the U.S. military. Today, the airfield is the site of a national historical museum that commemorates their service to their country at a time of desegregation and racial inequality. The first black four-star general was an alumnus of Tuskegee, and the General Daniel "Chappie" James Center for Aerospace Science and Health Education is currently housed at Tuskegee University in his honor. The center is also the largest athletic arena in the Southern Intercollegiate Athletic Conference (SIAC).

In the 21st century, Tuskegee continues to be on the leading edge of research and technology; for example, its program in nanotechnology has received national acclaim. The school has seven

colleges and offers two doctoral programs, one in integrative biosciences and the other in material science and engineering. The university offers 13 master of science degree programs in fields of study ranging from occupational therapy to veterinary medicine.

Tuskegee Syphilis Experiment

The Tuskegee Syphilis Experiment, or the Tuskegee Syphilis Study, was a clinical study conducted by the U.S. Public Health Service (PHS) between 1932 and 1972 in Tuskegee, Alabama. Because of its racism, dehumanization, and insensitivity, it is often referred to as America’s Nuremberg. The U.S. PHS worked with the Health Department of Macon County and the Rosenwald Foundation on this experiment, a nontherapeutic study that

examined the natural progression of untreated syphilis in African American men. Working with the Tuskegee Institute, the PHS enrolled a total of 600 poor, rural African American males. This ethically controversial study, which did not offer its subjects any treatment, led to the establishment of the Office for Human Research Protections and the Institutional Review Boards’ requirements that studies involving human subjects must abide by.

The Tuskegee Experiment stemmed from a report published in Norway in 1928. It examined the progress of untreated syphilis in white males. Although the study was valuable for its size, including several hundred subjects, it was inconclusive because the study did not observe how the disease manifested longitudinally. To advance this Norwegian case study, the U.S. PHS embarked on its own study. The study was designed to observe the development of the illness in patients for more than six months but less than nine months and treat them with what were at the time considered to be the most appropriate methods, such as Salvarsan and mercurial or bismuth ointments. Even though these treatments were minimally effective and carried high toxicity, they were the best treatments available at the time.

Premise of the Experiment

The experiment involved 600 black men between the ages of 25 and 60. Of these, 399 had syphilis and 201 participated as controls. Over the course of 40 years, they were observed to record how syphilis affected human pathology. Although the men were promised free medical care in addition to hot food on examination days and burial insurance, they were simply told that they had “bad blood”—a general term used at the time to refer to syphilis, anemia, and other illnesses—and never received treatment. No clear and conclusive diagnosis was given to patients. The premise of the experiment was to observe the subjects until their deaths, followed by autopsies to examine the effect of the disease on their bodies; the autopsy examination was part of the requirement for the participants to receive the promised funeral support, granted by the Milbank Memorial Fund starting in 1935.

The research team explained that once the project had identified patients with syphilis, it was no longer interested in them until they had died and

their bodies became available for autopsy. During the period of the experiment, a total of 13 reports involving the study were published. Despite the ethical implications of the study, none of these research findings, published in journals such as the *Journal of Venereal Disease Information* and the *Archives of Internal Medicine*, were kept secret, hinting at the racist social milieu at the time.

According to the first paper based on the experiment, published in 1936, 84 percent of patients showed signs of morbidity, as opposed to 49 percent of the controls. In 1938, researchers concluded that syphilis reduced life expectancy by 20 percent. The article published in 1955 stated that in addition to over 30 percent of the patients who died directly from syphilis, more deaths may have been accounted for by its complications.

Both African American and non-African American medical professionals played significant roles in the experiment. First and foremost, Dr. Taliaferro Clark is considered to be most responsible for outlining the premise of the project. He initially planned to examine African American syphilis patients for six to nine months and follow up with proper treatments. Because Clark retired approximately a year after the study began, Dr. Oliver Wenger, the director of the regional PHS, was responsible for continuing the experiment. He and his staff helped the project turn into a longer-term case study than initially planned. In 1933, the PHS officially approved the continuation of the experiment.

Robert Morton, then head of the Tuskegee Institute, and Dr. Eugene Dibble, then head of the Tuskegee Medical Hospital, were two African American figures who supported the government project and offered resources. Wenger explained that granting Dibble the position as a government doctor encouraged African Americans to trust the project. Consequently, Wenger anticipated that the patients would remain with the experiment, eventually dying in their hospital and making their bodies available for examination. Similarly, Eunice Rivers was an African American nurse who had received medical training at the institute and had worked for the study since its inception, becoming the only person to work with the study for its entirety. Frequently, African American nurses such as Rivers were the only contact people for the study participants.

Dr. Raymond H. Vonderlehr, the onsite director of the project, strongly supported inviting Rivers to the project. He believed that she had a very close connection to the local community. Researchers, however, disagree as to how much Rivers was aware of the unethical nature of the project. It was possible that Rivers believed the study to have more benefits to poor African American men than risks. Just as other African American medical professionals who were involved in the study did, Rivers may have been convinced that the experiment was in the best interests of the study subjects. However, in her report titled "Twenty Years Follow-Up Experience in a Long-Range Medical Study," she states that the care given to the patients was not for syphilis. Her responsibility being the continuation of the project rather than treating patients, some historians argue that she may have been more loyal to her profession than to the patients, who were of her race.

Lack of Medical Ethics

Although the experiment from its beginning lacked consideration of medical ethics, ethics became a larger concern by the late 1940s and early 1950s, when penicillin had become part of the standard care to cure syphilis. Since many of the patients were poor, illiterate, and lacked access to media, they were unaware of the availability of the cure. The experiment did more than deny treatments. To ensure that the subjects would not receive treatment from other medical institutions, the PHS secured agreements from local physicians, the state health department, and the U.S. Army not to offer them treatment. When the army drafted some of the patients in 1941 and told the research team that it would start providing them with treatment, the team gave the army a list of 256 patients whom they wished to not have treated. The army agreed to cooperate.

Even when the U.S. government sponsored public health programs to eradicate syphilis in Tuskegee, researchers prevented study subjects from receiving the medicine. Despite the evident effectiveness of the treatment, study participants received only placebos. Although some patients sought out treatments themselves, being medically unaware, they were easily convinced by Tuskegee

Institute nurses that they were being treated for the disease.

Consequently, only 74 patients with syphilis were alive at the conclusion of the experiment. Twenty-eight had died from the disease, and 100 from related complications. Furthermore, dozens of their wives had contracted the disease, and 17 children and two grandchildren by then had syphilis.

Blatant Racism

Racism is considered to be at the epicenter of this project. The experiment started and continued when racism against African Americans was an explicit norm of American life. For example, Clark once argued that observation without treatment was justifiable because African American patients lacked the intelligence to seek treatment on their own. Other physicians agreed that even though African Americans might visit doctors during the disease's early phase, they would not receive treatment until it was too late. After the termination of the experiment, the Federal Department of Health, Education and Welfare found that some physicians incorrectly, but most likely knowingly so, argued that blacks had a different kind of syphilis that penicillin could not cure. Furthermore, syphilis at the time was considered not just a sexually transmitted illness but also a symbol of immorality. At the time, blacks were thought to have an uncontrollable sexual urge. The experiment blamed the victims of the disease for their sexual activities and for subjecting themselves to the disease.

The closing phase of the experiment began in 1966, when Peter Buxtun, an investigator for the PHS, questioned the morality of the study. His concern, however, was met with the Centers for Disease Control and Prevention's (CDC) belief in the need to continue the experiment until all subjects were dead and their bodies were available for autopsy. Not only did the American Medical Association, representing white physicians, agree with the CDC, but so did the National Medical Association, which represented African American medical professionals. An African American worker at the PHS, Williams Carter Jenkins, urged the experiment to be terminated in his newsletter, *The Drum*, in 1968. His effort, however, did not lead to any change in the experiment.

Legal Settlement

It was in 1972 that the experiment captured national attention. Buxtun shared the immorality of the experiment with the Associated Press, and its article came out on July 25, 1972. A day later, the *New York Times* featured the experiment on its front page. After congressional hearings, the CDC and the PHS established a panel on August 28, 1972, to examine the study, which concluded that it was medically unjustifiable. This nine-person panel included five African Americans.

The advisory panel primarily investigated two questions. The first was whether the patients had given the experiment team their informed consent, making the study justifiable. The second was whether the team should have given penicillin to its participants once it became widely available. It was only in March 1973 that the study was terminated and treatment started. Once the study was terminated, the CDC and the government covered the medical expenses of the subjects. Two years later, in 1975, the coverage was expanded to their wives and children. In July 1973, attorney Fred Gray filed a \$1.8 billion class-action lawsuit on behalf of the study subjects and their families. In December 1974, the legal action reached a settlement through which each subject received \$37,500, the descendants of deceased subjects with syphilis \$15,000, each living control \$16,000, and each deceased control \$5,000.

In 1994, a symposium to examine the Tuskegee Experiment and its legacy was held in Charlottesville, Virginia. To follow up the discussions from the symposium, the Tuskegee Syphilis Study Legacy Committee met two years later and decided to commit itself to procuring a formal apology from President Bill Clinton on behalf of the government. Urged by the committee's final report, President Clinton held a ceremony with the attendance of committee members in which he formally apologized to surviving victims and their families.

The experiment is said to have affected general African American sentiment toward public health. Because of medical experiments conducted on enslaved people, hysterectomies performed on African American females, the eugenics movement in the early 20th century, and numerous other examples, studies have shown that African American communities are less willing to participate in medical programs. Although there is no

consensus as to how much this unethical piece of American medical history has affected black distrust in public health, various rumors against public health continue to exist within black communities. One of the most revealing cases was the conspiracy theory about human immunodeficiency virus and acquired immune deficiency syndrome (HIV/AIDS). In 1999, 27 percent of African Americans in California believed that HIV/AIDS was a man-made disease created by the U.S. government to eradicate African Americans. The number fluctuated between 20 and 30 percent as recently as 2005.

If the Tuskegee Experiment had a positive outcome, it is the establishment of guidelines for studies involving human subjects. By the mid-1970s, Americans were aware of the experiment, in addition to the Nazi experiments during World War II and the Willowbrook Studies, in which mentally disabled children were infected with live hepatitis to develop a vaccine between 1956 and 1971. These examples led to the establishment of the National Commission for the

Protection of Human Subjects of Biomedical and Behavioral Research and the National Research Act in 1974. The act requires that an institution that receives federal support must have institutional review boards for projects engaging human subjects.

U

Ugly Betty

An American prime-time comedy-drama series that ran on ABC from September 2006 to April 2010, *Ugly Betty* is the story of Betty Suarez, a plain, unsophisticated Latina young woman from a working-class background who works at *Mode*, a glamorous fashion magazine based in Manhattan. The series, the first to feature a Latina as lead in a network series, starred America Ferrera, best known to audiences for her role as Carmen in *The Sisterhood of the Traveling Pants* movies. *Ugly Betty* was based on a Colombian telenovela, *Yo Soy Betty la Fea* (I'm Betty the Ugly One). During its four seasons, the critically acclaimed series explored issues of race, class, gender, and sexuality in a manner that held broad appeal for a diverse, predominantly female audience.

The popularity of the telenovela generally and of *Yo Soy Betty la Fea* particularly would likely have attracted Latina viewers to the ABC show, but ABC emphasized the connection by using Salma Hayek, one of the show's executive producers and well known in her native Mexico as a former telenovela star, in the early publicity. Hayek praised the campiness of the telenovela genre and the universal appeal of the unlikely Betty's work on a fashion magazine. The show premiered on September 28, 2006, to critical acclaim. Hayek's

confidence in its appeal was justified as a loyal audience of women developed across a spectrum of ethnic backgrounds and ages.

A significant part of Betty's appeal to this diverse female audience is what ABC described in promotional materials as her "fish out of water" status. Betty, played by America Ferrera, a young actress of Honduran descent, is an outsider at *Mode* on several levels. Not only do her glasses, her braces, and her unflattering clothing mark her as unattractive in an office filled with beautiful, fashionable women, but also, on a more fundamental level, she is not tall enough, not thin enough, and not white enough to meet the prevailing standard of beauty. Even African American beauty Vanessa Williams, who played villainess Wilhelmina Slater, is light skinned, with the blue-green eyes of Welsh forebears. Betty's ethnicity intensifies her difference. Her difference is magnified for her coworkers and for the majority non-Latino audience when Betty is viewed within the context of her family.

Her father, Ignacio, is an undocumented Mexican immigrant who has worked as a janitor. Her sister, Hilda, is a sometimes jobless single mother of one son, Justin. Family is of great importance to them. Highly emotional, they like bright colors, loud music, and Mexican food, and their Queens home is filled with religious iconography. Although they are fluent in English, both Ignacio

and Hilda pepper their conversations with Spanish words, although the more assimilated Betty and Justin do not. None of the actors who played the members of the Suarez family are Mexican American. Tony Plano (Ignacio) is Cuban American, and Ana Ortiz (Hilda) and Mark Indelicato (Justin) claim some Puerto Rican ancestry.

Betty's family is warm and caring, supporting one another and willing to sacrifice for one another—the opposite of the cold, dysfunctional families to which most of the *Mode* staff belong. Wilhelmina Slater is emotionally distant from her father and sends her daughter to a boarding school in Europe, sometimes even refusing to take her calls. Betty's immediate boss, Daniel Meade (Eric Mabius), refuses to visit his mother during her rehabilitation, and Alexis Meade (Rebecca Romijn) wishes to kill her father and refuses to speak to her brother. If Betty's family is stereotypical, it's a stereotype both Latino and Anglo audiences found appealing.

Mocking Stereotypes

The show's writers also mock stereotypes with some sharp blows. When Daniel Meade first meets self-help author Sofia Reyes, a recurring character played by Salma Hayek, he mistakes her for a maid and asks her to bring him coffee. When Sofia questions him, he insists he's only asking her to do her job. Sofia responds, "Oh, and what gave it away? Was it my accent?" In another episode, Betty and Hilda express their disbelief in their father's deportation by enumerating his American characteristics: he pays taxes, he's a Mets fan, and he's a member of Oprah's book club.

The National Council of La Raza recognized the show's positive portrayal of Latinos in its first season by presenting it with four American Latino Media Arts Awards: *Ugly Betty*, Outstanding Television Series, Miniseries or TV Movie; America Ferrera, Outstanding Actress; Ana Ortiz, Outstanding Supporting Actress; and Silvio Horta, the show's Cuban American developer and co-executive producer, Outstanding Writing. The Imagen Foundation, which also annually recognizes positive portrayals of Latinos, named *Ugly Betty* Best TV Series in 2007, 2008, and 2009, with additional awards each year for Ferrera, Ortiz, Tony Plano, and Horta.

LGBT Issues

Gay characters have become more common in American television, but *Ugly Betty* pioneered a story line untouched in prime time. The flamboyantly gay Marc St. James (Michael Urie) was a regular from the beginning, and Alexis Meade, Daniel's transsexual sibling, appeared in 33 episodes in 2007 and 2008. But it was Justin Suarez's struggle with his sexuality and the friendship that develops between him and Marc that silenced the critics' mutterings about stereotypical treatment.

Ugly Betty won the Gay and Lesbian Alliance Against Defamation Media Award in 2007 and 2008. In all, *Ugly Betty* won more than 60 awards, including Emmys, Golden Globes, and a Peabody. Perhaps Silvio Horta, a gay Latino, identified the secret of the show's success when he said the writers and actors were less concerned with pleasing a gay audience or a Latino audience than with having the characters they created communicate honestly with the audience.

Ukrainian Americans

Ukraine is an Eastern European country often erroneously called "the Ukraine" in English. Formerly controlled by the Mongols, Lithuania, Poland, the Russian and Austro-Hungarian Empires, and the Soviet Union, it is today an independent democracy and the second largest country on the European continent after Russia. It was

one of the founding republics of the Soviet Union in 1922 and regained its independence in 1991 after the fall of European communism.

As of the 2010 Census, there are 939,746 Ukrainian Americans, making this one of the largest Ukrainian communities in the world. Ukrainians are well distributed through the United States and tend to concentrate mainly in northern cities—New York City, Philadelphia, Chicago, Detroit, and Cleveland, although Los Angeles also has a notable population of 34,000 Ukrainian Americans. Though a Ukrainian was among the settlers of the Jamestown colony in the early 17th century, sustained Ukrainian immigration did not begin until the 1880s. These early immigrants, arriving from the 1880s until the 1920s (when new immigration restrictions curtailed the number of immigrants arriving from eastern Europe), established

the country's oldest Ukrainian American enclaves, especially in New York City, Chicago, and Philadelphia. More recent immigration has been in response to the fall of the Soviet Union and has included a substantially greater number of Jewish Ukrainians than did the earlier wave.

A number of George Washington's soldiers in the Revolutionary War were Ukrainian Americans, as were several Union soldiers in the Civil War. Thousands more served in World War II, after the community had become better established and larger. Ukrainian Americans have been politically active and have tended to be conservative, especially since the end of World War I; historically, Ukrainian Americans have supported the Republican Party despite usually being pro-labor. Throughout the years between World War I and World War II, Ukrainian Americans were

The Harry F. Sinclair House is a mansion in Manhattan in New York City and houses the Ukrainian Institute of America (UIA). It is open to the public and promotes art and literature by hosting exhibitions and other shows. The UIA is a nonprofit organization founded in 1948 to promote Ukrainian culture, history, art, music, and literature.

involved in political demonstrations against the occupation of Ukraine by Poland and the treatment of Ukraine by the Soviet Union.

Ukrainian Religion

Ukrainian immigrants in the 19th and early 20th centuries came primarily from the Orthodox Christian faith and Greek Catholicism, though many Greek Catholic families eventually converted to Orthodoxy. An independent Ukrainian Orthodox Church for North America was first founded in 1915 with the union of several unaffiliated parishes that had formed to serve the religious needs of the Ukrainian American community. At the time, Ukrainian religious identity in the larger Orthodox community was under attack; a leader in the Russian Orthodox community, Archbishop Alexander, had dismissed the entire concept of a Ukrainian ethnic identity, describing them as “a Russian political party” who were not sufficiently distinguishable from Russians. It was certainly not comforting that many western European Americans held much the same belief, barely distinguishing between the various countries east of Germany. Despite Alexander’s remarks, upon Ukraine’s declaration of independence in 1918, the Ukrainian Autocephalous Orthodox Church (UAOC) formed, distinct from Russian Orthodoxy, and the American Ukrainian Orthodox parishes sought association with it. The UAOC appointed Metropolitan John to head a North American diocese in 1924, and he spent the next several years organizing the American parishes. The church became known as the Ukrainian Orthodox Church (UOC) of the USA.

The Ukrainian Orthodox Church in America (UOCIA) was founded in 1928 by Ukrainian Americans. Its main church is the Ukrainian Orthodox Church of Saint Vladimir, in Philadelphia. The UOCIA was founded by former Greek Catholic parishes leaving the Catholic Church over a disagreement with church leadership regarding celibacy and parish property ownership.

After World War II, as the makeup of Ukrainian immigration changed, it included a number of bishops from the UAOC, who gravitated toward the UOC of the USA rather than the UOCIA, increasing the size of the former—though at this point only the UOCIA was recognized by the global Orthodox community. An

attempt at union in 1950 failed to reach complete union when the UOCIA parishes under Bishop Bohdan refused to join, distrusting the UOC of the USA group. Further attempts to unify the different churches continued to fail until 1996, after Ukrainian independence and a subsequent reorganization of Orthodoxy in Ukraine. Today, the unified UOC-USA (taking the “in” of one group and “the USA” of the other) is organized into three eparchies: central (Florida, Georgia, Ohio, upstate New York, and western Pennsylvania), eastern (Connecticut, Delaware, Massachusetts, Maryland, New Jersey, New York, eastern Pennsylvania, Rhode Island, and Virginia), and western (Arizona, California, Illinois, Indiana, Michigan, Minnesota, Nebraska, Oregon, Washington, and Wisconsin). South Bound Brook, New Jersey, is home to the one UOC-USA seminary, the Saint Sophia Ukrainian Orthodox Theological Seminary, which opened in 1975.

Social and Cultural Organizations

The Ukrainian Institute of America in New York City was founded in 1948 and maintains an exhibition of Ukrainian folk art year-round, as well as a historical gallery and a seasonal program of concerts and lectures. New York is also home to the nonprofit Ukrainian Center for Social Research, which studies demographic, social, cultural, and economic issues related to Ukrainian Americans, and the Shevchenko Scientific Society (SSS), named for Ukrainian poet Taras Shevchenko. The SSS was founded to help Ukrainian scholars adjust to American life.

The Ukrainian National Museum was established in Chicago in 1958, when Chicago’s Ukrainian Archive-Museum absorbed the Ukrainian National Museum and Library of Ontario, Canada. In Cleveland, where many Ukrainians settled, the Ukrainian Museum-Archives, established in 1952, houses numerous materials about Ukrainian immigration.

Major Ukrainian social and cultural organizations include the Ukrainian Academy of Arts and Sciences in the United States, which supports scholars of Ukrainian studies; the Ukrainian American Youth Association, which runs summer camps and offers recreational activities; and the Ukrainian National Women’s League of America. All are based in New York City.

Ukrainian American media include *America*, a Catholic paper founded in 1922 and published in both Ukrainian and English (in separate editions) for the Ukrainian community; *Narodnia Volya*, a weekly Ukrainian language paper with an English language section, published in Scranton since 1911; the *New Star Ukrainian Catholic Newspaper*, published by the Greek Catholic diocese of Chicago in both English and Ukrainian about 17 times a year; *Svoboda*, a daily Ukrainian language newspaper with a circulation of 14,000, with a sister publication, *Ukrainian Weekly*, published in English; *Ukrainian News*, published weekly in Detroit, with an international circulation serving the Ukrainian diaspora worldwide; the *Ukrainian Variety Hour* on Chicago's WCEV and WVVX; three hours of Ukrainian programming a week on Michigan's WNZK, including *Slovo*, a program for newly arrived immigrants; and WHLD in Buffalo's *Ukrainian Radio Program*, hosted for three hours every Saturday by Wasyl Sharvan since the 1970s.

Prominent Ukrainian Americans include actors Vera Farmiga (*Up in the Air*), Mila Kunis (*Black Swan*), Traci Lords (*Roseanne*), Larisa Oleynik (*Mad Men*), and Jack Palance (*City Slickers*); pop artist Andy Warhol; director Steven Spielberg; American foreign policy expert Paula Dobriansky; helicopter engineer Igor Sikorsky; singers Neko Case, Bob Dylan, and Eugene Hutz (lead singer of Gogol Bordello); White House aide Kathleen Willey; football coach Mike Ditka; Olympic figure skater Sasha Cohen; hockey great Wayne Gretzky, who has dual U.S.–Canadian citizenship; NBA coach Flip Saunders; economist Lev Dobriansky; journalist Mike Royko; blacklisted film director Edward Dmytryk, who was imprisoned for contempt of Congress during McCarthyism; *Fight Club* author Chuck Palahniuk; and comic book artist Steve Ditko, cocreator of Doctor Strange and Spider-Man. Ukrainian Americans have been active in the art world, and a community of Ukrainian American artists has persisted since the 1950s. In addition to Gretzky, a number of Ukrainian Americans have played in the National Hockey League; recent players include Mike Krushelski, Dale Hawerchuk, and Mike Bossy.

Uncle Tom's Cabin

Uncle Tom's Cabin; or, Life Among the Lowly (1851–52) is Harriet Beecher Stowe's internationally known abolitionist novel. The best-selling novel in the 19th century, *Uncle Tom's Cabin* has been translated into all major languages and sold millions of copies worldwide. Although focused on U.S. slavery, the novel has appealed to underclass populations in countries such as Brazil, Cuba, Poland, and Russia, among others.

The story begins in Kentucky. In debt to a slave trader, Shelby, an otherwise "good" master, sells his devoted and religious slave, Uncle Tom, and little Harry, the young son of Mrs. Shelby's personal servant, Eliza Harris. This sale establishes the novel's two primary plot lines, one moving further into the slavery of the Deep South and another following the characters northward toward freedom.

Warned of the sale, Tom refuses to escape, citing his Christian honor and his responsibility to Shelby. Tom is sold to Augustine St. Clare. For a few years, he lives tolerably well on St. Clare's New Orleans estate, serving primarily as

a companion to the young, saintly Eva until her death. Although devoted to Eva and her father, Tom misses his family and longs for freedom. St. Clare is killed just before freeing Tom, and Tom is sold by the morally bankrupt Marie St. Clare. Tom's final home is the rural Louisiana plantation of the villainous Simon Legree. After a brief crisis of faith, Tom reaffirms his Christian beliefs and resists Legree's corrupting influences. When he refuses to betray two female slaves, Tom is viciously beaten. He dies a martyr's death just as the younger George Shelby arrives to reclaim him. Returning without Tom, George frees his slaves, promising to pay them for their future labor and demonstrating an economic alternative to slavery.

Meanwhile, the light-skinned Eliza flees northward with her son. After a daring leap across the ice floes of the Ohio River, Eliza receives help from Senator Bird and his wife. Bird, an advocate of the Fugitive Slave Act, has a change of heart when faced with the fugitives, and he helps them reach a Quaker settlement on the Underground Railroad. There, Eliza is reunited with her fugitive husband, George. The Harrises finally reach Canada, where they are further reunited with George's sister, Emily, and Eliza's mother, Cassy (whom Uncle Tom died protecting). The newly reconstituted family first goes to France, where George gets an education, then, after briefly returning to Canada, leaves for Liberia to become missionaries.

History of Composition and Reception

The story was first serialized in the *National Era* from June 1851 to March 1852, then published as a two-volume book. The novel sold 300,000 copies in the United States (and over 1 million in England) in the first year. Part of its record sales resulted from the absence of international copyright laws; pirated editions were common. By 1857, the novel had been translated into 20 languages and sold over 2 million copies. In 1862, President Abraham Lincoln reputedly credited the novel as having started the Civil War. To date, over 150 editions have been published.

Stowe proclaimed that the novel was a response to the Fugitive Slave Act of 1850, which required all individuals (in the north and the south) to aid in the return of escaped slaves, thus effectually

nationalizing slavery. In shaping the novel's characters and events, Stowe drew heavily from the 1849 slave narrative *The Life of Josiah Henson, Formerly a Slave, Now an Inhabitant of Canada, as Narrated by Himself*, as well as interviews with escaped slaves, personal observations, and other published personal testimonies.

However, proslavery factions condemned the novel as an egregious abolitionist exaggeration. Stowe herself received death threats and, once, an enslaved person's severed ear. The novel also spurred a slew of "Anti-Tom" novels. In 1853, Stowe published *A Key to Uncle Tom's Cabin*, a work meant to counter proslavery criticisms and to authenticate her depiction of slavery by identifying her sources.

Style and Themes

Uncle Tom's Cabin is both a protest novel and sentimental fiction. It elicits readers' sympathy through dramatic scenes of excessive emotion and culminates in a string of unlikely coincidences and family reunions, as well as Tom's melodramatic death. Stowe also frequently interrupts the narrative to address readers directly, often pleading in a sermonic voice for empathy for the enslaved, and arguing for the inherent goodness of humankind when individuals allow themselves to be guided by *feeling* rather than by greed or by logic divorced from sentiment.

The novel's message is framed specifically through a Christian lens. For Stowe, slavery was a sin, and the novel thus condemns secular laws that legitimated its morally corruptive influence. To offset such corruption, women, as the moral center of the family, had to guide men toward right action. The novel particularly highlights the harmful consequences of separating families, especially mother from child and wife from husband.

Despite its abolitionist intent, the novel's treatment of race is problematic. First, the Harrises' final relocation to Liberia advocates emigration rather than integration for freed slaves. Furthermore, although at points the novel reveals race as socially constructed, it generally reinscribes a hierarchy of racial categories generated from biological differences. In the novel, Africans are innately loyal, patient, gentle, and religious unless corrupted by their social environment.

Such romantic racialism slips easily into racial stereotyping. The novel thus helped cement in the American imagination the stereotypes of the loving “Mammy”; the mischievous “pickaninny” (Topsy); the tragic mulatta; the carefree “Sambo”; and the subservient “Uncle Tom.” Proliferating these stereotypes, an *Uncle Tom’s Cabin* commercial industry flourished through at least the mid-20th century, spawning a range of productions and merchandise, including “Tom Shows” (usually played in blackface), Topsy dolls, plays, songs, operas, cartoons, and numerous films. Consequently, a novel intended to condemn slavery and to advocate for the fundamental humanity of all people is perhaps most remembered in the United States for popularizing negative racial stereotypes of African Americans.

escape captivity via a series of secret routes and safe houses that stretched from the south to Canada. Between 1840 and 1860, between 20,000 and 30,000 slaves are estimated to have escaped by means of the Underground Railroad.

Assisted by free blacks, abolitionists, and allies sympathetic to the cause, Underground Railroad conductors helped move runaway slaves from station to station, ultimately finding someplace where their freedom was assured. The Underground Railroad has taken a central place in the folklore of America, during the years before the Civil War, and it provided a path to freedom for those motivated to pursue this goal and a focal point for those engaged in the abolitionist movement.

Background

At the time the 13 colonies declared their independence from Great Britain, slavery was a controversial and divisive issue. Although slavery had existed on the North American continent from the earliest colonial settlements, by the end of the Revolutionary War, the northern states had abolished it. The U.S. Congress passed legislation prohibiting slavery’s expansion into the Northwest Territory, the area now comprising Illinois, Indiana, Michigan, Ohio, Wisconsin, and the northeastern portion of Minnesota. For a while, it appeared that slavery would fade away quietly, as it was morally repugnant and of dubious financial benefit.

After 1800, however, slavery enjoyed resurgence in popularity as the invention of the cotton gin greatly increased the need for low-cost manual labor. Slavery expanded into the southwest, and a bitter rivalry developed between slave and nonslave states. Although the international import and export of slaves was banned in the United States after 1807, a lucrative trade in African Americans existed within the southern United States. Any slave who escaped from the tyranny of bondage caused a significant financial loss for his or her owners. Article IV of the U.S. Constitution provided for a slaveholder’s right to recover slaves who escaped. A variety of statutes enumerated how slaveholders could recover runaway slaves.

Pursuant to the Fugitive Slave Act of 1793, although runaways were subject to capture and return to their masters, the responsibility for catching escapees rested with officials from the slave’s home state. As part of the Compromise of 1850,

Underground Railroad

By the mid-19th century, the U.S. slave population totaled approximately 4 million. The Underground Railroad served as a way for slaves to

however, southern states were successful in getting a revised Fugitive Slave Act passed. Under the terms of the Fugitive Slave Act of 1850, the rights of slaveholders were strengthened considerably. Across the nation, law enforcement officers now had a duty to capture and return escaped slaves to their southern masters. The statute angered many northerners, as it made them responsible for enforcing slavery.

This anger helped strengthen the Underground Railroad, which in reality was neither underground nor a railroad. Instead, the Underground Railroad was an escape network via which African Americans fleeing the south were assisted in their efforts to find new homes where they could live in freedom. A collaboration of escaping slaves, free African Americans, and abolitionists, the Underground Railroad represented a coming together of those interested in abolishing involuntary servitude.

Structure of Operations

For those born into slavery, freedom was available through two methods. The first was through manumission, in which a slave owner renounced ownership rights to his or her slaves and gave them their freedom. The second way a slave could obtain freedom was by running away, which was illegal. To assist runaway slaves, the Underground Railroad worked to allow as many African Americans as possible to relocate to areas where they could live in freedom and without threat of capture. Although initially this meant helping former slaves locate a place to live in a northern state, after the passage of the Fugitive Slave Act of 1850, it often meant British North America, where slavery was illegal.

The Underground Railroad comprised meeting places, transportation, secret routes, and safe houses where escaped slaves could rest before departing for the next location. Escaped slaves would move north, with the assistance of a “conductor,” from one safe house to the next. Volunteers who assisted with the Underground Railroad usually knew the next “stations” that connected to their own, but little else. This way, if a conductor were apprehended helping runaway slaves, he or she knew few details of operations outside his or her immediate area. Many churches also played a part in the Underground Railroad, especially those affiliated with abolitionist preachers, including

Harriet Tubman was born into slavery, escaped, and subsequently made more than 13 missions to rescue more than 70 people using the network of safe houses and antislavery activists known as the Underground Railroad.

many Congregationalists, Presbyterians, and members of the Society of Friends (Quakers), as well as some Baptists and Methodists. Many conductors for the Underground Railroad were freed slaves who returned to the south at risk of great personal danger to help free others. A conductor would sometimes pretend to be a slave in order to gain access to a plantation, but once there would organize a small group of slaves to make the trip north to freedom. To avoid detection, runaway slaves often traveled at night and usually would cover a distance of 10 to 20 miles in that time.

Once a group of fugitives reached a station, word was sent to the next station on the line to

prepare for an upcoming arrival. The individual “stations” or “depots” were often barns, sheds, churches, or other buildings controlled by a “station master” who would provide a place to sleep and food to eat. “Stockbrokers” were those individuals who provided the “passengers” cash on their way to the “promised land” (Canada).

Although mass escapes were not unknown, much more common were journeys that consisted of one to three runaway slaves. Fugitives would sometimes travel by train or boat, but it was much more common for journeys to take place on foot, in wagons, or on horseback. Although the journey on the Underground Railroad was arduous and risky, many women and children made the trip.

Indeed, one of the best-known conductors was Harriet Tubman, who was especially known for her courage and steady nerves. Tubman had been born into slavery in Maryland in 1822 and escaped to Philadelphia in 1849. Despite tremendous personal risk, Tubman immediately returned to Maryland to assist others in her family to escape slavery. After bringing her family members out of slavery by means of the Underground Railroad, Tubman began to help dozens of others. Once the Fugitive Slave Act of 1850 made it easier for African Americans in northern states to be seized, Tubman, known as Black Moses, began transporting people to Canada. Renowned for never having lost a passenger, Tubman worked for the Grand Union Army during the Civil War, first serving as a cook and a nurse, and later utilizing her many skills as a scout and a spy.

Locations of stations and routes were closely guarded secrets, seldom reduced to writing and generally passed along solely by word of mouth. Many slaveholders who had slaves escape took vigorous steps to pursue them. Considerable rewards were offered for returned slaves, and slave owners advertised these bounties widely in newspapers and through the use of flyers. Professional bounty hunters and U.S. marshals were able to earn large amounts of money by apprehending escaped slaves, and as a result would pursue them all the way to the Canadian border.

The consequences for African Americans who were captured by the bounty hunters or marshals were severe. Fugitives could be seized without a warrant and brought before a commissioner, who would determine whether an African American

captive should be returned to the south. African Americans had no right to a jury trial to determine whether or not they should be transported south, and indeed were not even permitted to testify in their own behalf. As a result, many freedmen and even those who had never been slaves were seized and bound into slavery.

The total number of passengers served by the Underground Railroad is uncertain. Estimates of the number who went through the system vary greatly. U.S. census records account for only approximately 6,000 former slaves, but this lower number would not be surprising, as many Underground Railroad passengers left the country for Canada or other destinations. It appears there were at least 1,000 passengers per year who moved through the Underground Railroad, which would mean as few as 20,000 and perhaps as many as 40,000 passengers were freed by means of the Underground Railroad in the 20 years preceding the Civil War.

Influence

The Underground Railroad operated in large cities, such as Chicago and Philadelphia, as well as small towns, such as Milton, Wisconsin; Vandalia, Michigan; and New Albany, Indiana. Stations consisted of privately owned barns and homes as well as institutions such as Knox College in Galesburg, Illinois, and Oberlin College in Oberlin, Ohio. Although the Underground Railroad served to provide tens of thousands of former slaves with freedom, it was perhaps more significant as a means of organizing opposition to slavery and support for abolitionists. The success of the Underground Railroad greatly aggravated southern slave owners, causing them to back the Fugitive Slave Act of 1850. The remedies that this afforded slaveholders so offended many residents of the north, however, that they became ardent in their opposition to slavery and fierce supporters of abolition.

The Underground Railroad also took a significant place in the popular culture of the mid-19th century. Harriet Beecher Stowe’s landmark novel *Uncle Tom’s Cabin* was first published in 1852 and is credited with creating sympathy for fugitive slaves. Selling over 300,000 copies in the United States in the first year after its release, with an additional 200,000 sold in Great Britain, *Uncle Tom’s Cabin* was one of the more popular

novels of its day. The willingness of many Underground Railroad conductors and station masters to knowingly engage in illegal actions was influenced in part by Stowe's representations of slavery as an evil and wicked institution.

In addition to being published as a novel, *Uncle Tom's Cabin* appeared in a series of stage adaptations that served to greatly increase the influence of the work, especially with those less likely to read the story on their own. Such sentiments served to embolden supporters of the Underground Railroad, as evidenced by situations such as the rescue of James Price, a fugitive slave captured in Oberlin, Ohio, and freed from control of the U.S. marshal by a crowd in nearby Wellington, Ohio. After he was briefly returned to Oberlin, the Underground Railroad escorted Price to freedom in Canada, an event that would have been unlikely but for the negative image of slavery portrayed by Stowe and others.

United Farm Workers of America

The United Farm Workers of America (UFW) is a seminal agricultural labor union founded in

1962 by César E. Chávez (president) and Dolores Huerta (chief contract negotiator) in Delano, California, as the National Farm Workers Association (NFWA). The United Farm Workers Organizing Committee was created in 1966 from the merger of the NFWA and the Filipino Agricultural Workers Organizing Committee (AWOC) in Delano, led by Larry Itliong, when the NFWA voted to join striking AWOC workers in 1965. The merger was born of a common interest in improving the conditions of grape workers. The UFW contract with Schenley Wine in 1966 marked the first time in U.S. history that farm workers successfully represented themselves against an agribusiness employer. Since 1962, the UFW has become one of the most powerful unions in the country, continually changing agricultural labor law and shaping the American consciousness about migrant farm workers and the broader Chicano civil rights movement.

Migrant Population

Getting an accurate picture of migrant farm work life remains a challenge for the U.S. Census every 10 years. The same challenges faced by the UFW in bargaining and lobbying for farm workers are faced by the government in trying to get an accurate count for allocation of funding and political representation: worker mobility; relationship with employer or contractor; unofficial, unregulated local housing and lack of mail access; limited literacy in English or Spanish; and undocumented status and distrust of U.S. Census anonymity. The result has been a persistent undercounting of one of the poorest segments of the U.S. population and resultant underfunding of programs like Migrant Health and Head Start.

Every two years, the National Agricultural Workers Survey (NAWS) is conducted to better document and serve migrant workers. More than 3 million migratory and seasonal workers are estimated to be in the state. The majority of them are foreign born, and the majority of the foreign born are from Mexico. The majority of workers in the United States are male, have been working here for over 20 years, and are married and are parents; a quarter of farmworker families are living in poverty. According to the NAWS, the majority cannot speak English at all and have less than a sixth-grade education. Of these 3 million, only about 20,000 to 30,000 are

UFW members and benefit from collective bargaining with their employer.

History of the Union

It was these demographic realities, which are markedly better now than in 1962, that caused many to tell César Chávez and Dolores Huerta that unionizing farm workers was impossible, a notion they rejected after having learned from Sal Alinsky and the Industrial Areas Foundation (IAF) about community-based organizing. Both had worked for the Community Service Organization (CSO) in California under Fred Ross and embodied the union's motto, "Si Se Puede—It can be done."

The first contract in 1966 resulted from a U.S. Senate Subcommittee Hearing held by Robert F. Kennedy in March of that year, the UFW's first 340-mile march from Delano to Sacramento, and a four-month boycott. The combination of tactics, both labor and social justice, moved the plight of farm workers beyond those immediately affected to church leaders, environmental activists, urban labor unions, students, and many others. In 1968, Chávez added the new tool of the fast to the UFW, refusing food for 25 days to dissuade more agitated members from violence. In 1972, the union became an independent affiliate of the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), changing its name to the United Farm Workers of America, AFL-CIO.

Throughout the 1970s, table grape, wine grape, and lettuce boycotts and strikes forced growers across the state of California to sign contracts. By the early 1980s, at the apex of the union, more than 40,000 workers were covered by UFW contracts. The election of a Republican president from California in 1980 and a Republican state governor in 1982 rolled back union gains through lack of enforcement of existing laws. Contracts were broken and workers blacklisted, and Chávez began a third fast in 1968 at age 66, his longest, 36 days. The fast took a serious toll on his health, and five years later, on April 23, 1993, Chávez died. He was succeeded by UFW first Vice President Arturo Rodriguez. Since Chávez's death union membership has risen and the union has moved into major campaigns in strawberries and mushrooms. It successfully created a state and national holiday in honor of the fallen leader. The UFW also strategically increased its lobbying efforts to alter industry

and statewide working standards, viewing these actions as more effectual than negotiating rights and conditions one grower at a time.

UFW Strategy and Symbols

The UFW standardized the use of traditional labor union tactics such as strikes, boycotts (primary and secondary), informational picketing, extensive public relations and educational campaigns (such as through its house organ, *El Malcriado*), and lobbying for legislative change. But the union has also become synonymous with tactics of non-violence, such as the fast and the march (*peregrinacion* or pilgrimage). Affiliated with the UFW is El Teatro Campesino (the Farmworkers' Theater). Luis Valdez created El Teatro Campesino in 1965 on the picket line in Delano. It performed *actos* (acts) in the fields and labor union halls, using workers to embody the issues and political players in these real-life dramas. It was awarded for its political theater prior to launching a more extensive solo avenue separate from the farmworker issues in the 1970s and 1980s.

The flag of the farm workers has become internationally recognized: a black eagle in a white circle on a red background. Many Chicana/o muralists and printmakers incorporate the UFW eagle into their works as a symbol of the Chicano movement. The theme song of the UFW has remained "De Colores," although "El Picket Sign" and the traditional "Solidarity Forever" are always incorporated at events. Musicians such as Los Lobos and Joan Baez performed some of their first concerts for UFW members on the backs of flatbed trucks, or out in the fields on the picket lines. Chávez also wrote the poem "La Oracion del Campesino en la Lucha" (Prayer of the Farm Worker's Struggle), which is often read at meetings and events.

Impact and Legacy of the UFW

The UFW changed agriculture throughout the country, but particularly in California, where it was founded. Unprecedented changes in farm work conditions because of the union include the elimination of the disabling short-handled hoe; contracts requiring rest periods, drinking water, toilets, and hand-washing facilities; and protections against pesticide exposure and poisoning by banning growers from spraying while workers

are in the fields, banning dangerous pesticides like DDT, lengthening the time before field entry after spraying, posting, and employer-provided protective gear, in addition to regular testing of workers for pesticide levels. In some contracts with employers, UFW members are eligible for profit sharing and parental leave, and the elimination of independent farm labor contractors, guaranteeing seniority rights and job security. The UFW also impacted workers' lives by banning employer discrimination and sexual harassment and, in housing, by setting minimum standards for safety and sanitation.

Members with UFW contracts are eligible for health benefits for themselves and their families through the Robert F. Kennedy Farm Workers Medical Plan and a modicum of retirement security through the first pension plan for retired farm workers: the Juan de la Cruz Farm Workers Pension Plan.

The United Farm Workers of America was created with the hope of improving conditions for farmworkers like this family, circa 1935. Many farm workers live below the poverty line, earning an average \$10,000 per year.

In addition to hard-fought contractual changes that must be continually renegotiated and defended, the union has changed laws regulating their work. The 1975 Agricultural Labor Relations Act (ALRA), signed by Governor Jerry Brown in California, rectified a gap in the National Labor Relations Act (NLRA) of 1935 that did not allow agricultural workers to unionize. The ALRA was modified in 2002 by adding mandated binding mediation to force growers to bargain in good faith and uphold the intent of the 1975 law. Current legislation sought by the UFW includes union elections through card-check instead of onsite polling, minimum wage and overtime protections, and greater protections for those working in extreme heat.

Agricultural unions and migrant farm worker rights have expanded across the country even for those not immediately represented by the UFW. The Farm Labor Organizing Committee of Ohio has made substantial improvements for workers in the midwest, east, and new south. It remains arguably the most important and visible organization of the Chicano civil rights movement. The creation of the César Chávez holiday in California requires all primary and secondary school students to learn about the union annually as part of the education code standards, changing public consciousness.

United Negro College Fund

The United Negro College Fund (UNCF) is an international philanthropic organization that has raised more than \$3.3 billion since 1943 in support of black higher education domestically and abroad. Originally used specifically to fund historically black colleges and universities (HBCUs), over the years its focus has shifted to supporting individual students in their pursuit of higher education through a variety of scholarship funds. Today, the UNCF provides funding for more than 60,000 students at over 900 institutions throughout the United States and abroad, while annually dispersing more than \$100 million in grants and scholarships.

Black Higher Education Pre-Founding

The UNCF was established in a precarious financial time in the nation's history. The effects of the Great Depression coupled with the immense strains of World War II left little money available to fund private black institutions of higher learning. The U.S. Office of Education published findings in 1943 stating that between 1930 and 1943, the overall income of black colleges and universities decreased by 15 percent and income from private gifts decreased by 50 percent. During this same period, two of the largest supporters of black colleges—the General Education Board and the Julius Rosenwald Fund—were turning their attention to other projects, leaving black colleges and universities facing significant financial strain.

This financial strain was exemplified in the experiences of the UNCF's leading founder and first president, Dr. Frederick Douglass Patterson. Patterson succeeded Robert Moton as the president of Tuskegee Institute, one of the crown jewels of black tertiary education in the United States. Patterson was the third individual to lead Tuskegee, as Moton was mentored by Tuskegee's founder and initial president, Booker T. Washington. As an adept fund-raiser with strong ties to the white elite in both the north and south, Washington guided Tuskegee for more than 30 years with the help of benefactors who included some of the wealthiest men of the day, including Andrew Carnegie and John D. Rockefeller Jr. Patterson

lacked the contacts of Washington or Moton and found Tuskegee running a deficit of \$50,000 a year when he became president in 1935.

Through correspondence with other leaders of other black colleges and universities, Patterson found that the financial issues faced by Tuskegee were not at all distinct to his institution. In January 1943, he published a piece in the *Pittsburgh Courier* urging private black colleges and universities to pool their resources in order to make a united fund-raising appeal and salvage their institutions' futures. In April 1943, the heads of black colleges and universities, such as Spelman in Georgia, Bethune-Cookman in Florida, Dillard in Louisiana, and several others gathered at Tuskegee at the behest of Patterson. Each of the colleges present had quality "A" ratings, representing only the most elite black private tertiary institutions.

The summit at Tuskegee in 1943 united black college and university presidents for their shared goals of fund-raising and laid the foundation for the establishment of the UNCF. An exploratory committee chaired by Patterson following the meeting studied the budgets of the institutions present and outlined the feasibility of a united campaign. A budget of \$100,000 was set to launch fund-raising efforts for what was originally termed the United College Drive, and in early 1944, the fund-raising work for what would become the UNCF formally began.

Establishment and Early Years

As is the case now, in its first years of existence, the UNCF was able to achieve success through a combination of wealthy, high-powered white advocates and the steady, smaller donations of regular blacks throughout the nation. John D. Rockefeller, Jr., son and namesake of the wealthiest man in world history, chaired the National Advisory Committee. U.S. President Franklin D. Roosevelt and his wife, Eleanor Roosevelt, who were both longtime close personal friends of UNCF cofounder Mary McLeod Bethune, were some of its earliest advocates. Winthrop W. Aldrich, the chairman of the board of Chase National Bank, served as the UNCF's first national treasurer.

These individuals helped build the UNCF in its earliest stages by establishing a robust group of funders to support it. In its first annual campaign

in 1944, the UNCF raised \$765,000, which was triple what the individual member colleges had been able to raise independently the previous year. Relatively low overhead through a large group of volunteer workers at their New York City headquarters allowed most of these funds to go toward supporting the member colleges. The support of volunteers was critical as Patterson became the first president of the UNCF while still serving as president of Tuskegee. William W. Trent, Jr., was brought in as the first executive director of the UNCF to oversee its operations year-round while the member schools' presidents contributed on a part-time basis.

In its second annual campaign, contributions increased by 25 percent to \$1,030,000, proving that the huge initial success of the organization was not short-lived. The late 1940s saw the establishment of area offices as well as the establishment of the National Alumni Council. The area offices served as regional bases from which the UNCF was able to solicit contributions through the work of paid staff. The National Alumni Council was made up of representatives from various private black colleges who worked to raise funds on behalf of the UNCF. These early financial successes and organizational precedents laid a foundation for the organization's future operations that allowed it to thrive in the years to come.

Centrality to Black Higher Education

The impact of the UNCF on the education of blacks in the United States was significant. In 1950, only 50,000 black students were enrolled in higher education. Ten years later, in 1960, that number had increased to over 200,000, with 90 percent of black college/graduate students attending HBCUs. Part of this dramatic increase came as a result of the landmark 1954 *Brown v. Board of Education* Supreme Court decision, which spurred many predominantly white colleges and universities to recruit black students, but much of this increase should also be attributed to the increased funds available to HBCUs that were part of the UNCF to support larger student bodies.

Twelve years after its establishment in 1944, the UNCF contributed to 31 private black colleges, accounting for approximately 10 percent of the budget at each. It is possible that without these critical funds, the schools may not have

been able to remain accredited by the Southern Association of Colleges and Schools (SACS). This accreditation was one of the initial requirements of UNCF membership at the organization's founding. This centrality of import to the sustenance of HBCUs was underscored by Dr. Donald Agnew, the president of the SACS, in stating that no other money had been used more effectively for educational gains than the money provided through the UNCF to member colleges.

The importance of the UNCF was also demonstrated by the clamoring of nonmember HBCUs to gain entrance. This interest led the UNCF to set further formal criteria for admission in 1959. Some of the requirements involved accreditation mandates and degree program stipulations, while others dealt squarely with the member institutions' leadership agreeing to promote the fund's aim of educational opportunity for the greatest in need. Although the UNCF faced some financial issues in the late 1950s, membership was still highly regarded due to the longstanding connections the fund had with major philanthropic organizations such as the Rockefeller Foundation. Ongoing relationships such as these made the organization a powerful force in black higher education.

Perhaps nothing reflects the importance of the UNCF's work more than the magnitude of alumni who went through member schools during the first 40 years of its existence. During this period, member institutions graduated the likes of Toni Morrison, Alice Walker, and Ralph Ellison in literature and Spike Lee, Samuel L. Jackson, and Tom Joyner in entertainment. Educators such as Evelyn Hammonds and Ruth J. Simmons and public leaders such as Douglas Wilder and Angie Brook also became alumni of UNCF member institutions over this time. Finally, civil rights icons Dr. Martin Luther King, Jr., Ruby Robinson, Stokely Carmichael, and Marian Wright Edelman are among those who have been educated through UNCF member schools since 1944. These famous alumni represent a very small number of the estimated 400,000 college graduates throughout the world who have benefited from UNCF support.

Contemporary Fund-Raising and Developments

Over the course of time, the UNCF went through a number of major changes. Vernon Jordan's brief

but impactful tenure as UNCF president from 1970 to 1972 brought numerous new developments at the UNCF. One such change was the development of the slogan “A mind is a terrible thing to waste” by the advertising agency Young & Rubicam. It has since become one of the most iconic phrases in advertising. Jordan, whose background was in business and law, came after several years of national campaign chairmen who led major oil, banking, and pharmaceutical companies such as Standard Oil, the Summit Trust Company, and Bristol-Myers. The support of these individuals during this period spurred UNCF member schools to produce half of the black elected officials, 75 percent of the black Ph.D.s, and 85 percent of the black medical doctors in the nation.

Another new development occurred in 1980 with the establishment of an annual fund-raiser by famed musician and actor Lou Rawls. From 1980 to 2006, Rawls’s annual event has featured stories of students and graduates from UNCF member schools along with musical performances from many famous musicians. This fund-raising vehicle has brought in over \$200 million for the UNCF. During this period, after an initial request of \$20 million by then UNCF president Charles Edley, Walter Annenberg committed \$50 million to the UNCF in 1990. This marked one of the largest gifts in American history to higher education. Annenberg made his donation contingent on the UNCF raising \$200 million in matching funds, which was accomplished in 1997.

Perhaps the most significant shift that has occurred over the last 30 years is how funding from the UNCF is used. Whereas the UNCF was founded specifically to support HBCUs, the UNCF now also funds individual students regardless of what school they attend. This shift has coincided with the rise in black enrollment at predominantly white schools throughout the nation brought about through the elimination of de jure segregation in U.S. schools, affirmative action, and other developments. This shift has also come as many HBCUs struggle to maintain high levels of enrollment and funding, struggles that threaten their collective future.

Presently, the UNCF maintains its role as a critical funding source to schools and students throughout the nation. Over 10,000 scholarships, fellowships, and internships are awarded

annually, and strategic partnerships with the Bill & Melinda Gates Foundation, the Walton Family Foundation, and Merck have expanded the organization’s impact even further. Over \$1.5 billion has been raised in the past 10 years alone, reflecting an average annual intake of \$150 million—1,500 times more than the initial \$100,000 used to initiative fund-raising efforts nearly 70 years ago. These resources continue to help make the UNCF a critical player in higher education for black students and others throughout the nation.

United States v. Bhagat Singh Thind (1923)

Although many Americans assume that racial categories are natural, self-evident, biological divisions of humanity, race is actually a socially constructed and arbitrarily defined concept. Racial categories and their definitions have evolved from a series of laws, policies, and court decisions over the course of the nation’s history. During the early 20th century, for example, the U.S. government did not have an official definition of “whiteness” to clearly delineate who was included and excluded from this racial category. Although the policy of hypodescent (also called the “one-drop rule”) had been used since the slavery era

to exclude persons of known black ancestry from being classified as white, the social positioning of Asian immigrants within American constructs of race during the early 20th century resulted in a series of key court cases.

Takuji Yamashita: Asian American Civil Rights Pioneer

Largely overlooked in the annals of American civil rights history, Takuji Yamashita posed one of the first challenges to racially discriminatory policies that barred Asian immigrants from becoming naturalized U.S. citizens. The Naturalization Act of 1790 restricted the right of immigrants to apply for U.S. citizenship to “free white persons,” while the federal government extended citizenship to former slaves following the Civil War. A Japanese national, Yamashita migrated to the United States in the 1890s and graduated from the University of Washington’s law school in 1902.

Although he passed the state’s bar examination, the Washington Supreme Court blocked Yamashita’s bar application on the grounds that his ineligibility to become a naturalized U.S. citizen precluded him from practicing law in the United States. Yamashita responded by arguing that the denial of naturalization rights to Asian immigrants was incompatible with the basic values of “the most enlightened and liberty-loving nation of them all.” Yamashita argued his case before the Washington Supreme Court, but the court ruled against him. However, on March 1, 2001, the Washington Supreme Court reversed its decision rendered 99 years earlier and posthumously admitted Yamashita as an honorary member of the state bar. Washington governor Gary Locke, the first Chinese American governor in U.S. history, presided over the ceremony accompanied by 17 of Yamashita’s descendants.

Takao Ozawa v. United States (1922)

The U.S. Supreme Court considered the case of Takao Ozawa in November 1922. Ozawa, a Japanese national who immigrated to the United States in 1894, graduated from Berkeley High School in northern California, studied at the University of California at Berkeley, felt highly assimilated into American society, and applied to become a naturalized U.S. citizen in October 1914. Ozawa resided in Hawai‘i at the time he

filed for naturalization. The U.S. District Court of the Hawai‘ian Territory (Hawai‘i did not become a state until 1959) rejected Ozawa’s application for citizenship on racial grounds, noting that Ozawa was a member of the “Japanese race” and not “white.” Ozawa responded to the court’s ruling by suing the federal government for the right to naturalize. After both a U.S. District Court and the Ninth Circuit Court ruled against him, his case reached the U.S. Supreme Court.

Interestingly, Ozawa’s lawsuit did not challenge the legality of the racial restrictions contained in U.S. immigration policy. Instead, he sued on the grounds that, on the basis of his complexion, he should be considered “white” and therefore eligible for naturalization. In effect, Ozawa’s lawsuit contended that Japanese persons should be legally classified as “white” by the U.S. government. In addition to citing his light complexion, Ozawa asserted his high degree of acculturation to American society to support his claim for the right to naturalize. He pointed out that he felt no connection to Japanese society, that he belonged to an American church, that he had married an American woman, and that only the English language was spoken in his family’s home.

Nevertheless, the Supreme Court ruled against Ozawa and upheld the District Court’s initial rejection of his application for naturalization. The Supreme Court decision maintained that skin color could not be used as the benchmark of racial categories because various complexions and skin tones are found among members of any particular racial group. Invoking the common anthropological terminology of the day, the Supreme Court held that Japanese were not “Caucasian” but “Mongoloid” and, consequently, not “white,” despite the relatively light complexions of Ozawa and his coethnics.

United States v. Bhagat Singh Thind (1923)

Within months of its *Ozawa* ruling, the U.S. Supreme Court rendered another landmark decision regarding racial classification. Bhagat Singh Thind, a Punjabi Sikh immigrant from India who had graduated from the University of California, Berkeley, and served in the U.S. Army during World War I, took his case to the high court after being denied the right to naturalize. Like Ozawa’s, Thind’s case did not attempt to overturn the

racial restrictions that marked the naturalization process, but instead sought to have the plaintiff's "race" recognized as "white." Given the recent timing of the *Ozawa* ruling, which had essentially conflated whiteness with Caucasian ancestry, Thind and his attorneys remained optimistic that the Supreme Court would rule in their favor. Of particular significance to Thind's case was the fact that anthropologists during the early 20th century generally regarded the relatively lighter-complexioned inhabitants of northern India, from where Thind had migrated, as belonging to Aryan or Caucasian racial stock.

Once again, the Supreme Court ruled unanimously against an Asian immigrant seeking to naturalize. Justice George Sutherland, who authored the court's opinion for this case, recognized that Thind had "purity of Aryan blood" but nonetheless was not "white" or "Caucasian," according to popular American understandings of these terms. Sutherland invoked the presumed intent of the Naturalization Act of 1790 in the court's opinion:

. . . the original framers of the [naturalization] law, were intended to include only the type of man whom they knew as white. The immigration of that day was almost exclusively from the British Isles and Northwestern Europe, whence they and their forebears had come. When they extended the privilege of American citizenship to "any alien, being a free white person," it was these immigrants—bone of their bone and flesh of their flesh—and their kind whom they must have had affirmatively in mind.

In effect, the Supreme Court's ruling in the *Thind* case declared that all whites were Caucasian, but not all Caucasians were white. Whereas the court invoked contemporary scientific and anthropological discourses of race to exclude Japanese persons from the social boundaries of American whiteness in its *Ozawa* decision, it conveniently disregarded anthropological theories of race to exclude northern Indians from any claim to whiteness with its decision in the *Thind* case.

Following the *Thind* ruling, the U.S. government retroactively stripped several naturalized Asian Indian immigrants of their U.S. citizenship.

Not until 1946 did the United States reverse this policy and permit Indian immigrants to become American citizens, a move that some historians and legal scholars suggest was driven by the U.S. government's prescience that India would become an independent nation and a major world power within a few years.

Universal Negro Improvement Association and African Communities League

The Universal Negro Improvement Association and African Communities League, usually called the Universal Negro Improvement Association (UNIA), was the largest and most influential black nationalist organization of the 20th century. Founded by Marcus Mosiah Garvey in Jamaica in 1914, the UNIA emerged as a mass movement promoting racial pride, black self-sufficiency, and the establishment of an autonomous black nation-state. Although organizations like the National Association for the Advancement of Colored People (NAACP) generally attracted members from higher social and economic levels, the UNIA captured the imagination of the working class and drew an impressive following of African-descended people in the United States and abroad.

A charismatic personality, Marcus Garvey served as the UNIA's president general, actively promoting his nationalist ideas during the 1920s. Born on August 17, 1887, in St. Ann's Bay, Jamaica, Garvey became politically active during his late teens. While working as manager of a local printing establishment in 1905, he participated in a strike in the capital of Kingston.

In the years that followed, Garvey traveled extensively throughout Latin America, where he witnessed the common plight of African-descended people. These experiences greatly shaped his views and provided the impetus for his decision to establish an organization that sought to unite black people throughout the globe. With the assistance of Amy Ashwood, who would later become his first wife, Garvey oversaw UNIA affairs in Kingston, Jamaica, before relocating to Harlem, New York, where he incorporated the organization in June 1918.

At its peak, the UNIA attracted an estimated 2 million members and had approximately 1,000 chapters in more than 40 countries including South Africa, Cuba, and Canada. Women joined the organization in substantial numbers and generally participated in the two central female auxiliaries, the Black Cross Nurses and the Universal African Motor Corps. Amy Jacques Garvey, one of the leading female voices in the organization (and Garvey's second wife), became editor of the women's page of *Negro World*, the UNIA's official newspaper. Established in 1918, *Negro World* was the primary vehicle through which Garvey disseminated his nationalist ideas, often referred to as Garveyism. With an impressive readership in places as diverse as Dahomey and Australia, the *Negro World* became one of the most influential black newspapers of the 20th century.

Through the pages of *Negro World*, Garvey promoted a line of black-owned businesses including garment factories, grocery stores, and restaurants. Committed to improving the social and economic conditions of African-descended people, Garvey established the Black Star Line Steamship Corporation (BSL), the largest and most significant of these UNIA business ventures. Selling shares of stock for \$5 each, Garvey raised enough funds to launch the first ship, the *Yarmouth*, on September 19, 1919. In addition to transporting commercial products throughout

Marcus Mosiah Garvey was a staunch proponent of Pan-Africanism and black nationalism. A statue stands in Trinidad, Tobago, in his honor, dedicated by the African Advancement Association, touting him as a "Pan African Nationalist Hero."

the Caribbean and West Africa, the BSL provided a means through which black people could travel without discrimination. Garvey also envisioned using the BSL as the primary means to transport people of African descent to West Africa.

Although the BSL represented one of the UNIA's most significant ventures, it would also become the subject of much scrutiny. Long determined to deport Garvey, federal officials, under the instruction of J. Edgar Hoover, began to build a case against Garvey based on BSL stock sales. On July 12, 1922, Garvey was arrested for mail fraud, allegedly having used U.S. mail to promote and sell BSL stock for ships that had yet to be purchased. In 1923, he was found guilty of the

charge, and two years later, he began serving a five-year term at the Atlanta Federal Penitentiary. After numerous attempts to appeal his conviction, Garvey was ultimately pardoned by President Calvin Coolidge and ordered to leave the country. On December 2, 1927, in the presence of more than 500 supporters in New Orleans, Garvey was deported to his native Jamaica. He died in London 13 years later, on June 10, 1940.

Although the UNIA gradually declined during the early 1930s, Garvey's ideas left a lasting impact on the lives of millions throughout the African diaspora. In the decades following his death, a number of organizations (such as the Nation of Islam) and black leaders (including Malcolm X) drew widely on Garvey's ideas. Even today, Garvey's message of racial pride and black political and economic empowerment continue to inspire countless black men and women in the United States and across the globe.

Communications has expanded into a media empire and today owns two broadcast television networks, a cable television network, a radio network, a Latin music-based record company, and Internet communications outlets. The company's television networks comprise 26 owned and operated stations, 66 local affiliates, and more than 1,800 cable affiliates. Univision made history in September 2010 when it became the first non-English-language channel in American history to have the highest ratings among the highly coveted 18- to-49-year-old demographic. Univision is headquartered in Los Angeles, California.

The Early Years

Despite its contemporary status as an international media giant, Univision had humble origins. In 1961, Rene Anselmo, a Massachusetts native, purchased the San Antonio, Texas-based television station KWEX-TV. Anselmo transformed the station into the Spanish International Network (SIN), which was owned and operated by the Mexico-based broadcast corporation Telesistema Mexicano. Telesistema Mexicano provided SIN with the maximum amount of financing a foreign-based broadcaster was legally permitted to supply to a U.S.-based station (20 percent). The Mexican broadcast company also supplied SIN with all of its programming, although Anselmo did attempt to establish local news programming.

KWEX became the first exclusively Spanish-language channel in the United States, and the station provided programming to the local Spanish-speaking and Latino (primarily Mexican American) population of San Antonio. The success of KWEX led SIN to establish other Spanish-based television stations in other regions. By 1968, the network had established Spanish-language television stations in Los Angeles, Phoenix, and New York City.

The Spanish-speaking population of the United States increased dramatically during the 1970s and 1980s as a result of high rates of immigration from Mexico, Cuba, the Dominican Republic, and Central America. These trends served to expand SIN's broadcasting reach and raise its profits by providing the network with an ever-increasing source of potential viewers. SIN launched a premium subscription-based, Spanish-language cable network, Galavisión, on April 2, 1979. Based in Los Angeles, Galavisión broadcasts motion

Univision

Univision Communications, Inc., is the largest Spanish-language media corporation in the United States. The company is perhaps best known for its television network, Univision, which was the first Spanish-language television channel launched in the United States. Since the 1970s, Univision

pictures, sporting events, and *telenovelas* to paying customers in Florida, Arizona, Colorado, and New Mexico. By 1984, the cable network had gained 100,000 subscribers, although Galavisión dropped its premium status and became a basic cable channel three years later. By the end of the decade, more than 300 cable providers in a dozen states carried Galavisión.

Improvements in satellite technology, along with the growing Hispanic/Latino population in the United States, made SIN the dominant provider of Spanish-language television programming in the United States throughout the 1980s. By 1982, SIN controlled 33 of the 35 Spanish-language TV stations in the nation. The company's profits more than quadrupled in less than a decade, growing from \$10 million in 1978 to \$45 million in 1984. SIN was renamed Univision in 1987 after the network sold its TV stations to Hallmark.

Univision soared to new heights during the 1990s, when Nielsen Media Research, which calculates the advertisement-contingent Nielsen Ratings that measure a television program's level of viewership, launched its Nielsen Hispanic Television Index (NHTI) in 1992. Also in 1992, Hallmark sold the network to a partnership comprising A. Jerrold Perenchio (an Anglo television producer), Televisa (a Mexican broadcast company), and Venevisa (a Venezuelan broadcast company). The creation of a ratings system for Spanish-language television provided an objective measure by which Univision could court advertisers to purchase airtime on its stations. By the mid-1990s, Univision catapulted to the position of fifth-most-watched network in the United States, after the Big Three (NBC, ABC, and CBS) and Fox.

By 1992, Univision's revenue exceeded \$200 million, and American companies began to take note of the tremendous purchasing power of the Hispanic/Latino consumer market—at that time still a relatively untapped source of clientele. However, the rapidly growing Hispanic/Latino population of the United States had diversified considerably since Univision's origins in the early 1960s, with sizable communities of Caribbean Latinos settling in Florida and the northeast.

As Univision's scope reached more Latino viewers throughout more of the country, the network became a contested space over whose version of *latinidad* the network should promote. For

example, some Puerto Rican, Cuban, and Dominican viewers criticized Univision and Galavisión for the channels' excessive focus on programming clearly intended for Mexican and Central American viewers, while some Mexicans criticized Galavisión for relocating its headquarters to Miami in 1989. Miami has a large Cuban American population, which led some Mexican viewers to worry that the network would shift toward a more Cuban-oriented programming lineup.

As the 1990s came to a close, Univision controlled 83 percent of the total Spanish-language television programming in the United States. Popular programs on the network included *Despierta America* (a Latino counterpart to *Good Morning America*), *Cristina* (an Oprah Winfrey-esque talk show hosted by Cuban refugee Cristina Seralegui), *Noticiero Univision* and *Primer Impacto* (two evening news programs), *Sábado Gigante* (a Saturday evening variety show), and a variety of *telenovelas*. Anchored by Mexican newscaster and journalist Jorge Ramos, *Noticiero Univision* became the highest-rated Spanish-language news program in the United States. By 1997, Univision's revenues had increased to \$460 million.

Political Coverage

In the 21st century, Univision expanded its coverage of the American electoral process by hosting a series of political debates and interviews with presidential contenders from both the Republican and Democratic Parties. A Univision debate scheduled for September 16, 2007, to which all Republican candidates seeking their party's presidential nomination in the upcoming 2008 election were invited, drew attention for its lack of response. Only Arizona Senator John McCain, the eventual 2008 Republican presidential nominee, accepted Univision's invitation, leading Latino journalists and political scientists to question how long the Republicans could continue to overlook Latino voters and remain a viable national party. During the 2012 campaign, however, both Democratic incumbent President Barack Obama and Republican nominee Mitt Romney made appearances on Univision and fielded tough questions from hosts Jorge Ramos and Maria Elena Salinas.

Uprooted, The

The Uprooted is likely the most influential book ever written on the history of European immigration to the United States. Written by historian Oscar Handlin and first published in 1951, *The Uprooted* chronicles the migration of the millions of Europeans who came to the United States in the second half of the 19th century and first few decades of the 20th century. It was awarded the Pulitzer Prize for history in 1952. The book's central premise—that alienation and a sense of being uprooted were the defining characteristics of the immigrant experience—led to an outpouring of new scholarship in immigration history, much of which challenged or offered an alternative to Handlin's interpretations. Ultimately, *The Uprooted* changed the way historians wrote about immigration and forced them to reassess its relationship to U.S. history. As Handlin noted in the book's now famous first lines, "Once I thought to write a history of the immigrants in America. Then I discovered that the immigrants *were* American history."

A work of historical synthesis written in accessible prose and narrative style, *The Uprooted* was meant to appeal to a broad readership. Although based on archival research, newspaper articles, and the firsthand accounts of immigrants, the book contains no footnotes. Its chapters are organized thematically in the hope of capturing various aspects of the prototypical immigrant experience.

The Uprooted was one of the first books to focus on how immigration changed immigrants

rather than how immigrants changed their adopted country. As a result, the story starts in peasant villages and bustling European cities where demographic pressures and a lack of food led to large-scale migration to northeastern American cities over the course of the 19th century. Handlin then describes the arduous conditions migrants endured while crossing the Atlantic and the many challenges they faced upon arriving in the United States.

The majority of the book is dedicated to the new social, cultural, political, and economic realities and the many challenges immigrants faced in America. Handlin tells of the dangerous working conditions in urban factories where unskilled immigrant laborers toiled with few opportunities for upward mobility. Chapters on "The Ghettos" and "The Shock of Alienation" probe the physical and emotional hardships immigrants faced. A chapter on "Religion as a Way of Life" describes Christianity's increasing influence over immigrants, and a chapter on "Generations" explores shifting familial relations and the growing differences between the first-generation immigrants and their children.

Tying these chapters together is the pervasive sense of alienation, rather than belonging, that immigrants felt. Indeed, *The Uprooted* paints a bleak picture of immigrant life, one best characterized by loneliness and despair. According to Handlin, the experience of being uprooted was to blame.

In addition to being widely praised, *The Uprooted* generated serious debate among immigration historians. Many questioned Handlin's decision to write in generalities about "the immigrants," "the peasants," and "the newcomers." In the 1960s, scholars like Rudolph J. Vecoli challenged Handlin's simplistic depiction of a uniform, static, premodern European peasant culture and argued that the distinct experiences of Italian, Russian, and Irish immigrants could not be clumped together. According to Vecoli, a model immigrant type or single immigrant experience did not exist.

In the decades that followed, scholars such as John Bodnar advanced other paradigms, including the idea that immigrants were transplanted rather than uprooted. Contrary to Handlin, who depicted precapitalist peasant villages, Bodnar

identified European capitalism as the driving force behind migration. He also argued that Handlin overstated the supposed rupture between the old and new worlds. Recently, an increasing number of historians have sought to trace the transnational ties between Europe and European immigrants in the United States.

Although *The Uprooted* purports to tell “the epic story of the great migrations that made the American people,” the focus is limited to Europeans who immigrated during the 19th and early 20th centuries. By concentrating on European immigration to the northeast, *The Uprooted* fails to explain the important role played by Asian and Latin American immigrants in the development of the American west and southwest. Immigration from China, Japan, Korea, the Philippines, and Mexico is not addressed, even though large numbers of people arrived from these countries during the same period. The effect, even if unintended, is to reinforce the false notion that immigration to the United States has been exclusively European.

Moreover, by framing the history of European immigration to the United States as a process of being uprooted, Handlin lent support to the Chicago School’s problematic theory of one-way immigration, permanent settlement, and assimilation. Historians have since shown that 30 to 40 percent of European immigrants eventually returned to the countries they left.

Despite *The Uprooted*’s shortcomings, it remains one of the most important books on the history of immigration to the United States—not only because it was one of the first works to place the immigrant experience at the center of American history, but also because it galvanized the field of immigration history for decades to come.

Uruguayan Americans

Uruguay is a small South American country on the Atlantic coast, bordered by Brazil and Argentina. Parts of the country were colonized by both the Portuguese and the Spanish, and both of their languages persist among the European population today. The country has been independent since 1828. Unlike most of Central and South America, the majority of the population—88 percent—is white (Spanish, Italian, French, and German), with a mestizo minority of 8 percent. A disproportionate number of mestizos and Afro-Uruguayans have been represented in Uruguayan immigration, though most immigrants are white and many identify strongly with their European heritage, identifying as German Americans as much as Uruguayan Americans.

According to the 2010 Census, there are 50,538 Uruguayan Americans, making them one of the smaller Hispanic groups in the United States. The number is relatively small primarily because most Uruguayan immigration has taken place during the last 60 years and because Uruguay is the second-smallest country in South America.

Emigration From Uruguay

For more than a century after independence, Uruguayans did not immigrate to other countries very often; usually, Uruguay was a destination for immigrants. This changed in the mid-20th century, when the economic depression that began after World War II continued for a lengthy period of time, even after an initial recovery. Job crises and currency problems plagued the country in the Cold War years, and a dictatorial military regime had risen to power. For the first time, large numbers of people left the country; those who could afford to do so, for the most part, were the well-educated middle and upper classes, and young

people who could pursue an education elsewhere and then look for work.

This initial immigration made things in Uruguay worse, as the combination of the country's economic troubles and the sudden reduction in the population of well-paid taxpayers led to a shortage of funds in the social security system. This, in turn, both motivated further immigration and worsened the economic problems. Over the course of 25 years, about one-tenth of the population left the country, and only one-tenth of that tenth returned later (after receiving an education or earning money for one's family back home). This vicious circle continued throughout the 20th century, despite brief recoveries and occasional reforms.

Most Uruguayan émigrés left for Argentina, with which the country has many cultural and linguistic ties. Those who came to the United States settled in New York City, New Jersey, and Long Island, where existing South American communities could be found, or Florida, where there was a large Spanish-speaking community. A number of Uruguayan Americans have also settled in the Washington, D.C., area.

The dialect of Spanish spoken in Uruguay is Rioplatense Spanish, named for the viceroyalty of the Rio de la Plata, of which Uruguay was part during the colonial era. The language is heavily influenced by the number of European immigrants to Uruguay after its independence. Like North America, Uruguay has a history and demographics shaped by massive waves of immigration in the 19th century. In the same way that the United States is no longer predominantly Anglo-American but has instead become a melting pot of other heritages, Uruguay also differs greatly from other South American countries whose citizens are still descended mainly from Spanish colonists and the indigenous population. Rioplatense borrowed and adapted many indigenous words, as most of the Spanish spoken in the Americas has done. Because of these two sets of influences, as well as local language evolution, Rioplatense includes a vocabulary of about 9,000 words that are not used elsewhere in the Spanish-speaking world, many of them terms that are part of the average speaker's basic vocabulary.

Uruguayans in the United States

Significant Uruguayan Americans include ballet instructor Miguel Terekhov; economist Carlos

Vegh; Ida Vitale, an important art critic; billiards player Pedro Piedrabuena; Minnesota Stars soccer player Martin Nunez; actress Elizabeth Melendez; and actress Natalia Cigliuti, best known as Sam Harper on *The Glades*.

Though their number is small, many of Uruguay's immigrants to the United States have been well educated and from middle-class or prosperous backgrounds, allowing them to find work without the difficulty faced by some immigrant groups. Further, a great many of them were fluent in English when arriving, making assimilation easier; even those who were not found that there were sufficient Spanish-speaking communities in the United States. Uruguay has a largely urban population, and its capital, Montevideo, is a modern, cosmopolitan, multiethnic city. Many Uruguayans have commented that the most difficult adjustment to the United States was simply the difference in climate.

Ute

The Ute are a southwestern Native American tribe within the Numic or Shoshonean language family. They call themselves the Nuutsui or Nuciu, which translates as "the people." Traditional Ute territory covered parts of Colorado, Nevada, New Mexico, and Utah, where many Ute still reside. The Ute shared many characteristics of the traditional nomadic Plains Native American culture. Many modern Ute still reside on the Uintah and

Ouray Reservation located near Fort Duchesne, which is among the largest of the U.S. reservations, while others live off-reservation.

The seven original bands composing the Ute were the Capote, Mouache, Parianucs, Tabeguache, Unitah, Weeminuche, and Yampa. These bands often intermarried but were not governed by a central tribal organization. Male chiefs governed the different bands. The traditional Ute lifestyle was seasonally nomadic, subsistence-based, and largely reliant on hunting and gathering. The men were the traditional hunters and warriors, while the women were the traditional gatherers and were responsible for childcare and the household. Food sources included deer, antelope, elk, buffalo, rabbits and other small game, birds, fish, insects, roots, pine nuts, seeds and seed grasses, and fruits.

Many Western Ute lived in wickiups, a type of round or cone-shaped dwelling, whereas Eastern Ute generally lived in cone-shaped tepees. Their nomadic lifestyle and potential danger from raids encouraged mobile camps that were easily packed, moved, and reestablished. Clothing consisted of fringed deerskin dresses and shirts, breechcloths, leather leggings, buckskin shirts and moccasins, and yucca fiber sandals. Hair remained long unless cut for mourning, and facial tattoos and face painting was common. Tools and weapons included bows and arrows, spears, shields, and nets made of bone, stone, wood, and animal hides.

Ute social organization centered on extended family groupings, and the bands practiced polygamy. Their religious beliefs, like those of many Native Americans, were animistic and polytheistic and based on a strong respect for the natural environment, and animals such as the bear were worshipped. The Bear Dance and Sun Dance were key religious and social ceremonies. Artistically, the Ute were known for their baskets, pottery, and beadworking. Ute history was preserved orally.

Relations With Euro Americans

Early contact with Euro American settlers was sporadic, limited to encounters with explorers, trappers, and traders. Initial relations with Euro Americans were largely friendly. The Ute also maintained shifting alliances and hostilities with the neighboring Navajo, Comanche, and Pueblo tribes. Cultural adoptions from Euro Americans and other tribes included dress, agriculture, and

horses. Intercultural contact also brought the Ute into the trade in livestock, horses, and slaves. The adoption of more efficient horseback hunting as well as the wholesale slaughter of the buffalo by the United States all but eliminated the Great Plains buffalo herds that had formed the centerpiece of traditional western Native American culture.

Mormons were the first Euro Americans to arrive and settle in Ute territory in large numbers. A period of increasing competition for land and resources soon developed as the Euro American population expanded, resulting in outbreaks of hostility such as the Walker War of 1853-54. The Northern Ute were generally more resistant to cultural change than the Southern Ute. Some Northern Ute bands raided nearby Mormon settlements seen as threatening their traditional territory. Resistance to forced attempts at settled farming and removal to reservations resulted in the Black Hawk War of 1863 to 1868.

During the mid- to late 1800s, the Ute entered into treaty agreements with the federal government and relocated to reservations such as the Uintah and Ouray Reservation located near Fort Duchesne. The Ute chief Ouray and his wife, Chipeta, were among those Native Americans who traveled to Washington, D.C., in 1870 to meet with federal government representatives and achieve diplomatic peace. Many Ute, however, resisted assimilation into U.S. society. They sought to maintain a Ute and pan-Indian identity through such practices as the Sun Dance religion and use of peyote.

Current Statutes

The Native American population grew from the 2000 to the 2010 U.S. Census. The 2010 figures count 11,491 people who identified themselves as of full or partial Ute ancestry out of a total of over 5.2 million Native Americans. The total U.S. population in 2010 was 1.7 percent Native American, 22 percent of whom lived within American Indian areas such as reservations.

There are currently three separate Ute tribes, led by elected tribal councils. Elected representatives of the three bands incorporated as the Northern Ute Tribe in the early 20th century. The tribe is headquartered in Fort Duchesne. Most Ute reside on the Uintah and Ouray Reservation in northeastern Utah, which is one of the largest of the Native American reservations within the United

States. Tribal members receive per capita monies from the tribe. Lawsuits brought in the 20th century regained tribal control over portions of the reservation land that had been allotted to individuals and families or sold to non-Indian ownership under the Dawes Act of 1887. Modern economic activities include farming, cattle ranching, and the mining and production of oil and natural gas. The tribe has also been involved in western water resource issues and the related Central Utah Project. Ceremonial dances, powwows, traditional crafts, language, and storytelling have helped preserve its cultural heritage.

V

Venezuelan Americans

As of the 2010 Census, there were 177,866 self-identified Venezuelan Americans in the United States. An exact figure is difficult to determine because Venezuelan immigration was not accurately tracked until the early 20th century, and such immigrants were usually reported as South Americans. Furthermore, Venezuela attracted its own considerable immigration, and when the 19th century turned chaotic for the country, many first- and second-generation European immigrants left Venezuela for the United States but may have been recorded in immigration and census records not as Venezuelans or even South Americans, but according to the European country of their ancestry.

Venezuela is on the northern coast of South America, bordered by Brazil, Colombia, and Guyana. Having been colonized by Spain in the early 16th century, it became independent in 1830 after a brief period as part of Colombia. The population is roughly half mestizo, with whites forming the largest minority at 42 percent, and significant minority populations of African Venezuelans and indigenous peoples. After a tumultuous 19th century, Venezuela discovered oil in the early 1900s and has since developed some of the world's largest oil reserves. In the 20th and 21st centuries, the rise and fall of oil prices has had a significant impact on the Venezuelan economy, which has

also been driven by political crises. The 1990s were an especially difficult period, foreshadowed by thousands of deaths by rioting in 1989, followed by two attempted coups, the impeachment of the president, poverty rates of 66 percent, 100 percent inflation, and finally a revolution and the drafting of a new constitution in 1999.

Most South Americans settling in the United States in the 19th and early 20th centuries congregated in urban centers, especially in Los Angeles and San Francisco—where there was a vibrant existing Spanish-speaking community and ample land and job opportunities—as well as Chicago and the northeast urban hubs. Without accurate figures about Venezuelan immigration at the time, we can make only an educated guess that there were several thousand Venezuelan Americans by the first half of the 20th century. The number is unlikely to have been significantly greater than that, unless there is a significant population of Americans of Venezuelan ancestry who do not identify as such, and who therefore have not been revealed by census data once the census began tracking country-specific ancestry rather than simply Hispanic or South American.

Sustained Venezuelan immigration began in the 1980s, during modern Venezuela's turbulent period, and has continued since. A number of Venezuelans arrived earlier than that for educational purposes, remaining and finding work, and

later being joined by relatives, but the consistent immigration since the late 20th century has been driven by Venezuela's political turbulence and economic calamities.

Most Venezuelans today settle in Florida or New York City. The largest Venezuelan American community is in southern Florida, and the 20 communities with the largest Venezuelan population by percentage are all in Florida, with Doral (8.22 percent), Weston (4.1 percent), Fountainbleau (3.14 percent), the Hammocks (3.14 percent), Key Biscayne (2.36 percent), and North Bay Village (2.15 percent) leading the pack. Venezuelans tend to retain a strong connection to their home country and to visit it often, sharing news of their country with the rest of the community upon their return.

Despite Venezuela's economic troubles, the population is well educated and well skilled, and Venezuelans in the United States often work in white-collar fields like banking and telecommunications. Federal jobs are a growing sector for the Venezuelan American community. Many also come to the United States with petroleum industry experience, especially those who settle along the Gulf Coast or in Houston, Texas.

Venezuelan Americans are overwhelmingly Catholic but less active in church than most Hispanic American groups and less likely to observe religious holidays outside the major holidays celebrated by the greater American Christian community, such as Easter and Christmas. Women are active in the workforce, but there is in general a greater expectation of women in the family submitting to male authority than one finds in other communities. This is most true of Venezuelans who immigrated from rural Venezuela.

Joropo music, which accompanies Venezuela's national dance of the same name, is popular in the Venezuelan American community, especially among older members and first-generation immigrants. It is played with the harp, *bandola*, cuatro, and maracas, in polyrhythmic patterns; today, a guitar or piano often accompanies. The dance performed to *joropo* is a form of waltz, using waltz turns and hand turns, with the man stomping his feet to the rhythm of the music.

At Christmas, Venezuelans often serve *hallaca*, similar to tamales, with chopped meat, vegetables, and olives surrounded by a masa dough and

steamed in banana leaves. Often, this is a dish that relatives, especially women, can gather together to make while socializing. Popular year-round are arepas, tortilla-like corn cakes made with pre-cooked cornmeal and then split open and filled with various stuffings, like a taco. In the summer, *tizanas* may be made from various fruits, combining fruit juice and fresh chopped tropical fruit like melon, oranges, or pineapple.

Vietnam War

The war between Vietnam and the United States took place in three phases over a 20-year span (1955–75). During this period, Vietnam was divided into two sovereign countries—North and South Vietnam—and became the focus of America's military and political opposition to communism. North Vietnam's government combined

communism with nationalism and had support in both halves of Vietnam. South Vietnam tried but failed to establish democracy with American backing. Although the United States committed vast resources to the Vietnam War, there was no official American war declaration.

In the war's first phase (1955–63), the United States tried to fortify the south's government and military without sending combat troops. The second phase (1964–69) was the peak of U.S. involvement. American forces led fighting against the North Vietnamese Army (NVA) and the National Liberation Front (NLF, better known as Viet Cong). The third phase (1970–75) saw reduction and withdrawal of U.S. forces, followed by a North Vietnamese victory and national reunification.

The Socialist Republic of Vietnam was established in 1975, with Hanoi, the former North Vietnamese capital city, as the new nation's capital. Saigon, the country's largest city and onetime South Vietnamese capital, became Ho Chi Minh City to honor the late Vietnamese revolutionary leader Ho Chi Minh (1890–1969). The war had enormous social and cultural impacts on the diverse peoples of Vietnam and America. The consequences of those traumatic events continue into the 21st century.

Historical Background

In the United States, the Vietnam War stands out for its duration, controversies, and outcome. Cultural values have shaped traditional American expectations about wars: they should be quick, have clear goals and few casualties, and bring decisive American victories. The Vietnam War met none of these expectations.

Early on, most Americans supported the Vietnam War and anticipated a swift victory. Instead, Vietnam became synonymous with frustration and futility. Only the current conflict in Afghanistan has lasted longer. Anticommunism did not compensate for the inconsistency of America's diplomatic, military, and political goals. There were also cultural problems. Few Americans knew about ancient Vietnamese traditions of fighting for independence, and many Americans underestimated Vietnamese intelligence and determination.

Although American intervention in Vietnam began in World War II (1939–45), the Cold War

(1948–89) generated a Vietnamese crisis in which U.S. leaders saw southeast Asia as vulnerable to communism. A “domino theory” shaped American policy: If South Vietnam became communist, its neighbors would fall like dominoes. As leader of the free world, America had to prevent the domino theory from becoming reality.

Leaders of Vietnam's revolution had a very different perspective on national destiny. Vietnam was one of many countries seeking independence from European colonial rule after World War II; Ho proclaimed the end of French colonization in Vietnam in 1945. Although Ho worked with U.S. forces during World War II, he had a long record of partnership with the Soviet Union and China. Therefore, Ho and Vietnam's new government were unacceptable to Cold War America. U.S.-backed France, in its failed attempt to retain Vietnam, endorsed Vietnam's division into northern and southern regions. These and other events kindled war between Americans and the Vietnamese.

Except for aerial bombing and covert missions in North Vietnam, U.S. combat took place entirely in South Vietnam. Problems with the South Vietnamese political and military cultures tended to undermine America's effort. Although South Vietnam's government was not communist, it was authoritarian and unstable. Unlike the NVA and NLF, South Vietnamese troops often lacked determination and discipline. American anxiety about its South Vietnamese ally complicated a war that was intended to be a simple case of fighting communism.

The Vietnam War became a global war. Troops from South Korea, Thailand, the Philippines, New Zealand, and Australia fought alongside Americans and South Vietnamese. China and the Soviet Union sent massive assistance to North Vietnam in the form of weapons, oil, and other resources. Russian and Chinese military advisors worked with the north, but neither country sent combat troops.

Almost 9 million U.S. troops served in Vietnam, most as noncombatants. Of the 58,220 U.S. deaths in Vietnam, 47,434 occurred during battle. White service members accounted for 85 percent of the deaths; African Americans/blacks, 12 percent; Hispanic/Latino (one or more races), 0.6 percent; American Indians/Alaska Natives, Native Hawaiians/Pacific Islanders, and more

than one race/unknown, 0.4 percent each; and Asian, 0.2 percent.

Multicultural Vietnam

Lack of knowledge and negative assumptions about Vietnam and its peoples kept many Americans from recognizing its cultural and demographic diversity. Difficult historical relationships between Americans and Asians were factors. U.S. immigration restrictions of the 19th and 20th centuries targeted China and Japan. World War II and the Korean War brought out anti-Asian xenophobia among many Americans. Such legacies may well have shaped representations of Vietnam as an alien region whose population would be especially threatening as a communist force.

Although ethnic Vietnamese account for almost 90 percent of Vietnam's population, the country is no monolith. Many ethnic minorities have histories in Vietnam, with Chinese the largest group. The Hmong, whose roots are in Laos, and the indigenous peoples of the central highlands (known widely as Montagnards) helped America fight the war.

Regarding religion, most Vietnamese practice Buddhism or Taoism. Roman Catholicism accompanied French colonization and found favor among members of South Vietnam's relatively affluent classes. A sect known as the Cao Dai, whose members blend Catholic, Confucian, and Buddhist ways, have a base in Vietnam's southern regions, close to Cambodia.

Diversity

Diversity has always been notable among those who have fought America's wars. However, Vietnam and its home front contexts put new emphasis on cultural and social differences among troops. Factors in acknowledging diversity included civil rights struggles, ethnic and racial pride, and global resistance to white Western domination.

African American service drew great attention during the war and remains a key topic. The peak years of the African American freedom struggle coincided with the early years of U.S. combat in Vietnam, compelling many to analyze relationships between these transformative events. The lack of positive results in Vietnam and at home became increasingly frustrating. Similarly, although many African Americans benefited from

Vietnamese villagers under detention by the U.S. Army who were suspected of being Viet Cong. North Vietnamese women often fought in combat zones and provided manual labor in the rice fields to supply food for the troops.

civil rights legislation and government efforts at fighting poverty, the persistence of structural racism and the elusiveness of equal opportunity generated impatience. A younger, more assertive generation of black leaders was sometimes more willing than their predecessors to consider Vietnamese people as allies in their struggle.

Although there was no universal African American perspective on or experience in Vietnam, some general facts are notable. Black support for the war tended to be strong, especially in its early stages. African Americans often saw military service as a key to respect and economic empowerment. Regard for President Lyndon Johnson and his pro-civil rights, antipoverty agenda was high among many African Americans; therefore, these supporters hesitated to dispute Johnson on

Vietnam. Surveys also showed that black soldiers were more likely than white soldiers to have positive feelings toward the Vietnamese people.

Anti-Vietnam War sentiment in African American communities and among black leaders intensified as the war unfolded, however. Many activists who challenged southern segregation adapted their ideas and tactics to Vietnam dissent. The most prominent African Americans to reject the war were boxer Muhammad Ali, who suffered professional retribution for refusing the draft, and Martin Luther King, Jr., who pleaded for peace just one year before his 1968 assassination—an event that sparked tensions between black and white troops serving in South Vietnam. Black Panther Party for Self-Defense members took a bold stand by expressing solidarity with North Vietnam and visiting that country.

Vietnam experiences of Latina/os showed some similarities to those of African Americans. Historical, community, and social movement influences were powerful. Military service as a path to assimilation and upward mobility was valued in many Latina/o communities and families; so were duty and honor. Along with working-class identity, these values often led Latina/os to enlistment and away from draft resistance. Antiwar protests by Latina/os stemmed from reasons similar to those that motivated blacks, but their differences were striking. An organized African American movement preceded the peace movement's emergence; for many Latina/os in Los Angeles in the late 1960s and early 1970s who identified as Chicana/os, mobilizing against the war led to the Brown Power action that affirmed culture and ethnicity.

Throughout U.S. history, Native Americans have surpassed all other ethnic groups in per-capita military service rates. Although their numbers remained high in Vietnam and their generational traditions of honoring warriors stayed strong, aspects of that war were especially troubling for Native Americans. These included raids on Vietnamese villages and relocation of their residents, who were poor but fiercely proud of ties to ancestors and land. The designation of enemy territory as “Indian Country” and the “savage” label applied to Vietnamese people were offensive. Many saw the negative influence of Hollywood western and war movies on the conduct of Vietnam warfare and the portrayal of Vietnamese, a

connection reinforced by John Wayne's 1968 film *The Green Berets*.

For many Asian American Vietnam veterans, the empathy that soldiers of color often felt for Vietnamese people took disturbing forms. Asian Americans recall being singled out for abuse during training, being subjected to various restrictions, and being perceived as identical to the enemy. Some Japanese American soldiers had been born and raised in World War II internment camps, an experience that did not always prepare them for being seen as “un-American” even while wearing their country's uniform.

Vietnamese in the United States

The war's destruction of large land areas in Vietnam and other southeast Asian countries drove up immigration rates from those regions to the United States. Before the war, very few southeast Asians were part of America's population with Asian roots. Change came in 1975 with the arrival of South Vietnamese refugees who had relatively privileged backgrounds. Many of these immigrants hailed from cities, had professional skills, and supported American intervention in Vietnam. Their profiles often helped this first wave of Vietnamese immigrants find sponsorship from U.S. citizens.

Second-wave Vietnamese immigrants, sometimes referred to as “boat people,” came to America after South Vietnam's 1975 defeat. Along with Hmong and Montagnard refugees, this cohort included Cambodians fleeing mass extermination in their country. Generally, second-wave immigrants had rural roots and were poor. Many who made it to refugee camps outside their region had survived dangerous departures from Vietnam and pirate attacks on the South China Sea.

Vietnamese Americans have maintained a large presence in major U.S. cities for decades. Their contributions are vital not only to the U.S. economy but also to Vietnam's, which has moved away from socialism and become increasingly involved in global trade. Still, Vietnam remains a poor and developing nation. Monetary remittances from Vietnamese Americans to relatives in Vietnam are crucial to the country's transnational business relationships.

The “model minority” label often given to Asian Americans ignores the diversity of their

communities. This problem has specific implications for Vietnamese and southeast Asian immigrants and their descendants. It is true that Vietnamese Americans have established thriving communities in Louisiana, Texas, California, and elsewhere. For example, Little Saigon in Westminster, California, has been compared to Miami, Florida's Cuban American power base. However, Vietnamese and other southeast Asian immigrants are also more likely than most Asian Americans to live in poverty. The persistence of this problem suggests that for certain groups, economic disadvantage is not confined to the developing world.

Vietnamese Americans

Since the fall of South Vietnam to the communist-controlled North Vietnam in 1975, more than 2 million Vietnamese have fled from Vietnam and resettled in new countries, not counting possibly 1 million other Vietnamese people who did not survive their flight. Unlike the small number of

Vietnamese who chose to live outside the country prior to this event, these more recent immigrants were mostly political refugees who were forced to leave Vietnam because of fears of persecution.

Demographics and Migration Waves

Vietnamese Americans constitute the largest Vietnamese community outside Vietnam. The first group that arrived in the United States immediately after 1975 was made up of mostly political elites, military personnel, and other individuals affiliated with the French and former South Vietnamese governments. By the end of 1975, they numbered 130,000. By 1980, the Vietnamese population in the United States had nearly doubled, to approximately 245,000, as a result of the arrival of the second group, known as “boat refugees,” who were mostly businessmen, Chinese, and middle-class families.

Thereafter, the U.S. government institutionalized a humanitarian program to facilitate the resettlement of mostly Amerasians (people of mixed Vietnamese and American blood) and formerly detained Vietnamese military servicemen and their families. As a result, the Vietnamese American population grew to 615,000 by 1990. It jumped to approximately 1.2 million by 2000. Today, the Vietnamese American population is relatively stable. Its growth is mostly the result of U.S.-born children and Vietnamese who arrived through family unification programs. As of 2010, Vietnamese in the United States constituted 1.6 million, making them the fourth-largest Asian American group.

Vietnamese have been keen on rebuilding and maintaining their religious communities in the United States. For them, religious institutions have served as a primary community gathering center where they could reconnect with each other and transition to life in America. However, to successfully adapt their religious practices to the American multicultural landscape and lifestyle, Vietnamese Americans have had to make strategic changes.

Buddhists

Approximately 65 percent of all Vietnamese Americans are Buddhists. Most of them are associated with Mahayana Buddhist temples attended mostly by other Vietnamese. As in the homeland,

Vietnamese Mahayana Buddhist temples operate as semi-independent institutions. The lack of centralization has created spaces for greater diversities and adoption of new forms of Vietnamese Mahayana Buddhist practices on American soil. For example, unlike in Vietnam, Vietnamese Mahayana Buddhist temples do not strictly follow the lunar calendar to celebrate religious holidays. Instead, they hold their holidays on days and times that can accommodate the availability of members of their congregations. Another major difference compared with temples in Vietnam is the varied availability of abbots to their communities. Because abbots in the United States have to work, the opening hours of Vietnamese Buddhist temples are unpredictable and depend on the abbots' availability. These strategic forms of adaptation have allowed Vietnamese Mahayana Buddhism to flourish and contribute to American cultural diversity.

Catholics

As many as 35 percent of all Vietnamese Americans are Catholic, which is proportionally greater than in Vietnam, where Catholics constitute about 8 percent of the country's population. The over-representation among the overseas group is most likely because many were affiliated with the former Catholic-led government of South Vietnam and feared religious discrimination under communism in Vietnam after 1975.

One of the biggest challenges that Vietnamese American Catholics face is navigating the multicultural landscape of the American Catholic Church and the larger U.S. society. They are relatively much more adherent to conservative forms of worship than other Catholic groups in the United States that have institutionalized post-Vatican II progressive reforms of the late 1960s. They have transplanted these religious traditions onto the American religious landscape, particularly through popular devotions such as Marianism, pilgrimages, and prayers to saints.

Perhaps these unique practices could explain why many Vietnamese Catholics in the United States, even after nearly three decades in the country, continue to prefer to attend their ethnic parishes, while maintaining institutional relationships with local dioceses and Catholics of other ethnic groups.

Caodaists

Caodaism is a syncretistic religion born in Vietnam in 1926. The religion represents God with the symbol of the Left Eye, which is not distinguishable by race, gender, and class. As such, it encompasses teachings of tolerance that aim to create universal harmony between Western and Eastern philosophies, traditions, and rituals.

Unlike Vietnamese Catholics, whose faith is familiar to American society and who enjoy institutional support from local Catholics to rebuild their religious communities in the United States, Vietnamese Caodaists have to retranslate many of their religious practices in order to adapt to life in the new land. Like their Buddhist ethnic counterparts, because of conflicts with work schedules, they regularly congregate weekly or biweekly during the weekend instead of on the 15th and the 30th days of each lunar month.

Similarly, they often reschedule their ceremonial holidays to convenient dates. Moreover, although chants and prayers continue to be read in a Sinitized form of Vietnamese, a few have been translated by Vietnamese Caodai leaders in an effort to encourage participation from U.S.-born Vietnamese Caodaists and as outreach to non-Vietnamese. There have also been discussions about liberalizing the formal dress code for attending religious ceremonies from a white Vietnamese traditional dress to any form of attire in white.

Political Activism

As a result of their traumatic exodus, Vietnamese American civic involvements continue to be concerned with Vietnam, while also treading through the politics of their new, permanent home in the United States. Many studies have shown that the rate of political activism is exceptionally high among immigrants despite language differences and recent arrival. Through their political activism, Vietnamese have raised awareness in the United States about concerns related to Vietnam and have emphasized the significance of working across ethnic boundaries in American politics.

Homeland Politics

Because Vietnamese Americans were forced to leave Vietnam, they continue to be concerned with their homeland. They regularly stage protests against sociopolitical abuses in Vietnam

and those who sympathize with the Vietnamese communist government. This homeland political orientation has been increasingly heightened since the mid-1990s, when the United States lifted its embargo against Vietnam and began rebuilding bilateral trade relations. As Vietnam opened its borders to international trade and diplomatic exchanges, Vietnamese Americans have had more opportunities to further scrutinize their country of origin's human rights records and have gained support from U.S. politicians to endorse necessary actions against Vietnam.

Vietnamese Americans are particularly concerned with religious freedom in Vietnam. After the communist takeover in 1975, many religious institutions and properties were confiscated, and practices and rituals were severely restricted by the Vietnamese government. Although Vietnamese politicians have gradually loosened restrictions toward religious life in order to meet international standards for religious freedom, many Vietnamese Americans have pointed out that these changes are not sufficient and the government continues to harbor many forms of religious suppression, such as the house arrest of Father Nguyen Van Ly and the Venerable Thich Quang Do.

Local Politics

In addition to homeland issues, Vietnamese Americans are also heavily involved in U.S. politics. They are mobilized not only to raise the unique concerns of their ethnic community but also to work together with other Americans in political advocacy and alliances.

A sign of political maturity is evidenced by the increasingly greater number of elected and appointed Vietnamese officials in the United States. In 1992, Tony Lam became the first Vietnamese American elected official when he joined the Westminster City Council. Today, there are many Vietnamese Americans directly involved in politics, and they know how to appeal to their culturally diverse constituent population in order to climb the political ladder. For example, in 2007, John Tran became the first Asian American mayor of Rosemead, California. A year later, Joseph Cao surprised many Americans when he was elected into Congress by a predominantly African American district in New Orleans.

Another sign of Vietnamese American political success is the wide official recognition of the former South Vietnamese flag as the "Vietnamese American Heritage and Freedom Flag." At least 113 city and 11 state governments have recognized the flag. As with nearly all overseas Vietnamese in other countries, Vietnamese Americans consider the flag of Vietnam as offensive and have organized mass demonstrations to remove it. For example, in 1999, a monthlong candlelight vigil of 15,000 people was held in front of a Westminster video rental store that hung the flag of communist Vietnam and a photo of Ho Chi Minh.

Virgin Island Americans

The U.S. Virgin Islands are an American territory in the Caribbean, consisting of Saint Croix, Saint John, Saint Thomas, Water Island, and the surrounding minor islands. Originally inhabited by the Arawak, Carib, Ciboney, and Taino people, the islands were discovered by Europeans on Columbus's second voyage in 1493 and were controlled by a succession of European powers. For most of

the colonial period, they were known as the Danish West Indies, colonized by the Danish West India Company and turned into sugarcane plantations until the abolition of slavery, when they were all but abandoned because of the difficulty of turning a profit without the labor of enslaved people.

Several attempts were made to sell the islands to the United States, but the transfer was not finalized until 1917. Ten years later, U.S. Virgin Islanders were granted American citizenship. As residents of a territory, they cannot vote in presidential elections, and their congressional delegate cannot participate in floor votes, only committee votes. Until 1970, Virgin Islanders were not able to elect their governor, who was instead appointed by the president of the United States. A federal lawsuit was pending as of 2012, in the hopes that it will be decided in favor of granting Virgin Islanders the vote and full representation in Congress. The United Nations includes the U.S. Virgin Islands on its list of Non-Self-Governing Territories, a list that nations are supposed to work to reduce, out of human rights concerns. Water Island was administered separately until 1996, when it was added to the U.S. Virgin Islands territory.

2010 Census

The exact number of Virgin Island Americans is unknown. As of the 2010 Census, 11,674 people listed U.S. Virgin Islander as their ethnicity. British West Indian was listed by 88,043; this ethnicity includes Americans whose ancestry can be traced to the British Virgin Islands, the Bahamas, Barbados, British Guiana, Jamaica, Belize, or Trinidad and Tobago—though several of those have their own ethnic identity categories in the census. It can be assumed that at least a couple thousand of the 88,000 British West Indians are British Virgin Island Americans, which would suggest 15,000 or so as a base minimum Virgin Island American population. The population of the U.S. Virgin Islands themselves is 106,405 as of the 2010 Census, but most residents are Afro Caribbean and do not identify as ethnic Virgin Islanders. The white population of the U.S. Virgin Islands is a little over 7,000, including Hispanic whites, who are predominantly Puerto Rican. Most Virgin Island Americans living on the mainland United States migrated during the 1960s and 1970s.

Languages of the U.S. Virgin Islands

The official language of the U.S. Virgin Islands is English, but Virgin Islands Creole is commonly spoken, with Saint Croix possessing its own unique dialect thereof, known as Crucian. Virgin Islands Creole, which is also spoken in the British Virgin Islands and the nearby Dutch islands of Saba, Saint Martin, and Saint Eustatius, is just called “dialect” by its speakers; the full name is a scholarly term rarely heard in other contexts. The creole formed as a pidgin English spoken by enslaved African people, which was creolized as it was passed on to subsequent generations, along with Dutch influence from the Dutch owners of enslaved people on Saint Thomas and Saint John.

Before the Internet and text messaging, Virgin Islands Creole was not often used in print, but the 21st century has blurred the distinctions between written and spoken language and the assumption of formality on the part of the former. Virgin Islands Creole is spoken and understood by nearly all native-born Virgin Islanders, and to some degree by the Virgin Island American population living elsewhere in the United States. It is not taught, and in fact it is considered awkward at best, and more often rude, for newcomers to the island who did not acquire the language naturally to attempt to learn or speak it.

This also means there is no standardized spelling—without a written tradition and without formal teaching, there cannot be—and uses of Virgin Islands Creole online and in school assignments where it is acceptable (informal writing such as journals or lab notes) have provided linguists with a rich source of data. The language is one that is still very much alive and changing; it is considered to be developing in a post-creole context now.

As with many English creoles, dental fricatives (the “th” sound) are replaced with dental stops (“t”), and the “oy” sound in joy/boy/toy is pronounced “ay,” as in jay/bay/tay, which is actually an artifact of English as it was pronounced when the islands were settled, rather than something created by the collision with African and Dutch languages. One of the differences between standard (such as it is) Virgin Islands Creole and Crucian is the use of the adverb *deb* (“there”), which is *deb* in Virgin Islands Creole and *deb-deb* in

Crucian. In general, Crucian is more difficult for unmarked English speakers to understand, as it is further removed from its English origins.

Prominent Virgin Island Americans

Prominent Virgin Island Americans include basketball players Raja Bell and Tim Duncan; baseball player Calvin Pickering; actors Lawrence Hilton-Jacobs of *Welcome Back Kotter* and Kelsey Grammer of *Frasier*; jazz musician Sonny Rollins; founding father Alexander Hamilton, who grew up on Saint Croix; and feminist critic Barbara Christian.

Voting Rights Acts

The Voting Rights Act of 1965 was passed to enforce the provisions of the Fifteenth Amendment to the Constitution of the United States. The Fifteenth Amendment was passed in 1870 as one of what have come to be known as the Civil Rights Amendments, which include the Thirteenth, Fourteenth, and Fifteenth Amendments. The Thirteenth Amendment outlawed slavery, the Fourteenth Amendment extended the rights of citizenry to all those who had suffered as enslaved people prior to 1866, and the Fifteenth Amendment extended the right to vote to all citizens of the United States regardless of “race, color or previous condition of servitude.” Under each

amendment, Congress was given the authority to pass any “appropriate legislation” to enforce the amendment’s provisions.

The Voting Rights Act of 1965 was enacted as the major enforcement mechanism for the Fifteenth Amendment because of the continuing efforts by many jurisdictions, primarily the former slaveholding states in the southeastern part of the nation, to inhibit the ability of African Americans to vote or be elected to office. President Lyndon B. Johnson signed the Voting Rights Act (VRA) into law on August 6, 1965.

The congressional hearings that occurred prior to the passage of the VRA indicated that although the right to vote had been granted to African Americans, many jurisdictions had pursued various tactics inhibiting people of color and poor white people from casting their ballots in elections. Some of these restrictions included “literacy” tests such as reciting the U.S. Constitution from memory, property ownership requirements, and poll taxes, among others. Although the Fifteenth Amendment was a clear statement of a constitutionally protected right, it lacked an enforcement mechanism; the VRA was passed as the “appropriate legislation” that would act as this enforcement instrument.

The 1965 Act

Prior to the passage of the 1965 VRA, enforcement of the Fifteenth Amendment had been difficult because it required intervention by the federal judiciary. Although some restrictions were ruled unconstitutional by the courts, the discriminating jurisdictions continued creating and enforcing barriers to the political participation of African Americans. The culminating events that most contributed to serious congressional debate underlying the passage of the VRA were the murder of three civil rights activists in Philadelphia, Mississippi, and the unprovoked police attacks on civil rights marchers in Selma, Alabama, in 1965.

After congressional hearings and a conference committee, President Johnson signed the VRA into law. The new act prohibited an array of voting restrictions but left untouched the poll tax that would eventually be found unconstitutional by the Supreme Court in 1966 (*Harper v. Virginia State Board of Elections*). The original VRA possesses the fundamental voting rights protections

established in the Constitution. Of particular note are Sections 2 and 5.

Section 2: Litigation Provision and Redistricting

Section 2 of the VRA simply states that no jurisdiction in the United States may pass any law or establish any barrier that would deny or “abridge” the right of any citizen, regardless of color, to vote. Under this section, citizens or voters can bring suit against a specific jurisdiction alleging that a jurisdiction has created an electoral structure having a discriminatory effect. The most important Supreme Court decision to date that sets forth the constitutional “test” for Section 2 is *Thornburg v. Gingles* (1986). This case identified three prongs, besides the now famous “totality of circumstances,” that

had to be met by plaintiffs when bringing a lawsuit under this section. This case focused on the redistricting of state legislatures. Plaintiffs need to show that a minority district can be drawn, where ignored by the defendant jurisdiction; that the minority population voted cohesively; and that the white majority population usually voted as a block to prevent minority candidates from winning. If these tests were met to the satisfaction of the court, then single-member legislative districts can be imposed in a jurisdiction where at-large structures had been in place prior to the suit.

The *Gingles* case was preceded by *White v. Regester* (1973), which pointed out that under certain circumstances and with sufficient showing, the at-large representative system could be discriminatory and needed to be replaced to allow

President Lyndon B. Johnson gives Martin Luther King, Jr., one of the pens used in the signing of the Voting Rights Act of 1965. It was signed by President Johnson, who had also signed the landmark Civil Rights Act of 1964 into law. The act outlawed discriminatory voting practices in the United States. To King's left are Reverend Ralph Abernathy and Representative Claude Pepper.

Mexican Americans the opportunity to elect candidates of their choice. This particular case was the first in which a Latino or Hispanic group was explicitly included in a Supreme Court decision that focused on voting rights. The case was the precursor to the *Thornburg* case in that it identified the possible discriminatory effects of an election structure

The principle drawback of Section 2 is that it can go into effect only after a citizen brings suit. The most common litigation under this provision usually occurs after the decennial census is tabulated, national congressional seats are reapportioned, and districts are redrawn. The reapportionment process reassigns the number of congressional seats each state is awarded based on the census enumeration. When states gain or lose seats or population shifts within a state occur, then congressional districts must be redrawn so that an equal population is contained within each district. When covered individuals perceive that jurisdictions subject to VRA coverage have violated federal election law, then a lawsuit may be filed in a federal district court having appropriate jurisdiction. Some states have had more than 200 lawsuits filed against them, such as Texas, since the inception of the VRA under Section 2.

Although congressional redistricting lawsuits receive most of the media's attention, more suits have been brought against state assembly, local governmental, and special districts where elections occur.

Section 5: Preclearance Provision

Traditionally, it was commonly understood that Section 5 of the act was by far its most powerful enforcing tool. Until June 2013, this section required that certain named jurisdictions having a history of discriminatory behavior in the electoral realm submit any change to their election system to the Federal Department of Justice (DOJ) for preclearance or submit the change to the Federal District Court of the District of Columbia for a declaratory judgment on the matter. Preclearance required the DOJ to review a jurisdiction's submitted electoral change to ensure it does not violate the VRA.

Where Section 2 covers the entire nation, Section 5 covered only those jurisdictions with a historical record of discriminating against African

Americans in the electoral process. In the 1965 version of the VRA, these jurisdictions were identified as those having a population of more than 50 percent African Americans and a history of imposing inhibitory voting barriers prior to 1964. The exact requirements for coverage under Section 5 are listed in Sections 6 and 13. There is also a provision allowing a covered jurisdiction to petition for exclusion from the law.

However, in June 2013, the Supreme Court effectively struck down the most essential parts of the VRA by a 5–4 vote. The decision freed nine states, Alabama, Alaska, Arizona, Georgia, Louisiana, Mississippi, South Carolina, Texas, and Virginia, and many counties and municipalities, such as Brooklyn, Manhattan, and the Bronx, to change their election laws without advance federal approval. This is a major departure from the previous standard, which required that a jurisdiction covered under Section 5 either receive advance preclearance or petition the D.C. District Court to “bail out” of the provision. In order to bail out, a jurisdiction had to show two things: first, that whatever test or electoral procedure used prior to coverage was not used in a discriminatory way, and second, that in the previous 10 years, subsequent to 1982, the jurisdiction did not participate in any discriminatory behavior and that it took steps to improve the political participation of the covered groups.

The only actively enforcing provision of the VRA, Section 5 allowed the federal government to oversee the election procedures in those jurisdictions that had a history of discriminatory electoral behavior prior to the implementation of any provision. The June 2013 decision had immediate practical consequences. For example, voter identification laws in Texas and Arizona that had previously been blocked no longer required federal approval. The Texas law was put into place. As of this writing in July 2013, the Arizona law had not been enacted but it no longer had the VRA in place to stop it.

The VRAs of 1970, 1975, and 1982

In 1965, the VRA's coverage was to last only five years. In 1970 the five-year coverage was extended to 10 years. Additionally, the residency requirements for presidential elections were abolished. In 1975, Public Law 94-73 amended the VRA,

extending coverage to 17 years as well as adding Section 203, which extended VRA protections to language minority groups and eliminating English-only elections. The languages covered under the new Section 203 included “American Indian, Asian American, Alaskan Natives or of Spanish heritage.” Section 203 also pointed out that if “more than 5 percent of the citizens of voting age of a state or particular subdivision or jurisdiction are members” of a covered language minority group, then the jurisdiction was required to provide bilingual voting materials and ballots. Finally, in Section 301 of the 1975 amended act, provisions for enforcement of the Twenty-Sixth Amendment to the Constitution were set forth, giving voting rights to those citizens 18 years of age or older.

The bottom line impact of the June 2013 decision was that any changes in voting procedures in covered jurisdictions, including those concerning restrictions on early voting, were now subject only to after-the-fact litigation rather than preclusive control by the federal government. The Supreme Court majority held that Section 4’s 1965 coverage formula for deciding which jurisdictions were covered was unconstitutional because it relied on data from the 1975 reauthorization.

When the VRA was amended in 1982, the most important amendments were to the time extension of the act itself, established at 19 years, and setting forth more specific guidelines that had developed over years of litigation clarifying violations of Section 2. Essentially, the amended Section 2 now spoke of using a concept known as “the totality of circumstances” as the base of a lawsuit by an individual covered by the act. The amendment also made it clear that part of the “proof” was that the covered individuals would be denied less of an “opportunity to elect representatives of their choice” by whatever barrier was established by the jurisdiction in question.

Finally, a voting assistance provision was stipulated in 1982 to bring disabled, blind, or illiterate individuals under coverage of the VRA.

2006

In 2006, all the provisions of the VRA were extended for a 25-year period, until 2032. Nevertheless, commencing in 2008, there have

been more than 30 lawsuits brought by various jurisdictions requesting that the Supreme Court revisit Section 5 of the VRA. The Supreme Court left the door open for a review in the now famous *Northwest Austin Municipal Utility District No. 1 v. Holder* (2009), which allowed this jurisdiction to bail out of the Section 5 provisions because the utility district did not register its own voters.

Chief Justice John Roberts, writing for the 8–1 majority, pointed out that given the successful protections offered by the VRA, Section 5 did present certain constitutional issues, but they were not relevant in this particular case. Thus, for the moment, the Supreme Court avoided the issue of the constitutionality of Section 5.

2013

In 2013, the most active portions of the VRA were struck down. While the dissent was strong and vocal, the 5–4 majority found that the reasoning for the preclearance provisions was no longer convincing.

W

Wampanoag

The Wampanoag tribe was once a powerful Algonquin nation indigenous to southeastern coastal Massachusetts and Rhode Island, specifically the region extending east from Narragansett Bay to the Atlantic Ocean, including Nantucket and Martha's Vineyard. Ultimately, over the last century, theirs is a story of tribal resilience, ethnic identity, and cultural survival. Before the first wave of English settlers arrived in the early 17th century, the Wampanoag thrived, with conservative estimates of their numbers ranging upward of 12,000 members living in more than 40 villages. Although the tribe maintained seasonal activity in response to the New England climate (fishing in the summer; hunting in the spring and fall), the tribe was principally agricultural, relying on the traditional crops of corn, squash, and beans.

Despite migratory movements during the seasons, the tribe maintained relatively permanent settlements, living in domed-shaped houses made of sticks and packed grass that had remarkable architectural complexity. Each settlement had a tightly organized political structure centering on a sachem, a kind of governor who worked with the tribe to maintain order, see to the economic stability of the settlement, and maintain an effective security system.

Relations With White Settlers

The arrival of white settlers dramatically changed the Wampanoag, given their position along the coastal lands where European ships first arrived. The first contacts in the late 17th century did not favor the Wampanoag. Despite welcoming the settlers, many of the Wampanoag, both men and women, were taken into slavery. A series of deadly epidemics between 1615 and 1617 (forensic anthropologists believe the cause to be Weil's Syndrome, a virus contracted from animals, most likely introduced into the region by itinerant French trappers) so greatly reduced the Wampanoag's numbers (by some estimates nearly 80 percent) that there was little resistance to the growing numbers of English settlers. Given the growing threat from far stronger tribes around them, the Wampanoag looked to the settlers as potential allies.

In the early 1620s, Sachem Massasoit, along with Squanto, one of those taken into slavery but who had escaped and returned to Massachusetts, led the tribe's initial gestures of accommodation, particularly to the religious separatists known as the Puritans, who had little sense of how to survive in the wilderness. The Wampanoag shared critical information about farming the land, building shelters, and hunting. Squanto was instrumental in structuring a land deal that secured nearly 12,000 acres for the Puritans. Although historians cannot be sure how much is folklore, traditional

Plymouth Plantation is a living history museum in Plymouth, Massachusetts, replicating Plymouth Colony, which was established in the 17th century. Members of the Wampanoag tribe were pushed westward by English settlers.

accounts of the first Thanksgiving suggest that it may have been a harvest celebration between the Puritans and the Wampanoag.

However, over the next decades, as the number of settlers grew, Wampanoag leaders became alarmed as English efforts continued to both convert them to Christianity and limit their presence to specially designated communes, which gradually moved the tribe westward. That created sufficient alarm that when a powerful sachem, Wamsutta, the oldest son of Massasoit, died mysteriously after a diplomatic meeting with the English settlers, suspicions emerged that he had been poisoned. After Wamsutta's younger brother, Metacomet (whom Massasoit had given the Christian name Philip), assumed power, he would lead what would become the most organized—and bloodiest—Native American resistance in New England.

In waging a determined guerrilla campaign along the frontier lines of Massachusetts for more than a year (1675–76), the so-called King Philip's War, the Wampanoag, joined by several other tribes equally alarmed over the English

seizure of land, faced an enormous challenge. Settlers outnumbered members of indigenous tribes by more than three to one. Although the uprising would eventually involve tribal resistance as far as Maine, the English troops were too well armed and too numerous. Metacomet was captured and executed in August 1676, effectively ending any organized indigenous resistance to English occupation.

The uprising cost the Wampanoag considerably; at war's end, they numbered fewer than 400. After the American Revolution, stringent state relocation protocols over the next century restricted the Wampanoag to reservations of increasingly smaller tracts of land largely centered on the more remote parts of Cape Cod in the communities of Aquinnah, Christiantown, and Chappaquiddick. As the state developed in the early decades of the 20th century, the remaining Wampanoag were compelled to relinquish even more land, forcing many to leave the island area entirely. The tribe's population continued to decline, driven by economic necessity and by assimilation into the larger mainland culture, and the Wampanoag teetered near extinction by the mid-20th century.

Resurgence of Identity

Beginning in the early 1970s, however, with a resurgence of interest in Wampanoag culture and identity among those remaining in the area (fewer than 300), a tribal governing council was structured in the town of Gay Head to promote tribal interests and to petition state and federal agencies to return some of the land the tribe had lost. In 1987, the Bureau of Indian Affairs officially recognized two Wampanoag tribes: the Mashpee and the Wampanoag.

Although a newly established tribal council directed limited public services for the reservation, including police, fire, and medical personnel, a more far-reaching undertaking involved a program to reestablish the all-but-lost Wampanoag language. Tribe historians, meticulously reviewing centuries-old archival materials, put together a dictionary of more than 10,000 words. Beginning in the 1990s, for the first time in more than a century, tribal children learned the Wampanoag language before they learned English.

It is difficult to obtain an exact measurement of the tribe's population. A petition to re-acquire tribal land in an application for a gaming license, part of an ambitious casino development project, listed the population at 1,200, but data from the 2010 Census put the regional numbers including Rhode Island at just over 3,000.

War Brides

The term *war brides* generally refers to foreign nationals who married members of military forces during and especially after World War II and subsequent military occupation by Allied forces. The term has different connotations in different cultural contexts. In Europe, even though the term may connote a gold-digging woman by emphasizing the material aspects of motives for marrying Americans, “war bride” is not always associated with a negative meaning. Indeed, many European wives of American servicemen identify themselves as war brides. On the other hand, in Asia, the very same term has more associations with stigmatized identities and marginalized social locations. In most cases, women who associated with American G.I.s were perceived simultaneously as prostitutes and as traitors who chose American men over their own men. Therefore, war brides in Asia faced similar social constraints and hostilities from mainstream society.

Marriages Between Foreign Nationals and Military Personnel in Europe and Asia

Between 1939 and 1946, some 16 million Americans who were young, single men between the ages of 18 and 30 mobilized for the war effort. Consequently, as many as 1 million women from over 50 countries, both Allied and Axis nations, married Allied soldiers, particularly American soldiers, between 1942 and 1952. Various jobs catering to the military forces, ranging from interpreters and sales clerks at post exchanges to housemaids, were created. Many of these working women met their prospective husbands while on the job. Although American soldiers who married foreign nationals were predominantly white, other racial and ethnic groups, such as African Americans, were also involved in wartime and postwar marriages.

Women from European countries such as Britain, Germany, and Italy and women from Australia made up early cohorts of war brides who entered the United States, which was the major destination but not the only one. For example, marriages between British women and American servicemen took place as early as 1942. It is a well-publicized fact that 70,000 British war brides entered the United States during 1946 alone. Nearly 48,000 European women, the majority of whom were British, married Canadian troops who served in Great Britain during World War II; these women entered Canada. In Oceania, about 16,000 American G.I.s stationed in Australia and New Zealand married mostly Australians and, to a lesser extent, New Zealanders.

Later, marriages between G.I.s and local women began taking place in postwar Japan under U.S. occupation. The U.S. victory over Japan in World War II brought nearly half a million U.S. occupation troops to the war-torn country, overshadowing the presence of U.S. military allies. Consequently, an estimated 55,000 to 100,000 Japanese women married American servicemen after the arrival of U.S. military forces. The U.S. military mobilization for the Korean War also facilitated marriages involving American G.I.s and Korean women. Because of continuing American military presence in Asia after World War II, Asian brides of American servicemen gradually outnumbered the European brides by the mid-1950s. Within Asia, marriages between Japanese women and G.I.s were the most numerous, but their marriage

rates declined after they reached their peak years in the late 1950s and the early 1960s. The marriage trends gradually shifted to other Asian countries, such as South Korea, the Philippines, and Vietnam, which reflected the trajectory of U.S. military involvement in these Asian countries during the Cold War.

Institutional Barriers to War Bride Marriages

For foreign nationals, marriages to American GIs and immigration to the United States did not always go smoothly. Restrictive U.S. immigration policies and marriage laws often delayed their marriages. For example, the U.S. Immigration Act of 1924, known as the Oriental Exclusion Act, restricted the influx of foreign nationals by assigning annual quotas based on national origin. This legislation favored Europeans, who were granted relatively large quotas, while virtually preventing all Asian immigrants from entering the United States. Nonetheless, an unprecedented marriage rush between American soldiers and European women pressured the U.S. government to make revisions to the law. In response, the War Brides Act of 1945 was enacted, mostly to help U.S. G.I.s bring their European spouses and children home on a nonquota basis.

Although non-European spouses of American servicemen did not benefit from the new laws, eligibility for naturalization was extended to some Asian nationals who had been excluded under the provisions of the Oriental Exclusion Act of 1924. These were wartime Asian allies, such as Chinese and Filipinos, who first became eligible for immigration and naturalization over the course of the law's revisions. Other Asians, including Japanese and Koreans, remained ineligible for these rights. It was not until late 1952 that the U.S. Congress passed the McCarran-Walters Act, which allowed Japanese war brides to emigrate to the United States on a nonquota basis. Aside from racialized immigration policies, military red tape delayed marriage procedures by requiring various official documents pertaining to physical examinations, background checks, and commanding officers' permission for the marriages. The marriage application process usually took several months; it was common for the prospective G.I. grooms to be transferred to other regions or sent back to the United States before they formalized their

marriages. Only those couples who successfully overcame various barriers at personal and institutional levels were able to marry and establish their new homes in America.

Beyond War Brides

There were many more individuals, including those women who were deserted or widowed, who remained in their own countries. Included are the mixed-race children born to G.I. fathers and Asian women. These children are often referred to as Amerasian. They faced prejudice and discrimination in the home countries of their mothers, especially when their fathers were absent and they were raised by single mothers or in orphanages. The issues of fatherless Amerasians remain particularly volatile in Japan and Korea, reflecting the controversial and persistent social and cultural significance of U.S. military presence in Asia.

War in Afghanistan and Iraq

The United States went to war in Afghanistan in 2001 and Iraq in 2003 in the wake of the September 11, 2001, terrorist attacks in New York City; Washington, D.C.; and Pennsylvania. Although neither was an officially declared war, these

conflicts were the first major U.S. military actions of the 21st century. Afghanistan and Iraq became the main fronts in what U.S. political and military leaders called a “global war on terror.”

Afghanistan

Known as Operation Enduring Freedom (OEF), the Afghanistan war had three major goals: to capture or kill Osama bin Laden, leader of the Al Qaeda organization responsible for the 9/11 attacks; to overthrow the Taliban, Afghanistan’s theocratic government that provided a haven for Al Qaeda; and to seek out and destroy the Al Qaeda structure and ranks.

President George W. Bush set the war’s rhetorical agenda by challenging other nations to join the U.S. cause or risk being considered America’s enemies. After military victories during the early stages of OEF, the United States had an uneven record in Afghanistan, with later developments somewhat stalemated. Al Qaeda suffered huge casualties, and the United States backed a secular government after toppling the Taliban, but as of 2012, both forces remained threats. Bin Laden found sanctuary in Pakistan, where President Barack Obama had him killed in 2011.

Having promised during his 2008 presidential campaign to be aggressive in Afghanistan and scale back the Iraq War, Obama touted bin Laden’s death as a national security triumph. In Afghanistan, however, things remained uncertain at best, and Obama’s pledge to begin withdrawing U.S. troops by 2014 did little to reassure a public weary of the long war.

Iraq

Operation Iraqi Freedom (OIF) started in March 2003 and continued until November 2011. This was the second U.S. war with Iraq. The first, fought in 1991 and known as Operation Desert Storm, had the objective of driving Iraqi forces out of neighboring Kuwait, which Iraq had invaded in 1990. President George H. W. Bush organized a multinational coalition to discipline Iraq but never sought the ouster of Iraqi president Saddam Hussein.

By contrast, George W. Bush charged Iraq with possessing weapons of mass destruction and with being part of a terrorist “axis of evil,” along with Iran and North Korea. He also resolved to

bring down Hussein’s authoritarian government. Backed by a 21-nation coalition, the United States took preemptive action against Iraq. Hussein went into hiding, but U.S. forces captured him in 2003 and turned him over to the new Iraqi justice system. Hussein was executed in 2006, after a trial and conviction.

Even before it started, OIF was controversial and triggered massive worldwide demonstrations. U.S. and international political leaders objected to the war’s preemptive nature and questioned the Bush case for intervention. Early military success in OIF gave way to a formidable Iraqi insurgency and rising dissent in the United States, especially after the Bush administration’s war rationales proved false and U.S. casualties mounted. A new, relatively stable, and democratic Iraqi government was established after much difficulty, and President Obama oversaw the withdrawal of U.S. troops in 2011. Under the name “Operation New Dawn,” a much-reduced contingent of U.S. troops remained in Iraq to provide security.

Diversity

As of August 2011, about 2.3 million U.S. troops had been deployed to Afghanistan, Iraq, or both. According to statistics from the Department of Defense, whites accounted for 78 percent of the 1,835 military deaths in Afghanistan as of December 2011; Hispanics or Latinos, 11 percent; blacks or African Americans, 8 percent; Asians, 2 percent; multiple race or unknown, 1 percent; American Indians or Alaska Natives, 1 percent; and Native Hawai’ians or Pacific Islanders, 1 percent.

The department also reported there were 4,408 military deaths in Iraq as of December 2011, with whites accounting for 74.6 percent; Hispanics or Latinos, 10.5 percent; African Americans or blacks, 9.7 percent; Asians, 1.8 percent; Native Hawai’ians or Pacific Islanders, 1.1 percent; multiple races, pending, or unknown, 1 percent; and American Indians or Alaska Natives, 0.95 percent.

Cultural Awareness and Controversy in Conflict Zones

Al Qaeda defined its cause as a Muslim fundamentalist holy war against the West in general and the United States in particular. This gave the

United States both opportunities and problems in responding to 9/11. Since the United States needed to create alliances, or at least obtain cooperation, in strategically important nations with majority Muslim populations, the United States would have the chance to cast itself as a partner rather than a threat to Muslims, thus undermining Al Qaeda's ideology. However, pursuing and maintaining bonds with predominantly Muslim nations proved as difficult as it was necessary.

For instance, Pakistan and Saudi Arabia have been vital to the U.S. mission. Military and political leaders from these nations have worked with the United States—an especially valuable relationship in Pakistan's case, since Pakistan shares a border with Afghanistan and was one of the few countries in the world to have had diplomatic relations with Afghanistan's Taliban government. As one of the most influential Middle Eastern nations and home to the bin Laden family (whose members disowned Osama bin Laden), Saudi Arabia is also crucial.

However, neither Pakistan nor Saudi Arabia is a democracy, and both nations have Islamic fundamentalist movements that challenge their leaders, especially on issues that involve helping the United States. Moreover, the grievances that bin Laden and Al Qaeda exploit have significant support among many Pakistanis and Saudi Arabians and throughout the Middle East. These grievances include the presence of U.S. troops in the Middle East, the West's dominance in a globalized world, and U.S. policy in Israel. In other words, the U.S. war effort depended on ties between cultures—on one hand, Islamic and Middle Eastern, and on the other, Judeo-Christian and Western—that many saw as incompatible.

In the immediate aftermath of 9/11, President Bush appealed to the U.S. public to recognize that Islam is a religion of peace and to avoid judging Muslims by the actions of Al Qaeda. Bush made public appearances with Muslim clerics, and Islam was represented at memorial services for 9/11 victims. Not everyone in the United States was willing to hear Bush's message, however. Political leaders, media commentators, and large numbers of U.S. citizens were candid in their views of Islam and its followers as abhorrent and deserving of sweeping retribution. These Americans saw no possible reconciliation between

Americanism and what they called "Islamofascism," invoking the memory of Nazi Germany and urging extreme action to end what they believed was an extreme threat.

The Vietnam War loomed large in the public's mind during the wars in Afghanistan and Iraq, as an example of how the United States suffered for lacking cultural awareness of the country and people its troops sought to assist. To avoid the errors of Vietnam and reach the "hearts and minds" of Afghans and Iraqis, many U.S. troops have strived to know and respect not just the customs, sites, and cultural differences relevant to Islam, but also the diverse ethnic groups and tribal peoples they encounter. Becoming fluent in, or at least attempting to speak, some of the languages native to the regions where they are deployed is another priority for U.S. troops.

This conscientiousness is not universal among military personnel, however. Violations of the human rights and dignity of suspects held at U.S. detention facilities in Guantanamo Bay, Cuba, and Abu Ghraib, Iraq, drew condemnation within the United States and throughout the world. There have been vigorous debates over the ethics and morality of both wars since their beginnings, and events at these sites intensified the dialogues. When photographs of abused and tortured Abu Ghraib prisoners became public, it became clear that some U.S. military personnel at the prison antagonized their captives in culturally offensive ways.

In the United States, public reaction to the scandal followed a pattern that became familiar throughout the Iraq War. Many Americans expressed disgust and were shocked that their military would display such behavior; many others not only refused to condemn the prison guards but also saw no reason for humane treatment of enemy captives on the basis of culture or any other factors.

Homefront Cultural Debates

Divided reactions to events like the Abu Ghraib scandal were typical of post-9/11 U.S. culture. Debates over what constitutes American identity, the character of American culture, and the status of America's borders are nothing new, but they became more frequent and heated during this time of crisis.

The volatility of the cultural discourse regarding Arabs and Muslims was especially acute. Although people in these groups (who U.S. citizens sometimes view as one and the same) struggled to find acceptance in the United States long before 9/11, the terror attacks made them visible and vulnerable in unprecedented ways. Whether they had been born in or emigrated to the United States, people who identified or were perceived as Arab and/or Muslim faced demands that they be placed under surveillance, singled out for suspicion at airports, and even subject to internment, as Japanese Americans were during World War II. Sometimes the hostile climate turned violent, victimizing people who supposedly “looked Arab or Muslim,” as illustrated by the murders of members of the Sikh religion in Arizona (2001) and Michigan (2012). With the political rise of Barack Obama—the first African American president, whose success would be remarkable in any period of U.S. history but was astonishing so soon after 9/11—the American identity conversation took

U.S. Marines stand ready with assault rifles as they prepare to enter one of Saddam Hussein's palaces in Baghdad during the takeover of the complex in Operation Iraqi Freedom.

unexpected turns that highlighted the country's many cultural contradictions.

Heightened attention to the security of national borders and fears of future terrorism from the Middle East converged with widespread discontent with undocumented immigration. For many U.S. citizens, individuals and groups identified as or assumed to be of Arabic or Latina/o descent became the focus of suspicion, scapegoating, and outright attack. These reactions had roots in anxieties over the demographic profiles of immigrants who came to the United States after passage of the 1965 Immigration Act. In this cohort, immigrants from Asia, Latin America, and the Middle East had a major presence.

Because the 9/11 hijackers had been in the United States for some time prior to the attacks, enrolling in flight schools and blending into the population, concerns about immigration increased. A new federal government agency, the Department of Homeland Security, was created. It performed various functions, including immigration oversight, that had been the task of the now-defunct Immigration and Naturalization Service.

Despite the talk of a unified America in the hours, days, and weeks after 9/11, its citizens disagreed with one another frequently, fervently, and sometimes accusingly on the causes and meanings of the terror attacks, and on how to react to them. Some on the political right blamed what they called “politically correct” attitudes and ideas of a multicultural, pluralist America for putting the country at risk, before and after 9/11. On the political left, there was often a sense that the United States should not have been surprised at the 9/11 attacks, given our nation-state's history of exporting and imposing its model of culture throughout the world. That these debates are more likely to continue than to reach resolution anytime soon is an indication that diversity of opinion and identity remains a site of strength and productive conflict in the United States.

War of 1812

On June 1, 1812, President James Madison submitted to Congress a list of abuses committed by Great Britain against the United States. Madison cited Britain's use of Indians to raid American villages along the U.S.-Canadian border in the northwest, unlawful restriction of American neutral trading rights with France through the Orders in Council of 1807, and thousands of documented cases of British impressment of American sailors on the high seas as just cause for war. With Republican control of Congress, Madison got his wish. Just three days later, on June 4, 1812, the House of Representatives voted 79–49 in favor of a declaration of war. Two weeks after that, on June 17, the Senate approved the measure by a vote of 19–13. The next day, Madison signed the bill into law, marking the beginning of the second war between the United States and Great Britain.

Understandably, the declaration of war deeply divided the nation, both geographically and politically. The Federalists in the northeast, especially in New England, saw the war as an abuse of presidential power and a contradiction of Republican policy. In 1800, and again in 1808, the Republicans had run for election as the party that would bring the government back to the people. They proclaimed a message of equality under the law, state autonomy, decreased federal taxation, and greater focus on the internal prosperity of the

nation. In so doing, the Republicans decreased the size of the U.S. Army and Navy during the first decade of the 19th century, instituted an embargo on British product shipments to the United States, and promoted westward expansion to the Northwest Territory.

After the war began, New England Federalists charged that Madison and the Republican-controlled Congress simply wanted to justify expansion into Canada and the west through a costly and dangerous fight with the world's strongest power, an argument that held some truth. To Madison and his political confidant Thomas Jefferson, victory over Great Britain would allow the United States to expand across North America, providing new markets for the products the country manufactured. What they did not realize was that the end of the war would occur in the Deep South, at the port of New Orleans, two weeks after the Treaty of Ghent was signed, and the war would bring their nation together in the form of a ragtag, multicultural force of white frontiersmen, colored Creoles, Indians, and nationless privateers.

Invasion of Canada

In the summer of 1812, there was little that appeared to stand between Great Britain and the annihilation of the United States. With no more than 12,000 regular troops out of a total population of 7.7 million, and a paltry 16 warships, the U.S. military looked more like a ragtag militia unit than a national fighting force. But with Great Britain at war with Napoleon in Europe, and with nearly 725,000 militiamen available across 15 states, the United States held a distinct advantage over even the most formidable of foes. By invading Canada, which maintained a small regular military presence and had a total population of just half a million, and by using Indian proxies, militiamen, and regulars, the United States could hold Great Britain's largest North American colony as ransom for territory in the northwest and freedom in maritime trade. But the invasion of Canada did not go as planned.

With less than 30 years between the end of the American Revolution and the War of 1812, the U.S.-Canadian border had not fully developed along national lines. In many ways, border-dwelling Americans viewed their Canadian

counterparts as neighbors, separated only recently by revolution. Many were unwilling to take up arms against people with whom they interacted daily, shared lives and trade, and essentially lived as countrymen. This, coupled with the refusal of some Federalist New England governors to send state militiamen to serve in a seemingly unjust war, gave President Madison and his aging general corps more than a few problems.

The first assault on Canada ended in failure. Undermanned and hesitant in command, General William Hull, the territorial governor of Michigan, surrendered Detroit, the primary American waypoint en route to Canada, on August 16, 1812, just 17 days after word of the war had reach London. Commanding less than 10,000 troops across the entire North American continent, Great Britain used Indian allies to challenge the timid, poorly trained American troops along the border. It also used the American invasion as a call to arms, mustering local defense forces of old loyalists and freed slaves left over from the American Revolution, as well as native-born Canadian subjects looking to protect their homes and families from the American invasion force.

At the Battle of Queenston Heights, a small British force, along with Indian allies, defeated a group of American regulars under Major General Stephen Rensseler, a Federalist from New York, on October 13, 1812. More than 830 American troops ended the day as prisoners of war.

The following month, General Henry Dearborn, former secretary of war under Thomas Jefferson, failed to take or even lay siege to Montréal, the key to American victory in Canada. By mid-November 1813, his army of 13,000 men, defeated at every turn and unwilling to take orders from a Republican general, had disintegrated and turned back for home.

Despite a number of miraculous naval victories off the Atlantic coast and in the Canary Islands, Madison's dream of a "short and successful" war continued to dissolve into a personal and national nightmare. The British continued to drive back all American advances into Canada. By the end of the year, the Royal Navy had established a blockade of America's Atlantic ports and advanced to the U.S.-Canadian border at Fort Niagara, New York. Britain was primed to attack.

Battle of New Orleans and End of a Multicultural War

By January 1815, the northeastern portion of the United States lay in ruins. With Napoleon defeated in March 1814 and the pride of the His Majesty's Army diverted to the North American theater, Great Britain launched an aggressive, multipronged invasion of the unprepared American interior. By late August 1814, the president had fled Washington, D.C., leaving the capital of his nation undefended from British torches. Some three weeks later, a resilient American defensive force withstood a 24-hour British bombardment at Fort McHenry, Maryland, receiving the plaudits of Francis Scott Key in his lyrical poem "The Star-Spangled Banner."

By then, Great Britain was unwilling to continue the fight and was exhausted and heavily indebted from nearly a half decade of constant warfare. Representatives from the United States and Great Britain met in Ghent, Belgium, on December 24, 1814. The resulting Treaty of Ghent officially ended the war, restoring peace and the conditions that existed before the conflict, as though the war had never occurred. But word of the treaty traveled slowly. In the face of rumors of a potential British invasion of the south by way of New Orleans, Madison rushed Major General Andrew Jackson to the southern port on December 1, 1814. Upon arrival, Jackson declared martial law in the city and began recruiting the troops who would, in less than a month, challenge Sir Edward Pakenham and the British Army.

Jackson's force in many ways represented the diversity of the American population at that time. By December 18, he had recruited some 910 soldiers from New Orleans and the surrounding area. Of these, more than a third (392) were free men of color, a number of whom had served with distinction in the Spanish *pardo* and *moreno* militias during the American Revolution. Multiclass and multicolored, some members of the Battalion of Free Men of Color were wealthy slaveholders dedicated more to the preservation of their own Creole community than to any sense of American patriotism or nationalism. Men like Maurice Populus, a lieutenant in the First Battalion, and François Boisdoré, a noncommissioned officer in the Second Battalion, came from the most prominent mixed-race families in the state and owned

multiple slaves and properties across New Orleans. They stood beside the likes of Noël Carrière and Bazile Demazilière, “Negroes” by color and popular designation who entered military service down on their luck, earning social status and wealth only after showing courage on the battlefield.

Jackson recognized that his men did not share a sense of nationhood or American culture. On December 18, he rallied his “Natives of the United States,” Creoles of New Orleans, and “Descendants of Frenchmen” against a common British enemy dedicated to “dishonor[ing] the human race”; it was thus not of nation that Jackson spoke that day. It was of humanity, the one common trait he could find in perhaps the most multicultural force yet to fight under the American flag.

On December 23, less than a week after Jackson’s call to arms, the British Army arrived. After a quick naval victory on Lake Borgne, a British invasion force nearly 11,000 strong, under the command of 37-year-old Sir Edward Pakenham, landed at the Villeré plantation in Chalmette, just nine miles southeast of New Orleans. After a probing assault on the British lines that night, Jackson searched wildly for reinforcements. He knew he was outnumbered. To his aid came a modest but hardy crew—dragoons from Mississippi, Choctaw Indians from north of Lake Pontchartrain, volunteer ruffians from the Kentucky and Tennessee frontiers, and dissolute privateers from Baratavia under the brothers Lafitte, Jean and Pierre.

This varied corps of riflemen and regulars, numbering just under 4,000, engaged the advancing British forces on January 8, 1815. Aligned behind breastworks and a man-made canal on the Macarty plantation, the Americans—Creoles, Choctaws, and privateers alike—repelled a British force, crippled by mire and fog, of nearly 5,000 regulars, sailors, and Barbadian freedmen in less than an hour. The result was staggering. Along Jackson’s line, 13 men lay dead, and another 58 wounded. In the fields before them, however, lay a reported 291 dead Britons—among them young Pakenham—along with 1,292 of their wounded countrymen. It was a rout by all standards, and one that the American nation would never forget.

Legacy

With the Battle of New Orleans, the War of 1812 ended. The defeated British troops, after a failed

siege of Fort St. Philip, Louisiana, left for home along with the rest of Britain’s North American forces, and the guns gradually fell silent. The legacy of the Battle of New Orleans, and thus the War of 1812, stretched beyond the failed invasion of Canada, the burnt rubble of the U.S. Capitol, and the stalemate made official in the Treaty of Ghent. The fighting force that defended New Orleans, perhaps the least American of the nation’s cities, stood as a microcosm of the nation itself. Blacks, whites, Indians, and coloreds, and natives of France, the Americas, the Caribbean, and the American interior, fought together, but for differing reasons.

Some fought for their families and homes; others fought for wealth and prestige. Some fought for the militia, obeying orders alone, while any number of their colleagues took up arms for the preservation of their individual languages, cultures, identities, and ways of life, regardless of whether or not they were “American” in any recognizable way. They were not all fighting for the honor of the United States, its trading rights, and the rights of impressed sailors. They did fight, however, and fall together, side-by-side, showing that a nation forged from many could ultimately succeed as one.

The War of 1812 thus carved an American nation out of not-so-united states. During the succeeding decade and a half, a sense of nationalism and national belonging spread across the primarily white population. A middle class dedicated to personal advancement emerged in the northeast and urban south, and the political parties that so divided the nation before the war collapsed. The effects of this nationalism, however, did not rest solely in the minds of whites. Free men of color in New Orleans; Mobile, Alabama; and other southern and Gulf Coast towns, having fought for their native or adopted lands, made a strong case for citizenship that even the federal government could not ignore. As a result, the colored veterans of the Battle of New Orleans received combat pensions for the remainder of their lives. Although the reality of black citizenship remained a distant hope, the performance of the colored battalion at New Orleans inspired a generation of African-descended people to adopt a more consciously African American national identity, regardless of cultural affiliation.

The United States became a nation of nostalgia after the War of 1812. Forged in the crucible of

public imagination, the popular American image assumed the likeness of Jackson's victory at New Orleans—a multicultural force swathed in the cloth of liberty and equality. The reality beneath the myth, however, was not so romantic, as slavery, racial and cultural inequality, and Indian removal continued through civil war and beyond.

in war-torn Europe. The WRB collaborated with Jewish organizations at home and abroad, diplomats from neutral countries, and groups opposing Adolph Hitler and the Nazi regime throughout Europe to provide Jews with safe havens and to send provisions to Jews who had already been transferred to Nazi concentration camps. In total, the WRB rescued as many as 200,000 Jews.

Background

Although Roosevelt and his administration felt compelled to assist Jewish Nazi victims, they were hesitant to do so, and creation of the WRB came late in the war effort. Anti-Jewish bias ultimately hindered implementation of the WRB's programs and rescue efforts. The United States wanted to help European Jews from afar, and under the condition that the country would not have to worry about potentially large influxes of Jewish refugees permeating U.S. borders. Although many Americans were outraged by the atrocities inflicted upon eastern European Jews, they were not comfortable providing any more than temporary shelter to this population.

As early as the fall of 1942, the United States was cognizant of the mass murder of Jews and other groups, including the Roma and Slavs, by the Nazi regime. The mass killings of Europe's Jews received heightened attention in 1943 and early 1944. The amplified documentation of Hitler's "Final Solution" pressured the U.S. government to take action. To the U.S. Treasury Department, it appeared as if the State Department, led by Breckenridge Long, was avoiding the issue of Jewish rescue, and the Treasury ultimately deemed the State Department to be an impediment to Jewish rescue efforts. The State Department, however, contended that the best way to save civilian victims of the war was to focus on winning the war. Ultimately, it was revealed that the State Department had been issued instructions to conceal information on the extent of Jewish persecution and to delay the issuance of U.S. visas to fleeing Jews.

In response to the State Department's inaction, the Treasury Department prepared a report for President Roosevelt. On January 13, 1944, Henry Morgenthau, Jr., secretary of the Treasury, issued a memo to the State Department criticizing the agency for its relative inaction in the rescue of European Jews. The memo was titled "Report to

War Refugee Board

The War Refugee Board (WRB) was an executive agency created to aid civilian victims of Nazi Germany and its allied partners. The WRB was established in January 1944 by President Franklin Delano Roosevelt. At its inception, the primary mission of the WRB was to rescue Jewish victims of the Nazi regime and, when rescue was not feasible, to send material aid to relief agencies

the Secretary on the Acquiescence of This Government in the Murder of the Jews.” Upon receipt of this memo, President Roosevelt was urged to act, and he established a government commission to assist in the rescue and relief of civilian victims of the Nazi regime. At this relatively late point in the war, the Roosevelt administration was still hesitant to be perceived as friendly to the Jewish population. However, Roosevelt signed Executive Order 9417 on January 22, 1944, establishing the War Refugee Board. This board was to be supported by all government agencies, including the Departments of State, Treasury, and War (currently Defense) and was to work to rescue the Jews who remained in Europe. The board was responsible for the evacuation of victims and potential victims of the Nazi regime, the establishment of safe havens to resettle persecuted individuals, and the delivery of materials and supplies to assist those in concentration camps.

Rescue Efforts

As part of the WRB’s mission, the U.S. government was to establish safe havens for Jewish refugees within its own borders and encourage other able countries to do the same. President Roosevelt, however, established only one sanctuary, at Fort Ontario in Oswego, New York, on June 9, 1944, and the United States did not permit refugee resettlement anywhere else in the country.

Two months later, in August 1944, 982 refugees arrived at Fort Ontario. Approximately 875 of these refugees were Jewish, with the majority from non-Nazi-occupied territories in southern Italy. All refugees temporarily residing at Fort Ontario were considered guests of the United States and signed pledges that they would return to Europe after the war ended. During their tenure at the shelter, these refugees lived under tight security parameters and were prohibited from working outside the shelter. Many residents of Oswego were openly hostile toward the refugees residing at Fort Ontario. At the conclusion of the war, President Harry S. Truman issued a statement that refugees held at Fort Ontario were eligible for immigration to the United States, despite considerable opposition from the American public.

American diplomats abroad were encouraged to enforce all elements of Executive Order 9417. They arranged and coordinated efforts among the

WRB, diplomatically neutral countries, and independent rescue organizations. One such initiative included a rescue effort led by Swedish diplomat Raoul Wallenberg. By the time Wallenberg arrived in Budapest in July 1944, the Nazi regime had already deported almost 440,000 Jews from Hungary. Upon arrival, Wallenberg distributed protective Swedish passports to nearly 200,000 Hungarian Jews in jeopardy of deportation. Many Jews were moved into houses under Swedish diplomatic protection.

When Germany began actively deporting the remaining Hungarian Jews in November 1944, Wallenberg was able to relocate Jews with Swedish passports to safe houses throughout Budapest. In conjunction with the WRB and diplomats from other neutral countries, Wallenberg also established makeshift hospitals and food stations for the Jews remaining in Budapest. Wallenberg is credited with helping save over 70,000 Jews residing in a Budapest ghetto in late 1944. He successfully convinced German and Hungarian authorities to spare the ghetto and its inhabitants. Wallenberg went missing during the Soviet liberation of Budapest; he was last seen on January 17, 1945, surrounded by Soviet troops. The Soviet Union later acknowledged that he had been detained and later died in prison in 1947.

In all, the War Refugee Board was credited with saving the lives of approximately 200,000 Jews. The WRB was instrumental in ending the deportation of Hungarian Jews and ultimately saved about 120,000 Jews in Budapest alone. Roughly 15,000 Jews were evacuated from parts of German-occupied Europe, while another 48,000 Jews in Transnistria were transferred to safer areas of Romania. In addition, more than 10,000 refugees were protected in other parts of Axis-controlled Europe with the assistance of WRB funding.

Washita River, Battle of the

On the morning of November 26, 1868, the Seventh U.S. Cavalry Regiment, commanded by Lieutenant Colonel George Armstrong Custer, attacked Cheyenne Chief Black Kettle and his band of approximately 300 men, women, and children camped along the Washita River in Western Oklahoma. Depending on the source, estimates of Cheyenne casualties range from 13 to 150 killed and an equal number of wounded, as well as 21 American soldiers dead and 12 others wounded.

Black Kettle and the Cheyenne

Once a sedentary tribe living in small villages around the Great Lakes region, the Cheyenne people were pushed gradually westward by Lakota Sioux and other tribes. By 1700, they had settled in the Black Hills region of South Dakota and along the Powder River further west.

When the Spanish introduced horses to the Cheyenne and other Plains tribes, their lifestyles changed dramatically. They could now follow the migrating buffalo herds, giving them an uninterrupted supply of food and hides. Over time, bands of Cheyenne spread across the plains, ultimately dividing into northern and southern branches. Four chiefs of 10 different bands from both north and south met periodically for the Sun Dance and a meeting of the Council of Forty-Four. In 1854, Southern Cheyenne Chief Black Kettle became chief of the council.

In spite of his impressive title, Black Kettle's role was really more that of an advisor than a military commander. With the expansion of American settlement into Cheyenne lands, clashes were inevitable. Before and after Black Kettle became chief, several violent encounters between Cheyenne and Americans led to brutal retaliation on both sides. He and other chiefs knew American military power was far superior to anything the Indians could muster and that this superiority had overcome Native American tribes to the east.

Black Kettle therefore counseled for peace, an unpopular position among some of the more militant chiefs and warriors. Still, he pressed forward in the hope of coexistence with the Americans, signing the Treaty of Fort Wise in 1861 and doing all he could to comply with its terms.

Events Leading up to the Battle

Like so many Native American tribes before them, the Plains Indians were under relentless pressure to give up their traditional lands and move onto reservations established by the U.S. government. Not doing so meant war and subjugation. Although Black Kettle wanted peace, he had no control over the actions of warriors who chose to ignore treaty provisions.

Directed in late 1864 to take his band to Fort Lyon, in eastern Colorado, Black Kettle was further ordered to move some 40 miles from the fort to Sand Creek. Black Kettle and several other bands obligingly made camp along the creek.

American authorities told Black Kettle that flying the American flag would ensure immunity against any attack from American forces. With no reason to believe in any danger, most warriors left the camp for a buffalo hunt. Unknown to Black Kettle, Colorado officials authorized an attack on the camp in response to raids from errant Cheyenne warriors.

On the morning of November 29, 1864, and with the American flag fluttering at the top of Black Kettle's tepee, over 700 Colorado state troops attacked and massacred between 70 and 160 people, mostly women and children. The attack on the camp was notorious for the extreme barbarism of the American soldiers.

Even after this brutal betrayal, Black Kettle still hoped for peace, and in 1867 he signed the Medicine Lodge Treaty on behalf of the Southern

This illustration was published in Harper's Weekly in 1868. It portrays the Seventh U.S. Cavalry charging into Black Kettle's village on November 27, 1868. Black Kettle's village was part of a series of camps that ran 10 to 15 miles along the Washita River and consisted of approximately 50 Cheyenne lodges, one or two lodges of visiting Arapaho, and two of visiting Lakota, for a total of about 250 inhabitants.

Cheyenne. It was in compliance with this treaty that he made winter camp on the Washita River.

The Battle

American authorities, eager to force the Plains Indians into submission, planned a three-pronged winter campaign. As commander of one of the three columns, Custer was the first to locate the Indian encampment along the Washita River.

Intending to surround Black Kettle's camp and capture or annihilate the entire band, Custer divided his force into four commands. Having failed to conduct proper reconnaissance, he was unaware that Black Kettle's band was only a small component of a huge winter encampment that included other Plains tribes. The encampment stretched nearly 15 miles along an oxbow of the Washita River and included 6,000 Arapaho, Sioux, Comanche, and Kiowa Indians.

Black Kettle and his wife were among the casualties; the couple was killed when soldiers shot them in the back as they attempted to flee on horseback. Initially, Custer was successful in routing Black

Kettle's warriors, and he captured around 50 women and children. On discovering the massive wave of warriors moving in his direction from the other camps, Custer used the captives as human shields. Since the warriors refused to fire at their own people, Custer was able to extricate his command and avoid certain destruction.

Custer had been an effective cavalry officer during the Civil War, rising to the rank of brevet major general. After the war, he transferred to Fort Riley to take command of the newly formed Seventh U.S. Regiment of Cavalry. Custer was a stern leader and unpopular with his troops. Yet he was a more than competent cavalry commander and transformed the regiment into an effective and well-trained fighting unit. Most regiments had a brass band, including the Seventh Cavalry. The attack at Washita River was the regiment's first major engagement in the Plains Indian Wars. During the attack, the band played "Garry Owen," an old Irish song popular among Civil War soldiers and adopted by the regiment as a theme song.

Aftermath

For most Southern Cheyenne, the fight at the Washita River reinforced the futility of further resistance, and most settled on reservations in Oklahoma. The Northern Cheyenne fought to settle on Lakota reservations in the north, near their beloved Black Hills, and were among the last Native Americans forced to live on reservations. Cheyenne bands tried to carry on their traditional way of life, but the buffalo they had come to depend on, once numbering in the millions, were hunted nearly into extinction by the end of the 19th century.

According to the 2010 Census, there are nearly 12,000 Cheyenne living on the two reservations originally allotted to them. They live in two worlds, one lost forever and another just begun. For the Americans, subjugation of the Plains Indians meant the opening of the American west for settlement and access to its vast natural resources. The site of the Battle of the Washita is now a National Historic Site located near Cheyenne, Oklahoma.

WASPs (White Anglo Saxon Protestants)

Although the United States is a pluralistic society comprising many different racial, ethnic, and religious groups from six continents, the origins of American society as an independent nation began with British settlement and colonization in the early 17th century. Over the course of the next two centuries, the number of settlers from the British Isles steadily increased, while the 13 colonies along the eastern seaboard of the North American continent emerged as among the most significant territorial possessions within Great Britain's vast overseas empire. Despite the presence of other European nationalities, African slaves, and dozens of indigenous cultural groups whose ancestors had lived on the American continent for millennia, the early British colonizers established economic, cultural, and political hegemony over the lands that were to eventually become the United States.

Sociologists and historians use the term *WASP*, an acronym for White Anglo Saxon Protestant, to refer to a British-derived ethnic heritage in American society that often traces its origins and family history in North America to the era of British colonization and settlement during the 1600s and 1700s. Specifically, WASP heritage reflects the diversity of British society and includes Americans of English, Scottish, Welsh, and/or Scots-Irish ancestry. Academics also typically include the descendants of colonial-era Dutch and Scandinavian settlers as part of the greater WASP collective. To a somewhat lesser degree, the ethnic label WASP is used to refer to the colonial-era British settlers in Canada as a contrast to the French Catholic settlement of, and cultural legacy in, Québec.

Sociologists Adalberto Aguirre and Jonathan Turner have defined WASP as “an ethnic complex consisting of northern European ethnic stock with light, ‘white’ skin; Protestant religious beliefs;

Protestant-inspired values based on individualism, hard work, savings, and secular material success; and English cultural traditions (language, laws, and beliefs) and institutional structures (politics, economics, and education).” Scholars use the labels Anglo-Protestant, WASP, and White Anglo Saxon Protestant interchangeably, with Anglo-Protestant becoming increasingly more popular as the most accurate descriptor for this particular population.

Demographics

By the end of the 18th century, the United States had gained its independence from Great Britain and had begun its “experiment in democracy.” Historians estimate that during these early years of the new republic, the ethnic composition of the nation’s nonslave population was 60.1 percent English, 14.0 percent Scottish or Scots-Irish, 8.6 percent German, 3.1 percent Dutch, and 3.0 percent French or Swedish. Despite heavy waves of Catholic and Jewish immigration during the mid-19th and early 20th centuries, scholars estimated that White Anglo Saxon Protestants still accounted for 55 percent of the total U.S. population by the mid-20th century.

A precise count of the WASP population of the United States today is difficult to determine accurately because neither the U.S. Census Bureau nor the American Community Survey uses this label for purposes of self-identification when compiling demographic information. WASP is a colloquial and sociological label, rather than a political or legal label. WASP population estimates, therefore, are often based on the more general population projections produced by the American Community Survey, which analyzes the demographic composition of the United States by national ancestry. According to the 2010 American Community Survey, approximately 26 million Americans of English ancestry, 5.5 million persons of Scottish heritage, and 1.8 million Welsh Americans resided throughout the nation. Additionally, the 2010 survey enumerated approximately 3.25 million Americans of Scots-Irish descent.

However, reliance on these statistics to determine the WASP population is somewhat misleading for a variety of reasons. The English American population of the United States is not a monolithic religious bloc and includes many

Roman Catholics in addition to Protestants. Furthermore, Americans of English, Scottish, Welsh, and Scots-Irish ancestries do not universally trace their family origins in the United States to the colonial period. Millions of immigrants from the United Kingdom of Great Britain and Northern Ireland have entered the United States since the early 19th century. Additionally, the WASP population is likely undercounted significantly because the American Community Survey counted nearly 20 million persons who identified “American” as their national ancestry. This response seems to be most common in the south, where English and Scots-Irish ancestries are extensive.

The term *Anglo Saxon* is also misleading. The term actually derives from two Germanic tribes, the Angles and the Saxons, who invaded the British Isles during the 5th and 6th centuries C.E. and intermixed with the other cultural and tribal groups already living in this region, including the descendants of Celts and Romans who entered present-day Britain several years earlier. Over time, other cultural groups entered the British Isles and blended with these heritages, including the Jutes, Vikings, and Normans. As a result, the population of Great Britain had been forged from an amalgamation of several different tribal-cultural heritages by the commencement of English colonialism in the 16th century.

Use of the Term WASP

Despite its widespread use among historians and sociologists, and its entrance into the popular American lexicon, disagreement over the appropriateness of the term WASP as an ethnic label persists. Critics allege that “WASP” has a mildly negative connotation, evoking stereotypes of socially awkward white people with an extreme entitlement mentality who are stiff, boring, and wealthy. This remains a powerful archetype in Hollywood films, as illustrated in the romantic comedy *Fools Rush In* (1997), starring Matthew Perry and Salma Hayek. Perry plays the role of Alex Whitman, an upper-middle-class WASP from Manhattan who falls in love with Isabelle Fuentes (Hayek), a bilingual Mexican American photographer from Nevada, after impregnating her during a one-night stand amid a business venture in Las Vegas. Much of the film focuses on the cultural clash between Whitman and Fuentes,

with Whitman's priorities on career and finances, as well as his initial suppression of personal emotions and desire to "keep up with the Joneses," sharply contrasting with Fuentes's warmth, compassion, and family-oriented social outlook.

The association of WASPs with money is commonplace throughout American culture, as WASPs are typically presumed to be upper or middle class. The designation "old money" is frequently used to describe WASP families who have been wealthy for generations; this label stands in contrast with that of "nouveau riche," which is used in reference to individuals who were not born into money but achieved a substantial degree of wealth within their own lifetimes. The exotic-sounding label *nouveau riche* (French for "newly rich") reveals a connotation of this term with upwardly mobile non-WASP persons, such as Irish, Italian, Jewish, African, Asian, and Hispanic Americans. The fact that working-class and impoverished white southerners are rarely, if ever, described as WASPs—despite the primarily English and Scots-Irish ethnic and Protestant religious heritage of southern whites—further highlights the conflation of the WASP label with affluence in American society.

Although WASP families, including some very prominent and highly influential WASP ones, exist within all 50 states, White Anglo-Saxon Protestants are most commonly associated with the Massachusetts-New York-southeastern Pennsylvania corridor of the New England and mid-Atlantic region. This is perhaps because of the critical roles that Boston, New York City, and Philadelphia have played throughout the nation's history, especially during the colonial era and the early years of the republic. Another factor contributing to this geographic conflation may be the highly influential sociological studies of Cleveland Amory and Digby Baltzell, who examined the local Anglo-Protestant establishments within Boston and Philadelphia, respectively, during the 1940s and 1950s.

The Anglo-Protestant Cultural Core

Criticism pertaining to the appropriateness of the WASP label notwithstanding, the British—particularly English—colonial legacy has profoundly shaped the dominant cultural heritage and institutions of American society. Language and

religion stand as two of the strongest realms of WASP cultural influence on the nation. Although the Founding Fathers failed to establish an official national language while framing the Constitution, immigrants have long been expected to learn the English language, and the presence of other languages has long raised the ire of many Americans. Benjamin Franklin, who notoriously bemoaned the influx of Germans into Pennsylvania during the 1750s, expressed the earliest resentment against immigrants speaking their native tongues on American shores.

Many of the traditional, dominant cultural values of the United States—such as a belief in hard work, rugged individualism, pursuit of material success, avoidance of temptation, efficient use of time, and an emphasis on Christian faith—derive from the various austere denominations of English/British Protestantism, such as Puritanism and Calvinism, whose members came to American shores during the colonial period in search of religious freedom. Described as "ascetic Protestantism," this religious tradition generally emphasizes individualism over family and community, strict self-discipline over pursuit of gratification, and productivity over recreation. As sociologists Joe R. Feagin and Clairece Booher Feagin note in their assessment of the influence of ascetic Protestantism on American institutional and cultural traditions:

American condemnation of British sexual and political impurities focused on the King. Idleness, wealth, and power had corrupted him. Puritanism helped to establish the Protestant work ethic—the idea of hard work as a duty of every individual, originally of an individual who seeks to please God—at the center of the U.S. value system. This work ethic was linked by many to the persistent pursuit of personal profit. The expanding U.S. capitalistic system in the late 1700s and the 1800s was pervaded by the pursuit of profit, and forever renewed profit, by means of continuous, rational, capitalistic enterprise.

The profound Protestant influence on American society during its early years evoked intense fears and suspicion toward Catholicism in the 18th and 19th centuries and toward Judaism

during the 20th century, reflecting a powerful religious nativism within the nation stemming from its WASP origins.

At the same time, the basic structure of American legal and political frameworks derives from a blending of 17th-century English institutions with 18th-century French social philosophy. From this hybridization stem the core American ideals of the rule of law, representative government, a series of checks and balances between different branches of government, a court system and common law, and a belief in the “inalienable” rights to life, liberty, and property. Many of these ideals became codified into the U.S. Constitution, although from the outset the nation restricted the legal rights and freedoms afforded to American Indians, blacks (both free and slave), and women. The Naturalization Act of 1790 restricted the right to apply for American citizenship to “free white persons” of “good moral character,” while women were denied the right to vote until 1920.

WASP Hegemony Throughout American History

The Anglo-Protestant core held a virtual stranglehold on economic, political, and cultural power in American society for nearly two centuries following independence. From George Washington through Harry Truman, every president was a Protestant of northwestern European ancestry. Of the nation’s 43 presidents, two-thirds were of English ancestry. Notable exceptions to this trend included the Roosevelts and Martin Van Buren, who were of Dutch ancestry.

The election of Dwight D. Eisenhower, the first German American president, in 1952 and the subsequent election of John F. Kennedy, the nation’s first Irish Catholic president, in 1960 generated speculation at the time that WASP power may have reached its pinnacle. The election of Richard M. Nixon in 1968 assuaged such fears, however, with a series of Anglo-Protestant males succeeding Kennedy over the next five decades. All told, only one Roman Catholic has ever been elected president, and the nation has never had a president of southern European descent. Until 2008, neither major political party had nominated a black candidate as its presidential nominee. The election and reelection of Barack Obama as the 43rd president of the United States finally ended

the nation’s streak of white presidents, although Obama is a Protestant.

The earliest British colonies in North America date to the early 1600s and include the settlements of Jamestown, Virginia, in 1607 and Plymouth, Massachusetts, in 1620. Four distinct Anglo-Protestant groups from different regions of Britain settled throughout the 13 original colonies during the 17th and 18th centuries, setting the stage for local variations in dialect and cultural customs found between the American north and south today. Significant numbers of Puritans from eastern England settled in the Massachusetts region between the 1620s and 1640s, and a group of Royalists from southern England and large numbers of indentured servants from across England migrated to the Virginia area between 1642 and 1675. A third group, led by William Penn and consisting of Quakers from the North Midlands of England and Wales, settled in the Delaware River Valley between 1675 and 1725. This group founded the Pennsylvania Colony in 1681. Lastly, a group of English, Scottish, and Scots-Irish migrants from the borderlands area of northern England and northern Ireland settled in the Appalachian region between 1718 and 1775.

After winning independence from Britain and establishing the parameters of the new republic, Anglo-Protestant elites articulated an ideology of manifest destiny during the 19th century. This racialized worldview constructed Anglo Saxons as a “chosen people” to whom God had granted the authority of colonizing the entire North American continent. According to the logic of manifest destiny, expanding the borders of the United States through the annexation of additional territories was a predestined outcome that set the stage for additional warfare and ethnic conflict within the present-day southwest. Mexican military defeats in the Texas Revolution and Mexican-American War (1846–48) crystallized the ideology of racial Anglo Saxonism, which viewed the conquest of Indians, the enslavement of Africans, and the triumph over Mexicans as evidence of divine intervention and WASP supremacy. This ideology of Anglo-Protestant supremacy was invoked to justify calls for an American “colonizing mission” akin to French and British colonial endeavors, during the late 19th and early 20th centuries.

The 8,000 persons listed in the Boston *Social Register* in the mid-1940s consisted almost entirely of Anglo Saxon individuals, featuring just one Jew and various members of just a dozen Catholic families. The Philadelphia *Social Register* likewise reflected Anglo-Protestant dominance; studies indicate that the overwhelming majority of individuals listed in the register during the 1940s, 1950s, and 1960s were of British ancestry and either Episcopalian or Presbyterian in their religious affiliation. By 1982, Anglo-Protestants still accounted for 57 percent of all business leaders nationwide, a figure that greatly exceeded their share of the national population.

Immigration from non-Protestant societies and non-northern European nations resulted in occasional outbursts of intense nativist backlashes among America's Anglo-Protestant majority. Anti-Catholic prejudices against Irish immigrants escalated during the two-decade period preceding the Civil War, giving rise to the Know-Nothing Party and Philadelphia's notorious Bible Riots in the spring of 1844, in which Anglo-Protestants viciously attacked Irish Catholics and burned the city's two largest Catholic cathedrals to the ground. The Know-Nothings were a political party composed largely of working-class Anglo-Protestant males who sought to severely restrict immigration, particularly from Ireland, during the 1850s. Religious, cultural, and racial concerns initiated an intense wave of nativism against southern and eastern European, as well as Asian, immigrants during the 1910s and 1920s, ultimately culminating in the Immigration Act of 1924, which dramatically restricted immigration from these regions. Upon signing the bill, President Calvin Coolidge quipped, "America must be kept American."

The Hart-Celler Immigration Act of 1965 abolished the national origins quotas enacted in 1924. Since 1965, large numbers of immigrants from non-European nations have entered the United States. This has reshaped the demographics of the United States, leading to a greatly diminished WASP population.

WASP Identity: An Understudied Phenomenon

Relatively little social science data on the nature of WASP ethnic identity exists, in large part because most psychologists and sociologists throughout

American history have come from this heritage themselves and have demonstrated a general preference for studying "exotic others" (Catholic and Jewish ethnics, African Americans, Native Americans). The research that does exist on this matter, however, indicates that many Protestant whites in the United States perceive themselves as lacking an ethnic and cultural identity, with whiteness functioning as the default "norm" against which other all other racial, ethnic, and cultural identities are measured. In other words, whiteness is commonly understood as implying a culture-less and "normal" identity; against this backdrop, "culture" is attributed to white ethnics and racial and ethnic minority groups.

Sociologist Richard Alba documents that between 40 and 50 percent of Americans of British ancestry claim that their ethnic heritage holds no importance to them. Other European American ancestral groups, such as Irish and Italian Americans, reveal higher rates of identification with their ethnic heritages. Alba attributes the tendency among Americans of British descent to avoid identifying with their ancestral heritage as a strong testament to the thorough degree to which American identity had become synonymous with English- or British-derived customs, values, and lifestyles since the earliest origins of the republic.

Anthropologist Laura Zimmer-Tamakoski, herself of English, Scots-Irish, German, and Cherokee ancestry, claims that important class-based distinctions among Anglo-Protestants exist regarding the nature of self-identity. Zimmer-Tamakoski claims that family name/lineage and wealth often serve as the primary basis of identification among upper-class WASPs who constitute America's power elite, whereas working-class and middle-class Anglo Saxons are much less likely to make their family name the basis of their self-identity and instead are more likely to identify simply as "American." Zimmer-Tamakoski has described the pervasiveness of WASP identity as the essence of Americana during her youth in the 1950s and 1960s:

. . . the "all-American" image of white Anglo-Saxon Protestants was everywhere: on the cover of *Life* magazine and the *Saturday Evening Post* (e.g. Norman Rockwell paintings), on television, and at the movies. Our favorite

pulp fiction provided WASP models for adolescent success. For girls there was Nancy Drew, for boys the Hardy brothers. As a teenager I read every Nancy Drew mystery ever written, and from her I learned that a girl could be and do anything she wants as long, that is, as she knows when and for whom to take a back seat.

Decline of the WASP?

Recently, some social commentators have speculated that the era of WASP dominance in American social and political life is either in decline or perhaps already over. Proponents of these viewpoints point to demographic changes, political developments, and cultural shifts over the past few decades that appear to have diluted Anglo-Protestant influence over the nation. Since 1910, the percentage of Americans of English, Scottish, Welsh, and Scots-Irish heritage has steadily declined in large part because of dramatic increases in immigration from southern and eastern Europe in the early 20th century and from Latin America, Asia, the Caribbean, Africa, and the Middle East since the late 20th century.

By the early 21st century, Americans of English ancestry accounted for just 8.3 percent of the national population, while persons of Scottish descent constituted a mere 1.7 percent of all Americans. Scots-Irish Americans accounted for approximately 1 percent of the national population, and Welsh Americans composed less than 1 percent of the national total. Current immigration trends and birth rate patterns ensure that this dramatic decline in WASP demographics will continue into the future.

The WASP influence on contemporary U.S. popular culture, particularly with regard to music, movies, television, and sports, is minimal. Although country music performers remain overwhelmingly white Protestants from the southern and midwestern regions of the nation, other genres of popular music—particularly rock and roll, heavy metal, grunge, rap/hip-hop, rhythm and blues (R&B), and soul—are dominated largely by the progeny of white ethnic immigrant groups, African Americans, and Latinos. Additionally, Latin musical genres such as salsa and merengue have gained incredible popularity throughout American society. Major collegiate and professional sports, such as football and basketball, feature primarily

African American athletes, Latinos are concentrated in boxing and baseball, and professional hockey consists largely of eastern Europeans.

The 2012 presidential election was the first in the nation's 236-year history that did not feature an Anglo-Protestant candidate or running mate on either ticket, garnering significant media attention over the alleged demise of the WASP in American society. Just 20 years earlier, both major political parties featured Anglo-Protestants as their nominees and running mates (Republicans George H. W. Bush and Dan Quayle and Democrats Bill Clinton and Al Gore). The 2012 campaign featured an African American (Barack Obama), two Irish American Catholics (Joe Biden and Paul Ryan), and a Mormon (Mitt Romney). Evidence of the alleged WASP decline in government can be found in other areas as well. Currently, the speaker of the House of Representatives (John Boehner) is Catholic, while the Senate majority leader (Harry Reid) is Mormon. The U.S. Supreme Court today consists of one African American, one Latina, three Jews, and five Catholics, marking the first time in American history that not a single WASP has sat on the high court.

Welsh Americans

Wales is a sociocultural unit found in the western part of the island of Britain. Technically, it is part of England, although it has a separate language, history, and ethnicity. The Welsh were the natives in Britain when the Romans arrived, but they found themselves pushed further west, until their culture was restricted to an area mainly north and west of the Severn River and southwest of Liverpool.

The people of Wales are known as Welsh in English but as Cymru, which means “comrades” or “fellow countrymen,” in their own language. The Welsh language is one of the Celtic languages, related to those found in ancient Gaul and modern Brittany. Following the Norman invasion in 1066, Norman knights settled in Wales to subdue the local population. For this reason, Wales has one of the densest concentrations of castles per square mile in the world. Giraldus Cambrensis (Gerald of Wales) contributed greatly to the familiarity with Welsh life in the mid-12th century in his *Journey Through Wales* and *Description of Wales*.

Welsh Settlement in North America

According to medieval legend, Prince Madog ap Owain Gwynedd crossed the Atlantic in 1170 with three ships and founded a colony in what is today Alabama. A memorial to Madog was erected on the shores of Mobile Bay, Alabama, in 1953. The legend of Prince Madog gave rise to the legends of Welsh-speaking Indians in North America (especially the Mandan tribe). The legend also was cited as England’s claim to sovereignty over the United States. Some people believe that America was named after a Welsh merchant, Richard Amerik (ap Meurig), who was a financial backer of John Cabot, rather than the chronologically later mapmaker, Amerigo Vespucci.

In 1607, a Welsh and Cornish colony was established in what later became Maryland, and in 1617, one was founded in Newfoundland. Many Welsh Quakers came to Pennsylvania to escape religious oppression after William Penn promised them a colony to be called New Wales. Although this was rejected by the Crown, many towns and cities in Pennsylvania bear Welsh names, such as Bryn Mawr, to this day.

The oldest Baptist church in the United States was founded by Welsh settlers in Swansea,

Massachusetts, in the mid-17th century. According to historians Julie Brake and Christine Jones, the oldest ethnic language society in the United States was founded by Welsh in Philadelphia in 1729. Fourteen of the Revolutionary War generals were Welsh, and 18 of the 56 signatories of the Declaration of Independence were descended from Welsh immigrants, including Thomas Jefferson. As of 2004, 11 U.S. presidents were of Welsh descent. The U.S. Census Bureau’s 2010 American Community Survey reports that 1,793,356 people report Welsh ancestry (with a margin of error of 25,237).

Culture

In the 19th century, another wave of Welsh immigration to the United States followed the coal mining, iron smelting, and tin plating booms in Pennsylvania and the Ohio Valley. Many of these immigrants settled in Scranton and Wilkes-Barre, Pennsylvania, but some spread out along the Ohio River, where their descendants remain to this day. As late as the 1950s, there were Episcopal (Anglican) churches in southern Ohio in which Sunday services were conducted in Welsh. Other Welsh Americans were descended from Non-conformist worshippers, as were the Quakers. The later Welsh immigrants to America included many Methodists after their 1811 break with the Church of England. Some of them settled in Kansas and Wisconsin. The gold and silver rushes of the mid- and later 19th century spread Welsh miners throughout the west.

Literacy, taught as Biblical instruction in churches, was a priority for some Welsh in the United States, such as George Jones, who founded the *New York Times*, and the importance of education to Welsh Americans helped lead to the establishment of Bryn Mawr, Yale (after the Welsh Iâl, as in Llanarmon-yn-Iâl in Wrexham, Wales), Johns Hopkins, and Morgan State universities. American architect Frank Lloyd Wright named his own home after the 6th century Welsh poet Taliesin.

In 1789, bardic competition was reestablished in Wales in the form of the *Eisteddfod*, which endures to this day, not only in Wales but also in America. A number of *Eisteddfodau*, as well as other cultural events, are held in the United States, organized by Welsh American clubs in California, Minnesota, Missouri, New Jersey, New

York, Ohio, and elsewhere. At Welsh fairs and *Eisteddfodau*, people may be found displaying the national symbols, leeks and daffodils; attending sheepdog trials; eating dishes such as Welsh rabbit, or rarebit (a cheese, mustard, and egg sauce served on toast); and wearing traditional Welsh country attire, the women in heavy skirts, shawls, and wimples under flat-topped conical hats.

The Contemporary Scene

Welsh Americans in the 20th century found it easier to assimilate into the dominant culture because of their apparently English background, leading some Irish American competitors to complain that British American bosses favored the Welsh over them. Episcopalian churches with Welsh congregations or affiliation often celebrate Saint David's Day on March 1, David being the patron saint of Wales. It would appear that Welsh Americans are one of the country's most successful ethnic groups.

West Indian Americans

West Indian Americans are immigrants from the former British West Indies, Belize, and Guyana and their U.S.-born offspring. Although there has always been a steady stream of immigration from these home countries to the United States, the bulk of the immigration occurred in the late 19th and early 20th centuries. In 1924, restrictive immigration legislation effectively halted immigration from the islands, but in 1965, Congress passed, and President Lyndon B. Johnson signed, the landmark Immigration Act of 1965, which opened the floodgates for a mass migratory stream that continues today, although somewhat abated by economic and political factors.

Born out of brutal slavery, emancipation, oppressive colonialism, and later gradual political independence in most islands, for the last 50 years the West Indies have generally been perceived as a laboratory for racial and ethnic harmony and continue to be a main attraction for tourists.

West Indian Americans comprise many different ethnicities: African, East Indian, Portuguese, Syrian, Chinese, European, Amerindian, and mixed groupings, some of which are called Douglahts (the result of miscegenation of East Indians and Africans). The reasons for emigration from the West Indies are largely economic and result from the failure of political independence to bring the necessary economic reform. In addition, globalization has made the islands' single-crop economies largely irrelevant.

There is a Creole culture in the West Indies that is a combination of British, Amerindian, African, and other cultural elements, and this culture has formed, and in many instances replaced, the Anglo culture. Creole culture is also correlated with urbanization. There are other cultures, primarily in rural areas, most notably a large numbers of Hindus, as well as some Chinese, Portuguese, and Native Americans (called Amerindians).

Most West Indian Americans, because of chain migration, settled in the northeast corridor of the United States, and they have created viable and vibrant ethnic communities and enclaves in New York City and its suburbs; Florida (Miami and the southeastern part of the state); Boston, Massachusetts; Hartford, Connecticut; and Newark, New Jersey. Here, West Indian immigrants have contributed much to their adopted homeland.

Life in America

Living in America has not been without challenges and conflicts for West Indian immigrants. They have had to deal with the overriding issues of race and racial stratification that were generally alien to them in their native lands, where they were the numerical majority and were more attuned to class perspectives. Those of African backgrounds were forced to identify as African Americans, or try to maintain their ethnic identity as West Indians. Some alternated between the two identities, choosing whichever was more advantageous for them in their respective social interactions. Many, though, were active leaders among and for African Americans in the fight to end racial discrimination in the United States, and they fought such battles in the courts, legislatures, and many other social institutions.

Some immigrants who were lighter-skinned passed for whites and intermarried with persons who were not from the West Indies. Immigrants of East Indian ancestry largely tried to replicate their culture, including religion, dress, and cuisine, while staying in their own ethnic enclaves but joining the general West Indian population for events such as carnivals, independence celebrations, high school reunions, social club gatherings, cricket games, and fetes.

It is indisputable, however, that most West Indian Americans have subscribed to the values of hard work, deferred gratification, and a heavy emphasis on education to propel them into the middle and upper classes, thereby helping mitigate the more blatant issues of racial subordination and discrimination. As a result, West Indian immigrants are heavily represented in America as property owners and in the professions as physicians, professors, lawyers, judges, and businesspeople. Many also are enrolled in elite colleges, universities, and high schools.

Some prominent West Indian Americans include civil rights activists Marcus Garvey and Stokely Carmichael; Kamala Harris, attorney general of California; the late Mervyn Dymally, a former California lieutenant governor and state lawmaker; Colin Powell, a retired four-star general and the first African American appointed secretary of state; U.S. attorney general Eric Holder; the late Shirley Chisholm, a presidential candidate and longtime member of Congress; the late Constance Baker Motley, a judge, New York state lawmaker, and Manhattan borough president; David Patterson, former governor of New York; Kenneth Chenault, chief executive officer of American Express; and Ursula Barnes, chief executive officer of Xerox. Second-generation and later-generation West Indian Americans are often pressured by competing ethnic identities, questioning if they are West Indian, American, West Indian American, or African American.

Many have resolved this dilemma by alternating among these identities, choosing one or the other as advantageously warranted. In her research, Mary Waters has shown that some second-generation West Indian Americans who are lower class, living in ghetto-like conditions, performing poorly in school, and running into trouble with law enforcement agencies often create alliances with criminal elements among the African American population, which often leads to criminal careers, incarceration, and deportation. Many of the local political West Indian organizations, newspapers, and social clubs have been trying to work with the educated elite and professional class to assist their lower-class countrymen, who reflect badly on what was once considered an overachieving and highly successful ethnic group, despite the barriers of racial discrimination.

Remittances and Rotating Savings and Credit Associations

Within the West Indian American community, there exist transplanted mutual and voluntary organizations called rotating savings and credit associations, which are instrumental in helping members of this community validate their middle-class aspirations and cope with financial difficulties. Called *esusu* in Yoruba, and thought to have originated in West Africa, these associations are

known by different names among West Indians: *esu* among Bahamians, “meeting” among Barbadians, “syndicate” or *tanda* among Belizeans, “box” among Guyanese, *susu* among Trinidadians, and “pardners” among Jamaicans.

A group of West Indians, consisting of as many as 100 participants or as few as 10, verbally agree to make regular contributions to a fund (hand), with the money distributed to each contributor in rotation. Doubling or tripling, in which one participant contributes to two or three hands, occurs frequently. The exact amount of the hand is decided by the organizer, often called a banker. These associations have become structural shields for members of this community and their progeny, encouraging some small-scale capital formation and often acting as conduits for microlending, thus enabling West Indian Americans to capitalize their businesses, accumulate housing wealth, or purchase household items and airline tickets.

The first-generation West Indian Americans generally used funds from these associations for major economic transactions, such as placing a down payment on a home, putting a deposit on a small businesses, or purchasing an automobile. Second-generation West Indian Americans are more likely to use the funds to finance weddings, vacations, timeshare arrangements, and the like. The “*susu*” is a sound form of financial community in which people share in order to help each other make investments or achieve dreams that would otherwise not be possible. This transplanted association is firmly embedded in the community and now overlaps with other mainstream financial organizations in the United States.

Another financial transaction that has had a monumental impact on the West Indian American community is the remittance, in cash or in kind, that is sent back to their native homes. Among West Indians of Jamaican, Guyanese, and Barbadian ancestry, for example, cash remittances provide much-needed help for the impoverished communities back home; and the barrels of durable and tangible items sent home provide Hometown Associations (HTAs) with the wherewithal to maintain their viability. The economic and social importance of these associations cannot be underestimated, and many of the national budgets of their microsocieties in the Caribbean would be bankrupt with their loss.

Sports and Recreation

Despite the basketball prowess and success of Patrick Ewing (Jamaican ancestry) and Kareem Abdul-Jabbar (Trinidadian ancestry), cricket, football (soccer), and track and field are the predominant sporting activities in which West Indian Americans are involved and spend their leisure time.

From the legendary Royal Exiles Cricket Club, which existed in Brooklyn in the early 1900s, to the Atlantis Cricket Club, which in July 2012 celebrated its 100th anniversary with its senior partner, the Demerara Cricket Club in Guyana, many West Indians participate in this sport in America. There are cricket leagues in New York, Massachusetts, Florida, and Connecticut, and many West Indian Americans stay glued to their televisions and radios to follow the cricket World Cup matches in India, Pakistan, England, Australia, or New Zealand, or back home in their native lands.

Spurred by the memorable track and field prowess of legendary Olympic stars such as Mal and Mel Spence, Arthur Wint, and Usain Bolt of Jamaica, and Hasley Crawford of Trinidad and Tobago, West Indian American students tend to focus on this sport in high schools and colleges, often being awarded track and field scholarships. The Penn Relays track and field competition held in Philadelphia are often a main attraction for young West Indian athletes looking to make their mark in this sport. Soccer has gained popularity in the United States, and young West Indian American players can be seen with youth from Latin America and European backgrounds perfecting their skills in this sport.

There are few West Indian Americans who have excelled in the American sports of baseball and football, although Andrew Quarless, of West Indian background, was part of the Green Bay Packers team that won the Super Bowl in 2011. In his honor, the unincorporated village of Uniondale, in suburban Long Island, New York, named a street the Andrew Quarless Way.

West Indian Americans have also excelled in acting (Sidney Poitier, Cicely Tyson, Lawrence Hilton-Jacobs), the theater, fashion and music (Rihanna, Tyson Beckford, Harry Belafonte, Hazel Scott), literature (Paule Marshall, Derek Walcott, Patricia Powell), philanthropy (Earl

Colin Powell is a very prominent West Indian American. A retired four-star general in the U.S. Army and the 65th U.S. secretary of state, he was the first African American to serve in that capacity.

Greaves and Franklin Thomas), and dance (Pearl Primus and Geoffrey Holder).

Transnationalism and Going Home

In a paper on migration and transnationalism, published in March 2010 by the intersessional workshop of the International Dialogue on Migration, it was noted that transnationalism causes a great degree of connections between individuals, countries, and societies across borders, resulting in changes in the social, cultural, and political landscape of donor and host societies alike. This perspective comes closer to bridging the wide variance among immigration scholars in precisely defining transnationalism—a process that has grown among West Indians in the late 20th and early 21st centuries. In earlier periods, these immigrants were subjected to racism and nativism from many Americans, and responded by adopting a sojourner mentality

and posture: retreating to their ethnic enclaves, retaining only their green cards as proof of permanent residency, and opting out of naturalization as new Americans.

Today, in the age of globalization, rapid air travel, instant communication, and technological changes, West Indian Americans can travel to their native lands rapidly, engaging in commerce, starting HTAs, and, with the facility of dual citizenship, impacting the political and economic directions of their home countries. Since the terrorist acts on September 11, 2001, the rate of naturalization has increased among West Indians (many nationals were lost as a result of terrorism at the World Trade Center and the Pentagon). There has been a simultaneous increase in the home nations' establishment of cabinet ministries to provide increased and paramount attention to dealing with diasporic transnational affairs.

From New York, the prototypical World City, Mayor Michael Bloomberg and former governor George Pataki travelled to Jamaica during their reelection campaigns as part of their recognition of this important new transnational phenomenon. Many West Indian Americans have built retirement communities in their native lands. Investments, trade, and business arrangements, and political connections have also been initiated in Jamaica, Guyana, and Trinidad and Tobago, while the older cohort of immigrants seek to have their remains taken home for burial when they die. As one social commentator aptly stated “Yes, West Indian Americans can go ‘HOME’ again, they can even stay.”

West Side Story

West Side Story is a 1957 musical, conceived and staged by Jerome Robbins, with music by Leonard Bernstein, lyrics by Stephen Sondheim, and book by Arthur Laurents. It is a retelling of William Shakespeare's *Romeo and Juliet*, with the feuding Veronesi supplanted by Puerto Rican and white ethnic street gangs in 1950s Manhattan. With gritty themes explored largely through dance, barefaced dialogue, and an impressionistic jazz score, *West Side Story* brought a pressing, youthful aesthetic to Broadway. As of 2012, *West Side Story* has had four Broadway engagements. The 1961 film adaptation, which won 10 Oscars, is widely regarded as an exemplar of American filmmaking.

The Development of *West Side Story*

Choreographer Robbins initially conceived of a musical adaptation of *Romeo and Juliet*, set in the tenements of Manhattan's Lower East Side, with a Catholic Romeo in love with a Jewish Juliet. He enlisted Hollywood screenwriter Arthur Laurents to pen the libretto and conductor Leonard Bernstein to compose the score in 1949. After a few months of work, the trio realized that these themes had been covered in this way numerous times in the theater, and *East Side Story* was shelved.

A rise in violence from teenage street gangs engaged in turf wars on the Upper West Side of Manhattan reignited the trio's interest in adapting *Romeo and Juliet*. Shakespeare's Montagues became the white working-class Jets; the

Capulets were now the Sharks, Puerto Ricans who had recently migrated to New York; and the setting was the girded fire escapes and narrow alleyways of Hell's Kitchen. Robbins, Laurents, and Bernstein settled on Stephen Sondheim, a 25-year-old novice and protégé of Oscar Hammerstein II, to write the lyrics. Rechristened *West Side Story*, it was to be a serious examination of social pathologies and urban teenage angst, rather than a conventional musical comedy. The dark subject matter—depicted onstage were violence, a number of murders, and an attempted rape—discouraged many producers from supporting the work. However, Harold Prince, who would go on to direct and produce a number of Sondheim's most influential musicals, recognized the musical's potential and agreed to produce it with his partner, Robert Griffith.

In *West Side Story*, the Jets, led by Riff, and the Sharks, whose leader is Bernardo, get into minor but frequent scuffles over disputed neighborhood turf. Riff attempts to convince Tony, a former Jet, to rejoin the gang for an anticipated altercation with the Sharks at a school dance. Bernardo attends that same dance with his girlfriend, Anita, and his younger sister, Maria, who has recently arrived from Puerto Rico. For Maria and Tony, it is love at first sight, but considering the tensions between their rival groups, the couple has to conduct the relationship in secret. The gang members arrange to battle on the following night. Not wanting to see his friends or his girlfriend's brother injured, Tony attempts to stop the fight. However, in the ensuing melee, Bernardo accidentally kills Riff, and Tony, in a blind rage, stabs Bernardo. A contrite Tony is forgiven by Maria, who agrees to run away with him. Anita discovers their relationship and accuses Maria of disloyalty and foolishness; however, once she comes to understand the depth of their feelings for each other, she agrees to help the couple flee. However, before they are able to leave, Tony is shot by a Shark in retaliation for Bernardo's death. Devastated, Maria calls for an end to all the senseless violence.

Casting proved difficult, as *West Side Story* necessitated strong singing, dancing, and acting abilities from all its performers. Chita Rivera, who had already appeared in three Broadway musicals and had studied at George Balanchine's

School of American Ballet, was an obvious choice for the role of Anita. A more extensive audition process was necessary for finding Larry Kert and Carol Lawrence, who were cast in the leading roles of Tony and Maria. Very few performers cast as Sharks were actually Latinos.

Production History

On September 26, 1957, *West Side Story* opened on Broadway at the Winter Garden Theater, incidentally just a few months after a production of *Romeo and Juliet* had closed. The reception was mixed, with many hailing the musical a choreographic success but put off by the grisliness of the content. Nevertheless, Bernstein and Sondheim's distinguished score, which included "America," "Tonight," and "Somewhere," became an instant classic. The canonization of the musical did not occur until the release of 1961 film adaptation, which won 10 Academy Awards, including Best Picture, Best Director, Best Supporting Actor (George Chakiris), and Best Supporting Actress (Rita Moreno). In 1997, the Library of Congress recognized the *West Side Story*'s cultural significance and selected it for preservation in the National Film Registry.

As of 2012, the musical had been recorded numerous times, produced all over the world, and revived on Broadway three times: briefly in 1960; in a second production in 1980, and in a Tony-winning revival in 2008, with Spanish lyrics and dialogue for the Sharks, written by *In the Heights* composer-lyricist Lin-Manuel Miranda.

Wheeler-Howard Act (1934)

President Franklin D. Roosevelt signed the Wheeler-Howard Act, commonly called the Indian Reorganization Act, into law on June 18, 1934. Named for Senator Burton K. Wheeler of Montana and Representative Edgar Howard of Nebraska who presented the bill in Congress, the legislation was an essential part of a larger policy reform movement known as the Indian New Deal begun under the Franklin D. Roosevelt administration. The primary intentions of the Wheeler-Howard Act were to restore tribal self-governance, discontinue the land allotment policy established by the Dawes Act of 1887, return federal landholdings back to tribal ownership, and improve the economic development of tribes through a revolving loan fund. The Wheeler-Howard Act brought in a new era of American Indian affairs that was markedly different from earlier policies that centered on individual ownership of land and ending tribal sovereignty through assimilation. Although strong support for the Wheeler-Howard Act existed, opposition came from many fronts, including tribes that viewed the act as another form of federal paternalism and proponents of assimilation who criticized the legislation for attempting to restore communal ways of life.

The guiding force of the Wheeler-Howard Act and the Indian New Deal was John Collier, commissioner of the Bureau of Indian Affairs from 1933 to 1945. Once the former executive secretary of the American Indian Defense Association, Collier made it his mission to dissolve the Dawes Act, and he believed the Wheeler-Howard Act was a certain path to that particular goal. Collier was a romantic and often imposed his own vision of what a tribal community should be without regard to individual tribal differences or, in many instances, input from tribes. In this way, Collier failed to relinquish power to American Indians themselves. Collier found resistance from tribes who resented the paternalism of the Wheeler-Howard Act.

The act, for instance, gave the Department of the Interior the power to amend and approve tribal constitutions and bylaws. Selected intellectuals and Washington bureaucrats influenced the direction of tribal constitutions, resulting in governing

documents that reflected the U.S. Constitution and not traditional models of tribal governance. Tribes, for example, that depended on the authority of tribal elders had their traditional forms of governance replaced by tribal officials and unfamiliar political structures. Self-government, under the Wheeler-Howard Act's restrictions, put into question the very nature of the act's true intent and its ultimate limits for bringing forth reform based upon true tribal autonomy. Furthermore, resistance to Collier's reforms also came from tribes whose members preferred the individual ownership of land and did not want lands returned to communal ownership.

Greatest Contributions and Legacy

The reversal of the land allotment policy established by the Dawes Act is considered the Wheeler-Howard Act's greatest contribution to the reforms of the Indian New Deal. Under the Dawes Act, tribes lost two-thirds of their total landholdings through a process of allotting American Indians individual deeds of land and selling the surplus lands to non-Indians. Not only did the Wheeler-Howard Act stop the allotment policy that would have led to the further loss of tribal land, but it also provided monies and loans for tribes to acquire land that eventually totaled approximately 4 million acres.

The acquisition of land, however, did not necessarily increase the livelihood of tribes, as most of the land was inadequate for crops and grazing. Even when considering the reacquisition of tribal land as the most significant legacy of the Wheeler-Howard Act, the resistance from tribes to ending the allotment policy stands as an important aspect of the act's history. The American Indian Federation, led by Joseph Bruner (Creek), called attention to the resistance of the organization's 4,000 members who believed the end of the allotment policy would impede the progress made by the individual ownership of land. For the American Indian Federation, Collier's policies in general and the Wheeler-Howard Act in particular represented an anti-American ethos. Tensions over the Wheeler-Howard Act within individual tribes and intertribal organizations made it clear that no federally imposed solution to the problems American Indians faced would be widely supported.

The Wheeler-Howard Act stands as one of the most significant pieces of legislation affecting

American Indians in the 20th century. Diminished tribal sovereignty and landholdings moved the Roosevelt administration to counter the effects of policies set in place in the 19th and early 20th centuries. The Wheeler-Howard Act sought to empower tribes through self-government and rebuilding tribal lands. In historical context, the act presented a fundamental shift in Indian affairs, for it reversed policies that threatened the existence of American Indian tribes as legal entities with secured lands. The act, however, possessed limits on the extent of how far the federal government was willing to support tribal sovereignty. A high degree of paternalism was existent in the act and restricted tribes from passing constitutions without the oversight and approval of the Bureau of Indian Affairs. Tribes that held traditional forms of governance often had to capitulate to agreed-upon conditions often opposed to their customary practices. Ultimately, the diversity of tribes and factions within each made the Wheeler-Howard Act a controversial piece of legislation. Its approach did not take into full consideration the uniqueness of tribes that often possessed unique political structures and traditional forms of governance.

White Ethnics

Although the most general definition of “white ethnicity” may encompass the descendants of

all European immigrants, in the humanities and social sciences, “white ethnics” usually refers to whites of non-Protestant European origins (such as Italian, Polish, Jewish, Irish) whose arrival in the United States can be traced back to the massive immigration between the 1820s and 1920s. This understanding of white ethnics rests on the distinction between white Anglo Saxon Protestants (WASPs), who formed the dominant group in the early United States, and other whites. For some, the term *white ethnic* has lost its usefulness in today’s reality, where the groups once considered white ethnics are now often seen as falling into the general category of “white” or “European American.” However, the term remains important in discussions concerning immigrant groups’ historical place within American racial and ethnic classifications. Moreover, since the 1960s, the continued insistence of some descendants of white ethnics on preserving their groups’ ethnic distinctiveness suggests that the term *white ethnics* retains at least some of its relevance today.

The immigration that brought the future white ethnics to the United States happened in two distinct stages. The first stage, called the Old Immigration, started in 1820s and comprised northern and western European immigrants, among whom the Irish were the only non-Protestant group. Because of their religious difference, as well as their low economic status, the Irish faced harsh discrimination from other ethnic groups. They are often the main group among the Old Immigrants referred to as white ethnics, though a broader application of the term may also include other Old Immigrants. On the other hand, some scholars have argued that groups such as Germans and even the Irish should not be considered as white ethnics because of their early settlement in the United States and their high degree of assimilation that took place even before the end of the 19th century.

The New Immigration

The majority of the groups considered white ethnics arrived in the second stage of the massive migration from Europe, known as the New Immigration, which started in the 1880s and continued until 1924, when restrictive legislation ended the massive immigration. This wave brought an unprecedented number of immigrants to the United States. They came mostly from southern

and eastern Europe and were predominantly poor, non-English-speaking Catholics and Jews. Their cultural, religious, linguistic, and class difference made them targets of acute prejudices, comparable to the discrimination faced by racial minorities. In fact, at the turn of the 20th century, many of the groups referred to as white ethnics today were regarded, both by the WASP elite and by contemporary scientists, as separate races. Their perceived distinctiveness and inferiority were formulated not only in cultural but also in biological terms. Thus, people who were Polish, Italian, or Jewish were frequently described as possessing idiosyncratic physiological characteristics, as well as lacking in intelligence and skills.

As generations passed, those initially down-trodden and predominantly working-class immigrant groups climbed the socioeconomic ladder, eventually to achieve relatively high levels of social mobility in the second half of the 20th century. In the 1990s, a new interdisciplinary field of social, historical, and cultural inquiry, called “whiteness studies,” began to critically investigate the processes whereby those immigrants gradually came to be regarded as less ethnic and increasingly more white. Whiteness scholars see this social transformation as rooted in the development of an overarching white identity across European immigrant groups. Contemporary census records indicate that despite their perceived racial inferiority, southern and eastern Europeans as well as Irish were even in the late 19th and early 20th centuries categorized as white. This shared categorization in terms of skin color must have been helpful in forging a new identity that often depended on emphasizing and reproducing both the perceived and the real differences between white ethnics and the people of color. The result of those efforts—the social construction of a pan-ethnic white category—alleviated many of the hardships experienced by white ethnics. It also erased some of the differences among the various European ethnic groups while simultaneously establishing a more rigid boundary between whites and everybody else.

Current Status

Today, white ethnics are considered to be almost thoroughly assimilated. Most are members of the middle class and live away from the old ethnic neighborhoods that used to foster the distinctive,

working-class ethnic cultures. Ethnic identity nowadays often takes the form of symbolic identity—where ties to ethnicity are upheld through traditional rituals and food—and is largely optional. However, certain segments of the previously white ethnic populations insist on distinguishing their origins from the general category of whiteness. Already in the 1960s and 1970s, the so-called ethnic revival turned many European Americans' attention toward their roots. This fascination with white ethnic heritage is often seen as European Americans' response to the advances in equal rights and recognition made at the time by people of color.

The 1980 U.S. Census was the first to introduce a question allowing respondents to write in their ethnic origin. An overwhelming majority of European Americans took advantage of that opportunity. When the 2010 Census forwent the ancestry/ethnicity question, the decision was met with the widely publicized dissatisfaction from many ethnic groups, including protests from such white ethnic organizations as the Polish Piast Institute and the Order Sons of Italy. These trends in ethnic pluralism show that the white ethnic distinctiveness that once formed the basis for exclusion and prejudice is the object of nostalgia and pride for many white Americans today. For whiteness scholars, white ethnicity remains the subject of investigation that examines both the hardships and the privilege associated with European immigrants' entry into the American racial stratification.

White Supremacy

White supremacy is a sociopolitical ideology that posits a belief in the existence of distinct biological human races, fueled by the belief that the members of the “white race” are naturally intellectually, morally, culturally, and/or spiritually superior to members of nonwhite racial groups. White supremacy thus encompasses a range of presumptions pertaining to ideas of racial superiority and inferiority, along with the behaviors and policies conducted in accordance with such presumptions. For example, apartheid policies in South Africa, Jim Crow segregationist policies in the American south, and antimiscegenation laws were all implemented to limit social and sexual contact between whites and blacks, deriving from racial beliefs that integration would result in deleterious consequences for society as a whole and, in the case of intermarriage, erode the alleged “purity” of the white race.

Today, the phrase *white supremacy* is most often used in reference to organized hate groups and individuals who articulate a belief in white power and maintain a viewpoint that nonwhites are inferior to whites. Persons who espouse such ideologies are known as white supremacists.

Basic Tenets of White Supremacy

Although white supremacists vary in their specific individual philosophies and motivations for their racial beliefs, as well as their goals and social agendas, some common principles unite white supremacist ideologies. The first is a firm belief in the existence of distinct biological human races that are easily identifiable. Biologists and physical anthropologists have pointed out that biologically distinct human racial groups, or subspecies, do not exist, because of the tremendous degree of genetic and phenotypic overlap between human populations, noting that race, instead, is an arbitrarily and socially influenced method of categorizing the various peoples who inhabit a particular society. White supremacists reject these arguments and instead cling to the idea of clear-cut and allegedly “commonsensical” discrete biological human races. These different races, white supremacists argue, differ in their innate capacities for intelligence, reasoning, athletic ability, sexual prowess, and other qualities, as well as

exhibiting allegedly contrasting human natures, personality types, work ethics, and moral codes.

Not surprisingly, white supremacists imbue the “white race” with positive traits and nonwhites with negative traits, but white supremacists do not share universal agreement on the definition of whiteness. The question of just who constitutes a white person divides white supremacists to this day, with some embracing a rather loose definition of whiteness. Others define whiteness in a much more restrictive manner.

Those who define whiteness in a loose manner commonly regard as white any person of 100 percent European ancestry, regardless of that particular person’s current nation of residence. Under this rather loose definition, Greeks, Sicilians, and Spaniards, along with Puerto Ricans and Mexicans of full Castilian/Iberian descent, all may be considered white. Others operate under a much stricter definition, limiting whiteness only to persons who descend from northwestern Europe, specifically the British Isles, Scandinavia, the Netherlands, Germany, and Iceland. Proponents of this narrow definition of whiteness commonly use the terms *Aryans* or *Nordics* interchangeably with the term *white*.

Although they disagree over an exact definition of whiteness, white supremacists share a virtually universal revulsion toward interracial sex and marriage and strong anti-Semitic beliefs. Although Jews are generally thought of as members of an ethnic white population by most Americans, white supremacists adamantly proclaim Jews to be both nonwhite and racially inferior. White supremacist discourses construct Jews as “the ultimate enemy of the white race,” because they allegedly control the nation’s financial institutions and media outlets, as well as the federal government, all of which allegedly promote “race mixing” and integration for the purpose of eradicating the “white race.” White supremacist ideology also considers interracial sex, particular intercourse between a white female and a nonwhite male, an anathema tantamount to racial heresy.

Although such beliefs may seem extreme to most Americans today, they have not been fringe ideas throughout the nation’s history. For example, many Americans continue to believe in the existence of biological races, and all but 10 states have implemented antimiscegenation laws to ban

interracial marriage at some point during their histories. The U.S. Supreme Court did not rule such policies unconstitutional until 1967. Even respected public figures such as industrialist Henry Ford and pilot Charles Lindbergh espoused anti-Semitic conspiracy theories in the not-so-distant past. Each major wave of immigration throughout American history has evoked paranoia among a certain segment of society, which charged the newcomers with allegedly being inassimilable and inferior to those who came before them, and which resented the changing culture and complexion of American society.

Supremacist Groups in the United States

Sociologists identify four major branches of the contemporary organized white supremacist movement in the United States, including the Ku Klux Klan, the neo-Nazis, the Christian Identity Church movement, and the militia movement. These branches have different histories and use different tactics, but they share a unified belief that whiteness in American society is under attack at the hands of both the federal government and nonwhite populations.

Easily identifiable by their trademark white robes and hoods, the Ku Klux Klan is the nation’s oldest hate group still in existence, dating to 1865. Six confederate veterans founded the Ku Klux Klan as a fraternity-like organization for soldiers of the Confederacy, but the KKK quickly emerged as an antiblack organization that carried out beatings, shootings, lynchings, and rapes of formerly enslaved people. The Klan established a foothold in the northern and midwestern states during the early years of the 20th century when it adopted anti-Catholic and anti-Jewish positions and took a hard-line stance against the heavy influx of immigrants from Mediterranean and eastern European societies.

The Klan diminished in size and social importance during the 1930s and 1940s as the nation struggled through the hardships of the Great Depression and World War II, but the “invisible empire” re-emerged with a vengeance, particularly in the south, during the 1950s and 1960s as black Americans fought to achieve civil rights equality. The Klan remains active to this day, promoting its beliefs in white superiority and condemning blacks, Jews, Latinos, and Asians,

although most Klan chapters have dropped their anti-Catholic agendas.

The other three wings of the white supremacist movement may not be as notorious as the Ku Klux Klan, but they have exerted an impact on American society nonetheless. Founded by George Lincoln Rockwell in 1958, the neo-Nazis represent the most violent white supremacist faction, and their membership consists primarily of working-class teenage and twenty-something males. Known for their shaved heads, heavy work boots, and tattoos depicting imagery of the Third Reich, neo-Nazis also spread their message of white supremacy through the use of punk rock and heavy metal music replete with racist lyrics. Neo-Nazi subculture and ideology is poignantly explored in the 1999 motion picture *American History X*.

The Aryan Nations, headquartered in Idaho, is the best-known example from the Christian Identity branch of American white supremacy, which twists history and distorts the Bible to assert that

White Anglo Saxons are the true Israelites and God's "chosen people." Christian Identity also proclaims Jews to be the "children of Satan" and, consequently, the natural enemies of white Christians, while also declaring all nonwhite persons inferior "mud people."

Lastly, the militia movement consists of disgruntled "patriotic citizens" who no longer recognize the authority of the federal government and are convinced that the government is on the verge of stripping Americans of their constitutional rights. Militias sense that the government has, in effect, declared war on American citizens and that the only solution is to arm oneself for protection against the feds.

Recent Developments

Organizations such as the Anti-Defamation League and the Southern Poverty Law Center, which monitor hate group activity throughout American society, note that the number of white

The National Socialist Movement (NSM) displays the flags and coats of arms of the Socialist movement during a demonstration on the lawn of the U.S. Capitol. The NSM is a white supremacist group claiming to be the largest and most active organization of its kind in the United States as of 2013. They refer to themselves as a "white civil rights organization."

supremacist organizations in the United States has increased dramatically in recent years. The number of hate groups has increased 70 percent since 2000, to more than 1,000 such organizations today. Experts attribute the surge in white supremacist groups to a variety of factors, including a faltering economy, increased immigration from Latin America and Asia, and the election of the nation's first black president.

After peaking during the years of the Bill Clinton administration in the 1990s, the militia movement began to decline in the early 2000s. President Barack Obama's election fostered a resurgence of the antigovernment militia movement (and the related patriot movement). Since Obama took office in 2009, the number of patriot/militia groups has grown 755 percent, from 149 in 2008 to more than 1,200 in 2011.

The field is interdisciplinary by nature, incorporating concepts from sociology, education, cultural studies, humanities, legal studies, history, and anthropology. It is not a celebration of the American descendants of white Europeans but rather an examination of how the concept of race developed as a system for categorizing humans, with the intent of establishing white dominance for economic and political ends. Whiteness studies is also a form of antiracism education, predominantly for the 74.8 percent of Americans who declared white as their race in the 2010 U.S. Census.

Origins and Early Advocates

Historical texts delineate how racial categories influenced early American ideology through justification of conquests, disenfranchisement, and unequal treatment of some for the sake of progress. Slavery was part of the structure of American life leading to wealth for the landowners that eventually legitimized the institutional order of American race relations. That the color line was the 20th century's principal challenge was established in W. E. B. Du Bois's *The Souls of Black Folk* in the early 1900s, with his contention that race was both invisible and the "norm" to whites while people of color understood the "rules" of racism. Consequently, this invisibility allowed whites to see themselves as individuals rather than members of a race. Power more than skin color was at the core of the binary black/white construction, as evidenced by Jews, Italians, Irish, and others being considered nonwhite at specific times in history, Germans and Swedes were considered nonwhite in Benjamin Franklin's 18th-century classification.

Formally appearing in the 1980s as a recognized field, whiteness studies postulates that race is an ideological and/or social construct rather than a biological fact and seeks to explain how our understanding of race has been erroneously created, misunderstood, and used. Cornerstone texts like David Roediger's *The Wages of Whiteness* and George Lipsitz's *The Possessive Investment in Whiteness* each examine how whiteness intersects with socioeconomic issues and the resulting inequalities, as do hundreds of studies adding to the literature. More radical approaches, like the journal *Race Traitor* and its subsequent anthology by Noel Garvey and John Ignatiev,

Whiteness Studies

Whiteness studies is a relatively new field in race and ethnic scholarship offering an alternative interpretation of race in America. It asserts that all racial representations need to be investigated from a closely scrutinized historical perspective for authentic dialogue about race to occur.

point out the dysfunctional nature of whiteness and the necessity to abolish and disown it. Advocates emphasize that despite significant progress through the civil rights movement and antiapartheid rulings throughout the world, whiteness remains the power center of many cultures, resulting in continuing marginalization of nonwhites.

A 2010 study reports that undergraduate and graduate courses in whiteness studies have been instituted at more than 30 universities in the United States, more than 300 refereed articles have been published in academic journals, and the field has been explored and debated at numerous conferences. Unlike multicultural investigations of race that study the “problems” of racial/ethnic minorities, whiteness studies reverses the focus by offering a conceptually new approach to race relations. Instead, it challenges the established canon and calls attention to the construction of white identity and the impact of white dominance upon society. Through a variety of experiential techniques such as self-reflection, autobiography, analysis of history, and personal narratives, participants develop “race cognizance” to recognize the practices that have normalized whiteness and to disown the associated privileges of their whiteness. The intent is to benefit from an ideological critique of whiteness for an educated understanding of its global implications.

Counterpoint

Despite its significant body of work, whiteness studies has its detractors. Many claim it is constructed from broad generalizations, evaluative statements, and ontological claims with a political agenda. One objection is the seeming dualism where race or whiteness is named an artificial construct with no valid significance and then cited as an omnipresent force. The argument is that race cannot be transitory and permanent, ubiquitous and invisible. Critics also object to assertions that appear to commend all marginalized people while condemning whites as willful participants in a system of institutional racism. Where some proponents insist that whites must admit their privileges as unearned before racism can be eliminated, others believe that strident attacks merely impede a democratic dialectic. Finally, some contend that the complicated interactions among race, nationality, social class, sex, and religion are ignored. As

whiteness studies is a recognized field present in scholarly articles, educational initiatives and university courses, there is a responsibility to investigate its possible shortcomings and engage in rigorous analysis of its results.

Conclusion

The ethical imperative of whiteness studies today is to disarm the cloaked perniciousness of whiteness in institutional systems, pedagogical practices, and popular culture. Instead of studying the social problems of immigrants and minority groups that were the core of previous race studies, it examines how whiteness was constructed and reproduced as a privilege-granting mechanism and continues to impede the elimination of racism. In the midst of current demographic changes, it underscores America’s binary racial paradigm with the hope that analysis of race by the majority, by those in power, will lead to enlightened individual and political actions.

Witness

Witness is a 1985 film, part thriller and part romance, in which Samuel Lapp, a young Amish boy traveling with his mother, Rachel, sees a man murdered in a men’s room at a Philadelphia train station and sets in motion a series of events that leads to a wounded police detective and other,

more dangerous outsiders invading the Lapps' peaceful Amish community. The movie was filmed partly in Lancaster County, Pennsylvania, the heart of Amish Country. Although the movie presented the Amish and their way of life sympathetically, the National Committee for Amish Religious Freedom called for a boycott, charging that *Witness* portrayed the Amish inaccurately and that the voyeuristic tourism prompted by the movie posed a threat to Amish farms.

Australian Peter Weir, the film's director, was intrigued by the clash of cultures that would result from a 20th-century man for whom violence was an inextricable part of life finding sanctuary among a pacifist people with a lifestyle essentially unchanged for two centuries. Weir decided to increase the importance of the Amish community in the story, to make it not mere background but rather a key ingredient. He was diligent in protecting the Amish community, hiring former members of the Amish church as advisors and using only actors for the Amish roles in the movie, even for background shots. Reviewers called Weir's portrayal of the Amish honorable, adding that the Amish had nothing to fear from Weir's honest presentation of their world. Clearly, the Amish and their protectors disagreed.

Religious Concerns in the Amish Community

Amish concerns about the film had already been stirred before filming began. Kelly McGillis, who played Rachel Lapp, spent time in an Amish home, helping with household chores, making friends with the children, and recording conversations so that she could study Amish dialect later. McGillis considered her research a means of helping her create a character who would be true to the reality of Amish life. Her hosts felt betrayed when they discovered she was doing research for a movie. Fearing they would be shunned for their contact with her, they insisted she leave their home immediately. A member of the community who advised on the frame construction of the barn in one of the movie's most memorable scenes was shunned for his participation. Shunning, a centuries-old practice that is the Amish form of excommunication, isolates the individual from the community in work, daily fellowship, and worship.

The Amish repudiation of the film during its production took a more serious turn in the period

just before the movie's release. The National Committee for Amish Religious Freedom (NCARF), a group composed of lawyers, scholars, and clergymen—none of whom are Amish—presented a statement to Paramount Pictures charging that the movie represented “immoral and unlikely behavior portrayed for profit and laughter.” The most outspoken of the NCARF critics was John Hostetler, a Temple University anthropology professor who had grown up in an Amish community but converted to the more liberal Mennonite Church at 18. Hostetler used terms such as “exploitation,” “harassment,” and “psychological invasion” to describe the film's effects on the Amish, who, according to Hostetler, believed the movie mocked their customs and dress. Ironically, Joe Wittmer, a retired professor of counseling and psychology at the University of Florida, Gainesville, who served 15 years as vice chairman of NCARF, was a consultant on *Witness*.

Weir accused Hostetler, a leading authority on the Amish and author of numerous books and documentaries on the subject, of hypocrisy since the professor himself profited from representations of the Amish. Harrison Ford, who played the role of policeman John Book, publically refuted the charges, insisting that it was respect for the moral nature of the Amish that lay at the heart of *Witness*. Weir added that artistic freedom was as essential in a democratic society as religious freedom. The furor was little more than an exchange of words, none of them from the Amish.

NCARF issued a formal request to the governor's office that the film not be released, and requested that in the event of its release, the public express respect for the Amish by boycotting it. The official response from Pennsylvania state officials was a reminder that banning the film would be an unconstitutional act, along with a proposal that the state not encourage or promote future films on the Amish. Meanwhile, the Pennsylvania Dutch Visitors Bureau, in its spring 1985 brochure, encouraged visitors to “Visit Another Country . . . Pennsylvania Dutch Country—As Seen in the Movie *Witness*.”

Accolades and Success

Witness opened on February 8, 1985, and earned more than \$4.5 million in its first weekend. It eventually earned a total domestic gross of

\$65,532,576. It also earned eight Academy Award nominations, including Weir's first and Ford's only nomination to date. It received Oscars for film editing and for best original screenplay. The screenplay also won an Edgar from the Mystery Writers of America and was named best screenplay of the year by the Writers Guild of America.

Witness opens with an Amish funeral. The community gathers to surround the coffin and sit in silence with the widow, sharing her grief. This scene is in stark contrast to the violence and noise that surround the deaths of the criminals near the end: one is shot by Book, one is buried in tons of grain, and the third surrenders when Samuel (played by Lukas Haas) rings the bell that summons the Amish farmers. This difference defines the cultures that cannot be reconciled. The movie ends with Rachel and Lukas within the Amish community, separated from Book, and by extension the movie viewer, who take the road that leads back to a corrupt world.

Woman Warrior, The

The Woman Warrior: Memoirs of a Girlhood Among Ghosts, an autobiography written by Chinese American author Maxine Hong Kingston, was published in 1975. *The Woman Warrior* consists of five chapters that follow the maturation of Kingston, the book's narrator. Kingston's

parents moved to California from China before World War II. In her book, Kingston intertwines her parents' stories about China with impressions of her childhood in Stockton, California.

The novel criticizes American society for its racism, negative stereotypes, and exploitation of minorities, especially Chinese, but at the same time Kingston exposes misogyny in both Chinese and American societies. The dominant female characters in each chapter represent different aspects of woman as the Other in Chinese and American communities. The fact that they are often nameless, devoid of power, and silenced points to their generic character.

Female Characters

The first chapter about the narrator's aunt, No Name Woman, examines the rules patriarchy imposes on women. No Name Woman is punished by society for giving birth out of wedlock. She commits suicide after killing her baby, and is consequently expunged from familial and communal history. The narrator sees No Name Woman as an artist without a venue for expression, and thus her predecessor. By breaking the silence that surrounds her, by narrating her story, the narrator gives No Name Woman her voice.

The narrator reinvents the Chinese legend of Fa Mu Lan, the Woman Warrior, to present a different kind of model for herself, but realizes that the Woman Warrior supports patriarchy by pretending to be a man. While struggling to translate the lessons of Chinese legends, the narrator realizes that they are inapplicable to American reality. She also rejects the Woman Warrior's aggression and opts for pacifism.

Brave Orchid, the narrator's mother, is portrayed as a shaman who fought ghosts and other nether beings in China. As a woman connected to otherworldly phenomena, she represents another aspect of female and Chinese identity that is perceived as the Other. Kingston simultaneously subverts a Chinese fantastic context by providing different versions of her mother's story and fusing reality and fantasy. In the story of the narrator's aunt Moon Orchid, who loses her mind after forced immigration to the United States, Kingston examines the theme of female lunacy as a result of some women's inability to fit into the prerogatives of patriarchal society. Lunacy is also connected to

the failure of immigrants to adapt to the rules of the new society and to assimilate. Moon Orchid clings to her Chinese way of life, and she is constantly perceived as the Other, even by her American family. She is compared to a character from Chinese fairy tales, which is a way for Kingston to call attention to the way immigrant identities are constructed in their new environment.

The fifth chapter tells the story of Ts'ai Yen, a historical figure who was kidnapped and forced to live with a barbarian tribe for several years. She becomes a figure who is a synthesis of all the characters in the book, with her hybrid identity and life in exile. She also becomes a poet, and her work is a poem about the Other, as well as the sublimation of her grief and hope for survival. Kingston comments that Ts'ai Yen's art translates well from Chinese into English, using the metaphor of translation to show the connectedness of cultures, plurality, multiculturalism, and intertextuality of art.

Literary Technique

The Woman Warrior's mixture and blurring of fiction and autobiography, and its fusion of fantasy and reality, is a reflection of the narrator's hybrid identity as a Chinese American and her position on the margins of both American and Chinese American society. As the narrator comments, she is forever wearing double binds of her gender and her ethnicity. Kingston uses the term *ex-centric* to illustrate the position of the narrator's family within the societies to which they belong. In the book, the margin becomes the center, and the margin claims its voice in the portrayal of both female and Chinese American characters.

The Woman Warrior emphasizes the importance of matrilineage and transmission of female legacy through narration, or, as Kingston calls it, "talk-story." This term underscores the fictional nature of storytelling, but because the term derives from Hawai'ian pidgin, it also emphasizes the multicultural character of storytelling. Talk-story is recognized in literary criticism as a Kingstonian technique that influenced a number of predominantly female authors to apply similar techniques in their work.

Kingston parodies and reconstructs Chinese stories, myths, and legends to emphasize that they are constructions and liable to change. She examines their applicability and translatability in different

Maxine Hong Kingston, the author of *The Woman Warrior: Memoirs of a Girlhood Among Ghosts*, was awarded the National Humanities Medal by President Bill Clinton in 1997, as well as the Lifetime Achievement Award from Asian American Literary Awards in 2006.

cultures but also uses them to draw attention to the ways Chinese Americans have often been portrayed as exotic in American society. By providing various versions of the same story or event, the novel uses metafiction to point to the instability of history and truth. In her subversion of master narratives of Chinese and American society, Kingston uses elements of magic realism and historiographical metafiction, which certainly places the book in postmodern and postcolonial contexts.

In her use of multiple narrations, subversion of genres, focus on matrilineage and the importance of transmitting oral and female heritage, and exploration of Chinese American history and culture, Kingston ushered in a new phase in the development of Asian American literature. *The Woman Warrior* became a landmark in American culture, with close to a million copies sold, was widely taught in American schools and universities, and was translated into about 20 languages.

Worcester v. Georgia (1832)

On March 3, 1832, the U.S. Supreme Court published its ruling in the case of Samuel A. Worcester against the state of Georgia. The case deals with the arrest of two Congregationalist missionaries residing among the Cherokee and defying an 1830 Georgia bill prohibiting the passage of any white person onto Cherokee Nation territory without the permission of the state. Not only did the high court deem the Georgia law in question unconstitutional and asked for the missionaries to be released, but it also argued that the contested state legislation violated the political rights of the Cherokee Republic. Affirming Native American sovereignty, land title, and procedural rights, *Worcester v. Georgia* has been broadly conceived of as a landmark decision in the historical development of multicultural America and as the most extensive commentary by a federal court with respect to the status of Native American governments and property rights up to that time.

Disputing Georgia's Extension Laws

Since the late 1820s, the Congregationalist missionary Samuel A. Worcester had labored among the Cherokee in New Echota and had become a figure of trust in the Cherokee community and a significant advocate of Cherokee sovereignty. Georgia officials in favor of removing Native

tribes from the state territory attempted to eliminate the influence of missionaries such as Worcester, seeking to quash the budding sovereignty movement among the Cherokee.

In late 1830, the Georgia General Assembly passed a bill prohibiting whites from residing among the Cherokee unless they could procure a writ of permission and would swear an oath of loyalty to the state of Georgia and its laws. When Worcester and several other missionaries declared this law to be a violation of Cherokee sovereignty and refused to relocate within the time period indicated, they were arrested, tried, and sentenced to four years of imprisonment in the state penitentiary. Although most missionaries accepted Governor George Gilmer's subsequent pardon offer, Worcester and Elizur Butler did not relent, voicing their intention to have Georgia's anti-Indian legislation declared unconstitutional. On October 27, 1831, one of their lawyers, William Wirt, filed a petition for a writ of error, allowing him to plead the case in the U.S. Supreme Court.

The Supreme Court Decides

On March 3, 1832, the Supreme Court ruled against the state of Georgia. Writing for the majority of the Court, Chief Justice John Marshall argued, first, that Georgia's laws and actions in dispute were "repugnant to the Constitution, laws, and treaties of the United States," and therefore Worcester and Butler should be released; and second, that the state's extension laws violated the federal government's exclusive authority over Indian affairs and the political rights of the Cherokee. Reviewing the historical evolution of relations between Great Britain, the United States, and the Cherokee, Marshall emphasized the latter's independent political status and exclusive title to their lands: "The Indian nations [have] always been considered as distinct, independent political communities, retaining their original natural rights, as the undisputed possessors of the soil." The chief justice used *Worcester v. Georgia* to repudiate the language of conquest he had employed in *Johnson v. McIntosh* (1823) and to elaborate on and clarify the concept of "domestic dependent nations" he had developed in *Cherokee Nation v. Georgia* (1831).

He refrained, however, from classifying Native nations as foreign nations, implicitly denying

them equality of status, and pointed out that the tribes could cede land only to the discovering nation or its successor. Although concurring with the majority opinion, Justice John McLean distanced himself from Marshall's argument in favor of a perpetual federal responsibility for the protection of Native American national rights. He also characterized "the exercise of the power of self-government by the Indians, within a state" as "temporary," predicting either their eventual amalgamation into American political communities or their removal. Justice Henry Baldwin refused to sign the majority opinion but did not provide a written opinion.

The Boon and Bane of *Worcester v. Georgia*

The ruling of *Worcester v. Georgia* was simply ignored. Georgia officials refused to submit to the decision and to release the missionaries, arguing that the Supreme Court had exceeded its authority. The lack of clarity of the extent of federal executive and judicial authority over the states was exploited by President Andrew Jackson to avoid the enforcement of the high court's ruling. U.S. Congress, in turn, lacked the will to put pressure on the president. Although the missionaries were initially intent on fighting for enforcement, the tariff nullification crisis in 1832 caused such fears of civil dissension that they felt the patriotic duty to accept Governor Wilson Lumpkin's pardon offer. After their release from prison in January 1833, the test case came to an end.

Although *Worcester v. Georgia* can be considered a judicial asset affirming Native American property and sovereignty rights to a heretofore unprecedented degree, its legal doctrine was not able to avert the ideologies of removal, annexation, and assimilation from determining political praxis. During the removal and the allotment eras, the ruling's espousal of Native sovereignty and title was ignored. *Worcester v. Georgia's* ambiguous language—denying Native nations foreign nation status and emphasizing federal authority over Indian affairs—allows it to be filled with judicial interpretations strengthening concepts of guardianship over Native Americans and congressional control of Native affairs rather than Native political rights. Despite these developments, *Worcester v. Georgia* has been viewed as a significant legal precedent for Native governments, Native rights

activists, and courts alike and has become a significant strand in federal Indian law.

World Jewish Congress

Founded in Geneva, Switzerland, in 1936, the World Jewish Congress (WJC) is an international federation of Jewish organizations and communities whose mission is to serve as "the diplomatic arm of the Jewish people." WJC encourages membership from Jewish organizations and communities regardless of their social, political, or economic views. The congress also provides guidance to Jewish communities in almost 100 countries worldwide.

The main policy priorities of the WJC are to support Israel; to challenge anti-Semitism, especially Iranian threats to Israel; to assist Jewish refugees from Arab lands; to maintain an interfaith dialogue with Christian and Muslim organizations; and to respond to the ongoing challenges arising from the legacy of the Holocaust. Specifically, the organization's Holocaust-related tasks include restitution and reparations for survivors and victims and remembrance of the tragedy.

Basic Structure

New York City is home to the WJC headquarters, and the group maintains international offices in

Delegates at the World Jewish Congress (WJC) at the 25th Anniversary Conference in Switzerland in 1961. The group was founded in 1936 in Geneva, Switzerland, as an international federation of Jewish communities and organizations. The purpose of the WJC is to act as "the diplomatic arm of the Jewish people." The headquarters are located in New York City, with international offices worldwide.

several other countries on three continents. High-level decisions are made by the Plenary Assembly, which meets every four years and elects an executive committee and governing board. The WJC comprises five regional divisions: the WJC North America, the Latin American Jewish Congress, the European Jewish Congress, the Euro-Asian Jewish Congress, and the WJC Israel. A steering committee, composed of the organization's president, chairman of the governing board, treasurer, and the chairs of the five regional divisions manages the organization's day-to-day operations.

The World Jewish Congress also operates a research institute in Jerusalem, Israel. The institute's mission is to analyze and report on a wide range of issues that the group's leadership deems to be of importance to Jews. The institute's reports are published as policy dispatches and are freely available. Also within the auspices of the WJC Israel is the Israel Council on Foreign Relations (ICFR), the policy-crafting body of the WJC. The ICFR publishes *Israel Journal of Foreign Affairs*, which states the WJC's position on international affairs.

Key History and Policies

The WJC has played an important role in Jewish life since it was founded in 1936. The organization was created to counter the growing threat of Nazism and the accompanying anti-Semitism in Europe. Its immediate purpose was to defend the Jewish people against Nazism and mobilize both Jewish people and the forces of democracy in the fight to end the persecution of European Jews. Other important objectives were the establishment of a Jewish national homeland in Palestine and the formation of a democratic, representative organization based on the core value of Jewish unity.

In 1942, the WJC convened a conference to establish the Advisory Council on European Jewish Affairs. This council was composed of exiled representatives of the various Jewish communities under Nazi rule. During World War II, the WJC focused on urging American Jewish organizations to pressure the U.S. government to waive immigration quotas so that a greater number of Jewish refugees fleeing Nazism could settle in the United States. On August 8, 1942, Gerhart Riegner,

the WJC's secretary in Geneva, sent British and American diplomatic officials a telegram stating that the Nazis had discussed plans to "exterminate" 3 to 4 million Jews.

At the end of World War II, the WJC engaged in rebuilding efforts on behalf of European Jews and refugees and worked to ensure that Germany would be prosecuted for war crimes. WJC members helped create the tenets of the Nuremberg War Crimes Tribunal and supported the foundation of the United Nations. In 1947, the WJC was among the first nongovernmental organizations (NGOs) to receive consultative status with the United Nations Economic and Social Council (ECOSOC).

The 1990s and 2000s saw 17 European countries establish special committees to investigate their roles during World War II, in response to WJC requests. Many countries provided restitution funds. In 2000 and 2001, the WJC negotiated an agreement that would ensure that German industries compensate slave laborers for their forced work during World War II.

According to its mission statement, the WJC strives "to enhance solidarity among Jewish communities throughout the world and, recognizing the centrality of the State of Israel to contemporary Jewish identity, to strengthen the bonds of Jewish communities and Jews in the Diaspora with Israel." The WJC has repeatedly advocated for fair treatment of Israel in the context of the United Nations and international politics. The WJC endorses a two-state solution to the Israeli-Palestinian conflict. It also opposes unilateral actions on either side.

The struggle against anti-Semitism and Holocaust denial is also central to current WJC policy. In addition, the WJC takes a stand against glorification of the Nazi regime. These aspects of WJC policy have caused the organization to fairly regularly take public positions against a wide variety of public figures. Dialogue with other religions is another current tenet of the WJC; the organization's policy is that Christians, Muslims, and Jews can and must cooperate with each other and meet and discuss shared values. The WJC calls dialogue with moderate Islamic representatives extremely important and denounces the widening gap in understanding between Western democracies and the Islamic world. The WJC

also denounces Iran and tends to support countries that limit their dealings with Iran. The WJC maintains that Iran is a state sponsor of terrorism and must be held accountable.

The WJC and its American chapter, specifically, connects the large number of Jewish Americans to the international Jewish community. It functions to maintain and protect both circles. It also provides an explicitly political forum for Jewish advocacy that cannot always take place in a more local setting, since local Jewish gatherings in the United States tend to be through synagogues, schools, or community centers. Furthermore, since the WJC does deal with mainly secular issues (albeit for what are often partly religious motives), it connects religious and nonreligious Jews in America. This is significant because up to half of American Jews do not consider themselves to be religious or practicing.

World War I

World War I, also known as the Great War, commenced in June 1914 and ended in the early months of 1918. A war of unprecedented magnitude in its time, the conflict took the lives of at least 10 million soldiers and left 20 to 22 million wounded. The conflict was characterized by the use of aircraft, large-caliber siege guns, cannons, machine guns, and chemical shells.

One of the initial sparks for the war was the assassination of Archduke Franz Ferdinand of Austria by a Serbian national. This incident caused other European nations to mobilize their militaries and honor their alliance treaties, which required them to come to the aid of other countries that were attacked. These alliances pitted Austria-Hungary, the Ottoman Empire, and Germany (the Central Powers) against Russia, France, and Great Britain (the Allies). The United States, siding with the Allies, sent an expeditionary force to Europe, including two African American divisions, the 92nd and 93rd.

Nationalism and Conflict

Serbian nationalists, who were seeking a greater Serb nation, created great tension in the Austro-Hungarian Empire. The killing of the archduke by a member of the Black Hand, an extreme Serb nationalist group, was the precipitant that the monarchy of Austria-Hungary needed to put an end to ethnic nationalist sentiment besieging the realm. Upon the death of the archduke, Austria declared war against Serbia. Not long afterward, per alliance agreement, Germany entered the conflict. Russia, having created a military coalition with Serbia, also entered the fray. Not long afterward, France and England sent in their troops.

There had been tension in Europe years before the outbreak of war. Fighting in the Balkans, the buildup of arms and armies, naval competition, rivalry over colonies, and rising nationalism led all sides to prepare for an eventual conflict. After the archduke was assassinated and Austria declared war against Serbia, German military planners quickly put into place a prewar military plan of attack, called the Schlieffen Plan, after Field Marshal Alfred von Schlieffen.

This military strategy called for a rapid transfer of troops by train to the west to confront French

forces before engaging Russian forces in the east. Schlieffen designed his strategic military plan around a two-front war, with the understanding that Germany would bear the burden on both fronts. German forces would cross into Belgium, a neutral country, and proceed with their objective of capturing Paris.

1914

As German troops crossed into Belgium, the Belgian army put up a much stronger resistance than had been anticipated. Using siege guns, the Germans not only engaged a multiple number of Belgium fortifications, which they destroyed, but also captured the major Belgian city of Liège. By August 15, 1914, more soldiers were involved in the conflict, and there was indiscriminate shooting of civilians as Germany's military advanced toward France.

The first major armed engagement, the Battle of Marne, involving French, British, and German forces, began on September 6, 1914, and concluded three days later. By the time of this engagement, the German military was only 30 miles from Paris. Allied troops checked their forces' advancement by mounting a counteroffensive, thus saving the city from battle or prolonged siege. The Allies then pushed the German forces to the Aisne River. This effectively stopped a quick German victory over the French army. The Schlieffen plan had not created a contingent strategy if Paris was not taken within a given time period, so this left the Germans with no alternatives. Both sides resolved to dig defensive trenches, creating static warfare.

America Enters the Great War

The conflict was characterized by frontal assaults across "No Man's Land," killing thousands who ran across the barren field, as well as through trench warfare. Eventually, special types of weapons were made to extract maximum casualties on those hiding between the slivers of earthworks. They included mortars, massive artillery, gas, flamethrowers, and snipers. As the conflict dragged on, there was the introduction of heavier weaponry such as fighter aircraft and tanks.

As the war dragged in the European theater, Germany's use of unrestricted submarine warfare became a great concern to the United States. The subs were cumbersome and close quartered, with

the smell of diesel oil hanging in the air when they submerged. Nevertheless, they were lethal war machines. Once submerged, a German sub was all but undetectable, and any ship in its periscope was at its mercy.

On May 7, 1915, the civilian RMS *Lusitania* was hit by torpedoes from a German submarine and sank 20 minutes later, resulting in the loss of over 1,000 people. This created an uproar by American citizens and cries for an end of Germany's U-boat policy. The sinking of this ship, along with the Zimmerman Telegram and a behind-the-scenes diplomatic commitment to France and Great Britain, brought the United States into the war.

Meanwhile, Germany was concerned about the impact of its policy of submarine warfare on its relations with the United States. It thus became imperative to devise a contingency plan if the United States decided to respond militarily to the ongoing crisis at sea. Germany understood that it was essential to find an ally that was not currently in the conflict but could potentially threaten U.S. commerce and pull American troops away from the fighting in Europe. In essence, their strategy was to create a two-front theater of war.

Arthur Zimmermann, a German foreign minister, was dispatched to forge a military alliance with Mexico should America declare war against Germany. In return, Zimmermann was authorized to offer Mexico the recovery of all land lost to the United States during the Mexican-American War (1846–48) as well as monetary assistance. On January 19, 1917, he sent a telegram detailing the proposal to the German minister to Mexico.

The Zimmermann Telegram, once deciphered by British cryptographers and then published on March 1, was front-page news in the United States. This telegram fueled anxiety, fear, and anger among the American population as well as concern in Congress. With the continuation of German submarine attacks on U.S. ships, the correspondence became the ultimate tipping point that brought America into the conflict in Europe. President Woodrow Wilson went before Congress and asked for a declaration of war. Not long afterward, U.S. troops began preparing for combat.

American Home Front

World War I coincided with the great migration of thousands of African Americans to the

north. Wartime opportunities in urban areas provided higher wages and a life away from the Jim Crow south, sharecropping, and dismal poverty. Although they also found segregation in the urban backwaters of the northern cities, the opportunities in the north were still better than in the south, where they had little chance of finding meaningful work. When President Wilson addressed the war aims of the United States in 1917, he spoke of a world safe for democracy. This proclamation echoed the dreams and wishes of an underclass one or two generations removed from slavery. For many, the conflict was a chance to display their patriotism. Ultimately, 370,000 African American men joined the armed forces.

The 92nd and 93rd Divisions, both composed of black troops, fought under French command. These soldiers distinguished themselves at the battles of Meuse-Argonne and Oise-Aisne. For the heroism of the 371st Regiment of the 93rd Division, the French command awarded them the French *Medaille Militaire*, the *Legion of Honor*, and the *Croix de Guerre*.

To support the war effort, black women under the National Association of Colored Women joined the Red Cross and YWCA. Other organizations included the African American Women of National Defense, the National Bureau of War Risk Insurance, the Organization of Women Knitters, and Circle of Negro War Relief. Black women also found jobs in war plants, where they worked alongside white women. This was very different from the south, where such fraternization was all but impossible.

Indigenous American War Service

During World War I, over 12,000 American Indians served in the United States military. In the 142nd Infantry of the 36th Texas-Oklahoma National Guard, over 600 indigenous personnel made up the unit, primarily Choctaw and Cherokee. The 142nd saw action in France and served under French command. Indigenous soldiers were recognized for their contributions and bravery in battle, receiving the *Croix de Guerre* and the *Church War Cross* for bravery.

A major communications problem during World War I involved the ability of Germans to comprehend radio transmissions sent in English. American Indians assigned to the 142nd came

up with an innovative solution; they transmitted military communiqués in their native language. In so doing, they developed an indigenous vocabulary to identify troop movements, trucks, and enemy outposts. The U.S. military disallowed the use of indigenous languages in service, but once it became apparent that Germany could not decode the indigenous language in American communication lines, it was permitted.

Despite these contributions, American Indians were highly discriminated against during the war. For example, the Round Valley Indians from southern California sought to show their support for the war through the Red Cross. They made material needed for hospitals, including surgical dressings and garments. However, they were precluded from doing so because non-Indians did not want to include them in their chapter. Native people lobbied the Red Cross for an independent chapter, but it was denied.

German Americans

In 1683, the first groups of Germans to arrive in America were Mennonites. By 1892, Germans were the principal immigrants in the United States, with a population of 1,700,000. During the 1880s, there were as many as 800 publications written in German circulating in the United States.

Some German Catholics and Lutherans maintained that the preservation of their faith was directly dependent on the interrelationship between their language and culture. Hence, many German Americans created their own schools and spoke in German. However, with the onset of war and its continuation, by 1917, some civic organizations and governmental agencies came to see German artwork and community events as anti-American.

Anti-German sentiments swept the country, with calls to stop teaching German in schools. Instructors who insisted on teaching the language were dismissed or suspected as spies. Individuals reading German papers of any sort while were taunted. The American Defense Society in particular encouraged the public burning of German-language books and crusaded to change the names of all things German.

Across the country, the names of German foods were purged. Sauerkraut was renamed “liberty

cabbage,” hamburger became “liberty steak,” and frankfurters became “hot dogs.” Pretzels were removed from drinking establishments. German measles were renamed “liberty measles.” Many German Americans changed their names to assimilate. As the concern intensified, patriotic individuals reported to local authorities anyone they thought were German spies. Finally, Congress passed the Espionage and Sedition Acts.

Irish Americans

From 1830 to 1914, roughly 5 million immigrants from Ireland arrived in the United States. Upon arrival and settlement in America, the Irish lived in insular communities, excluding anyone who was not a compatriot. They were not interested in assimilating into the greater American culture lest they lose their heritage. The Irish opened dry goods shops and other stores to enhance their self-sufficiency. As a result, many Americans were cool to their arrival and hostile to their independent spirit, preferring to judge them in harsh, cartoon-like stereotypes. The Irish were typecast as hard-drinking brawlers in many newspapers. Other images portrayed them as “aliens” loyal to the Catholic Church, with no allegiance to the U.S. Constitution.

With the massive numbers of Irish immigrants pouring into the country, there was fear that Catholicism would become the predominant denomination. This caused great concern among many Protestant Americans as to the Roman Catholic Church’s perceived ability to influence world events, with questions surrounding if the United States would be influenced by papal politics or what impact Catholicism would have on U.S. foreign policy. In addition, it threatened many who viewed America as a Protestant nation that might be influenced by the papacy. This led to violence against individuals of Irish descent and destruction of property.

The vast majority of Irish American Catholics were in opposition to the war in Europe. In fact, they had no vested interest in the continent in general and Britain in particular. They wanted a free Ireland not dominated by English politics and thus had little interest in aiding Britain now at war.

Once Irish Americans entered politics, they quickly dominated the Democratic Party. Their influence on political affairs could not be taken

for granted by governments from the local to federal level; even President Wilson's views on British war aims were shaped by Irish politics. After the Dublin Rebellion was brutally suppressed by British troops in 1916, Irish Americans voiced their disapproval of Wilson's possible acceptance of England's war aims. Because of their voting power, they effectively pushed the United States to define its own objectives in the conflict.

Conclusion

The guns fell silent in 1918 after the final battle of the Marne, where French, American, and English troops stymied a German offensive with a massive counterattack. Having lost thousands of troops in the engagement, Germany called off the offensive and called for peace. In 1919, a peace conference was held at Versailles, France, at which Allied leaders affirmed their aspirations to rebuild their countries in a devastated Europe and protect themselves against future conflicts.

World War I was catastrophic, taking the lives of not only many soldiers but civilians as well. Noncombatant casualties hovered close to 10 million. The war affected all countries involved but had its greatest impact on Germany and France. Both countries sent over 80 percent of their males between the ages 15 and 49 into combat. The conflict saw the fall of four empires—Austria-Hungary, the Ottoman, Germany, and Russia—and was the galvanizing force for the Russian Revolution.

On the American home front, multicultural issues abounded prior to the war, brought on by immigrants from Europe as well as racial and gender bias. The time for tolerance had not yet emerged, with European immigrants persecuted as a result of language, cultural, and social norms as well as religious differences. Despite these differences, however, the conflict brought communities into proximity with one another, particularly in factory work for a common cause. World War I changed America, sending black workers north, uplifting women from their former roles to become industrial workers, and giving immigrants a voice while simultaneously attempting to marginalize them. Immigrants learned to use political power to achieve their goals and create distinctive cultures. While blacks, ethnic groups, women, and America's indigenous population

fought for a better America on the home front, they also served their country with distinction during the Great War.

World War II

World War II, also known as the Second World War, was a global conflict in which U.S. involvement lasted from December 7, 1941, until September 14–15, 1945. The United States played a major role in the two main theaters of the conflict, Europe and the Pacific. The war exerted a considerable influence on the culture of some of the groups that composed the population of the United States.

These included African Americans, Asian Americans, Italian Americans, and German Americans. In addition, numerous Mexican Americans were welcomed to the United States as guest workers, predominantly in transportation and agriculture. Women also played a significant role both in the military and in the wartime labor force. The experience of the war exerted considerable influence

on later social movements of the following two decades, including civil rights and the women's movement.

African Americans

Among the first areas of American society to experience profound changes as a result of the U.S. participation in the conflict were the armed forces. At the outset of World War II, the U.S. armed forces were segregated, as was much of American civilian society. This began to change as the United States needed greater manpower during the war.

In 1941, there were fewer than 4,000 African Americans serving in the U.S. military, and only 12 were commissioned officers. Most of those in the military served in noncombat support roles. By 1945, more than 1.2 million African Americans were in uniform, serving in both the European and Pacific theaters in combat, as well as in support roles on the home front. Likewise, there were thousands of African American women serving in the various women's auxiliary corps of the armed services, such as the Women's Army Corps and Women Accepted for Volunteer Emergency Service.

The first African American war hero emerged on the first day of the war. Mess attendant Doris "Dorie" Miller served aboard the battleship USS *West Virginia*, which was caught in the Pearl Harbor attack on December 7, 1941. Though African Americans were not trained for combat in the military at this time, Miller manned an anti-aircraft gun on the stricken vessel and even downed several Japanese planes prior to being ordered to abandon ship. In addition, he helped several injured crewmen, including the critically wounded captain to safety. His actions earned Miller the Navy Cross, the first ever awarded to an African American.

During the initial year of the war, African Americans were routinely passed over by all-white draft boards that doubted their combat ability. Pressure from the National Association for the Advancement of Colored People (NAACP) led President Franklin D. Roosevelt to pledge that African Americans would be enlisted based on their percentage of the total U.S. population.

In addition to African Americans' growing military participation, war production and the need for labor drew many blacks from the

south to head north to work in mills and factories. This movement was later referred to as a Second Great Migration. The resulting influx of new people exacerbated racial tensions in some northern areas and resulted in racially motivated riots in Detroit.

The Second Great Migration

During World War II, nearly 5 million African Americans moved out of the southern United States to urban areas in the north, west, and midwest. As a result, by 1970, African Americans had become the most highly urbanized group in the country, with 80 percent living in cities. The results of this shift were profound. Whereas African Americans made up 23.8 percent of the southern population in 1940, by 1970 that figure had dropped to 19 percent. By the same token, whereas they had only accounted for some 3.5 percent of the population of the midwest in 1940, by 1970 that figure had climbed to 8.1 percent.

African Americans served in all major theaters of the war, and their participation initiated the process that later led to the desegregation of the armed forces by Executive Order 9981 in 1948. In the aftermath of the war, African American veterans refused to submit to the daily degradations that constituted a routine part of life in the Jim Crow south. In addition, many African Americans who left the south for the war—lured away by the higher pay of war industry jobs and the hope of escaping southern racism—left the cities in which they had worked as skilled laborers. These changes, in turn, began the process of the integration of American society and calls by African Americans for civil rights.

Immigrants

In 1936, the Federal Bureau of Investigation (FBI) under director J. Edgar Hoover began planning to take action against those with roots in the countries that were viewed as the most likely foes of the United States in a future war. The director issued orders that led to the collection of information on any individuals and organizations perceived to be communist, fascist, or subversive. These efforts were given the highest priority and emphasized that as much information as possible was to be collected, using every source available. As a result, by 1939 the FBI had

assembled information on a very large group of people, many of whom were of foreign birth. As a result of these activities, the FBI developed its ABC list. This was a categorization of individuals into three groups based on the risks they were perceived to present to the United States. These lists were utilized in the establishment of the Custodial Detention Program from 1940 to 1941.

Japanese Americans and Internment

Asian Americans, specifically Japanese Americans, encountered a much greater level of racism in the aftermath of the Pearl Harbor attack. The best-known aspect of their experience was the internment of 110,000 Japanese Americans from the west coast of the United States in various camps throughout the midwest and western parts of the country. This action was authorized by President

Doris "Dorie" Miller was the first African American to be awarded the Navy Cross, the third highest honor awarded by the U.S. Navy at the time. Admiral Charles Nimitz pins the cross on Dorie at a ceremony on board a ship in 1942.

Roosevelt with Executive Order 9066, issued on February 2, 1942, which allowed local military commanders to designate some areas as "exclusion zones" from which various people could be excluded because of concerns about their loyalty. As a result, people of Japanese ancestry were excluded from the entire Pacific coast, which included all of California, as well as sizable portions of Oregon, Washington, and Arizona. The result was a policy applied in unequal measure in the western United States.

The internment of Japanese Americans was enforced in an unequal fashion and seemed to be the result more of local prejudice than any evidence of real or intended malfeasance by the Japanese Americans living in a given area. As already noted, most of those uprooted lived along the west coast of the United States. Of these, an estimated 62 percent were American citizens. At the same time, in Hawai'i, where an estimated 150,000 Japanese Americans made their homes, only between 1,200 and 1,800 were interred. It is often noted that the Japanese American population of the Hawai'ian Islands were too economically vital to remove from the workforce. The U.S. Census Bureau, as well as the Federal Bureau of Investigation, aided local authorities in internment efforts by providing confidential information on neighborhood demographics. The Census Bureau denied its efforts in this regard for decades, but its actions were finally proven in 2007.

One reaction among some young men of Japanese American background was to protest for the right to fight in defense of the United States. Their calls eventually resulted in the formation of the 422nd Regimental Combat Team, also known as the Nisei Division. This unit saw extensive service in Europe, and its members received numerous citations for valor. The service of these men laid the foundations for later efforts to reverse the policy of internment and gain some recompense for those who had suffered under it. These efforts did not yield much success initially, as a 1944 U.S. Supreme Court decision upheld the internment policy.

In 1980, President Jimmy Carter ordered an investigation to determine whether the internment of Japanese Americans during the war was justified. He appointed a Commission on War-time Relocation and Internment of Civilians.

The report issued by the commission, "Personal Justice Denied," found little justification for the practice of internment or for the accusations of disloyalty of Japanese Americans at the outset of the war. In addition, it recommended the payment of \$20,000 in reparations to each individual survivor of the internment camps. These recommendations were formalized by President Ronald Reagan, when he signed a bill that officially apologized for the internment of Japanese Americans. In all, the U.S. government eventually awarded \$1.6 billion to former internees and their heirs.

German Americans

Whereas Japanese Americans were often targeted for racial prejudice and internment, those of German ancestry experienced much less bigotry during World War II. Although about 25,000 supported the German American Bund, a pro-Nazi group in the period prior to the war, and there existed a level of anti-German feeling in the country, there was a profound absence of general bigotry against German Americans to the extent that it was present against Asian Americans. Among many German Americans, the war evoked pro-American patriotic sentiments.

At the institutional level, some official prejudice continued to exist. The Alien Registration Act of 1940 required over 300,000 German-born residents of the United States who possessed German citizenship to register with the federal government. Many of these were recent immigrants from Germany, as 114,000 left there between 1931 and 1940, many attempting to flee from the Nazis. The act restricted their freedom of movement and property ownership rights. In addition, between 1940 and 1948, over 11,000 German Americans were interned by the federal government. Those German Americans who possessed language skills in their native tongue were often recruited to work in the intelligence services.

Italian Americans

The years between 1900 and 1914 were the peak period of Italian immigration to the United States in the 20th century. During this time, nearly 3 million Italians left their homeland. Many of these people came to the United States, where they found employment as laborers. Immigration to the United States by Italians and other groups

declined sharply during the 1920s, as the Immigration Act of 1924 set quotas on how many could come from each country.

Like their German counterparts, Italians who were not citizens at the outset of the war were considered enemy aliens. Like the Japanese and German Americans, many Italian Americans were interned as well. However, neither Italians nor Germans interned during the war were compensated as were the Japanese.

Guest Workers

Mexicans in America encountered very different treatment in the United States during the war. As the nation mobilized its manpower to fight a global conflict, the need for labor in certain sectors of the economy, specifically railroads and agriculture, led to the development of what was in essence a guest worker program. Known as the Bracero Program, it encompassed a series of laws and international agreements between the United States and Mexico for the importation of Mexican citizens as contract laborers in the United States. As a result of these efforts, by 1945 there were 75,000 Mexican guest workers employed by railroads in the United States, as well as 50,000 in agriculture, most of them in the southwestern section of the country.

Those who participated in the Bracero Program challenged the U.S. and Mexican governments to locate and return the 10 percent deduction that was taken from their wages during the period from 1942 through 1948. These deductions were for savings accounts the workers were guaranteed to receive upon their return to Mexico at the conclusion of their contracts. However, those employed in the program never received their savings accounts.

Racial Violence

With the racial demographics of the nation shifting so profoundly during such a short period of time, tensions were inevitable. Racial tension manifested itself in a number of ways, from strikes by Italian workers on assembly lines in Chicago in protest over the inclusion of African Americans in their work area, to full-blown riots in Los Angeles and Detroit.

The Zoot Suit riots consisted of a series of violent clashes between U.S. sailors and Marines

and Mexican American youths in Los Angeles in 1943. Some African American and Filipino youth were involved in the incidents as well. The incidents derive their name from a type of suit popular among young men of the Chicano, African American, and Italian American communities during the 1940s. The suits featured wide-legged, tight-cuffed, pegged trousers with high waists, and long coats with wide lapels and padded shoulders. The overall effect was sometimes enhanced by the inclusion of a long watch chain. Many white servicemen perceived these suits as overly extravagant in wartime.

The flashpoint for the riots was the murder of a Mexican American woman in Sleepy Lagoon by a Mexican American man. This served to ignite underlying tensions between many servicemen who resented the Mexican American community and questioned their patriotism due to their fashion choice. Certainly, social and race distinctions played a role in contributing to the tensions. The riots occurred over several days, at the end of which over 150 people had been injured and the police had made over 500 arrests on charges ranging from rioting to vagrancy.

Worse still was the riot in Detroit from June 20 to 22, 1943. There were long-standing tensions that led to these riots, based on the rapid influx of African Americans into the south side of Detroit as a result of war manufacturing jobs, as well as the tensions resulting from the quality of housing available to these newly arrived residents. Charges of police brutality likewise factored into the causes and aftermath of the riots.

The riot began on the evening of Saturday June 20, 1943, at roughly 10:30 P.M., when a fistfight broke out between two men, one white and one black, at the Belle Isle Amusement Park. The resultant upheaval stretched over much of the city's center and predominantly black neighborhoods.

As the violence spread, it began to draw in groups of white and African American men. The police were essentially ineffective in stopping the violence, though it is asserted that they actively aided the whites in attacking the African Americans.

The violence ended only when Mayor Edward Jeffries, Jr., asked President Roosevelt to dispatch troops to restore order. The president responded by sending in some 6,000 soldiers. While order

was on its way to restoration by 11 P.M. on June 21, the riots left 25 African Americans and nine whites dead. Of the blacks killed in the fighting, 17 were believed to have been shot by the police, who defended themselves by claiming that the men were looting. None of the nine whites to die in the violence was killed by police. The riots also caused an estimated \$2 million in property damage.

The Detroit riots were the worst racial violence to take place in the United States during World War II. They also proved a national embarrassment. At the same time, other cities experiencing a similar rapid influx of African Americans responded proactively to the riots in Detroit by creating agencies to work for better race relations in their cities. The Detroit riot was just one manifestation of the rapidly changing demographics of the United States. Much of this derived from the Second Great Migration.

Women

Women made significant contributions to the American war effort during World War II, both in the military and in the industrial production sector. These contributions, in turn, led to profound changes in the role of women in society.

During World War II, some 350,000 women served in the various auxiliaries of the U.S. armed forces. These included the Women's Army Corps (WACs), Women's Airforce Service Pilots (WASPs), and U.S. Naval Reserve (Women's Reserve), the official designation for the Women Accepted for Volunteer Emergency Service (WAVES). The latter designation became the more accepted in popular nomenclature.

In addition to their direct military contributions, women played a substantial role in the production of war materials to meet the needs of the conflict. Between 1940 and 1945, the percentage of women in the workforce climbed from 27 to 37 percent. Although this change proved ephemeral in the short term, it exercised long-term consequences on the roles and expectations of women in American society.

White women generally encountered less difficulty securing clerical jobs than African American women. Many African American women left work as domestic servants to take higher-paid skilled jobs in war production facilities.

Conclusion

The experience of World War II exerted a profound effect on many groups in the United States. Among those who experienced the most positive effects were women and African Americans. Women were able to advance into fields that were previously dominated by men; this initiated a long-term trend of greater employment of women in both the public and private sectors. The experiences of African Americans, especially those who served in combat, lent great impetus to the call from the black community for civil rights in the years following World War II. These efforts culminated in the passage of the Civil Rights Act of 1964. In addition, the experiences of many guest workers in the United States led to greater immigration from Mexico in the years following the war. Clearly, World War II initiated profound and enduring changes in the mosaic of the United States.

Wounded Knee Massacre and Incident

The tragedy that happened on the snow-custed plain near Wounded Knee Creek at daybreak on December 29, 1890, has been described as a battle and a massacre. In truth, both sides fired gunshots and suffered casualties—but it was hardly even.

Of the 500 U.S. Cavalry engaged that day, 23 died in the encounter, dozens were wounded, and 20 received the U.S. Army's Medal of Honor. Of some 350 Sioux Indians, over 150 were killed, including 44 women and 18 children, and another 50 were wounded. Some estimates put the Indian deaths closer to 200.

The Fight

The day before, soldiers of the U.S. Seventh Cavalry under Major Samuel M. Whiteside, a veteran officer who had served in the Civil War, were patrolling the Dakota Badlands and came across a large band of Sioux who were led by a chief named Spotted Elk, also known as Big Foot. The army had issued orders that all nomadic Indians must be brought to the nearby Pine Ridge Reservation, and Major Whiteside, following these orders, decided to escort the Indians in that direction. They camped along the way by Wounded Knee Creek.

But rather than disarm the Indians immediately, which could start a fight, Whiteside decided to wait for reinforcements, which came later that night with a heavily armed column under Colonel James W. Forsyth, another veteran officer with both Indian and Civil War experience. Forsyth and Whiteside's combined force now totaled some 500 men and included four Hotchkiss

guns (similar to Gatling machine guns) that they mounted around the Indian encampment.

During the late 1880s, most Americans still harbored bitter feelings toward Indians because of continued confrontations on the Great Plains. The public still fumed over the killing of General George Armstrong Custer and his soldiers at Little Bighorn in 1876, and they sought recompense. Most Americans felt that the Indians needed civilizing and the only way to accomplish this was to remove them from their reservations. This set the stage for the tragic events that occurred near Wounded Knee Creek in the winter of 1890.

The Shooting

On the morning of December 29, 1890, at daybreak, Colonel Forsyth ordered his Seventh Cavalry troops to gather the Indians in their camp, separating men from women, and demand they surrender their guns. Both sides seemed itching for a fight. By one account, a Sioux medicine man named Yellow Bird began to perform the Ghost Dance—a mystical ritual that many Sioux believed made them bulletproof. Forsyth demanded he stop, but the medicine man refused.

Once the Ghost Dance started, the soldiers immediately raised weapons and returned fire full force at close range. Dozens of Indian men fell in the first volleys, including Chief Spotted Elk. The Indian gunfire quickly ceased, but the soldiers kept shooting, and many soldiers ended up falling to friendly fire. The Sioux women and children, originally separated from the men, ran from the camp toward some nearby ravines for safety. In the confusion and excitement, several cavalry soldiers jumped on horses, chased them down, and shot them. The machine guns joined the fight, with soldiers raining bullets into the Indian tents.

The whole affair ended in barely a few minutes. The chasing and killing of those who ran off to nearby ravines, mostly women and children, lasted perhaps another hour. When it was over, the land was covered with bodies. Four Sioux infants were discovered still alive in the arms of dying or dead mothers.

The Reaction

Back east, newspapers quickly told the story about a great battle in the Dakotas. Public sentiment stood solidly behind the soldiers, reflecting

both support for U.S. troops in the field and continuing bitterness at hostile Indians threatening settlers.

Although the Indians denounced the killings, the only apparent criticism from non-Indians came from within the army. General Nelson Miles, another longtime Indian fighter and Civil War veteran who had won the Medal of Honor for his role in the 1863 Battle at Chancellorsville, had recently been named major general and senior officer for the Dakota Territory. Miles loudly complained that Forsyth had allowed his soldiers at Wounded Knee to break discipline and commit an unneeded massacre. He relieved Forsyth of his command and convened an army court of inquiry to investigate the massacre.

The December 1890 massacre at Wounded Knee marked the last major encounter of the Great Plains Indians Wars of the 1800s. The Sioux gave up any organized resistance and, for the next 83 years, would stay on their reservations. Later treaties would strip away more lands as poverty persisted and social conditions continued to deteriorate. It would take decades for the U.S. government to grant the Sioux basic elements of citizenship, decades more for basic constitutional civil liberties, and still more for the right to vote in elections.

Wounded Knee Incident (1973)

The Wounded Knee standoff in 1973 was sparked by a dispute on the Pine Ridge Reservation in southwestern South Dakota when members of the Oglala Lakota (Sioux) tribe attempted to impeach tribal chairman Richard “Dick” Wilson, whom they accused of being corrupt, authoritarian, and biased against full-blooded and traditional Indians. The tensions eventually built up into a deadly conflict.

Several factors led up to the incident at Wounded Knee. Eleven thousand Oglala inhabited Pine Ridge Reservation in the 1970s. Covering approximately 4,000 square miles, the reservation was a labyrinth of white- and Indian-owned property. The tribal government owned 500,000 acres, whites owned one million acres, and the Indians owned 1.5 million acres, 83 percent of which were leased. The U.S. Bureau of Indian Affairs (BIA) controlled many of these land leases, with these leases going to white ranchers. Oglala

This image shows U.S. soldiers disposing of Native American corpses in a mass grave after the massacre at Wounded Knee. On the morning of December 29, 1890, U.S. troops entered the native camp to disarm the Lakota, and by the time it was over, at least 150 Lakota Sioux had been killed. The conflict was the last battle of the American Indian Wars.

Indians who sold or leased their lands were forced to move to the agency town of Pine Ridge in order to find jobs.

The unemployment rate among Indians in the state of South Dakota was 20.1 percent compared with the 3.2 percent rate among whites, resulting in 54.8 percent of Indians living below the poverty line. Because of high unemployment, one-third of the Indian population relied on government assistance, and those who were employed often worked for the BIA or in tribal government posts. The scarcity of jobs also forced many off the reservation into government-sponsored training programs, urban areas, military service, and to college campuses for further education.

Politics and Poverty

With the 1960s War on Poverty during the Lyndon B. Johnson administration, more funding

and patronage jobs had become available to raise the economic status of reservation Indians. These jobs and the disposition of funds were under the control of the tribal chairman, who assigned jobs and committee posts. Most tribal politicians tried to support the people of traditional Sioux communities, but they almost always had to bow to the voting power of Pine Ridge village.

In response to pressure from Indian activists for more self-determination, the power of the BIA had decreased, resulting in increased power for the tribal president and making this position more strongly contested. Although this shift in power had promised to restore control to reservation Indians and tribal governments, reduced BIA funding, jobs, and oversight programs, along with increasing factionalism on the Pine Ridge Reservation, set the stage for the violent incident of 1973.

Tensions Build up to a Boil

Responding to the postponement of Dick Wilson's impeachment trial, and with the assistance of the American Indian Movement (AIM), the Oglala Civil Rights Organization began actively protesting against Wilson. AIM was founded in Minneapolis in 1968 as an urban activist group dedicated to the protection of Indians from police brutality and injustice. In a very short time, the group grew to a national organization that served as advocates for a variety of Indian concerns.

After a few days of increasing tensions and vocal statements from the crowds, because of the presence of the Federal Bureau of Investigation (FBI) and U.S. Marshals, the protest ended without any major incident, and the tribal government rescheduled Wilson's impeachment trial for February 22. However, patrols by the tribal police, FBI, U.S. Marshals, BIA police, the state police, and Wilson's security forces intensified, and special operations forces set up communication networks on the reservation.

On February 27, 1973, the small village of Wounded Knee, South Dakota, was occupied by several hundred Oglala Sioux residents, tribal elders and headmen, medicine men, and members of the American Indian Movement after many failed attempts to impeach the chairman of the tribal council on the Pine Ridge Reservation. The Independent Oglala Nation demanded the removal of Wilson as chairman and restoration of tribal government by traditional Lakota structures as per the Indian Reorganization Act of 1934.

The Lakota accused Wilson of mismanaging tribal funds, failure to hold meetings that concerned tribal affairs, nepotism, civil rights violations, and inflicting terror and violence against those who offended him or challenged his leadership. Wilson allegedly favored "mixed bloods" over "full bloods" for council and government jobs and supported U.S. government and white interests over those of the people he represented, often overriding tribal council decisions.

Negotiations, held in an old tepee, dragged on for 71 days. Finally, a tentative agreement was set for April 5, but then collapsed. The occupation ended on May 9, with two Indians dead, numerous casualties on both sides, Wilson remaining in office, and many of the members of AIM in prison, in exile, or involved in years of litigation.

Outcome of the Incident

The situation on Pine Ridge Reservation was one of quiet desperation among traditional Lakota, of factionalism that developed over time as a result of federal policies toward Indians that separated them according to blood degrees, and of terror, violence, and corruption. The consequences of federal policy toward Indians led to the emergence of a supratribal consciousness and ethnic renewal among Indians living off reservations. Seeking to end white dominance and restore self-determination, the pan-Indian movement was born in order to address treaty rights and Indian sovereignty and to confront injustices toward Indians.

Wyandot

Historically, the Wyandot came into being in the winter of 1649 to 1650, when survivors of the Tionontati (Petun or Tobacco) and Attignawantan escaped the Iroquois Confederacy and headed west. The two tribes shared great cultural similarities, and they agreed to drop their original names and assume a new identity as a single tribe, the Wendat, a name that had been used collectively for more than a dozen tribes of the Great Lakes region. Sometime in the early 18th century, one group of Wendat settled in Ohio, where the British corruption of the name was spelled “Wyandot.” The tribe was terminated by treaty in 1855. Two years later, some Wyandot, unwilling to accept citizenship, relocated to Indian Territory, what is now Oklahoma. When this group sought reinstatement as a tribe in 1867, the name Wyandotte was used, reflecting French influence. Regardless of divisions and spelling variations, the Wyandot trace their tribal history to the mid-17th century.

The Iroquois had exhausted the supply of fur-bearing animals in their territory by 1650. To meet the demand for furs from British and Dutch traders, they turned to the Ohio Country, claiming the land for the Iroquois Confederacy, driving out or exterminating weaker tribes. The Attignawantan, a member of the Huron Confederacy, fled west to escape, taking refuge with the Tionontati. The Iroquois pursued and attacked both tribes. About a thousand people from the combined tribes escaped, retreating north, where they spent the winter of 1649 to 1650 on Mackinac Island (upper Michigan). It was they who became the Wendat. The threat of further attacks drove them farther west in company with the Odawa, who were also escaping the Iroquois.

Not Free of Conflict

The chaos the Wyandot and the Odawa found in Wisconsin, their next refuge, worked to their advantage as they collected furs from other tribes and organized canoe fleets to take them to Canada. But the Iroquois attacked Wyandot and Ottawa villages along with those of the tribes supplying them with furs. Moving inland into western Wisconsin, they angered the Dakota, and so even after the combined forces of the Wyandot,

Ojibwe, Nipissing, and Odawa destroyed an Iroquois war party in 1662, the Wyandot were not free of conflict. Wisconsin was not conducive to raising the corn on which they depended, and 500 Wyandot and Odawa starved to death during the winter of 1661 to 1662.

The Wyandot wandered from place to place until 1701, when Antoine de Lamothe Cadillac invited them to Fort Detroit. By 1725, they were on the move again, this time moving into the Ohio Valley, which had grown rich in resources during the empty years after the Iroquois had driven out all its inhabitants. The Wyandot grew strong, and their population increased. Soon, they were the most influential tribe in the Ohio Valley. They had also become adept at playing the political games that the Europeans set up. They were allies of the French until around 1640, when the British moved into Ohio Country. After the French routed the British, the Wyandot became allies of the French until the British emerged the victors in the French and Indian War (1754–63). They joined other Native American tribes to drive British military and settlers out of the Ohio Valley in 1764. They fought for the British in the American Revolution and continued to fight the Americans when the British withdrew.

General Anthony Wayne defeated the Wyandot and other Ohio Indians at the Battle of Fallen Timbers in 1794. The Wyandot signed the Treaty of Greenville in 1795, surrendering most of their land in Ohio and Michigan. In 1842, they surrendered their claim to their reservation at Upper Sandusky. In 1843, the Wyandot were the last Indian tribe to leave Ohio. They had been promised 148,000 acres in Kansas, but the promised acres were never granted. In 1855, with Kansas open to white settlement, the government was not granting land to Indians. In 1855, the Wyandot signed a treaty that ended their tribal status but allowed them to become citizens by taking their lands in severalty.

Internal Pressures

The late 19th and early 20th centuries brought factionalism, assimilation, and affiliation with other tribes, threatening the existence of the Wyandot. The division between the Wyandot who had accepted citizenship and those who had rejected it and migrated to Indian Territory was

not healed by time. In general, the Oklahoma Wyandot no longer recognized the Kansas Wyandot as tribal members. Some Wyandot rejected their tribal identity and lived among the whites, others found refuge among the Seneca-Cayuga, and still others were too concerned with survival to be active in keeping Wyandot culture alive. In 1956, Congress terminated the Wyandot Nation of Oklahoma as a federally recognized tribe. But a handful of Wyandot nurtured the culture that remained, and in May 1978, President Jimmy Carter restored their status as a federally recognized tribe. That restoration combined with the vision of becoming an economically independent, self-governing nation revitalized the Wyandot.

The United States currently has more than 4,000 Wyandot, organized in two main groups: the Wyandot Nation of Kansas and the Wyandotte Tribe of Oklahoma. Only the Oklahoma Wyandotte are federally recognized as a tribe. The Kansas Wyandot, organized in 1959 from descendants of the Wyandot who accepted citizenship, are recognized by Kansas and have applied for federal status. Under the direction of Chief Leaford Bearskin, the Wyandotte Nation of Oklahoma acquired self-governance status in 1995

and is working toward economic independence. The Wendat Confederacy was reaffirmed in 1999 by representatives from the Huron Wendat of Wendake, the Wyandotte Nation of Oklahoma, the Wyandot Nation of Kansas, and the Wyandot Nation of Anderdon, who mutually pledged harmony and cooperation. Tribal rolls in 2012 revealed 4,467 Wyandot worldwide.

Y

Yakama

The ancestral territory of the Yakama, primarily fishers and gatherers, lies along the river that bears their name, the Yakima (an earlier spelling of the tribe's name), a tributary of the Columbia River in what now is the southern portion of Washington State. They lived in relative seclusion until the mid-19th century, when Oregon was restructured as the Washington and Oregon territories. Settlers and miners were soon making their way into the region, and they required military posts to protect them. A conflict over land was inevitable. The Yakama, along with the Walla Walla, Umatilla, Cayuse, and Nez Perce, signed a treaty in 1855 that ceded 60,000 acres of land in eastern Oregon and central Washington. The treaty required the tribes to occupy a single reservation. Given that this requirement placed traditional enemies in near proximity, it's hardly surprising that war was the result. The rebellious Indians fought for three years, but they were defeated in 1858.

Reservation life had its own frictions during the early years, for reasons both religious and tribal. When Yakama tribal leaders signed the treaty in 1855, they reserved the right to fish, hunt, and gather all of the tribe's traditional foods on the reservation as well as the ceded area. Fishing rights and protecting the river have been lasting concerns to the Yakama, a battle their

21st-century descendants continue to wage. The various tribes who are part of the Confederated Tribes of the Yakama Nation make it difficult to know the tribal composition of the reservation. The U.S. Census Bureau reported that 7,239 American Indians lived on Yakama Reservation and Off Reservation Trust Lands in 2010, compared with 6,307 in 1990 and 5,168 in 1980.

The Yakama today live on land that was home to their ancestors before the first Europeans and Americans appeared. The tribal name was spelled "Yakima" until 1994, when it was changed to better mirror the pronunciation in the Yakama language. The Yakama were also called *Waptailmin*, meaning "narrow river people," a reference to narrows in the Yakima River where their principal village was located. The Yakama wintered in villages located on the valley floor, a site chosen for its relatively moderate climate. The nearby river assured them of a supply of deer, elk, and fish. With the arrival of spring, the tribe would range the countryside, collecting edible roots and plants that could be carried back and stored for the winter. Geographically protected, the Yakama rarely saw outsiders, although explorers William Clark and Meriwether Lewis did visit the tribe in 1806. By 1850, over a thousand settlers were in the Washington Territory, and more were on the way.

In 1855, Isaac J. Stevens convened the Walla Walla Council. Appointed governor of Washington

Territory two years earlier, Stevens was also superintendent of Indian affairs, and he was willing to use any means at his command to compel Native Americans to yield their land to his government. By the time this council was dismissed, five tribes—the Yakama, Walla Walla, Umatilla, Cayuse, and Nez Perce—had surrendered 60,000 acres, in return for which they were to be paid \$200,000 per tribe. At the signing, Stevens had promised two years before the ceded land was declared open for settlement. Instead, he made the announcement 12 days later. The people of all the signatory tribes were forced onto the Yakama reservation.

Yakama War

Yakama Chief Kamiakan led warriors from the Yakama, Umatilla, Cayuse, and Walla Walla tribes in the rebellion that was called the Yakama War. In September 1855, a band of Yakama attacked and killed prospectors headed to the goldfields of British Columbia. They also killed a popular Indian agent to prevent his summoning the army. A group of volunteers led by Colonel James Kelly captured Walla Walla Chief Peo-peo-mox-mox; they killed him and sent his scalp and ears to the Oregon settlement for display. Bloody skirmishes and bloodier battles, each followed by retaliation, became the pattern. In 1858, General Newman S. Clarke, commander of the Department of the Pacific, sent a force under Colonel George Wright to settle the Indian problem. Wright did as commanded. First, he and his men decisively defeated the Indians at the Battle of Four Lakes, cutting them down with new long-range rifles. He followed up the military victory by capturing or executing 24 chiefs and sending most of the tribes to reservations.

Life on the reservation, sometimes with as many as 14 tribes in the mix, was difficult. Some of the tribes proved especially troublesome. The Northern Paiutes were sent to the Yakama reservation after the Bannock-Paiute War of 1878. Tension between the Yakama and Paiutes ran high, but the Paiutes left in the early 1880s. A longer-lasting problem was created by Indian agent Reverend James Wilbur, a Methodist minister whose motto was “The Plow and the Bible.” The white Protestant community was delighted with Wilbur, but few of the Indians were interested in farming. Wilbur’s biblical teachings also created friction between Protestant and Catholic converts.

Other Sahaptian peoples—Klickitat, Palouse, and Wanapam—were relocated on the Yakama reservation. All the tribes of the region fished area rivers. Fish meant sustenance and often religious ritual as well. The construction of a series of dams on the Columbia and tributary rivers in the first half of the 20th century changed the Yakama’s way of life. Legal activism was the tribes’ means of protecting the rivers and their fishing rights. Tribal leaders also traveled to Washington, D.C., to lobby for cleanup of the Columbia and Willamette rivers. It was in response to Yakama action that a program to reintroduce the sockeye salmon to the Yakima River Basin was introduced in 2008. The species had died out after the natural lakes in the headwaters of the Yakima River system had been dammed for irrigation. Land acquisition is also a continuing concern. It was a significant achievement when 21,000 acres of treaty lands were returned to the Yakama on May 20, 1972. According to numbers from the U.S. Census Bureau, 11,527 people self-identify as fully or partly Yakama. The commitment among them to protect the land of their tribal ancestors for the next century seems strong.

Ybor City

Ybor City is a historic neighborhood in Tampa, Florida, located just northeast of downtown. The neighborhood was founded in the 1880s as

a company town for a cigar factory. In the early 20th century, Ybor City was known for its unique collection of mutual aid societies and multiethnic population. The initial immigrants were cigar workers from Spain, Cuba, and Italy; members of other ethnic communities would come later. Thanks to the cigar trade, Ybor City thrived from the late 1800s until the Great Depression. After the Depression, Ybor City fell into desolation. The area was revitalized in the 1980s by artists seeking low-rent studio space. Today, Ybor City is a vibrant, gay-friendly, historic neighborhood known for its restaurants and nightlife.

The Cigar Era

Unlike most other immigrant communities in the 1800s, Ybor City was a good place to live. Ybor City was founded by Vicente Martinez Ybor, a Spanish-born cigar manufacturer. Ybor sought to move his cigar production operation outside Tampa after being driven from Havana for political reasons and Key West, Florida, because of labor conflicts.

In the 1880s, Tampa was an isolated village. Ybor chose to move his operation nearby Tampa in large part because he desired to create a company town to house workers for his cigar factory. After negotiating a deal with the owners of the land and receiving a substantial subsidy from the city of Tampa, Ybor made an initial purchase of 40 acres; he soon bought more. After purchasing the land, Ybor had hundreds of small houses built and brought in cigar workers from Cuba, Spain, and Italy. In 1887, Tampa annexed Ybor City. Ybor finished a three-story brick building in 1888, which would be the largest cigar factory in the world at the time. However, at this time the rest of Ybor City had yet to be developed.

During this era, neither immigrant enclaves nor company towns were known for a high quality of living. However, Ybor's company town had to be different to entice highly skilled tobacco rollers to settle there. On average, those living in Ybor City enjoyed a high quality of life at a time when most immigrant communities were slums. Good wages in the cigar factories encouraged high levels of economic development. Employees could own their own homes, and private entrepreneurs could buy land. These conditions created a more pleasant environment that was

needed to maintain workers with a high degree of choice in their living situation.

The neighborhoods of Ybor City were unique. The ethnic makeup of neighborhoods was mixed, with no single ethnic group exclusively dominating any area. A degree of racism existed in Ybor City, but it was generally better compared with other parts of the Deep South. The degree of harmony within the neighborhoods could be gauged by the many parades and community picnics, along with the widespread practice of sharing communal areas.

The Factory and Employment

Nonmanagerial positions within the factory were generally separated between *tabaqueros* and support roles. *Tabaqueros* (literally, tobacco workers) rolled finished cigars. These workers saw themselves as highly skilled artisans. They were paid for each cigar they rolled and were able to set their own hours; thus, they were able to make significantly more money than other workers. Cubans, Spaniards, and men tended to dominate these positions.

There were also many unskilled positions in the factories. These jobs included sweeping floors, banding cigars, and maintaining machinery, and employers performing them were paid by the hour. Italians, women, and blacks tended most commonly to hold these positions.

Possibly the most prestigious positions in the factories were those of lecturers. Lecturers were seated in a chair elevated above the cigar roller tables, from which they would read newspapers, nonfiction, or more academic works. Each worker paid 25 cents per week directly to the lecturers, and this service was paid for gladly. By listening to the lecturers, uneducated factory workers, even those who could not read, received a kind of education and were even able to quote famous authors. Lecturers were well respected and often highly educated and multilingual. It was common for a lecturer to read text in Italian or English and recite it in Spanish for the benefit of workers on the floor. On certain occasions, the materials presented by lecturers led to heated political incidents. As a result, owners tried to ban lecturers on numerous occasions. Such actions on behalf of owners led to bitter strikes on more than one occasion. Workers claimed they had the right to a lecturer and would not perform

A lector in a Ybor City tobacco factory. Lectors held the most prestigious job in the factory and were seated in elevated chairs, where they would read newspapers or books aloud to workers rolling cigars. Workers were happy to pay 25 cents each per week out of their pay to the lectors to receive a kind of education not otherwise available to them.

their work without one. Unfortunately, lectors were eventually removed as part of concessions with management in 1931.

There were also a variety of employment opportunities outside the factory floor, but like the jobs in the factory, they were usually separated by ethnicity. Italians frequently owned and operated small businesses in Ybor City. Germans tended to be businessmen and factory managers; they filled the roles of bookkeepers and supervisors. Romanian Jews and Chinese typically worked in service trades or retail.

Mutual Aid Societies

Ybor City's mutual aid societies defined life in the community for decades. These organizations helped workers' families and new immigrants

establish themselves. Societies were financed by dues collected from members; in general, a family membership cost 5 percent of a worker's salary. In exchange for dues, families enjoyed access to libraries, educational programs, sports teams, restaurants, social functions, death and injury benefits, and free medical services with access to doctors and pharmacies. The buildings of some societies included cantinas, theaters and ballrooms, gymnasiums, and bowling alleys. In addition to offering services and facilities, mutual aid societies served as gathering places where members could meet and play dominoes or cards, or simply socialize.

Mutual aid societies were generally organized around ethnicity, with clubs for every ethnic group in the community. Rivalries did exist

between societies, but these rivalries were generally friendly. Contrary to the norm, El Centro Asturiano society accepted people from any ethnic group; it also ran a high-quality hospital. These factors combined to make El Centro Asturiano the largest mutual aid society in Ybor City.

Politics in Ybor City

One could say that Ybor City was a political place even before it began. When Vincente Ybor moved his operation from Havana, it was eventually located in Ybor City so he could avoid being arrested or killed by Spanish authorities. Ybor was a known critic of Spanish colonial rule and provided financial support to Cuban revolutionaries. These initial Cuban rebellions began as early as 1860s, and many Cuban immigrants in Ybor City were political exiles. Lectors in the cigar factories would frequently read revolutionary newspapers and take up collections for the revolutionary fund. As a result of the strong support for the Cuban cause, Cuban revolutionaries often made visits to Ybor City. José Martí, leader of the revolution, visited Ybor City himself on several occasions. During these visits, Martí delivered many passionate speeches. One such speech, delivered from a cigar factory's steps, was reprinted in newspapers throughout the United States and Cuba. This incident is thought to have been a major factor in sparking the Spanish-American War in 1898. During the war, Tampa became a main port of embarkation for U.S. forces. This designation helped develop railroad lines and other infrastructure surrounding Tampa.

In the 1930s, the citizens of Ybor City would also show overwhelming support for the antifascist forces in the Spanish Civil War. Many residents donated up to 10 percent of their salary and tons of clothes to the cause. A handful of the strongest supporters joined the Abraham Lincoln Brigade, which would travel to Spain to fight alongside other resistance fighters. The victory of the fascists at the end of the conflict would force many in Ybor City to cut ties with Spain.

During the cigar manufacturing era, there were a number of massive strikes in Ybor City. These strikes occurred in 1899, 1901, 1910, 1920, and 1931 and were unique. Because of tense U.S.-German relations at the time, many workers distrusted the perceived German influence on

the larger national cigar makers' unions. Despite this fact, the workers found success through their unity and were considered militant even by the standards of union leaders.

Desolation, Rejuvenation, and Renewed Prosperity

The period of abandonment and decay that struck Ybor City in the mid-20th century began during the Great Depression and accelerated after World War II. Cigar production reached its peak in 1929, and production later plummeted after the stock market crashed that same year, adversely impacting Ybor City's economy. This financial disaster, combined with the growing popularity of cigarettes and the cigar industry switching to mechanized rolling methods, caused massive layoffs in the factories. These layoffs led to corresponding shutdowns of other businesses in the neighborhood, such as restaurants and shops. The 1950s and 1960s brought additional problems for Ybor City. In an attempt at urban renewal, much of Ybor City was demolished, including housing units. However, the construction that was to accompany that demolition never occurred. The effect on Ybor City was catastrophic.

In the 1980s, an influx of artists seeking inexpensive studio quarters started the process of recovery and gentrification that created Ybor City as it exists today. By the early 1990s, deserted buildings had been converted to bars, restaurants, and nightclubs. El Centro Asturiano, El Circulo Cubano, and L'Unione Italiana mutual aid societies survived the era of desolation and were also able to recuperate during this time. However, the benefits offered to members were not what they used to be.

Since 2000, Ybor City has enjoyed continued and steady economic development. La Setima, the main street of Ybor City, is known for its restaurants, festivals, events, and music. Ybor City serves as Tampa's historic district and is known as Tampa's Latin Quarter. Additionally, the neighborhood has been designated a National Historic Landmark District, and crime has decreased 84 percent since 2001. Ybor City features many establishments friendly to lesbians, gays, bisexuals, and transgendered people (LGBT). In late 2007, the GaYBOR business association was

founded to represent the interests of LGBT-owned and LGBT-friendly businesses, property owners, and residents in Ybor City. It sponsors GaYBOR Days, a street party that takes place annually in July.

Yellow Peril

Yellow peril is one of the most commonly utilized “controlling images,” or persisting stereotypes, to characterize Asians. This particular construct has been applied to depict Asian countries and their descendants as economic, social, and/or military threats to the Western world. In general, Yellow Peril images and discourses cast Asians as exotic perils to white society, often described as inassimilable and cunning.

One of the earliest stereotypes associated with the yellow peril is the character of Fu Manchu (and its many reincarnates). Fu Manchu embodied the quintessential Chinese villain whose life purpose is to physically destroy white men and to sexually take their women. The widespread circulation of this caricature, first in print, then later in television and cinema, accompanied the justification of the unequal treatment of Asian

immigrants compared with their European immigrant counterparts in late-19th-century America. This was apparent in racist laws and policies in both the political and economic spheres.

Economic Threat

The yellow peril image and discourse allowed for the racialization of xenophobia, codified through racist laws and harsh discrimination toward Asian immigrants. The abolition of slavery was met with an initially warm welcome of immigrants from China and other Asian countries. Asian men served as a pool of cheap labor in the expanding U.S. industrial capitalist economy. However, working side by side with European immigrants, Chinese laborers were soon viewed as economic threats to white working-class men, as well as sexual threats to their women.

Many Chinese laborers had no choice but to leave their families behind in China and live in “bachelor societies,” geographically located in ghettos associated with crime and vice. Antimiscegenation laws made it illegal for nonwhite men to marry white women, while the moral implications of the Page Act of 1875 made it difficult, if not impossible, for Chinese women to migrate to the United States unless they could prove they were not prostitutes. In contrast, women from European countries were able to migrate with their husbands and families.

The 1882 Chinese Exclusion Act was the first law to restrict immigration from a specific country (in this case, China). Subsequent laws were passed in 1917, 1924, and 1934 to eliminate immigration from India, Japan (and Korea), and the Philippines, respectively. Meanwhile, life was cruel for Asian immigrants in a fledgling country that viewed them as unassimilable and conniving. The Naturalization Act of 1870 restricted citizenship to whites and blacks, until the 1898 Supreme Court decision in *U.S. v. Wong Kim Ark* granted citizenship to an American-born child of Chinese parents. Moreover, the Alien Land and Property Acts of 1913, 1920, and 1923 barred individuals ineligible for citizenship from owning property.

By the middle of the 20th century, the yellow peril, once personified by the ubiquitous image of Fu Manchu, was replaced by the image of the treacherous “dirty Jap” and “gook.” U.S. involvement in World War II, the Korean War, and the

Vietnam War positioned Asians as military threats to Western society. In addition, any U.S. conflict with Asian countries made Asian Americans especially vulnerable to heightened racial discrimination. The yellow peril stereotype did not allow for distinctions to be made between Asians and Asians Americans, nor differences between different generations and nationalities to be considered.

National Security Threat

The proliferation of the “dirty Jap” discourse characterized Japanese people as a ruthless threat to national security. The Japanese attack on Pearl Harbor on December 7, 1941, incited the already existing anti-Asian sentiments and made all Japanese (including American citizens and newborns) suspects. On February 19, 1942, President Franklin D. Roosevelt signed Executive Order 9066, which authorized the immediate relocation of anyone with Japanese descent living on the west coast into one of 10 internment camps, often situated in remote desert or swamp lands. Ironically, those living in Hawai‘i (where the bombing took place) were exempted because they constituted a significant majority of the state’s economy compared with the Japanese labor force residing on the mainland. Although J. Edgar Hoover, director of the Federal Bureau of Investigation (FBI), argued that this order was not a military necessity, all individuals of Japanese ancestry were treated as enemies, regardless of their citizenship status. Moreover, Chinese and Koreans in the United States wore pins proclaiming their nationality so that whites would not mistake them for Japanese. At the end of World War II, residents of the internment camps were released. Not a single one of them was charged with any wrongdoing related to the Japanese aggression.

In the 1950s and 1960s, U.S. involvement in the Korean and Vietnam Wars popularized the image of the “gook.” This slur was used to dehumanize Asians and treat them as objects of annihilation overseas. It also justified ongoing discrimination against Asian people living in the United States. Historically, the various archetypes of the yellow peril corresponded with racist sentiments against Asian Americans while vindicating American military actions in Asia.

In more contemporary times, the yellow peril imagery and discourse continues to invoke

racially defined nationalistic competition with Asian countries and their people. In the 1980s, the booming Japanese automobile industry and the corresponding decline of the American manufacturing industry intensified racial and class tensions. In this context, two white men, Ronald Ebens and Michael Nitz, beat Vincent Chin, a 27-year-old Chinese American, to his eventual death with a baseball bat in Detroit, Michigan. Not only did Ebens mistake Chin to be Japanese, but his actions also were a poignant reflection of his view of Chin as the perpetual foreigner rather than an American.

The controlling images of the threatening yellow peril persist alongside its twin, the domesticated model minority. In both cases, Asians are constructed as outsiders in a white society. While the United States continues to adapt to China’s ascendancy in the global economy, there is concern about growing Asian American populations, especially in the public university systems. These twin stereotypes ignore the heterogeneity of Asian Americans, who represent distinct nationalities (e.g., Hmong, Japanese, and Vietnamese), religions (e.g., Christianity, Buddhism and Islam), and languages (e.g., Mandarin, Korean, and Tagalog), spanning across every imaginable socioeconomic group.

Yeshiva

A *yeshiva* (plural *yeshivot*) is a Jewish school that focuses on the study of traditional religious texts—the Talmud and the Torah. Elementary school students study in a *yeshiva*, while high school instruction is provided in a *mesivta*; a *beis medrash* (Hebrew for “study hall”) or *yeshiva gedola* (“large yeshiva”) provides undergraduate instruction, and a *kollel* is a yeshiva for married men.

The first yeshivot were established in ancient Babylonia. By the 19th century, the yeshiva movement flourished in Poland and Lithuania, and rabbis educated in these schools would later relocate to, and establish similar schools in, the United States. Although many of the first American yeshivot were modeled after the traditional Orthodox Jewish academies of eastern Europe, there are now yeshivot affiliated with every strand of Judaism, including Modern Orthodox, Hasidic, Conservative, Reform, and Reconstructionist.

The First American Yeshivot

The large influx of Jews from eastern Europe who immigrated to the United States in the late 19th century initially had little interest in sending their children to a yeshiva. Wanting their children to assimilate into American culture, these parents chose to educate their children in public schools while enrolling them in after-school programs that taught them about Judaism. Although many of these after-school institutions were called yeshivot, they did not provide the Talmudic instruction that was central to the eastern European tradition.

This development disturbed many Orthodox rabbis, who wanted boys to have a Jewish education that would protect them from acculturation

into the American mainstream. In 1886, Etz Chaim, the first elementary school providing advanced study of the Jewish religious texts, opened in a storefront on the Lower East Side of Manhattan in New York City. Study of the Torah and Talmud was the core of Etz Chaim’s instruction and was provided during most of the day, while secular subjects were taught after 4 P.M.

In 1898, the Union of Orthodox Jewish Congregations was established, and this organization founded many other yeshivot. By 1906, there were 21 yeshivot in the United States that were modeled after the Lithuanian yeshivot that ordained rabbis. Talmudical Academy in New York City, established in 1916, was the first Orthodox Jewish high school in the country to offer traditional studies as well as a state-approved general education curriculum.

At the same time that these schools opened for boys, the Beth Yaakov movement provided education to Jewish girls. The Beth Yaakov schools, which originated in Poland in the early 20th century, did not feature Talmudic study but offered girls instruction in the Torah, prayers, and Jewish laws and customs. The first movement-affiliated school in the United States opened in the Williamsburg neighborhood of Brooklyn, and similar yeshivot were founded in Brooklyn’s East New York and Brownsville neighborhoods.

In 1921, Yeshiva Torah Vodaath, the fifth Jewish all-day elementary school in the United States, was founded in Williamsburg by Orthodox Jews from Poland. Five years later, the curriculum was expanded to include high school courses, and the school later opened a separate Talmudic academy for post-high school instruction.

“Black Hat” and Day Schools

In the 1930s and 1940s, a new wave of eastern European immigrants, fleeing Nazi persecution, settled in the United States. Among these immigrants were thousands of Orthodox Jews, trained in Lithuanian Talmudic academies, who opened up similar schools in their adopted country. These yeshivot were dubbed “black-hat schools,” in reference to the black hats worn by the Orthodox. These institutions included Ner Israel Yeshiva in Baltimore (founded 1933), Chofetz Chaim Yeshiva in Brooklyn (1933), Mesivta Tifereth Jerusalem in Manhattan (1937), and Yeshiva Chaim Berlin in

Brooklyn (1939). Telz Yeshiva was transplanted from Lithuania to Cleveland in 1941, and two years later, Beth Midrash Govaha, which would become the largest and most prestigious school for advanced Talmudic studies in the United States, was founded in Lakewood, New Jersey.

In the 1940s, a group of Orthodox rabbis and lay people founded the National Society for Hebrew Day Schools. Day schools rapidly expanded after World War II, becoming a fixture of Jewish communities in the newly developed suburban areas of the country. The day schools sought to provide both a secular American education and intensive learning of Jewish texts. By 1957, Jewish day schools were educating more than 2,500 students in 235 communities; by the 1970s, 67,000 students were receiving instruction in every Jewish community with a population larger than 7,500.

Yeshiva University

In 1896, 10 years after the opening of Etz Chaim, the founders of that school opened Rabbi Isaac Elchanan Theological Seminary (RIETS), which provided advanced Talmudic study in the Yiddish language to Etz Chaim graduates who later became rabbis. Like the eastern European schools after which it was modeled, RIETS did not offer any specialized training for rabbis, believing that intensive knowledge of the Talmud and Torah was sufficient preparation for this work. However, this philosophy was challenged by another rabbinic training institute—the Jewish Theological Seminary (JTS), which opened in New York City in 1887. JTS offered practical courses aimed at training rabbis to write sermons and perform other duties, as well as internships for prospective rabbis. JTS attracted many students who would otherwise attend RIETS, where, in the early 20th century, a growing number argued that they needed to receive a secular, as well as religious, education and wanted specific instruction to enable them to become American rabbis.

The situation improved in 1915, when Bernard Revel became president of the newly merged RIETS and Etz Chaim. Revel, an Orthodox Lithuanian rabbi and scholar, wanted to create a college that would offer both religious instruction and a secular education, enabling students to enter the American mainstream while remaining true to their Orthodox beliefs. Revel hired eastern

European colleagues to bolster RIETS's Talmudic studies, as well as Orthodox Jews to teach Jewish history, philosophy, Hebrew studies, and the German language. He spearheaded a \$5 million fund-raising campaign that enabled the college to relocate in 1928 to a new campus in the Morning-side Heights neighborhood of Manhattan.

By 2012, the school had expanded to become Yeshiva University, with more than 6,400 undergraduate and graduate students at four New York City campuses. Students received education at three undergraduate schools—Yeshiva College, Stern College for Women, and Syms School of Business. In addition, the university offered graduate and professional education at RIETS, the Albert Einstein College of Medicine, Benjamin N. Cardozo School of Law, and schools of social work, psychology, Jewish education and administration, and Jewish studies.

Yiddish

A Germanic language written in the Hebrew alphabet, Yiddish was the mother tongue of the Ashkenazi Jews, a population scattered throughout eastern Europe and the Russian Empire; starting in the 1880s, 2 million of them migrated to the United States. In America, Yiddish thrived as a main vehicle of eastern European Jewish culture as it found expression in literature, theater, music, and cinema.

Before migration, the status of Yiddish was quite low; lacking a proper grammar and a standard written form, intellectuals dismissed it as *zhargon* (“jargon”) or, worse, mere gibberish. In the multilingual milieu of eastern European towns and *shtetl*ack (“villages”), Jews used Hebrew in connection with religion and the national Christian languages spoken in the different areas of settlement (such as Russian, Polish, or Romanian) in their negotiations with bureaucracy and the outside world. Yiddish was restricted to the sphere of family and community. When new currents of thought influenced by the Enlightenment (known as *Haskalah*) spread from Germany into the Jewish settlements, intellectuals chose to publish their work in either German or Hebrew, languages with an established tradition of speculative thought and writing that Yiddish lacked.

The name *Yiddish* itself is a relatively recent denomination. First known as *taytsh* (a word that stresses its Germanic roots) or *losh-askenaz* (“the Ashkenazi’s tongue”), starting in the Renaissance, several names appeared that underlined the language’s Jewish element, such as *Judish-teutsh* or *Judische sprache*. The name *Yiddish* emerged only during the 19th century.

Origins

The oldest surviving written testimonies of Yiddish date back to the 13th century. Some scholars, however, following linguist Max Weinreich, place its formation between the 9th and 10th centuries, when Jews moved from France to the Rhine region and settled in Koln, Mainz, Worms, and Trier. Others, such as Robert King, argue that the language is more recent, and its development must be pushed forward to the 12th century, when Jews had spread to the southern regions of Germany. The lack of documentary sources, however, so far has made impossible any definitive agreement on the matter.

When they arrived in the Rhine region, Jewish migrants gradually abandoned the Romance vernacular they spoke and adopted the northwestern German dialect, retaining the Hebrew and Aramaic vocabulary connected to religion and ritual. As Jews moved eastward through further migrations, expressions and constructions from the Slavic tongues spoken in the new areas of settlement entered their language. By the beginning of the 19th century, three distinct Yiddish dialects

could be identified: Lithuanian, highly Germanized and considered the closest to a supposedly standard version of the language; the Polish or western; and the Ukrainian or southeastern.

Following the trends of the Enlightenment, Jewish intellectuals called for a progressive abandoning of Yiddish and adoption of German in its place as a necessary step toward integration into society at large—a move that gained currency between the ranks of the elites living in Germany and the western territories of the Austrian empire, but which was resisted in eastern Europe, the area that consequently became the gravitational center of Yiddish.

Yiddish in America

Eastern European Jews started to migrate to the United States in the 1880s and settled in urban areas, clustering in neighborhoods where they re-created the life of the *shtetl*. Yiddish was the main tongue of those new American ghettos, but the contact between different dialects and the looming presence of English meant the language underwent a process of development that resulted in a peculiar patois, with expressions such as *all-rightnik* (upstart, boaster), *boychik* (little boy) or *next doorige* (the people next door) that would be incomprehensible to those Jews who had stayed behind. Some contemporary observers claimed this patois, which they called Yinglish, should have been considered a completely distinct language. H. L. Mencken would note that the sentence “Die boys mit die meidlach (“girls”) haben a good time” was excellent American Yiddish.

The question of language would surface dramatically when, as the community grew in numbers, intellectuals and entrepreneurs saw the opportunity to start periodicals in Yiddish. The written form available at the time, derogatorily called *deutschmerish*, was a pompous and highly Germanized version of Yiddish, extremely distant from the language spoken in the street. This, on the other hand, lacked sophistication and the vocabulary to express complex ideas. Labor activists and intellectuals, who regarded a newspaper venture as instrumental in reaching out to the masses, keenly felt the urgency of this dilemma.

Abraham Cahan (1860–1950), one of the founders of the socialist *Arbeiter Zeitung*, pushed for the total banishment of *deutschmerish* and promoted

experimenting with a written form closer to everyday speech. The newspaper enjoyed immediate success, setting a lowbrow pattern that would be copied by radical dailies (such as the *Freie Arbeiter Stimme*) and conservative papers alike (*Der Tageblatt*). When the *Arbeiter Zeitung* folded because of financial difficulties, Cahan would transplant its successful formula to his new venture, the *Vorvaerts* (*Jewish Daily Forward*), the only Yiddish newspaper of the immigrant era that has survived to this day, even if as a bilingual edition.

The language question continued to be the crucial issue for Yiddish writers, as witnessed in a 1943 article by Isaak Bashevis Singer (1902–91), “Problems of Yiddish Prose in America”; the Yiddish writer, Singer argued, found himself lost between two extremes: the old language and the patois spoken in the street. Although the former was too distant from the writer’s experience, the latter was unsuitable for any literary undertaking. The solution Singer proposed was for the Yiddish writer to re-create a mythical past using the old language. However, Singer’s later career would show how Yiddish could be used to engage with contemporary issues.

Literature

Far from setting limits, the lack of established norms was a liberating factor that made Yiddish a very malleable vehicle, fit to be employed in the different forms of popular culture, from Tin Pan Alley songs to dramatic theater. Yiddish newspapers, as a way of capturing a wider audience, started to feature poems, cartoons, and short stories that addressed the harsh conditions of immigrant life, the problems of adaptation, the conditions of labor, and nostalgia for the old country. In the pages of the dailies are scattered the seeds of Yiddish literature in America. The first immigrant poets and writers took direct inspiration from ordinary life in Jewish neighborhoods and were largely ignorant of the literary developments that were taking place in Europe around the same time.

In the 1890s, the “sweatshop” poets, like Morris Rosenfeld (1862–1923) and Morris Winchevsky (1856–1932), were the first to articulate the plight of fellow immigrants and in particular their difficult adaptation to the American way of life. Soon afterward, other schools emerged, producing a large and diverse body of poetry: the *Yiddishkeit*

(Jewishness) school, focused on tradition and the meaning of being Jewish in the contemporary world (Abraham Reisen, 1876–1953, was one of them); the *Di Yunge* (the young ones) movement, mainly concerned with symbolism (Moyshe-Leyb Halpern, 1886–1932); and the modernists of the *In zich* (into oneself) group (Jacob Glatstein, 1896–1971). Prose too, in spite of Singer’s doubts, enjoyed a wide flowering. Cahan’s first attempts at writing were in Yiddish, and only afterward did he choose English as the main vehicle of his creative fiction (his first tale is *Mottke Arbel*, later reworked and translated into “A Providential Match”). A number of short story writers, such as Leon Kobrin (1873–1946), Isaac Leib Peretz (1852–1915), and others, regularly contributed to newspapers and magazines. Lured by the improving circumstances of the Jewish community, the two major “European” Yiddish writers of the era, Sholem Asch (1880–1957) and Scholem Aleichem (1859–1916), eventually migrated to New York. Only the former, though, chose to engage with America in his fiction; he portrayed the life of the immigrant community in *Onkl Mozes* (*Uncle Moses*, 1918) and *East River* (1946).

As several scholars have pointed out, there is also a significant Yiddish presence in the work of Jewish Americans who wrote in English. Abraham Cahan and Anzia Yezierska employed Yiddish vocabulary as well as syntax in their writings, while the dialogues and interior monologues in *Call It Sleep* (1934), the experimental novel by Henry Roth, are literal English translations of the Yiddish spoken by the characters. Traces of bilingualism are also to be found in the novels and stories of second-generation writers such as Saul Bellow and Grace Paley.

After World War II, Isaac Bashevis Singer would become the major voice of Yiddish fiction worldwide. Having arrived in the United States in 1935, Singer took his major theme from the lot of Holocaust survivors: in works like *Shotns baym Hodson* (*Shadows on the Hudson*, 1957) and *Sonim, di Geshichte fun a Liebe* (*Enemies, A Love Story*, 1966), Singer portrayed a new immigrant generation in its attempt to come to terms with an America that seemed to celebrate a life for which the immigrants had lost any taste.

The golden era of Yiddish culture in America lasted until World War II, about a generation after

the 1924 immigration laws restricted access to the United States. The Holocaust, with its 6 million Yiddish-speaking victims, destroyed entire communities and modes of life in eastern Europe, depriving the speaking community of its most substantial terrain. When, in 1978, Singer was awarded the Nobel Prize in Literature, the occasion sounded like an official homage to a cultural movement whose moment was already past.

Holocaust camp survivors joined coreligionists in America or Israel, territories where the language was doomed to remain marginal, with speakers reduced in numbers with the passing of the generations. Some estimates put Yiddish speakers at 250,000 in the United States, to which another 200,000 living in Israel and other parts of the world should be added.

Of the rich Yiddish language culture that had flourished in the first half of the 20th century, few residual instances remain. A number of Yiddish words have come into everyday use in English, especially in the New York area, where terms like *schmuck*, *kosher*, and *schlep* have become of common use. The New York-based *Yidisher Visnshaftlekher Institut* (Yiddish Scientific Institute) has the goal to preserve, study, and teach the Yiddish language and culture. A small number of limited-circulation weeklies survives, as well as radio programs, like the *Forward Sho* (*The Yiddish Hour*) and *Dos Yidishe Kol* (*The Yiddish Voice*).

Yiddish Theater

Yiddish theater was written and performed in the Yiddish language spoken by Ashkenazi Jews. Ashkenazi Jews are an ethnic group of Jewish people who settled in Germany in the early Middle Ages. Because the main centers of Jewish learning developed in Germany, many Jews in western and central Europe came to be called Ashkenazi after they adopted many of the same cultural and linguistic features, notably the use of Yiddish. The original Ashkenazi also migrated, forming communities throughout central and eastern Europe and Russia. Most of the Jewish immigrants to the United States were Ashkenazi or Sephardim, the Jewish community of Spain that later spread into France.

Yiddish developed among the Ashkenazi. Much as English is a Germanic language, with heavy Romance influences, Yiddish is a fusion of the Aramaic that the first Ashkenazi likely spoke, the Hebrew they learned for religious services, and the German dialects of the surrounding community. Slavic and Romance elements were incorporated as Ashkenazi migrated. Yiddish is written using the Hebrew alphabet. Today, Yiddish is the native language of about 1.8 million people, with at least another 10 million fluent in Yiddish as a second language. It was the primary language of the Ashkenazi Jews for centuries and is the primary language in most Hasidic communities; the use of Yiddish in Israel, where Hebrew and Arabic are the national languages, is subject to ongoing debate. The Holocaust not only destroyed the lives of many Yiddish speakers but also disrupted Yiddish-speaking culture.

Yiddish literary culture flourished in the 19th century, in parallel with the rise of modern Hebrew, after a brief decline during the Enlightenment. The popular stories of Sholem Aleichem about Tevye the Dairyman were later translated into English and were adapted into the Broadway musical (and film) *Fiddler on the Roof*. Yiddish film developed in the early 20th century, and the language was the official language of the Ukrainian People's Republic, the Jewish Autonomous Oblast, and Belarus.

Early Yiddish Theater

Yiddish theater encompasses many genres, including musical comedies, naturalist dramas,

modernist drama, operettas, nostalgic revues, and satires. Religious plays were published in Yiddish in the early 18th century, and Yiddish theater as an art form hit its stride in the 19th and 20th centuries. The professional Yiddish theater began in 1876, and it quickly became widespread throughout the Ashkenazi diaspora, including eastern Europe and the United States, where many Ashkenazi Jews had immigrated. There were both permanent Yiddish theaters and traveling theater troupes, but the troupes were primarily responsible for the spread of the theater. Like the Italian traveling theater troupes, many Yiddish

performances were based around standard types, like the villain and villainess, the comic, the prima donna, the lover, and a few distinctive roles called for by the plot, like a soldier or tailor. Troupes were originally all-male, but not for long.

One of the earliest pieces in Yiddish theater to be embraced and endure is Abraham Goldfaden's comedy *Schmendrik, or the Comical Wedding*, the title of which is a play on *The Chymical Wedding*, a 16th-century foundational text of Rosicrucianism. A religious school student, Schmendrik is foolish and clueless, and the plot centers around his arranged marriage to a girl who attempts to evade the marriage because she is both in love with someone else and affronted by Schmendrik. Hence, the term *Schmendrik* in Yiddish is both affectionate and derisive.

Yiddish theater arrived in the United States in 1881, when recent immigrant Boris Thomashefsky, then 12 years old, heard songs from Yiddish theatrical productions sung by his fellow immigrants and became determined to introduce them to America. Thomashefsky made money singing at the synagogue and soon made theatrical connections in order to put on the first Yiddish theatrical production in New York City. The Jewish community opposed it at first, believing that Yiddish theater was an undignified remnant of the old country, but the performance was a success, and Thomashefsky's company soon went on the road. A dozen more Yiddish theater companies opened in New York in the next 50 years, and 200 traveling troupes were formed. Plays ranged from adaptations of William Shakespeare or recent modern plays—not only presented in Yiddish, but also typically turning the characters into modern Jews—to new works of drama centered on the tensions between Jewish immigrants and their American-born children, or different religious groups within the Jewish community.

Broad Appeal

There were Yiddish versions of *Uncle Tom's Cabin*, *Faust*, *Salome*, *Hamlet*, *Hedda Gabler*, and even Richard Wagner's *Parsifal*. Because of these adaptations and the tendency of traveling troupes toward melodrama, the dignified Jewish community had originally opposed the theater. But just as Shakespeare had presented his plays in a form that the rabble would tolerate, Yiddish

A poster introducing the show *King Solomon at the Thalia Theater*, which was playing in New York in 1897. Yiddish theater grew quickly after the first troupes were formed as the result of a strong Jewish literary intellectual culture.

theater took works of high art and presented them as entertainment of low culture. Still, Jewish intellectuals in the early 20th century made a frequent target of the Yiddish theater, which continued to grow in popularity and was frequently relied upon as a means of fund-raising for philanthropic organizations, labor unions, and mutual aid societies.

As with vaudeville, audience members at Yiddish theater productions did not sit quietly in their seats. Whereas vaudeville was known for its hecklers and catcallers in the audience, at the Yiddish theater, the audience would loudly cheer and hiss the heroes and villains, and cry at the dramatic turns of melodramas. It is widely believed the theater provided a necessary form of catharsis at a cheap price, much like movies. It was not solely for the proletariat: The Yiddish theater was truly egalitarian in its appeal, despite the complaints of some vocal intellectuals.

From 1905 to 1908, half a million Jewish immigrants arrived in the United States, and Yiddish theater not only underwent a boom period, but also tended toward broader appeal in order to reach the masses. The Thomashefskys put aside the more sophisticated plays that they had developed in favor of broader comedies, and plays by now-well-respected playwrights like Jacob Gordin failed commercially. Critically acclaimed Yiddish plays in the United States hit a new golden age only a decade later, with S. Ansky's *The Dybbuk* and H. Leivick's *The Golem*.

Two of the stars of New York Yiddish theater were Jacob Adler and his wife, Sara. Their daughter Stella, born in 1901 on the Lower East Side, acted in her parent's Independent Yiddish Art Company before making her English-language debut on Broadway at the age of 21. She went on to study acting with Russian actor-director Constantin Stanislavski and opened the Stella Adler School of Acting in 1949. One of the most influential figures in American acting, she taught Marlon Brando, Robert De Niro, Martin Sheen, Melanie Griffith, Warren Beatty, and Peter Bogdanovich.

Young Lords

Originally a Chicago street gang, the Young Lords emerged as a civil rights–conscious and political empowerment–minded youth movement of the late 1960s and early 1970s, known for its confrontational tactics and radicalism. The Young Lords were founded in September 1968 as a reformed street gang under the leadership of José “Cha Cha” Jiménez, a native of Puerto Rico whose family relocated to Chicago during childhood. The Young Lords drew inspiration from the social activism of the era, such as the black civil rights movement, the anti–Vietnam War movement, and the charisma of Malcolm X, the Black Panther Party, and others. Jiménez envisioned the Young Lords as a Black Panther–like organization for Puerto Ricans and other Latinos.

Although the Young Lords originated in Chicago and chapters existed in numerous cities throughout the northeast, the New York City chapter became the Young Lords’ largest and most notable. The New York City chapter of the Young Lords Party was formally established on July 26, 1969, by several socially conscious Puerto Rican college students after they had traveled to Chicago and personally met with Jiménez.

Founding members included Felipe Luciano, Juan Gonzalez, Mickey Melendez, Denise Oliver, Iris Morales, and Pablo “Yoruba” Guzman. The Young Lords Party adopted a 13-point program as its mission statement in October 1969, which called for the independence of Puerto Rico, an end to U.S. military intervention overseas, an end to racism and economic exploitation, greater governmental attention to issues of poverty and social neglect, and the establishment of a socialist society. The Young Lords also adopted a distinct

uniform that consisted of an Army fatigue jacket, a purple beret, and combat boots.

During the summer of 1969, the Young Lords launched a Garbage Offensive to protest the city's lack of adequate trash disposal service in East Harlem (affectionately known as *El Barrio* by locals). Members stole a dozen large brooms from the local Department of Sanitation and proceeded to sweep the neighborhood streets, accumulating the trash into a five-foot-tall barrier along Third Avenue that caused an acute traffic jam. Eventually, the Young Lords set the wall of trash on fire as local residents cheered the young radicals' brashness. This Garbage Offensive resulted in city efforts to improve trash removal within *El Barrio*.

In perhaps the organization's most memorable action, the Young Lords occupied the First Spanish Methodist Church in East Harlem for 11 days in December 1969 and January 1970. After seizing control, the Young Lords converted the church into a makeshift community center that offered a free breakfast program for school children, donated clothing, and films and musical entertainment for local residents. The New York Police Department ultimately stormed the church and arrested 103 Young Lords. As the police escorted the arrestees from the church, the defiant Lords raised their clenched right fists overhead to the cheers of onlooker local residents who sang "Que Bonita Bandera," a prideful Puerto Rican anthem.

The Young Lords began to decline in membership as well as influence after 1971 because of the confluence of several factors. During that year's Puerto Rican Day Parade, the Young Lords attempted to take control of the event. Former Young Lord Miguel "Mickey" Melendez admits that his organization aimed to prevent the Puerto Rican officers of the New York Police Department from marching at the head of the parade, as was customary. This showdown escalated into a violent confrontation that encompassed many of the parade's bystanders and spectators, marking a significant turning point in the larger Nuyorican community's views of the Young Lords' radical agenda and tactical operations. Another major factor contributing to the downfall of the Young Lords was infiltration of the organization by undercover agents as part of the Federal Bureau of Investigation's (FBI) Counterintelligence Program (COINTELPRO).

During the early 1970s, the Young Lords devoted a much sharper focus toward advocating for the independence of Puerto Rico and dispatched a significant volume of its personnel and finances to the Caribbean island in an effort to marshal support for the independence movement. This strategy proved counterproductive, as the island's population did not regard their New York-born and -bred coethnics as sufficiently knowledgeable about Puerto Rico's culture and politics, and an independence movement already existed on the island. Lastly, internal strife produced divisions among the Young Lords, as several female members alleged that sexism prevented many of them from achieving positions of power within the male-dominated organization.

By the 1980s, the Young Lords were a relic of the radical 1960s. Reformist tactical approaches of the Ronald Reagan–George H. W. Bush years replaced antiestablishment tactics of the civil rights–Vietnam era, rendering the organization obsolete. Nevertheless, the legacy of the Young Lords lives on in the hearts and minds of socially conscious Nuyoricans today, especially among those who directly benefitted from the organization's activism and services. The Young Lords drew greater visibility in American society to the social conditions of lower-income Latinos living in East Harlem and the South Bronx, and their activism helped lead to the establishment of Puerto Rican/Latino Studies courses in many northeastern colleges and universities. Nuyorican actress and filmmaker Rosie Pérez highlights the Young Lords in her 2006 documentary *Yo Soy Boricua, Pa'Que Tu Lo Sepas!*.

Z

Zionism

Zionism, one of the most complex and controversial movements of modern history, is a political, religious, nationalist, and cultural endeavor that supports a Jewish nation-state in territory defined as “the Land of Israel”—the geographic and biblical heartland of the Jewish faith

Zionism offered a bold resolution to what was commonly referred to as “the Jewish Question”—the seemingly intractable refusal or inability on the part of Western nations to allow their Jewish populations to assimilate into mainstream society. Zionism has been referred to as “the national liberation movement of the Jewish people,” a radical vision of normalization for a dispersed, alien, homeless, religiously condemned, and often physically persecuted international community.

Background

From its beginning, Zionism advocated secular as well as spiritual aims, reflecting the dual nature of Jewish identity as both a religion (Judaism) and a national or ethnic designation (“Jewishness” or “Jewish peoplehood”). Jews from every ideological position—left and right, secular and religious—joined together to create a Jewish sovereign state in Palestine for the purpose of transforming the victimized European Jews and the second-class

Jews of Muslim lands into a redeemed biblical Jew—the agrarian man of the earth, the fierce warrior, the passionate man of God.

The word *Zionism* was coined in 1890 by Nathan Birnbaum, an Austrian Jewish publicist. In his essay, the term *self emancipation* is derived from a biblical source: the word *Zion*, one of the common names of Jerusalem, the sacred capital of the Kingdom of Israel.

Zionism does not have a uniform ideology because of the many competing ideologies among the founders of the movement. From the first Zionist Conference in Basle, Switzerland, in 1897, the often fierce struggle for supremacy between Zionist factions quickly erupted: Political Zionism, Labor Zionism, Revisionist Zionism, and Religious Zionism battled to determine the prevailing identity of the Jewish homeland in Palestine, a struggle that continues today in the present state of Israel.

To illustrate the paradoxical nature of the Jewish movement, one can simply point to the many ultra-Orthodox Jews who opposed Zionism as a blasphemous preemption of the Messianic Age (since only the Messiah, with God’s support, can bring about Jewish rule in the Holy Land), while some of the key founders of the state of Israel were unbending atheists. It is important, therefore, to explain Zionism by clarifying the historical ideologies that characterized the movement from the outset.

Labor Zionism

Labor Zionism provided the most powerful ideology during the founding years of pre-state Israel and prevailed as the dominant ruling party in government until 1977. The movement had its origins in the first intellectual document of the Zionist movement—Moshe Hess’s book *Rome and Jerusalem: The Last National Question*, published in 1862. Hess perceived European Jewry as a nonproductive, dependent merchant class that desperately needed a process of transformation through “redemption of the soil”—a return to the tilling of the earth, as in the days of the Bible. Such a transformation, however, could take place only in a new and sovereign Jewish homeland. Hess is now considered a key founder of Labor/Socialist Zionism as well as a key intellectual forebear of the Israeli kibbutz movement.

Political Zionism

Two years later, in 1894, Theodore Herzl, a highly assimilated Austrian Jewish journalist, covered the Dreyfus Trial in Paris. There, he witnessed the frightening outbreak of virulent anti-Semitism throughout France, the presumed bastion of brotherhood, reason, and egalitarianism. Deeply shaken by the convulsions of the Dreyfus Affair, Herzl became an ardent Zionist, the father of the movement known as Political Zionism, and the most revered founder of the current state of Israel.

In his visionary work *The Jewish State*, published in 1896, Herzl provided the most widely read foundation for Zionism as a pragmatic solution to the Jewish Question. Herzl firmly believed that the Great Powers would support the Jewish in-gathering into a national home because, once and for all, Zionism would remove the Jews as a demographic anomaly in their midst. Herzl wrote:

We are a people—one people. The idea I have established in this pamphlet is an ancient one: it is the restoration of the Jewish State . . . We have sincerely tried everywhere to merge with the national communities in which we live, seeking only to preserve the faith of our fathers. It is not permitted us . . . Palestine is our unforgettable historic homeland . . . We shall live at last as free men on our own soil, and in our own homes, peacefully die.

Although Herzl died prematurely in 1904, his vision was carried forth by Chaim Weitzman, Herzl’s acknowledged successor as international leader of the Zionist movement. Weitzman secured England’s official sanction for a Jewish homeland in Palestine in the Balfour Declaration of 1917, considered one of the most important documents in Zionist history. Commitment to the Zionist cause was confirmed by the League of Nations in 1922, the U.S. Congress in 1923, the British Peel Commission in 1937, and, finally and most conclusively, by the United Nations General Assembly on November 29, 1947, with the passage of Resolution 181, sanctioning two states in Palestine—Arab and Jewish—with recognized borders, economic unions, and internationally accepted governmental institutions. Throughout the subsequent years of struggle to defend and sustain the Jewish state, other Zionist ideologies vied for power with Labor and Political Zionism.

Religious Zionism

Religious Zionism is advocated by observant Jews who support Zionist efforts to build a Jewish state in Palestine. Rabbi Abraham Isaac Kook, the main proponent of the movement, justified Zionism by citing Jewish law, which sanctifies Jewish resettlement of God’s biblically Promised Land as part of a divine scheme. Resettlement, Kook asserted, would bring *geula* (salvation) to the Jews and then to the entire world. After the refoundation of the Jewish homeland, the Messiah would come, bringing peace and harmony to all humankind, as envisioned by the biblical Prophets. Therefore, settlement in Israel is an obligation for all religious Jews, and promoting Zionism is actually following God’s will. For many religious Jews, giving up “holy” land for political reasons is sacrilegious, as evidenced by the assassination in 1995 of Prime Minister Yitzchak Rabin by an extremist supporter of Rabbi Kook’s ideology.

Zionism Today: Triumphs and Challenges

Despite its turbulent history, the Zionist movement has achieved undeniable success. Perceived originally by many Jews and non-Jews alike as a fanciful daydream, Zionism within five decades obtained international sanction for Jewish self-determination and political statehood. The physical redemption of the Jewish people in their primal

homeland after an absence of 2,000 years is almost unprecedented in human history.

Israel today is a modern, secular, democratic state that now ranks among the top 24 world economic powers. The public culture of the state is Jewish; Hebrew, the ancient language of the Jews, has been revived as an everyday mode of discourse; the nation commemorates Jewish religious holidays and historic events; and concern for the fate of international Jewry remains a crucial topic on the national agenda. In addition, state lands, immigration, and the defense of the population are in the hands of a Jewish government. In just half a century, Israel has become home to the largest Jewish community in the world.

American Zionism

Significant numbers of American Jews today derive their sense of Jewish identity through their commitment to the Zionist movement and to their ongoing support of the state of Israel. Zionist organizations such as the Zionist Organization of America, the American Zionist Federation, Hadassah, American Friends of Israeli Universities, Pioneer Women, and many others offer membership affiliations and fund-raising opportunities for hundreds of thousands of American Jews who are loyal Americans but passionate supporters of the Jewish nation.

AIPAC, the American Israel Public Affairs Committee, the official lobbying entity on behalf of Israel in America, is considered one of the most effective and powerful lobbies in Washington. More recently, J Street, a left-of-center, pro-Israel lobby, has attracted attention and support from thousands of American Jews who are dissatisfied with what they perceive to be the “hawkish” stance of AIPAC.

Jewish Federations, the key fund-raising arms of the American Jewish community, raise hundreds of millions of dollars annually on behalf of Israel’s Jewish Agency, the agency that deals with the settlement and needs of Jewish immigrants to Israel. In times of crisis in Israel, American Jews have responded with historic generosity and emotional support. For example, American Jews raised \$150 million during Israel’s War of Independence in 1948 and \$318 million during the Six-Day War of 1967. Immediately after the 1967 war, over 10,000 American Jews made

aliya—emigrated to Israel. Approximately 3,000 American Jews choose to emigrate to Israel each year, and the current American Jewish population in Israel today numbers over 80,000.

American Jewish support of Zionism, however, was late in its development. Comfortable in the new “American Zion,” desperate to assimilate into mainstream American society and culture, and fearful of the accusation of “dual loyalty,” the majority of American Jews throughout the first decades of the 20th century strongly resisted the appeal of the Zionists.

Louis Brandeis and His Influence on American Zionism

Louis Brandeis did more than anyone else to change the American Jewish attitude of indifference and outright hostility to Zionism. His magnetic leadership led American Jews to see Zionism not only as the means of rescuing oppressed Jews in Europe but also as the key to American Jewish renewal.

Born in Louisville, Kentucky, to affluent German Jewish parents, Brandeis became a brilliant lawyer and the first Jew appointed to the U.S. Supreme Court. Drawn to Zionism by a beloved uncle, Brandeis became an ardent convert to the cause, and by 1915 was the leading national spokesperson for the still-fledgling movement.

Brandeis’s most important concept was that Zionism and Americanism were compatible. A Jew could be loyal to both America and to Zionism because the two were simply different expressions of the same basic values. “The highest Jewish ideals are essentially American in a very important particular,” he proclaimed. “It is democracy that Zionism represents. It is social justice that Zionism represents, and every bit of that is the American ideal of the 20th century. Zionism is the pilgrim impulse all over again,” he continually announced. “To be good Americans, we must be good Jews, and to be better Jews, we must become Zionists.”

Brandeis asserted the social ideal of pluralism, the belief that loyalty to America does not negate ethnic, racial, religious or national pride, a concept that gradually replaced the “melting pot” theory that defined a “good” American as one who had melded into a uniform, harmonious, nationally acknowledged image called an “American.”

Under Brandeis's leadership, American Zionism swelled its ranks to 200,000 by the 1920s, and by 1942, with the full horror of Adolf Hitler's atrocities becoming known, Zionism became the common thread that bound together all segments of the Jewish community.

Though American Jews proved powerless to save more than a token number of European Jews during the Holocaust, American Zionists were instrumental in persuading President Harry S. Truman to affirm Israeli statehood after the United Nations Partition Vote in 1947, a gesture of support that may well have saved the newborn state.

American Zionism, therefore, has become a crucial element in the continuance of the Jewish state, despite the many differences over Israeli governmental policies that strain the Jewish community today. Support for Israel's security remains strong, both among the American Jewish community and as the official policy of the American government.

Zoot Suit

Zoot Suit is a musical play by Luis Valdez that deals with the Sleepy Lagoon murder trial of the 38th Street Gang, a group of zoot-suited Chicano youth known as pachucos, and the Zoot Suit riots

in Los Angeles during World War II. It debuted as the first Chicano play on Broadway in 1979. The music is by Daniel Valdez and the "father of Chicano music," Lalo Guerrero. *Zoot Suit* later was adapted for a film directed by Luis Valdez. The play is narrated, with an idealized zoot suiter, El Pachuco, performing most of the songs. El Pachuco also comments on the play as it unfolds and serves as the conscience for the protagonist. Edward James Olmos played El Pachuco.

The Zoot Style of Dress

"Zoot" was a slang word common in the 1930s jazz subculture. "Zoot," according to the *Oxford English Dictionary*, rhymes with "suit," making zoot a reduplication of suit. Suits were zoot; thus, zoot suit. The suit included a killer diller coat, drape shape, reet pleat, and all that jazz. "Zoot" meant dress or attire in an extravagant style.

There is disagreement about the origin of the suit. One source says the zoot suit was an urban style of poor black men and their tailors in Harlem. Another attributes the zoot suit to Italian Americans and African Americans in Chicago. Zoot suits were worn by blacks, Hispanics, and Italians in the eastern United States in the 1930s and 1940s. Regardless of the source, by the 1940s, poor Mexican American young men adopted the style, as did working-class youth, regardless of skin color. The long coat was sometimes also worn by female gang members. Zoot suiters included César Chávez and Malcolm X, as well as dancers and entertainers.

The coat was long and draped, and the pants were high-waisted, baggy, and oversized, with severely pegged cuffs. Coats had padded shoulders and wide lapels. The coat had to be long, and the pants had to be really full at the knees and tightly pegged at the cuffs. The zoot suit required a conspicuous ducktail hairstyle and a broad-rimmed flat hat or fedora with a large feather in the back. The fedora with a feather in the rim was known as a "tapa."

Only around 3 percent of Mexican American young men wore zoot suits or belonged to gangs wearing the style, but the media exaggerated, labeling all Mexican Americans as zoot-suited gang members. The 38th Street Gang railroaded in the Sleepy Lagoon case wore zoot suits. By the early

The zoot suit included high-waisted, wide-legged, tight-cuffed, pegged trousers. The amount of material and tailoring required to produce them made them a luxury item during war years.

1940s, the zoot suit was the uniform of the defiant, whether rioters or more generalized juvenile delinquents (something else new in the wartime milieu).

The American government wanted to stop people from wearing the suits because they appeared to use too much fabric and therefore were unpatriotic and disrespectful in wartime. Made of wool and silk, the tailor-made suits available on the black market defied wool rationing and the ban on silk for purposes other than the war effort.

A Play Based on Real-Life Events

The play *Zoot Suit* was first performed in Los Angeles on August 17, 1978. It set box office records before moving on to the Aquarius Theater in Hollywood. Its Broadway run of 41 performances spanned March 25 through April 29, 1975. Universal Studios, inspired by the play's success, converted *Zoot Suit* into the first Chicano-written, -directed, and -performed feature-length movie.

The protagonist, Henry Reyna, is based on the real-life Henry Leyvas. Reyna leads a pachuco

gang that, on the eve of his induction into the navy, allegedly murders a rival gang leader at a party. Reyna's entire gang is jailed, charged, and tried unfairly. While in jail, Reyna develops a crush on his legal aide, and his brother is injured in the Zoot Suit riots. A reporter provides updates of public opinion by reading news headlines during the play.

Zoot Suit Riots

In 1943, zoot-suited young Mexican Americans and uniformed young American G.I.s clashed violently on the streets of Los Angeles in an episode known as the Zoot Suit riots. At that time, Los Angeles had one of the largest Mexican populations in the United States. First-generation Mexican immigrants worked for low pay in poor areas. Their offspring, the young and restless zoot-suited pachucos, frequented downtown pool halls, movies, dance halls, and other entertainment facilities. The hot style for young minority males in 1943 was the zoot suit and an extreme ducktail hairstyle. Zoot style and pachuco attitude were "look-at-me" defiant.

War-stressed whites perceived the pachucos as threats similar to the Japanese and Japanese

Americans just recently moved to detention centers. The chief of the Los Angeles Police Department (LAPD) equated Mexicans with Indians and Asians and classed them as bloodthirsty Aztecs. The 1942 Sleepy Lagoon trial had intensified an already strong anti-Hispanic mood in the community, and the local media were touting a Mexican crime wave caused by zoot-suited pachucos and gangsters, equated in the press reports.

Pachucos were not the only young men in downtown Los Angeles. The area's bases were full of young men confronting imminent transfer to the war zone. Young G.I.s found Mexican American culture in general, and pachuco style in particular, to be alien, perhaps offensive or threatening. Initially the G.I.s treated the pachucos mockingly, but soon they began to resent that the pachucos were civilians while they were preparing to ship overseas. It did not matter that Mexican Americans were overrepresented in the military or that the ones on the streets were underage; the ones the soldiers saw were not in uniform at all but rather were strutting their stuff.

The riots began on May 31. Twelve sailors and soldiers walking down Main Street in East Los Angeles crossed the street to talk to a group of women. Seaman Joe Dacy Coleman remained behind. A group of pachucos approached, exchanged words, and attacked Dacy. Meanwhile, another group of pachucos assaulted the servicemen across the street. Surprised and determined to rid the streets of criminal gangs, the sailors and soldiers mobilized.

Three days later, 50 sailors headed from the Chavez Ravine naval reserve armory in search of Mexican Americans downtown. On June 4, 1943, about 200 sailors, bored and bigoted and responding to a claim that the night before, pachucos had robbed and beaten several sailors, hired cabs and headed for East Los Angeles with the aim of beating and stripping any young man they saw. Thousands of those stationed awaiting shipment overseas headed to the bars, parks, theaters, and restaurants, dragging Hispanics out and beating them. Servicemen stripped the zoot suits and cut the ducktails. Los Angeles police officers stood by, watching. Through June 5, the action stayed downtown, but on June 6 it moved to the East Los Angeles barrio, and June 7 was the most severe day of the riots.

Authorities made a few token arrests but did not detain the sailors. Perceiving the token effort as a green light, soldiers and sailors marched through the barrio, entering bars and movie theaters and assaulting and embarrassing all young Latinos, pachuco or not. The G.I.s also assaulted young Filipinos and blacks in the area. Police accompanied the G.I. caravans. The shore patrol and military police abdicated their responsibility for controlling the soldiers and sailors.

Media Attention

Newspapers bore a significant responsibility. Newspapers used pachucos as scapegoats, internal enemies, and a diversion from the war. The *Los Angeles Daily News* regarded the riots as a cleansing. The newspaper's coverage of pachucos and pachucas in the 1940s identified them as delinquent and nonconformist in language and behavior, and it classed pachucos as gangsters speaking an indecipherable argot.

The servicemen with no previous experience learned their racism from the press. The press praised the servicemen for taking on Mexican criminals. The media also fueled citizen paranoia about the loyalty of a minority group during wartime. The public increasingly saw the pachucos as foreign, unpatriotic, and a threat. Law enforcement was also discriminatory against Indians, Mexican Americans, and pachucos. The Los Angeles City Council banned the wearing of zoot suits.

National condemnation was immediate, with First Lady Eleanor Roosevelt noting that the problem was more than a clothing issue but was rather a racial one. A Los Angeles newspaper accused her of fomenting racial disharmony and labeled her a communist sympathizer. Pressure was applied to the press to stop publishing negative and misleading articles on zoot-suiters.

The riot resulted in 150 injuries and 500 arrests. When the military police and shore patrol proved derelict in controlling the military, the police began arresting Latinos for "rioting" and vagrancy. After federal pressure, local authorities clamped down. The marine and navy commanders restricted their men to their barracks on June 7, and the riots ended the next day. The navy maintained that its personnel had acted in self-defense. Although rioting quieted in Los Angeles on June

8, other ports and cities had riots of their own, including Philadelphia, Chicago, Detroit, and Harlem (where black zoot-suiters were targeted).

Los Angeles County later investigated the riots, human relations committees arose, and policemen received instructions to treat all persons equally. The Mexican ambassador asked Secretary of State Henry Stettinius to investigate. The mayor of Los Angeles responded to a complaint by the Mexican government by minimizing the racial nature of the riots and blaming the pachucos. The riots resolved nothing, merely serving as an indicator of the unsettled state of race relations in an unsettled wartime environment.

Glossary

AASS: The American Anti-Slavery Society; founded in 1833 in Philadelphia, it was the first American organization dedicated to abolishing slavery.

Abolition: A movement in the United States to end slavery; the abolitionist movement dates back to the 17th century, but was most powerful in the 19th century, particularly in the decades leading up to the Civil War.

Aborigine: The first inhabitants of a geographic region, as opposed to those who arrived later; a comparable term is “indigenous.”

Accommodationism: A philosophy associated with Booker T. Washington that argues that African Americans should accept white domination in the present and expect to be granted full rights only gradually.

Acculturation: The process by which people change by adopting characteristics of a new and dominant culture; for instance, immigrants to a country may acculturate by adopting attitudes and habits typical of those native to the culture.

Affirmative action: laws and policies meant to counter past discrimination or wrongs against a group of people, such as members of minority racial groups.

African American: A citizen of the United States who has ancestry traceable to sub-Saharan Africa. Although definitions sometimes differ, those descended from white or Asian residents of Africa, and naturalized citizens from Caribbean or African countries, are usually not included in this category, although the offspring of naturalized citizens from African and Caribbean countries may be.

African Blood Brotherhood: An organization founded in 1919 by Cyril Briggs to advocate for African American civil rights and to combat lynching.

African burial ground: An African cemetery discovered in lower Manhattan, New York City, during construction of the Foley Square Project Federal Building; it contains the remains of over 400 persons of African descent.

African Studies Association: An organization founded in 1957 in New York City to promote research on Africa and encourage communication among those working in the field.

Afrocentrism: A focus on African history and culture, including in the African diaspora—that is, countries—such as the United States where many individuals have African ancestry but the

dominant culture is based on European values and traditions.

Alaska Purchase: The 1867 purchase of the territory of Alaska by the United States from Russia.

Amerasians: People who have both Asian and American ancestry.

American Colonization Society: An organization founded in 1816 by Robert Finley, originally called the American Society for Colonizing the Free People of Color in the United States. The purpose of this organization was to help free African Americans emigrate to Liberia, then a colony in Africa.

An American Dilemma: A 1944 study published by Swedish economist Gunnar Myrdal, working on a commission by the Carnegie Corporation of New York, analyzing relations between African Americans and whites in the United States.

American Indian: As defined by the Bureau of Indian Affairs, a person who is registered or enrolled with an American Indian tribe and can demonstrate that at least one-fourth of his or her lineage is from American Indian tribes. Other definitions are used in other contexts.

American Indian reservation: An area recognized by the federal government and held in trust for the use of a given tribe; within a reservation, the tribe is the primary authority.

American Jewish Committee: An organization founded in 1906 by Oscar Straus, Jacob Schiff, and Cyrus Sulzberger to defend Jewish rights in the United States and around the world; the founding of the American Jewish Committee was prompted by pogroms in Russia in 1903 and 1905.

American Negro Labor Congress: An organization founded in 1925 to promote union organizing among African Americans and to promote integration of the American Federation of Labor.

Amish: A group of people whose religious roots go back to the Anabaptist movement in Europe,

who settled in the United States, and who maintain distinctive customs including limited use of modern technology.

Amsterdam News: An African American newspaper founded in New York City in 1909 by James H. Anderson.

Amnesty: Turning an illegal situation into a legal situation; in the case of immigration, amnesty generally refers to a government or authority allowing those who have entered a country illegally to become legal immigrants, perhaps after fulfilling certain conditions.

Anti-Semitism: Prejudice and discrimination directed toward Jews and persons of Jewish descent.

Arranged marriage: A marriage resulting from a pairing initiated not by the two individuals involved, but by parents, relatives, professional matchmakers, and so forth; no force is implied in the term *arranged marriage*, and the parties involved may retain the right to refuse a match.

Asian American: A person of Asian heritage living in the United States.

Assimilation: A process by which people of different ethnic and cultural heritages are absorbed into the dominant culture of the region in which they live.

Asylum seeker: Someone who wishes to obtain refugee status in a country.

Bar mitzvah: A Jewish ceremony, usually performed when a boy reaches the age of 13, recognizing his religious maturity; the equivalent for girls is the Bat mitzvah.

BIA: The Bureau of Indians Affairs, created in the U.S. War Department in 1849 to oversee treaty negotiations. The BIA was moved to the Department of the Interior after the Civil War and was granted broad authority to govern Indian affairs. Today, the chief responsibilities of the BIA include education, medical care, economic development, and other services to reservations.

Bidialecticism: A description of the ability of some individuals to communicate in two dialects, for instance standard American English and black English.

Bilingual: Being fluent in two languages; sometimes, the term is interpreted to mean being equally fluent in both languages.

The Birth of a Nation: A groundbreaking 1919 American feature film directed by D. W. Griffith and based on *The Clansman*, a novel by Thomas Dixon. *The Birth of a Nation* is notable both for its innovative formal techniques and for the racist and stereotypical nature of its plot.

Black codes: Laws passed in 1865 and 1866 in southern states to restrict the rights of newly freed slaves (and all African Americans). Typical restrictions of these codes included prohibiting African Americans from working in particular occupations, testifying against white Americans in court, holding public office, or serving on juries.

Black Panther Party: An organization founded within the African American community of Oakland, California, by Huey Newton and Bobby Seale in 1966; the original name was the Black Panther Party for Self-Defense. The Black Panthers played an important role in the Black Power movement.

Blaxploitation films: A genre of American feature films produced in the late 1960s and early 1970s that focused on the urban African American experience; examples include *Shaft* (1971), *Superfly* (1972), *Black Caesar* (1973), and *Cleopatra Jones* (1973).

B'nai B'rith: A Jewish fraternal organization founded in New York City in 1853; it is the oldest Jewish fraternal organization in the United States and the largest Jewish organization in the world.

Boat people: A term used to describe individuals who fled Vietnam, Laos, and Cambodia after the fall of Saigon in 1975 to North Vietnamese forces.

Boriquen: A term referring to the indigenous natives of Puerto Rico and also to the island as a whole.

Braceros: Mexican laborers allowed to work temporarily in the United States to help meet the demand for labor during World War II.

Bris: The Jewish ritual of circumcising boys, performed by a mohel or professional ritual circumciser, traditionally taking place on the eighth day of life.

Brown v. Board of Education: A 1954 Supreme Court decision that struck down the “separate but equal” principle and ruled that discrimination in public schools violated the Fourteenth Amendment to the United States Constitution.

Census block: A designation by the United States Census for areas bounded by visible features; in a city. A census block is usually a small area using city streets as boundaries, but in rural areas, census blocks may be large and irregularly shaped.

Census block group: A designation by the United States Census for a cluster of census blocks, with an optimum size of 1,500 people and a range of 600 to 3,000 people.

Census region: Areas of the United States as defined by the Census Bureau. There are four Census regions: northeast, midwest, south, and west.

Census tract: An area designation by the U.S. Census Bureau; census tracts do not cross county lines and ideally have 4,000 people, with a range from 1,500 to 8,000 people.

Chamorro: A term referring to the indigenous peoples of the Mariana Islands and Guam.

Chicano/Chicana: A Mexican American (male/female); the term was adopted in the 1960s and can apply to culture as well as to individuals.

Chinese American: A person of Chinese descent living in the United States.

Civil Rights Act of 1964: A law giving the federal government wide powers to promote desegregation and end discrimination in public facilities, including education, and banning discrimination

in employment on the basis of race, sex, color, or national origin.

COINTELPRO: The Counterintelligence Program of the Federal Bureau of Investigation (FBI), aimed at disrupting and neutralizing many political organizations, including many involved in the civil rights movement.

Colonialism: A process by which one society extends its cultural, economic, and political domination on another; for instance, the process by which European settlers came to dominate the Native American societies of North America.

Color line: A term referring to the divisions between people based on their skin color.

Compromise of 1850: A series of federal laws that represented a compromise between those who supported slavery and those who did not; provisions included allowing California to enter the union as a free state, allowing the slave trade to be practiced in Washington, D.C., and enacting a strong fugitive slave law that would give special federal commissioners the power to arrest fugitive slaves in free states and return them to their owners.

CORE: The Congress of Racial Equality, a civil rights organization founded in Chicago in 1942.

Creole: A culture produced through the merging of two or more distinct cultures, a person who is a product of those merged cultures, or a language that is a result of that merging.

The Crisis: A publication founded in 1910 by W. E. B. Du Bois and published by the National Association for the Advancement of Colored Peoples (NAACP).

Cultural competence: The ability to act appropriately and communicate effectively with people of a different culture from one's own.

Cultural relativism: The belief that a culture or society should be judged in its own context and in terms of the needs and desires of its own people, rather than by the standards of some other culture or society.

Culture shock: The experience of conflict felt when moving into a region where the local culture is different from one's own.

Deportation: The removal of an alien from the country in which he or she is resident, to his or her country of origin, by force of law.

Diaspora: People of a particular race, culture, or ethnicity living dispersed around the world, and (at least originally) not by their own choice; two examples are the Jewish diaspora (beginning with the exile from Babylon in 586 B.C.E.) and the African diaspora caused by slavery.

Discrimination: Attitudes and behavior, either positive or negative, directed at people because of his or her personal characteristics, such as gender, race, religion, native language, or sexual identity.

Dred Scott v. Sandford: An 1857 decision by the U.S. Supreme Court declaring that slaves were not American citizens and that their rights were not protected by the Constitution.

Dual citizenship: Holding citizenship from two countries simultaneously.

Ebonics: A term coined in 1973 by Robert L. Williams to describe characteristics of English as used by some African Americans. The term is controversial, as is Williams's theory that characteristics of contemporary African American speech can be traced back to African origins.

Emancipation Proclamation: A proclamation issued by President Abraham Lincoln in 1863, declaring that slaves in Confederate states (those that had seceded from the Union) were free.

Environmental racism: Placing members of minority or other disadvantaged groups at risk for adverse environmental exposures through the siting of undesirable facilities such as incinerators or toxic waste dumps in their vicinity.

Ethnic cleansing: The processing of removing an ethnic group from a geographic region, through genocide and/or forced migration.

Ethnocentrism: The belief that one's own ethnicity and culture are superior to all others, or that one's own culture is the only one worthy of consideration.

Eurocentrism: The belief that values and customs historically associated with European countries are superior, and the tendency to judge other cultures and society by comparison with European values and customs.

Executive Order 9066: An executive order, issued by President Franklin D. Roosevelt on February 19, 1942, authorizing the internment of persons of Japanese ancestry living in an area including Hawai'i, California, Oregon, Washington State, and part of Arizona; smaller numbers of Americans of Italian and German heritage were also interned.

Executive Order 9981: An executive order, issued by President Harry S. Truman on July 26, 1948, ordering the end of racial discrimination in the U.S. military.

Executive Order 11246: An executive order, issued by President Lyndon B. Johnson on September 24, 1965, barring employment discrimination by organizations working under federal contracts or subcontracts; protected categories in this executive order are race, color, religion, and national origin.

Expedited removal: A procedure in which a low-level immigration official can, without a trial, remove non-citizens attempting to enter the United States without authorization.

Family reunification: An effort to bring together family members who have been separated from each other, for instance by granting preference in immigration to those who already have family members in the new country.

Fisk University: A university founded in 1866 in Nashville, Tennessee, by the American Missionary Association to train former slaves to be teachers.

Freedmen's Bureau: Officially the Bureau of Refugees, Freedmen, and Abandoned Lands, a bureau

established within the U.S. War Department in 1865 to aid African Americans in the Confederate states.

Freedom Summer: A popular name for the summer of 1964, when hundreds of college students and others traveled to southern states to aid efforts to register African Americans to vote and to establish freedom schools.

Genocide: The attempt to destroy or eliminate members of a racial, ethnic, or other group through murder, removal of the means necessary to live, mandatory sterilization, seizure of children, and so forth.

Genotype: All the genetic material of an individual, whether or not it achieves visible or discernible expression.

Hanukkah: A minor holiday in the Jewish calendar, commemorating the victory of the Maccabees; it has achieved some prominence in the United States because of its occurrence near Christmas.

Hawai'ian home land: An area held by the state of Hawai'i in trust for Native Hawai'ians.

Healthy immigrant effect: An observation often noted in population studies that because of selection effects, people who choose to emigrate to a new country are generally healthier than the average population of that country.

Hereditarianism: The belief that racial characteristics are based on inheritance rather than representing adaptations to different environments.

Highlander Folk School: A school founded in 1932 in Monteagle, Tennessee, by Myles Horton to train people for union organizing. The Highlander Folk School also played a key role in the civil rights movement.

Hypodescent: A method of assigning a person a racial status based on a relatively small fraction of their total heritage. The "one drop" rule formerly used in some southern states is an example, because it specified that a person with any black ancestry was considered black.

ICERD: The International Convention on the Elimination of All Forms of Racial Discrimination, a treaty adopted by the United Nations in 1965 and acceded to by 158 member states as of 2001.

Immigrant: A person who settles permanently in a country other than the one in which he or she was born.

Indian Removal Act: An 1830 law authorizing the removal of Native Americans from lands east of the Mississippi River to lands west of the Mississippi.

Issei: A person who is born in Japan and emigrates to the United States (or another country); the term derives from the Japanese word for “first.”

Jay Treaty: A 1794 treaty allowing Native Americans free passage between the United States and Canada.

Jim Crow: A number of laws enacted primarily in southern states after the Civil War, and the social norms and customs congruous with those laws, which had the result of enforcing segregation between white and black Americans.

Johnson Publishing Company: A publishing company founded in 1942 in Chicago by John Harold Johnson that publishes African American interest magazines, including *Ebony* and *Jet*.

Kerner Report: The 1967 report of the National Advisory Commission on Civil Disorders, a commission directed by President Lyndon Johnson to investigate the causes of a series of race riots occurring in the United States over the previous several years.

Ku Klux Klan: A racist and white supremacist organization founded in 1865 and originally aimed at preventing newly freed slaves from operating as equals in southern states. Eventually, the Ku Klux Klan turned to attacking other groups, including Catholics and Jews.

Kwanzaa: A holiday observed by some African Americans beginning in 1966; the founder was Dr.

Maulana Karenga, a professor at California State University, Long Beach. The name derives from the Kiswahili term for “first fruits of the harvest,” and the holiday is observed from December 26 through January 1.

Loving v. Virginia: A 1967 Supreme Court decision that declared the Virginia law prohibiting marriage between black and white individuals to be unconstitutional, and at the same time struck down all similar laws in other states.

March on Washington: A gathering at the Lincoln Memorial in Washington, D.C., on August 28, 1963, attended by an estimated 250,000 people. Martin Luther King, Jr.’s, “I Have a Dream” speech was delivered to this gathering.

Marielito: A Cuban who came to the United States during the *Mariel* boatlift of 1980.

Melting pot: The idea that immigrants to the United States (or any other country) will assimilate to the new culture; the analogy is to a pot in which different metals are melted and combined.

Mestizo: A person of mixed Indian and European heritage.

Metropolitan area: As defined by the U.S. Census Bureau, an area consisting of one or several large population nuclei plus adjacent communities economically and socially integrated with that nucleus. Metropolitan areas must include a total population of at least 100,000 (75,000 in New England) or a place with a minimum population of 50,000.

Migration chain: A process by which a few people from one region migrate to another region, and their example encourages others from their area to follow them to the new region.

Middle Passage: The transportation of slaves across the Atlantic Ocean from Africa to the Americas.

Million Man March: An event organized by Louis Farrakhan, leader of the Nation of Islam, to draw attention to challenges facing the African

American community and to promote solidarity among African Americans. The culmination of the event took place in Washington, D.C., on October 16, 1995; estimate of the number attendees range from about 400,000 to almost 900,000.

Miscegenation: Mixing of races, most often applied to marriage between African Americans and white Americans. All state antimiscegenation laws were declared unconstitutional with the 1967 U.S. Supreme Court decision *Loving v. Virginia*.

NAACP: The National Organization for the Advancement of Colored People, a civil rights organization founded in 1909 by W. E. B. Du Bois, Mary White Ovington, Ida B. Wells, Henry Moskowitz, and William English Walling, with the objective of ensuring equality for minorities.

Nation of Islam: An African American religion founded in 1913 by Drew Ali (Timothy Drew) and based loosely on Islamic principles; well-known leaders include Elijah Muhammad and Louis Farrakhan.

National Council of Jewish Women: An organization founded in 1893 to unite Jewish women.

National Urban League: A civil rights organization founded in 1910 as the Committee on Urban Conditions Among Negroes; it is the oldest community organization of its type and has more than 100 local affiliates.

Naturalized citizen: A person who is not a citizen of a country by birth but becomes one by going through a legal process.

Nisei: A person of Japanese descent whose parents were born in Japan but who was born in the United States (or another country); the term derives from the Japanese word for “second” and refers to the American-born children of Japanese immigrants.

North Star: An antislavery newspaper founded in Rochester, New York, by Frederick Douglass; it was published from 1847 to 1860.

Nuyorican: A colloquial term for a person of Puerto Rican descent born or raised in New York City.

Phenotype: The observable or discernible expressions of a person’s genotype.

Pidgin: A simplified language used to communicate by people who have no other language in common.

Plessy v. Ferguson: An 1896 Supreme Court decision declaring that “separate but equal” facilities were constitutional, and thus allowing for continued segregation in schools, transportation, and so forth.

Las Posadas: A Christmas season custom among some Hispanic and Hispanic American communities, in which carolers go from house to house requesting shelter as a way to commemorate Christmas and the journey of Mary and Joseph to Bethlehem.

Proposition 209: An initiative passed in California in November 1966 that added a clause to the state constitution prohibited preferential treatment in public employment, contracting, and education on the basis of race, sex, color, ethnicity, or national origin.

Protocols of the Learned Elders of Zion: A text published in Russia in 1903 that purported to outline Jewish plans for world domination through taking over financial institutions. Despite being exposed as a hoax, it continues to surface in American culture, and some tenets expressed in it remain part of the belief system of some extremist groups.

Pull factors in migration: Factors in the country or region to which a person is going (such as greater economic opportunity or political freedom) that encourage him or her to leave the homeland and move to the new country.

Push factors in migration: Factors in the country or region a person is leaving (such as poverty or persecution) that encourages him or her to emigrate elsewhere.

Quota system: A policy under which immigration is limited to specified numbers of people classified by certain conditions, such as their national origin.

Racial profiling: Assigning people to categories based on their physical appearance and treating them differently. The term is often used in a law enforcement context, for instance, singling out people who appear to be Muslim for extra screening at airports or police disproportionately stopping automobiles driven by African Americans.

Ramadan: The ninth month of the Islamic calendar, traditionally observed by Muslims by fasting during daylight hours.

Reconstruction: The period from 1865 to 1877, from the end of the Civil War until Union troops withdrew from southern states.

Regents of the University of California v. Bakke: A 1978 Supreme Court decision that banned the use of racial quotas in university admissions policies.

Roma: Gypsies, persons of Indian origin who emigrated to Europe in the 13th century, approximately 1 million of whom have since emigrated to the United States.

Rosh Hashanah: A holiday lasting two days and marking the beginning of the Jewish New Year as well as the beginning of the “Ten Days of Awe” that culminate with Yom Kippur.

Sansei: A person of Japanese descent whose grandparents emigrated to a new country (like the United States); Sansei and their parents are both born in the new country. The term derives from the Japanese word for “third.”

SCLC: The Southern Christian Leadership Conference, a civil rights organization founded in 1957, partly as an outgrowth of the successful Montgomery Bus Boycott.

Scottsboro Boys: Nine African American boys and men charged with rape in Alabama in 1931; 11 were sentenced to death after a brief trial marked

by inadequate defense, a mob presence outside the courtroom, and no African Americans serving on the jury. The U.S. Supreme Court, in the *Powell v. Alabama* decision, overturned their convictions; the convictions from a second round of trials also were overturned by the Supreme Court, in the 1935 *Patterson v. Alabama* and *Norris v. Alabama* decisions.

Seasonal migrant worker: A person who leaves one country to work in another for a short period of time, for instance to work during the tourist season or agricultural harvest.

Serial migration: A type of migration pattern in which one or more members of a family emigrates to an area, then other members of the family follow, perhaps aided by laws favoring family reunification.

Shoah: A Hebrew word describing the mass killings of Jews during World War II.

SNCC: The Student Non-Violent Coordinating Committee, a civil rights organization founded in 1960 that played a key role in organizing voter registration drives and protests against segregation in the American south in the 1960s.

Stateless: A term referring to a person who is not recognized as the citizen of any country.

Thirty Years of Lynching in the United States: 1889–1918: After establishing an Anti-Lynching Committee in 1916, the National Association for the Advancement of Colored People (NAACP) published a report in 1919 that reported that 3,224 people (of which 2,522 were black) were lynched between 1889 and 1918.

Trail of Tears: The forced removal of Native Americans from their lands east of the Mississippi river, to Oklahoma; many died during the journey.

Transracial adoption: Adoption of a child of one race by parents of another race.

Underground Railroad: A network of routes, safe houses, and sympathetic individuals that provided

a route for escaped slaves to follow from the south to free states and Canada.

Urban cluster: As defined by the U.S. Census Bureau, a densely settled area with a population range of 2,500 to 50,000 people.

Urbanized area: As defined by the U.S. Census Bureau, a densely settled area with a population of over 50,000 people.

USCIS: The U.S. Citizenship and Immigration Service, the federal agency in charge of immigration to the United States.

Visa: A document issued by a government that allows the visa holder to enter the country.

Xenophobia: The fear of anything foreign or different, most often used to describe the fear or dislike of people from different countries, races, or cultures.

Yom Kippur: In Jewish tradition, the day of atonement; the culmination of the “Ten Days of Awe” and the most solemn day in the Jewish year. It is customarily marked by fasting and attending religious services.

U.S. Census Briefs and Reports

The Asian Population: 2010 2247

The Black Population: 2010 2270

Overview of Race and Hispanic Origin: 2010 2290

The Asian Population: 2010

2010 Census Briefs

Issued March 2012

C2010BR-11

INTRODUCTION

According to the 2010 Census, the Asian population grew faster than any other race group in the United States between 2000 and 2010. This was observed for the population who reported Asian alone (increased 43 percent), as well as for the population who reported Asian alone or in combination with another race (increased 46 percent). The Asian population continued to be concentrated in the West, and the Chinese population was the largest detailed Asian group.

This report provides a portrait of the Asian population in the United States and discusses that population's distribution at the national level and at lower levels of geography.¹ It is part of a series that analyzes population and housing data collected from the 2010 Census.

The data for this report are based on the *2010 Census Redistricting Data (Public Law 94-171) Summary File*, which was the first 2010 Census data product released with data on race and Hispanic origin, including information on the Asian population, and was provided to each state for use in drawing boundaries for legislative districts.² Data for this report also come from the *2010 Census Summary File 1*, which was one of the first 2010 Census

¹ This report discusses data for the 50 states and the District of Columbia, but not Puerto Rico.

² Information on the *2010 Census Redistricting Data (Public Law 94-171) Summary File* is available online at <<http://2010.census.gov/2010census/data/redistricting-data.php>>.

data products to provide information on selected detailed groups, such as Asian Indians, Koreans, and Filipinos.³

UNDERSTANDING RACE DATA FROM THE 2010 CENSUS

The 2010 Census used federal standards to collect and present data on race.

For the 2010 Census, the question on race was asked of individuals living in the United States (see Figure 1). An individual's response to the race question was based upon self-identification. The U.S. Census Bureau collects information on race following the guidance of the U.S. Office of Management and Budget's (OMB)

³ Information on the *2010 Census Summary File 1* is available online at <<http://2010.census.gov/news/press-kits/summary-file-1.html>>.

1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*.⁴ These federal standards mandate that race and Hispanic origin (ethnicity) are separate and distinct concepts and that when collecting these data via self-identification, two different questions must be used.⁵

Starting in 1997, OMB required federal agencies to use a minimum of five race categories: White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. For respondents unable to identify with any of these five race categories, OMB approved the Census Bureau's inclusion of a sixth category—Some Other Race—on the Census 2000 and 2010 Census questionnaires. The 1997 OMB standards also allowed for respondents to identify with more than one race. The definition of the Asian racial category used in the 2010 Census is presented in the text box on this page.

Data on race have been collected since the first U.S. decennial census in 1790, but no distinction was made for people of Asian descent. In 1860, the first Asian response category ("Chinese") was added to the question on race in California only and in other states beginning in 1870. A second Asian response category ("Japanese") was included for the first time

⁴ The 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*, issued by OMB, is available at <www.whitehouse.gov/omb/fedreg_1997standards>.

⁵ The OMB requires federal agencies to use a minimum of two ethnicities: Hispanic or Latino and Not Hispanic or Latino. Hispanic origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be of any race. "Hispanic or Latino" refers to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race.

DEFINITION OF ASIAN USED IN THE 2010 CENSUS

According to OMB, "Asian" refers to a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

The Asian population includes people who indicated their race(s) as "Asian" or reported entries such as "Asian Indian," "Chinese," "Filipino," "Korean," "Japanese," and "Vietnamese" or provided other detailed Asian responses.

in the 1870 Census in California only and in other states starting in 1890. Additional Asian response categories were collected intermittently in the question on race over the course of seven censuses, from the 1920 Census to the 1980 Census. The use of six detailed Asian response categories in the decennial census question on race has remained unchanged since the 1980 Census (Asian Indian, Chinese, Filipino, Japanese, Korean, and Vietnamese).

Beginning with the 1910 Census, reports of detailed Asian groups that did not have separate response categories in the race question were tabulated from a general "Other" write-in area. In the 1990 Census, a write-in area was introduced that was solely dedicated to the reporting of detailed Asian groups or detailed Native Hawaiian and Other Pacific Islander groups that did not have a separate response category. A shared write-in area for reports of detailed Asian groups or detailed Native Hawaiian and Other Pacific Islander groups that did not have specific response categories in the race question continued for Census 2000 and the 2010 Census.⁶

⁶ For information about comparability of 2010 Census data with race and Hispanic origin to data collected in previous censuses, see the *2010 Census Redistricting Data (Public Law 94-171) Summary File—Technical Documentation* at <www.census.gov/prod/cen2010/doc/pl94-171.pdf>.

In Census 2000, for the first time, individuals were presented with the option to self-identify with more than one race, and this continued with the 2010 Census, as prescribed by OMB. There are 57 possible multiple-race combinations involving the five OMB race categories and Some Other Race.⁷

The 2010 Census question on race included 15 separate response categories and three areas where respondents could write in detailed information about their race (see Figure 1).⁸ The response categories and write-in answers can be combined to create the five minimum OMB race categories plus Some Other Race. In addition to White, Black or African American, American Indian and Alaska Native, and Some Other Race, 7 of the

⁷ The 2010 Census provides information on the population reporting more than one race, as well as detailed race combinations (e.g., Asian **and** White; Asian **and** White **and** Native Hawaiian and Other Pacific Islander). In this report, the multiple-race categories are denoted with the conjunction **and** in bold and italicized print to indicate the separate race groups that constitute the particular combination.

⁸ There were two changes to the question on race for the 2010 Census. First, the wording of the race question was changed from "What is this person's race? Mark one or more races to indicate what this person considers himself/herself to be" in 2000 to "What is this person's race? Mark one or more boxes" for 2010. Second, in 2010, examples were added to the "Other Asian" response category (Hmong, Laotian, Thai, Pakistani, Cambodian, and so on) and the "Other Pacific Islander" response category (Fijian, Tongan, and so on). In 2000, no examples were given in the race question.

15 response categories are Asian groups, and 4 are Native Hawaiian and Other Pacific Islander groups.⁹ The 7 Asian response categories are Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, and Other Asian.

For a complete explanation of the race categories used in the 2010 Census, see the 2010 Census Brief, *Overview of Race and Hispanic Origin: 2010*.¹⁰

RACE ALONE, RACE IN COMBINATION, AND RACE ALONE-OR-IN-COMBINATION CONCEPTS

This report presents data for the Asian population and focuses on results for three major conceptual groups.

First, people who responded to the question on race by indicating only one race are referred to as the *race alone* population, or the group who reported *only one* race. For example, respondents who reported a single detailed Asian group, such as “Asian Indian” or “Korean,” would be included in the *Asian alone* population. Respondents who reported more than one detailed Asian group, such as “Asian Indian” and “Korean” would also be included in the *Asian alone* population. This is because the detailed groups in the example combination are part of the larger Asian race category. The *Asian alone* population can be viewed as the minimum number of people reporting Asian.

⁹ The race categories included in the census questionnaire generally reflect a social definition of race recognized in this country and are not an attempt to define race biologically, anthropologically, or genetically. In addition, it is recognized that the categories of the race question include race and national origin or sociocultural groups.

¹⁰ Humes, K., N. Jones, and R. Ramirez. 2011. *Overview of Race and Hispanic Origin: 2010*, U.S. Census Bureau, 2010 Census Briefs, C2010BR-02, available at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

Second, individuals who chose more than one of the six race categories are referred to as the *race in combination* population, or as the group who reported *more than one race*. For example, respondents who reported they were Asian **and** White or reported they were Asian **and** White **and** Native Hawaiian and Other Pacific Islander would be included in the *Asian in combination* population. This population is also referred to as the *multiple-race Asian* population.

Third, the maximum number of people reporting Asian is reflected in the *Asian alone-or-in-combination* population. One way to define the Asian population is to combine those respondents who reported *Asian alone* with those who reported *Asian in combination* with one or more other races. The addition of these two groups creates the *Asian alone-or-in-combination* population. Another way to think of the *Asian alone-or-in-combination* population is the total number of people who reported Asian, whether or not they reported any other race(s).

Throughout the report, the discussion of the Asian population includes results for each of these groups and highlights the diversity within the entire Asian population.¹¹

THE ASIAN POPULATION: A SNAPSHOT

The 2010 Census showed that the U.S. population on April 1, 2010, was 308.7 million. Out of the total U.S. population, 14.7 million

¹¹ As a matter of policy, the Census Bureau does not advocate the use of the *alone* population over the *alone-or-in-combination* population or vice versa. The use of the *alone* population in sections of this report does not imply that it is a preferred method of presenting or analyzing data. The same is true for sections of this report that focus on the *alone-or-in-combination* population. Data on race from the 2010 Census can be presented and discussed in a variety of ways.

people, or 4.8 percent, were Asian alone (see Table 1). In addition, 2.6 million people, or another 0.9 percent, reported Asian in combination with one or more other races.¹² Together, these two groups totaled 17.3 million people. Thus, 5.6 percent of all people in the United States identified as Asian, either alone or in combination with one or more other races.

The Asian population increased more than four times faster than the total U.S. population.

The total U.S. population grew by 9.7 percent, from 281.4 million in 2000 to 308.7 million in 2010 (see Table 1). In comparison, the Asian alone population increased more than four times faster than the total U.S. population, growing by 43 percent from 10.2 million to 14.7 million.^{13, 14}

The Asian alone-or-in-combination population experienced slightly more growth than the Asian alone population, growing by 46 percent from 11.9 million in 2000 to 17.3 million in 2010. In fact, the Asian population grew at a faster

¹² For the purposes of this report, the terms “reported,” “identified,” and “classified” are used interchangeably to refer to the response provided by respondents as well as responses assigned during the editing and imputation process.

¹³ Percentages shown in text generally are rounded to the nearest integer, while those shown in tables and figures are shown with decimals. All rounding is based on unrounded calculations. Thus, due to rounding, some percentages shown in tables and figures ending in “5” may round either up or down. For example, unrounded numbers of 14.49 and 14.51 would both be shown as 14.5 in a table, but would be cited in the text as 14 and 15, respectively.

¹⁴ The observed changes in the race counts between Census 2000 and the 2010 Census could be attributed to a number of factors. Demographic change since 2000, which includes births and deaths in a geographic area and migration in and out of a geographic area, will have an impact on the resulting 2010 Census counts. Additionally, some changes in the race question’s wording and format since Census 2000 could have influenced reporting patterns in the 2010 Census.

Table 1.
Asian Population: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Race	2000		2010		Change, 2000 to 2010	
	Number	Percentage of total population	Number	Percentage of total population	Number	Percent
Total population	281,421,906	100.0	308,745,538	100.0	27,323,632	9.7
Asian alone or in combination	11,898,828	4.2	17,320,856	5.6	5,422,028	45.6
Asian alone	10,242,998	3.6	14,674,252	4.8	4,431,254	43.3
Asian in combination	1,655,830	0.6	2,646,604	0.9	990,774	59.8
Asian; White	868,395	0.3	1,623,234	0.5	754,839	86.9
Asian; Some Other Race	249,108	0.1	234,462	0.1	-14,646	-5.9
Asian; Black or African American	106,782	—	185,595	0.1	78,813	73.8
Asian; Native Hawaiian and Other Pacific Islander	138,802	—	165,690	0.1	26,888	19.4
Asian; White; Native Hawaiian and Other Pacific Islander	89,611	—	143,126	—	53,515	59.7
All other combinations including Asian	203,132	0.1	294,497	0.1	91,365	45.0
Not Asian alone or in combination	269,523,078	95.8	291,424,682	94.4	21,901,604	8.1

— Percentage rounds to 0.0.

Note: In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Asian **and** White or Asian **and** Black or African American, generally should be more comparable.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Table PL1; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

rate than all race groups in the country.¹⁵

MULTIPLE-RACE REPORTING AMONG THE ASIAN POPULATION

About 15 percent of the Asian population reported multiple races.

Of the 17.3 million people who reported Asian, 14.7 million or 85 percent, identified as Asian alone (see Table 1). An additional 2.6 million people reported Asian in combination with one or more additional races, representing about 15 percent of the Asian alone-or-in-combination population. Of the five OMB race groups, the Asian

population had the third-largest percentage reporting more than one race.¹⁶

Asians who reported multiple races grew at a faster rate than the Asian alone population.

From 2000 to 2010, the Asian multiple-race population grew by about 1 million people. The multiple-race Asian population grew at a faster rate than the Asian alone population, growing by 60 percent in size since 2000 (see Table 1).

Among Asians, the largest multiple-race combination was Asian and White.

Among the 2.6 million people who reported they were Asian and one or more additional races, the majority (1.6 million or 61 percent) identified as Asian **and** White (see Figure 2). The next largest

combinations were Asian **and** Some Other Race (9 percent), Asian **and** Black (7 percent), Asian **and** Native Hawaiian and Other Pacific Islander (6 percent), and Asian **and** White **and** Native Hawaiian and Other Pacific Islander (5 percent).¹⁷ Together, these five combinations accounted for nearly 90 percent of all Asians who reported multiple races.

The Asian and White population contributed to most of the growth among Asians who reported multiple races.

Among people who reported their race as Asian and one or more additional races, those who reported Asian **and** White grew by 87 percent, nearly doubling in size from 868,000 in 2000 to 1.6 million in 2010 (see Table 1). The Asian **and** White population represented the greatest increase in the multiple-race Asian population. The Asian **and** White population's share of all

¹⁵ Information on national-level 2010 Census redistricting data (Public Law 94-171) for race groups is available online at <http://2010.census.gov/news/press-kits/redistricting.html>.

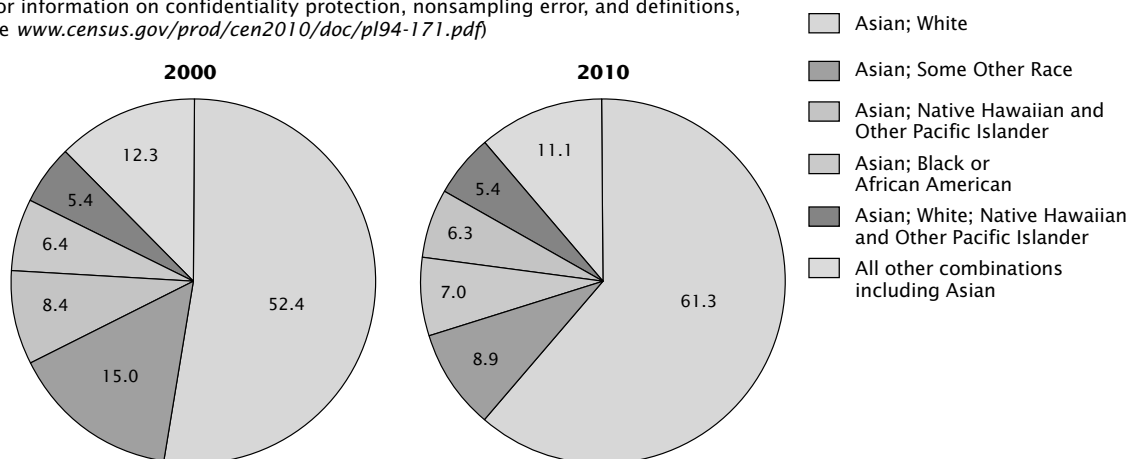

¹⁶ Humes, K., N. Jones, and R. Ramirez. 2011. *Overview of Race and Hispanic Origin: 2010*. U.S. Census Bureau, 2010 Census Briefs, C2010BR-02, available at www.census.gov/prod/cen2010/briefs/c2010br-02.pdf.

¹⁷ The terms "Black" and "Black or African American" are used interchangeably in this report.

Figure 2.

Percentage Distribution of the Asian in Combination Population: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Note: In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Asian **and** White or Asian **and** Black or African American, generally should be more comparable. Percentages may not add to 100.0 due to rounding.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Table PL1; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

multiple-race Asians also increased substantially, from 52 percent to 61 percent (see Figure 2).

The Asian **and** Native Hawaiian and Other Pacific Islander population's share of the multiple-race Asian population decreased from 8 percent in 2000 to 6 percent in 2010. The Asian **and** Black population's share of the Asian multiple-race population increased from 6 percent to 7 percent. The proportion of the Asian **and** White **and** Native Hawaiian and Other Pacific Islander population remained at 5 percent.

The Asian **and** Some Other Race population decreased from 2000 to 2010. This decrease was likely

due to a data processing error in the Two or More Races population, which largely affected the combinations that included Some Other Race, overstating the Asian **and** Some Other Race population in 2000.¹⁸

¹⁸ In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Asian **and** White, generally are more comparable.

THE GEOGRAPHIC DISTRIBUTION OF THE ASIAN POPULATION

The Asian population was heavily concentrated in the West.

In the 2010 Census, of all respondents who reported Asian alone or in combination, 46 percent lived in the West (see Figure 3). An additional 22 percent lived in the South, 20 percent in the Northeast, and 12 percent in the Midwest. This pattern was similar for the Asian alone population.

Figure 3. Percentage Distribution of the Asian Population by Region: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Note: Percentages may not add to 100.0 due to rounding.
 Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File, Table PL1*; and *2010 Census Redistricting Data (Public Law 94-171) Summary File, Table P1*.

Among all regions, Asians constituted the greatest proportion of the region’s total population in the West.

Among all regions, Asians constituted the greatest proportion of the region’s total population in the West, at 11 percent (see Table 2).¹⁹ In other regions, the Asian alone-or-in-combination population was a smaller proportion—6 percent of the Northeast and 3 percent of both the South and Midwest. This pattern was similar for the Asian alone population.

¹⁹ The Northeast census region includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. The Midwest census region includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. The South census region includes Alabama, Arkansas, Delaware, the District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. The West census region includes Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

The proportion of Asians declined in the West and increased in the South.

The proportion of all respondents who reported Asian alone or in combination stayed about the same for the Northeast and Midwest, while the proportions for the South and West changed by 3 percentage points each from 2000 to 2010 (see Figure 3). The proportion of the Asian alone-or-in-combination population living in the South increased from 19 percent to 22 percent, while the proportion living in the West declined from 49 percent to 46 percent. These changes were similar for the Asian alone population.

When comparing the Asian alone population with the Asian in combination population, the largest differences were found in the proportions living in the West and the Northeast.

In 2010, 50 percent of the Asian in combination population lived in

the West compared with 46 percent of the Asian alone population (see Figure 3). A larger share of the Asian alone population lived in the Northeast (21 percent) compared with the Asian in combination population (14 percent). In the South and Midwest, the differences between the Asian in combination and Asian alone populations were smaller.

The proportions of the Asian in combination population decreased in the West and Northeast and increased in the South.

The proportions of multiple-race Asians decreased in the West and Northeast and increased in the South (see Figure 3). In 2000, 52 percent of the Asian in combination population lived in the West, decreasing to 50 percent in 2010. The Asian in combination population increased in the South from 21 percent to 23 percent. The proportion decreased slightly in the Northeast from 15 percent to 14 percent.

The Asian population grew in every region between 2000 and 2010, experiencing the fastest growth in the South.

The Asian alone-or-in-combination population grew in every region between 2000 and 2010, growing the fastest in the South (69 percent), followed by the Midwest (48 percent), Northeast (45 percent), and West (36 percent) (see Table 2). These patterns were fairly similar for the Asian alone population.

In comparison, the Asian in combination population grew by 80 percent in the South, followed by the Midwest (66 percent), West (54 percent), and Northeast (48 percent).

Table 2.
Asian Population for the United States, Regions, and States, and for Puerto Rico:
2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

¹ The percentage of the total population is calculated by using the total population of all races. The totals for each geography can be found in Table 11, page 18 of the 2010 Census Brief, *Overview of Race and Hispanic Origin: 2010*, available at www.census.gov/prod/cen2010/briefs/c2010br-02.pdf.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Table PL1; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

Nearly three-fourths of all Asians lived in ten states.

The ten states with the largest Asian alone-or-in-combination populations in 2010 were California (5.6 million), New York (1.6 million), Texas (1.1 million), New Jersey (0.8 million), Hawaii (0.8 million), Illinois (0.7 million), Washington (0.6 million), Florida (0.6 million), Virginia (0.5 million), and Pennsylvania (0.4 million) (see Table 2). Together, these ten states represented nearly three-fourths of the entire Asian population in the United States.

Among these states, the Asian alone-or-in-combination population experienced substantial growth in six states between 2000 and 2010, growing by 72 percent in Texas and Florida, 71 percent in Virginia, 62 percent in Pennsylvania, 53 percent in Washington, and 52 percent in New Jersey. Out of the ten states, the Asian alone-or-in-combination population grew the least in Hawaii (11 percent).

Out of the ten states above, the first nine also had the largest Asian alone populations. The state with the tenth-largest Asian alone population was Massachusetts (0.3 million). In a similar fashion to the Asian alone-or-in-combination population, the Asian alone population experienced considerable growth in Texas, Florida, Virginia, Pennsylvania, Washington, and New Jersey and relatively slower growth in Hawaii.

The Asian population represented over 50 percent of the total population in Hawaii and over 8 percent of the total population in five other states.

The states with the highest proportions of the Asian alone-or-in-combination population

were located in the West and the Northeast. The Asian alone-or-in-combination population represented 57 percent of the total population in Hawaii (see Table 2). California had the next highest proportion at 15 percent, followed by New Jersey (9 percent), Nevada (9 percent), Washington (9 percent), and New York (8 percent). These same six states had the highest proportions of the Asian alone population.

The Asian alone-or-in-combination population represented less than 2 percent of the total population in 15 states. Out of these 15 states, 8 were in the South—West Virginia, Mississippi, Alabama, Kentucky, Arkansas, South Carolina, Tennessee, and Louisiana. Three states were in the West—Montana, Wyoming, and Idaho. Two states were in the Midwest—South Dakota and North Dakota—and two states were in the Northeast—Maine and Vermont.

The Asian alone population represented less than 2 percent of the total population in the same states as the Asian alone-or-in-combination population, plus seven additional states—New Mexico, Indiana, Missouri, Ohio, Oklahoma, Iowa, and Nebraska.

California and Texas had the largest numeric growth of Asians.

The Asian alone-or-in-combination population grew by 5.4 million people over the decade. California had the largest numeric growth of people reporting Asian alone-or-in-combination (1.4 million), increasing from 4.2 million in 2000 to 5.6 million in 2010. Texas had the next largest numeric growth (466,000), increasing from 644,000 in 2000 to 1.1 million in 2010. This was followed by New York, which

grew by 410,000, increasing from 1.2 million to 1.6 million. The Asian alone population showed a similar pattern of numeric growth.

The Asian population grew in every state between 2000 and 2010.

The Asian alone-or-in-combination population grew by at least 30 percent in all states except for Hawaii (11 percent increase) (see Table 2). The top five states that experienced the most growth were Nevada (116 percent), Arizona (95 percent), North Carolina (85 percent), North Dakota (85 percent), and Georgia (83 percent). These same five states also experienced the most growth in the Asian alone population.

Reflecting percentages similar to the Asian alone-or-in-combination population and the Asian alone population, Nevada (114 percent), Arizona (105 percent), and North Carolina (94 percent) were among the top five states that experienced the most growth in the Asian in combination population. In contrast to the Asian alone-or-in-combination population and the Asian alone population, Utah (94 percent) was among the top five states that experienced the most growth in the Asian in combination population. The Asian in combination population also grew considerably in the District of Columbia (110 percent).²⁰

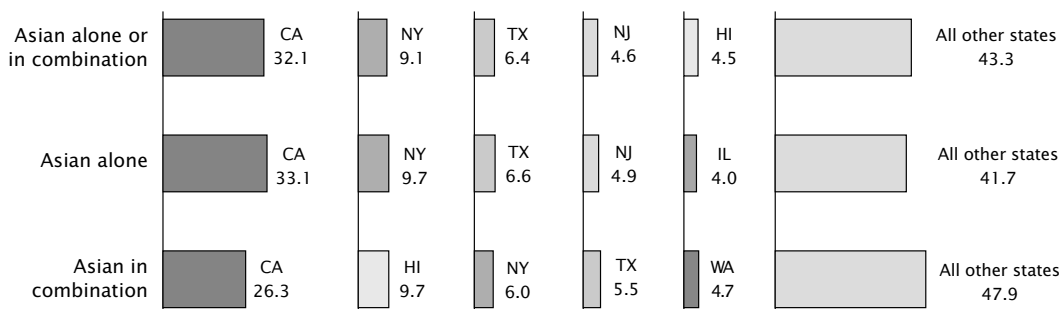

Multiple-race Asians were more likely to live in California and Hawaii.

More than half of all Asians lived in five states. Of all respondents who reported as Asian alone or in combination, about 32 percent lived in California, 9 percent in New York, 6 percent in Texas, 5 percent in

²⁰ For this report, the District of Columbia is treated as a state equivalent.

Figure 4.
Percentage Distribution of the Asian Population by State: 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Note: Percentages may not add to 100.0 due to rounding.

Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171) Summary File, Table P1.

New Jersey, and 5 percent in Hawaii (see Figure 4).

This pattern was similar for the Asian alone population for California (33 percent), New York (10 percent), Texas (7 percent), and New Jersey (5 percent). However, the state with the next highest proportion of the Asian alone population was Illinois (4 percent).

The pattern was slightly different for respondents who identified as Asian in combination and one or more additional races. Among multiple-race Asians, 26 percent lived in California, 10 percent in Hawaii, 6 percent each lived in New York and Texas, and 5 percent in Washington.

The Asian population was concentrated in counties in the West, especially counties in Hawaii and California.

Counties with the highest concentration of the Asian alone-or-in-combination population were located in the West and are shown in dark blue on the map (see Figure 5). Honolulu county, HI, had the highest percentage of the Asian

alone-or-in-combination population (62 percent), followed by three additional counties in Hawaii: Kauai (51 percent), Maui (47 percent), and Hawaii (45 percent).

Two county equivalents in Alaska had concentrations of the Asian alone-or-in-combination population of 25 percent or more—Aleutians East Borough and Aleutians West Census Area. Four counties in California had concentrations of 25 percent or more, all of which were located near San Francisco, CA, and San Jose, CA.

These patterns were similar for the Asian alone population, although the proportions of the Asian alone population were smaller relative to the Asian alone-or-in-combination populations in the four Hawaiian counties mentioned above. The Asian alone population represented 44 percent of the population in Honolulu county, 31 percent in Kauai county, 29 percent in Maui county, and 22 percent in Hawaii county.

The Asian alone-or-in-combination population also had concentrations of 10.0 percent to 24.9

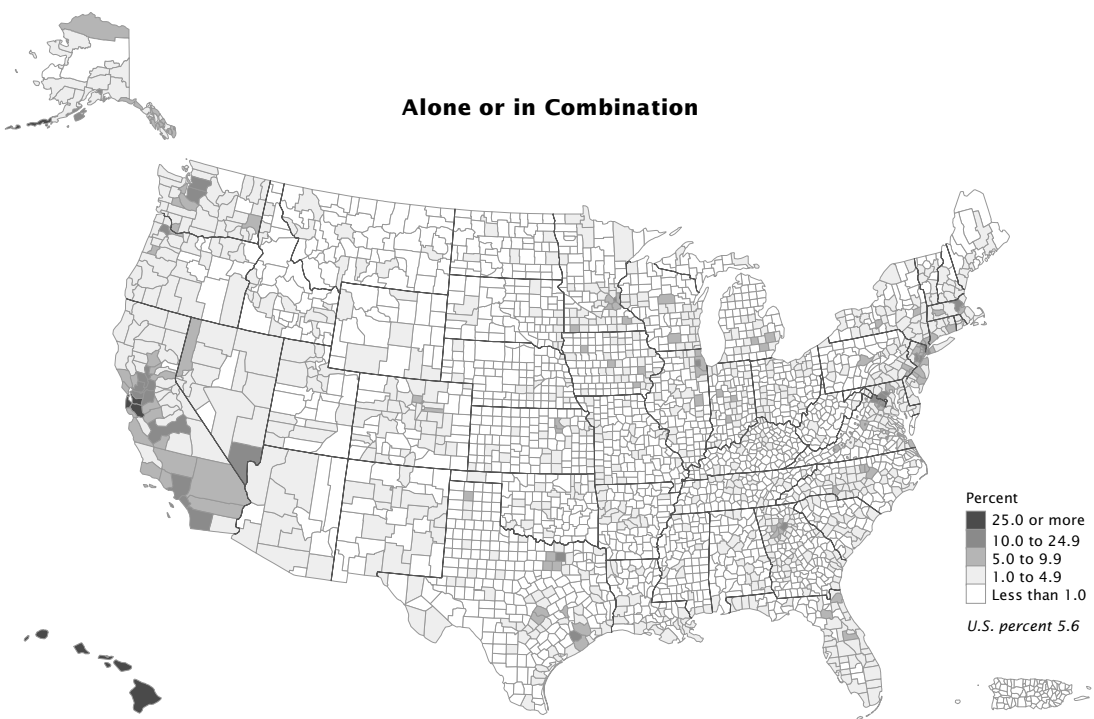

percent in other counties near metropolitan statistical areas in the West, such as Los Angeles, CA; Las Vegas, NV; Portland, OR; and Seattle, WA. In the South, the Asian alone-or-in-combination population had concentrations of 10.0 percent to 24.9 percent in counties near Dallas, TX; Houston, TX; Washington, DC; and Atlanta, GA.

In the Midwest, one county (DuPage) near Chicago, IL, and one county (Ramsey) near Minneapolis, MN, had concentrations of the Asian-alone-or-in-combination population between 10.0 percent and 24.9 percent of the total population. This was also true in the Northeast for counties near Boston, MA, and New York, NY.

Counties with concentrations of 5.0 percent to 9.9 percent of the Asian alone-or-in-combination population were near all of the metropolitan statistical areas mentioned above. While there were some differences in the magnitude of the concentrations for some of the metro areas discussed above, the overall pattern was similar for the Asian alone population.

¹ Urban Honolulu CDP, HI, is a census designated place (CDP). CDPs are the statistical counterparts of incorporated places and are delineated to provide data for settled concentrations of population that are identifiable by name but are not legally incorporated under the laws of the state in which they are located.

Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171) Summary File, Table P1.

Many counties in western states, counties in states along the north-eastern seaboard, and counties around several metro areas had Asian alone-or-in-combination populations of at least 1 percent of the total population. This population made up less than 1 percent in the majority of counties across the United States (66 percent of all counties). This was more pronounced for the Asian alone population, which accounted for less than 1 percent of the total population in 75 percent of all counties.

Counties that experienced the fastest growth in the Asian population were primarily located in the South and the Midwest.

Of the 733 counties that had an Asian alone-or-in-combination population of 1,000 or more, 38 counties experienced 200.0 percent growth or more, 116 counties experienced 100.0 percent to 199.9 percent growth, 299 counties experienced 50.0 percent to 99.9 percent growth,

275 counties experienced up to a 50 percent increase, and in 4 counties the Asian alone-or-in-combination population declined (see Figure 6).²¹

Throughout the South and Midwest, there were several counties where the Asian alone-or-in-combination population grew 200 percent or more. For example, this was seen in counties in Texas, Florida, and Georgia in the South and counties in states in the Midwest such as Minnesota, Ohio, Iowa, and Indiana. Two counties in the West, in Arizona and Nevada, experienced growth over 200 percent. There were no counties in the Northeast that experienced 200 percent growth or more in the Asian alone-or-in-combination population. This pattern was similar for the Asian alone population.

The Asian alone-or-in-combination population grew by 100.0 percent to 199.9 percent in a number of counties in western and northeastern states. For example, the Asian

²¹ Of the 733 counties, one county (Broomfield, Colorado) existed in 2010 but not in 2000.

alone-or-in-combination population grew between 100.0 percent and 199.9 percent in counties in Oregon, California, Nevada, and Arizona. Counties in states along the eastern seaboard experienced considerable growth. In the South, counties in Florida also stand out as having experienced substantial growth in the Asian alone-or-in-combination population. There were also pockets of substantial growth in other southern states, such as counties around Atlanta, GA, and counties near Houston, TX, and Dallas, TX. There were also pockets of growth in counties in midwestern states, such as near Minneapolis, MN, and Chicago, IL. These patterns were similar for the Asian alone population.

The places with the largest Asian populations were New York, NY, and Los Angeles, CA.

The 2010 Census showed that New York, NY, had the largest Asian alone-or-in-combination population, with 1.1 million, followed by Los Angeles, CA (484,000), and San Jose, CA (327,000) (see Table 3). Three

Table 4.

Ten Places With the Highest Percentage of Asians: 2010(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/p194-171.pdf)

Place ¹	Total population	Asian					
		Alone or in combination		Alone		In combination	
		Rank	Percentage of total population	Rank	Percentage of total population	Rank	Percentage of total population
Urban Honolulu CDP, HI ²	337,256	1	68.2	2	54.8	1	13.4
Daly City, CA	101,123	2	58.4	1	55.6	21	2.8
Fremont, CA	214,089	3	54.5	3	50.6	5	3.9
Sunnyvale, CA	140,081	4	43.7	4	40.9	19	2.8
Irvine, CA	212,375	5	43.3	5	39.2	4	4.1
Santa Clara, CA	116,468	6	40.8	6	37.7	11	3.2

San Jose, CA	945,942	10	34.5	10	32.0	27	2.5
Elk Grove, CA	153,015	11	30.6	12	26.3	2	4.3
Fairfield, CA	105,321	26	19.0	32	14.9	3	4.1
Berkeley, CA	112,580	21	22.8	22	19.3	7	3.6
Vallejo, CA	115,942	13	28.3	15	24.9	8	3.3
Enterprise CDP, NV ²	108,481	20	24.5	20	21.2	9	3.3
Hayward, CA	144,186	17	25.2	18	22.0	10	3.2

¹ Places of 100,000 or more total population. The 2010 Census showed 282 places in the United States with 100,000 or more population. They included 273 incorporated places (including 5 city-county consolidations) and 9 census designated places (CDPs) that were not legally incorporated.

² Urban Honolulu CDP, HI, and Enterprise CDP, NV are census designated places. CDPs are the statistical counterparts of incorporated places, and are delineated to provide data for settled concentrations of population that are identifiable by name but are not legally incorporated under the laws of the state in which they are located.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

other places—San Francisco, CA; San Diego, CA; and Urban Honolulu CDP, HI—had Asian alone-or-in-combination populations of over 200,000 people.²²

Six of the ten places with the largest Asian alone-or-in-combination populations—Los Angeles, CA; San Jose, CA; San Francisco, CA; San Diego, CA; Urban Honolulu CDP, HI; and Fremont, CA were located in the West, and of these six, five were located in California. This ranking was identical for the Asian alone population.

New York, NY (97,000), and Los Angeles, CA (57,000), also had the largest Asian in combination populations, followed by Urban Honolulu CDP, HI (45,000), and San Diego, CA (33,000). Of the ten

²² Census designated places (CDPs) are the statistical counterparts of incorporated places and are delineated to provide data for settled concentrations of population that are identifiable by name but are not legally incorporated under the laws of the state in which they are located.

places that had the largest Asian alone-or-in-combination and Asian alone populations, eight also had the largest Asian in combination populations. The two places out of the top ten that had the largest Asian in combination populations but were not within the top ten ranking for the Asian alone and Asian alone-or-in-combination populations were Seattle, WA, and Sacramento, CA.

The place with the greatest proportion of the Asian population was Urban Honolulu CDP, HI.

Among the places with populations of 100,000 or more, the places with the greatest proportion of the Asian alone-or-in-combination population were Urban Honolulu CDP, HI (68 percent), followed by Daly City, CA (58 percent); Fremont, CA (55 percent); Sunnyvale, CA (44 percent); and Irvine, CA (43 percent) (see Table 4). Of the

top ten places shown, three were majority Asian—Urban Honolulu CDP, HI; Daly City, CA; and Fremont, CA. All of these ten places were in the West, and nine of them were located in California.

These rankings were similar for the Asian alone population, except that Daly City, CA (56 percent) had the greatest Asian alone proportion, followed by Urban Honolulu CDP, HI (55 percent). Also, the proportions for the Asian alone and Asian alone-or-in-combination populations across the ten places shown were similar, with the exception of Urban Honolulu CDP, HI, where the Asian alone-or-in-combination population constituted 68 percent of the total population. This figure was much lower for the Asian alone population (55 percent).

Urban Honolulu CDP, HI, also had the greatest Asian in combination proportion. Similar to the Asian alone and Asian

Table 5.

Other Asian, not specified ⁵	218,922	19,410	366,652	18,777	623,761

— Represents zero.

Note: This table shows more detailed Asian groups and response types than tables in *2010 Census Summary File 1*. As a result, some numbers do not match those shown in *2010 Census Summary File 1*.

¹ The numbers by detailed Asian group do not add to the total Asian population. This is because the detailed Asian groups are tallies of the number of Asian responses rather than the number of Asian respondents. Respondents reporting several Asian groups are counted several times. For example, a respondent reporting "Korean" and "Filipino" would be included in the Korean as well as the Filipino numbers.

² The total of 14,327,580 respondents categorized as reporting only one detailed Asian group in this table is higher than the total of 14,314,103 shown in Table PCT5 (U.S. Census Bureau, *2010 Census Summary File 1*). This is because the number shown here includes respondents who reported "Chinese" and "Taiwanese" together as a single detailed group, "Chinese", whereas PCT5 excludes respondents who reported "Chinese" and "Taiwanese" together.

³ Includes respondents who reported "Chinese" and "Taiwanese" together.

⁴ Excludes respondents who reported "Chinese" and "Taiwanese" together.

⁵ Includes respondents who checked the "Other Asian" response category on the census questionnaire or wrote in a generic term such as "Asian" or "Asiatic."

Source: U.S. Census Bureau, 2010 Census special tabulation.

alone-or-in-combination populations, all the places with the highest Asian in combination proportions were located in the West. Of the ten places that had the highest Asian in combination proportions, four places also were among the top ten Asian alone and Asian alone-or-in-combination proportions.

Six places that had the highest percentage of the Asian in combination population were not within the top ten ranking for the Asian

alone population or the Asian alone-or-in-combination population. These places were Elk Grove, CA; Fairfield, CA; Berkeley, CA; Vallejo, CA; Enterprise CDP, NV; and Hayward, CA.

PATTERNS AMONG THE DETAILED ASIAN GROUPS

Table 5 presents data for a number of detailed groups. Data for people who reported only one detailed Asian group, such as Filipino, are presented in the first data column.

Next, data for people who identified with two or more detailed Asian groups, such as Filipino and Korean, and no other race group are presented in the second data column. The third data column presents data for people who reported only one detailed Asian group and one or more other races, such as Filipino **and** White. The fourth data column presents data for people who reported two or more detailed Asian groups and one or more other race

Table 6.

groups, such as Filipino, Korean, **and** White.

All of these columns are summed and presented in the last data column, detailed Asian group *alone or in any combination*. Thus, the last column presents the maximum number of people who identified as the detailed Asian group.

The Chinese population was the largest detailed Asian group.

In the 2010 Census, the detailed Asian groups with one million or more responses for the Asian alone-or-in-any-combination

population were Chinese, Filipino, Asian Indian, Vietnamese, Korean, and Japanese (see Table 5).

The Chinese alone-or-in-any-combination population, the largest detailed Asian group, was 4.0 million. There were 3.3 million people who reported Chinese alone with no additional detailed Asian group or race category.

Filipino and Asian Indian were the second- and third-largest detailed Asian groups.

Filipino and Asian Indian were the next largest detailed Asian groups for the Asian

alone-or-in-any-combination population. Filipino was the second-largest detailed Asian group of the Asian alone-or-in-any-combination population (3.4 million), followed by Asian Indian (3.2 million). However, for the Asian alone population where only one detailed Asian group was reported, Asian Indian was the second-largest group (2.8 million), followed by Filipino (2.6 million).

The Bhutanese population experienced the fastest growth from 2000 to 2010.

The Bhutanese population experienced the fastest growth from

2000 to 2010, growing from about 200 in 2000 to about 19,000 in 2010 (see Table 6). While the Bhutanese population experienced high percentage growth, its proportion of the Asian alone-or-in-any-combination population remained small.

Of all the detailed Asian alone-or-in-any combination groups that had a population of one million or more, the Asian Indian population grew the fastest, by 68 percent, followed by the Filipino (44 percent), Vietnamese (42 percent), Korean (39 percent), and Chinese (40 percent) populations. The Japanese population experienced the slowest growth among the detailed Asian groups with alone-or-in-any-combination populations of one million or more, growing by 14 percent.

Asian Indians, Chinese, and Filipinos represented 60 percent of the Asian alone population.

An analysis of respondents who identified with only one detailed Asian group shows the Chinese population accounted for 23 percent, the Asian Indian population accounted for 19 percent, and the Filipino population accounted for 17 percent of all respondents who identified as Asian alone (see Figure 7). Combined, these three groups accounted for 60 percent of the Asian alone population. Vietnamese (11 percent), Korean (10 percent), Japanese (5 percent), other single detailed Asian groups (13 percent), and two or more detailed Asian groups (2 percent) accounted for smaller proportions of the Asian alone population.

The largest proportion of Asian in combination with another race(s) was for respondents who identified as Filipino (24 percent), followed by all other single detailed Asian

Figure 7. Percentage Distribution of the Asian Population by Detailed Group: 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/sf1.pdf)

Note: All categories shown, except the "Two or more detailed Asian groups" category, represent respondents who identified with only one detailed Asian group. Percentages may not add to 100.0 due to rounding.
Source: U.S. Census Bureau, 2010 Census special tabulation.

groups (20 percent). The next highest proportions were Japanese (14 percent), Chinese (13 percent), Asian Indian (9 percent), Korean (8 percent), two or more detailed Asian groups (8 percent), and Vietnamese (4 percent).

Japanese had the highest proportion reporting multiple detailed Asian groups and/or another race(s) relative to the largest detailed Asian groups.

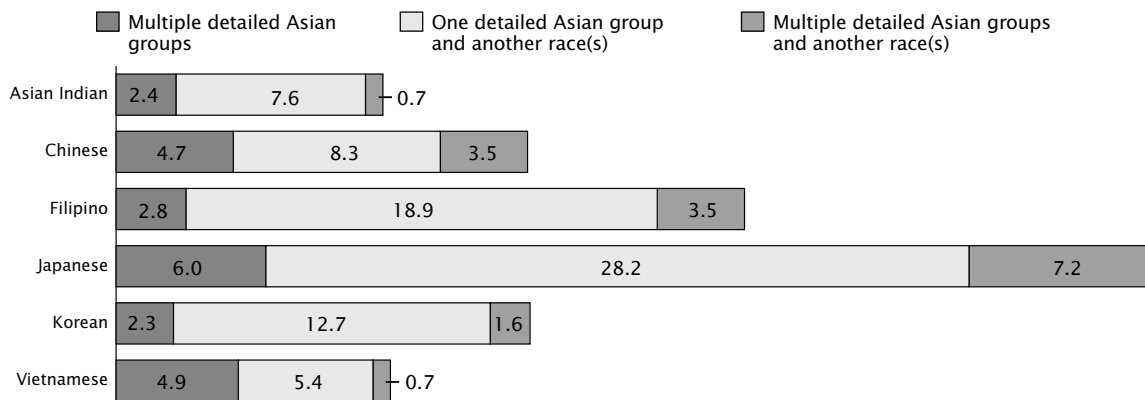

Among the detailed Asian groups with alone-or-in-any-combination populations of one million or

more, the Japanese population had the highest proportion reporting multiple detailed Asian groups and no other race (6 percent), one group (Japanese) and another race(s) (28 percent), and multiple detailed Asian groups and another race(s) (7 percent) (see Figure 8). Combining these groups, 41 percent of the Japanese population identified with multiple detailed Asian groups and/or another race(s). After Japanese, Filipinos had the highest proportion of respondents reporting

Figure 8.

Percentage of Largest Detailed Asian Groups Alone or in Any Combination by Number of Groups and Races: 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/sf1.pdf)

Note: Percentages are based on the alone-or-in-any-combination population for each group. People who reported two or more detailed Asian groups, such as Korean and Filipino, and no other race group are represented in the "Multiple detailed Asian groups" category. People who reported one detailed Asian group and another race(s), such as Korean **and** White are represented in the "One detailed Asian group and another race(s)" category. People who reported two or more detailed Asian groups and another race(s), such as Korean, Filipino, **and** White are represented in the "Multiple detailed Asian groups and another race(s)" category. Together, these three categories represent the Asian in-any-combination percentages for each detailed group.

Source: U.S. Census Bureau, 2010 Census special tabulation.

one group (Filipino) and another race(s) (19 percent). Also, 3 percent identified with multiple detailed Asian groups and no other race, and 4 percent reported multiple detailed Asian groups and another race(s). Therefore, 25 percent of those who identified as Filipino identified with multiple detailed Asian groups and/or another race(s).

Among the detailed Asian groups with alone-or-in-any-combination populations of one million or more, Asian Indians and Vietnamese had the lowest proportion who reported multiple detailed Asian groups and/or another race(s) (11 percent each). The Asian Indian population had 2 percent report multiple detailed Asian groups and no other race, 8 percent report one group (Asian Indian) and another

race(s), and almost 1 percent report multiple detailed Asian groups and another race(s). The Vietnamese population had 5 percent report multiple detailed Asian groups and no other race, 5 percent report one group (Vietnamese) and another race(s), and almost 1 percent report multiple detailed Asian groups and another race(s).

Chinese and Koreans both had a slightly higher proportion who reported multiple detailed Asian groups and/or another race (17 percent each). The Chinese population had 5 percent report multiple detailed Asian groups and no other race, 8 percent report one group (Chinese) and another race(s), and 4 percent report multiple detailed Asian groups and another race(s). The Korean population had 2 percent report multiple

detailed Asian groups and no other race, 13 percent report one group (Korean) and another race(s), and 2 percent report multiple detailed Asian groups and another race(s).

THE GEOGRAPHIC DISTRIBUTION OF DETAILED ASIAN GROUPS

The Japanese population had the highest proportion living in the West among the largest detailed Asian groups.

Among detailed Asian groups with alone-or-in-any-combination populations that numbered one million or more, Japanese (71 percent) and Filipinos (66 percent) had the two largest proportions that lived in the West (see Figure 9). Large proportions of Chinese (49 percent), Vietnamese (49 percent), and Koreans (44 percent) lived in the

West as well. A much lower proportion of Asian Indians (25 percent) lived in the West compared to the other groups shown.

Larger proportions of Vietnamese (32 percent), Asian Indians (29 percent), and Koreans (24 percent) lived in the South compared to other groups shown. A greater proportion of Asian Indians (30 percent), Chinese (26 percent), and Koreans (21 percent) lived in the Northeast compared to other groups shown. For all detailed Asian groups shown, the Midwest had the lowest proportion of each group.

California was the top state for each of the six largest detailed Asian groups.

Of the detailed Asian groups that numbered one million or more within the Asian alone-or-in-any-combination population, the highest proportion of each group lived in California. The Filipino population (43 percent) had the highest proportion that lived in California, followed by Vietnamese (37 percent), Chinese (36 percent), Japanese (33 percent), and Korean

(30 percent) (see Figure 10). Asian Indians (19 percent) had the lowest proportion living in California relative to all groups shown.

For Chinese (15 percent), Asian Indians (12 percent), and Koreans (9 percent), the state with the

second-largest proportion of these populations was New York. The state with the second-largest proportions of Japanese (24 percent) and Filipinos (10 percent) was Hawaii. The second-largest proportion of the Vietnamese population (13 percent) lived in Texas.

Figure 9. Percentage Distribution of Largest Detailed Asian Groups by Region: 2010

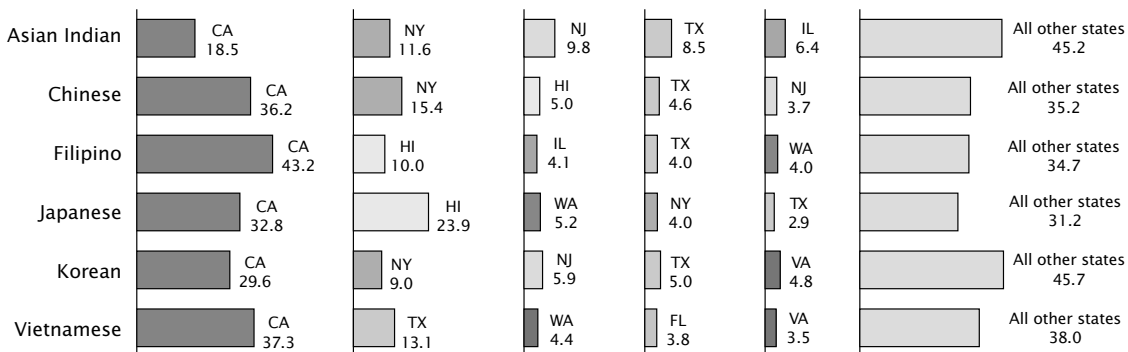

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/sf1.pdf)

Figure 10. Percentage Distribution of Largest Detailed Asian Groups by State: 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/sf1.pdf)

Note: Percentages are based on the alone-or-in-any-combination population for each group. Percentages may not add to 100.0 due to rounding. Source: U.S. Census Bureau, 2010 Census special tabulation.

The Asian Indian population was the largest detailed Asian group in nearly half of all states.

Figure 11 presents a state-level map illustrating the diversity of the largest detailed Asian alone-or-in-any-combination population groups across the country. The different colors denote which detailed Asian group was the largest in each state, and the graduated circles illustrate the relative size of that group.

The Asian Indian population was the largest detailed Asian group in 23 states, more than any other detailed Asian group. Of these states, 13 were in the South (Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Maryland, North Carolina, South Carolina, Tennessee, Texas, Virginia, and West Virginia); 6 were in the Midwest (Illinois, Indiana, Iowa, Michigan, Missouri, and Ohio); and 4 were in the Northeast (Connecticut, Pennsylvania, New Hampshire, and New Jersey).

For every state in the West, either the Filipino population or the Chinese population was the largest detailed Asian group. Filipino was the largest detailed Asian group in Alaska, Arizona, California, Hawaii, Idaho, Montana, Nevada, New Mexico, Washington, and Wyoming, while Chinese was the largest in Colorado, Oregon, and Utah. Outside of the West, Filipino was the largest detailed Asian group in South Dakota, while Chinese was the largest in the District of Columbia and North Dakota, as well as several states in the Northeast (Maine, Massachusetts, New York, Rhode Island, and Vermont).

The Vietnamese population was the largest detailed Asian group in five states—Louisiana, Mississippi, and Oklahoma in the South; and Kansas and Nebraska in the Midwest.

The Hmong population was the largest detailed Asian group in two states (Minnesota and Wisconsin).

The 20 metro areas with the largest Asian population contained many diverse detailed Asian groups.

Next, the top five detailed Asian groups in the 20 metro areas with the largest Asian alone-or-in-combination population in 2010 are discussed.

In 6 of the 20 metro areas with the largest Asian alone-or-in-combination population, Chinese had the largest alone-or-in-any-combination population of all detailed Asian groups (see Figure 12). Of these metro areas, the New York-Northern New Jersey-Long Island NY-NJ-PA metro area had the largest Chinese population (695,000), followed by Los Angeles-Long Beach-Santa Ana, CA (544,000), San Francisco-Oakland-Fremont, CA (477,000), San Jose-Sunnyvale-Santa Clara, CA (173,000), Boston-Cambridge-Quincy, MA-NH (123,000), and Seattle-Tacoma-Bellevue, WA (101,000). Of these 6 metro areas, 2 were in the Northeast, and 4 were in the West.

The Asian Indian population also had the largest alone-or-in-any-combination population in 6 of the 20 metro areas with the largest Asian alone-or-in-combination population. Of these areas, the metro area with the largest Asian Indian population was Chicago-Joliet-Naperville, IL-IN-WI (186,000), followed by Washington-Arlington-Alexandria, DC-VA-MD-WV (142,000), Dallas-Fort Worth-Arlington, TX (108,000), Philadelphia-Camden-Wilmington, PA-NJ-DE-MD (98,000), Atlanta-Sandy Springs-Marietta, GA (86,000), and Detroit-Warren-Livonia, MI (60,000). Of these 6 metro areas, none was located in the West.

The Filipino population had the highest alone-or-in-any-combination population in 5 of the 20 metro areas with the largest Asian alone-or-in-combination population. Of these 5 areas, San Diego-Carlsbad-San Marcos, CA had the largest Filipino population (182,000), followed by Riverside-San Bernardino-Ontario, CA (118,000), Las Vegas-Paradise, NV (108,000), Sacramento-Arden-Arcade-Roseville, CA (74,000), and Phoenix-Mesa-Glendale, AZ (40,000).

Among the 20 metro areas with the largest Asian alone-or-in-combination populations, Japanese, Hmong, and Vietnamese had the highest alone-or-in-any-combination population in 1 metro area each. The Japanese population (241,000) was the largest detailed Asian group in Honolulu, HI. The Hmong population (64,000) was the largest detailed Asian group in Minneapolis-St. Paul-Bloomington, MN-WI. The Vietnamese population was the largest detailed Asian group in Houston-Sugar Land-Baytown, TX (110,000).

The Chinese population was represented among the top five detailed Asian groups for each metro area shown.

The Chinese population was among the top five largest detailed Asian populations for every metro area shown (see Figure 12). The Asian Indian and Filipino populations were within the top five largest detailed Asian alone-or-in-any-combination populations for 18 out of the 20 metro areas with the largest Asian alone-or-in-combination populations. Asian Indians were not represented within the top five detailed Asian groups in Los Angeles-Long Beach-Santa Ana, CA, and Honolulu, HI.

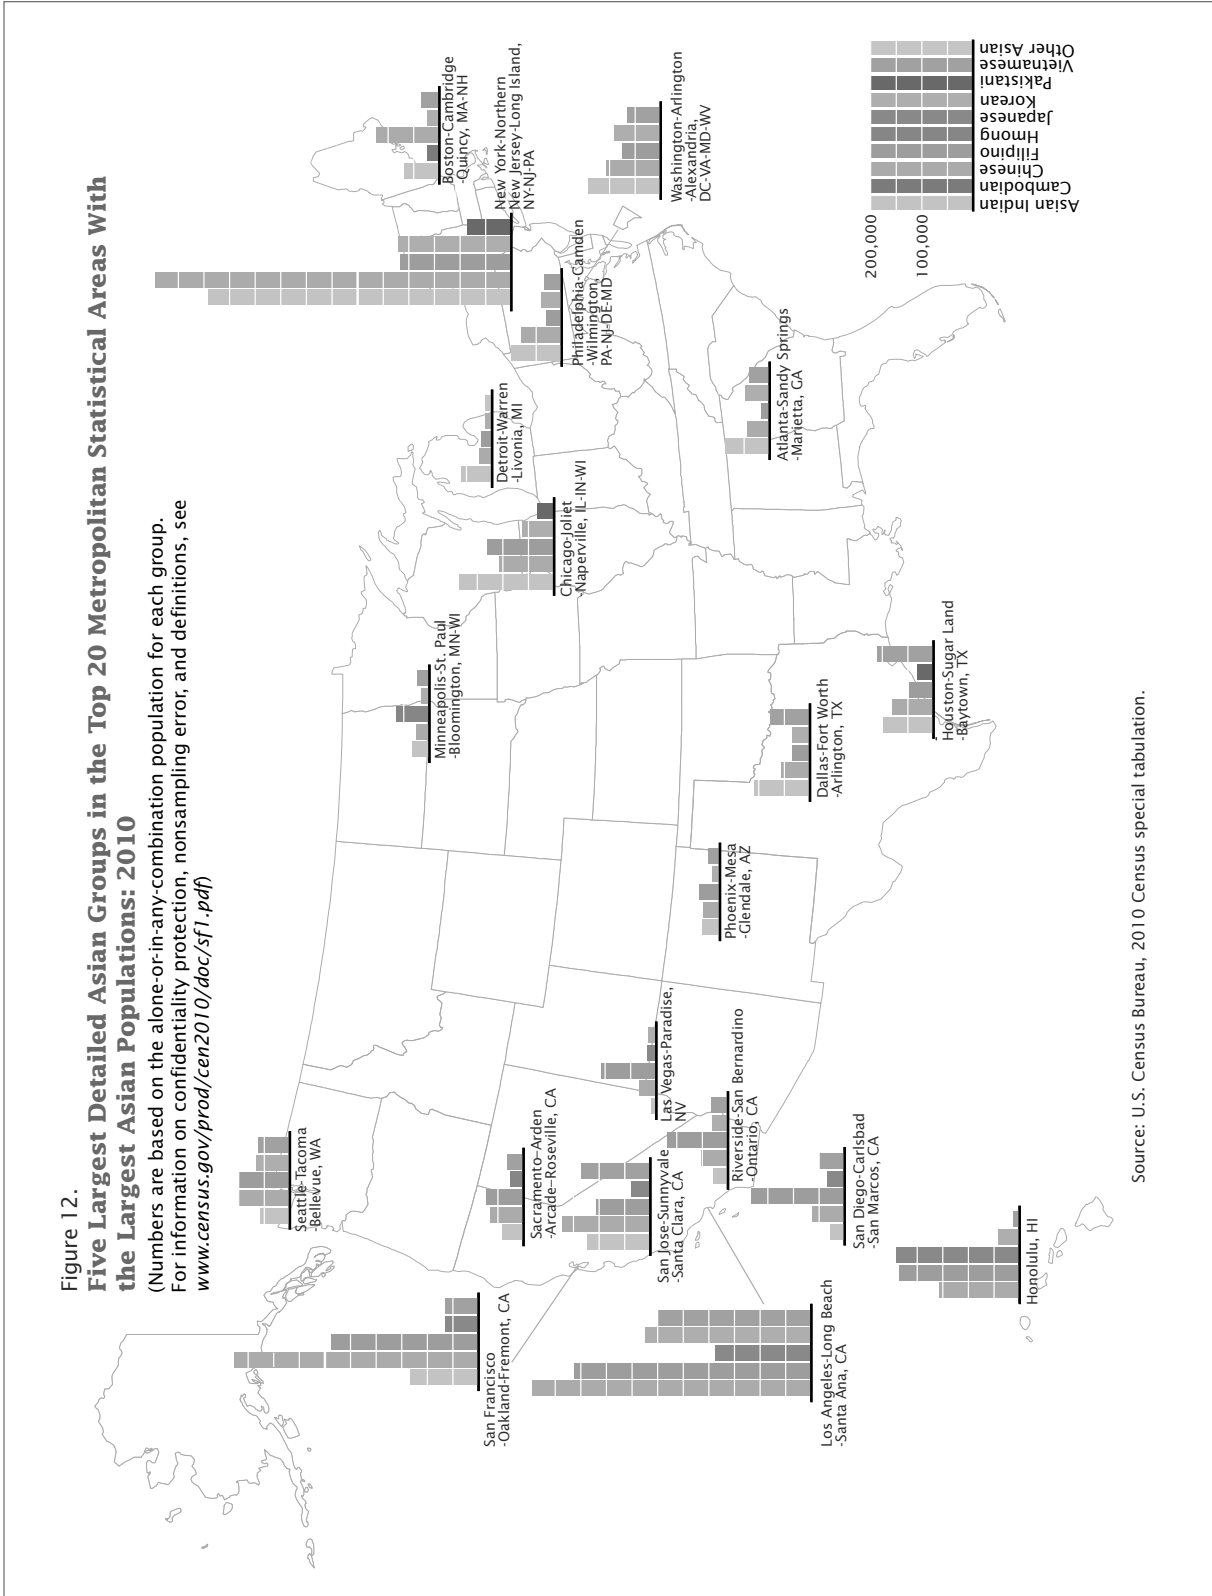

Figure 11.
Largest Detailed Asian Group by State: 2010
(The area of each circle symbol is proportional to the population of the largest detailed Asian group in a state. The legend presents example symbol sizes from the many symbols shown on the map. Numbers are based on the alone-or-in-any-combination population for each group. Five Largest Detailed Asian Groups in the Top 20 Metropolitan Statistical Areas With the Largest Asian Populations: 2010

(Numbers are based on the alone-or-in-any-combination population for each group. For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/sf1.pdf)

Source: U.S. Census Bureau, 2010 Census special tabulation.

Filipinos were not represented in the top five detailed Asian groups in Boston-Cambridge-Quincy, MA-NH and Minneapolis-St. Paul-Bloomington, MN-WI. The Korean and Vietnamese populations were represented among the top five detailed Asian groups in 15 and 16 out of the 20 metro areas with the largest Asian alone-or-in-combination population, respectively.

The Japanese population was represented in the top five detailed Asian groups in 6 out of the 20 metro areas, all of which were located in the West. Pakistanis were represented in 3 of the 20 metro areas with the largest Asian alone-or-in-combination population, New York-Northern New Jersey-Long Island NY-NJ-PA (86,000), Houston-Sugar Land-Baytown, TX, and Chicago-Joliet-Naperville, IL-IN-WI (32,000 each). Hmong were represented in 2 metro areas, Minneapolis-St. Paul-Bloomington, MN-WI (64,000) and Sacramento-Arden-Arcade-Roseville, CA (27,000). Cambodians were represented in 1 metro area, Boston-Cambridge-Quincy, MA-NH (25,000).

SUMMARY

This report provides a detailed portrait of the Asian population in the United States and contributes to our understanding of the nation's changing racial and ethnic diversity.

The Asian alone population and the Asian alone-or-in-combination population both grew substantially from 2000 to 2010, increasing in size by 43 percent and 46 percent, respectively. These populations grew more than any other race group in 2010. The multiple-race Asian population also experienced considerable growth, increasing by 60 percent. Leading this growth was the Asian *and*

White population, which grew by 87 percent.

Additional notable trends were presented in this report. The Asian population continued to be concentrated in the West. However, the proportion of all Asians living in the West decreased from 2000 to 2010, while the proportion living in the South increased.

The report also highlighted results for detailed Asian groups, indicating that the Chinese population was the largest detailed Asian group. For the Asian alone-or-in-any-combination population, Filipinos and Asian Indians were the second- and third-largest detailed Asian groups.

The report also discussed geographic patterns for detailed Asian groups. Of the detailed Asian groups with one million or more alone-or-in-any-combination populations, Japanese, Filipino, Chinese, Vietnamese, and Korean populations were concentrated in the West. However, this pattern was not observed for Asian Indians. In addition, for these same six groups, the largest proportion of each group lived in California.

Another interesting finding is that among the detailed Asian groups with alone-or-in-any-combination populations of one million or more, the Japanese population had the highest proportion that identified with multiple detailed Asian groups and/or another race(s) (41 percent). After Japanese, Filipinos had the next-highest proportion of respondents who identified with multiple detailed Asian groups and/or another race(s) (25 percent).

Throughout the decade, the Census Bureau will release additional information on the Asian population, including characteristics such as age, sex, and family type, which will provide greater insights

into the demographic characteristics of this population at various geographic levels.

ABOUT THE 2010 CENSUS

Why was the 2010 Census conducted?

The U.S. Constitution mandates that a census be taken in the United States every 10 years. This is required in order to determine the number of seats each state is to receive in the U.S. House of Representatives.

Why did the 2010 Census ask the question on race?

The Census Bureau collects data on race to fulfill a variety of legislative and program requirements. Data on race are used in the legislative redistricting process carried out by the states and in monitoring local jurisdictions' compliance with the Voting Rights Act. More broadly, data on race are critical for research that underlies many policy decisions at all levels of government.

How do data from the question on race benefit me, my family, and my community?

All levels of government need information on race to implement and evaluate programs, or enforce laws, such as the Civil Rights Act, Voting Rights Act, Fair Housing Act, Equal Employment Opportunity Act, and the 2010 Census Redistricting Data Program.

Both public and private organizations use race information to find areas where groups may need special services and to plan and implement education, housing, health, and other programs that address these needs. For example, a school system might use this information to design cultural activities that reflect the diversity in their community, or a business could use it to select the mix of merchandise

it will sell in a new store. Census information also helps identify areas where residents might need services of particular importance to certain racial groups, such as screening for hypertension or diabetes.

FOR MORE INFORMATION

For more information on race in the United States, visit the Census Bureau's Internet site at www.census.gov/population/race.

Information on confidentiality protection, nonsampling error, and definitions is available at www.census.gov/prod/cen2010/doc/pl94-171.pdf.

Data on race from the *2010 Census Redistricting Data (Public Law 94-171) Summary File* and the *2010 Census Summary File 1* were released on a state-by-state basis. The 2010 Census redistricting data are available on the Internet at <http://factfinder2.census.gov/main.html>.

For more information on specific race groups in the United States, go to www.census.gov and search for "Minority Links." This Web page includes information about the 2010 Census and provides links to reports based on past censuses and surveys focusing on the social and economic characteristics of the Black or African American, American Indian and Alaska Native, Asian, and

Native Hawaiian and Other Pacific Islander populations.

Information on other population and housing topics is presented in the 2010 Census Briefs series, located on the Census Bureau's Web site at www.census.gov/prod/cen2010. This series presents information about race, Hispanic origin, age, sex, household type, and housing tenure.

For more information about the 2010 Census, including data products, call the Customer Services Center at 1-800-923-8282. You can also visit the Census Bureau's Question and Answer Center at ask.census.gov to submit your questions online.

The Black Population: 2010

2010 Census Briefs

Issued September 2011

C2010BR-06

INTRODUCTION

This report provides a portrait of the Black population in the United States and discusses its distribution at the national level and at lower levels of geography.^{1, 2} It is part of a series that analyzes population and housing data collected from the 2010 Census. The data for this report are based on the *2010 Census Redistricting Data (Public Law 94-171) Summary File*, which was the first 2010 Census data product released with data on race and Hispanic origin and was provided to each state for use in drawing boundaries for legislative districts.³

UNDERSTANDING RACE DATA FROM THE 2010 CENSUS

The 2010 Census used established federal standards to collect and present data on race.

For the 2010 Census, the question on race was asked of individuals living in the United States (see Figure 1). An individual's response to the race question was based upon self-identification. The U.S. Census Bureau collects information on race following the guidance of the U.S. Office of Management and Budget's

¹ The terms "Black" and "Black or African American" are used interchangeably in this report.

² This report discusses data for the 50 states and the District of Columbia, but not Puerto Rico.

³ Information on the *2010 Census Redistricting Data (Public Law 94-171) Summary File* is available online at <<http://2010.census.gov/2010census/data/redistricting-data.php>>.

(OMB) 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*.⁴ These federal standards mandate that race and Hispanic origin (ethnicity) are separate and distinct concepts and that when collecting these data via self-identification, two different questions must be used.⁵

⁴ The 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*, issued by OMB, is available at <www.whitehouse.gov/omb/fedreg/1997standards.html>.

⁵ The OMB requires federal agencies to use a minimum of two ethnicities: Hispanic or Latino and Not Hispanic or Latino. Hispanic origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be of any race. "Hispanic or Latino" refers to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race.

By
Sonya Rastogi,
Tallese D. Johnson,
Elizabeth M. Hoeffel,
and
Malcolm P. Drewery, Jr.

Starting in 1997, OMB required federal agencies to use a minimum of five race categories: White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. For respondents unable to identify with any of these five race categories, OMB approved the Census Bureau's inclusion of a sixth category—Some Other Race—on the Census 2000 and 2010 Census questionnaires. The 1997 OMB standards also allowed for respondents to identify with more than one race. The definition of the Black or African American racial category used in the 2010 Census is presented in the text box on this page.

Data on race have been collected since the first U.S. decennial census in 1790.⁶ For the first time in Census 2000, individuals were presented with the option to self-identify with more than one race and this continued with the 2010 Census, as prescribed by OMB. There are 57 possible multiple race combinations involving the five OMB race categories and Some Other Race.⁷

The 2010 Census question on race included 15 separate response categories and three areas where respondents could write in detailed information about their race (see

⁶ For information about comparability of 2010 Census data on race and Hispanic origin to data collected in previous censuses, see the *2010 Census Redistricting Data (Public Law 94-171) Summary File—Technical Documentation* at <www.census.gov/prod/cen2010/doc/pl94-171.pdf>.

⁷ The 2010 Census provides data on the total population reporting more than one race, as well as detailed race combinations (e.g., Black or African American **and** White; Black or African American **and** Asian **and** American Indian and Alaska Native). In this report, the multiple-race categories are denoted with the conjunction **and** in bold and italicized print to indicate the separate race groups that comprise the particular combination.

DEFINITION OF BLACK OR AFRICAN AMERICAN USED IN THE 2010 CENSUS

According to OMB, "Black or African American" refers to a person having origins in any of the Black racial groups of Africa.

The Black racial category includes people who marked the "Black, African Am., or Negro" checkbox. It also includes respondents who reported entries such as African American; Sub-Saharan African entries, such as Kenyan and Nigerian; and Afro-Caribbean entries, such as Haitian and Jamaican.*

*Sub-Saharan African entries are classified as Black or African American with the exception of Sudanese and Cape Verdean because of their complex, historical heritage. North African entries are classified as White, as OMB defines White as a person having origins in any of the original peoples of Europe, the Middle East, or North Africa.

Figure 1).⁸ The response categories and write-in answers can be combined to create the five minimum OMB race categories plus Some Other Race. In addition to White, Black or African American, American Indian and Alaska Native, and Some Other Race, 7 of the 15 response categories are Asian groups and 4 are Native Hawaiian and Other Pacific Islander groups.⁹

For a complete explanation of the race categories used in the 2010 Census, see the 2010 Census Brief, *Overview of Race and Hispanic Origin: 2010*.¹⁰

⁸ There were two changes to the question on race for the 2010 Census. First, the wording of the race question was changed from "What is this person's race? Mark one or more races to indicate what this person considers himself/herself to be" in 2000 to "What is this person's race? Mark one or more boxes" for 2010. Second, in 2010, examples were added to the "Other Asian" response category (Hmong, Laotian, Thai, Pakistani, Cambodian, and so on) and the "Other Pacific Islander" response category (Fijian, Tongan, and so on). In 2000, no examples were given in the race question.

⁹ The race categories included in the census questionnaire generally reflect a social definition of race recognized in this country and are not an attempt to define race biologically, anthropologically, or genetically. In addition, it is recognized that the categories of the race question include race and national origin or sociocultural groups.

¹⁰ Humes, K., N. Jones, and R. Ramirez. 2011. *Overview of Race and Hispanic Origin: 2010*. U.S. Census Bureau, 2010 Census Briefs, C2010BR-02, available at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

RACE ALONE, RACE IN COMBINATION, AND RACE ALONE-OR-IN-COMBINATION CONCEPTS

This report presents data for the Black population and focuses on results for three major conceptual groups.

People who responded to the question on race by indicating only one race are referred to as the *race alone* population, or the group who reported *only one* race. For example, respondents who marked only the "Black, African Am., or Negro" category on the census questionnaire would be included in the *Black alone* population. This population can be viewed as the minimum number of people reporting Black.

Individuals who chose more than one of the six race categories are referred to as the *race in combination* population, or as the group who reported *more than one race*. For example, respondents who reported they were Black or African American **and** White or Black or African American **and** Asian **and** American Indian and Alaska Native would be included in the *Black in combination* population. This population is also referred to as the *multiple-race Black* population.

Table 1.
Black or African American Population: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Race	2000		2010		Change, 2000 to 2010	
	Number	Percent of total population	Number	Percent of total population	Number	Percent
Total population	281,421,906	100.0	308,745,538	100.0	27,323,632	9.7
Black or African American alone or in combination	36,419,434	12.9	42,020,743	13.6	5,601,309	15.4
Black or African American alone	34,658,190	12.3	38,929,319	12.6	4,271,129	12.3
Black or African American in combination	1,761,244	0.6	3,091,424	1.0	1,330,180	75.5
Black or African American; White	784,764	0.3	1,834,212	0.6	1,049,448	133.7
Black or African American; Some Other Race	417,249	0.1	314,571	0.1	-102,678	-24.6
Black or African American; American Indian and Alaska Native ..	182,494	0.1	269,421	0.1	86,927	47.6
Black or African American; White; American Indian and Alaska Native	112,207	-	230,848	0.1	118,641	105.7
Black or African American; Asian	106,782	-	185,595	0.1	78,813	73.8
All other combinations including Black or African American	157,748	0.1	256,777	0.1	99,029	62.8
Not Black or African American alone or in combination	245,002,472	87.1	266,724,795	86.4	21,722,323	8.9

- Percentage rounds to 0.0.

Note: In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Black or African American **and** White or Black or African American **and** Asian, generally should be more comparable.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Table PL1; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

The maximum number of people reporting Black is reflected in the *Black alone-or-in-combination* population. One way to define the Black population is to combine those respondents who reported Black alone with those who reported Black in combination with one or more other races. This creates the *Black alone-or-in-combination* population. Another way to think of the *Black alone-or-in-combination* population is the total number of people who reported Black, whether or not they reported any other races.

Throughout the report, the discussion of the Black population compares results for each of these groups and highlights the diversity within the entire Black population.¹¹

¹¹ As a matter of policy, the Census Bureau does not advocate the use of the *alone* population over the *alone-or-in-combination* population or vice versa. The use of the *alone* population in sections of this report does not imply that it is a preferred method of presenting or analyzing data. The same is true for sections of this report that focus on the *alone-or-in-combination* population. Data on race from the 2010 Census can be presented and discussed in a variety of ways.

THE BLACK POPULATION: A SNAPSHOT

The 2010 Census showed that the United States population on April 1, 2010, was 308.7 million. Out of the total population, 38.9 million people, or 13 percent, identified as Black alone (see Table 1).^{12, 13} In addition, 3.1 million people, or 1 percent, reported Black in combination with one or more other races.

Together, these two groups totaled 42.0 million people. Thus, 14 percent of all people in the United States identified as Black, either

¹² Percentages shown in text generally are rounded to the nearest integer, while those shown in tables and figures are shown with decimals. All rounding is based on unrounded calculations. Thus, due to rounding, some percentages shown in tables and figures ending in "5" may round either up or down. For example, unrounded numbers of 14.49 and 14.51 would both be shown as 14.5 in a table, but would be cited in the text as 14 and 15, respectively.

¹³ For the purposes of this report, the terms "reported," "identified," and "classified" are used interchangeably to refer to the response provided by respondents as well as responses assigned during the editing and imputation process.

alone, or in combination with one or more other races.

The Black population increased at a faster rate than the total population.

The total U.S. population grew by 9.7 percent, from 281.4 million in 2000 to 308.7 million in 2010 (see Table 1). In comparison, the Black alone population grew by 12 percent from 34.7 million to 38.9 million.¹⁴

The Black alone-or-in-combination population experienced more growth than the total population and the Black alone population, growing by 15 percent. However, both groups grew at a slower rate

¹⁴ The observed changes in the race counts between Census 2000 and the 2010 Census could be attributed to a number of factors. Demographic change since 2000, which includes births and deaths in a geographic area and migration in and out of a geographic area, will have an impact on the resulting 2010 Census counts. Additionally, some changes in the race question's wording and format since Census 2000 could have influenced reporting patterns in the 2010 Census.

Table 2.

Most Frequent Combinations of Black or African American Population With One or More Other Races by Hispanic or Latino Origin: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Black or African American in combination	2000		2010		Change, 2000 to 2010	
	Number	Percent	Number	Percent	Number	Percent

Black or African American; White; American Indian and Alaska Native	94,161	6.6	180,848	7.4	86,687	92.1
Black or African American; Asian	99,513	6.9	170,144	7.0	70,631	71.0
Black or African American; White; Some Other Race	27,691	1.9	13,087	0.5	-14,604	-52.7
All other combinations including Black or African American	93,484	6.5	160,463	6.6	66,979	71.6

Note: In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Black or African American *and* White or Black or African American *and* Asian, generally should be more comparable.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Tables PL1 and PL2; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Tables P1 and P2.

than most other major race and ethnic groups in the country.¹⁵

MULTIPLE-RACE REPORTING AMONG THE BLACK POPULATION

Blacks who reported more than one race grew at a much faster rate than the Black alone population.

In the 2010 Census, 3.1 million people reported Black in

combination with one or more additional races (see Table 2). The multiple-race Black population grew at a considerably faster rate than the Black alone population, growing by more than three-fourths in size since 2000.

¹⁵ Humes, K., N. Jones, and R. Ramirez. 2011. *Overview of Race and Hispanic Origin: 2010*, U.S. Census Bureau, 2010 Census Briefs, C2010BR-02, available at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

The largest multiple-race combination was Black *and* White.

Among people who reported they were Black and one or more additional races, the majority identified as Black *and* White (59 percent) (see Table 2). This was followed by Black and Some Other Race (10 percent), Black *and* American Indian and Alaska Native (9 percent), and Black *and* White *and* American Indian and Alaska Native (7 percent). Together, these four combinations comprised over 85 percent of all Blacks who reported multiple races.

The Black *and* White population contributed to most of the growth among Blacks who reported multiple races.

Among people who reported their race as Black and one or more additional races, those who reported Black *and* White more than doubled in size from about 785,000 in 2000 to 1.8 million in 2010. This combination constituted the greatest increase in the multiple-race Black population. The Black *and* White population's share of all multiple-race Blacks also increased substantially, from 45 percent in 2000 to 59 percent in 2010, about a 15 percentage-point difference.

The Black *and* Some Other Race population decreased between 2000 to 2010. This decrease was likely due to a data processing error in the Two or More Races population, which largely affected the combinations that included Some Other Race, overstating the

Black *and* Some Other Race population in 2000.¹⁶

The Black *and* American Indian and Alaska Native population grew by nearly one-half its size, increasing from 182,000 in 2000 to 269,000 in 2010. However, the Black *and* American Indian and Alaska Native population decreased as a proportion of the Black in combination population, from 10 percent to 9 percent.

The Black *and* White *and* American Indian and Alaska Native population increased both numerically and as a proportion of the Black in combination population. This population more than doubled in size from 112,000 in 2000 to 231,000 in 2010.

The Black *and* Asian population increased numerically from 107,000 in 2000 to 186,000 in 2010, an increase of 74 percent or nearly three-fourths in size. However, the Black *and* Asian population as a proportion of Blacks who reported multiple races remained at about 6 percent.

PATTERNS AMONG THE NON-HISPANIC BLACK POPULATION AND THE HISPANIC BLACK POPULATION

According to the 1997 OMB standards, Hispanics may be of any race. The 2010 Census results reflect this, demonstrating that

¹⁶ In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as Black or African American *and* White or Black or African American *and* Asian, generally should be more comparable.

Hispanics report a diversity of races (White, Black, American Indian or Alaska Native, etc.), or may also report that they are "Some Other Race" (self-identifying their race as "Latino," "Mexican," "Puerto Rican," "Salvadoran," or other national origins or ethnicities), or identify with various combinations of races. For more details on the race reporting patterns of Hispanics, see the 2010 Census Brief, *The Hispanic Population: 2010*.¹⁷

This section presents data for the Black population, highlighting patterns for Blacks who reported a Hispanic origin and Blacks who did not report a Hispanic origin.

About 97 percent of the Black alone population reported that they were non-Hispanic.

In 2010, the overwhelming majority of the Black alone population was non-Hispanic—about 97 percent of the Black alone population reported as non-Hispanic and 3 percent as Hispanic (see Table 3). Similarly, 95 percent of the Black alone-or-in-combination population reported as non-Hispanic and about 5 percent reported as Hispanic. However, a much lower proportion (79 percent) of people who reported Black in combination with one or more additional races were non-Hispanic.

Both non-Hispanic Blacks and Hispanic Blacks contributed to the growth of the multiple-race Black population.

Nationwide, the total multiple-race population grew from 6.8 million in 2000 to 9.0 million in 2010 (see Tables 3 and 4). Both non-Hispanic

¹⁷ Ennis, S., M. Rios-Vargas, and N. Albert. 2011. *The Hispanic Population: 2010*, U.S. Census Bureau, 2010 Census Briefs, C2010BR-04, available at <www.census.gov/prod/cen2010/briefs/c2010br-04.pdf>.

Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171) Summary File, Tables P1 and P2.

Blacks and Hispanic Blacks contributed to this growth. In 2000, non-Hispanic Blacks accounted for 21 percent of all people who reported multiple races, compared with 27 percent in 2010. Hispanic Blacks accounted for 5 percent of all people who reported multiple races in 2000 and increased to 7 percent in 2010.

Over the last 10 years there has been a large increase in the

non-Hispanic Black in combination population who reported Black **and** White (see Table 2). In the 2010 Census, 65 percent of non-Hispanic Blacks who reported multiple races were Black **and** White, compared with 49 percent in 2000. Black **and** American Indian and Alaska Native accounted for 10 percent, and Black **and** White **and** American Indian and Alaska Native, and Black **and** Asian accounted for 7 percent each.

In 2010, among Hispanics who identified as Black and one or more additional races, 38 percent reported Black **and** White, compared with 27 percent in 2000. Black **and** Some Other Race accounted for 35 percent, Black **and** White **and** American Indian and Alaska Native accounted for 8 percent, and Black **and** White **and** Some Other Race accounted for 5 percent.

THE GEOGRAPHIC DISTRIBUTION OF THE BLACK POPULATION

The South was the region where Blacks comprised the greatest proportion of the total population.

The South was the region where the Black alone-or-in-combination population comprised the greatest proportion of the total population, at 20 percent (see Table 5).¹⁸ In other regions, the Black alone-or-in-combination population was much smaller in proportion—13 percent in the Northeast, 11 percent in the Midwest, and 6 percent in the West. These results were similar for the Black alone population.

The majority of Blacks in the United States lived in the South.

According to the 2010 Census, of all respondents who reported Black alone-or-in-combination, 55 percent lived in the South, 18 percent in the Midwest, 17 percent in the Northeast, and 10 percent in the West (see Figure 2). This pattern was similar for the Black alone population.

Compared to 2000, the proportions of the Black alone-or-in-combination population for the West stayed about the same, while the proportions increased

¹⁸ The Northeast census region includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. The Midwest census region includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. The South census region includes Alabama, Arkansas, Delaware, the District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. The West census region includes Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Figure 2. Percentage Distribution of the Black or African American Population by Region: 2000 and 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Note: Percentages may not add to 100.0 due to rounding.
Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File, Table PL1*; and *2010 Census Redistricting Data (Public Law 94-171) Summary File, Table P1*.

in the South and decreased in the Northeast and the Midwest. The proportion of the Black alone population also increased in the South, from 55 percent in 2000 to 57 percent in 2010, whereas the Northeast and the Midwest experienced decreases in their share of the Black alone population.

The multiple-race Black population was more geographically dispersed than the Black alone population.

The Black in combination population had a different regional pattern compared to the Black alone population (see Figure 2). A considerably higher proportion of the multiple-race Black population lived in the West (23 percent), relative to the Black alone population (9 percent). While a large proportion of the multiple-race Black population lived in the South (36 percent), this was much lower than the Black alone population (57 percent).

The Black population grew in every region between 2000 and 2010 with the Black in combination population contributing to this growth, particularly in the South.

The Black alone-or-in-combination population grew in every region between 2000 and 2010, led by 18 percent growth in both the South and the West (see Table 5). The Black alone population also increased in every region, but at a slower rate than the Black alone-or-in-combination population. The Black alone population grew the most in the South, increasing by 16 percent.

The Black in combination population contributed to population growth in every region, particularly the South. In the South, the Black in combination population doubled from 547,000 to 1.1 million, growing 101 percent over the decade. The Midwest also experienced

- Percentage rounds to 0.0.

¹ The percent of the total population is calculated by using the total population of all races. The totals for each geography can be found in Table 11, page 18 of the 2010 Census Brief, *Overview of Race and Hispanic Origin: 2010* available at <www.census.gov/prod/cen2010/briefs/c2010br-02.pdf>.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Table PL1; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

considerable growth in the Black in combination population, increasing 90 percent, followed by increases of 70 percent in the West and 39 percent in the Northeast.

This growth contributed to shifting patterns of the Black in combination population by region. The proportion of the Black in combination population residing in the South increased from 31 percent to 36 percent, and decreased in the Northeast (from 26 percent to 21 percent) (see Figure 2).

The Black population represented over 50 percent of the total population in the District of Columbia and over 25 percent of the total population in six states, all located in the South.

The Black alone-or-in-combination population represented 38 percent of the total population in Mississippi (see Table 5). This was followed by Louisiana (33 percent), Georgia (32 percent), Maryland (31 percent), South Carolina (29 percent), and Alabama (27 percent). These same six states had the highest proportion of the Black alone population and the proportions were similar to the Black alone-or-in-combination population. The Black alone-or-in-combination population represented 52 percent of the total population in the District of Columbia.¹⁹

The Black alone-or-in-combination population represented less than 3 percent of the total population in 12 states, all located outside of the South. More than half of the states in the West had a Black alone-or-in-combination population of less than 3 percent—Hawaii, New Mexico, and Oregon (about 3 percent each); Utah (about 2 percent); and Wyoming, Idaho, and Montana (about 1 percent each).

¹⁹ For this report, the District of Columbia is treated as a state equivalent.

The Black alone-or-in-combination population represented less than 3 percent of the total population in two states in the Midwest—South Dakota and North Dakota (about 2 percent each), and three states in the Northeast—New Hampshire, Maine, (about 2 percent each) and Vermont (1 percent). These same 12 states also had less than 3 percent of the Black alone population and the percentages tended to be slightly lower than the Black alone-or-in-combination population. One additional state (Iowa) had a Black alone population of less than 3 percent, and thus 13 states had Black alone populations of less than 3 percent.

Nearly 60 percent of all people who reported Black lived in ten states.

The ten states with the largest Black alone-or-in-combination populations in 2010 were New York (3.3 million), Florida (3.2 million), Texas (3.2 million), Georgia (3.1 million), California (2.7 million), North Carolina (2.2 million), Illinois (2.0 million), Maryland (1.8 million), Virginia (1.7 million), and Ohio (1.5 million) (see Table 5). Among these states, four experienced substantial growth between 2000 and 2010. The Black alone-or-in-combination population grew by 29 percent in Florida, 28 percent in Georgia, 27 percent in Texas, and 21 percent in North Carolina.

Out of the ten states above, nine of them also had the largest Black alone populations. The state with the tenth largest Black alone population was Louisiana (1.5 million). In a similar fashion to the Black alone-or-in-combination population, the Black alone population also experienced considerable growth in Florida, Georgia, Texas, and North Carolina.

The Black population grew in every state between 2000 and 2010, but declined in the District of Columbia.

Among all states, the states with small Black alone-or-in-combination populations (2 percent or less) in 2010 tended to experience the largest percentage growth. Maine experienced the largest percentage growth in the Black alone-or-in-combination population, increasing by 128 percent between 2000 and 2010. This was followed by South Dakota (120 percent), Vermont (108 percent), North Dakota (106 percent), and Idaho (96 percent).

At the other end of the spectrum, the Black population in the District of Columbia decreased by 10 percent between 2000 and 2010. As discussed earlier, the District of Columbia still had the highest proportion reporting Black among states, with 52 percent in 2010. The same patterns were observed for the Black alone population by state.

The Black in combination population showed even more substantial growth, as it more than doubled in more than half of all states. The states that experienced the most growth were in the South: North Carolina and South Carolina both grew by 165 percent, followed by West Virginia (147 percent), Kentucky (144 percent), and Tennessee (143 percent).

Of the population who identified as Black, people who reported multiple races were more likely to live in California.

Of all respondents who reported as Black alone-or-in-combination, about 8 percent lived in each of these states—New York, Florida, and Texas. Another 7 percent lived in Georgia and 6 percent lived in

Figure 3.
Percentage Distribution of the Black or African American Population by State: 2010

Black or African American alone	NY 7.9	FL 7.7	TX 7.7	GA 7.6	CA 5.9	All other states 63.3
Black or African American in combination	CA 12.4	NY 8.4	FL 6.5	TX 6.1	OH 4.3	All other states 62.2

Note: Percentages may not add to 100.0 due to rounding.
 Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

California (see Figure 3). The pattern for the Black alone population was similar, where 8 percent of the Black alone population lived in New York, Florida, Texas, and Georgia and 6 percent lived in California.

The pattern was slightly different for respondents who identified as Black in combination with one or more additional races. Among multiple-race Blacks, 12 percent lived in California, 8 percent in New York, 6 percent lived in both Florida and Texas, and 4 percent in Ohio.

The Black population was highly concentrated in counties in the South.

The Black alone-or-in-combination population was highly concentrated in 2010: 62 percent (1,941 counties) of all counties in the United States had less than 5 percent of the population identified as Black alone-or-in-combination, but in 106 counties, the Black alone-or-in-combination population comprised 50 percent or more of the total county population. All of these counties were located in the South except for the city of St. Louis, MO, which

is considered a county equivalent (see Figure 4). These patterns were similar for the Black alone population.

Concentrations of Blacks outside of the South tended to be in counties located within metropolitan statistical areas. There were 317 counties where the Black alone-or-in-combination population was 25.0 to 49.9 percent of the county population, and only 17 of these counties were not in the South. Of these 17 counties, 15 were in metro areas. This pattern was similar for the Black alone population.

Although the Black alone-or-in-combination population and the Black alone population were not as concentrated in counties in midwestern states, in some metro areas, such as around Chicago, IL, and Detroit, MI, the proportion Black was much higher than the national average of 13 percent. Also, in some metro areas in the West, such as around San Francisco, CA, and Sacramento, CA, the proportion Black was above the national average.

The Black population in the South experienced mixed growth—some counties experienced an increase, while others experienced a decline.

Among the 1,558 counties with a Black alone-or-in-combination population of over 1,000 people, over one-third (536 counties) had an increase of 25 percent or more from 2000 to 2010 (see Figure 5). On the other hand, 100 counties had a decrease of over 10 percent. The Black alone-or-in-combination population in counties located in northeastern states such as Maine and Pennsylvania grew significantly, as well as counties in the South, specifically Florida, which had a number of counties that grew by 25 percent or more.

Large growth in the Black alone-or-in-combination population also occurred in the West and sections of the Midwest. Counties in Arizona, Nevada, California, Oregon, and Washington grew substantially between 2000 and 2010. The Midwest had pockets of high growth in states such as Minnesota, Wisconsin, and Illinois.

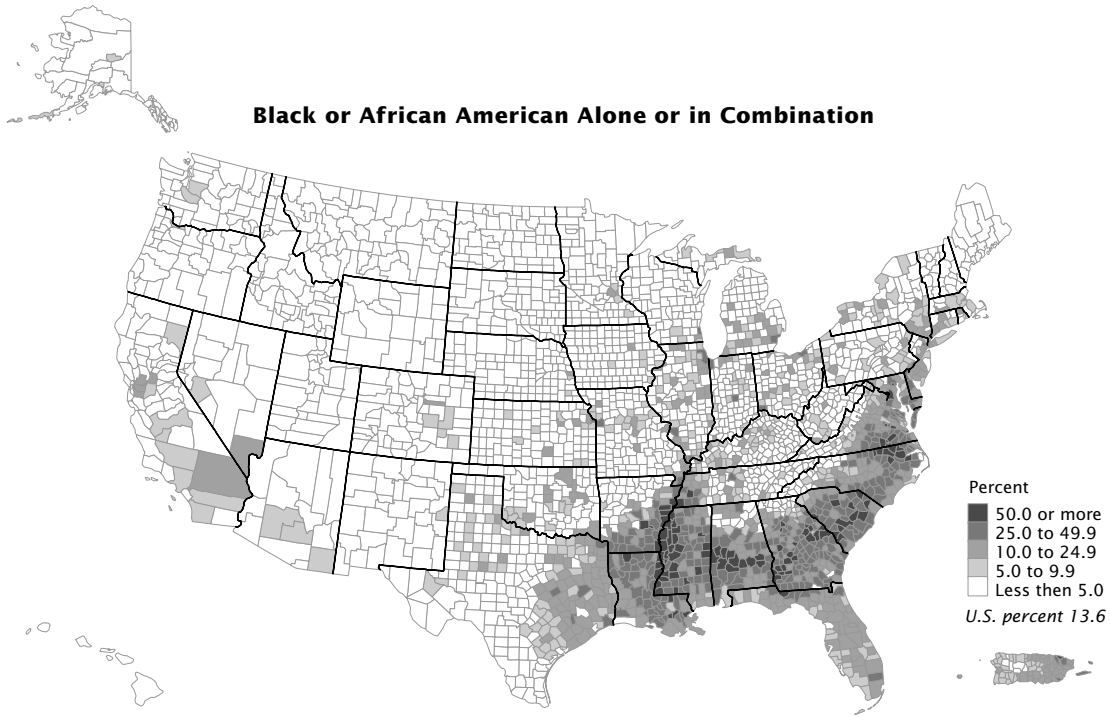

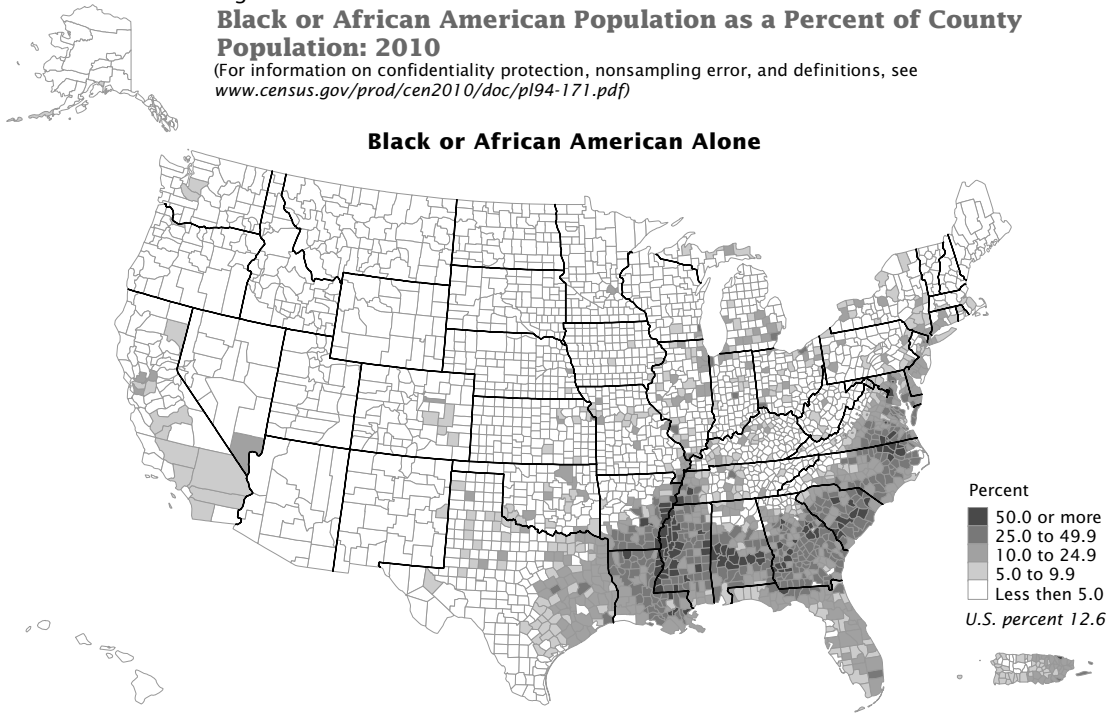

The Black alone-or-in-combination population in the South experienced the largest percentage declines between 2000 and 2010. Counties located in southern states such as Texas, Arkansas, Louisiana, Mississippi, Alabama, and Georgia experienced greater declines in the Black alone-or-in-combination population compared to the rest of the nation. The Black alone population had similar results.

The Black in combination population had large concentrations in northeastern states and counties near metro areas in the West, Midwest, and South.

In 2010, large proportions of the Black in combination population were located in counties

¹ Places of 100,000 or more total population. The 2010 Census showed 282 places in the United States with 100,000 or more population. They included 273 incorporated places (including 5 city-county consolidations) and 9 census designated places (CDPs) that were not legally incorporated.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

in northeastern states such as Pennsylvania, New Jersey, New York, and Massachusetts (see Figure 6). The Black in combination population was also concentrated in counties in midwestern states such as Ohio, Michigan, and Indiana, as well as in counties in southern states such as Georgia, North Carolina, and Florida.

Counties near metro areas in the Midwest such as Chicago, IL; Detroit, MI; and Minneapolis, MN, also had large concentrations of the Black in combination population. There were also large concentrations of the Black in combination population in the West in counties near metro areas such as Los Angeles, CA; San Francisco, CA; and Seattle, WA.

The places with the largest Black population were New York and Chicago.

Among the places with populations of 100,000 or more, the 2010 Census showed that New York, NY, had the largest Black

alone-or-in-combination population with 2.2 million, followed by Chicago, IL (913,000) (see Table 6). Three other places had Black alone-or-in-combination populations of over 500,000 people (Philadelphia, PA; Detroit, MI; and Houston, TX).

Five of the ten places with the largest Black alone-or-in-combination populations—Houston, TX; Memphis, TN; Baltimore, MD; Washington, DC; and Dallas, TX—were in the South. These rankings were identical for the Black alone population.

The places with the largest Black in combination populations were New York and Los Angeles.

Among the places with populations of 100,000 or more, New York, NY, had the largest Black in combination population (1,400,000), followed by Los Angeles, CA (37,000) (see Table 6). Two other places, Chicago, IL, and Philadelphia, PA, had populations over 25,000.

In contrast to the patterns observed for the Black alone-or-in-combination population, only one out of the ten places with the largest Black in combination population was in the South and there was more representation of places in the Midwest and the West.

The place with the greatest proportion Black was Detroit.

Among the places with populations of 100,000 or more, the places with the greatest proportion Black alone-or-in-combination were Detroit, MI (84 percent); followed by Jackson, MS (80 percent); Miami Gardens, FL (78 percent); and Birmingham, AL (74 percent) (see Table 7). Of the top ten places shown, all were majority Black.

Of these places, eight were in the South, and two were in the Midwest, specifically Michigan. These patterns were the same for the Black alone population and the proportions were similar to the Black alone-or-in-combination population.

Table 7.
Ten Places With the Highest Percentage of Blacks or African Americans: 2010

(For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

¹ Places of 100,000 or more total population. The 2010 Census showed 282 places in the United States with 100,000 or more population. They included 273 incorporated places (including 5 city-county consolidations) and 9 census designated places (CDPs) that were not legally incorporated.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

The place with the highest proportion of people who identified as multiple-race Black was Lansing, MI.

Among the places with populations of 100,000 or more, the places with the highest proportion of people who identified as Black and one or more other races were Lansing, MI; Tacoma, WA; Killeen, TX; and Syracuse, NY (about 4 percent each) (see Table 7). Of these ten places, three were in the Northeast, three were in the West, two in the Midwest, and two in the South.

Among the 20 largest metropolitan statistical areas, New York-Northern New Jersey-Long Island, NY-NJ-PA, had the highest proportion of the non-Hispanic Black alone population living inside the largest principal city.

The remaining sections discuss geographic patterns for the non-Hispanic Black alone population

and make comparisons to other race and ethnic groups.

Figure 7 shows the proportion of selected race and Hispanic origin groups who lived inside the largest principal city of the 20 largest metro areas in the country versus those who lived outside of that largest principal city.²⁰ The red bars represent the non-Hispanic Black alone population, the blue bars represent the non-Hispanic White alone population, the green bars represent the Hispanic population, and the orange bars represent other race groups.²¹ For example, the red bar denotes the proportion of the

²⁰ For the remainder of this section, when metro areas are discussed, the report will refer to the largest 20 metropolitan statistical areas.

²¹ For this report, the “other” race group refers to the non-Hispanic Asian alone, non-Hispanic American Indian and Alaska Native alone, non-Hispanic Native Hawaiian and Other Pacific Islander alone, and non-Hispanic Some Other Race alone populations, as well as non-Hispanics who reported multiple races.

non-Hispanic Black alone population that lived inside the largest principal city of Boston (46 percent), out of the total non-Hispanic Black alone population in the entire Boston-Cambridge-Quincy, MA-NH metro area.

The top 5 metro areas that had the highest proportion of the non-Hispanic Black alone population living inside their respective largest principal cities were New York-Northern New Jersey-Long Island, NY-NJ-PA (61 percent); Detroit-Warren-Livonia, MI (60 percent); San Diego-Carlsbad-San Marcos, CA (56 percent); Chicago-Joliet-Naperville, IL-IN-WI (54 percent); and Philadelphia-Camden-Wilmington, PA-NJ-DE-MD (53 percent).

The 5 metro areas with the lowest proportion of the non-Hispanic Black alone population living inside their respective largest principal cities were Miami-Fort

Lauderdale-Pompano Beach, FL (6 percent); Riverside-San Bernardino-Ontario, CA (7 percent); Atlanta-Sandy Springs-Marietta, GA (13 percent); San Francisco-Oakland-Fremont, CA (13 percent); and Washington-Arlington-Alexandria, DC-VA-MD-WV (21 percent).

The proportion of the non-Hispanic Black alone population living inside the largest principal city surpassed 40 percent in all of the northeastern metro areas shown.

Across the northeastern metro areas shown, at least 40 percent of the non-Hispanic Black alone population lived inside their respective largest principal city—New York (61 percent), Philadelphia (53 percent), and Boston (46 percent) (see Figure 7).²²

In the South, 2 out of the 7 metro areas shown had at least 40 percent of the non-Hispanic Black alone population living inside their respective largest principal city—Baltimore (51 percent) and Houston (49 percent). In the Midwest, this was the case for 2 out of the 4 metro areas shown—Chicago (54 percent) and Detroit (60 percent). In the West, half of the metro areas shown had at least 40 percent of the non-Hispanic Black alone population living inside their largest respective principal city—San Diego (56 percent), Phoenix (45 percent), and Los Angeles (40 percent).

²² The Philadelphia-Camden-Wilmington, PA-NJ-DE-MD metro area contains counties that are also part of the South region as defined by the U.S. Census Bureau.

The non-Hispanic Black alone population was more likely to live inside the largest principal cities compared with non-Hispanic White alone, Hispanic, and other race populations.

A higher proportion of the non-Hispanic Black alone population lived inside the largest principal cities in 15 out of the 20 largest metro areas, relative to the non-Hispanic White alone, Hispanic, and other race populations (see Figure 7). This was most pronounced in the metro areas of Detroit-Warren-Livonia, MI, and Baltimore-Towson, MD, where the proportion of the non-Hispanic Black alone population living in the largest principal city surpassed the second largest group, Hispanics, by 30 percentage points.

Metro areas that had a lower proportion of the non-Hispanic Black alone population living inside their largest principal city, relative to the Hispanic and other race group populations, were primarily located in the West—the metro areas of Phoenix-Mesa-Glendale, AZ; Riverside-San Bernardino-Ontario, CA; San Diego-Carlsbad-San Marcos, CA; and San Francisco-Oakland-Fremont, CA. However, the metro area with the lowest proportion was Miami-Fort Lauderdale-Pompano Beach, FL, located in the South.

In the metro areas of Miami-Fort Lauderdale-Pompano Beach, FL, and Phoenix-Mesa-Glendale, AZ, a higher proportion of the Hispanic population lived inside the largest principal cities of Miami and Phoenix, relative to the non-Hispanic Black alone population. In the metro area of Riverside-San Bernardino-Ontario, CA, the non-Hispanic Black alone population had the lowest proportion living

inside the city of Riverside, relative to the other groups shown.

In the metro area of San Diego-Carlsbad-San Marcos, CA, the other race category had a slightly higher proportion living in the city of San Diego relative to the non-Hispanic Black alone population. In the metro area of San Francisco-Oakland-Fremont, CA, both the other race category and the non-Hispanic White alone population had a higher proportion living in the city of San Francisco relative to the non-Hispanic Black alone population.

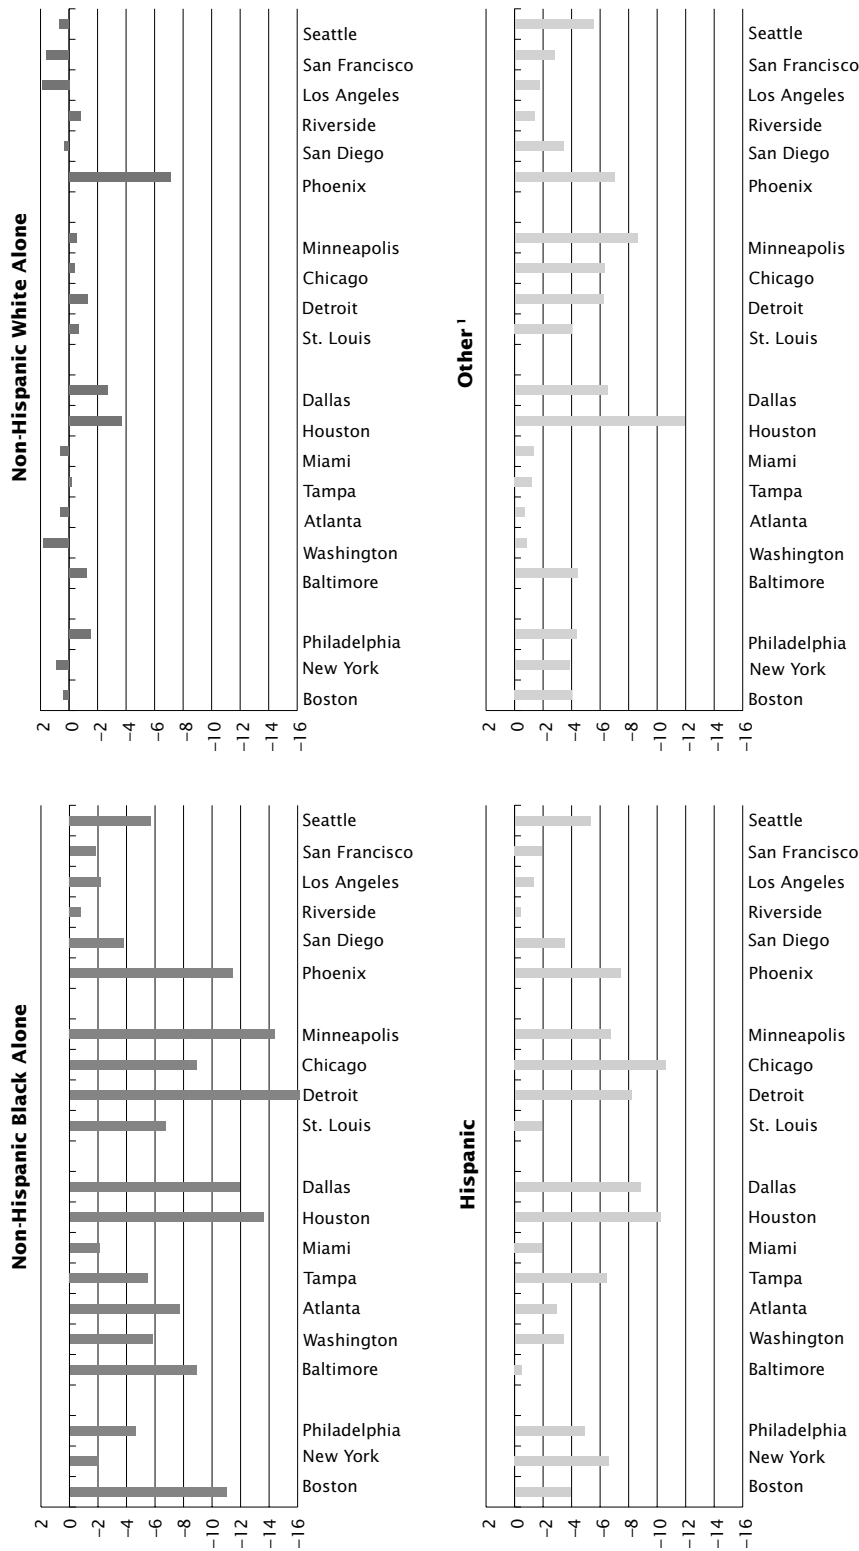

The proportion of the non-Hispanic Black alone population living inside the largest principal cities within the 20 largest metro areas decreased over the last decade.

Figure 8 shows the percentage-point difference of a race or Hispanic origin group living inside the largest principal city in a metro area, from 2000 to 2010.²³ The red bars represent the non-Hispanic Black alone population, the blue bars represent the non-Hispanic White alone population, the green bars represent the Hispanic population, and the orange bars represent other race groups. For example, in the Boston-Cambridge-Quincy, MA-NH metro area, 57 percent of the non-Hispanic Black alone population lived in the largest principal city, Boston, in 2000. This figure decreased to 46 percent in 2010, representing a decline of 11 percentage points, which is denoted by the red bar.

Across the 20 largest metro areas in the United States, the non-Hispanic Black alone population declined in the largest principal

²³ Data for the metro areas are based on the 2010 Census boundaries.

Figure 8. Percentage-Point Difference of Race and Ethnic Groups Living Inside the Largest Principal City of the 20 Largest Metropolitan Statistical Areas: 2000 to 2010
 (For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

¹ For this figure, the "other" race category refers to the non-Hispanic Asian alone, non-Hispanic American Indian and Alaska Native alone, non-Hispanic Native Hawaiian and Other Pacific Islander alone, and non-Hispanic Some Other Race alone populations, as well as non-Hispanics who reported multiple races.
 Note: Principal cities within regions are organized based on proximity to each other. Boston, New York, and Philadelphia are located in the Northeast census region. Baltimore, Washington, Atlanta, Tampa, Miami, Houston, and Dallas are located in the South census region. St. Louis, Detroit, Chicago, and Minneapolis are located in the Midwest census region. Phoenix, San Diego, Riverside, Los Angeles, San Francisco, and Seattle are located in the West census region.
 Source: U.S. Census Bureau, 2010 Census special tabulation.

cities and increased outside of these cities from 2000 to 2010. This largely follows the trend of the total population in these metro areas, where the proportion of the total population living inside the largest principal city within a metro area declined in 19 out of the 20 largest metro areas and increased as a proportion outside the largest principal cities from 2000 to 2010. The metro area of Boston-Cambridge-Quincy, MA-NH, was the only metro area that experienced an increase in the proportion of the total population living inside the city of Boston.

The proportion of the non-Hispanic Black alone population in the largest principal cities decreased by at least 10 percentage points in six metro areas from 2000 to 2010, Detroit-Warren-Livonia, MI (16 percentage points); Minneapolis-St. Paul-Bloomington, MN-WI (14 percentage points); Houston-Sugar Land-Baytown, TX (14 percentage points); Dallas-Fort Worth-Arlington, TX (12 percentage points); Phoenix-Mesa-Glendale, AZ (11 percentage points); and Boston-Cambridge-Quincy, MA-NH (11 percentage points).

Among the 20 largest metro areas, the proportion of the non-Hispanic Black alone population living inside the largest principal cities declined by at least 7 percentage points across all midwestern metro areas.

The proportion of the non-Hispanic Black alone population living inside the largest principal cities across midwestern metro areas declined by at least 7 percentage points from 2000 to 2010. The largest change was in the Detroit-Warren-Livonia, MI metro area, where the proportion of the non-Hispanic Black alone population living inside the city of Detroit versus outside

the city decreased by 16 percentage points. This was followed by Minneapolis-St. Paul-Bloomington, MN-WI (14 percentage points); Chicago-Joliet-Naperville, IL-IN-WI (9 percentage points); and St. Louis, MO-IL (7 percentage points).

In the Northeast, the proportion of the non-Hispanic Black alone population living inside the largest principal city declined by at least 7 percentage points in 1 out of the 3 metro areas, Boston-Cambridge-Quincy, MA-NH (11 percentage points). In the South, 4 of the 7 metro areas experienced a decline of at least 7 percentage points—Houston-Sugar Land-Baytown, TX (14 percentage points); Dallas-Fort Worth-Arlington, TX (12 percentage points); Baltimore-Towson, MD (9 percentage points); and Atlanta-Sandy Springs-Marietta, GA (8 percentage points).

The non-Hispanic Black alone population experienced the greatest decline in the proportion living inside the largest principal city for 14 of the 20 largest metro areas.

The proportion of the non-Hispanic Black alone population living inside the largest principal city declined more than the proportion of other race and ethnic groups that also experienced decreases in the largest principal cities in 14 out of the 20 metro areas. In the metro areas of New York-Northern New Jersey-Long Island, NY-NJ-PA; Philadelphia-Camden-Wilmington, PA-NJ-DE-MD; Tampa-St. Petersburg-Clearwater, FL; and Chicago-Joliet-Naperville, IL-IN-WI; the Hispanic population experienced the greatest declines compared to all groups shown. In the metro areas of Riverside-San Bernardino-Ontario, CA, and San Francisco-Oakland-Fremont, CA, the other race category experienced the greatest declines relative to all groups shown.

Although not as sweeping as the decline in the proportion of the non-Hispanic Black alone population living inside the largest principal cities of most major metro areas, the proportion of the Hispanic population and other race group populations living inside the largest principal city also declined in all of the 20 largest metro areas (see Figure 8). On the other hand, in about half of the largest metro areas, the proportion of the non-Hispanic White alone population living inside the largest principal city increased.

SUMMARY

This report provided a portrait of the Black population in the United States and contributes to our understanding of the nation's changing racial and ethnic diversity.

While both the Black alone population and the Black alone-or-in-combination population grew from 2000 to 2010 (by 12 percent and 15 percent, respectively), the Black in combination population experienced the most growth, increasing by 76 percent. Within this population, the Black *and* White population more than doubled.

Additional notable trends were presented in this report. The Black population continued to be concentrated in the South and the proportion increased from 2000 to 2010. Additionally, the Black population that lived outside of the South tended to be more concentrated in metro areas.

Other interesting geographic patterns include, for the largest 20 metro areas, the non-Hispanic Black alone population was more likely to live in a largest principal city relative to the non-Hispanic White alone, Hispanic, and other race group populations in 2010. The

non-Hispanic Black alone population also experienced the greatest declines in the proportion living in a largest principal city from 2000 to 2010.

Throughout the decade, the Census Bureau will release additional information on the Black population, including characteristics such as age, sex, and family type, which will provide greater insights into the demographic characteristics of this population at various geographic levels.

ABOUT THE 2010 CENSUS

Why was the 2010 Census conducted?

The U.S. Constitution mandates that a census be taken in the United States every 10 years. This is required in order to determine the number of seats each state is to receive in the U.S. House of Representatives.

Why did the 2010 Census ask the question on race?

The Census Bureau collects data on race to fulfill a variety of legislative and program requirements. Data on race are used in the legislative redistricting process carried out by the states and in monitoring local jurisdictions' compliance with the Voting Rights Act. More broadly, data on race are critical for research that underlies many policy decisions at all levels of government.

How do data from the question on race benefit me, my family, and my community?

All levels of government need information on race to implement and evaluate programs, or enforce laws, such as the Civil Rights Act, Voting Rights Act, Fair Housing Act, Equal Employment Opportunity Act, and the 2010 Census Redistricting Data Program.

Both public and private organizations use race information to find areas where groups may need special services and to plan and implement education, housing, health, and other programs that address these needs. For example, a school system might use this information to design cultural activities that reflect the diversity in their community, or a business could use it to select the mix of merchandise it will sell in a new store. Census information also helps identify areas where residents might need services of particular importance to certain racial groups, such as screening for hypertension or diabetes.

FOR MORE INFORMATION

For more information on race in the United States, visit the Census Bureau's Internet site at www.census.gov/population/www/socdemo/race/race.html.

Information on confidentiality protection, nonsampling error, and definitions is available at www.census.gov/prod/cen2010/doc/pl94-171.pdf.

Data on race from the *2010 Census Redistricting Data (Public Law 94-171) Summary File* were released on a state-by-state basis. The 2010 Census redistricting data are available on the Internet at <http://factfinder2.census.gov/main.html> and on DVD.

For more information on specific race groups in the United States, go to www.census.gov and search for "Minority Links." This Web page includes information about the 2010 Census and provides links to reports based on past censuses and surveys focusing on the social and economic characteristics of the Black or African American, American Indian and Alaska Native, Asian, and Native Hawaiian and Other Pacific Islander populations.

Information on other population and housing topics is presented in the 2010 Census Briefs series, located on the Census Bureau's Web site at www.census.gov/prod/cen2010. This series presents information about race, Hispanic origin, age, sex, household type, housing tenure, and people who reside in group quarters.

For more information about the 2010 Census, including data products, call the Customer Services Center at 1-800-923-8282. You can also visit the Census Bureau's Question and Answer Center at ask.census.gov to submit your questions online.

Overview of Race and Hispanic Origin: 2010

2010 Census Briefs

Issued March 2011

C2010BR-02

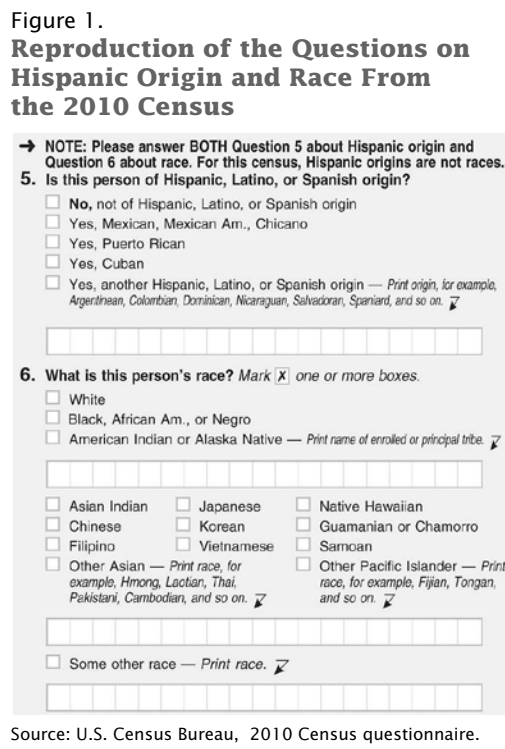

INTRODUCTION

This report looks at our nation's changing racial and ethnic diversity. It is part of a series that analyzes population and housing data collected from the 2010 Census, and it provides a snapshot of race and Hispanic origin in the United States. Racial and ethnic population group distributions and growth at the national level and at lower levels of geography are presented.

This report also provides an overview of race and ethnicity concepts and definitions used in the 2010 Census. The data for this report are based on the *2010 Census Redistricting Data (Public Law 94-171) Summary File*, which is among the first 2010 Census data products to be released and is provided to each state for use in drawing boundaries for legislative districts.¹

¹ The *2010 Census Redistricting Data (Public Law 94-171) Summary File* provides data on Hispanic origin and race, including information on the population reporting more than one race as well as detailed race combinations (e.g., White **and** Asian; White **and** Black or African American **and** American Indian and Alaska Native). In this report, the multiple-race combination categories are denoted with the conjunction **and** in bold and italicized print to indicate the specific race groups that comprise the particular combination. This report discusses data for the 50 states and the District of Columbia but not Puerto Rico.

The *2010 Census Redistricting Data (Public Law 94-171) Summary File* does not contain data for detailed Hispanic origin groups (e.g., Mexican or Puerto Rican) or detailed information about race or tribes (e.g., Chinese, Samoan, or Choctaw). Therefore, these specific groups are not discussed in this report. Data on detailed Hispanic origin groups and detailed information about race and tribes will be released on a state-by-state basis as part of the *2010 Census Demographic Profile* and the *2010 Census Summary File 1*. Additional reports on the Hispanic or Latino population and selected race population groups will be released as part of the 2010 Census Briefs series. For a detailed schedule of 2010 Census products and release dates, visit www.census.gov/population/www/cen2010/glance/index.html.

UNDERSTANDING RACE AND HISPANIC ORIGIN DATA FROM THE 2010 CENSUS

The 2010 Census used established federal standards to collect and present data on race and Hispanic origin.

For the 2010 Census, the questions on race and Hispanic origin were asked of individuals living in the United States (see Figure 1). An individual's responses to the race question and to the Hispanic origin question were based upon

self-identification. The U.S. Census Bureau collects race and Hispanic origin information following the guidance of the U.S. Office of Management and Budget's (OMB) 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*.² These federal standards mandate that race and Hispanic origin (ethnicity) are separate and distinct concepts and that when collecting these data via self-identification, two different questions must be used.

Hispanic Origin

The OMB definition of Hispanic or Latino origin used in the 2010 Census is presented in the text box "Definition of Hispanic or Latino Origin Used in the 2010 Census." OMB requires federal agencies to use a minimum of two ethnicities: Hispanic or Latino and Not Hispanic or Latino. Hispanic origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be any race.³

Definition of Hispanic or Latino Origin Used in the 2010 Census

"Hispanic or Latino" refers to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race.

² The 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*, issued by OMB, is available at <www.whitehouse.gov/omb/fedreg/1997standards.html>.

³ The terms "Hispanic or Latino" and "Hispanic" are used interchangeably in this report.

The 2010 Census question on Hispanic origin included five separate response categories and one area where respondents could write-in a specific Hispanic origin group. The first response category is intended for respondents who do not identify as Hispanic. The remaining response categories ("Mexican, Mexican Am., or Chicano"; "Puerto Rican"; "Cuban"; and "Another Hispanic, Latino, or Spanish origin") and write-in answers can be combined to create the OMB category of Hispanic.⁴

Race

The OMB definitions of the race categories used in the 2010 Census, plus the Census Bureau's definition of Some Other Race, are presented in the text box "Definition of Race Categories Used in the 2010 Census." Starting in 1997, OMB required federal agencies to use a minimum of five race categories: White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. For respondents unable to identify with any of these five race categories, OMB approved the Census Bureau's inclusion of a sixth category—Some Other Race—on the Census 2000 and 2010 Census questionnaires.

⁴ There were three changes to the Hispanic origin question for the 2010 Census. First, the wording of the question changed from "Is this person Spanish/Hispanic/Latino?" in 2000 to "Is this person of Hispanic, Latino, or Spanish origin?" in 2010. Second, in 2000, the question provided an instruction, "Mark the 'No' box if **not** Spanish/Hispanic/Latino." The 2010 Census question provided no specific instruction for non-Hispanic respondents. Third, in 2010, the "Yes, another Hispanic, Latino, or Spanish origin" category provided examples of six Hispanic origin groups (Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, Spaniard, and so on) and instructed respondents to "print origin." In 2000, no Hispanic origin examples were given.

Data on race have been collected since the first U.S. decennial census in 1790.⁵ For the first time in Census 2000, individuals were presented with the option to self-identify with more than one race and this continued with the 2010 Census, as prescribed by OMB. There are 57 possible multiple race combinations involving the five OMB race categories and Some Other Race.

The 2010 Census question on race included 15 separate response categories and three areas where respondents could write-in detailed information about their race.⁶ The response categories and write-in answers can be combined to create the five minimum OMB race categories plus Some Other Race. In addition to White, Black or African American, American Indian and Alaska Native, and Some Other Race, 7 of the 15 response categories are Asian groups and 4 are Native Hawaiian and Other Pacific Islander groups.⁷

⁵ For information about comparability of 2010 Census data on race and Hispanic origin to data collected in previous censuses, see the *2010 Census Redistricting Data (Public Law 94-171) Summary File—Technical Documentation* at <www.census.gov/prod/cen2010/doc/pl94-171.pdf>.

⁶ There were two changes to the question on race for the 2010 Census. First, the wording of the race question was changed from "What is this person's race? Mark one or more races to indicate what this person considers himself/herself to be" in 2000 to "What is this person's race? Mark one or more boxes" for 2010. Second, in 2010, examples were added to the "Other Asian" response category (Hmong, Laotian, Thai, Pakistani, Cambodian, and so on) and the "Other Pacific Islander" response category (Fijian, Tongan, and so on). In 2000, no examples were given in the race question.

⁷ The race categories included in the census questionnaire generally reflect a social definition of race recognized in this country and are not an attempt to define race biologically, anthropologically, or genetically. In addition, it is recognized that the categories of the race question include race and national origin or sociocultural groups.

Definition of Race Categories Used in the 2010 Census

“White” refers to a person having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicated their race(s) as “White” or reported entries such as Irish, German, Italian, Lebanese, Arab, Moroccan, or Caucasian.

“Black or African American” refers to a person having origins in any of the Black racial groups of Africa. It includes people who indicated their race(s) as “Black, African Am., or Negro” or reported entries such as African American, Kenyan, Nigerian, or Haitian.

“American Indian or Alaska Native” refers to a person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment. This category includes people who indicated their race(s) as “American Indian or Alaska Native” or reported their enrolled or principal tribe, such as Navajo, Blackfeet, Inupiat, Yup’ik, or Central American Indian groups or South American Indian groups.

“Asian” refers to a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. It includes people who indicated their race(s) as “Asian” or reported entries such as “Asian Indian,” “Chinese,” “Filipino,” “Korean,” “Japanese,” “Vietnamese,” and “Other Asian” or provided other detailed Asian responses.

“Native Hawaiian or Other Pacific Islander” refers to a person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. It includes people who indicated their race(s) as “Pacific Islander” or reported entries such as “Native Hawaiian,” “Guamanian or Chamorro,” “Samoan,” and “Other Pacific Islander” or provided other detailed Pacific Islander responses.

“Some Other Race” includes all other responses not included in the White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander race categories described above. Respondents reporting entries such as multiracial, mixed, interracial, or a Hispanic or Latino group (for example, Mexican, Puerto Rican, Cuban, or Spanish) in response to the race question are included in this category.

RACE AND HISPANIC ORIGIN IN THE 2010 CENSUS

Data from the 2010 Census provide insights to our racially and ethnically diverse nation. According to the 2010 Census, 308.7 million

people resided in the United States on April 1, 2010—an increase of 27.3 million people, or 9.7 percent, between 2000 and 2010. The vast majority of the growth in the total population came from increases in those who reported their race(s) as

something other than White alone and those who reported their ethnicity as Hispanic or Latino.⁸

More than half of the growth in the total population of the United States between 2000 and 2010 was due to the increase in the Hispanic population.

In 2010, there were 50.5 million Hispanics in the United States, composing 16 percent of the total population (see Table 1). Between 2000 and 2010, the Hispanic population grew by 43 percent—rising from 35.3 million in 2000, when this group made up 13 percent of the total population.⁹ The Hispanic population increased by 15.2 million between 2000 and 2010, accounting for over half of the 27.3 million increase in the total population of the United States.

The non-Hispanic population grew relatively slower over the decade, about 5 percent. Within the non-Hispanic population, the number of people who reported their race as White alone grew even slower between 2000 and 2010 (1 percent). While the non-Hispanic White alone population increased numerically from 194.6 million to 196.8 million over the 10-year period, its proportion of the total population declined from 69 percent to 64 percent.

⁸ For the purposes of this report, the term “reported” is used to refer to the response provided by respondents as well as responses assigned during the editing and imputation process.

⁹ The observed changes in race and Hispanic origin counts between Census 2000 and the 2010 Census could be attributed to a number of factors. Demographic change since 2000, which includes births and deaths in a geographic area and migration in and out of a geographic area, will have an impact on the resulting 2010 Census counts. Additionally, some changes in the race and Hispanic origin questions’ wording and format since Census 2000 could have influenced reporting patterns in the 2010 Census.

Table 1.
Population by Hispanic or Latino Origin and by Race for the United States: 2000 and 2010
 (For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Hispanic or Latino origin and race	2000		2010		Change, 2000 to 2010	
	Number	Percentage of total population	Number	Percentage of total population	Number	Percent
HISPANIC OR LATINO ORIGIN AND RACE						
Total population	281,421,906	100.0	308,745,538	100.0	27,323,632	9.7
Hispanic or Latino	35,305,818	12.5	50,477,594	16.3	15,171,776	43.0
Not Hispanic or Latino	246,116,088	87.5	258,267,944	83.7	12,151,856	4.9
White alone	194,552,774	69.1	196,817,552	63.7	2,264,778	1.2
RACE						
Total population	281,421,906	100.0	308,745,538	100.0	27,323,632	9.7
One Race	274,595,678	97.6	299,736,465	97.1	25,140,787	9.2
White	211,460,626	75.1	223,553,265	72.4	12,092,639	5.7
Black or African American	34,658,190	12.3	38,929,319	12.6	4,271,129	12.3
American Indian and Alaska Native	2,475,956	0.9	2,932,248	0.9	456,292	18.4
Asian	10,242,998	3.6	14,674,252	4.8	4,431,254	43.3
Native Hawaiian and Other Pacific Islander	398,835	0.1	540,013	0.2	141,178	35.4
Some Other Race	15,359,073	5.5	19,107,368	6.2	3,748,295	24.4
Two or More Races ¹	6,826,228	2.4	9,009,073	2.9	2,182,845	32.0

¹ In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific race combinations not involving Some Other Race, such as White **and** Black or African American or White **and** Asian, generally should be more comparable.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Tables PL1 and PL2; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Tables P1 and P2.

The overwhelming majority of the total population of the United States reported only one race in 2010.

In the 2010 Census, 97 percent of all respondents (299.7 million) reported only one race (see Table 1).¹⁰ The largest group reported

¹⁰ Individuals who responded to the question on race by indicating only one race are referred to as the *race-alone* population or the group that reported only one race category. Six categories make up this population: White alone, Black or African American alone, American Indian and Alaska Native alone, Asian alone, Native Hawaiian and Other Pacific Islander alone, and Some Other Race alone. Individuals who chose more than 1 of the 6 race categories are referred to as the Two or More Races population. All respondents who indicated more than one race can be collapsed into the Two or More Races category which, combined with the six race-alone categories, yields seven mutually exclusive and exhaustive categories. Thus, the six race-alone categories and the Two or More Races category sum to the total population.

White alone (223.6 million), accounting for 72 percent of all people living in the United States.¹¹ The Black or African-American alone population was 38.9 million and represented 13 percent of the total population.¹² There were 2.9 million respondents who indicated American Indian and Alaska Native alone (0.9 percent). Approximately 14.7 million (about 5 percent of all respondents) identified their race

¹¹ As a matter of policy, the Census Bureau does not advocate the use of the *alone* population over the *alone-or-in-combination* population or vice versa. The use of the *alone* population in sections of this report does not imply that it is a preferred method of presenting or analyzing data. The same is true for sections of this report that focus on the *alone-or-in-combination* population. Data on race from the 2010 Census can be presented and discussed in a variety of ways.

¹² The terms "Black or African American" and "Black" are used interchangeably in this report.

as Asian alone. The smallest major race group was Native Hawaiian and Other Pacific Islander alone (0.5 million) and represented 0.2 percent of the total population. The remainder of respondents who reported only one race—19.1 million (6 percent of all respondents)—were classified as Some Other Race alone. People who reported more than one race numbered 9.0 million in the 2010 Census and made up about 3 percent of the total population.

The Asian population grew faster than any other major race group between 2000 and 2010.

In the United States, all major race groups increased in population size between 2000 and 2010, but they

grew at different rates. Over the decade, the Asian alone population experienced the fastest rate of growth and the White alone population experienced the slowest rate of growth, with the other major race groups' growth spanning the range in between. Of the 27.3 million people added to the total population of the United States between 2000 and 2010, the White alone population made up just under half of the growth—increasing 12.1 million. Within the White alone population, the vast majority of the growth was propelled by the Hispanic population.

The Asian alone population increased by 43 percent between 2000 and 2010, more than any other major race group. The Asian alone population had the second-largest numeric change (4.4 million), growing from 10.2 million in 2000 to 14.7 million in 2010. The Asian alone population gained the most in share of the total population, moving up from about 4 percent in 2000 to about 5 percent in 2010.

The Native Hawaiian and Other Pacific Islander alone population, the smallest major race group, also grew substantially between 2000 and 2010, increasing by more than one-third. This population numbered 398,835 in 2000, rising to 540,013 in 2010 with its proportion of the total population changing from 0.1 percent to 0.2 percent, respectively.

Between 2000 and 2010, the population classified as Some Other Race alone increased considerably,

growing by about one-quarter. This population climbed from 15.4 million in 2000 to 19.1 million in 2010 and was approximately 6 percent of the total population in both decennial censuses. Most of this growth was due to increases in the Hispanic population.

An 18 percent growth in the American Indian and Alaska Native alone population occurred between 2000 and 2010. This population, also relatively small numerically, maintained its proportion of the total population between decennial censuses (0.9 percent) while growing from 2.5 million to 2.9 million.

While the Black alone population had the third-largest numeric increase in population size over the decade (4.3 million), behind the White alone and Asian alone populations, it grew slower than most other major race groups. In fact, the Black alone population exhibited the smallest percentage growth outside of the White alone population, increasing 12 percent between 2000 and 2010. This population rose from 34.7 million in 2000 to 38.9 million in 2010, making up 12 percent and 13 percent of the total population, respectively.

The only major race group to experience a decrease in its proportion of the total population was the White alone population. While this group increased the most numerically between decennial censuses (211.5 million to 223.6 million), its share of the total population fell from 75 percent in 2000 to 72 percent in 2010.

The Two or More Races population was one of the fastest-growing groups over the decade. This population increased approximately one-third between 2000 and 2010.¹³

The Hispanic population predominantly identified as either White or Some Other Race.

People of Hispanic origin may be any race. For the 2010 Census, a new instruction was added immediately preceding the questions on Hispanic origin and race, which was not used in Census 2000. The instruction stated that “For this census, Hispanic origins are not races” because in the federal statistical system, Hispanic origin is considered to be a separate concept from race. However, this did not preclude individuals from self-identifying their race as “Latino,” “Mexican,” “Puerto Rican,” “Salvadoran,” or other national origins or ethnicities; in fact, many did so. If the response provided to the race question could not be classified in one or more of the five OMB race groups, it was generally classified in the category Some Other Race. Therefore, responses to the question on race that reflect a Hispanic origin were classified in the Some Other Race category.

¹³ In Census 2000, an error in data processing resulted in an overstatement of the Two or More Races population by about 1 million people (about 15 percent) nationally, which almost entirely affected race combinations involving Some Other Race. Therefore, data users should assess observed changes in the Two or More Races population and race combinations involving Some Other Race between Census 2000 and the 2010 Census with caution. Changes in specific multiple-race combinations not involving Some Other Race, such as White *and* Black or White *and* Asian, generally, should be more comparable.

The 2010 Census racial distributions of the Hispanic population and of the non-Hispanic population differ and are shown in Table 2. Over half of the Hispanic population identified as White and no other race, while about one-third provided responses that were classified as Some Other Race alone when responding to the question on race. Much smaller proportions of Hispanics identified as other race groups alone: Black alone (3 percent), American Indian and Alaska Native alone (1 percent), Asian alone (0.4 percent), and Native Hawaiian and Other Pacific Islander alone (0.1 percent).

The racial distribution of the non-Hispanic population, on the other hand, was mostly White alone (76 percent), Black alone (15 percent), and Asian alone (6 percent). Less than 1 percent of non-Hispanics provided responses to the race question that were classified as Some Other Race alone (0.2 percent).

In 2010, 6 percent of Hispanics reported multiple races. Among non-Hispanics, 2 percent reported more than one race.

Native Hawaiians and Other Pacific Islanders and American Indians and Alaska Natives were more likely than other groups to report multiple races.

In the 2010 Census, the population reporting their race as White, either alone or with at least one other race, was the largest of all the alone-or-in-combination categories (231.0 million) and represented about three-fourths of the total

Table 2. Population by Hispanic or Latino Origin and Race for the United States: 2010

population (see Table 3).¹⁴ People who reported their race as White in combination with one or more additional races numbered 7.5 million, making up 2 percent of the total population. About 14 percent of

the total population reported their race as Black, either alone or with at least one other race, which was the second-largest of the alone-or-in-combination categories (42.0 million).

¹⁴ The maximum number of people reporting a particular race is reflected in the race-alone-or-in-combination concept. This represents the number of times responses were part of 1 of the 6 major race categories, either alone or in combination with the other five race categories. There are six race-alone-or-in-combination categories, which are not mutually exclusive: White alone or in combination, Black alone or in combination, American Indian and Alaska Native alone or in combination, Asian alone or in combination, Native Hawaiian and Other Pacific Islander alone or in combination, and Some Other Race alone or in combination. For example, a respondent who indicated Asian **and** White was counted in the Asian alone-or-in-combination category as well as in the White alone-or-in-combination category. Therefore, the sum of all race-alone-or-in-combination categories equals the number of races reported (i.e., responses), which exceeds the total population.

There were 21.7 million people classified as Some Other Race alone or in combination and 17.3 million people classified as Asian alone or in combination in the 2010 Census, making up 7 percent and 6 percent of the total population, respectively. There were comparable levels and proportions of the total population who indicated race groups in combination with Some Other Race (2.6 million and 0.9 percent) and with Asian (2.6 million and 0.9 percent).

(X) Not applicable.

Note: The total population is equal to the number of respondents. In the 2010 Census, there were 308,745,538 respondents. The total of all race categories alone or in combination with one or more other races is equal to the number of responses; therefore, it adds to more than the total population.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

The two smallest alone-or-in-combination categories were American Indian and Alaska Native (5.2 million) and Native Hawaiian and Other Pacific Islander (1.2 million), making up 2 percent and 0.4 percent of the total population, respectively. These two categories were unique in that large proportions of these populations indicated more than one race, compared with other major race groups (see Figure 2). There were more reports of Native Hawaiian and Other Pacific Islander in combination with one or more additional races than there were of Native Hawaiian and Other Pacific Islander alone (0.7 million and 0.5 million, respectively). Almost as many people indicated American Indian and Alaska Native in combination with one or more additional races as people who indicated American Indian and Alaska Native alone (2.3 million and 2.9 million, respectively). Thus, over half of the Native Hawaiian and Other Pacific Islander population and almost half of the American Indian and Alaska Native population reported more than one race.

Most people who reported multiple races provided exactly two races in 2010; White *and* Black was the largest multiple-race combination.

Over the last 10 years, considerable research has been conducted on people of multiple races, and how they self-identify has become a more common part of our discussions and understanding of race and ethnicity. Results from the 2010 Census provide new information on the diversity and changes in the Two or More Races population in the United States.

Among people who reported more than one race in 2010, the vast majority (about 92 percent) reported exactly two races (see Table 4). An additional 8 percent of the Two or More Races population reported three races and less than 1 percent reported four or more races.

In 2010, four groups were, by far, the largest multiple-race combinations in the United States: White *and* Black (1.8 million), White *and* Some Other Race (1.7 million), White *and* Asian (1.6 million), and White *and* American Indian and Alaska Native (1.4 million). Together, these four combinations composed nearly three-fourths of the multiple-race population in the 2010 Census (see Figure 3).

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

Different multiple-race reporting patterns occurred for Hispanics and non-Hispanics.

Tables 5 through 10 present data for the major race groups and their largest multiple-race combinations by Hispanic origin. A general pattern existed in these data tables for people who reported more than one race in the 2010 Census. There

were more reports of multiple-race combinations that included White than reports of combinations involving any other group. This basic pattern also existed among non-Hispanics. However, among Hispanics, relatively large proportions reported multiple-race combinations involving Some Other Race, as well as combinations involving White.

Percentage Distribution of People Who Reported Multiple Races: 2010

(For more information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

Note: People reporting multiple races represented 2.9 percent of the total population. Black refers to Black or African American; AIAN refers to American Indian and Alaska Native; NHPI refers to Native Hawaiian and Other Pacific Islander; SOR refers to Some Other Race.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Table P1.

People who identified as White were the most likely to report only one race.

In the 2010 Census, 97 percent of people in the White alone-or-in-combination category reported White and no other race (see

Table 5). Among the 7.5 million people who reported they were White and one or more additional races, one-fourth reported White **and** Black, and nearly one-fourth reported White **and** Some Other Race. Another one-fifth reported

White **and** Asian, and nearly one-fifth reported White **and** American Indian and Alaska Native. This was a fairly even distribution of responses among the four largest combinations.

Table 5 shows that 29.2 million people of Hispanic origin reported that they were either White alone or White in combination with another race. Of the 2.4 million Hispanics who reported their race as White in combination with one or more additional races, almost two-thirds were classified as White **and** Some Other Race.

The multiple-race reporting pattern was different for non-Hispanic Whites. Of the 5.0 million non-Hispanics who reported that they were White and one or more additional races, about one-third reported White **and** Black, nearly one-third reported White **and** Asian, and about one-fourth reported White **and** American Indian and Alaska Native.

Within the population who identified as Black, Hispanics were more likely to report multiple races than non-Hispanics.

In the 2010 Census, 93 percent of people in the Black alone-or-in-combination category reported Black and no other race (see Table 6). Among the 3.1 million people who reported that they were Black and one or more additional races,

the majority reported being Black **and** White (59 percent).

The Black alone-or-in-combination population included 1.9 million people of Hispanic origin, 35 percent of whom reported multiple races. This is more than five times greater than the proportion reporting multiple races among non-Hispanics who identified as Black (6 percent). Most Hispanics who

identified as Black in combination with one or more additional races reported one of two combinations: Black **and** White (38 percent) and Black **and** Some Other Race (35 percent). This contrasts with non-Hispanics who identified as Black in combination with one or more additional races, where about two-thirds reported one combination, Black **and** White.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Tables P1 and P2.

Nearly half of all people who identified as American Indian and Alaska Native reported multiple races.

In 2010, 56 percent of people in the American Indian and Alaska Native alone-or-in-combination category reported one race (see Table 7). Of the 2.3 million who reported American Indian and Alaska Native along with one or more additional races, about 63 percent reported one combination: American Indian and Alaska Native **and** White. American Indian and Alaska Native **and** Black (12 percent) as well as American Indian and Alaska Native

and White **and** Black (10 percent) were also common combinations reported among this population.

Among those who identified as American Indian and Alaska Native, the proportion of Hispanics and non-Hispanics who reported more than one race was about the same—unlike any other race group.

There were 1.2 million people of Hispanic origin who identified as American Indian and Alaska Native, 43 percent of whom reported multiple races. The majority of Hispanics who reported more than one race within the American Indian and

Alaska Native population identified as one of two combinations: American Indian and Alaska Native **and** White (45 percent) and American Indian and Alaska Native **and** Some Other Race (21 percent). Similar to Hispanic American Indians and Alaska Natives, 44 percent of non-Hispanics who identified as American Indian and Alaska Native reported more than one race. However, unlike Hispanics, over two-thirds reported one combination: American Indian and Alaska Native **and** White.

Among people who identified as Asian, 15 percent reported more than one race.

About 85 percent of the Asian alone-or-in-combination population reported Asian and no other race in the 2010 Census, compared to 15 percent who reported Asian along with one or more additional races (see Table 8). Of the 2.6 million who indicated Asian along with one or more additional races, well over half reported being Asian *and* White (61 percent).

The majority of the 0.6 million people of Hispanic origin who identified as Asian alone or in combination reported more than one race (65 percent). Among Hispanics who identified as Asian along with one or more additional races, the most frequently reported combinations were Asian *and* White (35 percent) and Asian *and* Some Other Race (27 percent). About 14 percent of non-Hispanics who identified as Asian reported multiple races—two-thirds of whom identified as one combination, Asian *and* White.

Source: U.S. Census Bureau, *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Tables P1 and P2.

More than half of all people who identified as Native Hawaiian and Other Pacific Islander reported multiple races.

About 44 percent of people in the Native Hawaiian and Other Pacific Islander alone-or-in-combination

category reported this race and no other (see Table 9). Of the 0.7 million who indicated Native Hawaiian and Other Pacific Islander along with one or more additional races, 25 percent reported Native Hawaiian and Other Pacific Islander **and** White, 24 percent reported

Native Hawaiian and Other Pacific Islander **and** Asian, and 21 percent reported Native Hawaiian and Other Pacific Islander **and** White **and** Asian—representing a fairly even distribution of responses among the largest combinations.

Within the population who identified as Native Hawaiian and Other Pacific Islander, high proportions of both Hispanics (72 percent) and non-Hispanics (53 percent) reported multiple races (0.2 million and 1.0 million, respectively). For Hispanics, the largest combination was Native Hawaiian and Other Pacific Islander **and** Some Other Race (31 percent). Among non-Hispanics, similar proportions (about 28 percent each) reported the following: Native Hawaiian and Other Pacific Islander **and** Asian and Native Hawaiian and Other Pacific Islander **and** White.

Hispanics made up 97 percent of all those classified as only Some Other Race.

Table 10 shows the Some Other Race alone-or-in-combination population (21.7 million) by Hispanic origin in the United States in 2010. Respondents who were classified as Some Other Race alone represented the vast majority of the total (88 percent).

Among the 2.6 million people who reported multiple races that included Some Other Race, the most common combinations were Some Other Race **and** White (66 percent), followed by Some Other Race **and** Black (12 percent), Some Other Race **and** Asian (9 percent), Some Other Race **and** American Indian and Alaska Native (4 percent), and Some Other Race **and** Native Hawaiian and Other Pacific Islander (2 percent). All other combinations including Some Other Race represented 7 percent of the Some Other Race alone-or-in-combination population.

Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171) Summary File, Tables P1 and P2.

In the 2010 Census, approximately 20.7 million people of Hispanic origin were classified as Some Other Race either alone or in combination, compared with only 1 million people of non-Hispanic origin. Nearly all of those who were classified as Some Other Race alone were

of Hispanic origin (18.5 million out of 19.1 million, or 97 percent).

The majority of Hispanics classified as Some Other Race reported only one race (89 percent). However, notable reporting differences were observed for non-Hispanics. Among non-Hispanics who were classified as Some Other Race, about

42 percent reported more than one race (nearly four times higher than their Hispanic counterparts).

In 2010, among Hispanics classified as Some Other Race in combination with one or more additional races, the most common multiple-race group by far was Some Other Race **and** White (72 percent), followed by Some Other Race **and** Black (10 percent). Among non-Hispanics who were classified as Some Other Race and one or more additional races, the most common multiple-race combinations were more evenly distributed—Some Other Race **and** White (33 percent) and Some Other Race **and** Asian (31 percent).

GEOGRAPHIC DISTRIBUTION OF THE MINORITY POPULATION

Nearly half of the West region's population was minority.

In the 2010 Census, just over one-third of the U.S. population reported their race and ethnicity as something other than non-Hispanic White alone. This group, referred to as the “minority” population for this report, increased from 86.9 million

to 111.9 million between 2000 and 2010 (see Table 11). This represented a growth of 29 percent over the decade. The non-Hispanic White alone population also grew over the decade, from 194.6 million to 196.8 million; however, growth was relatively slow for this population (1 percent).

In the four census regions, the proportion of the total population that was minority (proportion minority) ranged from about one-fifth to just under one-half of the total population in 2010.¹⁵ The minority population numbered 33.9 million (47 percent) in the West, 45.8 million (40 percent) in the South, and 17.3 million (31 percent) in the Northeast. In the Midwest, the minority population was 14.8 million and made up 22 percent of the total population.

The minority population grew in every region between 2000 and 2010, but most significantly in the South and West. The South experienced growth of 34 percent in its minority population. Similar growth occurred in the West, with the minority population increasing by 29 percent. The non-Hispanic White alone population also grew in the

South and West between the two decennial censuses, but at a slower rate (4 percent and 3 percent, respectively).

The minority population in the Northeast and Midwest experienced considerable growth between 2000 and 2010. The minority population grew by 21 percent in the Northeast, and the Midwest minority population grew 24 percent. In contrast, the non-Hispanic White alone population in both of these regions declined since 2000 (–3 percent in the Northeast and –1 percent in the Midwest).

California had the largest minority population in 2010.

In 2010, the states with the largest minority populations frequently also had the largest non-Hispanic White alone populations. California led the nation with the largest minority population (22.3 million). Texas (13.7 million), New York (8.1 million), Florida (7.9 million), and Illinois (4.7 million) round out the top five states with the largest minority populations. Most of these states also had the largest non-Hispanic White alone populations—California with 15.0 million, Texas with 11.4 million, New York with 11.3 million, and Florida with 10.9 million. The state with the fifth-largest non-Hispanic White alone population in 2010 was Pennsylvania (10.1 million).

¹⁵ The Northeast census region includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. The Midwest census region includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. The South census region includes Alabama, Arkansas, Delaware, the District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. The West census region includes Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

¹ For this report, "minority" refers to people who reported their ethnicity and race as something other than non-Hispanic White alone in the decennial census.

Sources: U.S. Census Bureau, *Census 2000 Redistricting Data (Public Law 94-171) Summary File*, Tables PL1 and PL2; and *2010 Census Redistricting Data (Public Law 94-171) Summary File*, Tables P1 and P2.

Texas joined California, the District of Columbia, Hawaii, and New Mexico in having a “majority-minority” population.

In California, the District of Columbia, Hawaii, New Mexico, and Texas, the population was majority-minority (i.e., over 50 percent of the population was minority) in 2010 (see Table 11). Hawaii had the highest proportion minority (77 percent), followed by California and New Mexico, each with 60 percent. California, New Mexico, and Hawaii had a majority-minority population in 2000 as well, and this population grew 24 percent, 22 percent, and 13 percent, respectively, between 2000 and 2010. About 55 percent of Texas’ population was minority in 2010, up from 48 percent in 2000. Over the decade, the minority population in Texas grew by 39 percent. The District of Columbia’s population was also majority-minority (65 percent) but was down from 72 percent in 2000.

In 2010, the vast majority of the population identified as non-Hispanic White alone in four states. In the New England area, Maine, New Hampshire, and Vermont all had populations that were predominantly non-Hispanic White alone (94 percent, 92 percent, and 94 percent, respectively). The minority population grew by at least 50 percent in each of these states between 2000 and 2010—by 66 percent in Maine, by 68 percent in New Hampshire, and by 52 percent in Vermont, which outpaced growth of the non-Hispanic White alone population (2 percent, 3 percent, and 1 percent, respectively). West Virginia also had a predominantly non-Hispanic White alone population in 2010 (93 percent). While West Virginia’s non-Hispanic White alone population increased by 1 percent over the decade, the

state’s minority population grew 29 percent.

Nevada’s minority population grew the fastest between 2000 and 2010.

There were a number of other states where significant proportions of the population were minority. The minority population in Arizona, Florida, Georgia, Maryland, and Nevada approached 50 percent in 2010. Among these states, Nevada had the highest proportion minority (46 percent), followed by Maryland (45 percent), Georgia (44 percent), and Arizona and Florida (each about 42 percent).

The minority population grew in all 50 states between 2000 and 2010. Among all states, Nevada’s minority population increased the most (78 percent). Each of the five states that had a proportion minority approaching 50 percent also experienced at least 30 percent growth in this population. The minority population grew by 40 percent in Georgia and by 30 percent in Maryland across the decade. Arizona’s and Florida’s minority population increased even more (45 percent and 43 percent, respectively). In the District of Columbia, the minority population declined by 5 percent.

The non-Hispanic White alone population also experienced growth between 2000 and 2010 in 35 states and the District of Columbia. Eight states and the District of Columbia had non-Hispanic White alone populations that increased at least 10 percent between the decennial censuses. The District of Columbia had the largest percentage increase in the non-Hispanic White alone population (32 percent), followed by Utah (17 percent), Idaho (16 percent), and Arizona (13 percent). Hawaii, Nevada, and South Carolina all

had about 12 percent growth in the non-Hispanic White alone population. The non-Hispanic White alone population grew by about 10 percent in North Carolina and Wyoming.

The non-Hispanic White alone population declined in 15 states between 2000 and 2010. Eleven of the states with declines in the non-Hispanic White alone population were in the Northeast and Midwest. In particular, 6 of the 9 states in the Northeast had declines in the non-Hispanic White alone population—Connecticut (–4 percent), Massachusetts (–4 percent), New Jersey (–6 percent), New York (–4 percent), Pennsylvania (–2 percent), and Rhode Island (–6 percent). The five states in the Midwest with declines in the non-Hispanic White alone population were Illinois (–3 percent), Iowa (–0.3 percent), Kansas (–0.2 percent), Michigan (–3 percent), and Ohio (–2 percent). Fewer states in the South saw declines in the non-Hispanic White alone population (Louisiana, –2 percent; Maryland, –4 percent; and Mississippi, –0.3 percent). California was the only state in the West with a non-Hispanic White alone population that declined (–5 percent).

In about one-tenth of all counties, the minority population composed 50 percent or more of the total population.

Out of 3,143 counties, there were 348 where at least half of the population was minority in 2010 (see Figure 4). The minority population was concentrated in counties along the East coast from Massachusetts to Florida and in counties within the Gulf Coast states of Alabama, Mississippi, and Louisiana. A band of counties where a high proportion of the population was minority stretched

across the southwest through the states lining the U.S.-Mexico border (Texas, New Mexico, Arizona, and California). Additionally, counties in states along the Pacific coast, and in Hawaii and Alaska, also had high proportions of the population that were minority.

In 2010, there were 1,205 counties where less than 10 percent of the population was minority. The majority of these counties were located in Appalachia, in the upper Northeast, and in the central and upper Midwest.

Growth in the minority population occurred in many counties across the nation.

The map in Figure 5 illustrates the percentage change in the minority population between 2000 and 2010 for counties with a minority population of at least 1,000 in 2010. Minority population growth was concentrated in counties in the Pacific Northwest, Pacific Southwest, western Arizona, southern Nevada, and areas of the interior West. Counties in the mid-Atlantic corridor, Florida, and in clusters throughout the southeastern states also had significant growth in their minority population. Additionally, multiple groupings of counties in Texas, northern Illinois, southern Wisconsin, and southern Minnesota experienced substantial growth in their minority population between 2000 and 2010.

There were 53 counties with a minority population of at least 1,000 that experienced a decline of at least 10 percent in their minority population between 2000 and 2010. Many of these counties were located along the Mississippi River in Arkansas, Louisiana, and

Mississippi, as well as in central and western Alabama.

SUMMARY

This report presented data from the 2010 Census that illustrated the nation's changing racial and ethnic diversity. The examination of racial and ethnic group distributions nationally shows that while the non-Hispanic White alone population is still numerically and proportionally the largest major race and ethnic group in the United States, it is also growing at the slowest rate. During the past 10 years, it has been the Hispanic population and the Asian population that have grown considerably, in part due to relatively higher levels of immigration.

Additional notable trends were presented in this report. The Black population, the second-largest major race group, did experience growth over the decade; however, it grew at a slower rate than all other major race groups except for White. Racial classification issues continue to persist among those who identify as Hispanic, resulting in a substantial proportion of that population being categorized as Some Other Race. People reporting more than one race was another fast-growing population and made up large proportions of the American Indian and Alaska Native population and Native Hawaiian and Other Pacific Islander population. Geographically, there are a number of areas, particularly in the South and West, that have large proportions minority, which also grew considerably between 2000 and 2010. Overall, the U.S. population has become more racially and ethnically diverse over time. Throughout the decade, the Census

Bureau will release additional information on race and Hispanic origin population groups, which will provide more insights to the nation's racial and ethnic diversity.

ABOUT THE 2010 CENSUS

Why was the 2010 Census conducted?

The U.S. Constitution mandates that a census be taken in the United States every 10 years. This is required in order to determine the number of seats each state is to receive in the U.S. House of Representatives.

Why did the 2010 Census ask the questions on Hispanic origin and race?

The Census Bureau collects data on Hispanic origin and race to fulfill a variety of legislative and program requirements. Data on Hispanic origin and race are used in the legislative redistricting process carried out by the states and in monitoring local jurisdictions' compliance with the Voting Rights Act. More broadly, data on Hispanic origin and race are critical for research that underlies many policy decisions at all levels of government.

How do data from the question on Hispanic origin and race benefit me, my family, and my community?

All levels of government need information on Hispanic origin and race to implement and evaluate programs, or enforce laws, such as the Civil Rights Act, Voting Rights Act, Fair Housing Act, Equal Employment Opportunity Act, and the 2010 Census Redistricting Data Program.

Both public and private organizations use Hispanic origin and race

Figure 4.

Minority Population as a Percentage of County Population: 2010

(Minority refers to people who reported their ethnicity and race as something other than non-Hispanic White alone in the 2010 Census. For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/p194-171.pdf)

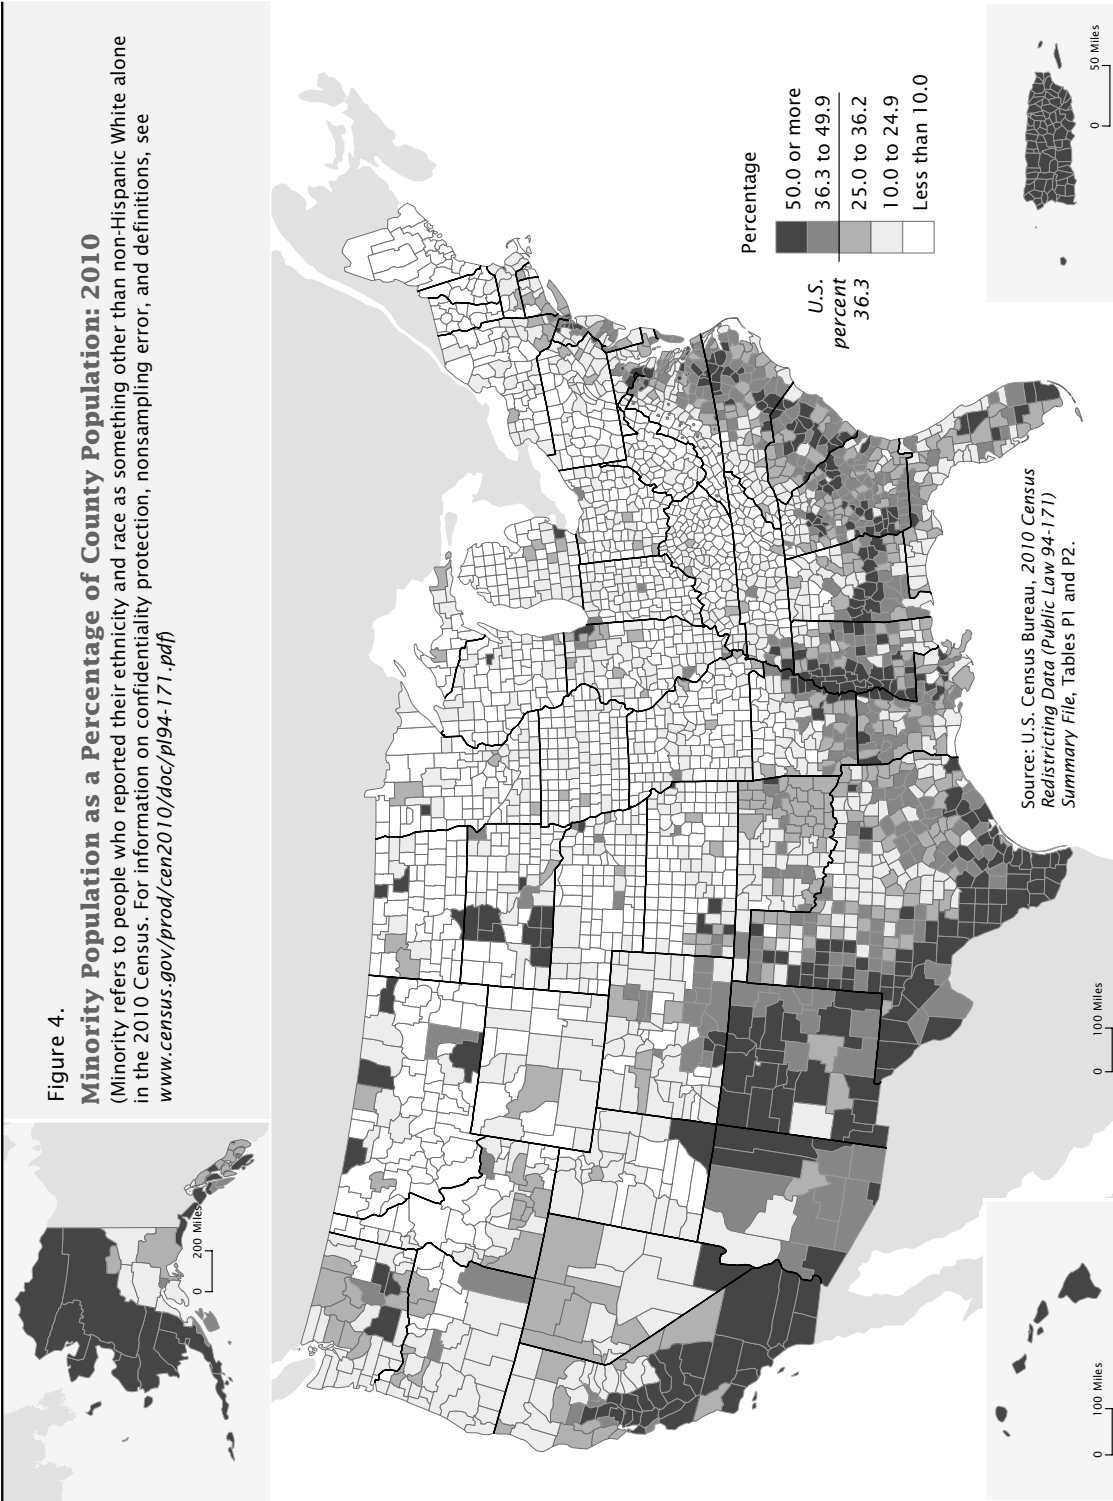

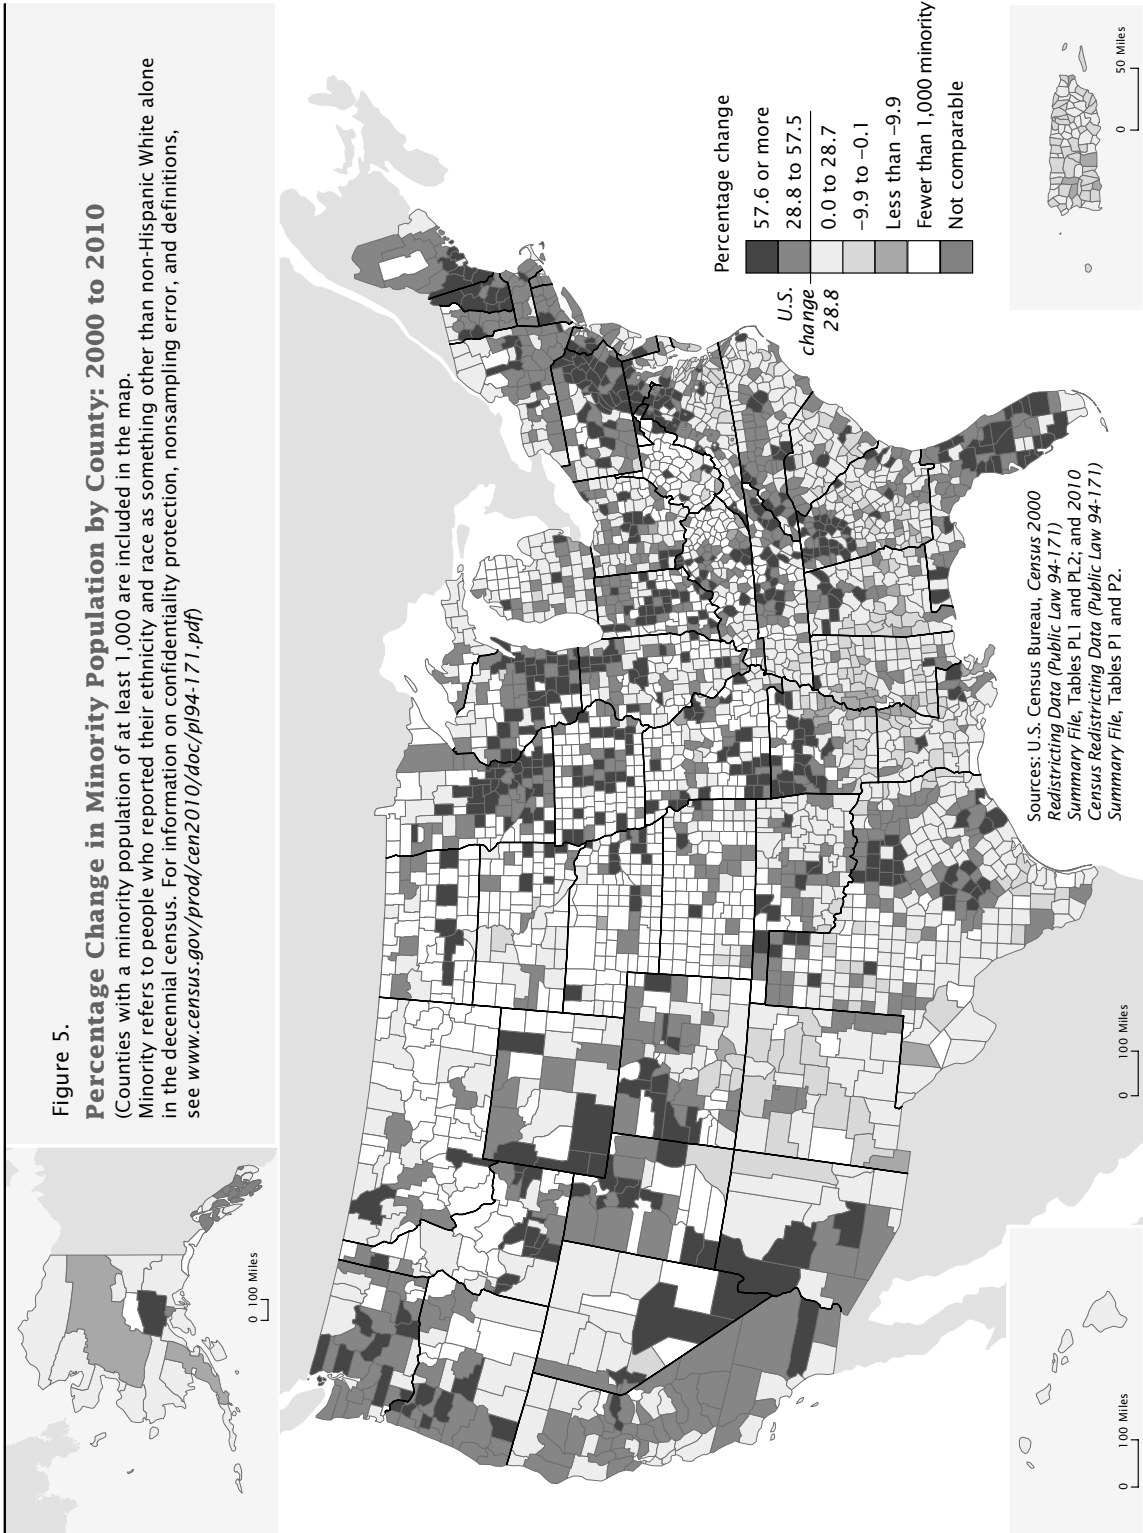

Figure 5.
Percentage Change in Minority Population by County: 2000 to 2010
(Counties with a minority population of at least 1,000 are included in the map. Minority refers to people who reported their ethnicity and race as something other than non-Hispanic White alone in the decennial census. For information on confidentiality protection, nonsampling error, and definitions, see www.census.gov/prod/cen2010/doc/pl94-171.pdf)

information to find areas where groups may need special services and to plan and implement education, housing, health, and other programs that address these needs. For example, a school system might use this information to design cultural activities that reflect the diversity in their community, or a business could use it to select the mix of merchandise it will sell in a new store. Census information also helps identify areas where residents might need services of particular importance to certain racial or ethnic groups, such as screening for hypertension or diabetes.

FOR MORE INFORMATION

For more information on race and Hispanic origin in the United States, visit the Census Bureau's Internet site at <www.census.gov/population/www/socdemo/hispanic/hispanic.html> and <www.census.gov/population/www/socdemo/race/race.html>.

Information on confidentiality protection, nonsampling error, and definitions is available at <www.census.gov/prod/cen2010/doc/pl94-171.pdf>.

Data on race and Hispanic origin from the *2010 Census Redistricting Data (Public Law 94-171) Summary File* were released on a state-by-state basis. The 2010 Census redistricting data are available on the Internet at <<http://factfinder2.census.gov/main.html>> and on DVD.

For more information on specific race and ethnic groups in the United States, go to <www.census.gov/> and click on "Minority Links." This Web page includes information about the 2010 Census and provides links to reports based on past censuses and surveys focusing on the social and economic characteristics of the Hispanic or Latino, Black or African American, American Indian and

Alaska Native, Asian, and Native Hawaiian and Other Pacific Islander populations.

Information on other population and housing topics is presented in the 2010 Census Briefs series, located on the Census Bureau's Web site at <www.census.gov/prod/cen2010/>. This series presents information about race, Hispanic origin, age, sex, household type, housing tenure, and people who reside in group quarters.

For more information about the 2010 Census, including data products, call the Customer Services Center at 1-800-923-8282. You can also visit the Census Bureau's Question and Answer Center at <ask.census.gov> to submit your questions online.
