German America, however, does not merely manifest itself in organizations and heritage museums. While the daily use of the German language has almost entirely disappeared among the younger generations, German ethnicity persists in folklore, material culture, and architecture. Particularly visible today are the great number of German festivals (Oktoberfest, Schmeckfest) hosted in numerous towns and cities, celebrating German American culture and heritage. Famous parades, such as New York City’s German American Steuben Parade, named after Major General Friedrich Wilhelm

von Steuben, honor the achievement of German Americans in the United States.

Yet, what Frederick Luebke argued in the 1990s still holds true today: The post–World War II immigration of Germans as well as the persistence of German America in contemporary America have been terra incognita and demand further scholarly investigation.

Gerrymandering

In the process of setting electoral districts, gerrymandering is the political manipulation of legislative boundaries for partisan or incumbency protection purposes. It is one of the oldest political expressions, traceable to the early days of the republic, and still in current use.

At various times, gerrymandering has been used to exclude and include racial minorities in the electoral processes. Following the Voting Rights Act of 1965 and subsequent court decisions, gerrymandering has been used to create majority-minority districts. These are political districts in which members of a racial or ethnic minority (as opposed to white non-Hispanic) make up an effective voting majority. This gives them the ability to participate and elect representatives of their own choosing, and has been the solution of choice in situations where there is, or could be, racial or ethnic vote dilution. In this sense, gerrymandering concurs to improve the ability of minority voters to elect a candidate of their choice in a particular district, increasing their power of representation and helping create a greater multicultural America.

The term *gerrymandering* derived from the name of Governor Elbridge Gerry of Massachusetts, who, in 1811, signed a bill readjusting the representative districts so to favor the Democrats and weaken the Federalists, although the last-named party polled nearly two-thirds of the votes cast. The word was coined because one of the contorted districts in the Boston area was said to resemble the shape of a salamander. Some historians argue that Governor Gerry, a signer of the Declaration of Independence and one of James Madison's vice presidents, never sponsored the redistricting bill and is said to have signed it reluctantly. But his name has been infamously perpetuated.

In technical terms, the two aims of gerrymandering are to maximize the effect of supporters' votes and to minimize the effect of opponents' votes. One strategy, packing, is to concentrate as many voters of one type into a single electoral district to reduce their influence in other districts. A second strategy, cracking, involves spreading out voters of a particular type among many districts in order to deny them a sufficiently large voting

bloc in any particular district. The strategies are typically combined, creating a few forfeit seats for packed voters of one type in order to secure even greater representation for voters of another type. Throughout the years many states operated a more or less explicit gerrymandering. Congressional majorities in Florida, Georgia, Maryland, Michigan, Pennsylvania, and Texas significantly reduced the competitiveness of their congressional districts, whereas states such as California, New Jersey, and New York protected the seats of the incumbents. Political scientists agree that one relevant consequence is that in the gerrymandered districts the threat of competition in the primary election often becomes more worrisome than the general election. On the other hand, there is no clear convergence on the case for gerrymandering as a primary source of polarization in Congress.

The Civil Rights Movement

For more than a century, gerrymandering only meant to gain power through partisan boundaries' redrawing of electoral districts. But with the civil rights movement and passage of the Voting Rights Act of 1965, federal enforcement and protections of suffrage for minorities were enacted. Gerrymandering for the purpose of reducing the political influence of a racial or ethnic minority group was prohibited and some states created majority-minority districts. This practice, also called affirmative gerrymandering, was supposed to redress historic discrimination and ensure that ethnic minorities would gain some seats in government.

Before the Civil War, enslaved people could not vote and freed African Americans were often denied that right. Immediately after the war, black leaders won congressional seats in the south. Following the end of Reconstruction in 1876, however, African American representation diminished as a result of gerrymandering and other tactics such as poll taxes, literacy tests, and intimidation. Only with court decisions interpreting the Fourteenth Amendment and the Voting Rights Act of 1965 as stipulating "one person, one vote," and district lines being redrawn, did American politics enjoy a substantial increase in the number of African Americans entering Congress as well as state and local offices. Between the end of Reconstruction and passage of the Voting Rights Act of

1965, minorities had to struggle for many years against discrimination and political dilution of representation through gerrymandering.

The U.S. Supreme Court

Several of these racial cases have reached the U.S. Supreme Court. In *Colegrove v. Green* (1946), the court refused to intervene in a redistricting case in Iowa, arguing that redistricting was a "political thicket" that the courts should avoid. In *Gomillon v. Lightfoot* (1960), the court looked at a redrawing of the city boundaries in Tuskegee, Alabama, that virtually took all the power away from African American voters. The old rectangular boundaries were changed to a 28-sided figure so that no district had more than five of the 400 African American voters. The Supreme Court struck down the new irregular city boundaries. In *Baker v. Carr* (1963), the Supreme Court ruled against the Tennessee district boundaries by interpreting the equal protection clause in the Fourteenth Amendment as saying that there should be "one man, one vote" for congressional elections. Congress had left the states to decide issues related to state and local elections, and the Supreme Court, although it had a history of not making decisions on districts drawn, often took a stand on the issue. Additional principles for constructing congressional districts were generated in *Wesberry v. Sanders* (1964). The Supreme Court required "contiguity" and required districts to be "compact." Another principle is continuity. The idea is that districts should be similar over time so that constituents will be in the same district and will maintain familiarity with the community and their representative. The problem is that there's no agreed-upon measure for compactness, so it can be difficult to show whether this preferred characteristic has been satisfied.

The *Thornburg v. Gingles* (1986) decision, as well as the 1983 Voting Rights Act amendment, introduced additional rules for drawing lines to create majority-minority districts. In order to create a majority-minority district, the amendment required the presence of a "compact and politically cohesive" minority as well as a white majority who usually vote overwhelmingly as a bloc. Even recently the constitutionality of using racial considerations to create districts has been difficult to assess. In *Hunt v. Cromartie* (1999), the Supreme

Court approved a racially focused gerrymandering of a congressional district on the grounds that the definition was not pure racial gerrymandering but instead partisan gerrymandering, which is constitutionally permissible. However, in *Vieth v. Jubelirer* (2004), the Supreme Court declared itself incompetent in disciplining gerrymandering. In theory, the U.S. Congress could legislate on the topic, but this has never been done. Therefore, the power of redistricting is still placed at the state legislature level.

Preclearance States and Redistricting

Section 5 of the Voting Rights Act of 1965 requires that the U.S. Department of Justice or a three-judge panel of the U.S. District Court for the District of Columbia requires that areas with a history of voting discrimination and low turnout submit and receive approval for any voting change, including redistricting, before implementing the change. States whose redistricting plans require preclearance are Alabama, Alaska, Arizona, California, Florida, Georgia, Louisiana, Michigan, Mississippi, New Hampshire, New York, North Dakota, South Carolina, South Dakota, Texas, and Virginia. States that want to obtain preclearance must demonstrate that a proposed voting change does not have the purpose or effect of discriminating against an ethnic or “language minority group,” which includes African Americans and “persons who are American Indian, Asian American, Alaskan Natives, or of Spanish heritage.” The curious case is that 2012 was the first time for a Democratic administration to retain such a final word. In 1972, this power was granted to President Richard Nixon, in 1982 to President Ronald Reagan, and, in 1992 and 2002 to the two President Bushes.

Majority-Minority States

Racial data from the 2010 U.S. Census show that four states are majority-minority: Hawai‘i (which is the only state that has never had a white majority), New Mexico, California, and Texas. Additionally, the percentage of non-Hispanic white residents has fallen below 60 percent in Arizona, Georgia, Florida, Louisiana, Maryland, Mississippi, Nevada, New York, New Jersey. The District of Columbia reached a majority black status during the latter stages of the Great Migration.

The process of redistricting that followed the 2010 census is effective since the 2012 congressional elections and new majority-minority districts have been drawn. The issue is particularly contentious in the south, where the GOP controls most of the state legislatures and so also the redistricting process in many states. The Democrats’ fear comes from the observation that, historically, the implementation of majority-minority districts led to a jump in safe Republican seats in surrounding districts that had been drained of minority voters who might otherwise have formed the core of a competitive opposition. Both parties apparently notice that majority-minority districts tend to help Republicans and hurt Democrats overall.

In the early 1990s, the Republican National Committee pushed for the creation of more black and Hispanic districts as part of a strategy to win additional seats in the House. And the successful Republican strategy of coalescing with African Americans to pack minority residents into overwhelmingly majority-minority districts, thereby diluting Democratic strength in surrounding districts, contributed to the dramatic Republican gains in the 1994 election. More recently in Georgia and New Jersey, Democrats sought to reduce the number of safe minority districts in order to improve the party’s chances overall. In doing so, both parties were acting contrary to their general positions on race-conscious lawmaking.

In 2012, there were 58 electoral districts classified as majority-minority electoral districts: 27 were formed by an African American majority, 30 by Hispanics, and one Asian American majority-minority district in Hawai‘i. Statistics from the 113th Congress show the presence of 44 African American representatives, 28 Hispanics, and 12 Asian American congressmen. The good news is that some of these representatives have been elected in white districts. However, full representation of minorities is yet to come. If the number of representatives were to be proportional to the population, in Congress there would be 31 Asian American and 86 Hispanic representatives.

Ghetto

The term *ghetto* originally referred to areas in Venice where Jews were forced to reside. Since the time of the Roman Empire, Jews have often been forced to live in isolated communities. Gradually, the term began to refer to any area of a city where particular minorities made up the bulk of the population. The term brings to mind the horrible abuses during the Jewish Holocaust, when many lived in ghettos. In America, the term has come to describe a severely distressed part of a city where African Americans make up the vast majority of the population. Ghettos are usually characterized by poorly maintained structures, high poverty rates, high crime rates, high rates of imprisonment, dysfunctional family units, poor education, and high unemployment. There is often a stigma attached to those who live in ghettos. People often incorrectly view all people living in a ghetto as people who display many of the negative characteristics of the ghetto.

After the urbanization of the United States accelerated in the 19th century and immigrants were settling in the cities in great numbers, some ethnic enclaves were referred to as ghettos. Certainly the neighborhoods in American cities that were predominately Jewish were often referred to as ghettos. Often people who were ethnically similar would settle near each other. Racial barriers as to where blacks could live exacerbated the growth of ghettos. Many of the European immigrants were assimilated into varied neighborhoods. Prejudice was a barrier to this kind of assimilation of blacks.

For decades after the Civil War, blacks in the north made up a small percentage of the population of cities and were not highly segregated. In the south many blacks lived in rural areas, and even in the cities they were somewhat interspersed with the white population. At the end of the first decade of the 20th century a massive migration began. In the south, the mechanization of farms, the decline of the sharecropper economy, and harsh treatment by whites led many blacks to begin migrating to northern states to find jobs and a better way of life. In the north, new factories were being built and there was a large demand for unskilled labor. Millions of blacks made their way to northern cities. Prior to the beginning of this migration there were few, if any, ghettos found in the cities of the north. By 1930, in Chicago, the majority of blacks in the city lived in areas where the neighborhood was overwhelming black. This growth of ghettos was happening in cities throughout the country. Demand for additional housing caused these neighborhoods to expand into white neighborhoods. Many of the whites who had the resources moved away from these areas.

Racial attitudes deteriorated in both the north and the south, and specific efforts were made to keep blacks from moving to white areas. Racial zoning and restrictive covenants were used to prevent blacks from moving into white neighborhoods. This led to the growth of ghettos. Additional waves of blacks moved to the north in the era of World War II as more jobs opened up in the industrialized cities. It was in the 1960s that the term *ghetto* came to be used to refer primarily to distressed areas of concentrated black populations in cities.

White flight from central city areas left even more ghettos as people who were financially able to contribute to the economy of these neighborhoods left. City governments became less interested in these racially concentrated areas of their cities. Loss of manufacturing jobs impacted the ability of residents of ghettos to find jobs. Conditions steadily deteriorated as ghetto areas expanded. Even middle-class blacks moved to more desirable locations. The civil rights movement and the elimination of legal segregation removed some of the legal barriers that kept people in ghettos, but ghettos remained a practical reality in American cities.

Characteristics of Ghettos

Black ghettos are often isolated physically from the rest of the city. This may be because of barriers such as railroad tracks, large highways, or industrial areas. One of the distinguishing characteristics of a ghetto is the concept of concentration. There is a concentration of people of a particular race, and in the current use of the term in the United States, that concentration is of blacks. However, ghettos can contain people of other races as well, especially whites and Hispanics. There is also a concentration of poverty. The majority of the residents tend to have much lower incomes. There is also a concentration of residents who, in many ways, are unable to escape the ghetto. In the past it was discriminatory housing practices that contributed to this problem. Now it is more related to the financial condition of the residents. They are not able to afford housing, which would be more expensive in other areas of the same city. Sometimes the children of ghettos are unfamiliar with even their own city outside the ghetto.

There is a concentration of poorly educated people, and educational opportunities are limited. There is also a concentration of hopelessness. Many residents see no way to achieve a way of life that leads to escape. Children have few role models in the ghetto. This leads to an overpowering sense of nihilism. Nihilism refers to the state of living with no sense of purpose, or believing that nothing really matters. This can lead to an abandonment of moral restraints and a view that so devalues life that the taking of life becomes common. In spite of the plethora of problems in

the ghetto, there are those who excel and escape, and even those who make it and stay in the ghetto to make a difference in the lives of others.

Ghost Dance

The Native American Ghost Dance (*Natdia* in Indian language, the "circle" or "round" dance) was a ceremonial ritual practiced among Native Americans that called for dancers to move zealously in a circle and chant, calling for the regeneration of the Earth and communion with the spirits of their ancestors, or ghosts. It became a widespread movement among Native Americans toward the end of the 19th century, when Indians and their culture were facing destruction. This dance had existed since prehistoric times, but the newer version originated with the Paiute Indians in the western United States around 1870 and had a revival in 1889. It was a spiritual ceremony that combined elements of Native American customs with Christian practices. These indigenous people had been subjugated by the U.S. government and, as a result, faced annihilation because of poverty, illness, and hunger. These observances provided them with hope and were often magical, according to many accounts. Today the dance is still practiced

privately among some tribes, but it has primarily become obsolete, replaced by Christianization and adaptation to white culture.

There were often regional conflicts among many of the Indian tribes, which led to intense fighting. However, the emergence of the Ghost Dance, which promoted peace, diluted this and brought about a unity among the tribes that made U.S. government officials nervous. This bonding together gave them strength in numbers, which in one circumstance led to the defeat of General George Armstrong Custer. U.S. authorities were wary of this now-peaceful nation.

These hunter-and-gatherer tribes didn't have political leaders but followed shamans (medicine men) instead. These self-proclaimed, spiritually anointed men organized rituals for the betterment of the community that took place at certain times of the year, aligned with hunting parties or harvests. These spiritual conduits had a great deal of influence throughout the tribes, so when two prophets emerged with the Ghost Dance philosophy, their words carried weight. Even as their numbers and culture diminished in the late 1800s, the Indians honorably relinquished their societal place by displaying and promoting peace.

Decimation of Native Americans

In 1867, a debilitating typhoid epidemic struck the Nevada region. Along with other European diseases, it wiped out one-tenth of that population, leaving the people emotionally and psychologically scarred. It also crippled their economic system, forcing the majority to abandon their itinerant lifestyle and settle in Virginia City, Nevada, for work. It was not long after, only two years, that prophet Hawthorne Wodziwob (Gray Hair) had a vision of going to the land of the dead, where he received messages from the *Numu* (ancient ancestors).

They communicated that they would return in three to four years to help their descendants. In order to acknowledge the ancestors and bring them to contemporary times, Wodziwob suggested the circle dance, which, when performed, achieved a religious ecstasy for the participants and supposedly conjured up the ancestors, who healed some participants and left them with new songs as gifts. One of the advisers to Wodziwob was a "weather doctor" named Tavibo, the father

of Jack Wilson, who would lead the second and strongest Ghost Dance movement.

New Vision

The second influential soothsayer, Wovoka (or Jack Wilson), during a solar eclipse in January 1889, claimed to have a vision of dying for a short time, during which he had an apocalyptic vision of Native Americans being lifted up to the sky while the Earth swallowed the white man and replenished itself. The Natives were then dropped back down to the new Earth after visiting the ancestors (including Jesus) during their ascension. Wovoka taught that if there was peace among tribes, the buffalo and harvest would be renewed and the white man would peacefully vanish. This gospel spread rapidly, uniting formerly warring tribes. This did not sit well with government officials, as they'd seen the results of indigenous unity before: Little Bighorn.

The Empty Plains

One of the duties of the Bureau of Indian Affairs was to convert Indians to Christianity, so it is ironic that they responded with fear to the Christian-like unity that started to permeate the tribes. When the Lakota started practicing the Ghost Dance, the Bureau of Indian Affairs grew alarmed at their supposedly "militaristic" behavior. In preparation for any retaliation by the white man, they made "ghost shirts," which were

Published in the December 6, 1890, issue of Harper's Weekly, this illustration by Frederic Remington was sketched at the scene of the Ogallala Sioux performing the Ghost Dance at the Pine Ridge Agency in South Dakota. This ritual, often accompanied by periods of trances, exhortations, and prophesying, includes a circular community dance held around a ceremonial leader.

supposed to deflect bullets. The tribal police were discharged to arrest Sitting Bull, the respected leader of the Lakota Sioux. A skirmish broke out and several policemen were killed as well as the revered Indian leader. The ghost shirts were useless in the face of real violence. On December 29, 1890, after a deaf youth accidentally discharged his weapon, the military opened fire on the camp, killing 300 Lakota, primarily women and children, in what became known as the Wounded Knee Massacre. Participation in the movement drastically diminished after this incident because participants feared retaliation by U.S. government officials.

Today, the dance is still practiced privately, with the Caddo Nation one of its torchbearers.

Giant

Giant, released by MGM in 1956 and based on a 1952 novel by U.S. author Edna Ferber, introduced a national audience to the inequalities in Mexican/non-Mexican white race relations in the southwest. The lasting legacy of the film, directed by George Stevens, has become one about race.

The film opens in the 1920s, when west Texas rancher Jordan “Bick” Benedict (Rock Hudson), marries young Leslie Lynnton (Elizabeth Taylor)

while visiting her Maryland estate. So smitten is he that he tolerates observations like “We really stole Texas from Mexico, didn’t we?”

Leslie quickly learns that Bick disapproves of her appreciative response to the welcome by the Mexican residents of his ranch, Reata. It is Bick’s belief that these people are not their equals.

At Reata, the film introduces Jett Rink (James Dean), a poor white ranch hand resentful of Bick, enchanted by Leslie, and staunchly defended by Bick’s sister Luz. Returning Leslie to the house after a day on the range, he accedes to her demand to see the Mexican worker village. Horrified by their living conditions, particularly the illness of a baby named Angel, she demands that Jett take her home to deal with this “scandal.” They arrive to discover that Luz has died in a riding accident. Luz bequeathed Jett the small land parcel on which he has been living and drilling for oil. Rejecting a buy out, Jett hits a gusher, ushering in oil wealth on Reata.

Bick soon discovers that his own family is not the family he expected. In a violent scene Bick forces young Jordy, his son, to ride his birthday pony, resulting in a screaming fit by the child, made all the more galling for Bick when little Angel, now healthy, thanks to Leslie’s efforts on behalf of the Mexican rancheros, leaps onto the pony and rides flawlessly. Scenes like this regularly reinforce the distance between the white Texas aristocracy and the Mexican Americans, who are treated as peons, despite their skills.

For young adult Jordy (Dennis Hopper), becoming a doctor faces great resistance from Bick. He pursues his vocation and returns to Reata. He meets Juana (Elsa Cardenas), a Mexican nursing student, with whom he begins a romance, shocking his family when, after a secret wedding, Jordy announces their marriage during a large party at the main ranch house.

Continued business with Bick leads the Benedict family to attend the opening of Jett’s grand hotel and airport. Events turn ominous when the hotel salon refuses Juana service, on Jett’s direct orders that there be no Mexicans be allowed. Jordy confronts Jett, only to be knocked senseless. Bick beats the drunken Jett to the point that he drops his fists in disgust.

Jordy and Bick then argue intensely as Jordy rages at his father for the racism he has displayed

over the years. Bick's protestations hold little sway. The family, sans Jordy, leaves together for Reata.

Upon their return, the Benedicts stop at a diner. Tensions rise when the owner "Sarge" notices Juana and her dark-skinned toddler, the youngest Jordan Benedict. All ignore the rude owner, until Juana tells Bick that little Jordan "wants ice cream, Grandpa." Bick affectionately orders the treat. Sarge, responds by saying he thought "that kid would want a tamale." Bick is stilled by his family. It is when a Mexican family enters the diner, only to be refused service and forcibly ejected by Sarge that Bick intervenes, using his name and reputation to insist that the family be treated with respect. Sarge ignores him. When he manhandles the elderly Mexican man in the family, Bick pushes him away. An extended and violent fight scene begins. Bick is beaten brutally and downed, with a sign reading, "We reserve the right to refuse service to anyone" dropped on his chest as he is covered in food and broken dishes.

Once home, Leslie comforts the dejected Bick. After a lifetime, only that "glorious" fight in Sarge's Diner made Bick her hero and she declares their family a "great big success." He finally sees the world through a different racial lens. Even though Bick then expresses frustration that the youngest Jordan Benedict "doesn't even look like one of us" but rather, looks "like a little wetback," he speaks with affection, and laughs when the toddler rattles his playpen as if in protest, admiringly noting that the "little *muchacho* sure fires up, don't he." The film ends with alternating shots of the grandchildren's cherubic faces.

Giant grossed more revenue for MGM than any other film until *Superman* in 1978. The film met with critical success. *New York Times* movie critic Bosley Crowther noted that, "Thanks to Mr. Stevens' brilliant structure and handling of images, every scene and every moment is a pleasure." *Variety* magazine compared the film favorably to the earlier indictment of anti-Semitism in the film *Gentleman's Agreement*. It has become an important illustration of Mexican/white race relations for Latino artists as well, with Tino Villanueva's award-winning prose-poem *Scene From the Movie Giant* employing the fight scene in Sarge's Diner as a vehicle for exploring his own experiences of prejudice and discrimination.

The poem has since become part of the Mexican American Studies canon.

Nominated for 10 Academy Awards, including a win for director George Stevens, *Giant* continues to find audiences through special editions on DVD and the continuing interest in James Dean's career, having been his final performance before his untimely death. As a representation of regional multicultural race relations, *Giant* serves as an enduring portrait of a highly significant time period presaging the beginning of slow but steady efforts to improve the status of Mexican Americans in Texas.

Global Education

Global education seeks to prepare students to be citizens of the global community. Much as public education curriculums have always included elements aimed at preparing students to participate in a national community by requiring English fluency and nationally minded history and civics classes, global education goes one step further, focusing on the rest of the world more than on traditional American education. Public education flourished in part because of the desire of Americans to teach English and cultural norms to the children of immigrants. The world is increasingly globalized and interconnected, not only

politically and economically, but also culturally. Events illustrating this have been as diverse as the global outcry over the financial crisis of 2008 and the commodity price shocks of the surrounding years to the uprisings of the Arab Spring, which in part inspired Occupy Wall Street. Further, climate change has become a severe enough problem that even with remedies that are significant and immediate, the world over the next century will be facing a common challenge in dealing with new and extreme weather patterns, regular commodity crises, and likely shortages of fuel and potable water.

Global education is most commonly found in Europe, where discussion of the topic has been necessitated by the many challenges of the evolving and growing European Union. In the United States, the term *multicultural education* is more commonly discussed and encompasses many of the same aims. The declaration produced by the European Global Education Congress, held in Maastricht, the Netherlands, in 2002—called the Maastricht Declaration on Global Education—admitted that there was debate about the term *global education*, but that it was a generally useful umbrella term that “is understood to encompass development education, human rights education, education for peace and conflict prevention, and intercultural education; [these] being the global dimensions of education for citizenship.” Global education is a direct address to the world’s diversity and to the challenges of global citizens achieving some baseline understanding of the world in which they live.

Sustainability

An increasingly globalized world requires new and different competencies, which global education seeks to provide. It requires an understanding of the complex relationships underlying ecological, social, political, and economic issues. One of the key elements of global education is the integration of the concept of sustainability: the capacity of ecosystems to endure, and, by extension, the characteristic of a system or behavior that allows it to continue, eschewing reliance on nonrenewable fuels and other unsustainable systems. Sustainability is integrated into education not only through the adoption of sustainable practices but also by teaching sustainable practices in the appropriate subjects. Sustainability economics,

for instance, is a branch of ecological economics; sustainable architecture is one of the most vibrant fields in 21st-century architecture.

Urban planning, legal studies, international relations, and the sciences all encompass areas where sustainability can be explored and illustrated. The goal of sustainability is not as simple as avoiding further ecological damage and climate change or avoiding the exhaustion of certain resources; it is a guiding principle, seeking improvements to the quality of human life without incurring an expense against the accounts of future human lives. Sustainability is also necessary to make the world livable in future generations as the population grows and as developing nations match pace with the developed world, increasing their resource use in the process. This concern goes far beyond the economics and ecological impact of energy use. At the heart of sustainability education is the idea of environmental management, an awareness of the impact of human actions on the climate, atmosphere, water systems of the Earth, carbon cycle, and other systems of the environment.

The U.S. Partnership for Education for Sustainable Development (USPESD) was founded in 2003 in Washington, D.C., by a group of educators, scientific researchers, conservationists, and religious leaders in order to respond to the United Nations declaration of 2005–14 as a Decade of Education for Sustainable Development. Rather than develop programs, USPESD helps connect interested parties and foster collaboration. Ithaca College (New York) and Ramapo College of New Jersey have shown a particular commitment to sustainable education.

Systems Thinking

Sustainability education tends to focus on systems thinking, the understanding of the working of systems, whether natural systems like those of the natural environment or human-made systems like social systems and structures of a business or other organizations. Systems thinking has especially been promoted as an approach to problem solving, but this is like billing mathematics as a way to solve equations—mathematical truths have a reality independent of their use in equation solving, and systems thinking is not just a trick to manage offices more efficiently.

A system is comprised of parts, and while it is bounded, it also interacts with the environment beyond that boundary—in fact, it is often made up primarily of the processes that turn inputs from the environment into outputs transferred back to that environment, as with the respiratory system of the human body, which transfers oxygen and carbon dioxide back and forth between the bloodstream and the external environment. Systems are both dynamic and complex, and their components are often best understood as seeking equilibrium. Systems thinking is an especially apt toolbox in global education, providing tools for considering the goals, inputs and outputs, and interdependence of the systems in the global community and the planet's environment.

Multicultural Education

Multicultural education is an approach to education that acknowledges and addresses the unique diversity of the United States and that seeks to move beyond the traditional white-centric view of history that dominated American curriculums for so long. Its concerns are not limited to history and are forward thinking, acknowledging the reality that the United States is moving from a country with a white majority to one with a white plurality; and furthermore, that white Americans are not a monolithic homogenous ethnicity but instead are made up of many different individual immigrant groups and their blending.

Multicultural education punctures the myth of a single American culture and instead embraces, investigates, and celebrates the many American experiences and the many kinds of Americans, rather than dividing them into “us” and “the other.” It also seeks to provide equal educational, cultural, and career opportunities for all students, regardless of ethnic, cultural, or religious background, a goal that encompasses more than just funding for special needs and English as a second language teachers, and which requires teachers to understand that many of their students come from drastically different backgrounds than they do. Typically, advocates of multicultural education also seek to reform the college admissions process, which tends to favor students from certain backgrounds, and the standardized tests used in the admissions process, which possess a demonstrable bias toward certain backgrounds.

Multicultural education was advocated even before globalization became a priority. It provides students with some of the best tools for dealing with globalization, as they are introduced to other cultures early, and have a better understanding of their personal culture by understanding its uniqueness, rather than assuming that it is simply a universal or default culture. Multicultural education ideally provides a learning environment that is fair for all students. There are many competing views on how multiculturalism should be taught and what values and norms are assumed. These include whether “whiteness” is considered an ethnicity, whether cultural groups should assimilate into a mainstream culture (and what is meant by “assimilation,” beyond some near-universally agreed-upon basics like language fluency and participation in institutions like schooling and the political process), and whether the differences or similarities of cultures should be emphasized.

Most multicultural education is pluralist: It acknowledges that in the foreseeable future, white Americans will be a plurality rather than a majority; it does not problematize whiteness or Eurocentrism; it focuses on culture and ethnicity, more than social class; while openly discussing the many different cultural and religious backgrounds of students, it is silent on the issue of class backgrounds; and it treats ethnicity almost more as a private matter than as a cultural product.

Global education is a growing priority for American educators. The Consortium for Global Education is a group of private U.S. universities that have committed to the cause of global education. Beginning in 1987 with eight founding members, it has grown to 40 consortium universities. In 2007, the Early Development of Global Education (EDGE) was founded by three businesswomen to raise environmental awareness and teach conservation through a branded preschool certification program. Harvard University recently began offering a special program in global education issues through its Graduate School of Education, aimed at K–12 teachers and administrators, policy makers, and social entrepreneurs. Faculty involved in the program include Fernando Reimers, the Ford Foundation Professor of International Education and Harvard's director of the international education policy master's degree program, as well as

Harvard professors, nonprofit organization directors, and high school principals.

Glory

Glory, a 1989 movie about the 54th Massachusetts Infantry, a regiment of black soldiers, around half of whom were killed in a Union attack on Charleston's Fort Wagner in 1863, won praise as a serious movie about the U.S. Civil War and earned criticism for its failure to present the 54th with historical accuracy. Although the screenplay is based in large part on the letters of Colonel Robert Gould Shaw, the white commander of the regiment, *Glory* is most significant as a historically symbolic movie that recaptured a forgotten moment in American history and awakened new interest in the role of African Americans in the Civil War.

By the time the Civil War ended, African Americans comprised 10 percent of the total Union forces. The 54th was among the first African American fighting units. The unit's volunteers included some with well-known connections: one of its officers was Garth Wilkinson James, younger brother of philosopher William James and novelist Henry James; and Lewis H. Douglass, son of the great abolitionist Frederick Douglass, was one of the earliest enlistees. The 54th proved a disciplined, courageous group, particularly in the attack on Fort Wagner, at the mouth of Charleston Bay, on July 18, 1863.

Kevin Jarre based the screenplay for *Glory* on the letters of Shaw and on two modern works: *One Gallant Rush* (1965) by Peter Burchard, also based on Shaw's letters; and "Lay This Laurel," (1973), Lincoln Kirstein's essay on the regiment and the Boston Common memorial monument sculpted by Augustus Saint-Gaudens in 1897. Shaw is the central figure in all these sources. Saint-Gaudens's monument shows Shaw on horseback with rows of unidentified African American soldiers marching with him. William James at the dedication of the memorial paid tribute to Shaw and his "nameless comrades" who perished with him in the assault on Fort Wagner, but names of the African American casualties at Fort Wagner were readily available. Survivors of the assault who marched in the dedicatory procession certainly could have provided some of the names.

It is hardly surprising then that Jarre repeats this focus, as can be seen in Matthew Broderick, who plays Shaw in the movie, receiving top billing. Some critics accused Edward Zwick, who directed the Tri-Star movie, of unconscious racism, in a glorification of Shaw that was sometimes at odds with historical accounts. Shaw's letters reveal that he was not free of the racist attitudes prevalent in 19th-century America. Such incidents as Shaw's sending his personal physician to attend private Trip after a flogging and Shaw's tearing up his pay voucher to protest the inferior pay of his troops are examples of the dramatic license taken in the film.

Critics were also quick to point out inaccuracies in *Glory's* characterization of the African American volunteers who made up the 54th. Rather than the nameless cast of foot soldiers in the Saint-Gaudens sculpture or a selection of

Although there was significant criticism regarding the historical accuracy of the portrayal of the 54th Massachusetts Infantry in the film *Glory*, there was a renewed interest in these soldiers after the film was released. In 1998, Ed Hamilton's nine-foot bronze statue of African American soldiers was erected at the African American Civil War Memorial in Washington, D.C.

historically accurate African American soldiers, Jarre uses four fictional characters to represent all the 168,000 African Americans who fought in the Civil War. Of the four men the script highlights, three are former slaves, whereas in the real 54th, four-fifths of the African Americans had been free men all their lives. But the four actors in the movie are cast in roles that represent the full spectrum of African American types who fought for the Union, and the consensus is that they do so without descending into stereotypes.

Private Trip is the rebellious escaped slave who feels trapped in a war not his own. Denzel Washington received the Academy Award for Best Supporting Actor for his performance in this

role. Some critics argue that Trip's is the necessary modern sensibility in the movie. Sergeant Major John Rawlins, a middle-aged grave digger turned soldier (portrayed by Morgan Freeman), is the wise voice that is the film's conscience. Private Jupiter Sharts, played by Jihmi Kennedy, a stuttering crack shot, is a country boy. Corporal Thomas Searles (Andre Braugher), a boyhood friend of Shaw's, is a free man and a proper Boston intellectual. Civil War historian James McPherson cautions against small complaints that can undermine the accomplishments of the film. McPherson praises *Glory* for showing the racism in the Union army in the person of an Irish drill sergeant who slings racial epithets as he teaches the 54th how to march and in the African American regiment from Kentucky whose white commander refers to them as "little monkey children."

Although *Glory* may be deemed a critical success, it was not a smash at the box office. The movie grossed a modest \$26.8 million in the United States. But its success in informing the public about the valor and sacrifice of soldiers whose story was rarely mentioned in history books cannot be measured in movie tickets. The documentaries about the 54th that followed the film suggest increased interest. A modern edition of Shaw's letters was issued, and a reissue of Burchard's *One Gallant Rush* sold 10 times more copies than its original publication. In the summer of 1998, the African American Civil War Memorial Freedom Foundation dedicated *Spirit of Freedom*, a sculpture portraying uniformed African American soldiers and a sailor. The memorial is encircled on three sides by the Wall of Honor that lists 209,145 names from the official records of the Bureau of United States Colored Troops at the National Archives. The memorial was inspired by *Glory*.

Go Tell It on the Mountain

Go Tell It on the Mountain (1953) is the first published novel by James Baldwin and is often regarded as his best. One of the most important African American writers of the postwar era, Baldwin was born James Arthur Jones on August 2, 1924, in the black ghetto of Harlem in New York City. Baldwin’s own life experience in Harlem enabled him to have a profound insight into extreme poverty and pervasive white oppression and discrimination that his fellow people were forced to face. He is universally considered to be one of the most important and influential African American writers of the postwar era, powerful as a novelist, essayist, playwright, and polemicist.

Baldwin’s works include six novels, four plays, and more than 10 essay collections. From his 1953 autobiographical novel, *Go Tell It on the Mountain*, to his final essays in *Playboy* and other magazines, his works demonstrate the indomitable will to face historical identities, injustices, and tragedies. Baldwin is most remembered for using his writing to encourage social change, having the courage to live outside racial boundaries, and remaining true to his homosexual identification. James Baldwin’s widely acclaimed works have profoundly altered America’s social and literary consciousness. Among his awards are the Partisan Review Fellowship, a National Institute of Arts and Letters Award, and a Guggenheim Fellowship.

Plot of the Novel

Based on the author’s early experiences in a small church in Harlem, *Go Tell It on the Mountain* traces and elaborates upon the events that occur to John Grimes, the son of a preacher, on his 14th birthday. Through the use of flashbacks, the novel examines the struggling lives of John, his stepfather Gabriel, his mother Elizabeth, other members of his family, and his Sunday school teacher, Elisha, for whom John has great admiration.

The events span two days and a night with the Grimes family, with the hero being the 14-year-old John and his stepfather, Gabriel. James Baldwin divides his novel into three distinct parts. The first section of the novel, “The Seventh Day,” witnesses John’s confusion over his future. It opens with John lying in bed on the morning of his 14th birthday, brooding over the family’s expectation that he should be a preacher like his father. This part is where the novel’s central action is and centers on John’s maturing into manhood. John cannot figure out why his father hates him that much and gives all fatherly affection to his younger brother Roy. He struggles bitterly between his desire to win his father’s love and his hatred for him. In so doing, the religious inclination of the boy makes him believe that he has committed the first major sin of his life, which eventually escalates into his religious crisis.

“Florence’s Prayer” is the first prayer to be treated in Part Two, “The Prayers of the Saints,” which is broken into three stories that focus on the history of John’s family: his stepfather Gabriel, his mother Elizabeth, and his aunt Florence. Florence, Gabriel’s sister, recalls her childhood times when she resented her mother’s favoritism over Gabriel and her dislike of her brother’s treatment of his present and former wives.

In “Gabriel’s Prayer,” Gabriel is found to be a callous and religious man who experienced a rebirth after his youthful life of sin. While married to Deborah, he started an affair with Esther, and withstood the death of his illegitimate son, Royal, believing Roy to be his new hope in life.

In “Elizabeth’s Prayer,” Elizabeth recalls her bitter childhood with her unloving aunt and later her failed love and marriage to Richard. She marries Gabriel and is naïve enough to believe his promise that he will treat John, her son with Richard, as his own. In the third part, “The Threshing

Floor,” John’s hallucinatory experience and his spiritual rebirth are discovered.

The novel ends the next morning, John having come back from the church following a long and tumultuous evening. This final note of optimism, typical of Baldwin, leaves the reader with a powerful sense of hope. In sum, *Go Tell It on the Mountain* not only narrates the experience of growing up in poverty, but also demonstrates the themes of race, religion, and the search for self-identity.

Commentary

Baldwin’s reputation rests largely on his first novel, *Go Tell It on the Mountain* (1953), now an American classic. His style is at once delicate and intense; the language of the novel echoes that of the King James Bible modified to suit a modern audience. The style of the novel is evocative of the slave spiritual tradition that, according to Baldwin, “Americans are able to admire because a protective sentimentality limits their understanding of it.”

Critical praise for the success of *Go Tell It on the Mountain* has not faded since 1953, when the book was first published. One of the earliest reviews, by J. Saunders Redding in the *New York Herald Tribune Book Review*, told potential readers that the book was more than just entertaining, and that “even the most insensitive of readers will put the book down with a troubled feeling of having ‘looked on beauty bare.’” *Saturday Review* praises it as “masterful,” and the *San Francisco Chronicle* declares that this important American novel is “brutal, objective and compassionate.” *Harper’s* writes, “It is written with poetic intensity and great narrative skill,” and *Commentary* writes that it is “the most important novel written about the American Negro.”

GobiernoUSA.gov

GobiernoUSA.gov is the official Spanish-language Web site and information portal of the U.S. government. It provides access to government services, transactions, and information in Spanish online, intended to serve the Hispanic community by highlighting pertinent government programs and initiatives for Spanish speakers. It was launched on October 16, 2003, and is managed by the U.S. General Services Administration’s Office of Citizen Services and Innovative Technologies.

History

GobiernoUSA.gov was established in a joint context with the gradual adoption of online service delivery by the government in the early 2000s, and the policy development that has sought to minimize discrimination and increase language access. Three especially relevant policy steps were pertinent in this direction. First, the early initiation of the process can be traced back to Title VI of the Civil Rights Act of 1964, which had the intention of minimizing discrimination by country of origin. Second, in line with this provision, Executive Order 13166 was signed by President Bill Clinton in August 2000 and legally required government agencies to ensure that the services they provide are meaningfully accessible to persons with limited English proficiency. Finally, this mandate of providing multilingual information on government services was reaffirmed in a 2011 memorandum

to the Heads of Federal Agencies from Attorney General Eric Holder. This memorandum cited the 2010 Decennial Census as evidence of the need for equitable language access and highlighted the importance of providing more equitable service access for both routine government matters and emergency government communications.

In April 2003, the government launched an initial Spanish-language Web site called FirstGov en Español. Later that year, a press release described the service as a central portal for the then 28.1 million Spanish-speaking residents of the United States to access government information, communicate with government agencies, and complete official transactions in their native Spanish language. U.S. General Services Administration's Office of Citizen Services and Innovative Technologies manages both the Spanish-language Web site and the English-language Web site, USA.gov.

Rather than simply translating its English-language counterpart, the Spanish-language Internet initiative is intended to cater to the cultural sensitivities of the audience it serves. In 2005, a research effort was initiated—utilizing surveys, Hispanic focus groups, and public feedback—to increase the general utility of the site and promote its credibility, trustworthiness, and acceptance by the Spanish-speaking community. This research supported a name change for the Web site to GobiernoUSA.gov. The Web site was redesigned to include official government imagery and a color scheme that is distinctively different from the English-language version. A new publication policy rapidly followed, which maintained native-language standards by prohibiting linking poor machine-translated text. This research and its resulting developments brought the Web site in line with the apparent cultural sensitivities of its Hispanic users.

Current Functioning

The potential outreach of GobiernoUSA.gov is shown by the contemporary growth of the Hispanic population and the sizable proportion that uses the Internet. According to the U.S. Census Bureau, Hispanics became the largest minority group in 2000, and by 2010 came to represent 50.5 million people, or 16.3 percent of the total U.S. population. Moreover, the Pew Hispanic Center's report "Latinos and Digital Technology, 2010" found that 65 percent of Hispanics,

generally, and 47 percent of Spanish-dominant Hispanics, in particular, access the Internet. Regarding online activity specifically, the Office of Citizen Services found in 2008 that social media Web sites are disproportionately used by Hispanic Internet users (77 percent) as opposed to Internet users from other groups (42 percent). In light of the unprecedented growth of the Hispanic population in the United States, which increased by over 40 percent in 10 years, facilitating interaction between the government and Spanish-speaking users has become increasingly relevant.

GobiernoUSA.gov leverages both its Web site and social media to serve this sizable and rapidly changing population in a language in which they are most comfortable. The Web site developed a social media strategy aiming, in addition to the basic objectives of the initiative, to expand awareness of the online availability of Spanish-language government services and to leverage networking features of social media platforms. GobiernoUSA.gov has accounts on Facebook, Twitter, and YouTube, allowing its users to interact with the government in an easier fashion. A smartphone version of the site was also launched in 2011.

Although both GobiernoUSA.gov and USA.gov maintain a unified strategy when communicating to their respective audiences, GobiernoUSA.gov recognizes the particular needs of the Hispanic population. Both Web sites provide information about government programs and services, and offer a directory of local, state, and federal government information. Yet GobiernoUSA.gov has adapted its content to deliver targeted resources, including immigration advice, visa services, and access to residence forms. Additionally, it supports bilingual language education and aims to increase the quality and quantity of Spanish-language content available on government Web sites.

Acknowledging American Multiculturalism

As the official Spanish-language counterpart to the Internet initiatives of the U.S. government, GobiernoUSA.gov is significant for the contemporary study of American multiculturalism. With the growth of Hispanic Internet use, existing government services and information can be meaningfully complemented through online platforms. Of equal significance, the presence of a resource that is distinct from the English-language Web site

recognizes the United States as a plural rather than a monolithic society. Such electronic democracy initiatives, tailored not only to a specific minority language but also to cultural needs and sensitivities, are evidence of an important convergence of technological development in government and the recognition of the distinct civic needs of multicultural society.

Godfather, The

The Godfather is a feature film directed by Francis Ford Coppola, based on a book by Mario

Puzo, with cinematography by Gordon Willis. It is a Paramount production. The film is fictional and follows the life of Michael Corleone (actor Al Pacino) as emerging head of a family crime syndicate established by his father Vito Corleone (Marlon Brando).

The film is set in America in 1945, when Michael is a war hero returning from active duty in World War II. At his sister Connie's (Talia Shire) wedding celebration he introduces his girlfriend Kay (Diane Keaton) to his family and tells her that they are gangsters. He is keen to distance himself from their activities, telling her, "That's my family, Kay. It's not me." Michael is equally keen that Kay, a white Anglo-Saxon Protestant, be included in the photos of his Italian American Catholic family.

Both Michael and his father Vito implicitly agree that Michael will not join the established crime syndicate, much to the disgust of his impetuous brother Sonny (James Caan). However, when his father is the victim of a near-fatal shooting by a rival gang member, Michael emerges as the natural leader. He orchestrates the killing of a police chief, which results in a war with rival Mafioso. Michael takes refuge in his father's hometown of Corleone, Sicily; there he meets, falls in love with, and marries Apollonia (Simonetta Stefanelli). Shortly after their wedding day she is killed in an attack intended for Michael.

Michael returns to the United States, rekindles his relationship with Kay, and marries her. Michael convinces Kay that he aims to make the family business legitimate, but as his gangster status rises their relationship becomes more strained. Through the course of Michael's 10-year ascendancy, his brother Sonny is killed, his brother Fredo (John Cazale) betrays Michael, and adopted brother Tom (Robert Duvall) becomes Michael's *consigliere* (adviser). When Vito Corleone dies, Michael emerges as the new Mafia Don.

Audience and Acclaim

The Godfather was critically acclaimed from the outset. It was nominated for 11 Academy Awards and won three: Best Picture, Best Actor (Marlon Brando), and Best Adapted Screenplay (Mario Puzo and Francis Ford Coppola). It has consistently appeared in lists of the top 10 films ever made, often alongside its sequel *The Godfather*

Part II (1974). A later sequel, *The Godfather Part III* (1990), was critically derided and is usually dismissed from academic study.

The film established Coppola as an auteur director and key figure of the New Hollywood cinema that emerged in the 1970s. Other notable films directed by Coppola include *The Conversation* (1974), *The Godfather Part II* (1974), and *Apocalypse Now* (1974). Often using the same cast and production crew, Coppola's films portray America as a country that is discomfited in the light of past transgressions, such as the Vietnam War. *The Godfather* demonstrates this in its narrative style, which, particularly when considered with *The Godfather Part II*, is nonlinear and lacking a neat resolution.

Cultural Commentary

As a key text of an established film canon, *The Godfather* has been the subject of considerable academic study and cultural debate. Whether as an example of genre, narrative structure, cinematography, stardom, directing, or acting, it is hard

Francis Ford Coppola discusses his experience with *The Godfather* at the Capodichino Ciao Hall in Naples, Italy, November 21, 2006. Initially, Coppola was concerned that the 1972 screenplay, which features a powerful New York crime family, would glorify the Mafia and reflect poorly on his Sicilian and Italian heritage.

to find an English-language film studies text that does not refer to this movie. In creating a portrayal of the Mafia that was both convincing and enduring, *The Godfather* perpetuated many of the stereotypes of Italian American culture. The success of both the film and the book ensured that several Italian criminal terms (such as *Cosa Nostra*, “going to the mattresses,” and “sleeping with the fishes”) became known to an English-speaking audience and entered a wider cultural discourse.

In *The Godfather Part II*, Al Pacino reprised his role as an older Michael Corleone reflecting on his ascent through the Mafia. In a series of flashbacks, Robert De Niro plays a younger version of his father Don Vito Corleone, showing his own emergence as head of the crime family. The collaboration of Pacino and De Niro in one film, directed by Coppola, was seen by many as the pinnacle of American cinema. Although the film has often been cited as a negative representation of Italian American culture, it has been given a greater amount of credence by the collaboration of many Italian Americans to create it.

The term *the godfather effect* was coined to refer to the way that American cultural consciousness in the 1970s appeared to turn inward, reflecting on the unattainability and failure of the American Dream. In *The Godfather*, the Mafia are presented as gangsters who are ultimately no more corrupt than many of the legitimized members of American society, such as governors, politicians, and clergy, that they encounter. The film's opening line: “I believe in America,” can therefore be read as a damning indictment of American society in the mid-20th century.

Gold Mountain

Gold Mountain, or Gum Shan, is the Chinese name for western North America. After the discovery of gold in California in 1848, thousands of men from the Pearl River Delta in Guangdong (Canton) Province made their way to the American west to escape civil war, flood, and famine, hoping to send support to their families and one day return home. The term *Gold Mountain* originally pertained to California, and a few years later also to British Columbia when gold was discovered there. After the North American Gold Rush declined over the next decade, Australia's gold fields became the New Gold Mountain for another group of Chinese sojourners. As a metaphor denoting the hopes and struggles of the early immigrants, Gold Mountain is as ubiquitous in Chinese American literature as the Ghost Dance is in Native American literature or the Statue of Liberty in works by European immigrants.

The Yellow Peril

Ceded to the United States by Mexico in 1848, California was home to some 30 indigenous cultures before the Gold Rush, as well as a small minority of Californios (Mexican colonists of Spanish descent), Russians, Brits, and other Europeans. After gold fever hit, Native populations were decimated by disease and violence as people poured into the region. Those seeking their fortunes were mainly European Americans from the American east and south, but prospectors also included African and Native Americans, Mexicans, Central and South Americans, western Europeans, Russians, Australians, and Asians. At first welcomed, by the 1850s Chinese laborers were deemed the “yellow peril” invading America to offer cheap labor and take jobs from whites. Chinese were also legal outcasts, like blacks and Indians, unable to testify against whites, which led to ever-increasing anti-Chinese violence.

Almost all Chinese had left the mines by 1868. Some joined the new influx of Chinese immigrants who came to build the western portion of the transcontinental railroad over the Sierra Nevada. The Chinese also contributed to agricultural development in the region, building levees in the Sacramento Delta like those of their homeland, establishing orchards, and growing vegetables.

They were also fishermen, cigar makers, cooks, restaurateurs, merchants, laundry owners, domestic servants, and nannies.

Chinese culture arrived with the first sojourners. Theater groups and roving minstrels entertained fellow immigrants. Chinese operas were also presented for white audiences. In 1854, the *Xinwenlu* (Golden Hill News) became the first Chinese-language newspaper in North America. Gambling halls, temples, herbalists, fortune-tellers, laundries, restaurants, and boarding houses, along with Chinese churches and benevolent associations, created bustling Chinatowns.

Major cities in the west, including Sacramento, Los Angeles, Seattle, and Victoria (British Columbia), have been important community hubs, but none have held the significance of San Francisco, the port where émigrés were processed at the infamous Angel Island, and where the city's densely populated Chinatown offered immigrants critical resources. San Francisco itself has been known as Gold Mountain.

In 1882, the Chinese Exclusion Act halted Chinese immigration and prohibited Chinese from becoming U.S. citizens. Previously, only prostitutes and “morons” were excluded. Because white Americans assumed that all Chinese women entering the United States were prostitutes (most who arrived before the mid-1870s were in fact forced to become sex slaves), women were excluded early on and remained a small minority of the Chinese in America, though exempt classes—merchants, diplomats, students, clergymen, and travelers—could bring their families. Exclusion laws, violence against migrant workers, and the illegality of interracial marriage limited the possibility of Chinese men putting down permanent roots. Nonetheless, the 25,000 Chinese émigrés by 1852 grew to 4 million claiming full or partial Chinese heritage in the 2010 U.S. Census, making Chinese Americans the largest Asian group in the United States.

Today, as a trope appearing throughout Chinese American literature, Gold Mountain insists on the remembrance of the significance of the past. Marlon K. Hom's translation of 220 songs originally published in 1911 and 1915, *Songs of Gold Mountain: Cantonese Rhymes From San Francisco Chinatown*, for example, opens readers' eyes to the wide variety of concerns of early Chinese immigrants, including poverty, sex, and

frustration with American bureaucracies. Maxine Hong Kingston's fictional *Tripmaster Monkey: His Fake Book*, set in the beatnik era, offers a comical window into how generations of Chinese immigrants helped shape the San Francisco Bay Area. Lisa See's family history, *On Gold Mountain*, inspired a 2000 exhibit at Los Angeles's Autry Museum of Western Heritage that traveled to the Smithsonian in Washington, D.C., in 2001 and was touted as the most significant show ever mounted in the United States on Chinese American life in the American west.

In an ironic twist, for investors today, the Gold Mountain is China.

writer and comedienne Gertrude Berg, who also starred. *The Goldbergs* was one of the most successful situation comedy programs on radio, premiering on the NBC network on November 10, 1929, and running weekly for 20 years. In 1948, Berg created a Broadway play, *Me and Molly*, adapted from the radio comedy, which ran for two years, and in 1949 the CBS television network premiered *The Goldbergs* as a weekly series, which ran until 1955.

Gertrude Berg played the matriarch Molly in all of the show's incarnations and was also the major writer for both series, composing some 10,000 scripts over the years. *The Goldbergs* also appeared as a comic strip, originating in the *New York Herald Tribune* newspaper, one of the few American comic strips to feature Jewish characters. *The Goldbergs* was an important piece of American popular culture, a respectful and successful depiction of an ethnic family in a popular medium crowded with stereotypes, and one of the first sympathetic depictions of Jewish life in American broadcasting.

Set for most of its radio and television run in the Bronx, where the Goldbergs lived in apartment 3B at 1038 East Tremont, in a neighborhood where immigrant Jewish families often moved after achieving the first level of financial success in America, *The Goldbergs* opened with Molly talking to her neighbors from the window of the family's apartment. (Her greeting, "Yoo-hoo, Mrs. Bloom," became a well-known catchphrase.)

The Goldbergs was one of the first family situation comedies in American media, and the longest running before Lucille Ball's *I Love Lucy*. Unlike Ball's character, mother Molly was a resourceful anchor at the center of the family, a problem solver who helped not only her family but those of her neighbors in the community. Her family included husband Jake, who owned a clothing business (on radio, actors Himan Brown and James R. Waters; on television, Philip Loeb, Harold Stone, and Robert H. Harris), Molly's retired Uncle David (Menasha Skulnik and Eli Mintz), who helps run the household, son Sammy (Alfred Ryder; on television, Larry Robinson and Tom Taylor), and daughter Rosalie (Roslyn Silber; on television, Arlene McQuade).

For most of its run, the radio show ran for 15 minutes daily or thrice weekly, featuring

Goldbergs, The

The Goldbergs was a humorous comedy series about a Jewish family in New York created by

serialized, continued story lines. The television adaptation began its run as a half-hour program on the CBS network; Berg received the first Emmy Award for Best Actress for this version in 1950. The show later moved to NBC, then the Dumont network, and finally Berg independently syndicated the show, becoming a pioneer in this form of distribution, ending in 1956.

The Immigrant Experience

Berg conceived her show as a portrait of the immigrant experience of her own life and family and of the Jewish community in New York where she grew up. The first episode of the radio show and the plot of the Broadway play featured Jake failing to get family financial support for opening his own clothing business, and Molly literally saving the day with her own secret funds. She later explained, "The saved money idea came from my grandmother, who was always putting away a penny here and a penny there for when something would be needed. Jake's desire to be his own boss was that of my father and grandfather."

The Catskill Mountains of New York became the major destination for vacations for the Jewish communities of the northeast, filled with summer camps and popular hotels featuring recreation and entertainment, sometimes called the Borsht Belt. *The Goldbergs* featured a fictional Catskills hotel, Pincus-in-the-Pines, based on Fleischmann's, a resort run by Berg's grandfather.

The success of the *Amos 'n Andy Show*, featuring white performers enacting stereotypical comedy about African Americans, paved the way for Berg's success in bringing *The Goldbergs* to radio. Stereotypical, and often offensive, depictions of racial and ethnic minorities have been a part of American popular culture since the 19th century, from blackface minstrel shows to vaudeville comedians like Gallagher and Sheahan and plays like *Abie's Irish Rose*.

Although employing ethnic stereotypes of Jews, Berg intended her shows to depict a cross-generational immigrant experience: "The children," she explained, "Sammy and Rosie, were . . . first generation Americans, who were trying to make sense of growing up in one world, America, but coming from another, the European world of their parents . . . they helped teach their immigrant parents how to become American."

Berg's Molly was a competent, adaptive mother and member of her community, one of the strongest feminist images of Jews in American popular culture, and also a verbally adept social commentator in the tradition of wise ethnic fictional characters like Finley Peter Dunne's Mr. Dooley and Langston Hughes's Jess B. Simple. Vaudeville dialect humor mocked its caricatured speakers, but Molly's use of malapropisms was not only popular (the public called them Molly-propisms) but expressive, satirical, and emotionally resonant of the feelings within her family and community.

McCarthyism and the Red Scare of the 1950s particularly targeted the popular media, and when a magazine called *Red Channels* published a list of supposed communists in Hollywood, these and others were barred from working through the blacklist. Philip Loeb was blacklisted, and when Berg refused to remove him from the show, CBS dropped it. Berg resisted, but finally replaced Loeb in order to move to NBC, but the show's appeal had been damaged and advertisers were frightened. When the show moved to the small Dumont network, the name was changed to *Molly*, and the family moved to a suburb, Havemore, losing much of its ethnic quality.

Gone With the Wind

Gone With the Wind, the 1936 novel by Atlanta native Margaret Mitchell, is the best-selling novel of the 20th century. It begins with talk of secession and follows Scarlett O'Hara through the U.S. Civil War and the early years of Reconstruction. Successful almost from the moment of publication, the 1,037-page novel has continued to sell in impressive numbers into the 21st century. Central to the novel's popularity, and almost inseparable from it in the popular imagination, is David O. Selznick's 1939 film adaptation, one of the most popular films of all time. Both novel and movie have frequently been the center of controversy surrounding the inherent racism of the work. Less attention has been given to the treatment of class and the Irish identity of the title character.

Early reviewers may have compared *Gone With the Wind* to William Makepeace Thackeray's *Vanity Fair*, but Margaret Mitchell's only novel has generally been looked upon with disdain by the literary establishment. Even though the novel won the Pulitzer Prize for Fiction in 1937, it has been viewed by most academic critics as popular fiction, flawed and trivial. Nevertheless, it broke publishing records, selling more than two million copies by the time its 21-month run on the bestseller list ended. It has been translated into 40 languages, and more than 75 years after it was first published, it continues to sell around 75,000 copies each year.

Margaret Mitchell was born in 1900 and came of age in a region, in urban areas no less than in rural ones, where racial violence was a fact of life and prejudice against Jews and Catholics as well as African Americans was entrenched. In presenting slaves as happy, sometimes childlike, creatures whose identity rested in their relationship to their white owners or as bestial beings less than human, Mitchell was replicating the moral blindness of

a system that owed its existence to slavery. The communist newspaper the *Daily Worker* accused Mitchell of inciting race hatred, but by and large, protests against the novel's racism were linked to the film.

The Film

Selznick paid Mitchell \$50,000 for film rights and hired Pulitzer Prize-winning dramatist Sydney Howard to write the screenplay. Aside from omitting background and two of Scarlett's children, Howard followed the novel in most respects. However, he and Selznick decided that racial elements must be toned down. They decided to remove references to the Ku Klux Klan and racial epithets. But these changes were not enough to stop the public outcry. Several African American organizations, including the National Association for the Advancement of Colored People (NAACP), opposed the film's production and release. Others saw it as a showcase for African American actors. While the actors themselves, particularly Butterfly McQueen, who played the simple-minded slave girl Prissy, were unhappy with the degrading stereotyping of African Americans, most were happy to have work in the 1930s.

Selznick's problems with the African American community increased once the film was complete. The Atlanta premiere was a three-day extravaganza. Selznick planned for all his actors to participate in the event. He was particularly eager to showcase Hattie McDaniel, whose Academy Award nomination for her performance as Mammy was the first such recognition for an African American actor. But Selznick was warned that while southern whites would receive the African American actors warmly on stage, they would not be seated with them in the theater or share dinner with them after the showing. Selznick chose to bring only the film's white actors to Atlanta.

Reviews of the film were generally generous, with Vivien Leigh's embodiment of Scarlett O'Hara and Hattie McDaniel's portrayal of Mammy as the moral force of the film receiving particular praise. The *Daily Worker*, on the other hand, called the film insulting to African Americans and Mammy "loathsome" in her love for her owners. Picketers in Washington, D.C., Chicago, and New York charged that the film

glorified slavery. A small band protested at the Oscars, but Hattie McDaniel's win was widely celebrated. Protests had little effect on audiences in 1939 or later. The movie has grossed approximately \$4 million; adjusting this for current value places the total at \$3 billion to 5.3 billion, making it one of the highest-grossing films of all time.

While prevailing racist attitudes toward African Americans have been a significant part of discussions about *Gone With the Wind* as book and film, consideration of the O'Haras' Irish ethnicity is often overlooked. Ellen O'Hara is from an aristocratic coastal family, but Gerald O'Hara is an Irish Catholic immigrant who has infiltrated the ranks of southern aristocracy through money and marriage. Rhett Butler, a product of Charleston aristocracy, calls him a "Mick on the make" and assures Scarlett that their daughter Bonnie with the blood of Butlers and Robillards in her veins is too good to associate with Scarlett's crowd of Irish, Yankees, white trash, and carpetbaggers.

Scarlett is her father's daughter. She is named for her paternal grandmother, whose family fought at the Battle of the Boyne. Her love for Tara, which is named for the ancient hall in County Meath (Gerald's home) where legendary Celtic figures gather, is inherited from her father, whose forebears placed high value on the land. Scarlett, who knows she is unlike her lady mother, is aware of how thin the barrier is that separates her from the white trash Slatterys, the common Bridget Flaherty, and her sawmill manager Johnnie Gallegher, who is willing to beat and starve a gang of convicts in order to increase profits. India Wilkes, sister of the man Scarlett loves for much of her life, tells Scarlett that she is not and never has been "one of us."

Gospel Music

Gospel music generally refers to songs that are expressions of Christian faith, or songs that provide religious alternatives to secular genres of music. Its purpose may be for worship, ceremony, proselytizing, education, or entertainment. Gospel audiences often expect performers to lead lives that match the expression of faith of their music. Structurally, gospel music varies across its many subgenres. Generally, strong vocals, either solo or ensemble; lyrics expressing messages ranging from inspirational to overtly religious; and syncopated, often ad libitum, rhythms comprise the fundamentals of gospel music.

Origins of Modern-Day Gospel Music

During the 17th century, spirituals, the precursors to gospel music, developed from the Christian hymns and sacred music imported from Europe, and the oral traditions that survived the Middle Passage, brought to the Americas by the enslaved peoples of West Africa. Because many practitioners were illiterate, first spirituals (and later gospel music) utilized repetition and call-and-response sections to facilitate memorization and participation. The lack of instrumentation available to African Americans at the time allowed for the development of complex rhythmic and harmonic elements.

By the 1870s, the music that had developed out of spirituals was known as gospel. The revival movement of the late 19th century facilitated the exportation of gospel music throughout the United States and made famous early gospel singers and songwriters, including Fanny Crosby, P. P. Bliss, and Charles H. Gabriel. In 1930, the National Baptist Convention formally endorsed

gospel as the music of the church. Mainstream acceptance of black gospel occurred in 1950, when Joe Bostic produced the Negro Gospel and Religious Music Festival at Carnegie Hall. Mahalia Jackson, the Fisk Jubilee Singers, and Thomas A. Dorsey were among the successful performers of traditional gospel music.

Contemporary Christian Music

Contemporary Christian music, or inspirational music, as it is sometimes known, is represented on *Billboard Magazine's* Top Christian Albums and Hot Christian Songs charts. This genre has been exemplified by a group of artists that includes Amy Grant, Jars of Clay, and dc Talk. A reaction to the libertine counterculture of the era that embraced radicalism, substance abuse, and sexual exploration, contemporary Christian music developed from the so-called Jesus music of the late 1960s and early 1970s. The genre's two foundational albums, Larry Norman's *Upon This Rock* (1969) and Mylon LeFevre's *Mylon—We Believe* (1970), evince its roots in folk and rock music. Initially, the music's secular sound was off-putting to some audiences. However, younger listeners gravitated toward the music, which facilitated the acceptance of more contemporary-sounding religious music. Over the course of the 1970s and 1980s, contemporary Christian music grew into a financially successful genre that received consistent airplay on mainstream radio stations. By the 2000s, contemporary Christian music was out-selling classical, jazz, and Latin recordings.

Christian Country Music

Christian country music is closely related to secular country music, sharing artists, instrumentation, and content. The genre is an outgrowth of both southern gospel and country music, developing in the southeast and midwest during the 1950s and 1960s. The work of disc jockeys like Bob Wilson helped cement the genre's popularity. Christian country music has been featured prominently on television on shows like *Grand Ole Opry*, *Hee Haw*, and *Ozark Jubilee*. Among the most popular Christian country performers are Barbara Mandrell, Tennessee Ernie Ford, and Allen Frizzell. Several Christian country music songs have had considerable mainstream success, including Dolly Parton's "The Seeker" (1975), Cristy Lane's "One

Carrie Underwood performs at the World Arena in Colorado Springs, December 2, 2006. Her Christian country music song "Jesus, Take the Wheel" (2005) was a major crossover hit.

Day at a Time" (1980), and Carrie Underwood's "Jesus, Take the Wheel" (2005).

Urban Contemporary Gospel

Urban contemporary gospel has its roots in traditional black gospel, Protestant hymns, and spirituals; it was established firmly as an independent genre by the late 1970s. It is marketed primarily to younger African American audiences as its sound has mirrored contemporaneous rhythm and blues and soul music. The primary audience for urban Christian music is black, while contemporary Christian music genres principally are listened to by white audiences. They have separate charts in *Billboard* magazine, are recognized at different awards shows, and have different artists who seldom collaborate with one another. Traditionally, the instrumentation of urban contemporary gospel has comprised keyboards, percussion, electric

guitar, and bass; increasingly, the influence of hip-hop can be observed as drum machines, samplers, and 808s have become commonplace.

Like most genres of African American music, urban contemporary gospel has its roots in spirituals, which were born out of West African musical forms mixing with Western Christian expression during American slavery. Although sometimes spirituals were used sometimes as a means of coded communication between enslaved people, their primary function was one of Christian praise and worship. Its syncopation, elaborate harmonies, stylistic freedom, and emphasis on virtuosic singing distinguished it from Protestant hymn singing. Soul singers, like Al Green, Aretha Franklin, and Wilson Pickett, further blurred the lines between secular and nonsecular black music with their vocal styles and by adapting gospel themes, musical elements, and phrases into non-religious music. Among the genre's most successful artists are Yolanda Adams, Mary Mary, and Donnie McClurkin.

Gran Torino

Gran Torino (2009) is a highly praised film that navigates the American multicultural scope and raises critical issues pertaining to racial discrimination, assimilation, generational difference, violence, and multicultural understanding. It

reveals a contrast in the demographic composition of the American urban setting, illustrated by a Detroit neighborhood in which most of the film's actions take place. The neighborhood is increasingly dominated by Asian migrants, who are rapidly replacing predominantly white residents. The film's protagonist Walt Kowalski (Clint Eastwood), one of the neighborhood's few white residents refusing to relocate, finds himself living at the intersection of homogenous past memories and a heterogeneous current reality, magnifying a critical crossroad for Americans to wrestle with.

Kowalski is a dying old American widower grieving the loss of his lifetime partner. He rejects any suggestions to move to a nursing home and chooses to lead an independent lifestyle. He struggles to find inner peace, but is unable to achieve it through church, family, or friends. His wife's death only increases his sense of anger and restlessness, which have already been stirred by his participation in the Korean War, his inability to adapt to the younger generation's way of life, and his difficulty interacting with the new racially diverse neighbors. As a self-reliant handyman, and a strong believer in work as a prerequisite for success, he suppresses his longing for inner peace by retaining his Ford Gran Torino, which is much sought after by his family, friends, and neighbors. It is through this Gran Torino that he eventually manages to secure peace for his soul.

Kowalski's young Hmong adolescent neighbor, Thao (Bee Vang), is coerced to join a neighborhood gang. For his initiation, he is asked to steal Kowalski's Gran Torino. The latter is alarmed and rushes to save his car. The next day, the gang members come back to convince Thao to steal the car. Thao refuses and attempts to run away. They all find themselves in Kowalski's yard and are scared away by his threatening rifle. The next morning, Kowalski finds himself hailed as the neighborhood hero for saving Thao and is swarmed with gifts. Later on, when Thao's sister, Sue (Ahney Her), is harassed by a small gang of African Americans, Kowalski rushes to her rescue. As a token of appreciation, Sue invites him to a birthday party, where he starts to learn and appreciate the Hmong culture and traditions.

This is a dramatic shift from Kowalski's earlier attitude toward them. In his earlier encounters,

he views them with disgust and contempt. He sees them as undesirable bodies unable to reflect, if not celebrate, any sense of assimilation to the American cultural codes. They congregate in big numbers, which makes him wonder, “How many swamp rats you can get in one room!” He constantly uses denigrating racial slurs when referring to them, spits to the ground with derision when looking at them, and thinks of them as dog-eaters and barbarians. He demonstrates a sense of ignorance of the Hmong as he chooses to call them Koreans and jungle dwellers, using his war frame of reference. He even passes on to them other fixed stereotypes like the ideas that Asians are education oriented and good at math. Constantly seeing them as a cultural other, Kowalski fails to recognize their embrace of American values.

Now, Kowalski exhibits more awareness of the differences between Hmong and other Asian ethnicities. He sees Thao’s commitment to success through hard work and secures a construction job for him at one of his friend’s construction sites, purchasing the necessary tools for him. He offers to lend him some of his tool collection when he learns that Thao has been beaten and lost his tools. He becomes more committed to Thao’s well-being and encourages him to take the girl he likes to a date. He even offers his *Gran Torino* as the ride for the date. Kowalski is infuriated when learning about the beating and raping of Sue that he is ready to offer himself as a sacrifice, offering redemption to his restless soul and salvation to Thao’s family. He even leaves the *Gran Torino* to Thao in his will.

The film, produced and directed by Clint Eastwood, presents a story line that delves into the racial tension that still generates misfortunes for people of color in the United States, and concludes with a touching reminder of the American pride in multiculturalism and ethnic diversity. It champions awareness of other cultures as a necessary component for American reconciliation with a history informed by racial divide, fear, and intolerance. Meanwhile, the film showcases the power of the individual by introducing new meanings to one’s salvation that can be realized through America’s multicultural promise.

Grandfather Clauses

A grandfather clause is a statement in law or policy granting specified exceptions to new regulations, based on preexisting practices or guarantees.

The term in its original usage specifically addressed free male U.S. voting rights in the 19th century. In their initial form, grandfather clauses in states such as Louisiana exempted voters who may have otherwise failed to meet either literacy or property requirements necessary to vote. A male voter whose father or grandfather voted prior to January 1, 1867, or was a war veteran, was exempt from these stipulations. Such clauses were often referred to as “old soldier” or “grandfather” clauses.

Thus, the terminology of “being grandfathered in” derived from the practice of allowing landless or perhaps illiterate white males the right to vote while disenfranchising African Americans male voters. The practice would stifle not only black voter representation in the south; it would also disenfranchise several thousand poor, white

voters. Along with numerous other strategies, undesirable voters of many ethnicities would be affected by such clauses. Suppression of their votes would have a lasting effect on the American political process and would not be adequately addressed until the Voting Rights Act of 1965.

Background

In the aftermath of the Civil War a critical debate arose among members of Congress regarding the full enfranchisement of newly emancipated blacks. Northern Republicans and southern Democrats were unilaterally divided. The passage of the Thirteenth Amendment (abolition of slavery, 1863), Fourteenth Amendment (guarantees citizenship of blacks, 1868) and Fifteenth Amendment (the right to vote, 1870) to the U.S. Constitution, sometimes referred to as the Reconstruction amendments, reflected Republican ideals and demonstrated the party's dominance by the end of the Civil War.

Remaking America along Republican lines would mean a greater inclusion of African Americans not only as free black citizens but also as voters willing to forge a partnership with the Republican Party. The Reconstruction amendments posed a tremendous threat to many southern Democrats' view of African Americans as inferior. The attempt at enfranchisement sought by the Fifteenth Amendment jeopardized the political power of the Democratic Party within Congress.

In a show of force, the 1867 Reconstruction acts, with radical Republicans at the helm, established a military presence within former Confederate states by dividing the south into five military districts, with federal troops dispatched to each; requiring southern states to draft state constitutions that allowed black male suffrage; and prohibiting former Confederate states from taking their seats in Congress until their ratification of the Fourteenth Amendment. The humiliation of southern failure during the Civil War was further exacerbated by these congressional defeats.

The Rise of a New South

Following the assassination of President Abraham Lincoln in 1865, President Andrew Johnson sought to placate southern states by softening the requirements necessary for reentry to the Union. However, a mostly Republican Congress felt the south

should receive harsher punishment for its secessionary actions. Johnson's efforts, while endearing him to southern Democrats, were largely ineffective and nearly cost him the presidency.

The election of 1876 once again shifted political power between the north and south. The hotly contested presidential race between Republican Rutherford B. Hayes and Democratic candidate Samuel Tilden ended with Tilden receiving the popular vote and Hayes a majority of electoral votes. Hayes was, however, allowed to take office contingent upon his agreement to push for pro-Democratic reforms. Often called the Compromise of 1877, such reforms included the removal of all federal troops from Confederate states. Louisiana, South Carolina, and Florida would be the beneficiaries of this decision.

This compromise, which brought an end to the period of Reconstruction, would prove detrimental to black political power throughout the final decades of the 19th century and into the following century. Throughout Reconstruction the military presence of federal troops stemmed the tide of racial violence that many newly freed blacks had experienced. In addition, there had been a tremendous flowering of black political involvement during this period. Military personnel provided a modicum of law and order and, where necessary, presided over civil matters as well. Elected black congressmen like Hiram Rhodes Revels, Blanche Bruce, Richard H. Cain, and Robert C. DeLarge emerged throughout the 1870s. However, events like the 1877 compromise marked the beginning of a new era, the end of Reconstruction.

In 1869, Mississippi alone had 87,000 registered black voters. A little more than a decade later that number had dwindled to half. At the same time, the black politicians that filled local, state, and federal positions were no longer in office. The factors responsible for this decrease would be the federal government's diminishing involvement in southern states' lawmaking, the nation's growing engagement abroad, and Supreme Court rulings upholding black disenfranchisement. What occurred in Mississippi would set an important precedent for the establishment of grandfather clauses and other tactics aimed at stifling the black vote. When the Mississippi convention of elected state officials convened in 1890 to draft the state's new constitution, the purpose was clear. In the

words of the convention president, they had gathered to devise a strategy to exclude black voters.

The establishment of literacy requirements, poll taxes, and the grandfather clause offered a legal route to circumventing the Fifteenth Amendment. The grandfather clause served as the penultimate choice, prior to full-out intimidation, to enable state legislators to ensure enfranchisement only for whites. While prospective white voters may have failed to meet the literacy requirements or were unable to pay a two-year retroactive poll tax, they would most likely still qualify to vote. The grandfather clause, applying only to males whose fathers or grandfathers were eligible voters prior to January 1, 1867, would undoubtedly exclude the majority of black voters. The following states soon adopted similar clauses: Louisiana (1898), North Carolina (1900), Maryland (1908), Georgia (1908), Virginia (1901), Alabama (1901), and Oklahoma (1910).

The passage of state constitutions and laws that excluded blacks from the voter rolls had its desired effect of disenfranchising African Americans. By 1892 in Mississippi alone, only 6 percent of the state's black population were registered to vote. Mississippi would first invoke an "understanding clause." Such a clause enabled illiterate whites to vote despite their inability to read. Election officials would read a passage from the U.S. Constitution. Upon their own discretion, the officials then decided whether prospective voters had significant understanding of the Constitution to allow them to cast their ballots. This loophole, however, invited voter fraud, and other southern states considering such measures believed they were too risky. The drafting of these states' constitutions reflected their attempts to build off the Mississippi model, while avoiding its mistakes.

Louisiana

For example, in 1898 Louisiana ratified its state constitution, which included the first reference to a grandfather clause. Under this clause, males, their sons, and grandsons born prior to January 1, 1867, were exempt from literacy and property requirements. Separate lists of white and black voters were generated. Louisiana's grandfather clause was meant to remedy even the appearance of the fraudulent practices inherent in Mississippi's understanding clause. It was effective in

purging the majority black voters from the rolls. In 1896, there were 130,334 black voters in Louisiana; by 1910, only 710 black registrants were eligible to vote.

North Carolina

By 1896 North Carolina's white Democrats sought to reestablish control of local and state government. In that year's elections, candidates ran on a platform of white supremacy and black disenfranchisement. In subsequent elections this goal was achieved. The North Carolina state legislature would meet in 1900 to effectively bar blacks from voting by adopting its own version of the grandfather clause.

The rationale for the grandfather clause's use was combined with the party's white supremacy dogma. Committee chairman George H. Rountree openly stated that barring blacks from voting through such clauses was necessary to the maintenance of whites' hereditary superiority in self-governing. Thus, in extending exemptions to the poll tax only to those entitled to vote prior to January 1, 1867, Rountree and others concluded that the proper hereditary rights of certain individuals would be maintained. The North Carolina regulations were especially effective in attaining their goals; from 1896 to 1904, virtually no African American voters went to the polls in that state.

Alabama

When Alabama legislators met in 1901 to create a new state constitution, they were influenced by the barriers to black voting in the Mississippi constitution, Alabama lawmakers sought to replicate these tactics. Like Louisiana and North Carolina before them, and to avoid a federal injunction for failing to uphold the Fifteenth Amendment, Alabama lawmakers stated their grandfather clauses more implicitly.

Article VIII, Section 180 of the Alabama constitution clearly specified its grandfather clause by placing voters into three categories: (1) a class of soldiers; (2) descendants of the soldiers' class; and (3) a class of people who were neither soldiers nor descendants of soldiers. Categorically the third class subjected potential black voters to significantly greater scrutiny when registering to vote. Forced to read difficult passages of the Constitution or interpret its most onerous passages,

black voters were often left to the whim of white registrars. However, the first two classes, by reason of their white descent, avoided such barriers to voting.

These voting practices were replicated in other states. So while Mississippi led the way in black disfranchisement, other southern states further formalized the process by including and refining grandfather clauses in their newly ratified state constitutions and laws. This paved the way for the establishment of several more Jim Crow laws and the beginning of the Jim Crow era in general.

Opposition to the Grandfather Clause

From their inception, grandfather clauses came under a storm of criticism. Republicans would rightly claim that these clauses sought to quiet black congressional voices that had arisen during Reconstruction. While largely unsuccessful, some like U.S. Representative Edgar D. Crumpacker offered proposals and legislation meant to curb such voter fraud and punish southern states for their attempts to implement such practices. Black leaders like Booker T. Washington financed several legal battles on behalf of southern black voters.

Throughout the late 19th and early 20th centuries, a string of state and federal cases sought to end grandfather clauses and other discriminatory voting practices. The 1898 case *William v. Mississippi* set a precedent in its attempt to challenge the Mississippi constitution's voting practices. Henry Williams was convicted and subsequently found guilty of murder by an all-white jury. His defense attorney argued that because of black voter suppression through literacy requirements, poll taxes, and the understanding clause, Williams's rights under the Fourteenth Amendment were violated, disallowing a trial by a jury of his peers. The Supreme Court, led by Chief Justice Melville Fuller who ruled in the *Plessy v. Ferguson* (1896) case, ruled in favor of Mississippi. The court concluded that such voting practices did not in fact target African Americans. Subsequent cases *Giles v. Harris* (1903) and *Giles v. Teasley* (1904) met with the same ruling.

The End of Grandfather Clauses

In 1915, grandfather clauses in the states of Oklahoma and Maryland were ruled unconstitutional

in *Guinn v. United States*. Chief Justice Edward D. White, who also ruled in *Plessy v. Ferguson*, found the states' clauses to be in violation of the Fifteenth Amendment. The court's ruling would be the first among several court briefs filed by the recently formed National Association for the Advancement of Colored People (NAACP). As the first successful federal ruling against grandfather clauses, *Guinn v. United States* ultimately ended such state constitutional barriers to voting in Louisiana, Georgia, Alabama, Virginia, and North Carolina. However, these states soon ratified new laws and conceived other methods to disenfranchise black voters.

Twenty-three years after the *Guinn v. United States* decision, the Supreme Court once again ruled on behalf of black voters in *Lane v. Wilson*. In response to the *Guinn* decision, Oklahoma had enacted a new law whereby anyone not registered to vote before 1914 was forever barred from voting unless they registered within 12 days. In the majority opinion written by Justice Felix Frankfurter, the Supreme Court saw this law as a thinly veiled attempt at circumventing the 1915 ruling that did away with grandfather clauses.

The state law was struck down. However, the *Lane v. Wilson* case demonstrates the continued attempts by state and local officials to suppress the black vote. The end of the grandfather clause only marked the inception of similar laws and devious practices meant to continue disenfranchisement efforts.

The 1965 Voting Rights Act addressed grandfather clauses' other voting abuses, providing one of the most sweeping legal rulings on the matter in the 20th century. While *Guinn v. United States* addressed grandfather clauses specifically, the Voting Rights Act of 1965 addressed all such discriminatory practices by prohibiting the use of any voting qualifications or prerequisites aimed at denying the right of any person on the basis of color or race.

Great Depression

The American Great Depression was a complex event that unfolded over more than a decade and affected different cultural and ethnic groups unevenly. The most typical index of the Depression, the general unemployment statistics, hovered consistently between 14 percent and 25 percent in the 1930s, but for minorities living during this period it was often much higher. For example, for African Americans who moved north during the Great Migration of the 1920s, unemployment was often above 50 percent.

Racism, Immigration, and Labor

Racism, exclusion, and poverty were an integral part of life for minorities and ethnic groups at every level of society, and manifested in multiple ways. The conditions of American life changed dramatically for everyone, with more than half of the population living in cities rather than on farms, and the electrification of a majority of homes for the first time. But these changes did not have the same effects for the more than 120

million Americans who experienced the 1930s. Those African Americans who did not leave the south had the lowest life expectancy in the nation, averaging 45 years in contrast to the national average of 60 years. These differences between region and population demonstrate the need to focus attention on the specific experiences that characterized life for American minority groups.

One of the most significant changes to occur during the Depression was the leveling off, then reversal, of the large-scale immigration of minority groups that had characterized the previous three decades. The economic hardship that caused many recent immigrants to return to their country of origin in the 1930s was compounded by the new immigration legislation that made it significantly more difficult for ethnic minorities to enter the United States or to naturalize. The Immigration Restriction Act of 1924 set quotas based on the theories of "scientific racism," which held that a pseudo-anthropological group called the Nordics was inherently superior to other "races." In accord with these eugenicist principles, white Protestants from northern Europe were encouraged to emigrate to the United States, while those from other regions were discouraged by restricting immigration from countries such as Italy, Greece, or Poland. These eastern and southern European white ethnic groups comprised distinct social categories in American sociopolitics, and were considered eugenically inferior for the same reasons that people originating from Africa and Asia were deemed "dysgenic."

These quotas dramatically restructured minority communities that had previously been shaped by patterns of immigration. On the West Coast, the large Japanese community continued to grow despite restricted immigration, with more than half of all Japanese Americans born in the United States by the 1930s. The significant number of Japanese women coming to the United States in the previous decades (some years as high as 40 percent of total Japanese emigration) meant that many Japanese Americans began families. With over 130,000 Japanese Americans in the United States, most of whom lived on the West Coast, this group comprised one of the few minority populations to significantly grow during the Depression.

This population growth stands in marked contrast to the experience of Chinese Americans, a

group that was predominantly male because Chinese women had made up a very small proportion of emigrants in the previous decades. Consequently, population growth among Chinese Americans came almost exclusively from immigration, and there were very few Chinese Americans born in the United States between the wars. Strictly enforced antimiscegenation laws in California deriving from the same eugenicist principles behind immigration restriction were also used to block marriage between minorities and the predominantly white population. This resulted in a very stable Chinese American population of about 75,000 over the period of the Depression.

Although the 1924 Immigration Restriction Act specifically contained an Asian Exclusion Act that continued earlier quotas on the number of immigrants from countries like China and Japan,

During the Great Depression in June 1935, a Mexican mother in California says she tells her children that "I would like to go to Mexico, but they tell me, 'We don't want to go, we belong here.'" The Great Depression was marked by a decade of racism, exclusion, poverty, and unemployment at every level of society, but affected U.S. cultural and ethnic groups unevenly.

the law's quotas did not include nations in the Western Hemisphere such as Mexico. Because of this lack of restriction, by the Great Depression, over one million people of Hispanic origin lived in the United States (mainly in Texas and California). This group, which had previously been considered "white," took on minority ethnic status for the first time with the 1930 U.S. Census. Along with these categorical distinctions came racism and exclusion. Between 1930 and 1932, more than a half-million Mexican and Mexican American laborers were deported or repatriated, sometimes in cattle cars. The combination of deportations and severe work shortages significantly reduced the Mexican American population during the Depression.

The Effect of the Dust Bowl

The Dust Bowl in Oklahoma and neighboring states brought more than one million ethnically white workers from that region to the agricultural fields of the West Coast in the 1930s, creating a serious shortage of work for the Japanese American and Mexican American groups that had previously provided the majority of agricultural labor. Mirroring the high unemployment of African American workers in the industrial northeast, these minority communities were seriously affected by the deeply ingrained discriminatory practices dictating that white laborers should be hired first and paid more. This was part of a common strategy among employers during the 1930s and earlier to use the antagonism between different ethnic communities to lower wages, increase workloads, and discourage the formation of unions. It was not uncommon, for example, to fire an entire workforce of Japanese American laborers to import Filipino workers at lower pay.

Labor Unions, Strikes, and Interethnic Collaboration

Because wages for agricultural labor dropped by almost half in the early 1930s, many ethnic minorities formed unions and went on strike. In an effort to reduce the ethnic antagonisms that benefited employers, these strikes frequently resulted in unprecedented cooperation among different groups of laborers. The 1934 strike organized between Filipino Americans and the mainly white American Federation of Labor (AFL) produce

packers was an important attempt at interethnic collaboration for higher wages and better working conditions. One of the most significant strikes of the Great Depression, the 1933 Cotton Strike in California, involved Mexican American, African American, and white labor. The resulting higher wages of this and other successful strikes on the West Coast in the 1930s were possible because inter-ethnic cooperation ended the struggles between ethnic minorities that employers had promoted to control wages. Conversely, these strikes often failed where ethnic conflict was reintroduced, as with the 1934 Filipino American and AFL strike, in which the white packers eventually chose to negotiate on their own while Filipino Americans were evicted from the fields by vigilantes. While the mainly ethnically white Congress of Industrial Organizations (CIO) achieved significant legislation protecting rights and wages in the 1930s, the predominantly minority agricultural laborers struggled throughout this period for even modest wage increases.

John Steinbeck's celebrated *The Grapes of Wrath* (1939) follows the struggles of a family of migrant workers from Oklahoma, the Joads, without addressing the minorities who were displaced by white laborers like the Joad family. The vigilantes who terrorize Steinbeck's protagonists were an important part of the landowner's strategy for displacing these minority laborers. The use of this kind of violence to break agricultural strikes normalized racist aggression, political disenfranchisement, and inhumane deportation, establishing a precedent for the internment of more than 100,000 Japanese Americans after the United States declared war on Japan in 1941. While openly racist groups such as the Ku Klux Klan (KKK) lost most of their membership in the 1930s, these extra-legal forms of racist exclusion and abuse continued throughout the decade in areas like agricultural labor.

The eugenicist attitudes underlying this extra-legal racism also found official sanction at the government level with compulsory sterilization laws that disproportionately affected minorities. California, along with Virginia and North Carolina, forcibly sterilized tens of thousands of people based on vague categories such as "feeble-mindedness" or "sexual perversity" that were often interpreted according to the prevailing biases of race and class.

According to these eugenicists, the effects of class and environment were insignificant compared to the innate qualities imparted by racial heritage. The ramifications of this attitude were in turn a major factor in exacerbating these same economic and environmental conditions for minorities in the United States during the Great Depression.

The New Deal

During his presidency from 1933 to 1945, Franklin Delano Roosevelt brought together an uneasy coalition of voters that redefined the Democratic Party. Before the 1930s, the Republican Party, which had been the party of Abraham Lincoln, tended to garner the minority vote, especially among African Americans. Roosevelt effected a shift in this voting demographic by bringing together the minority vote of the industrialized north and progressive factions in both parties to form the powerful New Deal electorate. In contrast to the traditional Democratic south, where only 5 percent of African Americans were registered to vote, industrial labor and immigrant minorities dominated the north. Organizations representing minorities such as the National Association for the Advancement of Colored People (NAACP) and the Anti-Defamation League also became influential political organizations with the emergence of professional interest groups in Washington. These and other factors contributed to shaping a New Deal policy that was unprecedented in its visible effects for minorities.

Just as the Great Depression is commonly understood in terms of its economic effects, the New Deal is frequently viewed as a mainly legislative undertaking. A remarkable number of important laws were passed during Roosevelt's tenure, many of which positively affected minority groups. The Indian Reorganization Act of 1934 designed by John Collier was the first legislation to reverse the Dawes Act of 1887, which had dispossessed Native Americans of land and livelihood for generations through forced assimilation. In a reversal of this procedure, Collier's act had the stated goal of maintaining Native cultures on communally owned land. This established self-government for Native American tribes and protected the land and people from the process of assimilation that had been under way since the colonial period.

Failures of the New Deal Legislation

Alongside successful programs like the Indian Reorganization Act, New Deal legislation frequently failed to establish the parity among ethnic groups that it had promised. The Social Security Act of 1935 excluded agricultural and domestic service, areas of work predominantly filled by minorities. This omission was especially egregious because these groups often had little savings and were especially vulnerable to the vicissitudes of the economy. Similarly, while the early version of the National Labor Relations Act of 1935 (often called the Wagner Act) prohibited racial discrimination, the AFL successfully campaigned to eliminate this clause, resulting in diminished opportunities for minorities to negotiate with employers. Without the legal protection of the Wagner Act, minorities experienced a significantly higher unemployment rate and a pay rate notably below the national average.

Some important legislation affecting minorities was never enacted. The Anti-Lynching Bill of 1937 never came to a vote in the Senate because of political infighting as the southern Democrats struggled for control over Roosevelt's policy. The failure of this bill was a strong index of the continuing racial tensions that characterized the south, an ongoing conflict dramatized in the Scottsboro Boys trial of 1931.

When nine young African American men were accused of raping two white women, they were nearly lynched, then arrested and tried under dubious circumstances. Although the defendants were never fully acquitted, their wrongful conviction was overturned several times in a series of court cases, in part because of the support of the American Communist Party, which was highly active in recruiting and aiding African Americans in the 1930s. Despite the Scottsboro trial's demonstration that racism was a national problem, no legislation explicitly protecting minorities would be passed until after the Great Depression.

New Deal Programs and American Minorities

Legislation was not the only avenue by which the New Deal altered life for American minorities. The Works Progress Administration (WPA) was one of the largest employers during the Depression era, supporting everyone from the unskilled

to the artisan. Because it focused on the unemployed, the WPA greatly helped minorities, who made up a disproportionate percentage of those without work. The WPA was not without its controversies, however. Critics felt that it fostered leftist art and unduly supported minorities. Conversely, the employment policies of the WPA specifically discouraged women from becoming the primary breadwinners, suppressing emerging forms of gender equality that had resulted from the changing economic roles brought about by the Depression.

More than anything, these controversies were a mark of the program's wide-ranging influence and remarkable importance for Americans. Begun in 1935, the WPA increased in size and scope every succeeding year of the 1930s to employ more than 8.5 million people at a total cost of \$11 billion. The projects supported by the WPA included parks and recreational areas that improved urban life, where most minorities lived, and subsidiary programs like the Federal Art Project, which aided many minority artists and helped document folk art and traditions.

In its charter, the WPA stated, "There shall be no discrimination on account of race, creed or color." This egalitarian ethos was realized in a variety of its programs, which carried forward the remarkable project of self-documentation and self-scrutiny that characterized the Depression era. The Federal Writers Project interviewed former slaves and recorded the experiences of minorities in more than 3,000 interviews. Thirty-five of these were gathered in *These Are Our Lives* (1939), which told the representative stories of Americans living in North Carolina, Tennessee, and Georgia. The Federal Music Project accomplished a similar documentation of American folk music and provided thousands of free concerts in urban settings across the United States.

Another major component of this documentary spirit was expressed through photography. In particular, the photographs by Margaret Bourke-White in *You Have Seen Their Faces* (1937) and Walker Evans in *Let Us Now Praise Famous Men* (1941) recorded the lives of poor rural minorities and whites. These and similar projects were part of a larger efflorescence of culture and entertainment that helped reshape the role of minorities during the Great Depression.

Culture and Entertainment

In the 1946 trial of Major General Karl Brandt for crimes against humanity, the Nazi war criminal defended himself by pointing out that the eugenicist principles underlying his murder of the disabled and racially “inferior” were first advocated and practiced in the United States. Like the German Reich, many Americans supported the theory that innate qualities were dictated by a vaguely understood concept of race. A decade before Brandt’s trial, Hitler had his greatest opportunity to demonstrate these eugenicist theories of racial superiority on the world stage as Germany hosted the 1936 Summer Olympics. In this event, the Nazis sought to corroborate their “scientific racism” with undeniable proof of German athletic superiority. However, African American athletes Jesse Owens and John Woodruff won celebrated gold medals in running and jumping events, victories that were widely perceived to undermine German and American eugenicist theories.

The Olympics was not the only area in which African Americans shone in the 1930s. Boxing was a tremendously popular sport when Joe Louis took the heavyweight championship by defeating, among others, the Jewish American boxer Max Baer. Undoubtedly, Joe Louis’s most important competitor was the German Max Schmeling, who beat Louis in their first meeting in 1936. The Nazis were quick to claim this victory as proof of Aryan superiority, but in the 1938 rematch, Louis decisively won one of the most famous boxing matches in history. Widely touted as an allegorical struggle between minority America and Aryan Germany, the fight was attended by more than 20,000 African Americans. More than 70 million Americans listened to the fight, about twice as many as had voted in the 1936 presidential election. In the rush of excitement at Louis’s victory, people of all ethnicities spontaneously joined together to celebrate in large cities and small towns across the United States.

The Mainstreaming of Minority Culture

Celebration was especially intense in Harlem, the town that the Jamaican American author Claude McKay called “the Negro capital of the world.” Although the Harlem Renaissance had suffered from the economic downturn, many important writers and artists continued to live in this

epicenter of African American culture. Among the important achievements of the later Harlem Renaissance was Zora Neale Hurston’s *Their Eyes Were Watching God* (1937), which is set in the context of the Great Depression. Other important works include Langston Hughes’s *Not Without Laughter* (1930) and George Schuyler’s *Black No More* (1931), both of which are critical of the internal and social racism that characterized the commodification of black culture in the 1920s.

This commodification of black culture continued and intensified during the Depression in events like the New York World’s Fair. Attended by one in three Americans, the fair was a showcase for American science and technology, which were glorified alongside African American dance. Swing, jazz, and the popular new Lindy Hop dance were put on display at the fair, adapted from famous Harlem venues such as the Cotton Club. These displays struck a delicate balance between cultural exchange and co-optation, as a mainly white clientele enjoyed the spectacle of African American performers. In the 1930s, some artists played with this tension to produce fresh responses or generate new material. Orson Welles’s famous production of *Macbeth* with an all-black cast at the Harlem Lafayette Theater complicated Shakespeare’s familiar play by overlaying its performance with American categories of race and ethnicity. On the other hand, George Gershwin’s “American folk opera” *Porgy and Bess* premiered in 1935 with a black cast that had been trained in classical opera as opposed to the kind of music on display at the Cotton Club.

At the same time that African American art and entertainment were becoming a part of a shared American culture, radio and cinema became important avenues for exploring questions of minority identity and experience. Jewish Americans like Jack Benny and the Marx Brothers brought vaudeville and Yiddish traditions of humor to their films, while radio programs like *The Goldbergs* gave listeners an image of New York immigrant life. As important as these media were, they were just as often part of a discriminatory and racist culture that persisted throughout the 1930s. The immensely popular *Amos ‘n Andy* radio broadcasts used racist caricature drawn from the southern minstrel show. In Hollywood, the onset of the Motion Picture Production Code

(or the Hays Code) prohibited the depiction of “miscegenation” or “sexual perversion,” provisions specifically targeting minorities and members of the queer community.

The Great Depression in Perspective

Although immigration greatly slowed during the Great Depression, the 1930s were a time when many minorities began to explore identity through art and culture. These communities contributed importantly to the shaping of an American culture that became significantly less assimilationist, despite the continued prevalence of eugenicist laws and attitudes. In many ways, the Depression brought people from different ethnic groups together in the shared project of overcoming the economic and social challenges of this tumultuous decade.

Great Lakes Indian Fish and Wildlife Commission

The 2010 U.S. Census reports that indigenous populations in the United States have risen by 9.7 percent since 2000. The Great Lakes Indian Fish and Wildlife Commission (GLIFWC) is an organization dedicated to serving Ojibwe (Anishinaabe or Chippewa) indigenous nations in the Great Lakes region of the United States. Michigan ranked among the top 10 most populous states for American Indian peoples, and its geographic boundaries contain three of the 11 GLIFWC tribal nations. The 2010 census also recorded a total number of 170,742 people identifying either alone or in combination with another grouping as Chippewa, the name the U.S. government applies to Ojibwe or Anishinaabe people. The GLIFWC is responsible for regulating services and agreements between the states and Native peoples.

History

Formed in 1984, the GLIFWC serves its 11 member Ojibwe (Anishinaabe) tribes in the management of off-reservation resources and treaty harvest seasons throughout the ceded territories in northern Michigan, Wisconsin, and Minnesota. It exercises powers delegated by its member tribes. Services include conservation enforcement, legal/policy expertise, natural resource management programs, and public information. Annual reports are available from the GLIFWC regarding Manoomin (wild rice) management and research, fish population assessments, trapping and animal harvest activities, management of invasive plants and plant-harvesting, and spear fishing records.

Governance

The GLIFWC's main office is located on the Bad River Reservation, just east of Ashland, Wisconsin. A satellite office is also maintained in Madison, Wisconsin, and enforcement personnel are stationed throughout the ceded territory. The GLIFWC's work is divided among the divisions of Administration, Biological Management, Enforcement, Intergovernmental Affairs, Development and Planning, and Public Information.

In the 19th century, a set of four important agreements with the U.S. government was

concluded based on cession of lands. These agreements are referred to as treaties, or legally binding agreements made between nations, and the rights kept by Ojibwe people to hunt, fish, and gather on land they sold are referred to as treaty rights (or usufructuary rights). The treaties in question were established in 1836, 1837, 1842, and 1854, respectively.

According to the GLIFWC, the 1836 treaty ceded land in Michigan and parts of the Great Lakes, the 1837 treaty ceded land in north-central Wisconsin and east-central Minnesota, the 1842 treaty ceded land in northern Michigan and Wisconsin as well as the western part of Lake Superior, and the 1854 treaty ceded land in northeastern Minnesota and created reservations for many Ojibwe bands. The Ojibwe ceded an abundance of land to the U.S. government but retained the rights to fish, hunt, and gather on those lands, as these were traditional means of feeding Ojibwe families. Most of these treaties were established before the state boundaries of Michigan, Wisconsin, and Minnesota existed. Because of a variety of government policies, including assimilation and termination, Ojibwe people did not challenge these usufruct rights until the early 1970s.

The court battle over fishing rights in Michigan began in 1971, continuing for over a decade and a half. However, 1983 legislation in Wisconsin resulted in the creation of the Great Lakes Indian Fish and Wildlife Commission, comprised of state and tribal members, to regulate Indian fishing and wildlife actions in Michigan, Wisconsin, and Minnesota.

The formation of groups like the GLIFWC is an acknowledgment by state, federal, and tribal people that Indigenous issues are real and present. The GLIFWC is also representative of the exercise of sovereignty within the boundaries of Indigenous nations. It is recognition that Indigenous nations do supersede state boundaries, resulting in the intertribal, interstate commission.

The GLIFWC's board of commissioners, comprised of a representative from each member tribe, provides direction and policy for the organization. The GLIFWC has two standing committees: the Voigt Intertribal Task Force (VITF) and the Great Lakes Indian Fisheries Committee. The VITF was formed following the 1983 Voigt decision and makes recommendations regarding

the management of the fishery in inland lakes and wild game and wild plants in the 1837 and 1842 treaty-ceded territories. The Lakes Committee addresses matters pertaining to the management of the Lake Superior fishery and related issues.

Mission

GLIFWC's mission is fourfold: (1) to assist member tribes in the conservation and management of the ceded territories' natural resources, ensuring access to traditional Ojibwe pursuits; (2) to facilitate development of tribal self-government, ensuring continued sovereignty of member tribes; (3) to protect the ecosystems, ensuring survival and abundance of the natural resources; and (4) to infuse traditional Anishinaabe culture and values into the GLIFWC's programs.

Member Tribes

The following are member tribes of the GLIFWC:

- Misi-zaaga'iganiing (Mille Lacs)
- Nagaajiwanaang (Fond du Lac)
- Bikoganoogan St. Croix (Danbury)
- Gaa-miskwaabikaang (Red Cliff)
- Mashkiigong-ziibiing (Bad River)
- Ginoozhekaaning (Bay Mills)
- Waaswaaganing (Lac du Flambeau)
- Gete-gitigaaning (Lac Vieux Desert)
- Zaka'aaganing (Mole Lake/Sokaogon)
- Gakiiwe 'onaning (Keweenaw Bay)
- Odaawaa-zaaga'iganiing (Lac Courte Oreilles)

Great Migration

The Great Migration of the early 20th century is part of a historical continuum of the story of black movement and mobility. Primarily initiated by the international slave trade, the movement of blacks throughout the Western Hemisphere has been a persistent theme in African American history. However, it was not until the Civil War and emancipation that massive numbers of blacks moved on a voluntary basis. Foreshadowed by World War I and running a course that lasted for nearly 20 years, the Great Migration changed forever the population distribution of blacks in the United States. This movement transformed blacks from a predominantly rural to a predominantly urban population. It not only reflected the long river of the black quest for freedom, jobs, and social justice but also contributed to profound social, economic, demographic, cultural, and political changes throughout the United States.

Following emancipation in 1865, the first wave of black mass movement was their resettlement within and throughout the south. A significant portion of this movement was that of farm laborers. Generally dissatisfied with stifled work opportunities, between 1890 and 1910, black farm laborers set in motion three migration streams that initiated a larger web of black movement in the 20th century. In one stream, black farm laborers moved to towns in search of industrial employment; another stream migrated to the southwest to Texas and Oklahoma for higher seasonal wages; and a final stream migrated to the newly opened iron and coal mines in Alabama, Georgia, and Tennessee.

Researchers have estimated that 1.5 to two million blacks fled the south during the period from 1910 to 1930. Estimates suggest that over 500,000

left between 1910 and 1920. Following the migration streams of farm laborers, a variety of factors underlay massive black population movement. Most historical accounts have explained the rapid population shift in terms of a set of concurrent push-pull factors. The primary argument for black movement and resettlement was their desire to seek alternatives to the racial injustices of the south that included physical terror and violence, political disenfranchisement, and limited educational and economic opportunities. Plantation agriculture and the sharecropping system operated as an extension of enslavement, which relegated most rural blacks to landless tenants. Within this system, they had little to no opportunity to improve their livelihoods or change their economic plight.

World War I and the U.S. adoption of more restrictive immigration laws served as the impetus that forced northern employers to consider southern blacks (and whites) as a source of inexpensive labor to replace European immigrants. As a result, it was these newly created economic opportunities combined with a desire to escape Jim Crow laws that provided the motivation for many blacks to migrate throughout the United States. Additionally, greater access to the rights of citizens, improved wages in northern industries, and access to better health care, schools, and the vote all encouraged the movement of blacks into northern cities.

Migration

A major contributor to relocation was labor conditions in the south. Researchers have noted that in 1910, over 60 percent of the black population was engaged in agriculture, 18 percent in domestic and personal service, and only 20 percent in all other occupations combined. These labor conditions and limited economic opportunities created a groundswell for black movement.

The Great Migration was not simply a move from southern agricultural work to northern businesses and trades. In fact, black movement had specific regional and subregional components, with the most important feature being that blacks moved from rural to urban locations. During the first half of the Great Migration, more blacks migrated to southern cities like Birmingham, Charleston, Jacksonville, Memphis, New Orleans, and Savannah prior to moving to

northern cities like Boston, Chicago, New York, and Philadelphia. Most blacks who migrated from Alabama, Arkansas, Louisiana, Mississippi, and Texas traveled to Chicago and other midwest destinations, while those migrating from Florida, Georgia, South Carolina, and Virginia primarily traveled to East Coast states that included New Jersey, New York, Pennsylvania, and even farther north. After arriving in northern cities, black populations usually engaged in further movement as they settled in surrounding cities and towns that may have provided even more opportunities.

In 1910, over 90 percent of the entire black population of the United States resided in the 14 states of the south. Southern economic underdevelopment and race-based policies severely limited black labor opportunities. Given its economic versatility, the north offered labor opportunities in a variety of trades and skills that the south could not match. The great majority of the southern black population were common laborers, working in the newly developed factories of the south in tobacco manufacture, lumber, coal, cotton oil refinement, and iron and steel production. The remainder were engaged in skilled and semi-skilled trade. Also, wages in the south were low, comprising about three-fourths of northern wages and, in general, could not compete with the labor and economic opportunities provided in northern cities. Therefore, many unskilled black laborers could earn better wages by moving north than by staying a skilled laborer in the south.

In addition, high unemployment and job scarcity in the south forced blacks to face increased levels of racial competition for jobs. This competition became entrenched in the southern political atmosphere whereby laws were enacted that prohibited blacks from holding skilled positions and working in numerous occupations. Thus, black employment opportunities were threatened and jeopardized. Racialized labor competition and political disenfranchisement severely limited and disadvantaged black workers in the south. These economic realities were used routinely as recruiting incentives by recent migrants, northern business owners, and black periodicals to encourage black movement to the north.

Many northern companies used labor agents to recruit workers; these agents traveled to southern cities advertising various employment

opportunities. Labor agents were soon replaced by the expansion of black familial and communal networks that informed other blacks about transportation, jobs, and housing beforehand. Many members of black communities also were made aware of opportunities in the north through advertisements in black periodicals, such as the *Chicago Defender*, *Pittsburgh Courier*, and several others. The black press played a critical role in helping create an atmosphere for a general pull of blacks to northern cities.

Impact

In moving north, African Americans were more attracted to areas that offered stronger social support networks, which helped ease their adjustment. These networks included a variety of African American churches and African American newspapers, community organizations, and businesses as well. All of these worked to create a substantial foundation for black communities across northern cities.

As African Americans moved into northern cities in growing numbers, a black industrial working class emerged, which significantly altered the landscape of race relations throughout the United States. In cities like Chicago, Cleveland, Detroit, Milwaukee, and Pittsburgh, the percentage of black men employed in industrial jobs increased from an estimated 10 percent to 20 percent of the black labor force in 1910 to about 60 percent to 70 percent in 1920 and 1930. African American women also entered industrial jobs, although their gains were far less than those of black men. Although jobs in urban industries provided blacks with increased opportunities, they entered the industrial economy at the lowest rungs of the occupational ladder. With northern industries steadily expanding, increased competition for housing and jobs created pressures of overcrowding and often resulted in racial conflicts. Blacks faced increased restrictions in housing, education, and access to social and public services. These newfound racial tensions manifested themselves in race-based politics and policies, such as residential segregation, that have engulfed northern cities to the present time.

The Great Migration significantly changed the black family, redefined the geographic location of blacks in the United States, and bolstered the

economic futility of blacks throughout the country. As new challenges emerged, African Americans intensified their communal efforts by building religious institutions, mutual aid societies, and social clubs; in addition, they established new businesses, joint ventures, and various organizations to meet their labor, civil rights, and political needs and interests. These efforts helped foster a dramatic period of change that gave rise to the Harlem Renaissance and the Garvey movement throughout the north, the prominence of the National Association for the Advancement of Colored People (NAACP) as a civil rights organization, and the growth and development of a black middle class, and they created great momentum for the mid-20th-century black freedom movement. Quite clearly, the impact of the Great Migration is still felt today.

Great Plains Tribes

The Great Plains is a geographic region that includes parts of Montana, North Dakota, South Dakota, Nebraska, Wyoming, Kansas, Colorado, Oklahoma, Texas, and New Mexico. Environmentally speaking, the climate is one of extremes, including excessive heat and cold and other forceful weather patterns. The region's terrain is comprised of mostly treeless, semiarid plateaus with seemingly endless short-grass vistas. Although modern agriculture and ranching have transformed the area, this region was once thought to have supported more than 10 percent (two million) of the total Native American population. By the time the early explorers William Clark and Meriwether Lewis visited the region in 1803, however, deadly epidemics such as smallpox had wiped out most of the indigenous communities living there.

The image of the tepee-dwelling Plains Indian warrior riding his horse and wearing buckskin clothing and a feathered headdress is the dominant stereotype of American Indians in the United States. But this image does not accurately represent Native Americans as a whole nor the numerous tribes inhabiting the Great Plains. There are six different linguistic groups represented among the indigenous Plains people. They lived in earthen lodges, woven-grass lodges, or buffalo-skin lodges (the stereotypical tepee). At the time of European contact, many Plains people were nomadic big game hunters, while others were agriculturalists living in semipermanent dwellings. The former include the Blackfoot, Arapaho, Assiniboine, Cheyenne, Comanche, Crow, Gros

Ventre, Kiowa, Lakota, Lipan, Plains Apache (or Kiowa Apache), Plains Cree, Plains Ojibwe, Sarsi, Nakoda (Stoney), and Tonkawa. The latter include the Arikara, Hidatsa, Iowa, Kaw (or Kansa), Kitsai, Mandan, Missouriia, Omaha, Osage, Otoe, Pawnee, Ponca, Quapaw, Santee, Wichita, and Yankton Dakota. Both groups possessed religious systems based upon complex ceremonial cycles that were often connected to the natural world.

Like most Native American nations living in the United States today, Plains Indians (which include more than 28 culturally distinct groups living on countless reservations and off-reservation land trusts) continue to fight legal battles involving tribal sovereignty and treaty rights, strive to improve living conditions through economic developments, and work to maintain traditional cultural knowledge through art, education, and religion. According to the 2010 U.S. Census, there are approximately 495,032 individuals who culturally identified themselves with one of the federally recognized tribal nations comprising what is referred to here, in this overarching category, as Great Plains Indian.

Horse and Buffalo Culture

Francisco Vasquez de Coronado's Spanish expedition in the 1540s and the later Spanish herds of horses kept in the southwest after the Juan de Oñate expedition probably demarcate the introduction of horses to certain Native American groups. Some Spanish horses escaped and bred in the wild, producing what are known as "Indian" horses that were smaller than the modern riding horses of today. These smaller horses were later bred with larger animals acquired from Spanish and, later, European American herds. In the 17th century the Plains tribes received horses in trade with the Navajo, Apache, and Ute. By 1750 horses could be found as far as Montana, used for transportation and as valuable commodities in trade and as signs of wealth or status.

Horses transformed the Plains Indians' way of life, becoming an essential part of their culture. Horses made economic life on the Plains more tenable by enabling them to follow and hunt buffalo herds as well as supporting their already nomadic lifestyle in other ways. Prior to the arrival of horses Plains people regularly moved

Some Great Plains tribes lived in earthen lodges like those at Four Bears Park on the Fort Berthold Reservation in northwest North Dakota. The origin of the earthen lodge is generally attributed to the Mandan tribe, who were sedentary farmers and traders located in the upper midwest.

their villages, walking alongside dog-pulled travois (a cart- or wagon-like mode of transportation made of timbers) loaded with their homes and property. Horses made this routine task easier and extended their territorial range.

Villages could be moved up to 30 miles in a given period, while warriors could cover 100 miles or more in a few days. Horses changed some of the Plains tribes' housing styles from fixed lodges to mobile tepees whose size also increased over time. Many Plains tribes became rich in horses, owning herds of up to 20 or more horses, while many individual tribal members achieved status by acquiring horses by raiding and capturing other tribes' horses.

In the early 19th century there were great herds of buffalo—American bison—roaming the Great Plains. The buffalo was a central component of the Plains Indians' economy and spiritual world, providing them with hides for clothing and shelter; various body parts such as the bladders, gall and blood, bones, and droppings were used for pouches, paints, utensils, and heat, respectively. By the 1870s the buffalo herds (between 50 and 75 million) on the central and southern plains had vanished, and by the 1890s less than a thousand buffalo remained, mostly on private ranches. Hide hunters and the growing railroads in America,

along with ill-advised decisions by the U.S. government, contributed to the extermination of the buffalo. For the Plains Indians, the disappearance of the buffalo destroyed their economy and way of life and, ultimately, forced them onto reservations with government handouts.

Sun Dance Ceremonies

The anthropological term *sun dance* is used to identify a number of similar or related ceremonies practiced by a variety of Great Plains tribes, such as the Lakota Sun Dance, referred to as *wiwan-yag*, which means to dance looking at the sun. Although the Sun Dance can vary, there are several common features. Most Sun Dance ceremonies last for four to eight days and include the construction of the lodge around a specially chosen center pole, preparatory sweat lodge rituals for purification (which could also include Vision Quests), prayers, songs, and dancing. Sun Dance ceremonies are practiced today, usually held during the summer months over a four-day period. They are supervised by religious authorities known as sacred persons, or *wakasa wakan*, who are responsible for the performance of the ceremony, including the various activities that begin with the selection of the sacred ceremonial location. For the Plains people who practice the Sun Dance, it is one, if not the most, important ceremony within their calendar of religious rituals.

Picturing History

Historically, the accomplishments and status Plains men achieved through combat or hunting were visually captured as pictographs (a visual language of symbolic images) on rock walls and also in pictographic drawings rendered on clothing items such as shirts and leggings, and wearing robes (also known as bragging robes). The surfaces of these garments, which often contained various episodes from several different events or battles, were covered with biographical details pertaining to the owner's activities and experiences. Although humans were often rendered as simplified stick figures, select details such as hairstyle and weaponry clearly identify the cultural affiliation of those depicted.

After the late 19th century when most Plains people were confined to reservations, warfare ceased, and the buffalo were gone, warriors

recounted earlier achievements in battle and documented tribal traditions as well as other notable events in their experience with modern American society on paper (often the paper from ledger books). The long-standing tradition of pictorial arts by Plains men has continued into the 21st century through the work of well-known artists like Oscar Howe (Yanktonai Sioux), Stephen Mopope (Kiowa), Dick West (Cheyenne), and Arthur Amiotte (Oglala Lakota), to name a few.

Women's Work and Cultural Identity

Traditionally, Plains women achieved status and success through their creative skills and industriousness in producing and decorating the hides used to make clothing, lodgings, and other material items. Training began early and the skills or knowledge required to perform certain decorative tasks was controlled by women's societies or guilds, such as the quilling societies among the northern Cheyenne and the Lakota Sioux. A woman's skill at beadwork and quillwork benefited the entire community (which was always a priority) while also bettering her own family's economic and social situation through trade and, later, participation in a cash economy.

Increasingly throughout the 19th century, as Plains people were forced onto reservations and pressured to give up their tribal identity in order to assimilate into American society while having most of their cultural traditions and practices outlawed or banned, beaded clothing visually expressed group solidarity and individual tribal identity through choice of colors, patterns or designs, styles of particular clothing items, and technique; for example, Crow beadwork historically favored designs dominated by pastel pink and blue triangle shapes outlined in white, whereas Cheyenne beadwork often depicted nested rectangles in red, yellow, and blue. Today Plains women continue to produce beaded items for personal use, such as the clothing needed for participation in powwows, as well as for a commercial market.

Great Sioux War

The Great Sioux War, also known as the Black Hills War, was a series of military campaigns and diplomatic efforts between 1876 and 1877 involving the United States and the Lakota (Sioux) and Cheyenne. Under the terms of the Fort Laramie Treaty of 1868, the Sioux were granted exclusive rights to the Black Hills and 26 million acres of land for the Great Sioux Reservation, as well as unlimited use of territory in the Powder River Country. Sioux territory was also to be protected from military or settler incursions.

The Fort Laramie Treaty had four key parts. The first pledged peace between both sides. The second part reserved territory west of the Missouri River and east of the Rockies for the Sioux, indefinitely and with unrestricted use. This land became the Great Sioux Reservation and included the Black Hills. The treaty also recognized the area around the Bozeman Trail as “unceded Indian territory,” upon which no U.S. military posts or white settlements would be permitted to exist. The third component was the U.S. government’s agreement to support the Sioux by establishing schools and providing basic necessities for farmers on the reservation. Reservation agencies were set up to distribute government aid. The final part, and perhaps the most important to this date, was that the treaty stipulated its terms could not be changed by the U.S. government without

the approval of three-quarters of the adult male Sioux population.

In 1874 George Custer led a U.S. military expedition investigating the mineral resources in the Black Hills while gold prospectors flooded the area. The United States did little to stop the incursions, offering instead to buy the Black Hills. The United States also wanted to relocate the Sioux to Indian Territory (now Oklahoma). The Black Hills contained important hunting grounds and, because they held them sacred, the Sioux refused to sell. After the U.S. government failed to negotiate agreeable terms for the sale of Sioux land, it embarked upon a military campaign against the Sioux and Cheyenne. In 1877 U.S. Congress changed the terms of the 1868 Fort Laramie Treaty, which had guaranteed the Sioux possession of the Black Hills forever, and with it secured that land.

At the center of the Great Sioux War were the Black Hills, but also the issue of treaty rights and tribal sovereignty.

The Black Hills, Failed Diplomacy, and War

The Black Hills are a small mountain range extending from western South Dakota into Wyoming. The Black Hills encompass the Black Hills National Forest, with the highest point, Harney Peak, rising to 7,244 feet. Today the Black Hills are home to numerous national parks and mountains, Mount Rushmore National Memorial, Custer State Park, Wind Cave National Park, and the Crazy Horse Memorial to name a few. The name *Black Hills*, referring to their dark tree-covered appearance, is translated from the Sioux word for them, *Pahá Sápa*, meaning Black Mountains. Native Americans have occupied the Black Hills area since at least 7000 B.C.E. The Sioux, who arrived from Minnesota, and before them the Cheyenne, occupied the territory encompassing the Black Hills since at least 1776. Both cultures asserted the importance of the Black Hills as the sacred center of the world.

After news of gold brought miners into the area, violating the terms of the Fort Laramie Treaty, the U.S. Army was called upon to stop the incursions. The Ulysses S. Grant administration decided to purchase the land from the Sioux. In 1875 Sioux delegations went to Washington, D.C., in hope of finding a peaceful resolution. The Sioux expected

President Grant to uphold the conditions of the existing treaty (curb the flow of prospectors encroaching into their territories); instead, they were offered \$25,000 for their land and were expected to relocate to new land in Indian Territory (where the Five Civilized Tribes had previously been relocated in the 1830s). The delegates refused to sign a new treaty, and after a U.S. commission also failed to secure support among the Sioux and Cheyenne people, war seemed inevitable. The U.S. government justified war by issuing a mandate that all nontreaty Sioux and Cheyenne turn themselves in to Indian agents in the region or face military actions.

The Great Sioux War that ensued was a combination of battles (Battle of Powder River, Battle of the Rosebud, Battle of the Little Bighorn, Battle of Slim Buttes, Dull Knife Fight, Battle of Wolf Mountain, to name a few) that resulted in the defeat of the Sioux and Cheyenne, many of whom turned themselves in to agents in the region, with the exception of Sitting Bull, who fled with his people into Canada but finally surrendered in 1881.

In 1980 the U.S. Supreme Court ruled in *United States v. Sioux Nation* that the United States had illegally taken Sioux land (by violating the Fort Laramie Treaty of 1868) and was ordered to pay monetary restitution plus interest (more than \$100 million). The Sioux refused payment and have continued to argue for the return of the Black Hills.

Greek Americans

Following the 2010 Census, Americans of Greek (or Hellenic) descent accounted for 0.4 percent of the total U.S. population; that is 1,315,775 individuals, mainly residing in New York, California, Illinois, and Florida. Greek Americans, with their temperament, dynamism, and ethnic culture, have uniquely stamped the multicultural landscape of the United States.

Among the Pioneers

Greeks can trace their presence on American soil back to 1528. It was then that the sailor and ship caulker Don Teodoro or Theodoros, who participated in the Panfilio de Narvaez expedition, offered himself as a hostage to the Native Americans and went ashore. Another plausible, but not fully proven theory, underlines the Greek origin of the famous Spanish admiral and explorer Juan de Fuca. De Fuca gave his name to the strait that he explored in 1592 located between Vancouver Island, in Canada, and Washington State, in the United States. Following this theory, de Fuca, tracing his lineage to the famous Foka Byzantine family, had been born in Greece on the island of Cefalonia.

The first organized Greek attempt to migrate in America is noted in 1768 and the ill-fated New Smyrna colony in Florida. The Scottish doctor Andrew Turnbull and his Greek wife Maria Gracia Rubini, born in Smyrna in Asia Minor, were among the 1,400 colonizers, 500 of whom were Greeks from the arid region of Mani in the Peloponnese. Though the majority of the colonizers were decimated because of famine and horrible work conditions of indentured labor, the Greeks who managed to survive were incorporated in the Saint Augustine community.

The Early Nineteenth Century

In 1821, Americans proved their love for ancient Greece and its culture by actively supporting the Greek War of Independence. They held fund-raisers, sent supplies, and even enlisted. In this spirit of philhellenism, that is, love for anything Greek, 40 war orphans were brought to the United States to be educated and returned to Greece to help its development. Among them were important figures in Greek history like Christodoulos

Evangelides, founder of an American-style school in Asian Minor, and Alexander Paspatis, prominent Byzantine scholar. The mid-century saw the advent of more Greeks, mainly sailors and merchants. The latter were involved in the import and export businesses in key port cities like New York, Boston, San Francisco, New Orleans, Savannah, and Galveston. A few years later, in 1864, the first Orthodox church in New Orleans was built, the Holy Trinity.

Mass Migration

The Greek mass migration mainly refers to the period between 1890 and 1924. In the beginning, the immigrants were mostly male. Raised in a strict patriarchal milieu, Greeks left their homeland, driven away by poverty, squalor, and the successive wars of the expanding Greek state. Destitute Greek men were intrigued by the economic possibilities of America, the vastness of the country, and the stories they heard. Apart from those who had lost their homelands through war (like the Greeks of Asia Minor in the beginning of the 20th century), most of the Greek migrants intended to return and enjoy the fruits of their labors with their loved ones. The love and duty toward one's family, sisters, and daughters, waiting for their dowries so as to marry well, were frequently the central reasons fueling the migratory movement. As soon as the newcomers realized they would be staying longer in America, women started joining them: sisters, wives, daughters, and mail-order brides.

Group migration was officially initiated in the 1880s with 2,000 men, mostly Spartan Greeks. Those safely arriving would usually write back to their relatives and compatriots, urging them to join them. For those without any relatives, labor agents, scouring Greece for laborers to exploit, promised passage money and a job in the American Paradise they promoted. Moreover, the exclusion of Greek raisins (currants) from the European market in 1890 resulted in a migratory flow of a further 15,000. The number would culminate with the flood between 1900 and 1915. In this period one in every four Greeks ages 15 to 45 left for America. In this period of mass migration approximately 450,000 Greeks migrated, mostly originating from the Peloponnese and the south.

Migrant Poles and Times of Change

Until the first two decades of the 20th century Greeks were mainly headed in three directions: the western states, to work in railroad gangs and mines; the New England mill towns, to work in textile or shoe factories; and the large northern cities, like New York and Chicago, to work as factory workers, busboys, fruit peddlers, or dishwashers.

As far as the West is concerned, two pioneer women recorded the Greek migration experience for posterity. In 1914, the intrepid reporter Maria S. Economidou described the life conditions of Greeks in her work. Toiling in mines and smelters of Utah and Colorado and in the railroads of California since the late 19th century, Greeks participated in the big upheavals and mine strikes that occurred between 1912 and 1914. Later, Helen Papanikolas, folklorist, historian, author, and scholar, saved from oblivion the testimonies of first immigrants, male as well as female. In her writings, which date back to the late 1920s, Papanikolas underscores the racist reception of the immigrants, as well as their upward mobility from hand-to-mouth existence to middle class suburbia.

In the early days of settlement the Greek communities centered around the coffeehouse. As the community multiplied a church and school would typically be added. The author Harry Mark Petrakis, whose father was among the first priests for the Greeks in America, depicts through his novels the early Greek experience.

While initially Greeks were received often with skepticism and xenophobic reactions, their reception in American society was gradually altered. The Greek bravery shown at the Albanian front during World War II and in the Greek Resistance, along with the enlistment of several soldiers of Greek origin in the American army, placed the Greek American in a more favorable light. The 1950s saw the coming of age of the American-born second generation. Their education and their upward mobility further improved the status of Greek Americans in American society.

Rediscovering Ethnicity: 1960 to 1980

The end of World War II, the Greek Civil War, and the political instability and junta between 1967 and 1974 renewed the flow of immigrants

to the United States. Coming from different class and educational backgrounds, compared to the indigent and illiterate arrivals of the early century, Greek migrants were received differently. Following the civil rights movement, the ethnic awakening movement, characterized by the rediscovery, exploration, and appreciation of one's ethnic background, strengthened pride in one's heritage. The feminist struggles helped diminish the gap between the traditional Greek female roles and the demands of American self-representation. As some Greeks excelled in the spheres of arts and science, like the director Elia Kazan, the soprano Maria Callas, the conductor Dimitri Mitropoulos, the doctor George Papanikolaou (known for his Pap test), ethnic pride swelled among the Greeks.

The Turkish invasion of Cyprus and its tragic repercussions were met with vehement reaction from the Greek organizations in America. Often led and organized by the church and the powerful Archbishop Iakovos, massive demonstrations took place. In politics, Greek American representatives like John Brademas and Senator Paul Sabanes played a dynamic role protecting Greek and Cypriot international rights and interests. Thus, the beginning of the 1980s saw a more organized attempt to reconnect with roots and heritage with the discovery of the photographic archive of Leon Pantioti and Georgios Kalogeras's doctoral dissertation that foregrounded, classified, and discussed Greek American literary production.

Greekness in America

Overall, the Greek American experience of migration is centered on the goal of social ascension. In their struggle to improve their living conditions and maintain a sense of identity, this ethnic group has kept strong bonds with its church as well as the diverse fraternal associations it has created in the United States, like the American Hellenic Educational Progressive Association (AHEPA) and the Greek American Progressive Association (GAPA). Uniquely stamped by both cultures, Greek Americans are often noted for their industry and initiative in business, especially food and tourist sectors, as well as their passionate temperament and love for family, tradition, and Greek customs. With huge parades on Greek Independence

Day, March 25, in big cities like New York and Chicago, unique Orthodox Easter Day celebrations, and local religious festivals, especially on Saint George's Day and Assumption Day, Americans of Greek descent proudly affirm their ethnic identity. Traditional delicacies like *moussaka*, *tzatziki*, the Greek salad, and feta cheese, as well as the benefits of the Cretan diet, based on olive oil and the consumption of greens, are familiar to Americans and available in the numerous diners owned by Greek Americans all over the country. The heartfelt sounds of the *bouzouki* chords as well as dancing are definitely some well-known trademarks of Greek culture, which by no means belittle their depth and richness.

The first publications by Greek Americans were Greek-language newspapers such as *Atlantis*, the *National Herald*, and Chicago's *Greek Star*. In 1945, Mary Vardoulakis published the novel that would be the first to discuss the Greek experience of migration in the United States, her trailblazing book *Gold in the Streets*. Besides the 2002 Pulitzer Prize-winner Jeffrey Eugenides and his *Middlesex*, Greek American fiction is represented by important authors such as Ariadne Thompson, Theano Papazoglou-Margaris, Demetra-Vaka Brown, Tom T. Chamales, Thomas Doulis, Nicholas Gage, Daphne Athas, Stratis Haviaras, Eleni Spanidou, and Nicholas Flokos, to name but a few. Some of the Greek Americans who have been publishing their poetry, either in English or Greek, include Konstantinos Lardas, George Koutoumanos, Olga Broumas, Nikos Laides (Paul Nord), Antonis Decavalles, Rae Dalven, Kimon Friar, Byron Vazakas, and Evans Chigounis.

Among those Americans of Greek ancestry who have had important careers in the performing arts are actress Olympia Dukakis; actor, screenwriter, and filmmaker John Cassavetes; actor Telly Savalas (Kojak); Hollywood screenwriter A. I. Bezzerides; and film director and Academy Award winner Alexander Payne. A blockbuster film that displayed the life of the Greek immigrant family was Joel Zwick's 2002 *My Big Fat Greek Wedding*, written by Greek Canadian Nia Vardalos.

Contemporary Scene

In the 1980s and 1990s political stability and improved living conditions in Greece further curtailed immigration in the United States. Following

the 2010 U.S. Census, only 9.8 percent of immigrants entering the United States in the 1990s were Greek. With 80.9 percent of immigrants permanently living in the United States before the 1980s, one out of four Greek Americans (25.4 percent) above 5 years old speaks only their native tongue at home. As proof of the value on education Greek Americans have always displayed, 40.3 percent have a bachelor's degree. Almost half of the Greek American workforce (47 percent) are employed in management, business, art, and science occupations and another 24.2 percent work in sales and office occupations. The vast majority of Greek Americans own their home (71 percent).

Even though they frequently enjoy material and personal success in the United States, Greek Americans cherish their ancestral home, which they actively support and remember through diverse institutions and organizations like AHEPA, Orthodox Archdiocese of America, National Hellenic Museum, and diverse local associations like the PanCretan Association, the Paepirotic Federation, and the PanArcadian Federation.

Guadalupe Hidalgo, Treaty of (1848)

The Treaty of Guadalupe Hidalgo is a treaty of peace between the United States and Mexico that ended the Mexican-American War (1846–48). It is the oldest treaty still enforced between these countries. Based in Manifest Destiny, President James Polk (1845–49) was successful in growing the U.S. landmass by one-third through these southwest territorial acquisitions. The treaty upholds the annexation of the northern frontier zone of Mexico, which became U.S. territory that includes today's states of California, New Mexico, Nevada, and parts of Texas, Colorado, Arizona, Utah, Wyoming, and Oklahoma in exchange for \$15 million. With the ratification of this treaty, Mexico lost over 50 percent of its prime land. This loss of land is one reason why Mexico remained an underdeveloped country well into the 20th century.

The treaty detailed specific instructions for property and citizenship rights for Mexicans in the ceded territory and many claim that the spirit of the treaty was not upheld when it came to the treatment of Mexican Americans. Rodolfo Acuña notes that this acquired U.S. territory is an example of how Mexicans and Mexican Americans have been the subjects of colonization because of Euro-American occupation of Mexican land, which has fundamentally shaped the history of Chicana/os. The treaty also negatively affected indigenous groups.

Spirit and Violations of the Treaty

Nicholas Trist largely negotiated the Treaty of Guadalupe Hidalgo. A Virginia lawyer with strong political ties, Trist was appointed as the chief clerk for Secretary of State James Buchanan in 1847. Under Buchanan's guidance, Polk sent Trist on a special mission to Mexico to negotiate a peace. At the time, there was growing disenchantment by U.S. politicians regarding the Mexican-American War in terms of both U.S. military occupation in Mexico and fears regarding the consequences of land expansion in non-Anglo-populated areas. Despite U.S. military victories, peace was not in sight. As a concession of good faith, Trist forwarded a Mexican negotiation for

annexation at the boundary of the Nueces River instead of the Rio Grande, which he knew Polk would not approve. Upon receiving these negotiations, Polk relieved Trist of his diplomatic duties, which Trist did not obey despite potential professional, economic, and criminal consequences. Claiming that following the Mexican presidential elections was the time to negotiate peace, Trist was successful in negotiating the treaty with Mexican officials in February 1848. When the treaty arrived in Washington, peace already existed and only needed confirmation by U.S. officials. On February 23 the treaty was placed before the Senate and ratified by a vote of 38 to 14 on March 10.

Because the treaty was modeled on language taken from other landmass acquisition treaties like the Treaty of Louisiana and the Treaty of Florida, the United States had set precedent in how inhabitants were to be incorporated into the nation. However, as the area ceded was occupied by people considered to be a backward race, the U.S. courts did not seek to protect the rights of the now American Mexicans. Articles VIII and IX of the Treaty of Guadalupe Hidalgo set the terms by which the former Mexican citizens and their property would become a part of the U.S. political landscape.

While the treaty is written to embrace Mexican citizens as Americans in the newly ceded territories by enabling them to retain their land rights and gain the benefits of U.S. citizenship, the local courts and Congress lacked the commitment to protect the Mexicans. This lack of commitment was due to a desire to further Euro-American land ownership during a time in which people of color in the United States were not considered to be equal to whites. One result of the ill interpretation of Article VIII was that the United States declared portions of its new territory as public domain. Instead of the United States determining the distinction between public land grants versus private estates, Mexicans were required to pay for their own surveys and for the drawn-out processes of litigation to prove individual titles.

Many barriers were placed between the Mexicans and their rights to claim their land in the new U.S. southwest, including the following: the creation of governing bodies to assess claims that resulted in high costs for the Mexican Americans

to prove their legitimate land grants; confusion over the validity of land claims prior to 1848; short time frames in which to prove land titles validity; the continuation of Manifest Destiny, which entitled Euro-American citizens to force their way onto private lands through the process of homesteading; and interpretations of the treaty that were not congruent with the power it should have held. Many people lost their land because of these prohibitive measures. Because Article X of the treaty—which had guaranteed protections to all prior and pending titles to property of every description—was stricken, Mexicans in the United States were subject to defending their land in U.S. courts, which had a vested interest in delegitimizing the treaty so as to gain more land. Both President Polk and the Senate agreed that Article X granted too many protections to Mexican landowners and impeded Texas's ability to discern land ownership rights.

Similar experiences related to citizenship were also violated. This treaty affected 100,000 Mexicans. According to Article VIII a person had one year to “elect” their preference for either Mexican or U.S. citizenship. If a claim was not filed within this year, the United States would automatically consider permitting the remaining Mexicans to

A copy of the Guadalupe Hidalgo Treaty was preserved by its signers, the United States and Mexico. The United States acquired the Rio Grande boundary for Texas, ownership of California, and a large area comprising New Mexico, Arizona, Nevada, Utah, and parts of Wyoming and Colorado.

become U.S. citizens, which will be determined by Congress at some future date. Furthermore, while Mexican Americans were guaranteed protection by the treaty, indigenous groups in the U.S. southwest were not afforded such rights in neither action nor rhetoric. Because of the complex definitions of race, whiteness, and citizenship at the time, Mexicans were in an interesting position. Governing bodies acknowledged that Mexicans might be discriminated against because of their skin color, but the treaty afforded them rights that other minority groups did not have. For instance, in California, the framers of the state constitution wrote the document in such a way as to grant citizenship to “white male Mexicans” while specifically excluding African Americans and indigenous groups despite their previous Mexican citizenship status. Mexicans in the ceded territories were not granted full citizenship rights because of varying levels of statehood; in New Mexico Mexicans did not become full citizens with the right to vote until the territory gained statehood in 1912. According to Chicana/o scholars, these continued violations of the treaty have systematically created a legacy of racial discrimination and contributed to the second-class status of Mexican Americans.

Guatemalan Americans

According to 2010 U.S. Census data, the Guatemalan population in America is 1,044,209, making it the second-largest group of Central Americans and the fifth-largest of Hispanic origin overall in the United States. The Guatemalan population increased almost threefold from 2000 to 2010, according to census data. Today Guatemalan Americans are one of the most diverse and fastest-growing groups among the Hispanic population, despite facing discrimination in the United States and poverty and violence in their country of origin.

Ethnicity and Language

Guatemala, located south of Mexico and north of El Salvador and Honduras, holds the largest population of the isthmus: 14,713,763 (2011 Guatemalan census). Its population is multiethnic and multilingual, with the most numerous indigenous population of Central America. The majority of Guatemalans share the Ladino (Mestizo) ethnicity, closely followed by indigenous Mayan, Xinka, Garifuna, and a minority of white ethnicities. There are a growing number of minorities in Guatemala of Asian, Arab, Jewish, and other ancestry.

It is important to bear in mind that rather than a purely racial classification, the term *indigenous* is based on group culture and language. Most Guatemalans speak Spanish, the official language of the country. However, Guatemala officially recognizes 21 Mayan indigenous as well as two non-Mayan languages; the former are spoken mostly in the rural areas, while Xinka is mostly spoken in eastern Guatemala, and Garifuna, an Afro-diasporic language, is spoken in the Atlantic coastline region of Guatemala.

Demographics

The ethnic composition of Guatemalans in their country of origin is largely reflected in the communities they have formed in the United States, as they tend to cluster according to ethnicity; Kanjopal Mayans from the region of Huehuetenango, for example, congregate mainly in specific regions of central Florida and North Carolina. According to the 2010 census, the largest populations of Guatemalans in the United States are located in the following states: California, Florida, New

York, Texas, New Jersey, Georgia, Illinois, Maryland, Virginia, and Massachusetts. There are also growing Guatemalan populations in Georgia, North Carolina, Arizona, and Virginia.

In the United States, as has been the case with many Latin Americans, Guatemalan Americans have endured discrimination based on their lack of English fluency as well as on their phenotype. Most of the current discrimination stems from Nativist attitudes among segments of the American population, which are exploited by some politicians. In general, Guatemalans have been willing to take on employment at below-minimum wages in the United States, which has contributed to their economic marginalization. Nevertheless, Guatemalan Americans have become an important source of economic development for Guatemala, via the remittances sent back by immigrants, as well as an engine of production for many regions in the United States.

History and Culture

Though there has always been some Guatemalan immigration to the United States, the numbers increased greatly in the 1970s and 1980s because of the exacerbation of violence against the indigenous peasant population by United States–backed military dictatorships. In the 1980s, in retaliation for popular uprisings and guerrilla activity, the military harassed rural communities to the point of genocide. Other Guatemalans, such as students, intellectuals, and union leaders, were also targeted and many immigrated to the United States. After the Peace Accords of 1996, Guatemalans have continued to migrate to the United States impelled by widespread poverty.

Guatemalan American culture is rooted in Mesoamerican pre-Columbian and Spanish colonial cultures. Immigrants have brought their regional gastronomy with them. Guatemalan cuisine specializes in dishes such as black beans, maize tortillas, tamales, chilies, plantains, and indigenous stews. These become particularly important when immigrants celebrate many Guatemalan religious holidays, such as the Day of the Dead, the Day of All Saints, and Good Friday. Although there are no official census numbers for religious affiliation among Guatemalans, major religious organizations such as the Episcopal Conference of Guatemala and the Evangelical Alliance calculate that

about 65 percent of the population are Catholic and 35 percent are Protestant, followed by a minority of the population who practice Judaism, Islam, indigenous religions, and others (2010).

Guatemalan Americans have contributed to cultural and technological development. Some major figures include Luis Von Ahn, inventor of the Captcha and Recaptcha systems and in 2006 named one of the 10 most brilliant scientists by *Popular Science Magazine*, and Francisco Goldman, best-selling author and prominent journalist who writes often for *The New Yorker* and other American publications. Guatemala counts two Nobel Prize laureates: Miguel Angel Asturias, Nobel Prize in Literature (1967), and Rigoberta Menchu, Nobel Peace Prize (1992).

Guess Who's Coming to Dinner

Produced and directed by Stanley Kramer in 1967, *Guess Who's Coming to Dinner* is groundbreaking in its approval of interracial marriage between a black man and a white woman and noteworthy for how it persuades audiences to agree. While guilty of selective stereotyping, this romantic comedy is significant for its place in social and film history and its influential responses to racial prejudice.

A box office success, the film's budget was almost \$4 million and it grossed over \$70 million. Nominated for 10 Academy Awards, it won Best Actress (Katharine Hepburn) and Best Original Screenplay (William Rose).

Its star appeal includes Spencer Tracy (as Matt Drayton) and Katharine Hepburn (Christina Drayton) as the white parents of the prospective bride. The role of John Wade Prentice, the prospective groom (played by Sidney Poitier), is an endorsement for a black husband. John is educated (*magna cum laude* Johns Hopkins) and highly successful. He is also deferential enough to ask his fiancée's parents for approval to marry their daughter, Joanna (played by Hepburn's niece, Katharine Houghton). Although his success and deference generated criticism (he's too perfect; he's an Uncle Tom), Poitier's character is an effective way to focus on race. John Prentice is a black man no one could object to—except on the basis of race.

Historical Significance

Significant in social history, *Guess Who's Coming to Dinner* takes place in 1967 and appeared in theaters December 12, 1967, just six months after the U.S. Supreme Court ruling on June 12, 1967, that state bans on interracial marriages are unconstitutional.

Important in film history, the film challenges the racial stereotypes of black men as hypersexual and dangerous that were codified in D. W. Griffith's influential film *The Birth of a Nation* (1915). Kramer revised Griffith's story to counter old ideas with new ones. Like Griffith's black villains Gus and Silas Lynch, John Prentice wants to marry a white woman. But where Griffith's characters won't take no for an answer, John asks

Joanna's parents to approve, and she loves him. Unlike Griffith's villains, John is restrained. He tells his mother he wants Joanna desperately, but he does not have premarital sex and he is not just after her because of her race. In fact, he was previously married to a black woman and had a son, but both died in an accident. It is also noted in the film that he is attracted to black women, including Dorothy, a Drayton employee. Akin to Silas Lynch, who rises from slavery to become a Lieutenant Governor, John is the son of a retired mailman and rises to Assistant Director of the World Health Organization. But whereas Lynch wants to disenfranchise whites, John wants to help Africans practice medicine in Africa. Unlike Griffith's villains, John is no threat to anyone.

Both films test white liberalism. In Griffith's film, Austin Stoneman, a white statesman who helps Silas Lynch rise to power, is tested when Lynch announces he wants to marry Stoneman's daughter. Stoneman adamantly refuses. In Kramer's film, Matt Drayton is a newspaper owner known as "a fighting liberal" against racial discrimination. Matt's liberalism is tested, but by film's end he champions his daughter's marriage and becomes a new cinematic role model for white fathers.

Obstacles and Antidotes

Following the romantic comedy premise that nothing can hinder true love, Kramer's film guides viewers beyond obstacles facing John and Joanna. While John, who is 37, is concerned for her welfare, Joanna, at 23, foresees no obstacles because she does not recognize racial difference. John explains: "It's not just that our color difference doesn't matter to her. It's that she doesn't seem to think there is any difference." Her white friends and the friendship between Dorothy and a young white deliveryman echo Joanna's view. Together, they embody the idea that the younger generation will inevitably create a color-blind, postracial America.

Matt and Christina Drayton are both color conscious. At first shocked by John's color, Christina quickly approves of the marriage, recalling teaching Joanna it's "wrong to believe that white people were somehow essentially superior." Matt initially disapproves, noting the discrimination they will face. John's answer, that Joanna thinks their children will be U.S. presidents but he would settle for secretary of state, is humorously prophetic in

light of the political careers of Barack Obama and Condoleezza Rice. To Matt's idea that blacks have "a special sense of rhythm," John explains differences as cultural, not racial: "It's our dancing and our music. We brought it here." A humorous metaphor recommends familiarity: Matt orders ice cream, gets an unexpected flavor, and likes it. As Matt concludes the couple will have only "a problem of pigmentation," he concurs with Christina that skin color is only skin deep.

Although he fills the role of a privileged white male who decides for everyone, Matt's approval, at the dinner comically referenced in the film's title, derives from John's mother. Mary Prentice (Beah Richards) and John Prentice, Sr. (Roy Glenn) are surprised that Joanna is white, and offer differing positions. John's father cites state bans on interracial marriage (still in effect during film shooting) and attitudes that will not change automatically if the law changes. In response, John aligns himself with the younger generation: "You think of yourself as a colored man. I think of myself as a man." Matt's own approval is in response to John's mother. She contends that he and her husband are old men who have forgotten what it's like to be passionately in love. Realizing he has not forgotten, the film's message that interracial marriage is the answer to prejudice is the decision of a white father prompted by a black mother.

The film dismisses blatant racial prejudices. White prejudice against John, expressed by the woman who manages Christina's art gallery, is dismissed as wrong as she is fired. Black prejudice against John, expressed by the Draytons' maid Tillie (Isabel Sanford), is also dismissed as wrong, but Tillie is not fired. Tillie's role is to humorously disarm white fears, ironically, as the voice of antiblack racism. As Tillie argues against the idea, declaring, "civil rights is one thing. This here is somethin' else," the film suggests interracial marriage is a civil right. Tillie also deflects fears of the Black Power movement, warning John to leave Joanna alone or she'll show him "what black power really means." Tillie is a stereotypical Mammy, happy to serve whites and protect their daughter from black men. Tillie's sarcasm and racist rants substitute for an examination of institutionalized racism, including the socioeconomic conditions that would explain her situation as a live-in maid. Her self-demeaning prejudice is so ludicrous that she

becomes the target of the film's humor, ensuring the Draytons will ignore her and audiences will dismiss her in favor of the film's happy ending.

Film and Multiculturalism

Guess Who's Coming to Dinner records the changing racial attitudes that it helped influence. Census data show that interracial marriages are increasing and biracial children are blurring the old racial boundaries that the post-civil rights generation dismisses as fictions.

Guyanese Americans

Guyana sits on the South American coast but is a Caribbean country and a former colony of the United Kingdom (UK). There were two main waves of immigrants from Guyana and the other nations of the British West Indies. The first wave

was from approximately 1900 to 1924, the year the Immigration Act of 1924 was passed. The act restricted immigration based on race, ethnicity, and literacy and included a quota.

These restrictions were lifted in 1952 with the Immigration and Nationality Act of 1952, and this ushered in the second wave of immigration from Guyana. As the UK tightened immigration law in 1962, immigration of Guyanese to the United States grew. In the 1960s and 1970s, Guyanese entered the United States in unprecedented numbers, helping counteract the American labor shortage. Economic change in Guyana in the 1980s and 1990s further intensified immigration. Since their lifestyle in Guyana was mostly urban, Guyanese Americans settled in the northeast, primarily in New York, New Jersey, and Maryland.

Guyanese American Culture

Guyanese Americans have a variety of beliefs that originate in Guyana, and these inform their day-to-day actions. For example, it is a Guyanese American custom to turn and enter a house backward when it is late at night. Guyanese Americans also enjoy an embarrassment of riches vis-à-vis proverbs. This colorful language helps maintain a notable Guyanese American character.

Guyanese Americans enjoy a cuisine that is flavorful and pungent; a typical Guyanese American dish and the national dish of Guyana is pepperpot, a sort of stew eaten with rice or bread. Most Guyanese American food is based on economizing and stretching food as far as it will go, so all parts of animals are used and spices add panache to what might otherwise be bland entrees.

Creole, a blend of English and African dialects, is the spoken language of Guyana. English is used for formal matters. After the first generation of Guyanese American immigrants, few spoke Creole in their day-to-day lives, although colorful idioms remain a strong component of the speech of Guyanese Americans.

Family, Religion, and Community Dynamics

First-generation Guyanese Americans were likely to see extended families as their social center. Endogamy was a strong preference, although like most Caribbean ethnic groups, Guyanese Americans did see themselves as having an overall English-speaking Caribbean ethnicity. This would

Alvin Chea, a Guyanese American, is the bass singer in an a cappella gospel music sextet called Take 6. In 2001, they performed for President George W. Bush and First Lady Laura Bush during a Black Music Month celebration at the White House.

therefore make intermarriage with other Caribbean immigrants fairly common. Ceremonies for weddings, funerals, and baptisms were shared community experiences and served to preserve the community's cultural identity.

As in Guyana, most Guyanese Americans were Episcopalian, and Guyanese American churches have always served as hubs for social networking. Churches also provided much of the community's educational opportunities for the children, and Guyanese Americans typically preferred that their children receive private schooling designed to preserve cultural identity rather than favoring complete assimilation.

Early Guyanese Americans settled in northeastern urban environments in order to access work, which was commonly low paying; later generations were more educated and more likely to hold more lucrative jobs. Entrepreneurship was valued by the community, and therefore many Guyanese Americans ran their own family businesses. This allowed for more preservation of Guyanese traditions as well as more secure economic status for Guyanese Americans.

Early Guyanese Americans remained politically active in Guyanese issues, although this political

involvement did not often extend into local American matters. To address problems within their local American communities, Guyanese Americans preferred grassroots social efforts more than getting involved in problem solving with American officials. In more recent years, however, Guyanese Americans have inserted themselves into local politics.

Guyanese Americans preserve close ties to Guyana, and like many other immigrant groups, a good portion of Guyanese Americans' earnings go toward their kin remaining in Guyana. Guyanese Americans coalesced to send relief money back home to Guyana in times of more serious struggle and helped offset economic crises in their home country. The ongoing stream of academic conferences between Guyana and the United States allowed for scholarly development of Guyanese Americans and this stream is still flowing.

Notable Guyanese Americans

Although Guyanese Americans by the numbers make up only a tiny portion of the total population of the United States, there are many notable examples of Guyanese American contributions to the scholarly, cultural, literary, musical, and political realms of American culture. E. R. Braithwaite has achieved international literary status with his autobiographical *To Sir With Love*. This memoir and the film that was based on it provided a poignant, frank exploration of race. Guyanese American authors such as Edgar Mittelholzer have depicted the tumult of Guyanese history in ways that have gained international acclaim. Alvin Chea is a singer famous for his work with a cappella group Take 6. Colin Moore, an unsuccessful New York gubernatorial candidate, was a

founder of the Freedom Party, which advocates for African Americans. Arman Shields is a professional wide receiver in the National Football League. Finally, musicians Rihanna and Eddy Grant are Guyanese Americans.

Current Scene

Guyanese American immigration norms are no longer following the traditional patterns of immigration to the United States; these patterns generally show men settling in the United States first and then sending for their families. Women are now "principal alien" in Guyanese American culture and are largely responsible for immigration trends. Guyanese Americans continue to populate urban centers and improve their economic outlook by pursuing higher education.

H

Hadassah

Henrietta Szold founded Hadassah, the Women's Zionist Organization of America, in 1912. It is the largest Jewish organization in America. Szold visited Palestine in 1909 and returned to the United States determined to address the need for medical care in the region. From the beginning, Hadassah has focused on both health care and the young. The organization has built two medical centers in Israel as well as schools of medicine and nursing and has supported other health care and education programs. The group also supports youth, public health, and advocacy groups in the United States. Despite the fallout from having been defrauded in 2008 and concerns about the paucity of members under 40, Hadassah's 300,000 members remain committed to the vision of their organization's founder.

Before that first visit to Palestine, Henrietta Szold was already a dedicated Zionist and an experienced activist. Before she was 30, Szold had organized a night school where Jewish immigrant laborers from eastern Europe and Russia were taught English and vocational skills. It was among the first of such schools in the United States.

When her mother suggested that practical philanthropy was the proper response to Szold's concern over the absence of modern health care in Palestine, Szold took the idea back to her study

group at home. They agreed to raise funds for nurses to visit the districts of Palestine. In February 1912, at a meeting in New York City, the Hadassah Chapter of the Daughters of Zion was born. Less than a year later, the first two nurses supported by Hadassah sailed for Palestine.

Communication between Hadassah and Palestine was cut off during World War I, but Hadassah continued to grow. By 1916, it had almost 2,000 members. By 1918, when it was possible to send another medical team to Palestine, it sent 45 doctors, nurses, dentists, and sanitary workers with the mission of bringing American-style medical care to serve all, regardless of race, creed, or ethnicity.

By the mid-1930s, Szold was involved with the Youth Aliyah, an organization that rescued thousands of Jewish children from the Nazis. Between 1935 and 1938 alone, the Aliyah had settled 3,100 European Jewish youth, ages 15 to 18, in 35 youth villages and three technical schools in Palestine. In 1942, the U.S. State Department named Hadassah as one of the five largest contributors to overseas relief.

Hadassah has continued to expand internationally and domestically. The organization has funded two medical centers in Israel, along with schools of medicine and nursing and an array of health care, education, and youth programs. Academicians and senior government officials

from the United States, Britain, Australia, and Israel have even nominated the Hadassah Ein Kerem and Hadassah Mount Scopus Hospitals in Jerusalem for the 2005 Nobel Peace Prize. The hospitals have been praised for the equality they practice during treatment, the ethnic and religious diversity of its staff and patients, and their efforts to build peace. In the United States, Hadassah has supported such issues as public health, voting rights, immigration, and stem cell research.

Hadassah's effectiveness was threatened in 2008 when the Bernard Madoff Ponzi scheme was revealed. Introduced to Bernard Madoff Securities in 1988 through a \$7 million gift from a French donor, Hadassah invested an additional \$33 million with Madoff between 1988 and 1996. In the months following the Madoff scandal, Hadassah made sharp cuts in its contributions to the Israeli hospitals and domestic programs. The organization insisted the cuts were planned and that Hadassah, although affected by the economic downturn, was not in financial difficulties.

Public Participation of Jewish Women

Although Hadassah is perhaps best known for its work in Israel, the organization has also played a significant role in promoting participation of Jewish women in the public sphere and involving them in the American political scene. From its beginnings, Hadassah was engaged in advocating

the Zionist cause in America, and as early as 1936, the group began sponsoring youth organizations committed to developing Jewish identity and Zionist beliefs among the young. Since 1967, when Hadassah merged Junior Hadassah with Young Judaea and restructured the summer camp activities, leadership training, and study scholarships in Israel that it had sponsored since 1940, the organization has been financially responsible for all Zionist youth organizations. Hadassah has also advocated liberal causes in the United States, ranging from women's suffrage to abortion legislation. Through formal policy statements and through the actions of individual members, the organization has taken a stand against illiteracy, hate crimes, and domestic violence.

Public Health has been a particular concern of Hadassah. In 1992, the organization initiated Hadassah Cares, an ongoing breast health awareness and education program for American women of all ages. The program includes Hadassah's award-winning Check It Out program for high school girls. It later added a testicular cancer education program for teenage boys. The organization was especially effective in its support of the Genetic Information Nondiscrimination Act of 2008, which prohibits group health plans and health insurers from denying coverage to a healthy individual or charging that person higher premiums based solely on a genetic predisposition to developing a disease in the future. The

This hospital, in Ein Kerem on the west side of Jerusalem, is one of two built by the Hadassah organization. They were nominated for the Nobel Peace Prize for maintaining equal treatment for everyone regardless of religion, ethnicity, or nationality. They were also acknowledged for setting an example of cooperation and coexistence by maintaining a mixed staff of people of many faiths and creating bridges of peace even during periods of active conflict between Israel and one of its neighbors.

legislation also bars employers from using individuals' genetic information when making hiring, firing, job placement, or promotion decisions.

The public image of Jews and of Jewish women in particular has been another area of great concern to Hadassah. In 1992, the group established its Curriculum Watch program to help guarantee the factual correctness of TV and radio programs, novels, textbooks, and other school materials relating to Judaism, anti-Semitism, the Holocaust, and Israel. In 1997, Hadassah established the Hadassah-Brandeis Institute (originally the Hadassah International Research Institute on Jewish Women at Brandeis University), the first university-based research institute devoted to the study of Jewish women, and in 1998, Hadassah founded the Morning Star Commission to advocate a healthier diversity of portrayals of Jewish women in the media and entertainment industry.

An aging membership and a failure to attract younger women in significant numbers are problems confronting Hadassah in its second century. More than 80 percent of the 300,000 members are over 45. But the organization has survived war, terrorism, and economic crises. Resilience is part of the Hadassah legacy. The organization celebrated its centennial year in 2012 with the opening of the 19-story, \$363 million Sarah Wetsman Davidson Hospital Tower at Hadassah-Hebrew University Medical Center in Ein Kerem.

Haitian Americans

Haitian Americans are an emergent group among recent immigrants to the United States. Haitians are the second-largest black immigrant group, after Jamaicans, with strong transnational connection to their homeland. An estimated 830,000 self-identified Haitians currently live in the United States, though this number does not include those here illegally, recent immigrants, or the children of Haitian immigrants.

Even before the official establishment of the United States, there was a history between the future super power and its southern Caribbean neighbor. During the American Revolutionary War, a group of free black men from Saint Domingue (not yet Haiti), known as the Chasseurs-Volontaires de Saint-Domingue, fought on the side on the French against the British in the Siege of Savannah of 1779. Haitians also were a part of the Tuskegee Airmen during World War II. During the 1940s, an ad was placed in Haitian newspapers recruiting at least 40 Haitian Army pilots to begin training at the Tuskegee Institute in Alabama.

Four Waves of Immigration

Haitians immigrated to the United States in primarily four waves. Migration began during the first U.S. occupation of Haiti from 1915 to 1934 to avoid the hazards of the occupation. While the number of immigrants was not considerable, these first immigrants fully integrated into the black community. Under the dictatorship of Francois "Papa Doc" Duvalier and his son Jean-Claude "Baby Doc" Duvalier from the late 1950s to the mid 1980s, significant waves of Haitians, particularly intellectual and professional political opponents of the regime, fled to the United States for safety. After the middle class had made its exodus, less-prominent individuals and sectors of the society began to immigrate to the United States, legally or illegally. Upon arrival, they tended to congregate in particular areas of the United States, such as Florida, New York, and Massachusetts, though there has been movement to other nongateway cities.

Triple Minorities

Because of language barriers, Haitians are often seen as triple minorities. They are immigrants,

black, and speak a foreign language. Haitians commonly speak Creole, though both Creole and French are the national languages in Haiti. Haitian Creole, a blend of French and African languages, is spoken only in Haiti, which makes language assimilation in the United States, as well as retention of the language, a bit difficult.

Immigrating to the United States subjects Haitians to a new social system in which they are judged on their physical appearance and race, rather than other culturally important criteria such as skin color, money, and education. The racial category of “black” for Haitians does not have the same negative connotations as it does in the United States. Haiti won its independence from France, emerging as the first successful slave rebellion and the first independent black nation in the Western Hemisphere. Haitians do not come from a society with white dominance, thus they are accustomed to seeing blacks in positions of power. Consequently, “black” does not mean inferior but is equivalent to pride and dignity.

In an effort to combat the negative American understanding of blackness, Haitians keep their Haitian identity, choosing to identify by nationality instead of race. Haitians will attempt to recreate the world they left behind by having social clubs based on hometowns and dances known as *bals*. The ethnic enclaves, often known as Little Haiti, are filled with Haitian businesses that cater to the Haitian population. They participate in major cultural festivities such as Haitian Independence Day (January 1st), Haitian Flag Day (May 18), and the anniversary of Dessaline’s Death (October 17).

There are two major, state-recognized religions in Haiti: Catholicism and voodoo. Protestant churches are present and active in Haiti as well. Though the religions are separate, many practitioners of Catholicism also engage in voodoo. Creating a religious syncretism, practitioners blend aspects of both voodoo and Catholicism such as correlating the saints of the church with the lesser gods, or *loa*, in voodoo.

Though Haitians have made progress in various arenas, they still face adversity in the form of discrimination. During the fourth wave of immigration, many poor Haitians attempting to flee the military government’s repression often tried to reach the United States by boat. Because of different government policies toward illegal

immigration, Haitians were not able to reach American soil and were often stopped en route or detained and deported back to Haiti—unable to file for asylum. Haitians were also falsely accused of bringing human immunodeficiency virus to the United States, which ultimately led to the Food and Drug Administration’s (FDA) excluding Haitians from donating blood. Haitians, and African Americans, fought against this unfair exclusion and the FDA rescinded its ban on Haitian blood donation.

Despite the negativity, Haitian Americans have made progress and had success in various areas. Founding members of the Fugees, Pras and Wyclef Jean, are notable Haitian American musicians in American society. In 2010, Jean attempted to run for president of Haiti, though he was deemed ineligible because he had not lived in Haiti for the past five years as required. There are other famous Haitian Americans, such as Edwidge Danticat, author of several novels depicting Haitian life in Haiti and abroad, and Garcelle Beauvais and Jimmy Jean-Louis, who are actors. Haitian Americans have also made strides outside the entertainment realm, including several professional athletes in football, basketball, and boxing. In the political arena, Philippe Deroose was the first Haitian American to be elected to public office in the United States in 1993. He was elected councilman in Miami-Dade County in Florida. In 2000, he was also the first Haitian American to be elected as mayor of Village of El Portal.

Based on achievements in the face of discrimination and stereotypes, Haitian Americans have made a contribution to American society in an impactful manner.

Halakha

Translated as “the path,” halakha refers to the inclusive body of Judaic law and has been a fluid, living repository of tradition for more than 2,500 years. Many of the judicial opinions in the halakha have been passed on for hundreds of years. It comprises the 613 *mitzvot*, Talmudic and rabbinic law, and even customs and traditions in the community. There is no classic difference between religious and secular life in Judaism; this is the reason that halakha provides such extensive guidance for everyday life and why it plays such a crucial role in maintaining Jewish culture despite the Diaspora. Halakha itself differs geographically and historically for different Jewish communities. But, despite these differences, any understanding of Jewish culture is based in part on an understanding of halakha. As the comprehensive guide to Jewish life, its tenets concern an enormous range of issues; halakha represents the extrapolated message of the Hebrew Bible.

Because halakha is constantly developing as it is interpreted and discussed by Jewish authorities, it displays a high level of dynamism. Different Jewish communities throughout the world can have different interpretations of halakhic principles; controversies based on these differences contribute to the intellectual rigor of rabbinic literature. As there is no one formal authority on halakha to which Jews may appeal opinions they find unsatisfactory, it is up to the individual to choose rabbis, synagogues, and other sources of authority. For the most part, acceptance of any one opinion is dependent upon the social stature of its *posek* (author), along with the kind of reception it receives in the scholarly community.

Specifically, the halakha is made up of the practice springing from the mitzvot and the interpretation of that practice in rabbinical literature. The Talmud indicates that there are 613 of these mitzvot in the Torah; 248 of them are positive

(you must do A, B, and C) and 365 are negative (you must not do D or E). Positive mitzvot allow the actor to emulate God and negative mitzvot create distance between God and the actor. Obviously, as the goal of life is to be as close to God as possible, the mitzvot must be carefully observed.

Categorization of Halakha

Halakha can be categorized by study of distinctions in areas of its laws. One such distinction is that between laws received directly from God via the Pentateuch and laws that originate with humans, such as rabbinic opinions. Practically speaking, those laws coming directly from the word of God are not subject to debate or revision, except in extraordinary circumstances (matters of life and death). Another major distinction within the halakha is between the written law (the Torah) and the oral law (laws that are memorialized in the Mishnah, the Talmud, and rabbinical opinions).

Another distinction is that between *chukim*, or decrees; *mishpatim*, or judgments; and *eduyot*, or testimonies. *Chukim* are laws without obvious connection to character or morality. An example of a *chok* (singular form of *chukim*) is kosher eating. *Mishpatim* are laws with obvious moral roots, such as the prohibition against killing. Finally, *eduyot* are commemorations such as the Shabbat. Another way to classify halakha via distinction is to characterize laws as being either in relation to God or in relation to other people. Within the Talmud, Jewish law is further classified. There are the six orders of the Mishnah, which are defined by their subject matter; this would include, for example, the category of *nashim* (women) that deals with laws of marriage and divorce.

The Jewish faith sees mitzvot as sins. There are three types of sin in the halakha, categorized by the intent of the actor. *Pesha* (rebellion) are intentional sins, considered to be purposeful defiance of God’s will. *Avon* (desire) are sins of lust or indulgence. The actor knows they are sins but does them anyway based on indulgence of desires. *Chet* are unintentional sins; the translation of *chet* is “missed the mark.” In Judaism, sin does not condemn an actor to damnation; however, in a sense, failure to follow the path to repentance, *teshuva*, does. The Talmud also says that providence will apply halakhic principles even if man cannot or will not.

Rabbis and communities differ wildly on how they interpret and change the halakha. There is a clear tension between early and more recent opinions, which challenges innovation; the concepts of binding precedents and responsibility of contemporary *poskim* to ensure the just thing happens along “the path” can come into conflict. In practice Judaism and its authorities take care not to upset precedents unless needed while granting *poskim*, a sort of judicial discretion.

These tensions are thrown into sharp relief with a comparison between more Orthodox practices and reformative practices. Orthodox positions on use of electricity are connected back to rules on fire and therefore there are Orthodox prohibitions on using electricity at times. However, Conservative and Reform *poskim* see electricity use as more akin to water use in modern society; you turn the tap or flip the switch and both water and electricity flow as needed.

The different schools of Judaic thought also see precedent and authority differently. For Orthodox Jews the halakha is divine law laid out in the Torah, rabbinical law, and community customs. As a result, change to any of those areas is not permitted. Conservative Jews see halakha as normative and binding, though not absolute; for them, halakha is necessarily changing and must be subject to interpretation by rabbis, especially across historical time periods. Both Reform and Reconstructionist Jews believe that rabbinic Jewish law is no longer binding on Jews. Traditionalists believe that each Jew must interpret the Torah and Talmud for themselves. Of course, some Orthodox Jews see these latter ideas as heretical.

The traditional purpose of halakha has been to maintain Jewish culture despite the Diaspora and other cultural calamities. In the modern United States, halakha still fulfills this purpose by providing a sense of community and ethnic identity for many Jews living within the larger, mainstream American culture. At the same time, elements of halakha have become integrated into American culture. One such example is the widespread acceptance of Jewish holidays and Shabbat (Jewish day of rest) in the American workplace.

Halal

Halal (Arabic for lawful or permissible) refers to an action or object that conforms to Islamic law. This term is frequently used in regard to food. The opposite of halal is *haraam*. Pork, carrion, and foods slaughtered in the name of anything but God are a few things considered *haraam*.

Dhabihah is the way meat is slaughtered in order to be considered halal. This does not apply to fish or seafood. The method involves using a sharp knife to cut the throat of the animal, slicing through the carotid artery, jugular vein, and windpipe without puncturing the spine. The animal is then placed so the blood drains and it exsanguinates. The prayer “in the name of God” should be uttered while this is performed and the head should be turned in a direction in accordance

with Qiblah. Apparently, this ritual prevents blood clots and gives the meat a longer shelf life.

Halal applies not only to food, however, but also to lifestyle and everyday living. Most people associate the word with meat, but it also applies to nonfood items like cosmetics that can contain animal by-products, pharmaceuticals, and processed foods.

Halal in the United States

Established in 1974, Midamar Corporation was the first halal company in the United States. It was also the first company to distribute U.S. Department of Agriculture (USDA) approval-stamped protein products to the Middle East and south-east Asia. Another first for this Cedar Rapids, Iowa-based company was slaughtering halal beef. Midamar is located where the oldest mosque in the United States still stands. The descendants of Muslims who settled in Iowa in 1900 recognized a need for the production of halal beef and chicken products for American Muslims, so this area has since been a U.S. center of production of halal products.

Major hotels, airlines, restaurants, and hospitals purchase halal-certified products. Manufacturers of pharmaceuticals, grains, soups, and cosmetics also have an interest in these products for their customers. The appeal of the halal market took off in 1991 and has grown ever since.

The Islamic Certification Agency (ISA) was established in 1975 but applied for nonprofit status in 2004. There have been many investigative reports done on Midamar and ISA because of an apparent conflict of interest. Three of the four ISA board members are members of Midamar's Aosse family. Some questions have also been raised about Midamar's slaughtering methods. Do they just supply the products or actually slaughter and produce them according to Islamic law? It is not only necessary for food to be approved to be shipped within the United States, but it is important that halal-certified foods are accepted by foreign governmental approval bodies, too.

Two other U.S. halal-certified companies are the Stockton, California-based Islamic Meat and Poultry Company and the Halal Products Certification Institute, also located in California. Established in 1986, the Islamic Meat and Poultry Company does hand-slaughtering and meat

A halal meat market in Chicago, Illinois. Efforts to create halal-certification companies for Muslim American consumers go back to 1974. The market has been pursued by mainstream manufacturers of soups, grains, cosmetics, pharmaceuticals, prepared foods, and other products.

processing according to Islamic sharia. Halal Products Certification Institute, formed in 2011, became the first company to globally distribute halal consumer products such as perfume, cosmetics, and toiletries. The company was started by Muslim scientists and intellectual scholars well versed in Islamic law.

In Dearborn, Michigan, which houses the largest Arabic and Muslim population in the United States, some fast food chains have started offering halal food items. For example, fast food giants like McDonald's offer halal chicken nuggets. In New York City, halal food trucks can be found all over the city. They offer gyros, chicken and rice, and other fast food dishes for reasonable prices.

In 2005, a county in Ohio issued a law banning the sale or distribution of any food mislabeled as halal. If it does not meet the dietary standards of Islamic law, it is not halal. There are similar policies

that protect kosher products. Many often confuse the terms *kosher* and *halal*. The terms are similar, as kosher means “proper” or “fit.” But, this is where the similarity ends. Their spiritual roots are completely different. Both are based on scriptures, with halal associated with the Qur’an and kosher rooted in the Bible and the Torah. When the slaughtering of the animals occurs, Jews do not say God’s name over each animal—only the first and the last ones. They think to do more is wasteful. With halal, any normal, adult Muslim can perform the process. With the kosher ritual, however, only a particular rabbi, a *Sachet*, can do it. They also have different notions about what parts of the animal fall under their law. Muslims consider the whole animal halal if it is slaughtered according to Islamic sharia. Jews consider only the fore quarter of the animal kosher. Halal customs prohibit alcohol, whereas kosher traditions allow all wines.

Treatment of Animals

The way that the animals are slaughtered has not gone unnoticed by animal welfare organizations. According to several studies, animals suffer greatly when experiencing the halal and kosher rituals. The Farm Animal Welfare Council (FAWC) confirmed this research in 2003, stating that livestock had to bleed a full two minutes before dying. Halal and kosher butchers have denied this, however, and several sources have supported them, including Humane Society International and the Food and Agriculture Organization of the United Nations.

Hapa

Hapa is a term that is Hawai’ian in origin and loosely translates to “half” or “mixed.” It came into widespread use in the United States during the 1990s as a way to refer to people of multi-racial Asian descent. Entering mainstream usage at a time when multiracial activism and visibility was reaching a zenith before the 2000 U.S. Census, *hapa* was adopted by people of multiracial Asian descent as a concise, novel, and affirmative way to claim an identity in the face of a U.S. racial schema that, until then, had few positive terms to accommodate them.

However, its etymology is connected with the history of settler colonialism in Hawai’i, and critics in the early 2000s began to question the power differentials implicated in its mainstream usage, decrying it as a language-based form of colonialist appropriation. Regardless of terminology, people of multiracial Asian descent made up almost 1 percent of the total U.S. population in 2010, their numbers growing at a rate faster than mono-racial Asians in the United States

Categorization of Race

People of multiracial Asian descent have a long history in the United States. But their existence is often grouped within Asian American history and sidelined in discussions of race category and multiracial identity within the United States. In contrast to a long, explicit history on the part of the American legal institution to clarify and reinforce the boundaries of whiteness and blackness via naming and category—including the “one-drop rule” and the terms *mulatto*, *quadroon*, and *octoroon*—official state discourse has either evaded or had difficulty naming people of multiracial Asian descent outright (with the notable exception of “Amerasian,” explained below). This is not to say that there has not been state legislation against interracial mixing with Asians in the United States. All western states in the United States except Washington and Colorado had antimiscegenation laws that prohibited marriage to Asian people, and the 1907 Expatriation Act and 1922 Cable Act forced any woman who was a U.S. citizen to give up her citizenship upon marriage to any “alien,” a term that applied to almost all Asians in the United States at the time. State antimiscegenation laws were reversed

on a piecemeal basis in the mid-20th century and nationally by the *Loving v. Virginia* Supreme Court decision in 1967.

A Difficult History of Naming

People of multiracial Asian descent have been the object of various labels that come from a plethora of cultural sources, almost all of which have had derogatory connotations at any given time. The term *Eurasian*, originating in the context of British colonialism, has a history of association with colonial power structures as well as tragic or villainous literary figures, and encompasses only white and Asian multiracial identity. The blanket terms *half-breed* and *half-caste* are considered offensive, while “halfie” or *haafu* carry the connotation of being less than whole. The Vietnamese term *bui doi* (dust of life, or children of dust) as well as the Korean term *honyol* have derogatory in-group connotations and associations with the U.S. imperial presence in those countries.

The term *Amerasian* was invented in 1930 by American author Pearl S. Buck, referring explicitly to the Asian-born children of white American men, almost always servicemen, and Asian women. In her book *East Wind: West Wind* (1930), she describes Amerasians as “the most needy children in the world”; many people of multiracial Asian descent avoid this term for this connotation. This term entered official state discourse in 1982 under Public Law 97-359, or the Amerasian Act of 1982, which granted special immigration status—but not citizenship—to children of U.S. male fathers born in Korea, Vietnam, Laos, Cambodia (Kampuchea), or Thailand between 1950 and 1982.

In the Native Hawai‘ian language the original meaning of *Hapa* was “part” or “half,” frequently used in the phrase *hapa haole*, signifying a person who was mixed Native Hawai‘ian and “foreigner” (white). This original meaning did not include reference to Asian heritage. It is also important to note that, used in this sense the term *hapa* is an adjective, not a noun, as it is often used in mainland U.S. discourse. The term had a derogatory connotation. Over time, its meaning shifted to encompass multiracial people of Asian heritage, in addition to (and sometimes instead of) multiracial people with Native Hawai‘ian heritage.

The Hapa Movement

The 1990s saw an upswing in multiracial activism and visibility, largely centered on a campaign to alter the race categorization schema of the 2000 census. Through a concerted and organized activist movement, many multiracial people of Asian heritage claimed *hapa* as a positive and inclusive term that described their heritage and that, to them, was free of the complicated political terrain of naming outlined above. The term was viewed as a concise way to articulate an identity that signified collective experience and struggle, responding to a long institutional history of difficulty with terminology as well as in-group prejudice from mono-racial Asian Americans.

A concerted activist effort to draw attention to this new identity, located largely on college campuses on the West Coast of the United States through the creation of student groups such as the Hapa Issues Forum, garnered national attention. Works such as Kip Fulbeck’s *Part Asian/100% Hapa* (2006) art installation and subsequent book as well as May-Lee Chai’s *Hapa Girl: A Memoir* (2007) are evidence of this movement. A new emphasis in scholarly research on the experiences of multiracial Asian Americans developed concurrently, resulting in works such as psychologist Stephen Murphy-Shigematsu’s *When Half Is Whole* (2012). Perhaps more than any other term, *hapa* has been the most widely embraced by multiracial people of Asian heritage.

Critics in the early 2000s, however, asserted that this usage was itself a form of colonialist appropriation and domination via language. Stripped of its original Native Hawai‘ian meaning and instead transformed to accommodate exogenous groups’ interests—the very same groups, Asians and mainland Americans, that have a history of settler colonialism in Hawai‘i—it was viewed as another instance in a long history of settlers wielding power through manipulation of Native Hawai‘ians’ own control over and access to the Hawai‘ian language. As of 2012, the term was still in popular usage, though with less concerted political organizing around it as a common identity than in decades past.

A Snapshot in 2010

Of the approximately nine million people who indicated more than one race in the 2010 U.S.

Census, 2,646,604 people reported “Asian in combination” with one or more races, which represents 0.9 percent of the total U.S. population. This is a 59.8 percent increase from the 2000 census, which reported 1,655,830 people who were “Asian in combination” with one or more races.

This is a higher rate of growth than the population that reported “Asian alone” between 2000 and 2010; in other words, the multiracial Asian population is growing faster than the monoracial Asian population in the United States. According to the 2010 census, multiracial Asians comprised about 15 percent of the total Asian population in the United States. This is the third-highest percentage of multiracial people within a racial group, behind white and black, respectively.

Among the approximately 2.6 million people who reported “Asian in combination” with one or more races in 2010, 1.6 million, or 61 percent, reported Asian and white, the most frequent combination. Asians and “some other race” followed, comprising 9 percent of multiracial people of Asian heritage, Asians and black at 7 percent, Asians and Native Hawai‘ian or Other Pacific Islander at 6 percent, and Asian and white and Native Hawai‘ian at 5 percent of multiracial people of Asian heritage. The Asian and white population was the most significant source for the growth of multiracial people of Asian heritage between 2000 and 2010, almost doubling in size. Almost half of all multiracial people of Asian heritage in the United States live in the west, though this proportion has decreased slightly from 2010 and increased slightly in the south. The highest concentrations of multiracial people of Asian heritage in 2010 were in California, followed by Hawai‘i.

Among specific Asian groups, Filipinos claimed the highest number of those reporting two or more races. However, the group with the largest proportion of people claiming identity with one or more other Asian groups or races were Japanese, with 41 percent of Japanese respondents identifying with multiple Asian groups, another race entirely, or all three. Asian Indians had the lowest proportion (11 percent) of identifying with other Asian groups or other races.

The first year that the U.S. Census allowed respondents to select more than one option for

race was 2000. Statistics before that year are not as specific or reliable as those from 2000 and later.

Harlem Globetrotters

Born out of the Chicago amateur basketball scene in the late 1920s, the Harlem Globetrotters, comprised of African American male athletes, morphed from a semipro basketball team into an international sensation. Their journey from barnstorming tours in the midwest to playing sold-out venues abroad was not without controversy as the Globetrotters have been criticized for perpetuating stereotypes of African Americans. Despite this scrutiny, the Globetrotters have overcome many barriers facing African Americans and succeeded in becoming a world-renowned organization.

Initially, the Globetrotters grew their fan base through barnstorming tours around the midwest region from Illinois to Montana, often playing in small, predominantly white towns. It was during this time that the Globetrotters perfected not only their basketball skills but also the showmanship that set them apart from other barnstorming basketball teams. For example, hidden-ball tricks, skits, and the Magic Circle became significant components of their skill set, as both basketball players and entertainers. These routines, however, led to criticism in later years.

Eventually, their on-court success secured the Globetrotters a place in nationwide competitions such as the College All-Star tour and victories against the Harlem Rens in 1947 (another highly successful African American team) and National Basketball Association (NBA) champion Minneapolis Lakers in 1948. Though these victories situated the Globetrotters as one of the preeminent teams of the time period, they still endured discrimination. During the College All-Star tour, the African American players on the Globetrotters were paid less than their white counterparts on opposing teams and stayed in segregated housing. Until the NBA integrated, the Globetrotters still suffered the indignities of racism and discrimination.

The integration of the NBA was crucial in that the Globetrotters faced increased competition for the best African American players while playing a diminishing number of games against quality opponents. Prior to integrating, the NBA was a fledgling league during the late 1940s and often played doubleheaders with the Globetrotters, who

actually were the main attraction. This changed in 1950, when the Boston Celtics chose Chuck Cooper, the Washington Capitols selected Earl Lloyd, and the New York Knicks selected Nat “Sweetwater” Clifton, all former Globetrotters, during the NBA draft. The Globetrotters no longer held a monopoly on the best African American players and it began to affect the organization financially.

By the 1970s, ownership had changed several times and, following the death of owner Abe Saperstein, the Globetrotters were in financial trouble. As popularity of the Globetrotters began to wane, the team could not maintain the financial success they experienced during the previous decades. After two decades of instability, the Globetrotters set a new precedent, becoming the first major professional sports franchise in the United States to have an African American owner and chief executive officer (CEO), when former player and successful businessman Mannie Jackson purchased the team in 1993.

Symbol of Race Relations and Identity

Throughout their history, however, the Globetrotters have played an important role as a symbol of race relations and identity in the United States. For example, the government utilized the Globetrotters’ international tour in 1950 as a public relations tool to counter communist claims of racism in the United States. The tour had heightened media coverage and set a record when 75,000 people attended their game in Berlin, Germany, at Olympic Stadium. Unfortunately, after being celebrated as heroes for representing American ideals of freedom abroad, the players returned home to the United States to face the same discriminatory practices against African Americans in housing, education, and business that existed prior to their departure.

During the 1960s, with their emphasis on pre-game antics and showmanship, some African Americans argued that the Globetrotters reinforced stereotypical images of black men as “Uncle Toms” or “clowns” because they attracted predominantly white audiences. This characterization emerged as the Globetrotters played against decidedly inferior competition and emphasized showmanship to keep the crowd involved as opposed to basketball skills and strategies. Some perceived that African American players were

being exploited for so-called entertainment purposes at the expense of the dignity of the African American community. While the visibility of the Globetrotters during the 1940s and 1950s was viewed positively for African Americans, this changed as civil rights activists criticized the caricatures and antics that the Globetrotter organization reproduced.

Eventually, what started out as a local Chicago barnstorming basketball team turned into a global attraction. By recruiting top-level African American athletes such as Marques Haynes and later Wilt Chamberlain, the Globetrotters played an up-tempo, unique brand of basketball accompanied by comedy routines designed to entertain primarily white audiences. As a result, the Globetrotters achieved commercial success through movies, cartoons, and a variety show that reflected their crossover appeal to white audiences. This was not without problems in later years as they were drawn into the debate over whether they were “goodwill ambassadors” or an example of minstrel show designed to appeal to white audiences. Ultimately, the Globetrotters played an important role in providing visibility to and opportunities for African American men during segregation as the players became internationally recognized.

Harlem Renaissance

The Harlem Renaissance began after World War I and lasted through the 1920s and 1930s. The early renaissance coincided with the peak of the Great Migration of southern rural blacks to northern cities during and shortly after the war.

During Reconstruction, although slavery was abolished, freedom proved ephemeral for African Americans as white supremacists instituted a modification of the old system quickly and violently. Ninety percent of American blacks lived in the “new south” of social, political, and economic repression. By around 1890, many blacks had enough of disenfranchisement, Jim Crow, hate, sharecropping, boll weevils, and general misery. The north offered jobs in industry, with factory owners recruiting everywhere for cheap labor. The industrial north remained after World War I a magnet for blacks from the economically depressed and industrially backward agrarian south.

Hundreds of thousands moved to northern cities, where they found that they had common histories and experienced common racial discrimination. The new migrants were squeezed out of white-dominated workplaces and neighborhoods, and squeezed into dilapidated older neighborhoods.

The largest of the old neighborhoods was Harlem in New York City. While blacks went to cities such as Chicago and Detroit for work in automobiles or meatpacking, they went to New York to work in that city’s primary industry—culture. In Harlem gathered writers, artists, actors, and musicians, all bent on celebrating black traditions and creating new ones. They discovered that they had reasons for pride in their culture. They demonstrated their pride in the Harlem Renaissance.

The “New Negro”

The Harlem Renaissance is, in the narrow definition, the flowering of black culture in Harlem in the 1920s and early 1930s. Blacks encouraged to celebrate their new freedom came under the label “the New Negro,” coined in 1925 by Alain Locke, sociologist and critic. Some use the phrase “Harlem Renaissance” interchangeably with “New Negro Renaissance” and apply the term to African American cultural flowering regardless of geographic setting.

The Harlem Renaissance is noted for poetry, novels, painting, and sculpture. The Harlem Renaissance brought recognition that black literature and art were legitimately a part of world culture. Blacks from the Caribbean and the southern United States came to Harlem, and the blending of cultures helped nourish the arts.

The New Negro demanded inclusion and empowerment within American society, and just about all major cities had a group of elite blacks. Although centered in Harlem, the flourishing of the arts—literature, drama, music, and movies—and the outpouring of protest spread its influence to black artists, Americans and other people in the diaspora, particularly Afro-Caribbeans in Paris. But the major flowering of black artistic expression was centered in Harlem.

The father of the Harlem Renaissance was Hubert Harrison, born in the Virgin Islands and transplanted to New York at age 17. Harrison attended night school while working as a bellhop. He was a socialist and worked with other black radicals, lecturing about socialism and civil rights, advocating unity, education, and Afrocentrism. Among those he influenced was Marcus Garvey.

A Musical Renaissance

The postwar increase in black writing, music, and visual arts in the city attracted attention from middle-class white New Yorkers. Black artists felt conflicted between being true to their art and altering it to the tastes of the dominant white society. Cultural tourists went to the Cotton Club in Harlem for the floor shows, somewhat debasing to performers but nevertheless an opportunity for black artists to develop ties to white entertainment entrepreneurs.

Jazz drew white and black audiences, although not usually at the same time. The Cotton Club featured the convention-spurning syncopated improvisational music of Duke Ellington, music that was never the same twice. Vocalists included Billie Holiday and Bessie Smith. Other jazz players included Louis Armstrong and Jelly Roll Morton.

The Apollo Theater, which opened in 1914, was the takeoff location for musicians such as Billie Holiday and Benny Carter, but it was also noted for live performances of dance, comedy, and instrumental music. The Apollo was home

to the live *Amateur Night Hour* broadcast on radio from 1934, and Ella Fitzgerald was an early winner.

There were black composers of symphonies and sonatas between the wars, but the significant music was nightclub style, which translated to the musical show. For instance, *Shuffle Along*, with music written by Eubie Blake and Noble Sissle, ran for more than 500 performances beginning on May 23, 1921. The chorus line included Josephine Baker and Ethel Waters, and Paul Robeson was in a barbershop quartet that had a brief run in the cast. The show's hit song was "I'm Just Wild About Harry." *Shuffle Along* is sometimes considered the first musical comedy.

Marian Anderson gained her initial recognition in Europe. In 1939, the Daughters of the American Revolution (DAR) refused to allow Anderson to perform in Constitution Hall. In response, Eleanor Roosevelt resigned from the DAR, and Interior Secretary Harold L. Ickes offered the Lincoln Memorial for the concert. On Easter Sunday, over 75,000 people heard Anderson sing. She won the National Association for the Advancement of Colored People's (NAACP) Spingarn Medal later in 1939. Her efforts helped diminish the barriers for black performers in the arts.

Harlem Renaissance Literature and Film

The black experience received treatment from writers of poetry, short stories, essays, and novels that attracted both black and white audiences. Claude McKay, a native of Jamaica, dealt with immigrant nostalgia and African American rage and pride. He wrote three novels, two autobiographies, and books of poetry. One best-selling novel won the Harmon Gold Award, and his first book of poetry was among the first publications of the Harlem Renaissance. McKay demanded that blacks stand up for their rights.

Langston Hughes was one of the most prolific and versatile of renaissance writers. He rejected white influences and wrote in blues and jazz rhythms. He wrote a play in poetry about the Scottsboro Boys. Countee Cullen was the adopted son of a Methodist minister, and he trained at New York and Harvard Universities. His poetry includes "Color" (1925), "The Ballad of the Brown Girl" (1927), and "Copper Sun" (1927.) Cullen's work focused seriously on the

poet's identity as well as the identity of the black collectivity. He doubted that a benevolent creator would have made race such a mixed blessing. Sterling Brown was a longtime professor at Howard University. His 1930s poems were sometimes light, sometimes pessimistic, and they were written in both standard English and black vernacular and in both black and European forms. Many of

Zora Neale Hurston beats a hountar, or mama drum, in 1937. Hurston was an American folklorist, anthropologist, and author during the Harlem Renaissance. She is best known for her novel *Their Eyes Were Watching God* (1937). The Harlem Renaissance redefined how America, and the world, viewed African Americans.

his poems feature strong individuals holding out against poverty, racism, and fate.

Another highly versatile writer was Zora Neale Hurston. Born in Florida, she was also a folklorist and anthropologist, trained at Morgan Academy in Baltimore, Howard University in Washington, D.C. and Barnard and Columbia Universities in New York. Her writings are many, among them *Jonah's Gourd Vine* (1934), *Their Eyes Were Watching God* (1937), *Moses, Man of the Mountain* (1939), and her autobiography, *Dust Tracks on a Road* (1942). Some of her folklore materials are at the Library of Congress. Hurston's stories of black southerners helped refute stereotypes about marriage and family. One spirited comment from Hurston indicates the influence the Renaissance had on African Americans at the time: "Sometimes I feel discriminated against, but it does not make me angry. It merely astonishes me. How can anyone deny themselves the pleasure of my company? It's beyond me."

Nella Larsen was born in Chicago. Her mother was Danish, her father West Indian. After her father died, her mother married a Dane. Larsen was educated at Fisk University in Nashville and the University of Copenhagen, as well as in schools of library science and nursing. She wrote novels and articles; her novels include *Quicksand* (1928) and *Passing* (1929). She exemplifies the difficulty of being a product of two worlds, one white, the other black.

Jean (Eugene) Toomer wrote plays and short stories that captured the spirit of his times. He was the sole renaissance representative of the Symbolist avant-garde. He was light enough to pass for white. After a brief flirtation with the Harlem scene, he became a follower of G. I. Gurdjieff and inner development and passed into the white world.

The Harlem Renaissance also involved film. After D. W. Griffith's *Birth of a Nation* (1915) stereotyped blacks negatively and made the Ku Klux Klan a heroic organization, black directors, particularly Oscar Micheaux, released films featuring black life and struggles in the United States. Micheaux was responsible for over 40 movies, and he launched the careers of Evelyn Preer, who made 10 movies before Hollywood discarded her for being too light-skinned, and Paul Robeson, whose many accomplishments included starring

as the first black Othello in an otherwise all-white cast. Micheaux's treatment of race relations led many of his movies to be banned.

The Harlem Foundation

Promoting the efforts of Harlem Renaissance artists who otherwise would have struggled financially was the Harmon Foundation, established in 1922. The foundation built playgrounds nationwide; provided vocational guidance and tuition for students; funded nursing programs; and presented achievement awards in business, education, religious service, science, race relations, music, literature, and fine arts.

The renaissance influenced subsequent generations. Writer Robert Hayden taught at Fisk and the University of Michigan and served twice as the consultant in poetry at the Library of Congress. Gwendolyn Brooks had her first success in 1945 with *A Street in Bronzeville*, and her 1950 *Annie Allen* won a Pulitzer Prize, the first book of poetry by a black poet to win that prize, the last for nearly 40 years. Brooks was an exceptional technician, and her poems dealt with the interior lives of black people. She later came under the influence of the radical Black Arts movement in the 1960s.

The Harlem Renaissance provided opportunities for blacks to gain white notice. This success was one element in the post-World War II civil rights movement, as was the influence of renaissance figures on civil rights leaders such as Malcolm X and Martin Luther King, Jr. Many artists themselves were active in the civil rights movement.

Harpers Ferry Raid

The 1859 raid on Harpers Ferry, Virginia, of white and African American men led by abolitionist John Brown was a failed attempt to inspire a major insurrection of enslaved African Americans. John Brown and his contempt for slavery led to an unprecedented event in American history, one that would cause many individuals in various economic, social, and political situations to reconsider the institution of slavery.

The leader of the Harpers Ferry Raid, John Brown, was considered one of the most outspoken and active abolitionists in the country. John Brown was the descendant of Peter Brown, one of the original English settlers who arrived at Plymouth Rock in 1620 on the *Mayflower*. Brown's grandfather, Captain John Brown, and his father, Owen Brown, were uncompromising abolitionists. Owen Brown raised his son John to adhere to a strict Calvinist faith. Raised during the Second Great Awakening, John was deeply affected by religious revivalism and the abolitionism that grew in this era, to which many of his own writings attest. As an adult, Brown developed a reputation as an abolitionist willing to use violence to oppose and eradicate the evil of slavery.

John Brown's Plan

On October 16, 1859, John Brown led 18 men to Harpers Ferry, located near the Potomac River in western Virginia near the Blue Ridge Mountain

Trail. The site for numerous battles during the American Revolution, the area around Harpers Ferry appealed to Brown as an ideal location for his raid. Initially, Brown intended the Harpers Ferry raid to cause little bloodshed. Brown planned to capture the slave owners and promise to release them once the slave owners freed the African Americans they had enslaved. Once this had been accomplished, Brown assumed that his small army of 18 men would grow to 150,000 able-bodied men. According to Brown's plan, the newly freed people would either assist in the freeing of additional enslaved people or they would march to the north in order to increase the number of people on the Union side. Brown's plan is often critiqued because Brown did not clearly define what the freed people or members of his army were to do once the raid had been completed.

John Brown ordered his men to take control of three structures: the armory, which was also the fire engine house; the arsenal; and Hall's Rifle Works. Meanwhile, Brown and Hayward Shepherd headed toward the train depot. Brown believed that if he were to forestall any trains arriving or departing from the depot then the area would be cut off, and there would be little to no interference with his plans. Brown's seizure of the depot took place during the night, which limited visibility and made it difficult to determine who was friend or foe. As a result, Shepherd, a freed person, became the first casualty of the resistance, shot by one of Brown's own men. During the incident, Brown and his men had also decided to secure an area called Kennedy Farm as a make-shift base camp.

The Kennedy Farm

The Kennedy Farm is where Brown and his men planned to meet, trade whites (particularly slave owners) for enslaved people, and orchestrate the rebellion. One of Brown's captives led to the demise of the short-lived rebellion: Colonel Lewis W. Washington, a descendant of President George Washington. Colonel Washington and his men would eventually assist in the proceedings that would lead to Brown and his followers being captured. Brown hoped a captive of such status would lead to victory for the raid and the abolitionist movement. However, Brown would later be forced to surrender based on the connections

and weaponry obtained from Washington. After Brown had successfully taken Washington, President James Buchanan sent in General Robert E. Lee with the U.S. Marine Corps. Lee and his troops quickly ended the raid and captured Brown and his followers; the raid lasted a total of 14 hours, during which time 10 men were killed, seven were captured, and an unspecified number escaped. After a speedy trial, Brown was found guilty of treason against the state of Virginia and was sentenced to die by hanging; he was executed on December 2, 1859.

The Ramifications of the Harpers Ferry Raid

Historians disagree as to whether John Brown's raid on Harpers Ferry was ultimately a success or a failure. Some have argued that the raid was a success in that it contributed to Brown's goal of ending slavery. According to this theory, the raid hastened the onset of the Civil War and led to the end of slavery, while also inspiring future African American civil rights activists to oppose racial injustice. However, Brown's raid has been deemed unsuccessful by others because the execution of his plans was so poorly done, and, more significantly, his acts set into motion future laws that were created based on southern whites' fears in the aftermath of the raid. Whites were faced with the possibility that, if given the opportunity, enslaved African Americans could rise up in a violent, bloody revolt to destroy the institution of slavery.

Haskell Indian Nations University

Founded as the United States Indian Industrial Training School in 1884 in Lawrence, Kansas, Haskell Indian Nations University began as a boarding school for American Indian youth. Today it is a North Central Association of Colleges and Schools–accredited university that serves members of all federally recognized American Indian tribes and Alaska Natives. Haskell is one of two postsecondary schools that operate under the auspices of the Bureau of Indian Affairs. It is one of the oldest continually operating American Indian schools in the country.

The Indian Industrial Training School was renamed the Haskell Institute in 1887 for Representative Dudley C. Haskell of Kansas, who had served as chairman of the House Committee on Indian Affairs.

Academics and Athletics

The original enrollment of 22 students quickly rose to 300 students in 1885; the school now averages about 1,000 students per year. In addition to English and mathematics, early trades taught at Haskell for boys were tailoring, wagon making, shoe making, and blacksmithing; for girls, classes were taught in sewing, cooking, and homemaking. Early students grew their own vegetables on the school farm and were expected to participate in a variety of industrial chores. Today, students study a variety of topics ranging from business and American Indian studies to communication, education, math and sciences, physical education, and social work.

In 1894, the school expanded its curriculum beyond elementary levels to secondary, or high school, and a "normal school," or teacher's college, was added because of the high demand for teachers on Native lands. In 1927, Haskell was accredited by the state of Kansas and the school began offering postsecondary courses at the same time. By 1935, the school had evolved to a postsecondary vocational school curriculum, and in 1965 the school graduated its final high school class.

In addition to academics, early Haskell students often excelled in athletics and its football teams from the early 1900s are legendary, especially the play of stars John Levi (1921–24), Mayes McClain (1925–27), and Louis "Little Rabbit" Weller (1929–31), consistently beating teams such as Brown University, Michigan State, Nebraska, Texas, and Oklahoma. The school's emphasis was returned to academics in the 1930s and athletics at the school were decreased. Today, Haskell is the home of the American Indian Athletics Hall of Fame, and students play football, women's softball, men's and women's cross-country, track and field, basketball, women's volleyball, and men's golf.

Despite its academic and athletic success, like the Carlisle Indian Industrial School and others, Haskell was initially a boarding school that, as historian David Wallace Adams said, was established "for the sole purpose of severing a child's cultural and psychological connection to his native heritage . . . a method of saving Indians by destroying them." Many American Indian children were sent to boarding schools against their wishes to eradicate old loyalties and instill them with a Eurocentric view. Children were not allowed to speak their native languages nor practice their religious beliefs; instead, they wore military-style uniforms with the goal of assimilating the Indian youth into the white-dominated society.

Continuing Development

Haskell became Haskell Junior College in 1970 when it began offering a junior college curriculum. The National Board for Haskell recommended the current name in 1992 to reflect its vision of Haskell as a center for Indian education, research, and cultural preservation. The name change was approved in 1993.

In the 21st century, the school has developed a variety of relationships with schools and governments, including partnerships with the U.S. Environmental Protection Agency, the U.S. Department of Agriculture Forest Service, the Bureau of Indian Affairs, a working group on climate change, and the University of Kansas. Primary scientific research includes genetics, medicinal plants, social relationships, and environmental fields.

Thanks to its relationships with many partners and its 60-acre setting, which includes wetlands of the Wakarusa River, Haskell is able to help students cut through the financial and cultural problems facing young American Indians and Alaska Natives by assistance with on-the-job experiences that complement their studies. This frequently involves mentors—Haskell alumni and federal employees—primarily in the fields of forestry, ecology, range management, soil conservation, landscape architecture, and wildlife and fisheries management. The system is, as explained by Gail Sloan and Bill Welton: “Working in partnership, federal agencies, tribal organizations, and Haskell recognize shared needs and collaborate to enhance students’ educational and employment opportunities.”

Today, as part of the federal land-grant university colleges under the Morrill Act, Haskell’s vision and mission statements reflect the need to serve Native Americans and Alaska Natives implementing both student learning and tribal sovereignty through academic programs and research, creative activities, and culturally diverse student experiences. Haskell embraces the concept of tribal sovereignty and self-determination through a culturally based holistic lifelong learning environment that promotes and upholds respect, rights, and responsibility among all Native peoples.

Hate Crimes

The kinds of criminal acts that qualify as hate crimes include threats, intimidation, violence against a person, or destruction of property, which itself may include cross burnings, institutional vandalism, criminal mischief, and trespassing. With that noted, definitions and scope of hate crimes differ from source to source and have evolved as hate crime legislation has evolved. Likewise, hate crime definitions have evolved in response to cultural movements (such as civil rights, women’s rights), and high-profile cases (such as the killings of Matthew Shepard and James Byrd, Jr.).

Originally developed to combat anti-Semitism, the Anti-Defamation League (ADL) drafted model legislation that sought to address all hate crimes, including “race, color, religion, national origin, sexual orientation or [as of a 1996 amendment] gender of another individual or group of individuals.” The model also criminalizes institutional vandalism “aimed at houses of worship, cemeteries, schools, and community centers.” The legislation outlines a civil action clause aimed at the offenders as well as the payment of punitive damages to victims. It also requires that state police and other law enforcement agencies “establish and maintain a central repository” of information, records, and statistics regarding bias-motivated crimes and provide hate crime training to officers, especially in identifying, responding to, and reporting such crimes. Finally, the legislation

provides a penalty-enhancement clause, which increases a convicted offender's sentence when there is proof of bias or prejudicial motivation.

In 2009, President Barack Obama signed into law the Matthew Shepard and James Byrd, Jr. Hate Crime Prevention Act. This act increased the power of the U.S. Department of Justice by extending its jurisdiction in the investigation and prosecution of hate-motivated violence. The act also increased the number of grants allotted to state and local communities that train agents in the criminal justice system in the management, investigation, and prosecution of bias-motivated crime. As of 2011, 45 states and the District of Columbia have laws against bias-motivated violence and intimidation.

Hate Crime Statistics

The Federal Bureau of Investigation's (FBI) most recent report from the 2010 calendar year represented a total of 14,977 participating agencies in hate crime reporting. The agencies reported a total of 6,624 single-bias hate crime incidents, involving 7,690 offenses, 8,199 victims, and 6,001 offenders. Most offenses reported were crimes against persons (62.7 percent). Crimes against property represented 37 percent of the total offenses and the remainder included crimes against society. The most common crime committed against persons was intimidation (46.2 percent), followed by simple assault (34.8 percent) and aggravated assault (18.4 percent). There were seven murders/non-negligent homicides and four forcible rapes. Among the 8,208 victims, 48.1 percent were victims of racial bias, 18.9 percent were victims of religious bias, 18.7 percent were victims of sexual-orientation bias, and less than 1 percent were victims of a disability bias.

The FBI also provides information about the offenders. White offenders accounted for 58 percent of all offenders, while 18.4 percent were described as black. Offenders were more often motivated by a racial bias (48.4 percent) than by biases of sexual-orientation (19.1 percent), religion (18.3 percent), ethnicity/national origin (13.5 percent), or disability (0.6 percent). Of the racial-bias offenses, 69.8 percent were antiblack, while 18.2 percent and 5.1 percent were antiwhite and anti-Asian/Pacific Islander, respectively. The religious-bias crimes consisted of 65.4 percent anti-Jewish and 13.2 percent anti-Islamic. Anti-Catholic,

Danny Chen, a Chinese American U.S. Army soldier, was found shot to death on October 3, 2011, in a guard tower in Kandahar Province, Afghanistan; suicide was suspected. The target of ethnic slurs and physical attacks on a daily basis for six weeks, Chen's final victimization was being forced to crawl on gravel while carrying equipment and being hit with rocks.

Protestant, atheism/agnosticism and other all fell below 10 percent of the religion-motivated victims. Among the sexual-orientation-bias crimes, 57.9 percent were antimale homosexual bias, 27.4 percent were antihomosexual bias, and 11.4 percent were antifemale homosexual bias.

Despite the high number of "participating agencies," around 85 percent of the agencies report zero hate crimes occurring in their jurisdictions. Researchers suggest this problem is due to the inconsistent definitions of hate crime and the ambiguous nature of laws written in response to hate crimes. The ambiguity and inconsistent definitions cloud the consistency of reporting across participating agencies. There is also a lack of hate crime investigation, training, and understanding among police departments.

Two Opposing Viewpoints

If it can be agreed that human rights are characterized by principles of human integrity, equality, and freedom, then it can be agreed that hate crimes are an egregious violation of human rights. It is apparent that the impact of hate crimes is harmful not only to the individual victims but also to the target community and society as a whole.

Frederick Lawrence argues that bias crimes are especially severe due to the psychological impact on the victim. Specifically, an individual victim is chosen or identified by an offender due to his or her race, ethnicity, religion, gender, sexual orientation, or disability.

Research has shown a wide array of negative outcomes aside from the physical harm, including vulnerability, violation, psychological symptoms (such as extended emotional distress, depression, withdrawal, anxiety, feelings of hopelessness, and isolation), stigmatization from humiliation, isolation, and self-hatred, and clinical symptoms (such as high blood pressure or increased use of narcotics and alcohol).

Furthermore, the impact on the target community, or “in-group” effects, involves an experience of shared victimization. The target community shares the race, ethnicity, religion, gender, sexual orientation, or disability of the victim as the effects spread beyond the victim and his or her immediate family. Community members experience shared victimization with the individual victim/target and experience fear that they could be the next victim. For example, members of the gay and bisexual community reported “vicarious traumatization” effects after the brutal murder of Matthew Shepard.

Last, hate crimes have a distal effect on society as a whole unit. Lawrence again argues a twofold effect on society. First, victimized families withdraw from the community as a direct outcome of the crime. Second, society distances itself from the victimized family in order to avoid harm.

Regardless of these negative proximal and distal effects, hate crime laws continue to be debated in the public and legal arenas. Some individuals argue against the protective nature of the hate crime laws, suggesting the law further isolates individuals and reinforces society’s rejection and indifference. Tom Streissguth, for example, noted that hate crime laws violate the ideals of citizens identifying themselves as Americans first, and members of other groups (such as ethnic or socioeconomic groups) second.

Opponents also argue against these laws based on the First and Fourteenth Amendments. For example, the First Amendment protects a citizen’s right to the free expression of thought, and as defendants are charged with crimes of hate, they

tend to claim protection by the Constitution, especially of their rights to free expression and free speech. The due process clause also requires clear descriptions and guidelines of criminal behavior in order to prevent arbitrary or inconsistent law enforcement. Litigants suggest hate crimes are a violation of this clause because of the inherent vagueness in the statutes. Last, some litigants have argued under the equal protection ground. Specifically, defendants suggest hate crime statutes provide the criminal justice system with the ability to treat people differently predicated on their personal beliefs.

Courts have consistently rejected these arguments and justified sentence enhancement because of the greater harm the crimes have on the safety and welfare of citizens. In the landmark case *State v. Nye*, the Montana Supreme Court rejected the first two arguments based on free speech and due process. First, the court claimed free speech does not include the right to cause substantial emotional distress by harassment or intimidation. The First Amendment does not protect activities that are intended to embarrass, annoy, or harass an individual, as was the case here. Second, the court said the hate crime statute does not seek punishment for offending or annoying a victim because of the victim’s race, religion, or national origin. On the other hand, the statute seeks punishment “for assaults and damage to property when that conduct is done with the intent to annoy or offend another individual because of that individual’s race, religion, or national origin.”

Conclusion

The question might be posed: How will the trend toward greater racial and cultural diversity affect the incidence of hate crimes and the harm that it causes? Will there be more victims like Private Danny Chen, who was the victim of racial-motivated taunts, or Amanda Cummings and Joel Morales, who both committed suicide after persistent bullying from classmates? The outcome will depend in part on whether growing multiculturalism results in a growing clash between cultures or a growing tolerance of other cultures.

Hate Crimes Laws

A hate crime can be defined as a criminal act motivated by bias toward a victim's real or perceived group affiliation. A victim of a hate crime may be targeted based on race, ethnicity, gender, sexual orientation, disability, and/or religion. Hate crime incidents include acts such as physical assault, bullying, harassment, and intentional damage to property. Most hate activities do not involve crimes. Examples of noncriminal hate group activity directed at targeted groups include organizing and attending marches, rallies, speeches, and meetings; distributing leaflets; and maintaining Internet Web sites. These actions, by and large, are considered hate speech, which is very different from a hate crime. Although disturbing, most of the aforementioned hate group activity is within the limits of the law and protected as freedom of speech. Individuals or groups who cross the line into criminal behavior can face prosecution for their offenses.

Enactment of specific hate crime legislation was not without a great deal of debate. Those against specific hate crime laws believed that enactment of such was tantamount to criminalizing thought because it makes thoughts, beliefs, and religious ideologies illegal. Others felt that all crimes could be labeled hate crimes as all violent crimes include a disregard for or bias against the victim. Further, hate crime law detractors believed that these statutes tend to pit one protected group against another, one being the victim and one being the perpetrator.

Those in favor of enacting laws to specifically deal with hate crimes cited various arguments for enacting specific legislation to address hate crimes. First, hate crime law proponents asserted that victims of hate crimes tend to experience an additional degree of suffering that nonhate crime victims do not have to endure. This additional trauma may be emotional or psychological, because the victim's very identity is being attacked. The trauma may also be physical, as some research suggests that violent hate crimes tend to produce greater degrees of injury than similar nonhate crime offenses. In addition, hate crime legislation was touted as a means to prevent retaliation by the victim's group against the perpetrator's group, since retaliation was more likely following a hate crime than a nonhate crime

incident. Proponents also noted that the victim's group can be considered a victim as well. Therefore, punishment of hate crimes through distinct legislation provides a sense of justice to the whole group, not only to the specific victim. Specific deterrence by the same perpetrator and general deterrence by the greater society were additionally seen as reasons to support hate crime laws. Finally, it was believed that enactment of hate crime legislation sent a message to the public and to past and present victims that hate crimes of any type would not be tolerated.

History of Hate Crime Laws

Unofficial hate crime laws have a long history in the United States. The first hate crime laws were passed after the Civil War beginning with the Civil Rights Act of 1871. This law was passed to deal with the growing number of racially motivated crimes being committed by the Ku Klux Klan. Passage of the Civil Rights Act of 1968 made it illegal to force, threaten, injure, intimidate, or interfere with anyone who was engaged in six specified protected activities, by reason of their race, color, religion, or national origin. The specified protected activities included voting, traveling, applying for employment, attending school, patronizing a public place/facility, or acting as a juror in a state court.

The first official "hate crime" law was enacted in California in 1978. Shortly thereafter, other states began to follow suit. Prior to this time, hate crime laws as such did not exist. Typically, an offender was charged for the overt offense, such as assault. For example, if one spray-painted a swastika on a Jewish temple, he/she would likely be prosecuted for trespassing and vandalism because there was no law that characterized such an act as a "hate crime."

State Legislation

Current hate crime laws at the state level generally fall into one of four categories. The first deals with laws defining specific acts as distinct crimes. This includes some states that allow any overt offense to be considered a hate crime, while other states only recognize certain offenses, such as vandalism or assault, to be categorized as hate crimes. A second category of hate crime laws provides for enhancement of criminal penalties. For example, if a person is convicted under a hate crime statute,

he/she is subject to a greater punishment than if the offense were not considered to be motivated by bias. A person convicted of an aggravated assault that was not motivated by bias toward a particular group would receive a lesser punishment or sentence than an individual convicted of the same type of crime that was motivated by bias toward race, ethnicity, religion, gender, or disability.

A third category of hate crime laws deals with the requirement of a governmental agency to collect and maintain statistics on reported and suspected hate crimes. Presently, 28 states have laws requiring some type of data collection on hate crimes. A fourth category of hate crime laws creates provisions for action in civil court. Regardless of the outcome in a criminal case, a victim may also choose to pursue the case civilly, thus potentially holding the perpetrator financially responsible for any damages the victim sustained from the hate crimes. Although not necessarily mandated by law, some states have administrative regulations that require training for law enforcement personnel in the area of hate crimes.

At present, 45 states and the District of Columbia have hate crime provisions. These statutes criminalize acts against both persons and property that deal with race, religion, ethnicity, sexual orientation, gender, and disability. Not all states are uniform in their criminalization of these discriminatory factors. Though 44 states have hate crimes statutes dealing with race, ethnicity, and religion, only 27 states currently criminalize unlawful activity directed at individuals or groups based on gender.

Federal Legislation

The Hate Crimes Statistics Act was enacted in 1990. It was the first federal law dealing specifically with hate crimes. The law requires the federal government to obtain hate crime statistics from local law enforcement agencies throughout the country. The data are published in an annual summary and made available to the public. By compiling statistics and charting the geographic distribution of these crimes, law enforcement officials are able to discern patterns in individual jurisdictions.

The Hate Crimes Sentencing Enhancement Act went into effect in 1994. This law required the U.S. Sentencing Commission to revise statutes to include a penalty enhancement when prosecution

could prove the victim was chosen because of his/her real or perceived group affiliation. Thus, a perpetrator can receive a significant increase in the federal prison sentence if it is determined that the offense was a hate crime.

In 1994, the Violence Against Women Act was passed by Congress. It allowed victims of gender-based crimes to sue the perpetrator for damages in civil court. This act was deemed unconstitutional by the U.S. Supreme Court in 2000.

The Church Arson Prevention Act was passed in 1997 in response to the rash of arsons that destroyed over 200 black churches in a three-year period. It provided for federal prosecution and increased penalties for intentionally damaging or defacing churches, temples, synagogues, and other houses of worship. This act increased the penalty from 10 to 20 years in prison.

Most recently, the Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act was signed into law by President Barack Obama in 2009. This federal hate crime law included crimes motivated by a victim's race, color, religion, national origin, gender, sexual orientation, gender identity, or disability. It also included attacks on members of the military. A clause within the act specifically protects freedom of speech.

The Future of Hate Crime Legislation

As previously noted, the 50 states and the District of Columbia are not uniform in their hate crime laws. At last count, five states did not have specific criminal penalties for bias-motivated violence and intimidation. Eighteen states did not have laws providing for civil action in hate crimes. With regard to race, ethnicity, and religion, six states lacked hate crime statutes. Twenty states did not have hate crimes laws that included sexual orientation. Gender was not included in hate crime laws in 24 states, and disability was not considered in 20 states.

New groups are being included in select state hate crime statutes. Some of them restrict bias-motivated crime based on age, homelessness, immigration status, transgendered identity, military membership, or political affiliation.

Combating Hate

Several antihate organizations have advocated the punishment and prevention of hate crimes. One

way in which they achieve their goals is through legislation. The Anti-Defamation League (ADL) and the Simon Wiesenthal Center (SWC) are both Jewish organizations that have fought anti-Semitism. The Simon Wiesenthal Center was established in 1977 and the Anti-Defamation League was founded in 1913. The Anti-Defamation League was also instrumental in the development of early hate crimes legislation in the late 1970s.

The Southern Poverty Law Center (SPLC), established in 1971, is dedicated to fighting hate and bigotry, and to seeking justice for the most vulnerable members of society. It uses litigation, education, and other forms of advocacy to combat racial and social injustice. This is done by tracking activities of hate groups and using lawsuits to disrupt and destroy them. The SPLC uses the courts as a means of winning reforms on behalf of victims. It has won multimillion-dollar judgments on behalf of its clients against the Ku Klux Klan, Aryan Nations, Church of the Creator, and other hate groups. The SPLC also provides educators with antihate materials to use in classrooms. Finally, the SPLC is responsible for conducting law enforcement training on hate groups and how they operate. The work of the Southern Poverty Law Center and the Anti-Defamation League serves to keep the issues of hate crimes and legislation against those crimes in the forefront of the American criminal justice system.

The National Gay and Lesbian Task Force (NGLT), established in 1973, seeks to promote the civil rights of gay, lesbian, bisexual, and transgender people. This is achieved through lobbying, advocacy, and education. The NGLT also tracks and documents antigay violence.

These groups continue to locate hate groups, document hate incidents, lobby for increased legislation, and fight for the rights of the victims of hate crimes. Only time will tell if the actions of these antihate groups will continue to positively impact state and federal hate crime legislation.

Hate Speech

Hate speech refers to any utterance that by design attempts to belittle or vilify another individual on the basis of race, gender, nationality, ethnicity, religion, sexual orientation, or other accidental characteristics. In the United States, the articulation of hate speech as a specific category of speech has largely taken place in, but is by no means limited to, the sphere of American jurisprudence during the 20th and 21st centuries.

The potential value hate speech represents to contemporary public discourse remains hotly contested, especially as the definition of hate speech has been expanded in recent years to include disenfranchised groups made visible during the culture wars of the 1990s and 2000s. At present, hate speech is largely regarded as a protected form of speech, although significant challenges are still being presented.

The History of a Controversy

The *Oxford English Dictionary* notes that the term *hate speech* was coined as recently as 1988, but the debate about what has come to be called hate speech began to emerge during the first half of the 20th century. As various critics have noted, First Amendment protections of free speech had been viewed prior to the 1920s as exclusively for the protection of the upper classes of American

society against the potential subversive power of racial and political minorities. This began to change as groups like the Jewish League, the National Association for the Advancement of Colored People (NAACP), and the American Civil Liberties Union (ACLU)—groups whose membership had been subject to unequal First Amendment protection during the preceding decades—began a full-throated call for the protection of all speech in the 1910s and 1920s. In the face of a tacit public acknowledgment that some speech was clearly offensive to society writ large, these groups acted on the belief that limiting oppressive speech might also provide an avenue to limiting the kinds of countercultural speech central to their own aims.

These efforts to expand First Amendment free speech protections to groups generally found odious by the larger public—particularly the ACLU’s push to protect the speech of the Klu Klux Klan and members of socialist political groups—were challenged in the 1930s in the time leading up to the outbreak of World War II. In 1938, the House Committee on Un-American Activities (sometimes called the Dies Committee) was charged with investigating potentially subversive activities, including speech, by individuals or groups suspected of having communist or fascist ties. The Dies Committee in many ways stifled the call for First Amendment protections by the ACLU and its associates. The resultant movement toward restricting some speech was perhaps most evident in the now-famous 1942 “fighting words” decision by the U.S. Supreme Court in *Chaplinsky v. The State of New Hampshire*. This decision created “narrowly limited classes of speech” that could be prohibited on the grounds that some words “by their very utterance inflict injury or tend to incite an immediate breach of the peace.”

The articulation of “fighting words” in the Supreme Court decision in the *Chaplinsky* case was followed in successive decades by some additional, but scattered, attempts at further proscribing potentially offensive speech in American culture. Perhaps the most notable examples of these attempts were the activities of the House Un-American Activities Committee (1947–75), a successor to the Dies Committee of the late 1930s, and the rise of group libel laws. Despite such attempts, by the start of the 1970s *Chaplinsky* had been revisited and severely limited in scope,

and any libel laws put on the books were never actually put into use.

By the early 1980s, the discourse around offensive speech had largely faded into the periphery. While there were some important exceptions—most notably, the national outrage and debate surrounding a proposed Nazi demonstration in Skokie, Illinois, in 1978 during which the ACLU once again defended what it felt to be the importance of unfettered speech—the national debate on hate speech did not reemerge in a significant and sustained way until the discourse surrounding hate speech on college campuses across the United States in the 1980s and early 1990s.

Following a number of hate speech incidents on American college campuses in the 1980s, a number of universities enacted hate speech provisions in their university codes of conduct. The most famous of these were found at Stanford University and the University of Michigan. These hate speech policies again called into question whether words that were designed to harm should be accorded the protection of the law or be prohibited to protect disenfranchised groups. The majority of these statutes were either removed or (several) were limited in the wake of lawsuits, but the rash of campus hate speech incidents and policies once again thrust the discussion of hate speech into the national spotlight. Even more important, they introduced many of the concerns that have dominated more recent discussions on hate speech.

Hate Speech in Contemporary America

Contemporary discussions of hate speech thus occur in the context of a long-standing debate that seeks to balance the impetus to protect the vulnerable but, at the same time, not foreclose one of the most productive routes to social change: speech. Of particular interest to recent critics in the hate speech debate has been the growing recognition of the various ways in which hate speech might affect previously ignored groups. This has effectively expanded the scope of the discourse surrounding hate speech beyond more traditional racial and political concerns and has led to growing concerns, especially within the academy, about the status of groups that emerged as part of the public debate following the culture wars of the 1990s and 2000s—perhaps most visible have been the

A U.S. House of Representatives committee headed by U.S. Rep. Martin Dies of Texas is appointed to probe un-American activities and foreign propaganda throughout the country, June 1938. The Dies Committee had the power to subpoena and travel from coast to coast in its investigations; it was a notable early example of attempts to proscribe potentially offensive speech in American culture.

LGBTQ (lesbian, gay, bisexual, transgender, and questioning) community and Latino immigrants.

The expanding scope of hate speech concerns has been joined in recent legal and academic discussions by a growing complexity in approaches to hate speech regulation. Replacing the either/or tenor of earlier discussions have been two principal distinctions rooted in the parsing of how speech is understood. First was the concept of “low-value” speech, which in many ways echoes the discussions surrounding the *Chaplinsky* case and seeks to recognize that certain kinds of speech (such as racial epithets) should be proscribed because their potential value necessarily falls short of their potential harm (especially to the disenfranchised). Second was the idea that speech might be separated from its manifest effects in the world. This argument has drawn on distinctions made in modern and postmodern philosophy, and most pointedly in the work of J. L. Austin, to suggest that speech can be proscribed on the grounds that the real-world effect of speech makes it an action that exists apart

from the speech itself. Such a conception of speech splits the discursive from the physical and yields the potential to regulate speech in a way that does not seek to censure content as prohibited by the First Amendment.

Given the complex genealogy of hate speech and the extent to which the debate continues to expand in modern discourse, both in terms of interested parties and complexity, there is little agreement as to how things will develop in the coming years. What seems clear is that the debate will remain vibrant as critics and scholars continue to consider the sometimes opposed value of free speech and the protection of disenfranchised individuals.

Havasupai

The Yuman-speaking Havasupai (Havsuw' Baaja) are descendants of the easternmost branch or band of the Hualapai (Pa'a or Pai) in the Grand Canyon area in Arizona. The Pai were comprised of three subtribes—the Plateau People, Middle Mountain People, and Yavapai Fighters. Each subtribe was divided into seven bands, which themselves were broken up into regional bands or local groups. Each local group consisted of a network of kinship and marital groups organized

around patrilocal, extended families who lived in a community that moved seasonally; there were 10 local communities of about 28 people each in the Havasupai band in the 1850s.

The Havasooa Pa'a was the regional band (or local group) of the Nyav-Kapai (Eastern People) of the Plateau People subtribe of the Hualapai. The Havasupai lands were in the Grand Canyon area and along the south rims on the high plateau; they have lived there for at least 1,000 years. Each community had autonomy and their own traditional lands, which they had the right to use, and met annually for a harvest festival and occasional social dances and funerals. The Havasupai consider other Pai their relatives and neighbors but the Yavapai their traditional enemies. The Havasupai call themselves Havasúwe 'Epá, the People of the Blue Green Water.

The Havasupai became separated from other Hualapai bands during the Hualapai Wars (1866–69) when families were moved to more confined parts of their original territories. Thereafter the federal government thought of them as a distinct culture and society. In 1880 the federal government assigned the Havasupai a reservation of 518 acres at the bottom of Cataract Creek, or Havasu Canyon, where the Havasupai traditionally farmed during the summer months, and a small area along the southern rim of the Coconino Plateau. This represented a significant decrease in their traditional subsistence areas and a collapse of their economic system. For years the tribe had to fight encroachment from miners and ranchers as well as the U.S. Forest Service and, after 1919 when the Grand Canyon National Park was established, the National Park Service. They fought to regain the right to use their traditional lands and to protect sacred sites. In 1975 they gained over 185,000 acres south of the rim. At the same time, 95,300 acres within the park were designated as Havasupai traditional-use area.

Federally Recognized Nation

The Havasupai Tribe has been transformed from loosely allied families and winter camp groups into a federally recognized nation with a group-wide organizational structure and internationally recognized sovereignty. The Tribal Council was created in 1939 under the Indian Reorganization Act of 1934. It included four elected members

and three chiefs appointed in a traditional manner. The chiefs were hereditary positions but each man had to earn the right to lead. By 1960 there were few men who could meet the criteria and the government was reorganized in 1964. The seven-member tribal council, elected every two years, establishes policy and has a very important influence on the tribe's economy. Most Havasupai live in the village of Supai, located on the floor of Havasu Canyon. A magnificent spring 10 miles north of Supai has a cascading waterfall that annually attracts thousands of tourists who make the trek down an eight-mile winding trail.

Tourism has been the Havasupai's major industry since the 1960s. Visitors stay at a tribally owned lodge that also operates a restaurant. The Havasupai Tribal Arts Enterprise and Tourist Enterprise employ several tribal members. In the mid-1990s, tourism generated 60 percent of the \$2,800 per capita income of the tribe. Many Havasupai also work for the federal government as concessionaires at the Grand Canyon or for area ranchers. They have a small, tribally owned cattle herd that supplies meat for members and visitors. Supai residents also farm, irrigating about 200 acres of rich river bottomlands. They still follow older seasonal subsistence patterns and speak Pai. Others have had to leave the reservation in order to find employment. The tribal Havasupai Trading Company operates a general store. The Bureau of Indian Affairs (BIA) provides police services and electricity, but water is provided by a tribal utility company. The tribe also has a community center, library, resort, senior citizen center, museum, school, and an athletic field.

Supai's precarious position on the Colorado River makes it susceptible to devastating floods, one of which occurred in 2010. Equally precarious has been the unearthing along the southeastern reservation boundaries in the late 20th century of uranium deposits, which have been the center of heated debate. The community has been unsuccessful in stopping off-reservation speculators in ensuring that the mines do not pollute their water sources or desecrate sacred sites.

In 1995 the Havasupai had a tribal enrollment of 433 people, up from a low of only 166 in 1906 after the tribe had been decimated by epidemic disease. In 2010 they had a population of 639 members, with about 200 others claiming

descent but who are not on the official tribal rolls. Because of its small size, the community relies on government services at Peach Springs, the capital of the Hualapai Nation.

Havurot

The word *havurot* comes from the Hebrew word *chaver*, which means friendship or fellowship. Because of its translation from Hebrew, the word is sometimes written *chavurah* or *havurah*; several *chavurah* are called *havurot*. In order to understand the concept of *havurot*, it is helpful to understand what *havurot* are, the origins of the creation of such groups, and the unique position they continue to hold in promoting friendships based on a shared religious and cultural heritage.

Definition

A *havurah* is a small group of Jews, affiliated or not affiliated with a specific synagogue, who gather, usually on a monthly basis, to read, discuss, and talk about Jewish topics. For some groups it can be the gathering together of like-minded Jews to participate in secular activities. Each group is self-directed and places an

emphasis on gender egalitarianism. This forum allows Jews to be more autonomous than they normally would be in attending services conducted by clergy. The purposes are manifold, often promoting the development of friendships and commitment to Jewish issues, somewhat akin to an extended family. Members celebrate the holidays together, life cycle events, sometimes study the Torah, and sometimes discuss how Judaism is relevant to their lives.

Influences on the Creation of Havurot

Although the first havurah was created in Whit-tier in 1960, the flowering of the movement was in the late 1960s and owes its origins to several factors: pietistic fellowships of the Pharisees, the development of Reconstructionist Judaism, countercultural trends in the late 1960s and early 1970s, and the publication of *The First Jewish Catalog: A Do-It-Yourself Kit* that influences Jewish Renewal and Humanistic Judaism. Pietistic fellowships of the Pharisees (loosely dating from 140 to 37 B.C.E.) were in some historians' views a school of thought (sometimes a social activist group) whose beliefs were nondogmatic in relation to Jewish texts. Their emphasis was more on the common man than the priestly class and they wanted to look at how the Torah applies to contemporary Jewish life. Because some Jews in the middle of the 20th century felt that Judaism was not spiritual enough for them and focused too much on the synagogue and the clergy, they harkened back to the pietistic Pharisees who supposedly promoted an emotionalism and a self-direction in their religious involvement.

Mordecai Kaplan from the 1920s to the 1940s developed the Reconstructionist branch of Judaism, which focused on Judaism as a civilization that is constantly evolving because of new developments in science, philosophy, and history. It is incumbent on Jews to be a part of this evolutionary process. Halaka (Jewish law) is not binding but should be upheld whenever it is appropriate. Havurot found these ideas appealing: Judaism can be a cultural experience; belief in a supernatural God is not essential to learning Jewishly; it is not necessary to live a life following restrictive commandments.

Another inspiration for the development of havurot was the unrest occurring in the 1960s

and 1970s in which many established mores were evaluated and found to be unacceptable for modern life. Questioning of much of the structure of authority in schools, in the military, in race relations, and in family life resulted in cataclysmic changes, and these changes affected Judaism as well. One particular response was Jewish Renewal, an effort to redefine the modern practice of Judaism by including more mystical and meditative practices than traditional Judaism. This reinvigoration included not only specific Jewish practices but multicultural spiritual practices as well. It incorporated some of the tenets of feminism, the emotionality of Hasidism and the self-directed energy of the emerging havurot movement. These "friendship fellowships" were formed for prayer and study with the goal of making 20th-century Judaism more spiritually meaningful to its participants.

During the 1960s another movement emerged, Humanistic Judaism, emphasizing the cultural and historical experiences of the Jewish people rather than the theology. Adherents to the Humanistic movement felt that the Jewish culture was the umbrella, with religion being just one part of the culture. Thus, the "ethics" of this movement excluded prayers and any references to God and emphasized the freedom of all peoples to shape their own lives rather than be beholden to prescribed and preordained regulations and rules. The varying movements were shaped by the publication in 1973 of *The Jewish Catalog: A Do-It-Yourself Kit* by Michael and Sharon Strassfeld. This book was directed toward young and unaffiliated Jews who wanted to know more about food, meditative practices, and politics.

All of these forces worked together with the havurot movement. They served not only as an impetus for havurot to strengthen their "mores" of self-determination and self-direction but they also encouraged Jewish Renewal and Humanistic Judaism to expand beyond traditional religious prescriptions. All indications are that havurot are strengthening in numbers and will continue to be an integral part of the Jewish experience for Reform, Conservative, and Reconstructionist Jews.

Hawai'i, Annexation of

The annexation of Hawai'i in 1898 and then its official incorporation as a U.S. territory via the Organic Act of 1900 brought approximately 40,000 native Hawai'ians into the United States as citizens, along with a significant number of Chinese, Japanese, and Portuguese immigrants. Despite the islands' ethnic diversity, a few haoles (white elites descended from missionary families) dominated the islands' economy and politics until the immigrants' citizen children began exercising their voting rights.

Historical Development

Americans and Hawai'ians influenced one another long before Hawai'i became part of the United States. From the first days of European contact in 1778, the islands captured Americans' imagination, compelling missionaries from New England to travel there to convert the people to Christianity. A Hawai'ian diaspora likewise followed, with a few Hawai'ians taking jobs aboard whaling ships, moving to the mainland United States, and even fighting in the U.S. Civil War.

But a greater association between the islands and the United States occurred once haoles overthrew Queen Liliuokalani in 1893 and sought

annexation to the United States. Although native Hawai'ians protested, along with others on the mainland, annexationists argued that whites controlled the local government and that affiliation with the United States was necessary to prevent Japan from overtaking the isles. Once the Spanish-American War commenced, haoles and their allies successfully persuaded American legislators that the islands were essential to American success. Even so, an official treaty was never passed and Hawai'i instead became a part of the United States via the Newlands Resolution in 1898, which required only a majority of votes in both houses of Congress to annex the islands.

Although Native Hawai'ians initially provided most of the labor for the haoles' booming sugar and pineapple plantations, their population rapidly declined because of their lack of immunity to new diseases. Haoles therefore encouraged the immigration of people from China, Japan, Portugal, Scotland, Germany, Russia, Spain, India, and other parts of the world to replenish their workforce. Ten years before annexation, approximately 45 percent of the population claimed Hawai'ian heritage, with 14 percent coming from Japan, an equivalent percentage from Portugal, 19 percent who were Chinese, 6 percent white, and a few people from other parts of the world. Three decades later, even as U.S. exclusion laws began restricting who could immigrate to the isles, Hawai'i had become even more diverse, with people of Japanese descent becoming the dominant ethnic group (43 percent) and Filipinos, Koreans, and Puerto Ricans joining the existing mix of peoples.

Impact on Multiculturalism

Prior to statehood, the haole population dominated the island as they maintained control of the most arable land and access to markets. Although they heeded some concerns of the Native Hawai'ian citizen-voters, haoles held more influence with mainland government officials who had the authority to make political appointments. U.S. naturalization laws prevented Chinese, Japanese, and other Asian immigrants from becoming citizens and thus from voting or holding major offices. Over time, this restriction mattered less to the immigrants because their U.S.-born children were citizens who could exercise voting rights when they came of age.

Hawai'ian President Sanford B. Dole proclaims the Republic of Hawai'i, Iolani Palace, Honolulu, July 6, 1884. Once a republic, the government intended to campaign for U.S. annexation, which it eventually accomplished on July 7, 1898, again with a ceremony at Iolani Palace. Most Hawai'ians spurned the ceremony and instead mourned for Hawai'i's independence and monarchy.

Hawai'i's great diversity did not imply harmonious interaction or equality. As early as 1896, haoles required that all private and public school instruction be taught using the English language. To discourage any type of class alliance among the various ethnic groups, they fostered differentiation in terms of jobs, pay scales, and housing locations, depending on one's ethnic group. In 1915, the typical pay for the few white Americans laboring on a plantation was \$2 per day, whereas Hawai'ians of mixed heritage earned daily wages of \$1.26, Chinese and Japanese immigrants received \$1.02 each, and Filipinos a mere 93 cents per day. Housing was also hierarchical, with the owners/managers (generally haoles or Scotsmen) living at the top of the hill, Portuguese supervisors in the middle, and laborers segregated by ethnic group at the base.

But the diverse population did make its mark in the cultural realm in terms of a variety of foods, religions, and especially with the tolerance of intermarriage. While social interaction

among various ethnic groups and classes was minimal, and there was tension and competition, especially between Hawai'ians and the Chinese and Japanese (Hawai'ians perceived these immigrants as a future threat to their tenuous alliance with haoles since they—as citizens—could vote and be appointed to modest political positions), intermarriage was high among all groups. Between 1912 and 1934, 20 percent of all Native Hawai'ians who married did so with someone outside their ethnic group. In the same period, 45 percent of haole grooms married nonwhite women. This practice resulted in the failure of a movement in the 1920s to segregate schools because there was much confusion over how to classify ethnicity and which groups would share schools. Yet other kinds of social segregation and oligarchic power and rule endured until more of the immigrant children acquired voting rights and political power in the 1940s.

Current Status

In 2010, over 50 years after statehood (1959), the Hawai'ian Islands continue to have a diverse population, with nearly 10 percent of the population claiming a Native Hawai'ian/Pacific Islander background, 40 percent asserting themselves as of the Asian race, approximately 25 percent choosing white, a small percentage selecting either African American or "Other" for their background, and nearly 25 percent claiming to be in two or more racial categories. The current president of the United States, Barack Hussein Obama, is emblematic of the continued diversity of the islands. The son of a white woman from the mainland and a Kenyan man, President Obama was born in the new state of Hawai'i in 1961 and attended the island's most prestigious private school—Punahou High—which had roots to the haole oligarchy.

Hawai'ians (Native)

Native Hawai'ians are the descendants of the indigenous Polynesian people of the islands of Hawai'i, of whom there are 527,077 as of the 2010 U.S. Census. Most self-reporting Native Hawai'ians are of mixed heritage; 140,652 identify Hawai'ian as their only ethnic background. About two-thirds of Hawai'ians live in Hawai'i, with most of the remainder in California and populations in Washington and Nevada, as well as others scattered throughout the rest of the country. The Native Hawai'ian population is smaller today than it was in 1778, the year Captain James Cook arrived in Hawai'i and introduced it to Europeans.

Hawai'i was settled hundreds of years before Cook's arrival, but how many hundreds is an open question. After Cook's arrival, the islands united under a single monarchy for the first time, with Kamehameha I as the first king. The Kamehameha dynasty ended in 1872 and was succeeded by the Kalakaua dynasty, which was overthrown

by Americans—including military and diplomatic representatives later determined to have "abused their authority," in the words of the report commissioned by President Grover Cleveland. A later report commissioned by the U.S. Senate contradicted these findings, and though Cleveland attempted to restore the Native monarchy, he was unsuccessful. His successor, William McKinley, annexed Hawai'i over the protests of other countries (including the Empire of Japan). Shortly after annexation, the first Dole pineapple plantation—owned by the cousin of the first Hawai'ian president, Sanford Dole—began business. Hawai'i was admitted as a state in 1959.

Hawai'ian sovereignty movements have persisted since the overthrow of the monarchy. Following statehood, some of these movements redirected their efforts toward keeping Native Hawai'ians involved in state politics and in supporting congressional candidates who would best represent Native interests. The flourishing of Hawai'i's sovereignty movement immediately following statehood helped catalyze the Hawai'ian Renaissance, a reclaiming of Hawai'i's traditional cultural identity and the distancing of that identity from tourist culture. Interest was renewed in the Hawai'ian language and traditional Hawai'ian crafts, as well as the study of the ancient hula dance, traditional Hawai'ian music, and a renewed interest in Hawai'i's place in greater Polynesian culture and history. Though the renaissance peaked in the early 1980s, many would deny that it has ended.

The Office of Hawai'ian Affairs (OHA), a department of the state government, was created in 1978 as a result of the state's constitutional convention, in which sovereignty activists were a strong force. The OHA represents Native Hawai'ian interests in administering the lands that belonged to the Hawai'ian government and the royal family before annexation. Ceded to the United States upon annexation, control of those lands was then passed to the state government in 1959. Creation of the OHA was one of the major successes of the sovereignty movement, but the office has been weakened over the decades by factional bickering.

The sovereignty movement and other activist groups succeeded in obtaining an apology from the federal government in 1993 for the

American government's role in the overthrow of the Hawai'ian people. In 2009 the U.S. Supreme Court affirmed that the apology contains no binding clauses that change the title of Hawai'i's public lands.

Native Hawai'ians and Native Americans

Although they are a population indigenous to a region now included in the United States, Hawai'ians are not generally considered Native Americans. They are generally listed as a separate category in demographic forms, including the census, and the general public typically differentiates the two groups. Until 1974, Hawai'ians were not eligible for federal assistance programs offered to Native Americans; even today, they are not eligible for all of them. There is some valid reason to differentiate: though Native Americans are not a single ethnic group nor a monolithic culture, they have a more interconnected shared history among themselves than they do with Hawai'ians; further, there are parallels and commonalities in the relationship and history between Native Americans and European settlers that do not exist in the relationship between Hawai'ians and Europeans. Acknowledging that difference does not imply any difference that should render Hawai'ians ineligible for the same benefits other Native groups are entitled to, however; and there may be no reason the differences should be reflected in American legal institutions, any more than is the difference between European American groups.

The government has also been inconsistent in the relationship between Native Hawai'ians and other Pacific Islander Americans. Originally counted as Asians, Pacific Islanders were given their own ethnic category by the Census Bureau in response to activist concerns.

In 2000, the Supreme Court reversed the existing federal policy, which recognized a "special trust relationship" between Native Hawai'ians and the U.S. government, on the basis that the Constitution prohibits such relationships when based on racial identity. The two senators from Hawai'i, Daniel Akaka and Daniel Inouye, introduced the Native Hawai'ian Government Reorganization Act almost immediately in order to promote raising the legal status of Native Hawai'ians to the same level as Native Americans. After seven years, the House version of the bill passed; in

2010, the Senate version failed. As a result, the legal status of Native Hawai'ians remains dangerously ill defined.

Head Start

During the mid-1960s, President Lyndon B. Johnson launched a variety of Great Society programs, all focused on areas of domestic need such as education, health care, transportation, and urban renewal. Head Start, which was originally designed to be a remedial summer school program for at-risk children, has been one of the most significant, and enduring, of the Great Society programs, lasting as it has for nearly 50 years. Head Start programs provide a variety of services to at-risk children and their parents, including comprehensive educational, health, and parenting services as well as parent involvement programs.

While initially intended only for low-income children, Head Start has expanded to include other groups, although it remains dedicated to breaking

the cycle of poverty. To that end, Head Start provides a comprehensive program of services designed to meet the emotional, health, nutritional, psychological, and social needs of children.

While popular with a broad constituency, including educators, families, politicians, and others, Head Start is not without its critics. While students enrolled in Head Start programs make certain academic and socialization gains compared to children from similar backgrounds who are not participants, the size of these gains and the length of time they persist are open to debate.

Background

In the midst of the civil rights movement of the 1960s, President Johnson famously declared a War on Poverty, and created a number of programs to assist with this goal. In the aftermath of the *Brown v. Board of Education* (1954) decision to desegregate schools, attention focused on some of the disparities facing children from certain backgrounds as they entered school. For both white and black families, the poverty level was quite high during the 1960s, something that was seen as hindering children of those families once they came to school. It was hoped that proper guidance and education would allow the next generation to enjoy a greater standard of living and more choices regarding employment.

Johnson assembled a panel of experts to help design Project Head Start. This panel included educators, pediatricians, and psychologists. In particular, these experts attempted to target those communities that seemed to evidence the greatest need. Head Start was designed to help preschool-age children who came from impoverished communities with little assistance or educational discipline. The program would help these children gain a “head start” that could influence not only those children who participated in the program but also the community in which they lived.

Launched during the summer of 1965, Head Start was initially an eight-week summer program that focused on helping families assist their preschool-age children grow in a variety of ways, such as physically, emotionally, nutritionally, socially, and psychologically. Although targeted to serve 250,000 children during its first year, Head Start had over 560,000 children enroll. The following year enrollment had grown to 700,000

children. Soon after Head Start’s launch, it became apparent to Jule Sugarman, the program director, that eight weeks of preschool immediately before kindergarten was inadequate to make up for five years of living in poverty. As a result, Congress expanded Head Start into a year-round program in 1966.

In 1968, Head Start began funding a project to develop a television program directed at low-income children, which would eventually evolve into *Sesame Street*. *Sesame Street* was developed by the Carnegie Corporation Preschool Television Project and became a major success for Head Start, as well as one of the most popular programs on public television.

Head Start was initially administered by the Office of Economic Opportunity (OEO), specifically through its Community Action Program. The OEO, whose first director was Sargent Shriver, managed other Great Society programs such as Volunteers in Service to America (VISTA) and Job Corps. Administration of Head Start was transferred in 1969 to the Office of Child Development, an administrative agency in the U.S. Department of Health, Education and Welfare (HEW), which later evolved into the Department of Health and Human Services (HHS). Today Head Start is managed by the Administration for Family and Children within HHS.

Services

Since it began, Head Start has sought to promote a positive and progressive learning environment for young children, a situation that includes developing strong family relationships and community support. There is an individuality that comes with the Head Start program as well because each child gets personal attention in terms of getting focus on things that he or she might need work on depending on their family heritage or community roots. Head Start does provide some overarching services that are available to all participants. These include educational, health, and social services, which are available to children and their families.

Educational services include a preschool education designed in accordance with the program’s national standards. The Head Start approach to preschool devises a curriculum that is consistent with developmentally appropriate practices and focuses upon four distinct aspects. First, the Head

Start curriculum must establish goals for children's development and learning. Second, the program designs experiences through which the children will meet their development and learning goals. Third, Head Start defines roles for staff and families to assist children in achieving these goals. Fourth, Head Start provides the materials necessary for supporting the implementation of a curriculum.

Children are eligible for Head Start services chiefly through an income-based means test. If a child's family earns less than 130 percent of the federal poverty level, he or she qualifies for Head Start. Additionally, a variety of other eligibility criteria exist that allow Head Start programs to provide services to children whose family income exceeds the cut-off amount. For example, children who are disabled, or who have family members who receive certain government services, are eligible to participate in Head Start. All Head Start programs are required to serve children with disabilities, with up to 10 percent of each program to be made up of such individuals.

Additionally, since the Head Start reauthorization bill in 2007, local programs are directed to make special efforts to serve homeless children, including those who live in shelters, motels, cars, or shared housing with nonfamily members. If a child qualifies for Head Start services, the program must also make available those programming options that are appropriate for the younger and older siblings of that child.

Head Start's approach to preschool education is different from that of some other programs. The program looks to provide the following specific features in its schooling:

- Comprehensive domains of learning
- Specific learning goals
- Well-designed learning activities
- Responsive teaching (and teachers)
- Culturally and linguistically responsive teaching
- Individualized instruction
- Ongoing assessment
- Family involvement
- Appropriate involvement for program staff, children, and families

To meet the criteria, the curriculum must address all the domains of learning, including

cognitive, psychomotor, and affective/socioemotional. Specific learning goals and objectives help specify precisely what is to be taught to children enrolled in the program. Activities in the classrooms address the specific learning goals and objectives, including through designing learning environments, materials, and interactions. When teaching, interactions are child-responsive, built around a child's interests, and child-focused. Teaching is responsive both culturally and linguistically, so that the classroom is representative of the children enrolled within it.

At all times teachers in Head Start classrooms must feel free to arrange environments, adapt materials, and choose instructional strategies that best meet the needs of the individual child. Ongoing assessment is used to drive the curriculum within the Head Start classroom, insofar that what is taught is based upon the demonstrated needs of the children. Every opportunity is taken to communicate with families regarding what is taking place in the classroom and involving those families where possible. Finally, the curriculum used in the Head Start classroom needs to be research-based whenever possible, and supported with adequate funding for materials and professional development.

Head Start's preschool programming is available to low-income children between the ages of 3 and 5. All services are tailored to reflect each child and family's culture and experience, and preschool programs attempt to influence all aspects of a child's development and learning.

In addition to preschool, Head Start offers a variety of other services to the children and families it serves. The Early Head Start program works with mothers and other caregivers to promote healthy prenatal outcomes and healthy families, and to provide appropriate infant and toddler development. Family and community partnerships seek to offer opportunities and support to parents as they identify and meet their own goals; attempt to provide ways for parents to nurture their children in a manner that is consistent with their family and culture; and advocate for communities within which the children served by Head Start live. Head Start Target is a special program that works with American Indian children and their families. To better reach the children of migrant and seasonal farmworkers, Migrant and

Seasonal Head Start provides services to target children beginning at six months and continuing through to those five years of age.

Health services provided include screenings, medical checkups, and dental checkups. Social service agencies cooperate with Head Start programs to provide family advocates who are able to work with parents and assist them in accessing community resources available for low-income families. In order to assure a high degree of quality and consistency across the many sites where services are offered, Head Start programs frequently examine the fidelity of implementation of services in individual classrooms. Specifically, supervisors check to ensure that curricular lessons are being implemented with regularity and fidelity, specific goals identified in lesson plans are focused upon, and recommended materials and instructional strategies are being used.

Ongoing professional development opportunities, including those offering classroom teachers coaching and consultation services, are made available to teachers and schools. As part of this professional development, teachers are regularly provided feedback regarding their performance, as research demonstrates that feedback is necessary for teachers to show continued growth.

A child enjoys painting at the city of Phoenix, Arizona, Head Start program. As part of President Lyndon Johnson's Great Society campaign, Head Start was launched as an eight-week summer program in 1965. The following year, the program was authorized by Congress to operate year-round.

Ongoing assessment is used to determine whether curricular and other services are an appropriate match for the children being served. As part of this assessment, children's learning over time is documented, and procedures for reviewing student growth are developed. In addition to cognitive performance, teachers document students' behaviors during activities and make appropriate modifications and adaptations to better support those children who may have special needs. Appropriate language support is always made available for English-language learners (ELLs) and their families.

Controversy

Over time, Head Start has grown into a large federal program that serves nearly one million children per year. These children are served by more than 200,000 teachers and 1.2 million volunteers. Head Start's annual budget now exceeds \$8 billion, at least 85 percent of which must be spent on direct services to children and their families, with no more than 15 percent to be spent on administration. These federal funds are augmented with the requirement that local government agencies must provide a 20 percent cash or in-kind match. Those local grantees that receive more than \$500,000 in annual federal support must also receive an annual financial audit. Despite these safeguards, Head Start has received increasing levels of criticism regarding the qualifications, or lack thereof, of many of its teachers as well as a number of studies suggesting that the program is ineffective.

Studies critical of Head Start have been especially critical of the low levels of education possessed by many of the teachers who work for the program. As a Great Society program, Head Start has since its inception placed a priority on hiring parents of the children it serves. Because the neighborhoods in which many Head Start-eligible children reside have lower levels of education than other areas, Head Start has frequently employed teachers without college degrees, or sometimes even high school diplomas. Disputes have consequently arisen regarding the ability of such teachers to instruct children in "standard" English.

To remedy this perceived problem, Congress has introduced guidelines for the credentials required of Head Start teachers. Beginning in 2013, all Head

Start teachers must have an associate's degree in early childhood education or a related field, and half must possess bachelor's degrees.

Other studies examining Head Start historically found that it creates positive outcomes regarding the cognitive, social-emotional, and physical health development of children enrolled. A meta-analysis of studies regarding Head Start suggests that children involved in the program saw immediate and measureable increases in their intelligence quotient (IQ) scores. Supporters of Head Start suggest that opposition to programs serving children from diverse backgrounds, especially children of color, English-language learners, and students from low-socioeconomic-status backgrounds, are the focus of criticisms of the program.

In 2011, however, an HHS study, "Head Start Impact," concluded that children enrolled in Head Start showed fewer behaviors associated with Attention Deficit Hyperactivity Disorder (ADHD) than did children who were not a part of the program. While a number of studies have demonstrated that upon entering kindergarten, children who have completed a Head Start program perform better than other children, the effectiveness of the program seems to diminish over time. Children who complete the Head Start program and then go on to attend low-performing schools perform less well than their peers who did not receive such services before kindergarten. These studies suggest that only by isolating former Head Start students from their neighborhoods, such as by sending them to better-performing schools, could such benefits be sustained.

Head Start remains one of the largest and most popular programs providing educational support to children age 5 and younger. Since its creation in 1965, it has served over 20 million children and countless additional family members. Despite this popularity, demands for accountability and demonstrated efficacy have increased demands for changes in the program to make it more academic. Additional examination of the efficacy of certain practices is under way and will undoubtedly influence the future direction of the program.

Health Beliefs and Practices

Culture and an individual's worldviews influence the experience and causal explanations of health, well-being, and illness, as well as the expected treatment and who to turn to for help, such as a primary care physician, traditional healer, and/or clergy. A client's belief systems about illness and health care delivery expectations from providers are based on culturally constructed views of reality that inform health-related behaviors.

Culturally based health beliefs, including religious/spiritual, orientation, and ethnic beliefs about health and wellness, are the products of socialization or socially shared codes that do

not always align with Western biomedicine. For example, religious groups, such as the Jehovah's Witnesses are against blood transfusions, a belief system that often clashes with conventional medical practices. Other illustrative cases have demonstrated how patients from other cultures who espouse certain belief systems often mistrust Western practitioners and their prescribed treatments.

For instance, in Anne F. Fadiman's compelling real-life account in the book titled *The Spirit Catches You and You Fall Down: A Hmong Child, Her American Doctors, and the Collision of Two Cultures*, the author relates how a non-English-speaking Hmong (Laotian) immigrant family of a young epileptic girl in the United States refused anticonvulsant medication to treat the child's epilepsy because, from their cultural lens, her illness was due to a soul-flight from her body. This was seen as a sign of distinction, possibly an omen that she had been called by the spirits to be a shaman or healer and her treatment required ceremonial care from a folk healer. This was in stark contrast to the treatment she received from physicians in a California health care facility, who explained the child's illness in terms of physiochemical and biological processes that required the use of Western interventions, including the use of pharmaceuticals.

Illness conditions and beliefs are sometimes unique to particular cultures (and referred to as culture-bound syndromes). For example, some Mexican Americans believe in *susto* (such as the experience of fright, shock, scare, or soul loss) or *mal de ojo* (evil eye) as ideological causes of illness that require the use of medicinal plants, prayers, and purifying ceremonies from a *curandero(a)*, who is a traditional healer and culturally sanctioned to assess and intervene.

Meaning-Making and Belief Systems

According to Arthur Kleinman, the illness experience is "always culturally shaped." In a model proposed by physician John S. Rolland (derived from Kleinman's writings), health practitioners need to examine the totality of their patient's experience, with belief systems as the mediators of meaning about the illness experience. The author explains this concept in the following excerpt:

Health professionals are trained to live in the world of biological diseases, focusing attention on medical diagnosis and treatment. Patients and their families live in the world of their human experience of symptoms and suffering, typically in some symbolic form that represents a synthesis of biological, personal, family, and cultural meanings.

This model includes the influence of societal forces on health and illness, such as macro-institutional, political, and economic realities. Thus, health care providers need to assess their patients' beliefs and assumptions about what caused an illness (etiology) and what will influence its course and outcome, including the meanings ascribed by the family, ethnic group, community, and religious affiliation.

Several experts have noted that race, ethnicity, and religion play a major role in determining health beliefs, and meaning-making typically emerges around several themes: personal control (or what has been termed "health locus of control" or "mastery over health problems"); decision making around who should be included in the provision of care; and the types of prescribed rituals at different stages of an illness.

According to surveys conducted in the United States, the majority of Americans believe in God; more than half claim to belong to a religious body or institution and most believe in the healing powers of prayer. Furthermore, studies conducted on patients with life-threatening illnesses found that patients have a desire to speak with their physicians about spiritual or religious concerns, even though physicians generally avoid such topics with patients as these are often viewed by Western practitioners as incompatible with their roles. Invariably, humans will construct an explanation, story, or narrative that helps organize an event to provide meaning; in this case, meaning-making in terms of illness, which will then influence an individual's course of action or response.

Complementary and Alternative Medicine

Western allopathic medicine (mainstream or conventional medicine) is thought to treat symptoms on a physical level, whereas eastern and indigenous traditional medical approaches (Native American), among others, view health as

holistically integrated, whereby body, mind, and spirit are interconnected. Complementary and alternative medicine (CAM), such as acupuncture, homeopathy, medical herbalism, and the use of essential oils, takes a more holistic approach to health and is being sought by many contemporary Americans from the general public, and specifically by adult American Indian, Alaska Natives, Asian Americans, African Americans, and whites. Complementary medicine is used to supplement conventional medicine and does not require that a patient hold certain beliefs in order for it to be effective, whereas the use of prayer for alleviating health concerns is only effective for those individuals who have corresponding belief systems.

Various forms of traditional Chinese medicine (TCM) are practiced in the United States and are founded on the ancient Chinese principles of health, defined as a harmonious relationship between the heavens, Earth, and people, through *qi* (vital energy) and *li* (order). For instance, acupuncture involves the practice of thin needles being inserted at specific points on the human body along a system of meridians that is thought to stimulate the flow of *qi* and has curative properties for an array of medical problems. Yoga (originally from India) is another form of holistic healing with a long philosophical tradition from the East that is very popular across the globe and transcends cultural belief systems.

Folk and Faith Healing

Causal explanations for illness around the world, including in the United States, have been suggested by various authors as belonging to one or more of the following loosely defined categories: natural, such as microbiological infection, organic deterioration, or the result of an accident or human violence; supernatural or animistic, involving the soul, spirit, ghost, ancestor, or acts of God; magical, including sorcery or acts of witchcraft by a malicious human being that are thought to be the root causes of illness; or mystical, explanations utilizing constructs of fate and destiny.

Causal factors can include more than one system and various treatments—including conventional medicine—that can also be used simultaneously. Folk and faith healing systems contain the following common elements: the healer's use of intuition to assess the problem; the use of prayer,

meditation, ritual and ceremony; and healers often entering into altered states of consciousness, such as dramatic dissociative or trance states.

One example of faith healing practices that are common to several American Christian ministries or Pentecostal denominations (such as Assemblies of God) is the use of "spirit-filled deliverance." This is a type of prayer intervention in the context of highly emotionally charged congregational groups led by a charismatic leader-healer. This intervention is carried out as an intense, group-oriented ceremony during church services conducted with the aim of restoring an individual's spiritual and physical healing through the calling of Christ's presence to help the patient battle demonic forces that are thought to be contributing to his or her ailments.

Another example of traditional healing is *curanderismo*, a term used to describe a system of beliefs and practices of folk healing among many Mexican Americans that it is a blending of Catholicism (Iberian-Spanish Catholicism) and indigenous Mexican traditions. Healing is thought to be a gift (or a spiritual calling) and healers use religious paraphernalia and amulets to honor the sanctity of a healing ceremony. *Curanderos* (male) or *curanderas* (female) may have several specialties and work in various realms; for example, some are herbalists who are intimately familiar with botanical remedies (herbs and plants), others specialize in massage, others are psychic mediums and/or read tarot cards and have powers of divination.

Herbs in the form of powder, salves, ointments, and oil are used to treat a variety of physical conditions, such as *empacho* (intestinal problems), burns, cough, arthritis, cancer, human immunodeficiency virus, and diabetes, to a name a few. Herbs and plants are also part of a regular diet and although many herbs are safe for human consumption, some have serious side effects or can produce deleterious consequences when combined with prescription medication.

Healing techniques are usually comprised of a combination of healing rituals, prayer, invocation of spirits, and herbal infusions as well as the involvement of others in healing ceremonies, such as family and members of the community. Typical traditional illnesses—what conventional medicine refers to as "culture-bound syndromes"—that are often treated by curanderos consist of *susto* (soul

loss). This is often translated as a form of mental illness where the soul has left a person's physical body because of a traumatic event. *Mal de ojo* (evil eye) or illness is caused by another person (perpetrator) staring at the victim and *envidia* (intense envy or jealousy) by another person who then causes the victim to fall physically and/or mentally ill. Studies have demonstrated that Mexican Americans also turn to conventional medical practitioners for assistance; however, they will often not report their use of folk remedies to their physicians.

Last, "rootwork" refers to beliefs and practices used to heal physical and psychological effects of malignant magic (hexing) mostly used in the southeastern part of the United States. Experts claim that its origins are based on a mixture of European and West African witchcraft along with West Indian voodoo. The perpetrator is often thought to be the jilted lover or an envious coworker of the "rooted person" (the victim of a hex). An array of physical symptoms (such as nausea, abdominal pain, and vomiting) and psychiatric symptoms (such as persecutory delusions, hallucinations, and agitation) strike the victim, and a "rootworker" (healer) is sought out who, through ritual and purging with herbal medicines, counteracts the spell and rids the victim of the "poisons" delivered by the antagonist. Similar to the use of *curanderos*, the rootworker is also used by individuals in conjunction with visits to a conventional medical physician.

Health Disparities and Ethnic Diversity

Historically, the concept of health disparities included broad and varied definitions. On November 22, 2000, President Bill Clinton

signed the Minority Health and Health Disparities Research and Education Act, as Public Law 106-525. This law defined health disparity populations as those with “. . . a significant disparity in the overall rate of disease incidence, prevalence, morbidity, mortality, or survival rates in the population as compared to the health status of the general population.”

The first comprehensive U.S. government report on the health disparities among ethnic minorities in America was released in 1985 by the Department of Health and Human Services. The report noted the increases in scientific advancements and overall health status juxtaposed against significant, unremitting health disparities within the American minority populations. According to the National Institutes of Minority Health and Health Disparities, life expectancy for the average American in 1980 was 74 years, which was 25 years longer than at the beginning of the 20th century. These increases, though, were not consistent across ethnic groups. For example, African Americans, Hispanic Americans, Asian Americans, American Indians, and Pacific Islanders experienced shorter life expectancy, higher rates of diabetes, cancer, heart disease, stroke, substance abuse, infant mortality, and lower birth rates. Since this first report, the nation responded with a variety of direct care and community-based prevention interventions. However, the “Healthy People 2010 Report” found that health inequities continued to persist.

According to predictions by the U.S. Census Bureau, U.S. ethnic minority populations are expected to constitute half of the U.S. population within three decades. From the rise of the public health movement in the mid-19th century, the United States recognized the need for documenting the social patterns of disease. Now in the 21st century, the importance of understanding and addressing health disparities across racial and ethnic groups is at the forefront of the public agenda.

Barriers to Health Equity

There are several significant barriers to health equity. They include health care disparities; disparities in America’s health care infrastructure and workforce; disparities in the health, safety, and well-being of Americans; and disparities in scientific knowledge and innovation.

Health care disparities. In 2002, the Institutes of Medicine (IOM) identified the lack of health insurance as the primary causative factor of disparities in health care. In the United States, over 25 million ethnic minorities remain uninsured. In comparison to white patients, ethnic minorities lack sufficient access to primary care doctors; receive reduced quality of health care; and experience obstacles in the reception of preventative care, critical care, and the management of long-term illnesses. When compared to white patients, minority children lack physician continuity of care, are hospitalized twice as often, and die four times more frequently from asthma-related complications.

Disparities in the U.S. health care infrastructure and workforce. A 2008 report from the American Association of Medical Colleges identified that less than 6 percent of Hispanics are physicians, and a little more than 6 percent of physicians are African Americans, even though the minorities account for 16 percent of the U.S. population. This lack of diversity in the health care professions creates negative patient–provider interactions, especially for minorities whose second language is English. The general health and well-being of ethnic minorities is further affected by the shortage of physicians and health care providers in rural and underserved locations. Ethnic minorities are not included in scientific research and clinical trials, which adversely impacts their overall health status.

The lack of the cultural competency by health care providers contributes to health disparities. Cultural competency is defined as the ability to effectively work with and interact with others in multicultural situations. Patients with limited English proficiency receive fewer preventive services than those without language barriers. For ethnic minorities, the paucity of easily accessible interpreter services creates barriers to health care, prevents the patient’s maximum use of the available health care services, and increases patient dissatisfaction with their health care provider.

Disparities in the health, safety, and well-being of Americans. Individuals who live at lower socioeconomic levels tend to lack access to healthy lifestyle activities and options. Therefore, these

individuals experience higher rates of illness and mortality compared to their counterparts in higher income levels. According to the Centers for Disease Control and Prevention (CDC), minority populations whose life span is shorter than other groups include African American, Asian American, American Indian, and Alaska Native populations. Furthermore, health inequalities exist between ethnic minorities. For example, significantly larger numbers of African Americans die from cardiovascular disease than Caucasians. Ethnic minority children suffer higher incidences of obesity and diabetes than Caucasians.

Disparities in scientific knowledge and innovation. According to an IOM report, the Office of Management and Budget and other federal agencies did not use standardized methods of data collection with American Indian, or Alaska Native, black or African American, Native Hawai'ian or Other Pacific Islander, white, and Hispanic populations. Standardized data collection methods ensure quality and strength in research and scientific study. The lack of reliability and rigor in collection methods prevents accuracy in gathering, analyzing, and tracking important health disparities data and information.

Best Practices: Policy, Research, and Programs

There are several best practices, policies, research efforts, and programs in place to tackle health disparities among ethnic groups, including the following:

A national commitment and plan. In 2010, the U.S. Congress highlighted its commitment to health equity by calling the National Institute on Minority Health and Health Disparities (NIMHHS) to lead and oversee the efforts toward this end. Subsequently, in 2011, the Department of Health and Human Services (HHS) solicited input from individuals across the health care system to create the Health and Human Services Action Plan to Reduce Racial and Ethnic Health Disparities. This plan created a unified approach for the department, in collaboration with other federal departments and local communities, to promote health equity. In addition to the Action Plan, the HHS Office of Minority Health convened almost 2,000 stakeholders across America

at the National Leadership Summit for Eliminating Racial and Ethnic Disparities. As a result of the summit, the National Partnership for Action to End Health Disparities emerged. This initiative brings together community and faith-based organizations, federal agencies, health care and insurance organizations, businesses, academia, cities, counties, states, and tribes to collaboratively address the issue of health equity.

President Barack Obama signed the Patient Protection and Affordable Care Act (PPACA) into law on March 23, 2010. A primary focus of this highly controversial health care bill is to assist all Americans to obtain affordable health insurance. Sections 1311 and 2201 are designed to increase affordability of care as well as access for underserved populations such as ethnic minorities; Section 10503 employs health centers and health teams to expand community-level care; Section 4004 is designed to increase prevention initiatives for underserved groups; and section 4201 intends to support community-based strategies for eradicating barriers to health by promoting community infrastructures and efforts to foster health in schools, workplaces, and neighborhoods.

Community-based participatory research. Community-based participatory research (CBPR) has emerged as a valuable tool for promoting health equity. These initiatives are increasingly receiving support within the NIH because of their effectiveness in reducing or eradicating ethnic health disparities. The CDC and other foundations recognize the effectiveness of these approaches and have also made substantial investments in CBPR initiatives. In addition to support from national government organizations, CBPR has recently gained traction in academia with the Institute of Medicine recognizing it as one of eight new competencies recommended for all health professions students.

The Kellogg Foundation Community Health Scholars Program states that community-based participatory research “equitably involves all partners . . . with a research topic of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities.” As a result of the collaborative nature of the process, participants have ownership in the findings of the

Harlem Globetrotter Anthony Blakes shoots hoops with kids attending a "Let's Move!" family fun fair at the Harlem Children's Zone, New York City, February 12, 2011. The free event celebrated the first anniversary of First Lady Michelle Obama's Let's Move Initiative, which addresses the increase in childhood obesity and its many adverse health effects as a serious public health concern. Ethnic minority children suffer higher incidences of obesity, respiratory disease, and diabetes than Caucasians.

research and are invested in implementing and creating practical results. CBPR is designed to serve as a bridge between professional knowledge and cultural communities, promoting engagement, mutual benefit, reciprocal knowledge sharing, and social action.

Programs and initiatives. There are numerous programs and initiatives that have been developed to address the issue of health disparities among ethnic minorities in the United States. Recruiting and retaining ethnic minorities in the health care and scientific research field is essential. One program that has been developed to address this issue is Bridges to the Future, which helps students in associate's or master's degree programs take the next step into higher levels of training. Another initiative is a loan repayment program that helps scientists who are focusing their research on minority health or health disparities advance their careers in basic, clinical, and behavioral research.

Health education programs are emerging to address the gap in health knowledge in the areas

of key issues where health disparities exist. One is First Lady Michelle Obama's 2010 Let's Move campaign that addresses the epidemic of childhood obesity, which disproportionately affects minorities. Medicine Plus and other outreach initiatives educate the public about healthy lifestyles and other diseases that disproportionately affect minorities. Additionally, the Centers for Disease Control and Prevention announced a \$103 million Community Transformation Grants program through which grants to local organizations and states can work with their communities to develop and implement initiatives proven to decrease incidences of heart disease, diabetes, and other chronic conditions.

Including ethnic minorities in clinical trials is essential to ensuring that health care research and practice have roots in the experiences, attitudes, and unique needs of all Americans. The NIH's Clinical Trial Networks are committed to enrolling a diverse population in clinical trials to ensure access and representation of the populations most affected by human immunodeficiency

virus/acquired immunodeficiency syndrome. This is one of many examples of increasing inclusivity of ethnic minorities in scientific research.

Future Trajectories

In light of the increasing diversity of the American population, the HHS Action Plan to reduce racial and ethnic health disparities holds great promise. It addresses many of the key barriers to health equity and is designed to leverage America's tremendous capacity and resources across industry, cultural, disciplinary, professional, and political communities. This collaborative approach—combined with a focus on engaging ethnic minorities in the research, practice, and implementation of health care initiatives—is addressing the social and cultural determinants of health, and building infrastructure to remove barriers to health care. The HHS Action Plan is expected to lead to significant strides in promoting health equity in the United States.

Implementing the plan will be a challenge. The roots of health disparities are deep and widespread. Additionally, despite the important contributions of the Affordable Care Act, it is receiving pushback from some states and industries. Furthermore, debates regarding fiscal issues in the United States may impact the implementation of the act. Strong leadership and an enduring commitment from the government, science, academia, business, and civil society are essential to overcome these challenges.

Hebrew Union College-Jewish Institute of Religion

The Hebrew Union College-Jewish Institute of Religion (HUC-JIR), the oldest Jewish seminary in North America, continues to train rabbis in the tradition of Reform Judaism to the present day. It has four campuses, each with a distinct history.

Its contributions to Jewish life in the United States and in the world are numerous. To understand the HUC-JIR's multicultural impacts, it is important to note the role the institution has played in the emergence and development of the American Reform movement.

History

Rabbi Issac Mayer Wise, who had the goal of educating American rabbis for American pulpits, founded the Hebrew Union College in Cincinnati, Ohio, in 1875. It was originally intended for general rabbinical training, but changes were taking place within American Judaism in the late 1800s that led to significant internal changes in American Jewish thought and practice.

Influenced by German Jewish reformers, a convention of liberal American Jewish rabbis met in 1885 and issued the "Pittsburgh Platform." This statement called Jews to modernize their approach to faith practices. The Pittsburgh Platform was controversial and divisive, in part because it called for Jews to consider themselves to be a religious community within the nation of the United States, rather than advocating a future Jewish state in Israel. (The Zionist movement forming at that time, by contrast, strongly advocated the foundation of a permanent Jewish nation-state in the Land of Israel.)

The progressive Reform movement began to break away from traditional Judaism in the United States after the Pittsburgh Platform was issued. After 1885, the Hebrew Union College became the first seminary in the Reform Jewish tradition. Rabbi Wise also founded the Central Conference of American Rabbis in 1889, which became a major voice in the American Reform movement.

In 1922 Rabbi Stephen S. Wise founded the Jewish Institute of Religion (JIR) in New York City with the goal of supporting Jewish ministries, research, and community service. This organization was intended to serve all streams of Judaism. When the JIR faced financial difficulties just after World War II, HUC president and archaeologist Nelson Glueck proposed a merger, and the two institutions combined in 1950. The Los Angeles campus opened in 1954 to serve the growing Jewish communities on the West Coast. It maintains close academic ties with the

The West Fourth Street, New York City, location of the Hebrew Union College-Jewish Institute of Religion. Established in 1875, the institution trains rabbis, cantors, educators, and communal workers in Reform Judaism—a modernized movement of Judaism.

University of Southern California. The Jerusalem campus, which is Israel's only Reform rabbinical school, opened in 1963. It also serves as a post-doctoral institution for biblical and archaeological studies.

Contemporary Impacts

Today, Reform Judaism is the largest Judaic tradition in the United States, with over 1.1 million practitioners. The rabbis who serve this population have been trained primarily at the HUC-JIR. The HUC-JIR's four-campus system is an international seminary and network for graduate studies in the Reform tradition. Their programs

have ordained over 3,000 Reform rabbis since the 1880s, making the seminaries' graduates the primary intellectual professionals of Reform Judaism worldwide.

The HUC-JIR's Cincinnati campus library holds one of the largest Jewish print collections in the world, putting the seminary at the center of international Jewish Studies research. Holding over 700,000 volumes, the collection is second in size and importance only to the National Library of Israel in Jerusalem. As Jewish Studies departments have been established in higher education institutions over the past two decades, this collection has taken on new value, as scholars travel to the HUC-JIR in order to study primary documents and publish on the ongoing development of their faith tradition.

All students in the rabbinical, education, and cantorial programs are required to spend the first year of their schooling at the Jerusalem campus in Israel. The intent of this requirement is for participating students to build community and to gain a deeper understanding of the State of Israel. In the past 125 years, a plurality of opinions about the relationship between Reform Judaism and the State of Israel have led to diverse streams of thought within Reform Judaism about the best solution to the ongoing international crisis between Israel and Palestine.

Reform Judaism's relations with Orthodox Judaism are both religious and political within Israel. For example, the State of Israel does not recognize marriages performed by Reform rabbis as civilly valid without an additional ceremony, because Orthodox Jews do not recognize the authority of Reform rabbis to perform marriage ceremonies. These internal faith relations also directly impact Reform Judaism in the United States, theologically and politically. Thus, future American Jewish leaders trained by the HUC-JIR are asked to understand and experience the complexity of the situation firsthand.

Graduates of the HUC-JIR have been responsible for several important achievements in diversity. The HUC ordained the first female rabbi in the United States, Sally Priesand, in 1972, and the first black female rabbi in the world, Alysa Stanton, in 2009. The HUC-JIR has been instrumental in welcoming gay and lesbian Jews to full participation in synagogues and in encouraging the

welcome of same-sex couples. Its work in shaping the future of progressive Judaism continues.

Hegemony

In modern discourse, hegemony most often refers to the cultural, economic, and political domination of a subject population (subaltern) by a group (a hegemon) that wields the power to shape the society's values, mores, and structures of thought. In addition to overt policing of established cultural norms, the reinforcement of hegemonic ideology also finds expression in subtler forms in everyday life, internalized in the minds of the population as common sense or appropriate moral judgments, socioeconomic ambitions, interpersonal relations, religious practices, physical presentations of self, and even mental constructs of reality. These subtler channels of hegemony continue to shape a society long after the originators of the hegemonic values fade into history. In other words, the long-term consequences of a group's hegemonic influence on a subaltern population rest largely on the degree to which that population internalizes as "natural" or "normal" the cultural elements supplied to it by the dominant society. Understanding the functioning and influence of hegemony in a modern republic requires examination of all of that

society's widely held notions—even its most fundamental concepts regarding the nature of reality and the distinction between right and wrong.

In ancient Greece, hegemony referred to the economic and cultural domination by one city-state of another, less powerful city-state. Since the 19th century, hegemony has usually referred to the nature of European and American political and economic domination over colonial conquests in Africa, the Americas, Asia, and the Pacific.

In recent years, a third notion of hegemony has arisen, which now stands as the most common usage in academic and political discourse. In this most recent version, hegemony refers to cultural domination beyond the realms of politics and economics. The hegemon—a class of sociocultural elites rather than a state—dominates the culture not of a related foreign state nor of a conquered distant colony, but primarily other classes of people within its own society. This modern hegemony is in many ways the most profound and subtly nefarious, for it seeks not to dominate from afar but rather literally to shape the reality of those so dominated. It can be extremely difficult to identify specific hegemonic influences within a society, as would-be critics within the society are themselves formed as individuals by the foundational ideological and social constructs previously established by past hegemonic elites.

Hegemony in the United States

As the world's most multicultural contemporary society, the United States is the exemplar of this most recent concept of hegemony, as well as of the earlier definitions. In daily life, most upper- and middle-class, American-born, phenotypically “white,” European-descended Americans (the class hegemon in the United States) neither experience nor recognize the existence of hegemony in their society. Raised to believe in the established psychological construction of reality presented by American culture, most do not realize that the rhythms and meanings in their lives have been passed down to them from the elites of previous eras, or that those patterns are neither more rational nor more desirable than many “foreign” notions rooted in other societies. As in other societies, Americans come to see the “American” ways of doing and believing—as defined largely by Euro-American elites and tastemakers over

generation—as the “normal” or most “natural” ways. Thus the expectations Euro-Americans hold for members of other groups within American society seem to them to be based on perfectly reasonable observations of reality, rather than oppressive and arbitrary impositions of one group's subjective social conventions upon another group.

In contrast, members of subaltern (socially subordinate) ethnic, racial, and religious groups, whether born and raised within the United States or immigrants, often experience acute tensions between hegemonic Euro-American expectations and their own cultural norms. In such circumstances, hegemonic influences exert intense pressure on individuals to conform to accepted Euro-American norms, which are presented as more real and rational than those of the subaltern culture. In addition to reinforcing the hegemonic power of the dominant culture, this process also essentially delegitimizes subaltern cultures, defining them as less rational and therefore inferior. This establishes hegemonic domination in a feedback cycle and further discourages future attempts by subalterns to resist cultural homogenization.

Hegemonic ideology so permeates society that individuals must conform almost entirely, at least publicly, to achieve material and social success in mainstream America. Religious beliefs and practices, ethnic clothing and accoutrement, and a plethora of other markers of “difference” constantly threaten the subaltern individual with exclusion and socioeconomic hardship. As individual members of subaltern groups eventually give in to these pressures of conformity, they become new, even more powerful channels through which hegemonic influence flows into their communities because the notions that flow through them are thereby stripped of some of their alienness.

In the United States, cultural hegemony demands that American Indians accept land ownership and hyper-individualism against the values of their cultures; that immigrants subordinate the values of their home cultures to American beliefs whenever the two conflict; and that black, Latina/o, Asian, and all other citizens of the United States strive to achieve material and social goals defined by Euro-American elites by means prescribed by Euro-American elites.

Effective hegemony convinces subaltern individuals that elite values are objectively proper and

rational, rather than representative merely of one group's history and interests. Cinema, literature, television, news media, and a multitude of other conduits deliver and reinforce this notion. Contemporary American hegemony can be expected to continue long after Euro-Americans become a minority population, due to internalization. Perhaps, however, examination of hegemonic influences will lead to self-conscious reassertions of subaltern cultural values, forms, and norms, creating a truly multicultural America.

Help, The

The Help (2009), the first novel of white author Kathryn Stockett, tells the story of Eugenia “Skeeter” Phelan, a white, upper-middle-class woman who returns to Jackson, Mississippi, in 1962 after graduating from the University of Mississippi. Seeing her segregated town through new eyes, Skeeter, an aspiring writer, launches a plan to interview black female domestic workers for a book that will reveal life from their perspective.

Over the course of two years, Skeeter grapples with the growing division between herself and her white racist friends, her mother's progressing terminal illness, the mysterious disappearance of her childhood maid Constantine, and a turbulent relationship with a senator's son. These

elements, however, primarily serve as a backdrop to the novel's exploration of the inequities of southern segregation during the civil rights movement.

After successfully pitching her idea to Elaine Stein, an editor at Harper & Row, Skeeter solicits the help of Aibileen Clark, a friend's maid. As Aibileen's faith in the project grows, she attempts to recruit other maids, the most notable being the outspoken Minny Jackson, who often finds herself unemployed because of her unwillingness to accept abuse from whites. After a maid is arrested for theft, 10 other women finally agree to participate. The relationships between Skeeter, Aibileen, and Minny (the book's three narrators) unfold what, according to Stockett, is the novel's most salient point: we must recognize the fundamental similarities and humanity of all people.

Because of proscriptions against interracial socializing, or any form of civil rights agitation, the interviews are conducted in secret, a necessity that highlights the black women's desire to claim a voice, even at great risk to themselves and their families. Were they to be discovered, the white community would certainly respond with both physical and economic violence. Key events in the civil rights movement woven into Stockett's narrative set the larger context for the maids' stories. These events include James Meredith's integration of the University of Mississippi (October 1962); the assassinations of Medgar Evers (in Jackson, June 1963) and John F. Kennedy (November 1963); Martin Luther King, Jr.'s, “I Have a Dream” speech during the March on Washington (August 1963); and the bombing of the 16th Street Baptist Church in Birmingham, Alabama (September 1963).

Although the manuscript becomes an open secret in the black community, the whites only learn of the project after the book—titled *Help: Colored Domestic and the Southern Families for Which They Work*—is published and begins to receive media attention. Despite Skeeter's attempts to disguise real names and location, the white community in Jackson soon recognizes itself in the book's pages and attempts first to identify the maids and then to exact revenge. Their efforts are curtailed, ironically, by Hilly Holbrook, who is the most racist of Skeeter's friends, the president of the Jackson Junior

League and the force behind the Home Help Sanitation Initiative, which would require separate bathrooms for the “colored help” in all white homes. Hilly must vehemently deny the book is set in Jackson because it (strategically) reveals that she had eaten two slices of a chocolate pie into which Minny had mixed her own feces after being unjustly fired by Hilly.

Following *Help*'s success, Skeeter and Aibileen are each given a copy of the book lovingly signed by hundreds of the black community. At Aibileen's and Minny's urging, Skeeter accepts a job at *Harper's* magazine in New York and exits the novel concerned for the maids' safety but also hopeful for her future. Minny, whose job is protected in part because she has earlier saved the life of the white woman for whom she works (Celia Foote), exits the novel pregnant with her

sixth child and having left her abusive husband. Aibileen, falsely accused of stealing silver by Hilly, is fired. Although she has the promise of some steady income from continuing on her own a domestic advice column that she had been helping Skeeter write—as well as her one-13th share of profits from *Help*—Aibileen exits the novel unsure of how she might earn enough to survive but also optimistic about beginning anew.

The Film

The movie *The Help*—starring Viola Davis (Aibileen), Octavia Spencer (Minny), Emma Stone (Skeeter), Bryce Dallas Howard (Hilly), and Jessica Chastain (Celia Foote)—was released in 2011. Tate Taylor wrote the screenplay and directed the film, which generally follows the novel's primary plot lines. However, it eliminates some of the

A black maid cleans fireplace tools in a home, circa 1942. The roles of these “negro maids” had changed little by the 1960s in the south, which is the setting for the novel *The Help* and the film of the same name. The story revolves around a young white woman, Skeeter, and her relationship with several black maids during the early 1960s. Skeeter, an aspiring journalist, decides to write a book from the point of view of the maids, referred to as “the help.” In so doing, she exposes the racism they face as they work for white families.

racial violence, including the beating and blinding of a young African American man, the assassination of Medgar Evers, and the reference to the 16th Street Church bombing. It thus lessens the novel's emphasis on the risk the women are taking by telling their stories. The film also makes several of the white characters more sympathetic by portraying them as remorseful for their past racist acts, and it allots whites more agency in key scenes: Skeeter conceives the idea for the book rather than adapting an idea that had originally been Aibileen's son's; Skeeter, rather than Minny, names the book; and Celia Foote (rather than Aibileen) motivates Minny to leave her abusive husband. The screenplay also eliminates a scene of racial passing that is the key to Constantine's disappearance.

The novel has been published in at least 35 countries and in three languages. It spent over 100 weeks on the *New York Times* Best Seller list and has sold over five million copies. It has received numerous awards, including the Townsend Prize for Fiction (2010) and the *Christian Science Monitor's* Best Book Award (2009). The film, too, was highly successful. It grossed over \$211 million and received four Academy Award nominations, including Best Picture, Best Actress (for Davis); and Best Supporting Actress (for Chastain and Spencer). The film's one Oscar went to Spencer. The film also won the Screen Actors Guild Award for Outstanding Performance by a Cast in a Motion Picture (2012) and several Golden Globe, BET, and Black Film Critics' Circle awards, among others.

However, the novel and film have been criticized for their representation of black vernacular (most of the maids, including Aibileen, speak in dialect); for their general inattention to the sexual exploitation of black domestic workers; and for the absence of positive portrayals of black men. Another criticism stems from Stockett's claims that the novel is her imagined answer to what her own childhood domestic, Demetrie, would have said had she been asked what it was like to be black in Mississippi and to serve whites. The novel thus actually reproduces once again only the white imagining of the black voice. In 2011, Stockett was sued by Ablene Cooper, an African American woman who worked for Stockett's brother for 12 years. Cooper claimed

that the character Aibileen was based on her life. Cooper's lawsuit was dismissed because she filed after the one-year statute of limitations. Stockett denied the charges.

Herbalism

Herbalism—the study or use of medicinal herbs and plants for promoting health and preventing and treating illness—has existed in most cultures for centuries, if not millennia. Also known as “botanical medicine” or “phytomedicine,” herbalism ultimately led to the development of modern medicine. In fact, many of the drugs currently in use have been derived from plant components, including aspirin, digitalis, ephedrine, and opium. Today, sales of herbal supplements in the United States have reached \$5 billion.

Early History

The first written records of the use of herbs in healing were made by the ancient Sumerians who jotted down lists of hundreds of medicinal plants on clay tablets. Egyptian hieroglyphs reveal physicians treating digestive disorders

with peppermint and caraway, and there are numerous references in the Bible to a wide variety of herbs. The Emperor Shen Nong of China's Han dynasty was said to have tasted hundreds of herbs to test their medicinal value. In addition to traditional Chinese medicine (TCM) and Kampo, its Japanese adaptation, India's Ayurvedic medical system includes the extensive use of herbs, as do the native healing systems of South America, Africa, and Australia. In North America, Native Americans used approximately 2,500 of the 20,000 native plant species for medicinal purposes, and there was prevalent use of herbs in early colonial America and in Appalachian folk medicine.

Trade and war did much to help spread herbs, plants, and spices to new places, including to Greece, where Hippocrates (the father of Western medicine) included some 400 herbal remedies in his writings. Perhaps the most influential treatise on herbs—and a precursor to all modern pharmacopeias—is the *De Materia Medica*, written in the 1st century C.E. by the Greek physician Dioscorides, who identified and described the healing properties of more than 500 plants.

In the Middle Ages herbs and plants were the only drugs available, and many of these had to be dried before they could be used. Various parts of the plant (including the root, seed, bark, flower, and leaf) were used for different purposes; they were made into infusions, decoctions, ointments, syrups, and poultices. For example, fennel was prescribed as a cure for colic, headaches, and as an appetite suppressant.

Much of what is known today about the use of herbs in the Middle Ages is derived from Benedictine monks who compiled and copied herb lore in the written form of “herbals.” Many purveyors of this knowledge were “wise women,” some of whom worked within their communities, while others were wanderers.

Herbalism and the Treatment of Disease

The practice of herbalism is as available as backyard gardens, and it was gardeners down through the ages, probably through trial and error, who discovered which plants were safe for consumption and for healing. Those early medieval apothecaries and physicians grew herbs in their own gardens, but so did most ordinary citizens of the

time. What people learned about these plants (folk medicine) was passed down from generation to generation in homes and villages.

Herbs can be either farm grown or wild grown. The harvesting of herbs from their natural habitats is called wildcrafting. In addition to the uses mentioned above, herbs can be made into therapeutic teas, tinctures (alcoholic extracts of herbs), essential oils, and inhaled as in aromatherapy.

In 2010 U.S. Census data, herbalists fall under the category of “miscellaneous health practitioner.” There are no precise figures as to the number of practicing herbalists in the United States. Most are self-employed and are often also naturopaths. There is currently no licensure for herbalists in the United States. Instead, most reputable herbal studies schools give graduates a certificate documenting the number of hours they have successfully studied in the field.

Herbalists may grow herbs; harvest or collect herbs (wildcrafting); teach or advise people in how to use herbs as medicine; or use what they know as adjuncts to other health care fields such as naturopathy, nutrition, acupuncture, etc. They work under a variety of titles, including native healers, naturopaths, holistic medical doctors, herbal pharmacists, medicine makers, wildcrafters, harvesters, and herbal farmers.

Herbalism Among Native Americans

In America, the first settlers arrived in a country already inhabited by 2,000 Native American tribes. Most, if not all, of these tribes practiced their own unique brand of herbalism, which varied according to tribal traditions and region.

It should be noted that traditional Native American medicine was and is not simply about the use of herbs for healing. It takes a more holistic approach that seeks to balance the physical, emotional, mental, and spiritual components of a person. The medicinal herbal formulas prepared by the tribe's healer were just one component of healing that included ritual purification (such as the sweat lodge), traditional smudge or burning of certain herbs, as well as chanting and prayers. One especially important herb used in healing rituals was tobacco. The tribe's healer (medicine man or woman) would blow smoke on the person who was ill, and this was believed to dispel evil spirits. Tobacco smoke was also seen as a

mediator between the human and spirit worlds. It was a means of requesting permission to gather the herbs needed for healing.

Remarkably, Native American tribes chose plants to use for medicine that are in those families of plants that modern phytochemical studies show contain the most bioactive compounds.

Herbalism in Modern Times

The World Health Organization (WHO) estimates that 80 percent of the population of some Asian and African countries depends on traditional (herbal) medicine for primary health care, and Europe and China are ahead of the United States in using natural products such as herbs. In America the use of herbs has often been eclipsed by dependence on modern medications, such as antibiotics, but that has not always been the case. For example, echinacea, derived from a plant called coneflower, was once a widely prescribed medication in the United States and continues to be used by herbalists as a way to fight infection and boost immunity.

Traditional Chinese medicine, as well as India's Ayurvedic medicine, are both popular approaches to healing prevalent in the United States today. Both of these holistic healing approaches—as with Native American medicine—take a holistic view. For example, Ayurvedic medicine seeks to achieve a balance in body, mind, and spirit through a number of treatments that include herbal medicines, specific diet and exercise protocols, and therapies such as purification treatments and massage.

The future of herbalism is promising. Less industrialized countries are discovering that it can be profitable to conserve their rain forests for the responsible harvesting of herbs, rather than slashing and burning them for agricultural use. For example, thanks to the large demand for the Peruvian rain forest herb *uña de gato*, the Peruvian government has taken steps to conserve their rain forests.

Hernández v. Texas (1954)

Latinas/os have brought cases before the highest court in the United States on a number of important issues throughout the 19th, 20th, and 21st centuries. In particular, Latinas/os have challenged restrictions on treaty rights, educational access, immigration, housing, equal employment, and criminal justice. *Hernández v. Texas* (1954) challenged the notion of what constituted a “jury of one’s peers.” The American G.I. Forum and the League of United Latin American Citizens (LULAC) provided attorneys to support the petitioner prior to the establishment of the Mexican American Legal Defense and Education Fund (MALDEF) in Texas in 1968. The *Hernández* case paved the way for later challenges under the Fourteenth Amendment of the Constitution for other American groups.

Prior to *Hernández*, Latinas/os had petitioned the court on several other occasions, the first involving land grants in both California and New Mexico protected under the Treaty of Guadalupe Hidalgo

(1848). In 1922, a case involving Puerto Ricans' right to a trial by a jury of their peers was heard by the court. *Balzac v. Porto Rico* (sic) found that U.S. citizens residing on the island were not entitled to a trial by jury because Puerto Ricans were members of a U.S. commonwealth and, although U.S. citizens, were not entitled to the full protections of the Constitution. Perhaps best known was the case of *Mendez v. Westminster* (1945), one of the precedents for the 1954 *Brown v. Board of Education* case challenging "separate but equal" education.

Background of the Case

In 1950, Pete Hernández, a cotton picker in Edna, Texas, was accused and found guilty of murdering Joe Espinosa by an all-white jury who were not of his economic class. No one with a Spanish surname had served on a jury for 25 years in Jackson County, Texas, where the small town of Edna was located. The jury provided to Pete Hernández was no exception. When his client was found guilty, Hernández's attorney, Gustavo "Gus" García, brought the case to the Texas Court of Criminal Appeals, which upheld the conviction, paving the way to the Supreme Court. The Texas court found that because Mexican Americans were "white," there was no violation of the Fourteenth Amendment. García argued before the U.S. Supreme Court that the exclusion of Mexican Americans from juries in Texas was historic and institutional, and a matter of economic status or class, not just race. The court, under Chief Justice Earl Warren, found that Hernández's rights were violated through the systematic exclusion of jurors of his class, and mere chance could not have produced this outcome. His case was remanded to the state to be retried by a jury selected without regard to race or class.

The ruling in *Hernández* was subsequently replaced by *Cisneros v. Corpus Christi Independent School District* in 1971, which found that Mexican Americans were an identifiable minority group in Texas. *Hernández* moved the court beyond the understanding of the equal protection clause as solely defining race in a white-black binary. It addressed the complicated, and as yet still unresolved, issue of whether Latinas/os are an ethnic or racial group. The U.S. Census considers race and ethnicity separately, with Hispanic origin being a unique identifier. The ability for

Latinas/os to identify multiple racial origins beginning with the 2000 census clarified, yet simultaneously complicated, the simplistic binary definition of race prior to the *Hernández* case, particularly where Hispanic ancestry was involved.

The *Hernández* case did not end the problem of jury exclusion of Latinos/as. Factors that continue to limit Latino/a juror selection include poverty, citizenship, and language requirements. The disproportionate representation of Latinas/os among the poor continues to limit their ability to serve on juries. The minimum requirement that jurors be able to read, write, understand, and speak English also challenges the equal protection of those who live in communities with large immigrant populations. The exclusion from juries of convicted felons whose rights have not been restored perpetuates disparities in the criminal justice system.

The inclusion of Latinos/as on the Supreme Court to adjudicate cases like *Hernández* has been of more recent debate. During the 2009 confirmation hearings of Supreme Court Justice Sonia Sotomayor, congressional members, the media, and the general public raised concerns about her ability to be objective on matters involving Latina/o civil rights given her Puerto Rican heritage. The implication that Sotomayor would be uniquely challenged because of her race and ethnicity in a way that white judges were not similarly ethnically divided by cases involving non-Hispanics indicated need for further education and dialogue on some of the fundamental issues of race, ethnicity, class, and equality raised by *Hernández v. Texas* in 1954.

High Yellow

High yellow is a term used to describe very light-complexioned people of African descent. More specifically, the expression refers to the pale, almost yellow, undertones to their skin, usually due to admixture between black and white individuals. It was in usage in the United States between the second half of the 19th century and the first few decades of the 20th century. When written in dialect, it is sometimes written as “high yella,” “high yeller,” or “high yaller.”

High Yellow in Pigmentocratic America

“High” refers to the privileges accorded to light-complexioned African Americans, who more closely resembled white Americans in terms of phenotype, that put them atop the pigment-based societal system in the United States during the antebellum, Reconstruction, and Jim Crow eras. According to Zora Neale Hurston’s *Glossary of Harlem Slang* (1942), that system was constituted in the following manner: high yaller; yaller; high brown; Vaseline brown; seal brown; low brown; dark brown. The advantages that light-skinned blacks sometimes enjoyed ranged from better access to resources to greater acceptance by whites. Some individuals with lighter complexions and phenotypes atypical of most individuals of African descent posed as white (particularly Mediterranean), Native American, Arab, or Asian to avoid the discrimination African Americans faced.

Some lighter-complexioned African Americans from mixed-race families were freed, educated, and/or bequeathed property prior to emancipation. This accumulation of wealth and education afforded them distinct social advantages over darker-skinned African Americans. A number of institutions, ranging from fraternal organizations

to churches to New York City’s famed Cotton Club, instituted “paper bag” policies that limited membership or admittance to individuals whose complexions were at least as light as a brown paper bag.

There were even several communities comprised of light-skinned African Americans, including in Charleston, South Carolina; New Orleans, Louisiana; and Charles City, Virginia, that mirrored contemporaneous white communities in many ways, including in their rejection of darker-complexioned blacks. Accordingly, high yellow was employed sometimes as a colloquial term for the lordly behavior associated with some light-skinned blacks during the late 19th and early 20th centuries.

In the contemporary United States, “high yellow” is considered an antiquated, and even pejorative, expression. According to 2010 U.S. Census data, 2.9 percent of Americans, or more than nine million people, identify as multiethnic, and approximately 1.8 million Americans identify as biracial of black and white ancestry; since the 1960s, most of them commonly have self-identified as biracial, multiracial, multiethnic, or mixed race. As of 2012, the term has not disappeared entirely, although it is frequently employed in an ironic manner or for rhetorical flourish.

The Cultural Legacy of High Yellow

In abolitionist literature beginning in the 1840s, light-complexioned blacks were used to evoke sympathy from white audiences for the plight of black Americans; these stories featured characters who looked like the white readers but suffered as African Americans did. These stories often featured a biracial heroine who was light-complexioned enough to pass for white. She struggled because she was unable to find full acceptance with either the black or white communities. Once her true ethnic background was made public, she lost her comfortable station in society and was reduced to bankruptcy, sexual victimization, slavery, or death. These plays and novels were aimed at white women readers; their aim was to warn audiences of the dangers of racism by way of identification with a character who shared their social class and appearance. Some of these works include *Imitation of Life* (a 1933 novel by Fannie Hurst that was twice adapted for the screen, in 1934

and 1959), Reginald Marsh's 1936 painting titled *High Yaller*; the 1949 film *Pinky* (based on the 1946 novel *Quality* by Cid Ricketts Sumner); and Larry Buchanan's 1965 film *High Yellow*, which concerns racial passing.

The title of the 1858 American folk song "The Yellow Rose of Texas" refers to the complexion of eponymous heroine Emily D. West, a biracial woman who helped General Sam Houston and his troops win a decisive victory in the Texas War of Independence. More recently, the term *high yellow* has been used in Alice Walker's *The Color Purple* in 1983 (as well as its 2005 musical adaptation); Spike Lee's 1987 film *School Daze*; Dael Orlandersmith's *Yellowman*, a Pulitzer Prize finalist in drama in 2002; and in rapper Jay-Z's 2009 song "Off That." Some versions of the popular 1929 Irving Berlin song "Puttin' on the Ritz" use the related phrase "high brown."

Higher Education

The history of diversity in American higher education is turbulent and still evolving. In the United States, colleges and universities currently serve students from a wide variety of ethnicities, classes, genders, sexualities, abilities, and ages. There are currently almost 4,500 two-year and four-year institutions of higher education serving over 20 million students. Some of these institutions were established well before the American Revolution.

The earliest colleges and universities in North America were established as seminaries and religious institutions for the training of clergy. Institutions of higher learning in the 17th and 18th centuries focused on the liberal arts and served white European colonists. The emphasis on occupation-specific majors was nonexistent.

The curriculum of American colleges and universities has changed along with shifts in the country's economic and sociocultural realities. In the early 20th century, Harvard University introduced the first college majors to prepare students for work or advanced study in specific fields and disciplines. These kinds of programs have become the standard for universities around the world.

To cope with the sociocultural realities of students from more diverse ethnic, sexual, and economic backgrounds, many colleges and universities created programs toward the end of the 20th century. These programs included centers for the study of specific ethnicities and sexualities; campus organizations that allowed students to learn more about diverse backgrounds; and programs to assist students whose parents had not graduated from or even attended college.

Moving into the future, colleges and universities are going to have to cope with lower budgets and still find ways to address falling graduation

rates among college students from almost all social-cultural and economic backgrounds.

Ethnicity-Based Colleges and Universities

In the wake of the Civil War, colleges and universities in former confederate states refused to admit African Americans to their universities. In response, schools began to open to serve this group of potential scholars.

Today, historically black colleges and universities (HBCUs) have hundreds of thousands of students enrolled, though not all of them continue to have a student body made up primarily of African American students.

HBCUs have a considerably higher graduation rate for their African American students than predominantly white institutions' (PWI) campuses. This has been linked to numerous factors including a higher ratio of African American professors to African American students; more programs designed to facilitate retention of students; and heightened awareness of the unique needs of African American college students. Ultimately, even at HBCUs the graduation rate among African American students is below the national average across all ethnicities, indicating a need for more efforts to equalize academic achievement.

More recently, colleges and universities have opened with the intention of providing improved education to other underrepresented minority students, including Native Americans, Latinos/as, and Muslims. These institutions report similar results to those of HBCUs, with higher than average graduation rates for the minority groups they serve.

The Hispanic Association of Colleges and Universities (HACU) has championed Hispanic-serving institutions (HSI) in Congress and helped gain recognition and funding from the federal government. HSIs are those colleges and universities with 25 percent or more Hispanic students. HACU currently has 243 member HSIs across the country.

In April 2013, technology billionaire Hun Loo Gong announced his plan to open the first Asian-American university, which will offer online courses and be headquartered in San Francisco.

Many ethnicity-based universities have partnerships with PWIs to provide some of the courses for their students. Students are often required to

enroll in a certain number of credit hours per semester or complete their general education requirements at the larger institution.

Ethnic Studies

Ethnic studies programs were designed to expose students to the histories of specific racialized ethnic groups. These interdisciplinary fields of study diverge from traditional anthropological and sociological approaches to studying culture in that their approaches lack the Eurocentric lenses common to more traditional disciplines.

The first ethnic studies programs were established at San Francisco State University and University of California, Berkeley in the late 1960s. Students and faculty alike wanted to study their own histories without white cultural interpretations. Today colleges and universities across the United States have ethnic studies programs focusing on areas such as Asian American Studies, Africana Studies, and Mexican American Studies.

James Meredith, accompanied by U.S. marshals, walks onto the campus of the University of Mississippi, October 1, 1962. Motivated by President John F. Kennedy's stance on civil rights, he fought to become the first African American student admitted to the segregated University of Mississippi.

Desegregation and Affirmative Action

After World War II, the American civil rights movement began, as did efforts to racially integrate colleges and universities in areas that still had segregation laws, particularly in the southern United States.

Integration of Caucasian and African American students in colleges did not happen overnight or without struggle. Many Caucasian groups protested or tried to physically stop African American students from attending classes. Over the decades since integration, colleges and universities have embraced diversity, welcoming all demographic groups and providing places of learning for all. Higher education campuses tend to have more racial harmony than the surrounding areas.

Affirmative action began in the 1960s under the John F. Kennedy administration and was intended to level the playing field for people of all ethnicities and genders in terms of academic and employment opportunities. In higher education this meant taking race and/or gender into account when evaluating potential students for admission. This led to decades of criticism.

Proponents of affirmative action believe that it allows students who come from various ethnic and economic backgrounds to have the same chance of at least getting into college. Some argue that legacy admissions and athletic recruitments already favor some students over others, possibly allowing them to gain admission without having competitive grades or standardized testing scores.

Opponents of affirmative action programs argue that taking any physical traits into account privileges one group over another. Some argue that this is tantamount to racism. Others argue that affirmative action has the potential to take college admissions away from deserving students who do not fit into whatever gender or ethnic quotas the university is trying to fill. They fear that Caucasian students will not be able to attend colleges and universities with affirmative action programs. Ultimately, data indicate that Caucasian women benefit from affirmative action far more often than men or women from any other ethnic group.

Some states have outlawed affirmative action programs. In 1996, the residents of California voted to approve Proposition 209, which

prohibited any state-run agency from considering race when determining eligibility to work or attend school. This meant that private colleges and universities could retain their affirmative action programs, but the California State University and University of California systems would have to shut such programs down. Proposition 209 passed due in large part to arguments that it would effectively remove racism from the system.

Graduation and Retention

In contemporary higher education in the United States, admission rates for varying cultural groups tend to be fairly representative of the demographics in the area primarily serviced by the college or university. Graduation and retention rates, however, remain fairly low.

Only about 50 percent of students entering college as freshmen will ever complete a four-year degree. This percentage is based on all ethnicities and genders. However, many social and economic factors lead to vast discrepancies in graduation rates between ethnicities and even between genders within ethnicities. At some universities the overall graduation rate may be 50 percent, while the graduation rate among African American men is as low as 0 percent. These same schools might post graduation rates for African American women that are as high as 25 percent.

It may be tempting to interpret the data as indicating certain ethnicities perform poorly in higher education. This is too simplistic for two reasons. First, it does not take into account differences within an ethnic group. Second, whether a student's parents went to college has far more bearing on his or her success than any other determining factor. All first-generation college students lack the social resources that come with parents who at least graduated from a four-year university.

Diversity Master Plans

In response to rapidly diversifying student populations at colleges and universities that were not set up to account for ethnic and socioeconomic differences, many institutions have composed diversity master plans to account for differences in the way they have traditionally run and to meet the needs of their current students. These plans became popular in the first decade of the 21st century.

Colleges and universities tend to engage in long-term strategic planning when it comes to over-seeing budgets, enrollments, academic changes, facilities construction, and other services. Institutional diversity plans take the model of strategic planning and develop ways to engage in active appreciation of diverse viewpoints, experiences, and identities.

These plans set policies, create programs, and allocate funds for promoting a richly diverse campus that is welcoming and inclusive beyond the physical presence of students, faculty, and staff who look different from one another. They often include policies for curriculum changes that foster in students an awareness and appreciation of disparate identities. Other policies include creation or expansion of programs on campus that promote cocurricular activities related to various identities, the establishment of a Chief Diversity Officer, or policies on recruitment and retention of diverse faculty and staff.

Academics have not yet studied the long-term effectiveness of these plans on graduation and retention of students. But with a national attrition rate of 50 percent, these plans may be needed by more colleges and universities in the near future.

High/Low Context Cultures

High context and *low context* are terms that characterize the ways individuals in a culture relate and communicate with each other, and the amount of explicit information that they need in a given situation. In simple terms, individuals in high context cultures rely on context and implicit understandings due to relationship more than words in a communication setting. Individuals from low context cultures rely on words to define and clarify communication, relationships, or the amount of information needed for a successful communication experience. Edward T. Hall defined this concept in his 1976 work *Beyond Culture*. The level of context affects each participant in a communication experience.

Generally speaking, individuals from the dominant culture in the United States are considered low context, sharing that designation with people from Germany, Switzerland, and the Scandinavian countries. The Asian, Arab, and Hispanic cultures are considered to be more high context. With the 2010 U.S. Census, the proportion of individuals from high context cultures is increasing.

High- and Low-Context Interactions

The consequences of interactions between people from high versus low context cultures within the United States can be significant. As the 2010 census reveals, the United States has seen an increase in the Asian and the Hispanic-Latino population, as well as an influx of refugees and immigrants from Arab and African countries. By 2030, the United States will be a minority-majority culture, so there is value in considering the differences in high context and low context interactions.

People from a high context culture do not consider it necessary to have a lot of data or detailed information about an event, as the tight network of personal relationships provides opportunities to learn about an event, a decision, or a situation. Low context communication is characterized by more information, discomfort with silence, a preference for explicit meaning and direct and assertive language.

For individuals from a high context culture, meaning can be provided through silence, inference, nonverbal communication, and shared common experiences. The status of the participants in a communication exchange may include title, family background, associations, education, gender, and age. The tightness and often homogeneity of the high context facilitates implicit understanding. Indirect communication, as opposed to assertive and direct communication, is essential to maintain harmony, to acknowledge authority, and to save face.

Implications for a high context person or members of a community interacting with members of a low context community can be subtle or dramatic. Methods of address also vary. For Japanese or Chinese, greeting protocol and terms of address are important as they reflect the presentation of self and face. The subordination of the individual to the group in collectivist and high context cultures leads to a different communication style. In business, on first meetings, and in organizational settings, who speaks and how people are addressed count. First names are generally not used but rather titles or honorifics acknowledging the status of the participants. The use of first names for terms of address may be offensive to individuals from a high context culture, particularly in a business or religious setting. Knowing the protocol for greeting behavior and terms of address facilitates the success of a communication situation.

The majority of business practices in the United States are characterized by the low context reliance on a substantial amount of explanation, copious data to support a proposition or initiative, detailed contracts, rich use of vocabulary, and assertive language. Silence is perceived as disagreement, boredom, or ignorance. However, silence and patience in deliberation is generally valued by individuals from low context cultures—and

people who talk a lot may be considered shallow, insincere, or ignorant. Silence, therefore, may be a strategic weapon or deadly when trying to accomplish a goal in most American business and enterprise. The manner of handling authority, disagreement, and conflict is also affected by high and low context communication styles.

With the increased diversity that characterizes the culture of the United States, there will be a need for increased training in culturally competent communication between the dominant low context culture of American social discourse and the many variations of high context cultures, whether Asian, African, or Hispanic.

It may be that individuals from low context American businesses must learn to take time building relationships, having meals, sitting in silence when doing business or communicating with individuals from high context American businesses. It may mean that low context health care workers may have to get to know a high context patient's entire family or ethnic community, listen well, and be aware of the implications of direct versus indirect communication, particularly of bad news.

Hijab

Hijab is the most general term for Muslim women's practice of covering their hair. Most women who wear hijab cover their hair with a scarf and wear clothes that cover their hands to the wrist and their legs to the ankles. These may be Western-style clothes, garments from their cultures of origin, or clothes that are identified with Islam, including the often-depicted outer wraps called the *abaya* or *chador*. Some women also wear the *niqab*, a cloth that covers their face below the eyes; this is often called a *burqa* in the west, but that is a misnomer, since *burqa* refers to either the blue face-covering robe worn in Afghanistan or the metallic face-jewelry worn in the Arab Gulf. In the United States, women who wear hijab or niqab are generally called *hijabis* or *niqabis*.

Debates Over Hijab

Muslims in general disagree about what forms of body covering women should wear, in which contexts, and whether or not it is required. Some feel that wearing hijab is required for all Muslim women, and others feel it is optional. The majority think that teenage and adult women should wear loose clothing that reveals only their faces, hands, and feet in public, and that they can only be seen uncovered by closely related men, other women, and children. However, there are many Muslim women who cover and identify as hijabis, but still reveal some hair, do not cover their necks or wrists, or wear tight-fitting clothing. Muslims frequently disagree about whether or not certain garments or dressing practices are sufficiently modest, culturally appropriate, or meet the requirements of hijab.

Hijab is a frequent source of debate among Muslims and non-Muslims. For some, the practice of hijab is considered a marker of the low status of women in Islam, and is closely associated with women's exclusion from the public sphere, their limited role in public life, and

male domination. For others, hijab is meant to encourage women's participation in public life by allowing them to be respected publicly. It is usually worn voluntarily and is a personal act of devotion a woman makes to God. (There are both Muslims and non-Muslims who take both positions.) The experiences of women who wear hijab are diverse. Many emphasize their own desire to cover themselves and how it makes them feel closer to God. However, many women have faced social pressure to cover themselves, or to cover themselves in a particular way, or behave a certain way when covered (particularly to not interact with unrelated men). There is a growing segment of women who identify with the concept of "dejabing," or ceasing to wear hijab after an extended period of doing so.

Hijab as a Cultural Marker

Hijab is a potent marker of community identity for Muslims, both men and women. Many American women who cover say that part of their reason to do so is to publicly affiliate themselves with the Muslim community and be identified as Muslims by non-Muslims in daily life. However, this high level of visibility has also made hijabis and niqabis the target of discrimination by non-Muslims. The Council on American-Islamic Relations reports that, of all anti-Muslim acts of discrimination reported to them in 2008, 5.61 percent had hijab as a precipitating factor, and 0.59 percent had niqab as a precipitating factor, making covering the fifth most common factor. (By contrast, fewer than 2 percent of all discrimination incidents were seen as caused by men's Islamic garb.)

Common reports involve women being required to remove hijab at work, having hijabs pulled off in public, or being the target of anti-Muslim language, specifically deprecation of their hijab; in some cases, hijabis have been the target of violence because of their scarves. Because of the threat of violence and discrimination, many Muslim families encouraged women who cover themselves to either temporarily stop or to stay inside away from non-Muslims after the September 11, 2001, terrorist attacks. Few hijabis, however, chose to stop covering at this point in time, although some have changed their travel habits (choosing not to take airplanes, for instance).

Bans on Hijab and Niqab

The United States has not seen any successful attempts to ban niqab (often referred to as “burqa bans”), unlike Europe, and no North American attempts to restrict the circumstances in which Muslim women can cover have been as strong as those in France or Turkey. The United States’ legal freedom of religion and strong protection of civil rights have created an unfavorable legal environment for anti-hijab and -niqab laws, and the right to wear religious clothing is considered a protected freedom. Most Muslims view legal restrictions on the wearing of hijab or niqab as highly discriminatory. However, there is occasional conversation about restricting niqab or hijab in public spaces (such as insisting women uncover their faces for ID photos, or that women cannot cover their heads in courtrooms), which has led to a sense of threat among some more conservative Muslims.

The Future of Hijab

A growing trend in the United States (and elsewhere) has been the rise of “hijab fashion,” focusing on looking cool while still wearing hijab. Video tutorials for different ways of wearing scarves, daily fashion photography, and explanations of how to translate current mainstream fashion styles into hijab-friendly forms are a major part of this culture. This integration of Western fashion and femininity norms with Muslim modesty norms represents an interesting new type of Muslim femininity.

Hindu Americans

In 1900, there were approximately 1,700 Hindu Americans living in the United States. By 1980, that number had grown to approximately 387,000; by 1997, the figure was approximately 1.1 million. By 2008, there were at least 2.3 million Hindu Americans in the United States, and most of them were of Indian or Indo-Caribbean origin. The Hindu American Foundation estimates that there were 1 million additional practicing Hindu Americans in 2013 who were not of Indian or Indo-Caribbean origin.

By 2011, there were 258 traditional Hindu temples in the United States, used by approximately 268,000 Hindu Americans. There were also 400 temples serving Hindu subtraditions, used by approximately 282,000. By 2011, there was at least one Hindu worship location in each U.S. state, mostly located in Indian American communities. This concentration is reflected in the fact that Hindu temples were only located in 13 percent of American counties in 2011. About one-third of all Hindu Americans live in concentrated groups in California, New Jersey, and New York.

In 2013, only around 8 percent of Hindu Americans were not proficient in English, which was lower than almost any other immigrant group in the United States. Only about 12 percent of Hindu Americans had not finished high school, and at least 64 percent had earned a college degree. At least 12 percent of Hindu Americans had earned an advanced degree, and some sources indicate that 48 percent do. These educational demographics place Hindu Americans far beyond any other demographic group in the United States for educational attainment. Hindu Americans also

enjoyed the highest rate of employment in highly skilled occupations.

Before the mid-20th century, Hindu Americans were isolated, and Hindu thought was rarely expressed as a part of public discourse. Those years saw mostly students, intellectual and religious visitors, and merchants in the United States. In the 19th century, translation of texts such as the Bhagavad Gita saw the introduction of Hinduism in the United States. Ralph Waldo Emerson hosted P. C. Mozoomdar, the first Indian teacher in the United States.

In 1893, Hindu leader Swami Vivekananda ventured to Chicago for the World's Parliament of Religions. This began a two-year lecture tour for the swami, during which time he also visited Boston, Detroit, and New York. Starting in 1902, the United States saw another two-year Hindu lecture tour, this time presented by Swami Rama Tirtha. His topic was the philosophy of Vedanta. In September 1907, intolerance and bigotry for Hindu Americans and Indian Americans raged into the Bellingham riots in Bellingham, Washington. The next major public showing of Hindu thought was not until 1920, when the International Congress of Religious Liberals featured Paramahansa Yogananda as the Indian delegate to the Boston event. The Asian Exclusion Act of 1924 stopped the growth of the Hindu American community.

In 1965, the Immigration and Nationality Services (INS) Act was passed. This was the first real chance for Hindu immigrants to come to the United States, bringing workers, families, and religious leaders. Many such Hindu religious leaders and teachers found an important place in the American counterculture of the 1960s, a radical movement springing from Hinduism that included groups such as the Swami Prabhupada's International Society for Krishna Consciousness. Other major Hindu thought leaders during this time included Maharishi Mahesh Yogi and Chinmoy.

Hindu Americans and their beliefs are gaining more visibility. In 2000, the prime minister of India, Atal Bihari Vajpayee, visited the United States. In honor of the visit, Venkatachalapathi Samudrala read a Sanskrit, Hindi, and English prayer before a joint session of the U.S. Congress. This prayer was supported by Sherrod Brown, congressman from Ohio. Brown also asked the House Chaplain of the U.S. Congress to invite the

Parma, Ohio, Hindu priest from the Shiva Vishnu Hindu Temple.

In 2007, another Hindu prayer came to Washington, D.C., this time to the U.S. Senate, courtesy of a Hindu priest from Nevada, Rajan Zed. Self-titled "Christian patriots," a couple and their daughter interrupted Zed twice, condemning him as "wicked." This episode eventually led to criticism of various candidates in the next election, based on their failure to defend Zed and the prayer or condemn the "Christian patriots."

President Barack Obama has celebrated Diwali in the White House since 2009, issuing a statement each year. The first year, in 2009, he lit a traditional Diwali lamp; the lamp symbolizes the triumph of light over darkness. In 2010, the First Lady danced with students celebrating Diwali. In 2011 and 2012, his message went out on YouTube, and he spoke at a Diwali event.

Many aspects of Hinduism have become mainstream in American culture. Examples of this are karma, reincarnation, and yoga; approximately 24 percent of Americans believe in reincarnation. Yoga is extremely popular all over the United States. Finally, especially with the acknowledgment of the president, Diwali has become a popular holiday among Americans.

Diwali, or the "festival of lights," is a five-day Hindu festival that always falls between mid-October and mid-November because of its placement on the Hindu lunar calendar. Diwali is an official state holiday in most major Hindu nations. For Hindus and many Hindu Americans, Diwali is one of the most important festivals of the year. Typically celebrated together by families, festivities often take place in the home. There are many regional and religious variations that impact the more specific meanings of Diwali for various Hindus, and this in turn will change the activities that accompany each celebration. It is common, however, to see candles and other light-related festivities for Diwali.

Hip-Hop

The genre of hip-hop emerged in the 1970s in the South Bronx. It cannot be attributed to a particular individual, but music historians have cited that the socioeconomic problems of minority neighborhoods in the Bronx incited the youth to create outlets of expression. Initially, it was a way for the youth to have fun; later, it became a political and social tool that gave a voice to minority youth in the United States.

Hip-hop has generally been associated with African American youth and “blackness,” yet it has strong multiethnic influences. Aside from borrowing from African American and African cultural practices, hip-hop also benefited from Latino and Caribbean influences. The Bronx was, and still is, very diverse, and the shared, urban ghetto experience of immigrant and African American youth resulted in a collective group identity. This fostered the cultural appropriations so essential to the beginnings of hip-hop.

Hip-Hop Culture

Hip-hop refers to both the culture and the musical genre associated with that culture. It is important to make this distinction because hip-hop culture encompasses much more than rap music. The elements that comprise hip-hop culture are graffiti art, break dancing, DJ-ing, and MC-ing, better known as “rapping.” Graffiti art is made by drawing on or spraying aerosol cans on various public surfaces, such as the outside walls of

buildings. Though it has been criticized as being an obstruction to the beautification efforts of city government officials, it is generally considered mainstream now and has been celebrated in various art museums. Notably, one can find graffiti memorial art in various urban minority neighborhoods that commemorate deceased residents of that specific area. Break dancing is another visual art that reached prominence within the culture before branching out into the mainstream. It is an athletic form of dancing that borrows from martial arts forms. Today, “hip-hop dance” is seen as its own category and it differs in aesthetics from traditional break dancing. DJ-ing and MC-ing are the musical accompaniments to hip-hop dancing. DJ-ing is an example of the West Indian influence on the culture. Mobile disc jockey units were very popular in Jamaica, and Jamaican immigrants who settled in the Bronx brought this equipment with them. MC-ing, or “rapping,” is the stylistic lyricism that complements the DJ’s music. It heavily borrows from African oral traditions and the Puerto Rican genres *décima* and *plena*.

Hip-Hop as Music

The commercialization of hip-hop began in 1979 with the release of Sugar Hill Gang’s “Rapper’s Delight.” Not only did the song garner success but it also motivated other musicians to add rap

A dancer in San Francisco, California, shows off his b-boy skills to a crowd in 2007. B-boying, also called breaking, is one of the major elements of hip-hop culture. It borrows heavily from many other cultures, including 1930s-era street dancing.

to their music. When black hip-hop group Run D.M.C. collaborated with white rock group Aerosmith in 1986 for a remix of "Walk This Way," the media deemed it to be musically groundbreaking and a sonic testament to the breaking of racial barriers. It further proved that rap could have crossover appeal and be marketed to white audiences. White artists would continue to incorporate rap into their music, but the first white hip-hop group, the Beastie Boys, would release their first rap album in 1986 and subsequently become rap icons. Another notable white rapper is Eminem whose first single in 1999 was an immediate hit. He is currently one of the biggest-selling hip-hop artists of all time.

Hip-hop music has a social justice and political history as well. Many rappers have used the genre to shed light on the plights that faced their communities. Grandmaster Flash's 1982 song "The Message" epitomizes this function of the genre because it details the struggles of residents in urban, low-income neighborhoods. Throughout the history of the genre, rappers have drawn attention to police brutality, racism and prejudice, important black public figures, and the hopes and dreams of black youth, among other subjects.

The Future of Hip-Hop

Hip-hop music has become the face of the culture and is internationally known. Hip-hop culture, specifically the music, has not avoided criticism, however. Some black public figures have derided it for being a negative depiction of black American life and culture. The media and social justice groups have emphasized the sexism and homophobia that can be expressed in various hip-hop songs. Supporters of hip-hop respond to these claims by emphasizing the positive aspects of hip-hop, such as its ability to give voice to the underrepresented in society.

Artists outside the United States have also embraced hip-hop and some of them have used it to broaden the reach of their sociopolitical messages. The documentary *Slingshot Hip-Hop* documents the lives of Palestinian rappers who use hip-hop music to educate others about the conditions of their country and to bring together other young Palestinians. Many other examples exist in countries such as France, Israel, and England. Hip-hop is stereotypically seen as being

"black," but in reality, it crosses race and ethnicity while also being the platform for black youth to be heard.

Hispanic Americans

The 2010 U.S. Census counted 50.5 million Hispanic Americans, or Latinos, who comprise 16 percent of the total U.S. population. The federal government officially defines a person of "Hispanic or Latino" heritage as "a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race." A rapidly growing segment of American society, Hispanics/Latinos accounted for more than half of the total growth in the U.S. population between 2000 and 2010. In 2003, the Hispanic/Latino population surpassed that of African Americans. This population growth is attributed to current immigration patterns, a slightly higher

birthrate among Hispanics/Latinos than the overall U.S. population, and the relatively young median age of the Hispanic/Latino community.

A Diverse Population

Hispanics, or Latinos, do not constitute a singular, homogenous, or unified group; rather, these labels are umbrella terms that encompass 20 different ethnonational heritages from Central America, South America, and the Caribbean. These different ethnic populations each have their own unique migration and social histories, sociocultural dynamics and idiosyncrasies, and social identities, an important point that may be easily lost in mainstream media discourses that homogenize or conflate the diverse sociohistorical and contemporary experiences of Hispanic/Latino communities. Mexican Americans comprise the single-largest ethnic population, accounting for 63 percent of the total Hispanic/Latino population of the United States, followed by Puerto Ricans (9.2 percent) and Cuban Americans (3.5 percent). Persons of Dominican heritage represent 2.8 percent of the total, comprising the fourth-largest Hispanic/Latino population. Central Americans and South Americans, respectively, comprise 7.9 percent and 5.5 percent of the total Hispanic/Latino population.

The geographic distribution of Hispanic/Latino communities correlates strongly with specific ethnic origins. The vast majority of Mexican Americans live in the six southwestern states, whereas the majority of Puerto Ricans and Dominicans reside in New England and the mid-Atlantic region. Recently, however, sizable numbers of Puerto Ricans and Dominicans have settled in Florida. The overwhelming majority of Cuban Americans live in Florida, and to a lesser extent, other southern states. Central Americans, particularly Guatemalans and Salvadorans, are primarily concentrated in the southwest, while the majority of South American-origin Latinos disproportionately reside in the northeast. Despite traditional geographic residential patterns, however, the 2010 census documented that the midwest and the south experienced the sharpest increases in Hispanic/Latino population during the first decade of the 21st century.

Such geographic diversity has produced a plethora of distinct, regionally based cultural identities among various Hispanic/Latino communities. For

example, persons of Puerto Rican heritage born and raised in New York City may use the term *Nuyorican* to distinguish themselves from Puerto Ricans living on the island or in other regions of the United States. Many Mexican Americans living in Texas self-identify as Tejanos to express regional pride in being a Texan while also acknowledging their ethnic ancestry, while some Mexican Americans, particularly in California, may refer to themselves as Chicanos, a name that became popular during the civil rights struggles of the 1960s. Among Mexican immigrants, however, the term *Chicano* is often used specifically to distinguish an American-born citizen of Mexican ancestry from a Mexican national. Along similar lines, the label *Dominican York* distinguishes Dominicans who have been socialized and acculturated to life in New York City from their island counterparts.

Other manifestations of cultural diversity characterize the Hispanic/Latino population as well. For example, while the majority of Hispanics/Latinos are Roman Catholic in their religious affiliation, sizable numbers of members of Protestant denominations, particularly Pentecostals, Evangelicals, Baptists, and Jehovah's Witnesses, also exist. Additionally, some Caribbean-origin Latinos in the United States practice *santería*, a hybridized Afro-Latino religious tradition that blends elements of Catholicism with African animism. Furthermore, some Latinos practice Judaism and Islam, or hold no particular religious affiliation. Similarly, Hispanics/Latinos vary widely in linguistic proficiency, depending upon one's socialization, family history, and/or length of time in the United States. Many Latinos speak only English, while others exhibit varying degrees of bilingualism in both English and Spanish. In addition, some Latinos are fluent in Spanish with limited to little or no English proficiency.

Additionally, Hispanics/Latinos do not share a common skin color or phenotype. Non-Hispanic Americans are sometimes unaware of this important fact, as many lighter-complexioned or darker-complexioned Hispanics/Latinos claim to have been told that they allegedly "do not look Hispanic/Latino." However, a vast range in physical diversity exists throughout Latin America and, consequently, among U.S. Latinos. Some Hispanics/Latinos exhibit strong European features, with relatively light skin, blonde or red

Members of the South Central Farm protest for amnesty at the immigrant rights march in downtown Los Angeles, California, on May Day, 2006. The banner translates in English to "No human being is illegal." By the 1990s, Mexican immigrants had become key sources of labor in the U.S. agricultural, construction, and services sectors. Today, Mexico is the largest source of both legal and illegal immigration to the United States, and Hispanics or Latinos form the second-largest ethnic group in the United States.

hair, and blue or green eyes, while others display strongly African physical features with respect to hair texture and skin color. While many Latinos may display an intermediate complexion, dark hair, and dark eyes, this appearance is in no way reflective of the overall Hispanic/Latino population. The tremendous range in physical diversity among Hispanics/Latinos derives from extensive amalgamation that occurred during the colonial heritage of Latin America in the 16th and 17th centuries, whereby European (primarily male) colonizers, indigenous inhabitants, and Africans inter-mated on a scale that far exceeded that of the British and French colonies.

History of Hispanic/Latino Communities

Mexican Americans have been part of the U.S. population since the middle of the 19th century,

when the Texas Revolution (1836) and the U.S.-Mexican War (1846–48) profoundly shifted the borders of the two nations. Under the terms of the Treaty of Guadalupe Hidalgo, which officially ended the U.S.-Mexican War, Mexico ceded more than 50 percent of its territory to the United States. The annexed territory, located north of the Rio Grande, encompassed the present-day states of Texas, New Mexico, Arizona, California, Nevada, Utah, Colorado, and parts of Wyoming. The number of Mexicans living in this region at the time of the cession is difficult to gauge precisely, but one such estimate by historians put the population of this newly acquired territory at the time at around 50,000 inhabitants. In any event, little migration occurred from Mexico to the United States during the remainder of the 18th century. By 1900, Mexican Americans numbered

approximately 150,000, with the largest ethnic communities residing in Texas.

Mexican immigration substantially increased during the early decades of the 20th century, resulting from a complex interplay of push and pull factors. The violence and sociopolitical upheavals stemming from the Mexican Revolution (1910–20) prompted hundreds of thousands of Mexican refugees to flee their homeland for a new life north of the border. At the same time, a series of immigration restrictions encouraged by various presidents and approved by the U.S. Congress, such as the Chinese Exclusion Act (1882), the Gentlemen's Agreement (1907), the National Origins Act (1921), and the Johnson-Reed Act (1924), sharply reduced the entry of immigrants from Asia and southern and eastern Europe. Fueled largely by Anglo-Saxon "racial" fears, the enactment of such policies particularly affected Italians, Jews, Poles, Hungarians, Chinese, Japanese, and Filipinos, who constituted the largest immigrant groups at the time. Mexicans, however, remained exempt from the restrictive immigration legislation of the era, and employers in the southwest soon began recruiting Mexicans as a migrant labor force in the agriculture, railroad, and mining industries. Labor shortages during World War I further increased demand for workers from Mexico. By 1930, approximately 750,000 persons of Mexican descent lived in the United States, and around this time, California surpassed Texas as the state with the largest Mexican American population.

Although the U.S. government conducted large-scale deportation campaigns during the 1930s and again in the 1950s, each of which resulted in several hundreds of thousands of Mexican-origin persons being deported, high rates of Mexican immigration continued throughout the 20th century and into the 21st century. The Bracero program, implemented by President Franklin D. Roosevelt in June 1942 to alleviate massive labor shortages in various industries stemming from increased production demands to meet wartime needs, led to the influx of hundreds of thousands of Mexican migrant workers. By the 1990s, immigrant workers from Mexico had established themselves as key sources of labor in the nation's agricultural, construction, custodial, hotel, and restaurant services. Today, Mexico

is the largest source of both legal and illegal immigration to the United States, and Mexican Americans currently represent the third-largest ancestral group in the nation, behind German and Irish Americans.

The United States acquired the islands of Puerto Rico and Cuba at the conclusion of the Spanish-American War in 1898, and the Jones Act of 1917 conferred American citizenship upon birth to all inhabitants of Puerto Rico. Consequently, Puerto Ricans are not immigrants but rather U.S. citizens. This significant fact is not widely known by many Americans, as illustrated by the comments issued by a prominent California State Assemblyman, who called for a crackdown on illegal immigration from Puerto Rico during the debate over Proposition 187 in 1994.

Like Mexicans, Puerto Ricans have been recruited as a labor force in certain industries throughout history. In the first decades of the 20th century, for example, sugar entrepreneurs in Hawai'i recruited workers from Puerto Rico to serve as sugarcane cutters; Puerto Ricans were regarded as a highly desirable workforce for this occupation because of their familiarity with a tropical climate and their experience with cutting sugarcane in their homeland. During the 1920s and 1930s, small numbers of Puerto Ricans settled in New York City's East Harlem and Red Hook districts, located in Manhattan and Brooklyn, respectively.

However, Puerto Ricans only began to relocate to the mainland United States in large numbers during and after World War II, facilitated by an increase in airline transportation from Puerto Rico to New York City, growing demand for Puerto Rican laborers on the U.S. mainland during the war, and Operation Bootstrap, by which the U.S. and local Puerto Rican governments encouraged residents of Puerto Rico to migrate to the U.S. mainland as a means of reducing overpopulation and overcrowding on the island. The largest Puerto Rican communities on the mainland during the 1940s and 1950s emerged in New York City, Chicago, and Philadelphia.

During World War II, the Campbell's Soup Company, headquartered in Camden, New Jersey, heavily recruited Puerto Ricans to work in the tomato fields of south Jersey amid acute labor shortages. This recruitment led to the formation

of a sizable Puerto Rican population in Philadelphia, with the largest community taking root in the Spring Garden neighborhood of the city. Also during the 1940s, the establishment of a farm labor recruitment camp in Berks County, Pennsylvania, fostered the development of the first Puerto Rican communities in south central Pennsylvania's Reading, Allentown, Lancaster, York, and Gettysburg regions. However, the vast majority of newcomers from Puerto Rico settled in New York City, where men and women found employment in the local manufacturing, garment, and service sectors. East Harlem and the South Bronx quickly emerged as the largest and most socially and culturally influential Puerto Rican communities in the mainland United States. All told, nearly one-third of the island's total population relocated to the U.S. mainland between 1945 and 1970.

The large-scale entry of Cubans began in 1959 following Fidel Castro's overthrow of dictator Fulgencio Batista, upon which Castro implemented a communist regime in Cuba. Successive waves of Cubans sought refuge from Castro throughout the 1960s and 1970s, beginning with the former officials of the Batista administration, followed by the island's upper class and monied elites, and middle-class professionals. The U.S. government enthusiastically welcomed the Cubans amid the height of Cold War tensions and anti-Castro sentiments. The federal government generously assisted Cuban refugees with a host of benefits that no other migrant or refugee group in U.S. history has received, such as reimbursement for transportation expenses from Cuba to the United States and job recertification training.

The vast majority of Cubans settled in the Miami metropolitan region because of the area's proximity to Cuba, separated only by 90 miles of water. Whereas these early waves of refugees from Cuba consisted primarily of lighter-skinned or "white" professionals, approximately 125,000 additional Cubans—many of them working-class and darker-complexioned Afro-Cubans—entered the United States during the 1980 Mariel boatlift, prompting a backlash among a segment of southern Florida's non-Cuban population who resented the changing demographics and the growing Cuban social, cultural, and linguistic influence on Miami.

Large numbers of other immigrant and refugee groups from Latin America have entered the United States both legally and illegally since the late 1970s, particularly from the Dominican Republic and Central America. Although smaller numbers of Dominican migrants fled their Caribbean nation during the 1960s to escape political instability following the assassination of dictator Rafael Trujillo and the U.S. military's five-month occupation of the Dominican Republic in 1965, the vast majority of Dominicans have migrated since the 1980s in search of better economic opportunities or to reunite with family members already living in the United States. Dominicans currently comprise the largest immigrant group to New York City.

More than 2 million Central American refugees fled civil war and political persecution in their homelands during the 1980s, including large numbers of Nicaraguans, Guatemalans, and Salvadorans. Unlike the warm welcome extended to Cubans following Castro's takeover of Cuba, however, the United States denied political asylum to Central Americans, prompting large numbers to settle in the United States as undocumented aliens. Nicaraguans fled the left-wing Sandinista regime, while Guatemalans and Salvadorans escaped right-wing regimes that were each backed by the U.S. government. Most Nicaraguans settled in Florida, where the established Cuban American community provided moral support and eased the newcomers' social and cultural transition to life in the United States. The majority of Guatemalans and Salvadorans took up residence in Los Angeles, although some Guatemalans settled in Florida, and Salvadoran communities also emerged in Long Island and Washington, D.C. In fact, Salvadorans make up the single-largest Latino community within the nation's capital.

The Guatemalan migration of the 1980s also included an estimated 250,000 indigenous Mayans, descendants of the original inhabitants of the Mesoamerican highlands, who were disproportionately impacted by the Guatemalan civil war. The epic 1983 motion picture *El Norte*, directed by Chicano filmmaker Gregory Nava, highlights the trials and tribulations of a pair of Mayan siblings who attempt to flee their war-torn village and make it to Los Angeles, which they envision as a de facto promised land.

Often overlooked in discussions of the nation's growing Latino population, a significant number of immigrants from South America have made the United States their home since the 1970s. According to the 2010 census, the largest South American populations in the United States include Colombians, Ecuadorians, and Peruvians. More than half a million persons of Ecuadorian or Peruvian descent and slightly under 1 million of Colombian heritage are part of the American mosaic, as are approximately one-quarter of a million Argentines and Venezuelans. Nearly 80 percent of South American Latinos reside along the nation's eastern seaboard, with New York City, Miami, and Washington representing the largest communities.

Latino Influences on U.S. Society and Culture

The growth of Hispanic/Latino communities across the United States in recent decades has altered the demographic composition of many large cities and small towns alike, infusing a Hispanic vibe into local language, politics, and cultural life. Today, persons of Mexican descent account for the single-largest ancestral group in

Salsa dance instructors demonstrate some moves during the Fort McPherson and Fort Gillem Hispanic American Heritage Month celebration at Fort McPherson, Atlanta, Georgia, September 30, 2009. The celebration was designed to educate attendees about the many contributions made by Hispanic Americans.

Los Angeles, while Cuban Americans comprise the largest ethnic population of Miami. Puerto Ricans and Dominicans represent two of the largest ethnic groups of New York City; additionally, the Big Apple boasts sizable communities of Central and South Americans and a rapidly growing Mexican population. Chicago also features a large Mexican American population that dates back to the early 20th century when employers recruited Mexicans as laborers in the city's railroad industry. The Windy City is home to the second-largest Puerto Rican community on the mainland United States as well. The lively Puerto Rican Day parade has become one of the largest and most vibrant annual displays of ethnic pride and identity in New York City, Chicago, and Philadelphia, with parades also occurring in smaller communities in New Jersey, Ohio, and Florida. A yearly Dominican Day Parade also takes place in New York City.

Throughout the southwest, the Mexican holiday Día de los Muertos (Day of the Dead) has emerged as a major public celebration, while the traditional Mexican holiday Cinco de Mayo (May 5), which commemorates a Mexican military victory over the French army during the Battle of Puebla in 1862, has attained such mainstream popularity and crossover appeal that it is now a popular festival among non-Mexican and non-Hispanic Americans. A minor historical footnote: Cinco de Mayo in the United States parallels St. Patrick's Day as a major public celebration of both ethnic pride and nonethnic partying.

The Hispanic/Latino influence on American political life has generated considerable media attention in recent local, state, and national elections. The nation's second-largest city, Los Angeles, elected Antonio Villaraigosa, a Mexican American, its first Latino mayor in more than 130 years in 2005, and Tomás Regalado, who fled Cuba during his teenage years, became mayor of Miami in 2010. Sonia Sotomayor, of Puerto Rican heritage, became the first Latina to serve as a U.S. Supreme Court justice when President Barack Obama appointed her to the high court in 2009. Several Hispanic/Latino candidates have been elected to the U.S. Senate in recent years, including Democrats Ken Salazar (Colorado) and Bob Menendez (New Jersey) and Republicans Mel Martinez (Florida) and Marco Rubio (Florida).

The increased power of the Hispanic/Latino vote, fueled by the growth of the Latino electorate, attracted much media spotlight during the 2008 and 2012 presidential elections. Two-thirds of Latino voters cast their ballots for Barack Obama in the 2008 election, enabling Obama to carry traditionally Republican states such as Florida, Colorado, Nevada, and New Mexico. During the 2012 campaign, Republican nominee Mitt Romney's low levels of support among Latino voters generated headlines.

Political scientists and partisan pundits have scrutinized the voting patterns and preferences of Hispanic/Latino voters and the standing of both major political parties with this voting bloc. Generally speaking, most Mexican Americans, Puerto Ricans, and Dominican Americans support the Democratic Party, while Cuban Americans have traditionally affiliated themselves with the Republican Party. Obvious exceptions exist, with many older and higher-income Hispanics/Latinos voting Republican, and many younger-generation Cuban Americans born and raised in the United States who have no recollection of pre-Castro life in Cuba supporting the Democratic Party. The staunch support among many Cuban Americans for the Republican Party, which dates to the 1960s, is attributed to the perceived betrayal of the Cuban exile community by the Kennedy administration, which failed to remove Castro from power, as well as the strong anticommunist positions of Republican presidents Richard M. Nixon and Ronald Reagan. Scholars also note that partisan affiliation often correlates with socioeconomic status, as members of the upper middle class customarily vote Republican. As a whole, Cuban Americans exhibit the highest levels of median income and per capita wealth of all Latino ethnic populations.

On the other hand, political scientists attribute the decline in support for the Republican Party among other Hispanic/Latino voters, particularly Mexican and Central Americans, to shrill rhetoric and draconian proposals calling for tighter immigration controls over the past two decades. In 1994, 59 percent of California voters approved Proposition 187, an anti-illegal immigration referendum that called for the denial of public education to undocumented immigrant children and encouraged citizens to report suspected "illegal

aliens" to law enforcement agencies. Although a federal judge blocked its implementation, the California Republican Party, along with Governor Pete Wilson and Speaker of the House Newt Gingrich, expressed strong support for the measure, while many Latinos, particularly the younger generation, perceived the referendum as a manifestation of anti-Latino resentment. Proposition 187 galvanized Latino voters in California, prompting large numbers to register with the Democratic Party, and since 1994, only one Republican candidate (Arnold Schwarzenegger) has won a statewide election in California.

The legacy of Proposition 187 looms large for the Republican Party, with several high-profile Republicans who espouse moderate views on immigration, such as President George W. Bush, former New York City mayor Rudolph Giuliani, and former Florida governor Jeb Bush, concerned that measures such as Proposition 187 and Arizona's S.B. 1070 threaten to alienate the Latino electorate from the Republican Party for years to come. Mitt Romney's low support among Latinos has been attributed primarily to the staunch support he expressed for S.B. 1070 and his disapproval of the DREAM Act legislation during the 2012 Republican Party primaries.

Nevertheless, concern over the social and cultural impact of legal and illegal immigration from Latin America has emerged in many communities with growing Hispanic/Latino populations across the country. Perhaps no other issue raises more concern or outrage among non-Latinos than the presence of the Spanish language, which can be heard spoken in public almost as often as English in some local settings across the nation. In November 1980, voters in Miami-Dade County approved a referendum declaring English the official language in response to a large influx of Spanish-speaking Cubans. This referendum became the template for similar legislation in other cities and states throughout the 1980s and 1990s. California voters approved Proposition 227 in 1998, which attempted to end bilingual education for students with limited English proficiency. The U.S. Census Bureau estimated that more than 35 million U.S. residents spoke Spanish at home in 2009, and Spanish speakers comprise more than 60 percent of all non-English speakers in the country. However, approximately half of all Spanish speakers

were born in the United States, and the majority of Spanish speakers also indicated that they spoke fluent English, thus demonstrating bilingualism rather than Spanish-language displacement of English.

Nevertheless, 31 U.S. states have declared English as their official language. A Spanish-language rendition of “The Star-Spangled Banner,” released in spring 2006, generated intense anger and criticism among right-wing elected officials and pundits on talk radio and cable news outlets. However, the federal government of the United States has never declared an official language, despite repeated efforts among proponents of making English the official language to pass such legislation in Congress. As the nation’s Spanish-speaking population has increased, so too has the presence of Spanish-language media outlets. In addition to pioneering networks such as Univision, Telemundo, and Galavisión, mainstream American television outlets such as HBO, CNN, MTV, and ESPN now offer Spanish-language channels that market entertainment, news, music, and sports programming to Latino consumers.

The growth of the Latino population in recent years has also spurred numerous legislative proposals across the nation to enact tighter immigration controls. In 2006, the town of Hazleton, Pennsylvania, implemented a local ordinance requiring landlords to verify the citizenship or immigration status of their tenants before renting out their properties; a federal judge struck down the ordinance as unconstitutional in 2007. In 2010, Arizona passed S.B. 1070, which required all foreigners within the state to carry proof of immigration status on them when in public and to require law enforcement officers to check the immigration status of suspected illegal immigrants during routine stops. Critics of S.B. 1070 asserted that such policies would lead to racial profiling on the basis of one’s name, physical appearance, and/or linguistic features. The U.S. Supreme Court ruled most of S.B. 1070 unconstitutional in June 2012. Ironically, experts note that illegal immigration from Mexico and elsewhere has actually declined since 2007, due in large part to increased unemployment and the effects of the recent recession on the U.S. economy.

Concern over immigration and the impact of the rapidly growing Latino population on the

future of the nation has led to the publication of several books predicting doomsday scenarios for the United States in the coming years, such as Samuel Huntington’s *Who Are We? The Challenges to America’s National Identity*, Tom Tancredo’s *In Mortal Danger: The Battle for America’s Border and Security*, and Patrick J. Buchanan’s *Suicide of a Superpower: Will America Survive to 2025?* Sociologists and anthropologists discount such fears, however, pointing out that similar nativist concerns were previously directed toward German immigrants during the 18th century, Irish immigrants during the 19th century, and Italian immigrants during the 20th century.

Linguists point out that while immigrants may, in fact, struggle with the arduous task of learning a new language, the U.S.-born children and grandchildren of immigrants acquire English as part of their socialization process and exhibit rapid rates of Spanish language loss across generational lines. In short, the presence of Spanish in the United States is the result of a large, current influx of immigrants from Spanish-speaking societies, rather than an alleged reluctance on the part of U.S.-born Latinos to learn or speak English. All major immigrant groups to the United States throughout the nation’s history have undergone a multigenerational period of linguistic, social, and cultural transition before becoming thoroughly incorporated into the fabric of American economic and political life.

Nevertheless, Hispanics/Latinos have achieved a high degree of visibility in American pop culture over the past two decades. During the media-dubbed “Latin Explosion” of the late 1990s, several Hispanic/Latino celebrities emerged as mainstream stars in movies, music, and sports, such as actors Antonio Banderas and Benicio del Toro; actresses Jennifer Lopez, Salma Hayek, and Cameron Diaz; recording artists Ricky Martin, Marc Anthony, Enrique Iglesias, Fat Joe, and Big Punisher; comedians John Leguizamo, George Lopez, and Carlos Mencia; and professional athletes Oscar de la Hoya, Sammy Sosa, and Alex Rodriguez.

These luminaries have been joined in more recent years by a new generation of celebrities, including recording artists Selena Gomez, Demi Lovato, Pitbull, and Daddy Yankee; actresses Eva Longoria, Eva Mendes, and Michelle Rodriguez; and NFL

quarterback Mark Sanchez, further illustrating the growing influence of Hispanics/Latinos on the pop culture of the United States. The number of Latino figures in American politics and the arts and entertainment will only increase exponentially in the coming decades, as Latinos comprise one of the fastest-growing segments of the U.S. population.

Hispanic Chamber of Commerce, U.S.

Hispanic-owned small businesses are growing faster than any other in the United States. Hispanic communities have continuously sought support in the development of business relationships and partnerships. In 1979, the U.S. Hispanic Chamber of Commerce (USHCC) was created as a national organization led by Hispanic leaders who dedicated themselves to the support of Hispanic communities. The USHCC was established in New Mexico. Its aim was to provide Hispanic communities with business networks, cohesion, and strength by promoting the economic growth and development of Hispanic entrepreneurs.

For the past 30 years, the USHCC has advocated for almost three million Hispanic-owned businesses while implementing its mission. The organization believes that Hispanic economic development serves to create sustainable prosperity for the benefit of American society. The USHCC consists of chamber members, corporate partners, and Hispanic business enterprises who are expected to effectively communicate the needs and potential of the Hispanic community while exemplifying the group's mission in their own daily lives.

The organization advocates for businesses in both private and public sectors by implementing and strengthening national programs that assist the economic development of Hispanic companies; increasing business relationships and partnerships between the corporate sector and Hispanic-owned businesses; promoting international trade between Hispanic businesses in the United States and Latin America; monitoring legislation, policies, and programs that affect the Hispanic business community; and providing technical assistance to Hispanic business associations and entrepreneurs.

Umbrella Organization

The USHCC serves as an umbrella organization for over 200 local Hispanic chambers of commerce and businesses across the United States. Local Hispanic chambers represent the interests of over three million Hispanic-owned businesses throughout the United States. Some of these chambers are relatively new organizations, while others have long been established.

USHCC provides basic resources to assist members attain business certifications by meeting simple government requirements. In addition, USHCC has developed a program in collaboration with the U.S. Hispanic Chamber of Commerce Foundation designed to provide small businesses with the tools they need to succeed.

The USHCC Foundation is dedicated to providing Hispanics with educational opportunities that will nurture their entrepreneurial spirits. In 2010, the USHCC Foundation collaborated with the University of Notre Dame's Mendoza College of Business to provide support in order to foster the prosperity of Hispanic-owned businesses in Hispanic communities. Both organizations are committed to ensuring that aspiring Hispanic entrepreneurs gain access to and achieve success in the business world.

In 1993, the USHCC and USHCC Foundation established a Chamber Training Institute. The institute's goal is to provide training targeting those Hispanic communities in which opportunities to achieve success in business are not readily available. Training is offered at hub locations throughout the United States. Additional resources provided by USHCC include conducting surveys and research to help chambers identify best practices, facilitating certification processes, and business-to-business matchmaking for Hispanic businesses.

Although a great deal of attention has been paid to the growing population of Hispanics in the United States, there still seems to be a gap in the knowledge of Hispanic small business owners across the country. As a result, this creates barriers for Hispanic-owned small businesses and Hispanic entrepreneurs to attain success. With Hispanics being the fastest-growing ethnic group in the United States, the USHCC has closely examined the changes in the Hispanic community since its inception and has continually responded to these changes.

Hispanic-Serving Institutions

The idea of Hispanic-serving institutions surfaced in the 1980s, when educational law and policy makers from all levels (local, state, and federal) recognized that few institutions enrolled large numbers of Hispanic/Latino students. The U.S. Department of Education, under Title V of the Higher Education Act, defines a Hispanic-serving institution (HSI) as an institution that is (1) an eligible institution and (2) has an enrollment of undergraduate full-time equivalent students that is at least 25 percent Hispanic at the end of the award year preceding the date of application. The National Center for Education Statistics (NCES) adds an additional criterion to the definition of HSI. It specifies that HSIs provide assurances that not less than 50 percent of the institutions' Hispanic students are low-income individuals.

The mission of HSIs was not explicitly to serve the large numbers of educationally

disenfranchised Hispanic students; instead, numbers and demographic data define these institutions. Over half (53 percent) of Hispanic/Latino graduates were enrolled in HSIs in 2010 and 2011.

Integral to the definition of HSI is the definition of Hispanic. NCES defines a person of Hispanic/Latino race or ethnicity as a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. If an individual is considered biracial, with one race or ethnicity category as Hispanic, he or she is assigned to the Hispanic/Latino category. For example, if a respondent self-identifies as Hispanic/Latino and also as Asian, black, or African American, this respondent is reported only in the Hispanic/Latino category.

As of September 2012, the Hispanic Association of Colleges and Universities (HACU), established in 1986, reported 240 member HSIs. For HACU's membership purposes, Hispanic-serving institutions are defined as colleges, universities, or systems/districts in which total Hispanic enrollment constitutes a minimum of 25 percent of the total enrollment. "Total enrollment" includes full-time and part-time students at the undergraduate or graduate level (including professional schools) of the institution, or both (head count of for-credit students). Currently, there is no list provided by the U.S. Department of Education or federal government of official HSIs.

HSIs are primarily found in the southwest United States; 75 percent of HSIs are located in three states and Puerto Rico. California has 98 HSIs, Puerto Rico and Texas each have 56, and New Mexico has 23. HSIs serve over 1 million Hispanic students yearly.

White House Initiatives

According to the U.S. Department of Education, the White House Initiative on Educational Excellence for Hispanic Americans was established in September 1990 by President George H. W. Bush to provide advice and guidance to the secretary of education on education issues related to Hispanics, and to address academic excellence and opportunities for the Hispanic community. Presidents Bill Clinton and George W. Bush, under Executive Orders 12900 and 13320, respectively, continued the initiative.

President Barack Obama's administration has embraced the Hispanic education endeavor, and Obama has communicated his dedication to this issue through continuation of the White House Initiative on Educational Excellence for Hispanic Americans. The president's commitment to the initiative was illustrated by the issuance of Executive Order 13555 on Hispanic Higher Education and the establishment of a presidential commission that will work with community leaders to glean advice on issues important to the critical role of Hispanic Americans. As part of Obama's executive order, his administration has emphasized the importance of direct work with local communities serving Hispanic youths, development and implementation of policy designed to impact Hispanic communities, and an exchange of resources that addresses the sociocultural aspects of the lives of Hispanic Americans in the United States. Specifically, Obama prioritized the following three new elements:

1. Working directly with communities nationwide in public-private partnerships, linking together key individuals and organizations from within and outside the education system to increase capacity and announce community-wide education initiatives
2. Establishing a presidential advisory commission and national network of community leaders that will provide real-time input and advice on the development, implementation, and coordination of education policy and programs that impact the Hispanic community
3. Forming a federal interagency working group to exchange resources and address issues impacting the lives of Hispanics nationwide, including housing, health, finance, employment, and education, among others

In September 2012, Obama declared September 16 to 22, 2012, National Hispanic-Serving Institutions Week.

The president's executive order focuses on increasing the college-degree attainment of Hispanic students. This is imperative because of the fact that higher education attainment for

Hispanics is lower than any other group, as only 19 percent of Hispanic adults have earned an associate degree or higher; and the Hispanic/Latino population is rapidly growing and by 2020 will represent over 20 percent of the 18-to-64-year-old U.S. population and nearly 25 percent of the 18-to-29-year-old U.S. population. This projected increase in the Hispanic population is supported by the U.S. Census Bureau's information on the growing Hispanic population.

The U.S. Census Bureau released a 2010 Census Brief on the nation's Hispanic population. This brief details the substantial growth of the Hispanic population and offers important trend data. The brief shows that the Hispanic population increased by 15.2 million between 2000 and 2010 and accounted for more than half of the total U.S. population increase of 27.3 million. Between 2000 and 2010, the Hispanic population grew by 43 percent, or four times the nation's 9.7 percent growth rate.

Social Justice Perspective

Approaching HSIs from a social justice perspective, it is important to understand the difference between representational and pluralistic diversity. Representational diversity focuses on having different groups (whether racial or ethnic, by gender, socioeconomic status, sexual orientation, etc.) represented in different areas of university/institution life, including but not limited to leadership, departments, programs, policy, student life, and academics. From a social justice perspective, it is arguable that in light of participation, representational diversity can be operationalized as a problem, as it is aimed at gathering, or collecting, numbers of people as opposed to integrating diverse Hispanic participation for systemic and paradigmatic change.

Pluralistic diversity, especially at an HSI, is imperative. The tenets for pluralistic diversity are (1) inclusion of diverse representation in the various facets of the university/institution, (2) diversity is nurtured and engaged, (3) the university/institution works toward creating a community of belonging, (4) participation is democratic and deliberative, and (5) each individual is a stakeholder in the success of the university/institution. The benefit of pluralistic diversity at an HSI is that it champions diversity from an integrative

and mission-based focus, so that the university/institution can transform, progress, innovate, and thoughtfully engage each of the necessary constituents at the HSI. Moreover, pluralistic diversity serves the public interest. As all 240 members of HACU are public universities, it is important to serve the public through this type of reciprocal relationship.

Hispanic "Collecting" Institutions

A controversial idea comes from theorizing the intersection of HSIs and social justice. If little empirical research continues to exist regarding the successes and barriers of HSIs for Hispanic students, and the definition is based on numerical data and "body count" as opposed to mission-driven imperatives, how can the public be assured that HSIs are actually "serving" and not simply "collecting" Hispanic students? This problem is exacerbated by the obtuse definitions and outcomes of multiple-race reporting, and subsequent confusing categorization. Again, according to the NCES, if a student self-reports as Asian and Hispanic (a biracial ethnic identity), that student for fiscal purposes will be designated in the Hispanic/Latino racial/ethnic category.

The financially manufactured definition of HSI's is evolving and changing with student enrollment, demographic data, racial categorization, and socioeconomic patterns. Thus, it is important to problematize whether the institution is simply "collecting" numbers of Hispanic bodies for representational diversity or actually embracing the institutional identity and working toward pluralistic diversity.

Historically Black Colleges and Universities

Historically black colleges and universities (HBCUs) are a diverse group of 105 institutions. The enrollments vary from several hundred students to over 10,000 students. Prior to *Brown v. Board of Education*, 90 percent of African American postsecondary students were enrolled in HBCUs. The competition that HBCUs currently face in attracting and educating African American and other students presents both challenges and opportunities. Despite the fact that numerous studies have found that HBCUs are more effective at retaining and graduating African American students than predominantly white colleges, HBCUs have serious detractors. Perhaps because of the increasing pressures on state governments to ensure that public HBCUs receive comparable funding and provide

programs that will attract a broader student population, several public HBCUs no longer serve primarily African American students.

Historically black colleges and universities represent the roots of black participation in American higher education. Early efforts to provide higher education for blacks began in the north. In 1837, a Quaker philanthropist founded the Institute for Colored Youth (now Cheyney University) as a teacher training facility in Pennsylvania. Wilberforce College was founded in Ohio in 1856. Lincoln University was founded in Pennsylvania in 1854 as the Ashmun Institute and renamed in honor of President Abraham Lincoln in 1866. In addition, some African Americans were permitted to attend white colleges in northern states in small numbers. The activities of missionary and benevolent societies at the outbreak of the Civil War led to the founding of black colleges in the south.

The American Missionary Association (AMA) alone was responsible for founding seven black colleges and 13 normal schools between 1861 and 1870. The federal agency known as the Freedmen's Bureau of Refugees, Freedmen, and Abandoned Lands also was instrumental in educating ex-slaves. Notably, Howard University, named for the commissioner of the Freedmen's Bureau, was established on land owned by the bureau in Washington, D.C. During this early period, the term *college* was misleading. An examination of the curriculum reveals that the institutions were teaching elementary and secondary skill training and remediation to students who had little or no rudimentary education.

Decisions at Capon Springs

In 1898, a conference on the state and direction of black higher education was held at Capon Springs, Virginia. Attended by influential northern and southern educators, philanthropists, clergy, and industrialists, it began to chart the course of a separate system of education for blacks and whites in the south. Hampton Institute, founded in 1868 with the help of the AMA, was held up as a model for its commitment to industrial education. Founded by Booker T. Washington in 1881, Tuskegee Institute joined Hampton to exemplify the Hampton-Tuskegee industrial education model.

In addition to the Capon Springs conference, philanthropic foundations such as the General

Education Board, the Peabody Fund, the Slater Foundation, the Phelps-Stokes Fund, and the Julius Rosenwald Fund worked in concert to define “black education” as industrial education pursued in a segregated setting. Government funding came from the Morrill Act of 1890, which extended the opportunity to southern states to found colleges for blacks and whites based upon the industrial model. The goal was to increase the nation’s productivity in agriculture and farm goods and to educate an essentially rural population. This affected the funding of private black colleges (either secular or denominational). The Morrill Act of 1862 had given support to Hampton because there were no public colleges in Virginia during or immediately after the Civil War. With the founding of Virginia State College for Negroes in 1882, however, the funds went to a public university versus a private school (Hampton). Black private and public colleges established before 1890 now competed with institutions backed by white money, political support, and federal funds.

Debate Over the Curriculum

Before 1890, the goals set for black education included cleanliness, character-building, Christian faith, and instruction in both liberal and industrial (manual arts) subjects. In the debate over the curriculum, however, black leader and ex-slave Booker T. Washington advocated vocational training for the black masses. W. E. B. Du Bois, a free black who grew up in the north, advocated the development of a “talented tenth” to lead, teach, and exemplify the black race. Whereas Washington wanted to prepare blacks to survive in the south, Du Bois’s view was more global and based upon the acquisition of civil and political rights. Du Bois’s ideas were considered too radical for the status quo and the industrial model prevailed.

While missionaries had often favored a classical liberal education, the general consensus was to limit black education to vocational training in the late 1890s. The proponents, largely white northern philanthropists and southerners, thought that blacks could help rebuild the south by industrial training and become socialized to their place on the lower rung of the new southern social order. This was codified by the

ruling in *Plessy v. Ferguson* (1896), in which the U.S. Supreme Court established the right to set up separate public institutions for blacks and whites. The argument over the curriculum was less clear-cut to college administrators, however. In the first place, there was concern over the meaning of industrial education. In addition, students, some black leaders, and even white northern philanthropists preferred the liberal arts model offered at private, missionary-founded colleges. Some colleges, in fact, offered a blended curriculum in order to attract financial support. Black education was debated as being necessary for black leadership and professional (teaching, legal, medical, etc.) training versus a means for the masses to be able to sustain themselves in an industrial society.

Surveys of Black Education

Between 1900 and 1954, seven major surveys were conducted to assess the quality and variety of education offered by black colleges. One survey was sponsored by a large foundation, two by a research component of Atlanta University, and four by the U.S. Office of Education. Du Bois undertook two surveys of black education from 1890 to 1910 as part of the annual Conference for the Study of Negro Problems held at Atlanta University. The first surveyed 34 institutions while the second ranked a sample of black colleges according to curricula and the number of students enrolled.

The 1932 Survey of Negro Education by the Phelps-Stokes Fund made seven far-reaching recommendations in regard to funding; strengthening industrial and agricultural training and teacher training; deemphasizing liberal arts; eliminating some private black institutions; coordination among colleges, church boards, and foundations; and closer associations between white educators and government officials. The surveys generally criticized the duplication of black colleges as being inefficient and straining scarce resources that could go to the strongest institutions. But they also spurred interest in institutional accreditation.

Influential Government Surveys

The following reports describe the more influential government surveys and findings:

Two examples show how historically black colleges and universities have withstood the test of time: The football team in 1899 at Claflin University (left), which was founded in Orangeburg, South Carolina, in 1869 by Methodist missionaries to prepare freed slaves to become full American citizens. Today it is a liberal arts and sciences institution with an enrollment of about 1,800 students. On February 11, 2009, First Lady Michelle Obama visits Howard University (right), which was founded in 1867 as a “university for the education of youth in the liberal arts and sciences.” The Freedmen’s Bureau provided most of the early financial support.

- *Negro Education—A Study of the Private and Higher Schools for Colored People in the United States (1920)*: Conducted by Thomas Jesse Jones, it was controversial for its recommendations regarding student living conditions and activities; changes in finance, accounting, administration, and governance; improving personnel; and modifying the curriculum. It encouraged teacher preparation and agricultural and mechanical training.
- *Bureau of Education’s Report on Agricultural and Mechanical Colleges, 1917 to 1918*: A survey of the course offerings and number of students enrolled in A & M (agricultural and mechanical) institutions.
- *Survey of Negro Colleges and Universities by Arthur J. Klein (1928)*: Similar to the Jones report, it included the same institutions and made largely the same recommendations.
- *National Survey of Higher Education of Negroes (1942) by the Office of Education, Federal Security Agency*: Requested by the Association of Colleges and Secondary Schools for Negroes, the findings revealed that these schools ranked low in quality, general education, advanced

education, and professional and technical education.

The Klein study is illustrative of the reports and surveys of black colleges during this period. It included 79 black colleges and universities. It arranged them into the following categories according to government: (1) colleges and universities owned, governed, and controlled by independent boards of trustees and privately supported; (2) colleges and universities under the ownership and control of northern white denominational church boards and privately supported; (3) privately supported colleges owned and governed by black-denomination church organizations or conferences; and (4) publicly supported institutions under state ownership and control, including land-grant colleges and normal and teacher training institutions. Examples of institutions in the first category are some of the best-known historically black institutions, such as Tuskegee, Howard University, and Fisk University. These colleges were founded largely by benevolent societies and philanthropists after emancipation. While the instructional programs at Hampton and Tuskegee were practical in nature, other institutions such as Howard and Fisk offered liberal arts and professional curricula in medicine and law.

In the second category, a number of privately supported colleges and universities were under the control and ownership of northern white denominational boards. Eleven colleges were controlled by the Board of Education of the Methodist Episcopal Church, including Philander Smith College (Little Rock, Arkansas), Rust College (Holly Springs, Mississippi), and Bennett College (Greensboro, North Carolina). Six colleges were controlled by the American Baptist Home Mission Society (ABHMS), including Morehouse College (Atlanta, Georgia) and Shaw University (Raleigh, North Carolina). Six were controlled by the American Missionary Association, including Straight College in New Orleans and Tougaloo College in Tougaloo, Mississippi. Two were controlled by the Board of National Missions of the Presbyterian Church in the United States of America (Barber College of Women in Anniston, Alabama, and Johnson C. Smith in Charlotte, North Carolina). Knoxville College (Knoxville Tennessee) was controlled by the Board of Freedmen's Missions of the United Presbyterian Church of North America. The United Christian Missionary Society (Disciples of Christ) controlled Southern Christian Institute (Edwards, Mississippi) and Jarvis Christian Institute (Hawkins, Texas). The American Church Institute for Negroes of Protestant Episcopal Church controlled St. Paul Normal and Industrial School (Lawrenceville, Virginia) and St. Augustine's School in Raleigh, North Carolina. Finally, the Sisters of the Blessed Sacrament of Pennsylvania (Catholic) controlled Xavier College, in New Orleans. These colleges initially stressed instruction in the liberal arts and sciences, theological and religious training, and eventually teacher training and preprofessional studies, home economics, nursing, and social services.

In the third category, the private colleges owned and governed by black denominational church organizations or conferences were founded during 1870–90, which was the beginning of efforts by blacks themselves, either independently or in conjunction with other groups, to establish and administer their own colleges. With the exception of Wilberforce, which was located in the north and operated by whites, there were seven colleges that were owned, administered, and financed by blacks and whose teaching forces were comprised entirely of blacks. Some representatives are Morris

Brown University (Atlanta, Georgia), Lane College (Jackson, Tennessee), and Paul Quinn College (Waco, Texas). The governing boards tended to be large, since each church district was entitled to representation on the board of trustees. The executive committees consisted almost entirely of clergymen. From the beginning, these institutions emphasized a classical liberal arts curriculum and theological training. As the emphasis on the latter began to wane in the early 1900s, more attention was focused on preprofessional studies and teacher training. Eleven of the 17 schools were administered by the African Methodist Episcopal Church through its state conference; five by the Colored Baptist Church; and one jointly by the Colored Methodist Episcopal Church and white Methodist Episcopal Church, South.

In the fourth category, the period from 1890 to 1920 marked a rapid growth of state normal schools, teachers' colleges, and other institutions with strong teacher training objectives. The land-grant institutions were governed by relatively small (four to 12 member) boards of trustees appointed either by the governor of the state or elected by state legislatures. In most cases, the boards involved leading white citizens of the states and prominent members of the communities in which the colleges were located. Fifteen of the 17 black land-grant colleges in the United States and seven state normal and teacher training institutions participated in the Klein survey. Two (State Agricultural and Mechanical Institute for Negroes of Alabama and State Industrial College of Kentucky) did not participate. Examples of the publicly supported and controlled black institutions include Winston-Salem Teachers College (North Carolina), Prairie View State Normal and Industrial College, (Prairie View, Texas), and Alcorn Agricultural and Mechanical College in Alcorn, Mississippi.

Effects of *Brown v. Board of Education*

The U.S. Supreme Court decision in *Brown v. Board of Education* (1954) declared that racial segregation in public schools deprived black students of equal protection under the Fourteenth Amendment of the U.S. Constitution. Reversing *Plessy v. Ferguson* (1896), it stated "in the field of public education the doctrine of separate but equal has no place." Although blacks generally accepted the *Brown* decision, some educators

worried that services designed specifically for black students would disappear and existing patterns of discrimination could be perpetuated under the guise of equality. But despite the concerns of black educators and officials, there were also immediate benefits for the black colleges as a result of the decision. Funding for physical improvements became available and many black colleges initiated building programs despite the strong possibility that funding may have been intended, at least in the case of state funding, to prevent implementation of the new desegregation order. College enrollments also grew as a result of the increased financial aid for students.

Civil Rights Activity

Students in the black colleges were an important force in the civil rights activity of the early 1960s. In February 1960, four black college students from North Carolina Agricultural and Technical State University sat down at a segregated lunch counter in Greensboro, North Carolina, and refused to leave until they were served. This sit-in was the first highly publicized direct action in which college students participated. Direct-action protests exploded across the south after the Greensboro sit-in. Public policy officials responded in two ways to the civil rights protests and the black power demands for equality. One response was a renewed attempt to achieve a more precise and comprehensive definition of the policy of desegregation through judicial and legislative channels. Another was to extend funding programs aimed at correcting past practices of discrimination against the black colleges, such as through Title III of the Higher Education Amendments of 1968.

Current Issues

According to the White House Initiative on Historically Black Colleges and Universities, there are currently 105 institutions that award 11 percent of degrees earned by African American students.

A recent article in *Diverse* magazine listed five threats facing HBCUs and five opportunities that could define their future. Threats include the following: (1) the lack of funding and development. As state legislatures try to contain costs, there are efforts to merge institutions to cut costs. Endowments and low giving by alumni are concerns as well; (2) low graduation rates and the number of

students who take six years to graduate; (3) new competition, especially from for-profit and online institutions that enroll a majority of minority students; (4) a conservative and constricting campus culture that continues the tradition of paternalism; and (5) incidents of insolvency and loss of accreditation that erode morale and enrollment as white critics question the relevance of HBCUs in a desegregated society. Opportunities include the following: (1) black campuses provide a safe and supportive environment where students are not an underrepresented minority; (2) HBCUs have the opportunity to be a research haven for the root causes of racial disparities; (3) the institutions could expand specialty programs, thus becoming the source for in-demand talent such as science technology, engineering, mathematics, and teacher education; (4) the institutions could reach out to other underserved students such as Hispanics; and (5) HBCUs could have a more global influence by linking to the African diaspora.

History/Heritage Months

Ever since its colonial period, the United States has been a nation comprised of many distinct

ethnic, religious, and cultural groups. Although the enslavement of Africans and the subjugation of American Indians tainted the original optimism and commitment to freedoms enshrined in the Declaration of Independence and the U.S. Constitution, the United States has long boasted a reputation as a nation of immigrants, while its governing document ensured Americans the right to religious liberty. Approximately 450,000 enslaved Africans were brought to the United States, and more than 60 million immigrants have entered the nation from around the globe over the course of the nation's history, making the United States one of the world's most ethnically and culturally pluralistic societies.

The first 175 years of the nation's history were marked by a strong ideology toward assimilation, whereby immigrant and ethnic minority groups moving to U.S. shores faced intense public pressure to shed their respective cultural identities and heritages as quickly as possible in order to adopt those of the larger Anglo-Saxon society. Sometimes termed "Anglo-conformity" by sociologists, this assimilation-based paradigm began to shift following the success of the civil rights movement during the 1960s and early 1970s. By the mid-1970s, the United States began to embrace its multiethnic roots and pluralistic nature much more readily. This gave rise to multiculturalism, a social philosophy that views pluralism positively as a source of enrichment and strength. Under multiculturalism, individuals are encouraged to take pride in both their common identity as Americans while also retaining a sense of identification and pride in their distinct, respective ethnic heritage(s).

The shift toward a multicultural American society has produced efforts to raise awareness of the important historical and contemporary contributions that various immigrant, ethnic, and religious groups have made to the nation, such as the accomplishments that distinct groups have made to the U.S. military; the American political process; American literature and popular culture; and to the U.S. economy, education, and science/technology. The drive to raise public awareness of the accomplishments and contributions of ethnic minority groups has led to the implementation of various ethnic studies courses as part of the general education curriculum at many colleges

and universities across the nation, along with the designation of several ethnic history and heritage months in commemoration of America's pluralistic nature. Major history/heritage months include Black History Month, Hispanic Heritage Month, Native American Heritage Month, Asian/Pacific American Heritage Month, and Jewish American Heritage Month.

These designations have been established by the federal government and are annually reissued via presidential proclamation, with strong encouragement of states and local municipalities to pay homage to the respective heritages during the corresponding time of the year. History/heritage months are celebrated in various manners, including teachers giving lessons to students on ethnic history and literature, the highlighting of specific works of art in museums and books in libraries, or the airing of movies and documentaries chronicling an ethnic heritage on television.

Black History Month (February)

Arguably the best-known ethnic heritage month is Black History Month, which is celebrated in February. The annual recognition of African American history and contributions to the nation began as Negro History Week in 1926, which was initiated by historian Carter G. Woodson to address the widespread absence of black historical experiences from the mainstream canon of U.S. history. Woodson was particularly disturbed by the content of the popular film *The Birth of a Nation* (1915), which depicted black men as savage and lustful of white women, while also glorifying the Ku Klux Klan. The son of former slaves, Woodson became the second African American (after W. E. B. Du Bois) to earn a Ph.D. from Harvard University in 1912. He founded the Association for the Study of Negro Life and History (ASNLH) in 1915 and began publishing *The Journal of Negro History* in 1917.

In 1926, Woodson promoted the idea of a Negro History Week to be held during the second week of February. Two central figures in African American history, abolitionist Frederick Douglass (February 17) and President Abraham Lincoln (February 12) have birthdays in mid-February, which served as Woodson's basis to designate this week in commemoration of black history. Although not officially recognized by the

federal government until the 1970s, Negro History Week quickly became popular among African Americans and progressive whites across the country. The ASNLH provided black and white educators with posters, lesson plans, and other teaching materials to be used in the classroom. By the height of the civil rights movement in the early 1960s, several mayors nationwide recognized the week.

In 1976, Negro History Week was expanded into Black History Month by the ASNLH, which the federal government now officially recognized through President Gerald Ford's message on observance that year. Ford declared the following:

In the bicentennial year of our independence, we can review with admiration the impressive contributions of black Americans to our national life and culture . . . Freedom and the recognition of individual rights are what our Revolution was all about. . . Yet it took many years before these ideals became a reality for black citizens . . . I urge my fellow citizens to join me in tribute to Black History Month and to the message of courage and perseverance it brings to all of us.

Today, Black History Month is also celebrated in Canada and the United Kingdom, two nations with significant Afro-Caribbean populations. In the United States, the federal government designates an official, specific theme annually for Black History Month. Recent themes have included "Carter G. Woodson and the Origins of Multiculturalism" (2007), "African Americans and the Civil War" (2011), and "Black Women in American Culture and History" (2012).

Irish American Heritage Month (March)

The world's first Saint Patrick's Day Parade took place in New York City on March 17, 1762, showcasing Irish soldiers who were serving in the English army. However, the large influx of Irish Catholics to the United States did not occur until the middle of the 19th century. Initially confronted with intense nativism, stemming largely from their Roman Catholic religious heritage in an overwhelmingly Protestant society, Irish Americans played significant roles in the U.S.-Mexico War of 1846–1848 and the Civil War of

1861–1865, as well as the westward expansion of the nation.

President George H. W. Bush issued the first proclamation of Irish American Heritage Month in 1991, and Congress officially declared March as "National Irish American Heritage Month" in 1995. The selection of March corresponds with Saint Patrick's Day, a national holiday in Ireland commemorating the death of Saint Patrick, the Irish patron saint who introduced Christianity to the sons and daughters of Eire. Saint Patrick's Day is arguably the biggest ethnic holiday in the United States today, highlighted by the wearing of green and an annual parade along Fifth Avenue in New York City that features more than 150,000 participants and 2 million spectators. Upon proclaiming March as National Irish American Heritage Month in 2007, President George W. Bush commented as follows:

Since our founding, Irish immigrants have come to America's shores in search of better lives. Today, millions of American citizens are of Irish descent, and they and their forbears have helped shaped our way of life, strengthened our economy, contributed to the arts, and protected our Nation. Irish Americans have shown their devotion to our country by serving in our Armed Forces. America is especially grateful to these brave men and women for the sacrifices that have helped preserve the ideals of our country and made the world a safer place.

Asian/Pacific Islander Heritage Month (May)

The origins of Asian/Pacific Islander Heritage Month date to the mid-1970s when Jeanie F. Jew, a Congressional staffer and board member of the Organization of Chinese Americans, sought to establish a week in commemoration of the contributions of Asian/Pacific Americans to the United States. Jew was displeased that the 1976 bicentennial celebration of the nation's immigrant and ethnic diversity largely overlooked persons with heritage from Asia and the Pacific Rim. Her efforts to found a week of recognition for Asian/Pacific Americans were also driven by her personal desire to commemorate her great-grandfather, who helped build the transcontinental railroad. Jew found a supporter for her cause in Frank Moy, an administrative assistant to

Republican Congressman Frank Horton of New York.

In June 1977, Horton and Democratic Congressman Norman Mineta of California introduced H.J.R. 540. This House resolution called for the first 10 days of May to be declared Asian/Pacific American Heritage Week. Mineta, the son of Japanese immigrants, was interned during World War II and is the first Japanese American on the U.S. mainland to be elected mayor of a metropolis (San Jose, California) and to win election to the U.S. Congress. Mineta also played a significant role in the passage of the 1988 Civil Liberties Act, which issued a formal government apology to Japanese Americans for their forced relocation under Executive Order 9066 and provided \$20,000 compensation to persons who had been interned during World War II.

In July 1977, Hawai'i's duo of Democratic senators, Daniel Inouye and Spark Matsunaga, both of Japanese American heritage, introduced S.J.R. 72. This legislation likewise called for the first 10 days of May to be designated Asian/Pacific American Heritage Week. The first 10 days of May were selected because of the historical significance of these dates for the nation's two oldest Asian American communities. The first record of Japanese immigrants to the United States occurred on May 7, 1843, and the transcontinental railroad—built with the labor of large numbers of Chinese immigrants in the western states—was completed on May 10, 1869. President Jimmy Carter signed the congressional resolution into law on October 5, 1978, and the first Asian/Pacific American Heritage Week was observed in May 1979.

President George H. W. Bush signed a bill on May 14, 1991, that expanded Asian/Pacific American Heritage Week into the entire month of May. Since then, each U.S. president has issued an annual proclamation declaring May as Asian/Pacific American Heritage Month. In his 2012 proclamation, which coincided with the 70th anniversary of Executive Order 9066, President Barack Obama remarked the following:

Generations of Asian Americans and Pacific Islanders have helped make America what it is today. Their histories recall bitter hardships and proud accomplishments—from the

laborers who connected our coasts one-and-a-half centuries ago, to the patriots who fought overseas while their families were interned at home, from those who endured the harsh conditions of Angel Island, to the innovators and entrepreneurs who are driving our Nation's economic growth in the Silicon Valley and beyond.

Jewish American Heritage Month (May)

The most recently established heritage month commemorates the history and achievements of Jewish Americans. The U.S. Congress approved H.C.R. 315 in February 2006, which called upon the president to issue an annual proclamation designating Jewish American Heritage Month. President George W. Bush signed this measure into law shortly thereafter, with May serving as the month to commemorate Jewish experiences in the United States. Two Jewish American legislators, Democratic Congresswoman Debbie Wasserman Schultz of Florida and Republican Senator Arlen Specter of Pennsylvania, were instrumental in the efforts to establish Jewish American Heritage Month.

Between 1980 and 2005, various presidents issued annual proclamations designating a week in either April or May as Jewish Heritage Week. President Jimmy Carter issued the first proclamation in April 1980, which in the Jewish calendar marked the anniversaries of the Warsaw Ghetto Uprising, Israeli Independence Day, and the Days of Remembrance of Victims and Survivors of the Holocaust. In his proclamation, Carter made the following observation:

Ever since the first Dutch Jew set foot in New Amsterdam in 1654, Jews have been contributing bountifully to the culture and history of our country . . . American Jews have made their heritage—a heritage of struggle for freedom, knowledge, and human dignity—part of the inheritance of all Americans.

Hispanic Heritage Month (September 15 to October 15)

Spanish conquistadors were the first to explore much of the western United States, and the Spanish language has been spoken in the United States a century longer than English. In 1848, the United States annexed its southwest region from Mexico,

and it annexed Puerto Rico and Cuba at the conclusion of the Spanish-American War in 1898. The Hispanic legacy on American society is evident in the names of many U.S. cities and states, such as Los Angeles, San Francisco, San Antonio, Colorado, Florida, Nevada, and Arizona.

In 1968, Congress approved a resolution honoring the week including September 15 and 16 as National Hispanic Heritage Week. These dates were selected because five Latin American nations (Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua) celebrate their independence days on September 15, while Mexico's independence day falls on September 16. Chile celebrates its independence on September 18. President Lyndon Johnson issued the first presidential proclamation designating Hispanic Heritage Week in September 1968, but in 1988 Democratic Senator Paul Simon of Illinois sponsored legislation to expand the commemorative week into an entire month. A bipartisan coalition cosponsored Simon's amendment, and on August 17, 1988, President Ronald Reagan signed this bill into law. Since 1989, National Hispanic Heritage Month has been observed annually from September 15 to October 15.

President Bill Clinton spoke of both the historical significance and increasing social influence of Hispanics in American society during his 1999 proclamation of Hispanic Heritage Month:

Hispanics were among the earliest European settlers in the New World, and Hispanics as a people—like their many cultures—share a rich history and great diversity. Hispanic Americans have roots in Europe, Africa, and South and Central America . . . This diversity has brought variety and richness to the mosaic that is America and has strengthened our national character with invaluable perspective, experience, and values.

At the time of Johnson's initial proclamation of Hispanic Heritage Week in 1968, the nation's Hispanic population was comprised almost entirely of three specific nationality groups: Mexicans, Puerto Ricans, and Cubans. By the early 21st century, the Hispanic community had diversified considerably as a result of increased immigration from the Dominican Republic, El Salvador,

Guatemala, Colombia, and other nations in Central and South America.

National Hispanic Heritage Month exists in addition to several more specific and regionally based holidays and traditions that derive from the Hispanic legacy in North America. Cinco de Mayo and Día de los Muertos are Mexican-themed customs that are celebrated widely throughout the southwest, while northeastern and midwestern cities such as New York, Philadelphia, Chicago, and Cleveland host an annual Puerto Rican Day Parade. New York is also home to an annual Dominican Day Parade, and Miami's Calle Ocho Festival occurs each March in the city's Little Havana neighborhood and celebrates southern Florida's Caribbean Latino cultural influences.

Italian American Month (October)

Italy was a leading source of immigrants to U.S. shores during the late 19th and early 20th centuries. Although Americans of Italian descent live throughout the nation, Italian ethnic heritage is particularly strong in the metropolitan regions of the northeast, where large numbers of Italian migrants entered through the port cities of Boston, New York, and Philadelphia during the 19th and early 20th centuries. New York City and Philadelphia remain the two cities with the most residents of Italian ancestry. In addition, Chicago is home to a large Italian American community, as is the San Francisco Bay area. New York has the largest Italian American population of any state, followed by New Jersey, California, and Pennsylvania.

Although migrants from southern Italy and Sicily encountered strong prejudice and discrimination (termed "Italophobia") in the United States, and were often characterized as members of an allegedly inferior Mediterranean race upon their early years of arrival on American shores, their U.S.-born descendants eventually came to be regarded simply as white and much of the virulent anti-Italian bigotry diminished. Stereotypes of, and prejudice toward, Italian Americans have not completely disappeared, however, prompting the importance of history/heritage month for Italian Americans. Occurring in October to correspond with Columbus Day, which President Franklin D. Roosevelt declared a national holiday in 1937, Italian American Heritage Month grew out of

New York City Mayor Abraham Beame's designation of May 17–23 as Italian Culture Week in 1976. In 1985, this event was moved to October, and mayors and governors across the nation with large Italian American constituencies soon began to pay homage to this ethnic heritage. Annual presidential proclamations refer to this October commemoration as National Italian American Heritage Month.

Native American Heritage Month (November)

The first official federal government recognition of Native American heritage occurred in 1976, when President Gerald Ford signed Proclamation 4468 designating the week of October 10–16 as Native American Awareness Week. Ford's proclamation, signed on October 8, followed resolutions approved by the U.S. House of Representatives (on September 30) and the U.S. Senate (on October 1) that called upon the president to recognize a week devoted to American Indian heritage. Support for Native American Awareness Week had been buoyed by the nation's bicentennial celebration in 1976, which highlighted the nation's vast ethnic and cultural diversity. Ford declared in his proclamation:

It is especially appropriate during our bicentennial year to recall the impressive role played in our society by American Indians, Eskimos, and Aleuts. Native Americans have made notable contributions in education, law, medicine, sports, art, the military, science, and literature.

Native American Awareness Week was officially expanded to a full month in 1990 when President George H. W. Bush signed a proclamation designating November as National American Indian Heritage Month. The following year, Bush signed another proclamation that declared 1992 as the Year of the American Indian. As the nation prepared to celebrate the 500-year anniversary of Columbus's arrival in the Americas, public protests staged by indigenous and nonindigenous activists drew attention to the position held by Native peoples that Columbus's legacy is not one of honor and admiration. These protests also aimed to raise awareness in mainstream society over the potentially offensive nature of

sports team logos, such as the Washington Redskins and Cleveland Indians, and the ethnocentric bias contained within the historical narrative that "Columbus discovered America." While some within the Native American community engaged in social protests throughout 1992, others used its Year of the American Indian designation to educate greater American society about Native peoples' diverse histories, customs, cultural practices, and contributions to the United States.

In 2009, President Barack Obama issued two caveats to federal recognition of indigenous heritage. On June 26, Obama signed a proclamation designating the Friday after Thanksgiving (the very next day) as National Native American Heritage Day. In October, Obama renamed the month National Native American Heritage Month.

Criticism

Despite the proliferation of ethnic history/heritage months, both liberal and conservative opposition to such months has been expressed in recent years, albeit for different reasons. Conservative opposition typically criticizes the celebration and acknowledgment of ethnic pluralism as allegedly divisive and undercutting of assimilation efforts that unnecessarily divide Americans, while some liberals contend that limited and occasional

On May 17, 2011, President Barack Obama greets Nobel Peace Prize laureate Elie Wiesel at a White House reception in honor of Jewish American Heritage Month. Obama lauded Jewish Americans' accomplishments in "the arts, science, the military, business and industry, and in public and community service."

displays of ethnic pluralism, such as history/heritage months, trivializes diversity by reinforcing white Anglo-Protestantism as the default socio-cultural norm of American society. According to this perspective, ethnic and religious minority groups represent “condiments” who provide “flavor” to the nation’s “salad bowl,” while the “lettuce” itself remains the nation’s central core.

Actor Morgan Freeman expressed these latter sentiments in a December 2005 interview with CBS’s *60 Minutes*. Freeman referred to the idea of Black History Month as “ridiculous” because it allegedly reduces the historical experiences and accomplishments of African Americans to one month. Instead, Freeman advocated a comprehensive account of U.S. history that is fully integrated, uncensored, and incorporates the histories of ethnic minority groups within the larger national framework. “I don’t want a Black History Month,” Freeman declared. “Black history is American history.”

Former CNN commentator Lou Dobbs, an ardent critic of multiculturalism and an advocate of stricter immigration controls, has criticized ethnic holidays and heritage months as allegedly undermining national unity. During his March 17, 2009, radio broadcast, Dobbs declared on air, “I’m against St. Patrick’s Day. I’m against St. Columbus Day. . . . I’m against all of those things. . . . I mean what is with all of these ethnic holidays? How about an American Day?”

Supporters of ethnic holidays and heritage months do not see such celebrations as un-American, but rather as celebrating the nation’s proud tradition as a society that has welcomed peoples from all across the world to its shores. Numerous holidays, including Independence Day, Memorial Day, Veterans Day, Labor Day, Flag Day, Presidents Day, and Thanksgiving, honor the United States in a variety of other manners. Supporters of history/heritage months maintain that the multicultural celebration of American society is necessary to counter the traditional Anglo-centric bias of accounts of U.S. history, which has marginalized the experiences and contributions of others and rendered them nearly invisible, and also to provide the public with a more comprehensive understanding of the United States by raising awareness of the influences that historically overlooked groups have had on the nation’s development.

A “White History Month?”

Some opponents of ethnic heritage months controversially allege that such months are, by their very nature, racist and operate within a double-standard matrix. Proponents of this view express resentment that Black History Month and Hispanic Heritage Month, for example, have been established, but an official White History Month does not exist and, if efforts to establish such a month were initiated, would be heavily criticized as racist. While such viewpoints are rarely published in the mass media, they are not a fringe perspective, as numerous online blogs, talk radio discourses, and discussions among students on college campuses express these perspectives. Whether invoked mockingly or as a serious proposal, a certain segment of white society perceives an unfair, or reverse racist, standard by which ethnic minorities are free to collectively organize under the banner of their group identities, while whites face social opposition to collectively organize under the banner of whiteness.

In October 2012, Mercer University in Macon, Georgia, generated national attention after anonymous fliers posted in residence halls around campus declared that the upcoming months of November and December would be designated “White History Months.” Featuring a portrait of Thomas Jefferson, the fliers encouraged students to “Celebrate White History Months” and stated, “Since there is too much white history to squeeze into one month, we will settle for two.” The fliers also presented their rationale for a two-month celebration of whiteness, indicating resentment at multiculturalism on Mercer’s campus, with the following statement:

There are African American societies, black student organizations, and Indian heritage associations; however, there is not one white society of engineers, white student organization, or Caucasian heritage association. Why? Because if there are, various individuals will say this is racism.

The incident inspired a student-led rally condemning the fliers and expressing support for Mercer University’s ethnic diversity. Approximately 40 students of various racial and ethnic backgrounds attended the rally, and university

president Bill Underwood declared in a campus-wide e-mail that the fliers “demeaned efforts to promote education about people of diverse races and cultures and their contributions to our society. The ignorance reflected in the poster is a reminder of the imperative of these efforts.”

Black nationalist freelance journalist Mychal Denzel Smith expressed his belief that American society needs a White History Month in an October 2012 op-ed piece published in the British newspaper *The Guardian*. Smith opined that a White History Month is necessary because many white Americans are unaware of the socially constructed nature of race, as well as the pervasive history of racial supremacy associated with whiteness in American society. Smith asserted, ironically, that America needs a White History Month precisely so it can educate its public as to why it does not need such a month.

Opponents of the idea of a White History Month point out that because whiteness in the United States has been hegemonic and normative since colonial times, the nation’s mainstream culture and educational curriculum already reflects the perspectives, ideals, and experiences of white persons. Antiracist activist Tim Wise has stated the following:

White history has been made the normative history, the default position, and when your narrative is taken as the norm—indeed, when it gets to be viewed as synonymous with American history—the need to racially designate its origins is obviously a less pressing concern. White folks’ contributions have never been ignored, diminished, or overlooked. As such, to now demand special time to teach about the people we’ve already learned about from the start seems a bit posterous.

Hmong Americans

The Hmong are an ethnic minority from mainland southeast Asia. The Hmong’s implication in Laos’s so-called Secret War led thousands to seek resettlement after the United States withdrew in 1975. Currently, 260,076 people of Hmong descent reside in the United States. Since their arrival, they have integrated into mainstream American society and gained political influence, all while maintaining their cultural heritage.

The Vietnam War and Immigration

The political and ideological turmoil leading to the Vietnam War affected the Hmong in various ways. Although certain Hmong groups supported the communist force Pathet Lao, others were directly recruited and deployed by CIA-paid special forces or served as U.S. allies in the Royal Lao Army. After the Pathet Lao gained power in 1975, however, thousands of Hmong sought refuge in neighboring Thailand in fear of retaliation.

The first group of 3,466 Hmong arrived in the United States in December 1975 within the framework of the Indochinese Parole Program.

The same year, the Indochinese Migration and Refugee Act was signed into law, and it provided the Hmong access to financial assistance as well as health, employment, and education services. With the enactment of the Refugee Act in 1980, Hmong immigration reached its peak when an estimated 27,242 Hmong were admitted into the country. In the following years, the numbers decreased until 1987 to 1994, when more than 56,000 Hmong were resettled. With the official closure of the last Thai refugee camps in 1994, the resettlement process was terminated.

During the resettlement process, Hmong were dispersed across 50 U.S. states via Refugee Resettlement Voluntary Agencies that were affiliated with the U.S. Department of State. This policy of dispersal was believed to enhance assimilation and reduce costs for receiving states, yet it severely undermined traditional clan and family networks. Beginning in the late 1980s, many Hmong left their assigned place of settlement and moved closer to their kin. Accordingly, the Central Valley in California emerged as the largest Hmong settlement with Fresno as its capital. A few years later, in the mid-1990s, a tertiary movement toward the midwest, Texas, and South Carolina took place. Prospects of better-paid employment and a higher living standard led more than 20,000 Hmong to move to Minnesota in 1998.

The first group of Hmong refugees predominantly comprised the followers of the Hmong military leader, General Vang Pao, and were accustomed to elements of an American lifestyle and technology. The majority of the latter immigrant groups, however, were illiterate, lacked English-language skills, and any professional qualifications that were transferable to the American labor market. As the majority of Hmong arrived during a time of economic stagnation and dwindling empathy for southeast Asian refugees, they faced discrimination and open rejection and were considered competition for low-skilled jobs, scarce public resources, and welfare payments. Additionally, many Hmong were traumatized by war, displacement, and the prolonged stay in Thai refugee camps, and thus suffered from psychological stress. Accordingly, adjustment to an urban postindustrialized environment proved difficult and affected the traditional patriarchic gender order as well as relationships between generations.

Culture

The Hmong language is a tonal language consisting of eight tones. Until the mid-1950s, when Western missionaries developed the Romanized Popular Alphabet in Laos, the language relied on oral traditions rather than a written system.

Although many Hmong converted to Christianity, approximately two-thirds of the Hmong in the United States adhere to the traditional Hmong religion, which builds on animistic beliefs and ancestor worship, and demands particular rites for important occasions such as births, weddings, and funerals. The most prominent festivity is the Hmong New Year, which is celebrated throughout the United States between October and November. The ritual festivity was adapted to the new environment and currently includes commercial, educational, and political activities as well as beauty pageants or sports tournaments.

The circumstances of Hmong resettlement and their adaptation to U.S. society received greater recognition in the American public with the Clint Eastwood drama *Gran Torino* (2008), the first Hollywood production that starred a largely Hmong cast.

The Contemporary Scene

Between 2004 and 2006 another 15,000 Hmong refugees from the Buddhist Wat Tham Krabok in Thailand were admitted under the auspices of the Family Reunification Program. More than half of these new arrivals were younger than 17 years of age and many lacked any English and educational skills. This influx increased local concentrations particularly in Minnesota (66,181) and Wisconsin (49,240), two states that taken together account for the highest concentration of Hmong. As of 2010, another 91,224 Hmong reside in California, 10,864 in North Carolina, while smaller groups can be found in Michigan, Colorado, Georgia, or Alaska forming heterogeneous, socially and regionally divergent communities. Minneapolis/St. Paul thereby emerged as the largest ethnic enclave with 64,422 Hmong, who established various organizations, mutual assistance associations, Hmong media, and thriving businesses.

Over the course of a few decades, the Hmong achieved social mobility. About 62 percent have

finished high school and 12 percent hold at least a bachelor's degree. Of the 65 percent of Hmong who are in the labor force, about 30 percent are employed in manufacturing, 18 percent in educational and social services, and another 12 percent in retail trade. However, 25 percent of Hmong families are below the poverty level.

Leading figures include Lormong Lo, the first Hmong American to serve on an American city council, in Omaha, Nebraska (1994); Joe Bee Xiong, who was elected to public office in Wisconsin (1996); Mee Moua, who served two terms in the Minnesota senate from 2002 to 2010; and Cy Thao, who was elected to the Minnesota House of Representatives in 2002.

Ho v. San Francisco Unified School District (1994)

The *Ho v. San Francisco Unified School District* case was a class action suit brought in 1994 by several students of Chinese descent who were denied admission to schools of their choice because of their race. The students alleged that the school district violated the Fourteenth Amendment, and sought an injunction to stop the school district from using quotas and a system of racial classification to determine which students would be admitted.

At the time of the case, the San Francisco Unified School District, which controlled all of the public schools in San Francisco, California, operated under a consent decree, which was agreed upon by the parties in a prior lawsuit and approved by the U.S. District Court for the Northern District of California in May 1983. The lawsuit that culminated in the consent decree was brought on behalf of all San Francisco schoolchildren and was issued in order to encourage desegregation in secondary and elementary schools in San Francisco. The consent decree included a provision prohibiting any racial group from exceeding 45 percent of a school's total enrollment in any public school, or 40 percent in any alternative school. This decree ultimately allowed the school district to use a student's race to determine admission to schools in the city. If a school located in a student's neighborhood met its 40 or 45 percent race quota, then the student would be required to attend a different school.

The court in *Hirabayashi v. United States*, 320 U.S. 81, 100 (1943), stated that legislative classification or discrimination based on race alone has often been held to be a denial of equal protection. This is because race has historically been used as a way of oppressing, persecuting, or discriminating against a group of persons. According to *Regents of University of California v. Bakke*, 438 U.S. 265, 290 (1978), when a school attempts to place a cap on the number of students of a certain race that can attend a school, the courts will apply strict scrutiny and will typically find the quota or race-based classification system as violating the equal protection clause of the Fourteenth Amendment. Further, quota or race-based classifications by federal, state, or local government actors are unconstitutional unless the measures taken are narrowly tailored and further any "compelling governmental interests."

In the *Ho v. San Francisco Unified School District* case, which was decided by the U.S. Court of Appeals in the Ninth Circuit, the court applied strict scrutiny to determine the constitutionality of the measures taken by the school district. In order to meet this increased burden and have the measures found constitutional, the school district would have to show that the race-based classification was a remedial measure to make up for past racial discrimination. However, the only purpose

of the 40 and 45 percent quota was for racial diversity in the school district. As a result, the district court found that the school district engaged in state action, which subjected students to race-based classification. This confirmed the court's decision to proceed with a trial, thereby denying the students' motion for summary judgment.

The Difficulties of Reporting Race

In order to enroll children in the San Francisco school district, parents were required to report the student's race or ethnicity. However, the forms that the district provided to parents, which were in turn used to determine whether the quota was met and to assign students to other schools in the district, only provided nine race/ethnicity categories. By the end of the five years of the *Ho* case, the school district had increased the number of categories from nine to 13. However, beginning with the 2000 U.S. Census, individuals were given the ability to choose more than one race, with the possibility of identifying themselves with as many as 57 race combinations. Furthermore, the 2010 census provided individuals with the ability to write in their race if one of the 57 combinations was not sufficient.

At the time of the *Ho* case in 1994, Chinese American students had become the largest group in San Francisco. Since the conclusion of the case, the Chinese population has continued to grow, not just in San Francisco but also in the United States overall. According to the 2010 census, there were 3.3 million people in the United States who reported being of solely Chinese descent. Of the entire Chinese population, 49 percent lived in the west. Between 2000 and 2010, the Asian population, which included Chinese individuals, grew faster than any other race group in the entire country.

While the entire U.S. population grew by 9.7 percent, the Asian population grew by 43 percent. Overall, the Asian population grew in every state. In California alone there were 5.6 million Asians, a 33.7 percent increase from the 2000 census. The census reported that San Francisco was one of the four counties in which 25 percent of all Asians in California were located. Of San Francisco's total population of 805,235, the Asian population totaled 288,529.

The *Ho* case is noteworthy because the United States is becoming a more diverse country, with

every succeeding census reporting a higher percentage of combination races. This case ended the school district's quota and race-based classification system, meaning that students are now free to attend any school in the district, regardless of their race.

Hollywood Film Music and Ethnic Diversity

Throughout its history, Hollywood film music has had a number of influences from various ethnic groups. It moved from the abstract musical universalism of the classical period to the cosmopolitan eclecticism of the present day.

The Classical Period

In the period of classical Hollywood film music from 1933 to the end of the 1950s, movie scores performed many narrative and formal functions. Film music also sought to produce a sort of universalism, the creation of an audience that would react to the emotional stimuli and understand

the film's storytelling in a predictable way. The almost sole influence for this music was the European romantic dialect of the late 19th century.

The first generation of Hollywood composers primarily consisted of European émigrés, such as Max Steiner and Erich Wolfgang Korngold (from Austria), Franz Waxman (Germany), and Dimitri Tiomkin (Russia), who transferred their heritage into the newborn Hollywood music. The tonal, late-romantic dialect was considered the universal musical language. As such, it was applied to every kind of story and setting—especially in the 1930s—no matter how anachronistic it might sound. For example, the medieval British legend *The Adventures of Robin Hood* (1938, music by Korngold) had a 19th-century Viennese-flavored score.

Music from other ethnic groups was used rarely and in a clichéd way, mostly to denote a locale or the ethnic origin of a character. For instance, such nontonal musical systems as the pentatonic, chromatic, and modal scales were employed to decorate with generic exoticism an otherwise late-romantic tonal score. Mexican music was used in westerns, where some touches of mariachi music or the *deguello*—a slow Mexican figuration for trumpet announcing the imminent battle—would be added to reinforce the ethnicity of the characters, who were mostly Mexican stereotypes.

African American music traditionally had negative connotations in films of the classical period. Jazz was featured in musical numbers performed by noted African American artists. In these numbers, the narrative stopped to create room for sheer spectacle. African American artists were featured as exotic attractions. Besides this racial segregation in spectacle moments, jazz was also linked to criminal characters or disreputable joints. Blues had similar connotations, being typically featured, and played with a sultry saxophone, to depict dark ladies, femmes fatales, gangsters' molls, prostitutes, and the like.

The Postclassical Era

In the 1950s, Hollywood music, like Hollywood cinema itself, was undergoing a series of changes. Influences from other cultures began to have a more prominent and less stereotypical role. As for jazz, two films must be mentioned as seminal. *A Streetcar Named Desire* (1951, music by

Alex North) was the first film to feature the jazz dialect in a symphonic score, that is, not as an attraction but as music with a narrative function. *The Man With the Golden Arm* (1955, music by Elmer Bernstein) had a score that featured both the jazz language and the jazz combo instead of the traditional symphony orchestra. Both films, however, retained traces of the old negative connotations: the former is a sordid love story; the latter is about a drug addict. Jazz finally gained a legitimate position with Duke Ellington's score for *Anatomy of a Murder* (1959), in which, jazz music is no longer associated with outlaws.

In the 1960s, Hollywood entered a severe crisis. To survive it, synergistic cross-promotions between films and the products of the burgeoning recording industry were created. Film music now had to be profitable in the record market, and therefore had to renounce the old idea of an eternal universal language and, instead, had to follow the musical tastes of the day. In these years, the various descendants of jazz and blues became frequent options in film scoring. Among the prominent African American musicians working in films were Charles Mingus (*Shadows*, 1959), Quincy Jones (*The Pawnbroker*, 1964), James Brown (*Black Caesar*, 1973), and Isaac Hayes, the first African American composer to be awarded an Academy Award (for *Shaft*, 1971).

Two films were instrumental in popularizing Latin American rhythms and melodies. The first was Walt Disney's *Saludos Amigos* (1942), commissioned by Franklin D. Roosevelt's administration to promote good relationships between the United States and South American countries. The second was *Black Orpheus* (1958), which popularized bossa nova and other Brazilian dances.

Latin American music abounded in the film scores of the 1960s. Sambas, merengues, cha-chas, and the like can be found in many scores by Henry Mancini, one of the leading Hollywood composers of the period. The most prominent Latin American composer emerging during the decade was Argentina-born Lalo Schifrin, who penned the theme for the television series *Mission Impossible* (1966) and such action scores as *Bullitt* (1968) and *Dirty Harry* (1971). He combined sounds and rhythms of his homeland with jazz, becoming one of the forerunners of the Latin-jazz movement.

A. R. Rahman received an Academy Award for his work on *Slumdog Millionaire*, the first Indian native to receive an Oscar. Time magazine describes the composer, singer-songwriter, music producer, multi-instrumentalist, and philanthropist as the world's most prominent and prolific film composer.

An Eclectic World Music

The influence of Asian music grew stronger after the success of Toru Takemitsu's score for *Ran* (1985) and Ryuichi Sakamoto's score for *Furyo* (1983). Both composers provided music for Hollywood films in the following years, including Takemitsu for *Rising Sun* (1993). Following the success of *Farewell, My Concubine* (1993, music by Jiping Zhao) and *Crouching Tiger, Hidden Dragon* (2000, music by Tan Dun), Chinese music also moved into the spotlight. These Asian composers made an effective synthesis of their musical heritage with the Western tradition.

Genuine Asian music has since become familiar in mainstream cinema, even influencing two scores by quintessentially American composer John Williams: *Seven Years in Tibet* (1997) and *Memoirs of a Geisha* (2005). The Indonesian

gamelan, a traditional group of mostly percussion instruments, also made its mark in Hollywood, being featured in *The Year of Living Dangerously* (1982, music by Maurice Jarre) and being a major influence on composer Danny Elfman's works.

In the 1980s, Peter Gabriel's influential score for *The Last Temptation of Christ* (1988) launched the duduk craze for this Armenian woodwind instrument. In the following years, almost every film set in the Middle East or dealing with Middle Eastern characters featured the duduk, including *The Passion of The Christ* (2004, music by John Debney).

Indian music is the most recent addition to film scores, with two landmarks: sitar virtuoso Ravi Shankar's work on *Gandhi* (1982) and the huge success of *Slumdog Millionaire* (2008), which won the Oscar for Best Motion Picture of the Year and thus brought Bollywood cinema and music to Hollywood. *Slumdog Millionaire's* composer, India-native A. R. Rahman, won Academy Awards for Best Original Music Score and Best Original Song.

Contemporary Hollywood film music is highly cosmopolitan and eclectic in style. Film music's universalism now means that music of every genre and from every part of the world can be employed. Definitely gone are the days when film music considered the late-romantic symphonic language as the universal music, and ethnic touches were employed just to create ethnic stereotypes.

Holocaust, The

The Holocaust, known in Hebrew as the Shoah, was the planned systematic destruction of the Jews of Europe by the Nazi state of Germany during World War II, resulting in the genocide of about 6 million Jews throughout German-occupied territory. This death toll represents approximately two-thirds of the Jewish population before the Holocaust, including 1 million Jewish children. Although the Nazis carried out a program of extinction against ethnic Poles, Romani, and homosexuals, and subjected Soviets, political prisoners, prisoners of war, and the disabled to the same treatment as the Jews, the term *Holocaust* is conventionally reserved to refer to the actions against the Jews. This usage is challenged by a sizable minority of scholars. The term *Holocaust* has been used by scholars and historians in its current sense since the 1960s and was popularized among the general public in 1978, thanks to the TV miniseries *Holocaust*.

Setting the Stage for the Holocaust

Before World War II began, the so-called Nuremberg Laws had been passed in Germany as an early step toward the Holocaust. The Nuremberg Laws, passed in 1935, two years after Nazism became the state ideology, acted on the Nazi Party's codification of anti-Semitism and scientific racism. Various types of heritage were defined, depending on whether one's grandparents were all non-Jewish German, if three or four of them were Jewish, or if one or two of them were Jewish. Rights and privileges were denied to those who lacked sufficient German heritage. Bans were also issued on sex or marriage between Jews and non-Jews and on participation of Jews in German civic life. In contrast with earlier anti-Semitic laws, the goal was not to convert Jews to Christianity—indeed, Jewishness was defined according to birth and could not be altered or escaped through any means.

Depictions of the Holocaust focus on the concentration camps where prisoners were worked as slaves until they died or were killed, but this tends to gloss over the sheer amount of resources Germany expended on the systematic slaughter of the Jewish people. The Nazi state has been called “a genocidal state” by scholar Michael Berenbaum

because of the vast bureaucracy and complex planning necessary to carry out the Third Reich's genocidal mission.

By 1900, the United States had become home to the third-largest Jewish population in the world. In the early 20th century, the Jewish community in the United States had become deeply involved not only in American economic and social life but in the Progressive movement and the major social movements of the era. The African American civil rights movement included many prominent Jewish leaders, as did the labor movement, the fight for women's suffrage, and movements devoted to pacifism, social reforms, ending poverty and hunger, improving health care, and freedom of religious practice. During World War I, the Jewish Welfare Board was founded to assist in enlistment and fund-raising campaigns, as well as to address the needs of Jewish servicemen. Helping the refugees and other victims of World War I brought the disparate elements of the American Jewish community together for the first time. Old World divisions might never vanish completely, but no longer did they seem as sharply drawn as at the turn of the century; indeed, many acknowledged that the difference between American Jews and Jews elsewhere was larger than between different groups of American Jews.

The size of the Jewish middle class grew significantly in the first decades of the 20th century. Many Jews were also particularly interested in international affairs, in no small part because of the anti-Semitic pogroms in Russia, the Bolshevik Revolution, and the organization of political Zionism. As a result, the Jewish community was politically savvy, and numerous social networks existed when concerns began to be raised about the treatment of Jews in Germany and other Nazi-controlled territories. Jews had been mistreated in Europe for centuries, and 19th-century anti-Semitism had motivated the immigration of many Jews to the United States in the first place; in the early 1930s it may not have been clear to many Americans that what was happening in Germany was novel in its evil.

The Jewish community was divided in its response to the Nuremberg Laws and, later, the Holocaust. Jews of eastern European extraction were more likely to be Zionists—adhering to the belief that the Jewish homeland must be

restored. The hostility of Germany to Jews, and the Nazi state's expansionism, made Zionist concerns more urgent: a restored Jewish state with its own military could intervene on behalf of its people. Western European Jews were less likely to be Zionists in the early 1930s—and often were more concerned about the possibility that the growing anti-Semitism in Europe would spread to the United States, where Jews might be subjected to the same institutionalized abuses that African Americans faced—but this changed gradually over time. Large-scale boycotts of German imports were held in the meantime. In the 1940s, when the extent of the Holocaust—a term that was not used until long after the war—became hinted at, many Jewish American leaders who had been openly disdainful of Zionism before the war suddenly pledged their support to the cause. Outside the Jewish community, few Americans discussed the Holocaust or seem to have been aware of it, especially its severity; until 1944, when the first concentration and extermination camps were liberated, the genocide was largely the subject of rumor.

President Franklin Delano Roosevelt was a popular figure in the Jewish community because of the social programs and reforms he introduced as remedy to the Great Depression. His anti-Nazi foreign policy was a relief to those Jews worried about the spread of American anti-Semitism, but when the United States failed to enter the war when it first began, many worried that isolationism would prevail. To this day, the question of whether Jewish American leaders during and before World War II did enough to assist the cause of European Jews is a matter of continued debate, discussion, and reflection in the Jewish community.

In the aftermath of the war, the United States was instrumental in establishing the restored State of Israel and was one of the first national governments to recognize the new state. With Europe in tatters, the United States enjoyed a position it had never attained before: the world's foremost superpower. Similarly, the Jewish community was now the largest and wealthiest in the world, though many expected the restoration of Israel to change that. Liberalized immigration policies allowed the entrance of thousands of Jewish refugees from war-torn Europe. And anti-Semitism,

though never entirely eradicated, declined rapidly after the war; revelations about the extent of the Holocaust increasingly impacted the narrative of Americans' memory of the war, such that to many it retroactively became a campaign to liberate the Jews, even though the United States had entered the war late and had been at war for three years before realizing the scale of Germany's anti-Jewish programs.

Following the war, the Jewish community became increasingly suburbanized and liberal and migrated in large numbers to Sun Belt communities. Fears of a second Holocaust, with Arab enemies as the perpetrators, impacted both the popularity of supporting Israel—even for American Jews with no intentions of relocating to the restored homeland—and the United States' staunchly pro-Israel foreign policy. It also led to ongoing efforts to “liberate” Soviet Jews that resulted in over 100,000 Soviet Jews immigrating to the United States over time.

U.S. Holocaust Museums and Memorials

The United States has a number of Holocaust memorials, including CADLES Holocaust Museum and Education Center in Terre Haute, Indiana; the Holocaust Memorial Museum of San Antonio, Texas; the Kennesaw State University Museum of History and Holocaust Education in Georgia; the William Bremen Jewish Heritage and Holocaust Museum in Atlanta, Georgia; the Baltimore Holocaust Memorial in Maryland; the Dallas Holocaust Museum in Texas; the Children's Holocaust Memorial at Whitwell Middle School in Tennessee; the Desert Holocaust Memorial in California; the El Paso Holocaust Museum and Study Center in Texas; the Florida Holocaust Museum in St Petersburg; the Holocaust Awareness Museum and Education Center in Philadelphia, Pennsylvania; the Holocaust Memorial Center in Detroit, Michigan; the Holocaust Memorial in Miami Beach, Florida; the Holocaust Memorial at the California Palace of the Legion of Honor in San Francisco; and the Holocaust and Tolerance Museum in Chandler, Arizona.

Other Holocaust museums and memorials include the Illinois Holocaust Museum and Education Center in Skokie; the Museum of Tolerance in Los Angeles, California; the Nebraska Holocaust Memorial in Lincoln; the New

England Holocaust Memorial in Boston, Massachusetts; the New Mexico Holocaust and Intolerance Museum in Albuquerque; the Oregon Holocaust Memorial in Portland; the Survivors of the Shoah Visual History Foundation in Los Angeles, California; the Virginia Holocaust Museum in Richmond; the Museum of Jewish Heritage in New York; the Holocaust Center of Northern California in San Francisco; the Holocaust Museum in Houston, Texas; the Holocaust Memorial in Harrisburg, Pennsylvania; and the Holocaust Memorial in Milwaukee, Wisconsin. In San Antonio, Texas, the Holocaust History Project archives documents, images, recordings, and essays regarding the Holocaust and anti-Semitism, working primarily through its Web site. In New Jersey, the bronze statue *Liberation* was dedicated in 1985, in Liberty State Park in Jersey City, portraying an American soldier carrying a Holocaust survivor.

The United States Holocaust Memorial Museum (USHMM) is located in Washington, D.C., near the National Mall. It was established in 1993 and is supported by both federal funds and substantial private donations. The collection, one of the largest Holocaust materials collections in the world, includes 49 million pages of archives, 80,000 photographs, 1,000 hours of film, and 9,000 oral histories. The museum was established on the recommendation of the President's Commission on the Holocaust in 1979, chaired by Holocaust survivor and author Elie Wiesel. As part of its congressional mandate, the USHMM established the Center for Advanced Historical Studies in 1998, which supports Holocaust research and fellowships, and publishes the journal *Holocaust and Genocide Studies*. The USHMM is home to the Committee on Conscience, a genocide think tank, which has become the leading nonpartisan commenter on contemporary genocidal atrocities.

The Holocaust and the American Arts

Jewish Polish American writer Jerzy Kosinski was born Jozef Lewinkopf in Poland and lived under the Jerzy Kosinski name while posing as a Catholic during World War II. He and his family survived the Holocaust due to the help of local villagers, and Kosinski defected to the United States from Communist Poland in 1957. His

semiautobiographical novel *The Painted Bird* was published in 1965, depicting the wanderings of a boy in eastern Europe during World War II; both the boy's religion and the specific parts of Europe he finds himself in are left unknown.

William Styron, in 1979, published *Sophie's Choice*, now probably best known for being adapted into a movie starring Meryl Streep. A best seller, the novel takes place in the 1970s but centers around Sophie's past in the concentration camps, in which a Nazi doctor forced her to choose which of her two children would be killed. One of the lead characters in the novel is an American southerner, and the novel explicitly compares the racial violence of the south with the sufferings of the Holocaust.

American cartoonist Art Spiegelman won the Pulitzer Prize for his 1991 graphic novel *Maus* (originally serialized from 1980 to 1991 as a feature in *Raw*, a magazine published by Spiegelman and his wife). Semiautobiographical, the comic depicts Spiegelman interviewing his father about his experiences as a Polish Jew during the Holocaust, while casting different ethnicities as different animals: Jews as mice, Germans as cats, and gentile Poles as pigs, leading to the powerful visual depiction of mice with pig masks tied to their faces, symbolizing the Jews who tried to hide their Jewishness to survive. It was the first comic book widely accepted in the English-speaking world as valuable literature.

Philip Roth's 2004 novel *The Plot Against America* takes place in an alternate version of the Newark in which Roth grew up. In this alternate history, Franklin Delano Roosevelt loses the 1940 presidential election to Charles Lindbergh, whose isolationism and anti-Semitism greatly impact the treatment of Jews in the United States during the Holocaust and in the aftermath of World War II.

As in other countries, the United States has occasionally dealt with individuals and movements who have been Holocaust deniers. Holocaust denial is the erroneous belief that the Holocaust as we have described it did not occur—that a much smaller number of Jews died, that extermination camps did not exist, and that there was no official policy of Jewish genocide in Nazi Germany. The corresponding claim, explicit or not, is necessarily that a Jewish conspiracy perpetrated a hoax. General Dwight Eisenhower, the Supreme

Allied Commander, predicted in 1945 that someday people would insist that Nazi brutality had been imagined as propaganda, and it is in part because of this fear that we have so many photographs of prison camps today. One of the first well-known deniers was an American, the anti-war activist and historian Harry Elmer Barnes, who claimed in 1962 that the Holocaust had been greatly exaggerated in order to justify American involvement in World War II—and that Germany was a victim of aggression.

More denial books followed by other authors in the United States, including *The Hoax of the Twentieth Century* in 1976 by electrical engineering professor Arthur Butz (who was censured by his university 30 years later). In 1978, the Institute for Historical Review (IHR) was founded by Willis Carto, a far-right activist who had assisted in George Wallace's 1968 presidential campaign. Describing itself as a research and publishing center operating in the public interest, the IHR disseminates anti-Semitic literature, focusing primarily on evidence that the Holocaust never occurred.

Home of the Brave

Home of the Brave was a groundbreaking 1949 American film examining the problem of racism from the point of view of an African American soldier serving in the Pacific theater. The film was directed by Mark Robson, written by Carl Foreman (from a play by Arthur Laurents), produced by Stanley Kramer and Robert Stillman, and starred James Edwards, Jeff Corey, Lloyd Bridges, Douglas Dick, Frank Lovejoy, Steve Brodie, and Cliff Clark. *Home of the Brave* was both a critical and commercial success. The National Board of Review chose it as one of the best 10 films of 1949, and Foreman's screenplay was nominated for the Robert Meltzer Award given by the Writers Guild of America.

The Origins of the Screenplay

The screenplay for *Home of the Brave* is based on a play of the same name written by Arthur Laurents, which was performed on Broadway from December 27, 1945, to February 23, 1946. The play is set in 1944 in a military hospital in the South Pacific, a setting that allowed the playwright to plausibly bring the diverse characters in the cast into a single confined location where they are forced to interact with each other. Although not a popular success, running for only 69 performances, the play was critically acclaimed. As of 2012, it has not been revived on Broadway, although a television version was broadcast in 1957 in the second season of the series *ITV Play of the Week*.

Producer Stanley Kramer acquired the rights to the source material for *Home of the Brave* for \$35,000. The primary difference between the play and the film is that in the play the central character is Jewish—Private Peter Coen, known as “Coney”—while in the film, this character becomes Private Peter Moss, an African American. Interestingly, Laurents originally planned to make the central character in *Home of the Brave* African American rather than Jewish but discarded this idea because he felt it would be too controversial for an American theater audience in 1945. Despite the fact that it would have been extremely unlikely for white and African American soldiers to serve side by side in a combat unit (the U.S. Armed Forces were segregated until

1948), Kramer made this change because several films dealing with anti-Semitism had already been produced, including the 1947 hit *Gentleman's Agreement*. Kramer also noted the advantage, for a film, in the obvious visual difference between an African American soldier and the white soldiers around him.

Controversy During Production

However, the idea of producing a film directly attacking racism, particularly racism in the military, and with an African American central character who was the equal of the white characters in the film, was extremely controversial. The production was shrouded in secrecy because Kramer feared that segregationist pressure groups might try to disrupt production of the film. *Home of the Brave* was produced under the dummy title *High Noon*; no visitors were allowed on the set; all crewmembers swore an oath not to discuss the film; and the actors, screenwriter, and Kramer himself all ate lunch privately and entered and left the studio by a rear gate to avoid attracting press attention.

*Black troops in Burma stop to read President Truman's victory proclamation in Europe, May 9, 1945. The story of soldiers like these is told in *Home of the Brave*, a 1948 film about the problem of racism from the point of view of an African American soldier.*

Plot Synopsis

The main character in *Home of the Brave* is an African American soldier, Private Peter Moss, who was played by James Edwards. Serving in the Pacific, Moss narrowly escapes death on a mission to an island held by the Japanese army and is traumatized by the death of his only friend in his unit, a white soldier named Finch (played by Lloyd Bridges); part of the trauma is due to guilt, as Moss feels he should have died instead of Finch. Moss becomes paralyzed, without any observable physical cause, and most of the film follows the efforts of an Army physician (played by Jeff Corey) to bring him back to health. Much of the story is told in flashback, as the physician administers drugs to help Moss remember his past life and the events leading up to his paralysis.

Moss, a surveyor, became part of a team led by Major Robinson (Dick), and including the bigoted Corporal T. J. Everett (Steve Brodie), Sergeant Mingo (Frank Lovejoy), and Finch, a cartographer and former classmate of Moss's. Robinson is not pleased at being assigned to work with an African American, but is told by his superior officer that he must be willing to work with anyone who can help the mission.

During the mission, Moss and Finch become close friends and make plans to work together after the war is over; Finch also defends Moss from the racist attacks of Corporal Everett. However, in a fit of anger, Finch deeply hurts Moss by calling him a "nigger" (the first use of that word, forbidden by the Motion Picture Production Code, in an American film since 1934). Under the influence of the drugs, Moss also recalls racial abuse he had suffered from others, including Corporal Everett. Significantly, Moss experiences a breakthrough in his treatment when the doctor uses the word *nigger* while shouting at him. The film ends with an upbeat conclusion that was typical for the time—Moss is cured, is acclaimed a war hero, and makes plans to open a business with Mingo.

Homestead Act (1862)

The Homestead Act of 1862 catalyzed agricultural development in the American west through the promise of free public land. Both celebrated and criticized as a method of promoting economic and social equality, the act's race and gender neutrality opened opportunities for land ownership to men and women from a range of cultures, including European immigrants, African Americans, Mexican Americans, and Mormons. By encouraging settlement and land speculation, it furthered the displacement of Native Americans while permitting some indigenous people to preserve their autonomy.

Legislative History and Text

Embodying the Jeffersonian ideal of a nation of small landholders, homesteading had a wide constituency in the northern United States in the decades before the Civil War. Land reformers viewed farm ownership as a way to save the economic and political independence of urban workers and to stop southern planters from extending slavery into western territory.

The secession of the Confederate states opened the political window for the passage of the Homestead Act in 1862. The politics of slavery and nativism had blocked earlier homestead bills. Southern leaders predicted that free land would disrupt the sectional balance between free and slave-owning states by stimulating western

migration by northern farmers and European immigrants. Following secession, the Republican-led Congress passed the Homestead Act over minimal Democratic and border-state dissent.

Issues of race, alienage, and ethnicity were embedded in the 1862 act. Drafters designed a low hurdle for foreign-born land applicants, who simply had to declare their intention to become citizens to register a claim. More remarkably, in a nation that sharply limited the opportunities for women and racial minorities to hold property, the act did not expressly discriminate on the basis of those identities.

Unlike antebellum "preemption" laws, the Homestead Act did not require settlers to purchase public land, although it did offer a "commutation" provision allowing purchase after a short residency period. For those who sought a patent of free land, the act required the settler to register his or her claim with a local land office, live on the land for five years, make improvements, and prove compliance with these requirements at the end of that term.

Jeffersonian Dreams and Reality

About 20 percent of the approximately 1.442 billion acres of the public domain of the lower 48 states, or over 270 million acres, were privatized by claimants under the residency and commutation provisions of the Homestead Act, producing perhaps 400,000 owner-occupied farms. Most homesteaders settled in the Great Plains, including large swaths of public land in Nebraska, the Dakotas, Montana, Oklahoma, and Colorado. By 1900, homesteading moved farther west, as amended homestead acts, which permitted larger land holdings, made settlement in arid parts of Oregon, Washington, eastern California, and Arizona viable for ranching.

Historians continue to debate the effectiveness of the Homestead Act as a system of equitable land distribution. Most scholars, following the Depression-era research of historian Paul Wallace Gates, focus on the misuse of the law and its failure to preserve the public domain for actual settlers. In practice, many homesteaders had to purchase their land from private sellers after finding that speculative land purchasers, mining and timber interests, and railroads had already claimed the best public land. And those settlers who staked a

claim to a free homestead often lacked the capital and labor to develop their land.

Recent scholarship has begun to recover the ways that race, ethnicity, and gender shaped the experience of homesteading. If older research focused on the tragedies of homesteading, recent work uncovers its ironies: that a program of public land distribution designed to protect the independence of self-sufficient white male farmers promoted western settlement by collectivities of racial and ethnic minorities and single women.

European Migration

As pressure for land increased in northern and central Europe during the mid-19th century, many Europeans traveled to the United States to take advantage of the Homestead Act. Some of these immigrants were tenant farmers squeezed out of the land market by the expansion of commercial farming, while others came from landholding families without enough property to parcel out to their younger children. Most learned about the Homestead Act through “American letters” sent by family members already in the United States or by promoters from western states who set up offices in European cities. They were also encouraged to move west by their churches and through ethnoreligious colonization organizations, such as the Minnesota Irish Immigration Society, the Swedish Agricultural Company, or the Hebrew Union Agricultural Society.

Though many migrants purchased their land from railroad companies or land speculators, thousands of other families claimed free public land. In the Great Plains states, foreign-born settlers and their children often became the majority of the population on the frontier. While proponents of the Homestead Act expected individual households to drive western settlement, European migrants tended to settle in colonies. Like their countrymen in industrial cities, these homesteaders built ethnic enclaves of varying strength and persistence to respond to the opportunities and hardships of frontier life. Group settlement promoted self-defense, mutual aid, and political power within rapidly changing territories. It also allowed migrants to transfer familiar ways of life or common religious or utopian beliefs to a new land.

Germans—a diverse culture that included Lutherans, Mennonites, and Catholics, merchants

and farmers, and German-speakers from Russia, Switzerland, the Austrian Empire, and Alsace—dominated European homesteading. Russian-Germans became particularly central to the success of Great Plains homesteading, as they imported hardy winter wheat that could survive its climate. British, Irish, and Scandinavian immigrants also formed population clusters in this region, along with smaller settlements of Czechs, Poles, and eastern European Jews.

Exodusters

Joining European settlers in Kansas in the late 1870s and Oklahoma after the 1890s were thousands of African Americans seeking to escape economic, social, and political oppression in the south after the end of Reconstruction.

This “Kansas fever” was triggered by disenfranchisement campaigns in Louisiana in 1879, the introduction of a resolution by Minnesota Senator William Windom encouraging blacks to find political sanctuary in the U.S. territories, and the millenarianism of religious leaders like Benjamin “Pap” Singleton. But it followed on the heels of a considerable black migration in the previous decade and reflected long-standing desires by formerly enslaved African Americans to form self-sufficient households and communities through land ownership.

Western homesteading proved attractive because the overwhelming majority of African Americans could not own land in the south. That path had been denied to the freedmen after the war, as defeated southern planters secured their land from redistribution and replaced slavery with sharecropping and tenant farming. An 1866 Homestead Act geared toward distributing public land in the south had also failed to open land to black settlers in that region. Many Exodusters purchased land sold by promoters, but others were able to claim free land through homesteading.

Mexican Americans

As federal land surveys reached the southwest in the 1870s, Mexican American residents used the Homestead Act to consolidate their property holdings and protect themselves from Anglo-American land claimants. Mexican American homesteaders usually came from families of high status but middling wealth, such as former military or political

officials in the Mexican-era government of Arizona, and they used land ownership as a path to become ranchers and farmers. Land ownership also preserved their political strength in a region where they were quickly becoming a minority.

Mormons

Racially “white” but religiously “other,” Mormons banded together to resist the hostility of outsiders, practice a common faith, and develop collective agricultural practices necessary in their arid settlements. The Homestead Act’s openness to women claimants was a boon to Mormon families, leaving space for wives in polygamous marriages to claim land in their own names. These claims might serve to expand the husband’s landholdings or they could provide a measure of independence for plural wives and their children.

Native Americans

The displacement of Native Americans attendant to the Homestead Act is well known. For example, in Kansas, a center for white and African American homesteading, the federal government shrank the reservation lands of the Kansa Indians in 1859; by 1877, all of the Kansa Indians had been removed to the Indian Territory. Even as the act subsidized their displacement, its provisions allowed American Indians to claim land if they took up settled agriculture. Some Native Americans applied. In 1869, 25 families from the Santee Sioux tribe, which had been removed by the federal government to the Dakota Territory after a bloody rebellion, formed the Flandreau Sioux colony. They surrendered their tribal land claims and, with the help of government officials and missionaries, entered individual land claims under the Homestead Act. A similar Indian land policy would underlie the Dawes Severalty Act of 1887.

Honduran Americans

The majority of Honduran Americans live in “mini-Honduran nations” throughout the country, in cities such as New York; Houston, Texas; Los Angeles and Miami; Charlotte, North Carolina; Dallas, Texas; New Orleans, Louisiana; Atlanta, Georgia; and Chicago, Illinois. According to the 2000 U.S. Census data, 218,000 Hondurans made up 0.6 percent of the total Hispanics living in the United States. Whereas the overall Hispanic population of the United States grew 43 percent between the 2000 and 2010 censuses, Honduran American population grew 191 percent to a total of 633,401 in 2010.

During World War II, Hondurans began coming to the United States as employees of the United Fruit Company, following the merchant marine trade routes and remaining in port cities such as New York, New Orleans, Boston, and Miami, and cities in New Jersey. They arrived as housemaids, gardeners, and the children of Honduran managers. They learned English, married U.S. citizens, remained in America, and became part of the nation’s growing middle class in the

1950s. Many were not integrated into Latino or Honduran communities, and therefore they assimilated into the “mainstream” U.S. culture, received a college education, and began working as professionals—teachers, nurses, lawyers, and engineers.

In the 1960s and 1970s many Hondurans entered the United States as students, tourists, or participants of family reunification programs. During this time frame, no strong Honduran communities existed; therefore, more resources were necessary to survive in the United States as members of the middle class. The most common immigrants from Honduras were single men between the ages of 20 and 34, considered by many to be the prime working age. Many left children and spouses behind with family members in Honduras to come to the United States to work. After establishing themselves here, some married U.S. citizens and formed families, while others brought their Honduran families to live with them.

In the 1980s, in the shadow of broader global economic restructuring, the Honduran economic market changed drastically. Moreover, civil wars in two bordering countries, El Salvador and Nicaragua, spread into the Honduran countryside. *Campesinos* (rural farmers) moved into the capital city of Tegucigalpa looking for work. When work became scarce across the entire country, many made the journey to the United States (including many who were undocumented, or *mojado*), looking for work to support family members left behind in Honduras.

Hondurans entering the United States during this period depended on family networks and compatriots for work and housing. This was the beginning of the trend of undocumented Hondurans entering the United States for economic reasons that still existed in the early 21st century. In 2012, there were 11 Honduran consulates in the United States serving compatriots. They were located in Washington, D.C.; Atlanta; Belmont, Massachusetts; Chicago; Houston; Los Angeles; Miami; New Orleans; New York City; Phoenix; and San Francisco.

Hurricanes Mitch and Katrina

The effects of Hurricane Mitch, which destroyed the infrastructure of Honduras in October 1998, increased the number of immigrants coming

to the United States for economic reasons. This group of immigrants also tended to stay in established Honduran communities, working in the service and agricultural industries, and not becoming part of the mainstream middle class. In August 2005, when Hurricane Katrina hit New Orleans, there were approximately 120,000 Hondurans living there, many of whom had come to the United States to escape the economic disaster of Hurricane Mitch. Many fled the area during the mandatory evacuation and relocated in other mini-Honduran nations like Houston, Texas. Many returned to New Orleans as part of the reconstruction efforts. Some Hondurans were part of the federal government’s Temporary Protected States (TPS) program, while at the same time other undocumented Hondurans experienced heightened fear of deportation during the uncertain economic effects caused by Hurricane Katrina. The TPS program is sponsored by the secretary of Homeland Security for individuals from specific countries that are facing civil war, environmental disasters or epidemics, and other extraordinary and temporary conditions. Employment authorization is generally granted and has been a resource for Hondurans entering the United States for the past several decades.

Garifuna

The Garifuna are descendants of Carib Indians and escaped black African slaves who settled on the island of Saint Vincent. In the 17th century when the British colonized the island, the Garifuna resettled along the Caribbean coasts and islands of Belize, Guatemala, and Honduras. But in 2012, there were mini-nations of Garifuna, mainly from Honduras, living in Chicago, Miami, Los Angeles, and New York City. In the past, the census may have been misleading when counting the number of Honduran Americans living in the United States because the Garifuna may have been counted as blacks rather than Hispanics. The Garifuna community takes great pride in cultural, historic, and linguistic preservation. One of the most famous cultural contributions of the Garifuna is the traditional music and dance called the *punta*.

Culture

Catracho(a) is a nickname that all Hondurans call themselves. The Liga Nacional de Fútbol

(National Soccer League) is an important part of the Honduran American culture, as is displaying flags of favorite soccer teams and the national flag. The Honduran flag is blue and white striped with five blue stars representing all of the Central American countries centered on the middle white stripe. Favorite dishes found at local Honduran restaurants include rice and beans, *baleadas*, *chismol*, *sopa de caracol*, *pupusas*, *mondongo*, *plátanos maduros*, and *carne asada*.

Hopi

The Hopi are a federally recognized tribe whose reservation was created by executive order in 1882. They primarily live on the Black Mesa escarpment in northeastern Arizona. Their 2.5-million-acre reservation is surrounded by the larger Navajo

Nation with whom the Hopi have had varied relationships over the years.

Most recently, concerns have dealt with sovereignty and gaining exclusive control of previously jointly used lands that were not identified by the federal government as exclusively Hopi in the 1882 treaty or subsequent executive orders. This created a jurisdictional problem that has led to years of turmoil and conflict. The Hopi consider their lands to be sacred and believe it is their duty to preserve and ensure that it is not desecrated or overused; they have felt the Navajo had let sheep and cattle overgraze the land.

In addition, the Hopi felt they had not received their share of royalties from the Peabody Coal Mine on Black Mesa in the disputed area. The federal government stepped in and passed the Navajo-Hopi Land Settlement Act of 1974, which led to the generally peaceful partition of 1.8 million acres, a freeze on any development in the disputed area, and the relocation of numerous Navajo and Hopi families. On May 9, 2009, President Barack Obama ended the dispute with the repeal of the freeze so that families can now repair their homes and obtain electricity.

The Peaceful Little Ones

Hopi is an English abbreviation of Hopituh Shinu-mu (The Peaceful People, or Peaceful Little Ones). The Hopi use it to refer to individuals who behave appropriately, are respectful, well-mannered, civilized, peaceable, polite, and follow the Hopi way—a philosophy and set of values that permeates all areas of life, including the setting of political policy and how one learns. The Hopi speak an Uto-Aztecan language that is related to Southern Paiute, Ute, and O'odham; culturally, they are related to Zuni, Acoma, Laguna, and the Rio Grande Pueblos.

Settled agriculturalists, the Hopi are the westernmost Puebloan peoples whose ancestors lived on the Colorado Plateau for thousands of years. They moved to their present homes following a history of clan and band migrations that are well documented in Hopi oral narratives and archaeological record.

The Hopi refer to the numerous sites and cliff dwellings as the footprints of their ancestors. One Hopi town, Oraibi, is the oldest continuously inhabited town in the United States; in the 1540s

the Spanish estimated it was home to between 2,500 and 3,000 people.

Through the years the Hopi have provided asylum for many people. Following the Pueblo Revolt of 1680, the Hopi gave sanctuary to Tewa-speaking migrants who feared reprisals from the Spanish when they returned to New Mexico in the 1690s. The Hopi allowed them to stay but they had to promise to contribute to Hopi culture, assume religious responsibilities, and live the Hopi way. Their contribution was to serve as warriors and protect the First Mesa Hopi village of Walpi from raids by Utes, Navajos, Apaches, and Spaniards and to serve as a buffer against Euro-American intrusions. The Hopi and Hopi-Tewa's calculated resistance to colonization, isolated location, tenacity, and belief in their culture has kept their traditions, language, religious beliefs, and rituals alive.

According to the 2000 U.S. Census, the Hopi had a population of 6,946 people, which by 2010 had risen to 12,580, with another 6,000 individuals self-identifying as having partial Hopi heritage, a reflection of increased intermarriage outside the Hopi community and matrilineality.

The Hopi as a sovereign nation is a creation of the federal government, which wanted to deal with a single entity when discussing governance, land, mineral development, educational, and welfare issues. Under the Indian Reorganization Act, the Hopi Tribal Council was established in 1935 and a constitution was written by Francis LaFarge in 1939. This government has been accepted by the Progressive faction, or those who favor working with the federal government by using a democratically elected representative form of government or who have been Christianized. In contrast the Conservative faction feel that the Hopi should follow their traditional theocracy with complete village self-governance. This political factionalism still continues.

The Hopi nation is comprised of village communities located on three mesas and outlying towns. Moving from east to west are First Mesa (Hano a Hopi-Tewa village, Walpi, Sichomovi) with Polocca at the base of the mesa, Second Mesa (Shipaulovi, Mishongnovi, Shungopavi), and Third Mesa (Oraibi, Bacavi, Hotevilla) with Kyakotsmovi at the foot of the mesa. Lower and Upper Moencopi, agricultural summer villages,

are sited near Tuba City and are home to a resort center. The tribal offices are located at Kyakotsmovi (previously called New Oraibi) at the foot of Third Mesa. Indian Service offices are located at Keam's Canyon, east of First Mesa. Today, many families live at the foot of the mesas where they can access amenities like electricity, water, and roads, using the mesa-top villages as ceremonial centers. Others who live off-reservation throughout the United States return regularly to fulfill family, clan, and religious obligations.

The Hopi are one of the best-known and most written about American Indian peoples. Every American has seen their beautiful pottery, painting, basketry, and silver and turquoise jewelry. People have also heard about or gone to see the katsina plaza dances or the famous snake dance, although most parts of Hopi religion are held in private and not meant to be seen by uninitiated individuals. Famous Hopi individuals are also well known: from the potters of the Nampeyo family to historic religious leaders and, finally, to Lori Piestewa, the young soldier who was killed in Iraq.

House Made of Dawn

N. Scott Momaday's *House Made of Dawn* (1968) is usually recognized as the first and one of the most influential novels of the literary movement critic Kenneth Lincoln called the "Native American Renaissance," which includes authors such as Sherman Alexie, Joy Harjo, Leslie Marmon Silko, and others. Momaday's realistic treatment of Native American life and powerful literary language not only made the author's reputation but the work's success helped open doors for succeeding Native American authors, both in greatly expanding publishing opportunities, particularly for novelists, and through an explosion of serious critical and scholarly attention to these new writers. *House Made of Dawn* was unexpectedly awarded the Pulitzer Prize for best novel of 1968—the publisher had already allowed the book to go out of print before the prize was announced.

Native American Renaissance

House Made of Dawn was hailed for its contrast with previous novels about Native Americans, which shared with anthropological works timeless settings in a presumed past that was defined

as more culturally authentic. Focused on Abel, it tells the story of a troubled World War II veteran who returns to the reservation, is imprisoned for murder, relocated to Los Angeles, and ultimately finds his way back to his community, the fictional Pueblo town of Walatowa, Cañon de San Diego, New Mexico. The novel is temporally complex, with the story unfolding through multiple techniques, including flashbacks, visions, songs and stories from oral traditions from multiple Native American traditions, sermons, and passages from a diary.

Momaday has said that the novel is in part based on his memories of growing up among Native American veterans who returned from World War II to face prejudice despite their service. The novel deals with contemporary social issues, including prejudice, relocation of Native Americans from traditional lands and reservations to cities, urban Native American life, and the Native American Church and its peyote rituals. These themes and settings, particularly the contrast of reservation and urban life and the role of traditional religion and ritual in these contrasting settings, all became important in contemporary Native American literature.

Taos Pueblo, New Mexico, is a Native American community that has been continuously inhabited for over 1,000 years. The term house made of dawn refers to the world of spiritual and physical wholeness and connectedness to the land and its people; the land plays an important role in the spirituality of indigenous American people. In the 1968 book of the same name, the protagonist, Abel, becomes separated from that world through his life experiences outside his family's New Mexico reservation.

An important issue in this novel, and also influential for subsequent writers of contemporary Native American fiction and for Native scholars of this literature, is the role of oral tradition in literature and in contemporary life. Momaday is a member of the Kiowa Nation from Oklahoma but spent his childhood in Jemez Pueblo of New Mexico, the model for Walatowa, and on the Navajo Reservation in Oklahoma. Multiple traditions are represented and sensitively combined in the novel, the title of which is taken from a Navajo healing ceremony, the Night Chant. Healing through traditional practices that link Native Americans to community and the natural world is a major theme of the novel, which begins and ends with a traditional run in the Pueblo community that honors the dead.

The religious divisions between urban Native Americans and those on traditional lands are reflected in the major indigenous characters in the novel, including Abel's grandfather Francisco, who participates in Pueblo ceremonies in the kiva, a semisubterranean ritual structure, and John Big Bluff Tosamah, who has adapted to city life in Los Angeles and is a priest in the Native American Church who uses Kiowa traditions as the basis for some of his religious teachings. Momaday's novel represents both traditional Pueblo and Navajo and Kiowa religion and community and the adaptation of these to urban environments, specifically Los Angeles, where Tosamah's sermons can be seen to help Native Americans working low-wage jobs and living marginal lives. Abel is also befriended in the city by Ben Benally, a Navajo who treasures his culture, sharing the House Made of Dawn Night Chant song with Abel, but who also finds pleasure in the life of the city.

Momaday was born in 1934 in Lawton, Oklahoma. His father Al was a recognized Kiowa artist, educated at Bacone College, and his mother Natachee Scott Momaday was an author and illustrator. After graduating from the University of New Mexico, Momaday received his Ph.D. at Stanford University, where he studied writing with famed western author Wallace Stegner and poetry with poet and critic Yvor Winters, who had a deep interest in Native American poetry and a profound influence on Momaday. Momaday has taught at the University of California, Berkeley and the University of Arizona. His other

major books include *The Way to Rainy Mountain*, a collection of Kiowa oral traditions illustrated by his father (1969), and *The Names: A Memoir* (1976).

As the novel opened the way for Native American writers, the 1972 independently produced film of *House Made of Dawn*, although receiving mixed reviews, helped open doors for Native American actors and presaged an important movement in indigenous cinema, including more independent and studio-backed adaptations of Native American Renaissance works. Directed by Richardson Morse, the film starred Native American actors Larry Littlebird (Abel), Jay Varelly (Ben Benally), and Mesa Bird (Francisco). Although he shared a writing credit with Morse for the screenplay and modestly minimizes his contribution to the film, the movie is a landmark as the first Native American novel adapted to the screen after a century of Anglo-American westerns, and it clearly helped pave the way for Native American writer-directors like Sherman Alexie and Chris Eyre. It is arguably a foundational example of contemporary indigenous cinema, or what director Barry Barclay has called the "Fourth Cinema," incorporating indigenous aesthetics and worldview.

House of Representatives, U.S.

Historically, the demographics of elected federal officials have lagged behind that of the rest of the country when it comes to diversity, though the legislative branch does not lag as far behind as the executive branch. Today, the 113th Congress is the most diverse in history, consisting of 43 blacks (8 percent), 32 Latinos (6 percent), 30 Asians (5.6 percent), four Arab Americans, and one Caribbean American, as well as the first Buddhist senator (Mazie Hirono), the first Hindu representative (Tulsi Gabbard), the first professed atheist (Congresswoman Krysten Sinema), and the first Unitarian Universalist (Congresswoman Ami Bera).

Various European immigrant groups became integrated into the congressional makeup over time. The first Polish American congressman, for instance, was John Casimir Kleczka, elected in 1918 to represent the 4th District of Wisconsin, a state with a significant Polish population. The first Italian American congressman was Foster Furcolo, the son of an Italian immigrant father and an Irish immigrant mother, who moved to Massachusetts from Connecticut after law school in 1937 and was elected to represent the 2nd District in 1948. In 1957, he became the state's first Italian American governor.

Jewish participation in the legislature dates to the colonial period, when Francis Salvador (who was later killed in the Revolutionary War) served in the legislature of the colony of South Carolina. The first Jewish American elected to the U.S. Congress was Lewis Charles Levin, who served Pennsylvania's 1st District from 1845 to 1851. Levin was a prominent Know-Nothing, a mid-19th-century political movement that was principally concerned with limiting immigration and limiting the influence of immigrants already in the country. Levin's own objections were less to immigration itself and more to the increasing presence of Catholicism in the United States. Anti-Catholic concerns, and fears that loyalty to the Catholic pope would override loyalty to the American republic (a fear revived by the second Ku Klux Klan in the early 20th century and the opponents of presidential candidate John F.

Kennedy in 1960), were at the heart of this anti-immigration platform. A lawyer who lectured on temperance, Levin began his anti-Catholic crusade in 1843 in response to a local school excusing Catholic students from Bible study class because the Protestant King James Bible was used by the district. He soon became the leader of a Pennsylvania-based nativist movement and was elected on an anti-Catholic platform, serving three terms.

Most states have been slower to elect female officials. The first female Jewish American elected to Congress was Florence Prag Kahn, only the fifth female congressional representative, serving California's 4th District from 1925 to 1937. Kahn originally ran in a special election to fill the vacancy left by her husband Julius Kahn, who had served from 1899 to 1903 and again from 1905 until 1924; she, too, was reelected numerous times. Both Kahns were Republicans. Julius had been concerned with military matters and national security, and Florence became the first woman to serve on the House Military Affairs Committee. After she left Congress in 1937, she continued for the next decade to encourage women to become more involved with politics.

Diversity in the House

In the 21st century, Eric Cantor became the first Jewish whip in 2009, and after the midterm elections shifted the balance of the House in favor of his Republican Party, he became the first Jewish House Majority Leader in 2011. Elected in 2000, Cantor serves Virginia's 7th District and is one of the highest-ranking Jewish figures in American political history. Notably, he attained this high office in the same era in which Nancy Pelosi became the first female Speaker of the House (2007) and Barack Obama became the first African American President (2008), with the most diverse cabinet in history.

There were no African Americans in elected office until the Fourteenth Amendment to the Constitution (1868) established their citizenship and the Fifteenth Amendment (1870) forbade abridgment of voting rights on the basis of race, color, or previous condition of servitude. Even in the north, blacks had held very few elected offices—Wentworth Cheswell had served as a school board official and justice of the peace

in New Hampshire in the 18th and early 19th centuries, Alexander Twilight had served in the Vermont state legislature from 1836 to 1857, John Mercer Langston had served as a clerk in Ohio in 1854 (elected by an abolitionist political party), and Edward Walker and Charles Mitchell had served as Massachusetts state legislators in 1866.

But after the Civil War, newly enfranchised blacks were the majority population in several southern states, including South Carolina, where Joseph Rainey became the first directly elected black member of Congress in 1870. (Hiram Revels had been the first black member of Congress when he was appointed to the Senate earlier in the year.) Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, and Virginia all elected black congressmen in the Reconstruction era. The end of Reconstruction saw various laws passed to attempt to restrict the voting rights of blacks or make it more difficult for them to vote, which in turn resulted in fewer blacks being elected to office. When John Mercer Langston was elected to Congress in 1888, he was the first African American congressman from Virginia. The second, Bobby Scott, was not elected until 1992, more than a century later.

The end of the 19th century has been called the nadir of American race relations, a period in which blacks were denied voting and economic rights at the state and local levels, lynching reached an all-time high, racist caricature was an everyday staple of entertainment, immigration laws were enacted to exclude or limit members of certain races or ethnicities, and enormous numbers of African Americans fled the south in the Great Migration to the industrial cities of the north and the midwest. For 28 years after the expiration of the term of George Henry White of North Carolina in 1901, no African American served in Congress. Not until the 1970s was an African American again elected from the southern states.

The first Hispanic American congressman was Romualdo Pacheco, elected in 1876, who had previously served as California's first (and still only) Hispanic governor. He had been preceded by Hispanic nonvoting delegates from American territories.

The first Asian American congressman was Dalip Singh Saund, an Indian American elected

by California's 29th District in 1956. Born in India, Saund moved to the United States in the 1920s to study agriculture and remained in the country as a permanent resident after his studies. He was part of a campaign to allow south Asians to become naturalized citizens, and he applied for citizenship by naturalization after the Luce-Celler Act successfully passed in 1946. Saund was elected seven years after becoming a citizen in 1949. His stroke at the end of his second term contributed to his losing his attempt at reelection. Prior to Saund, several Asian American nonvoting delegates had been sent to the House of Representatives by American territories, including Robert William Wilcox (1900–03), the Hawai'i-born son of a white captain from the mainland and a native Hawai'ian mother, and Jonah Kuhio Kalaniana'ole of Hawai'i (1903–22).

Keith Ellison, elected in 2006 to serve Minnesota's 5th District, is the first Muslim member of Congress. A member of the Minnesota affiliate of the Democratic Party, the Democratic-Farmer-Labor Party (created by the 1944 merger with the Farmer-Labor Party), Ellison was raised Catholic and is the brother of a Baptist pastor, but had no active involvement in religion until his conversion to Islam while in college at Wayne State University. His religion did not receive much national attention until the official photo session after the swearing-in ceremony, where he posed with his hand on an English translation of the Qur'an, a volume that had once belonged to Thomas Jefferson. Though numerous American officials had taken their oath of office without a Bible, including several presidents as early as John Quincy Adams, Ellison was criticized for his choice by members of the conservative punditry and accused of disloyalty to the Constitution.

Native Americans are one of the most underrepresented groups in Congress, and in 2013, only Tom Cole, serving Oklahoma's 4th District, is a registered member of a Native American tribe (the Chickasaw Nation). Charles Curtis, elected in 1892 to serve Kansas's 4th District, had three Native American great-grandparents on his mother's side, from the Kaw, Osage, and Pottawatomie tribes, and the rest of his ancestry was western European. He later served in the Senate and was the first Senate majority leader of Native American background—still later

he served as vice president to Herbert Hoover, another first.

Middle Eastern Americans have also rarely served in Congress. Most have been Lebanese, one of the Middle Eastern groups with the longest history in the United States. The first Middle Eastern American congressman, George Kasem (elected in 1958), was a Lebanese American, as are three current congressmen—Nick Rahall, Darrell Issa, and Charles Boustany.

Congressional Member Organizations

Within the House of Representatives, members belong to a number of Congressional Member Organizations, often called caucuses or coalitions, and governed by rules set by the House. These range in focus from the ideological—the Tea Party Caucus—to particular interests, like the Congressional Bike Caucus. Caucuses often include senators, though some separate senate caucuses are maintained as well. There are a number of caucuses for representatives of a particular ethnicity or religious affiliation, or to represent the interests of that group.

The Congressional Black Caucus was formed in 1971 by 13 African American representatives. It has included a small number of African American senators—six all told—in its lifetime. Though nonpartisan, in practice the CBC's membership has been predominantly Democratic, and its founding succeeded the Democratic Select Committee (DSC), which pursued similar aims. When the CBC was founded, the participation of blacks in public office was seen as inherently radical by some—Charles Diggs, who chaired the DSC and was the first chair of the CBC, was included in Richard Nixon's "enemies list" for this reason, despite a moderate political ideology and career. The CBC later helped found TransAfrica, a foreign policy advocacy group, and was instrumental in the Free South Africa movement and eventual drafting of the Comprehensive Anti-Apartheid Act, which passed in 1986.

The CBC was originally a legislative service organization and, as such, received a small amount of federal funding and use of federal resources such as office space. After the "Republican Revolution" of the 1994 midterm elections, remembered today largely for the Contract With America, newly major House Republicans abolished a large

number of legislative service organizations that it considered to be wasteful expenditures. The CBC was one of them, and it reestablished itself as a Congressional Member Organization, funded mainly by corporate donations.

The CBC has elected to maintain an exclusively black membership, though this is not officially part of its bylaws and may change, subject to the whim of its future membership. This issue has rarely required an address, but in 2006, white Congressman Steve Cohen, representing the predominantly black community of Tennessee's 9th District, applied for membership and was denied.

Like the CBC, the Congressional Hispanic Caucus was founded as a legislative service organization and later reorganized as a Congressional Member Organization. The CHC was founded in 1976 by congressmen from Texas, California, Puerto Rico, and New York in order to address the needs of Hispanic Americans. Its chairs have included presidential candidate and New Mexico Governor Bill Richardson. It maintains the Congressional Hispanic Caucus Institute, an independent nonprofit, nonpartisan organization.

The CHC was originally bipartisan. In 2003, the Republican members left the CHC in order to form the similarly named Congressional Hispanic Conference, a Hispanic Republican caucus. The split occurred as a result of the nomination of conservative Miguel Estrada to the Washington, D.C., Circuit Court of Appeals, and the new caucus was announced in an open letter published by the *Wall Street Journal* on March 17, 2003, in order to protest the Democratic CHC's opposition to Estrada's nomination. The Republican CHC has pursued support of faith-based initiatives in light of its constituency's generally conservative religious beliefs, and tax reductions for small business owners. Membership comprises both representatives and senators, including Tea Party conservative Senator Marco Rubio of Florida. Former members include Senator John E. Sununu, whose ancestry is Lebanese and Irish, but whose father was born in Cuba.

The Congressional Asian Pacific American Caucus was formed in 1994 by Japanese American Congressman Norman Mineta to serve the interests of Asian Americans and

Pacific Islanders. It includes a number of non-Asian American associate members, especially those serving districts with significant Asian American or Pacific Islander populations. It also includes delegates from the United States' Pacific territories, American Samoa and the Northern Mariana Islands.

The American Sikh Congressional Caucus was formed in 2013 to address the interests of American Sikhs in the wake of post-9/11 discrimination, such as the 2012 shooting at an Oak Creek, Wisconsin, Sikh temple. Judy Chu (D-California), the first Chinese American woman elected to Congress, founded the caucus; she also serves as chair of the Congressional Asian Pacific American Caucus.

The Congressional Caucus on Turkey and Turkish Americans was founded in March 2001, and consists not of Turkish American representatives but of (in 2013) 67 Democratic and 90 Republican congressional representatives whose constituencies include large numbers of Turkish Americans. Issues addressed by the caucus include both Turkish American issues and U.S.-Turkey relations. This focus on foreign policy and trade issues with the ancestral home country is common in many of the congressional caucuses organized along ethnicity-related issues.

A number of smaller caucuses exist as well, including the Armenian Caucus (formed in 1991) and the Congressional Caucus on Armenian Issues (2006), the Bangladesh Caucus (2002), the Caribbean Caucus (2003), the Congressional Azerbaijan Caucus (2006), the Congressional Brazil Caucus (2006), the Congressional Caucus on Central America (2006), the Congressional Caucus on Hellenic Issues (2006), the Congressional Caucus on the Netherlands (2006), the Congressional Caucus on Sri Lanka and Sri Lankan Americans (2006), the Congressional Caucus on Uganda (2006), the Congressional Croatian Caucus (2006), the Congressional Czech Caucus (2008), the Congressional French Caucus (2003), the Congressional Iraqi Women's Caucus (2006), the Congressional Morocco Caucus (2003), the Congressional Pakistan Caucus (2006), the Congressional Taiwan Caucus (2002), the Diversity and Innovation Caucus (2007), the House Friends of Scotland Caucus (2006), the Friends of Switzerland Caucus (2003), the German-American

Caucus (2010), the India Caucus (2004), the Indonesia Caucus (2004), the Italian American Congressional Delegation, the Kenya Caucus (2006), the Kurdish American Caucus (2007), and the Latino-Jewish Congressional Caucus (2011). Not all of these caucuses limit their membership to members of the ethnic or religious group in question, and in some cases may be joined by representatives whose constituencies include a significant number of that group.

Hungarian Americans

Hungarians have long seen the United States as a place where they could make better lives for themselves, initially coming in a series of individual migrations in the 16th and 18th centuries. In the 19th and 20th centuries, Hungarians came in three waves of much-larger group migrations—after the War of Independence in 1848, during the period immediately prior to and after World War I, and as political refugees after the failed Hungarian Revolution of 1956. Data drawn from the 2010 U.S. Census indicate that roughly 1.5 million Hungarian Americans reside in the United States, mostly the descendants of these earlier three waves of migrations.

Historical Development

Sporadic individual migrations of middle- and upper-class individuals occurred from the 1600s to the 1800s, mostly comprised of travelers of the middle and upper classes who settled sporadically in major American port cities. These phenomena made it almost impossible for a Hungarian American ethnic group to form a cohesive identity, as ethnic institutions, churches, and cultural organizations in the United States were nonexistent. The first major group migration of Hungarians to the New World occurred after the Hungarian Revolution and War of Independence in 1848, comprised

of those who fled the war-torn Austrian Empire. The following two years (1849–50) saw several thousand Hungarian refugees come to the United States, mostly men of the educated gentry who eventually ended up working as laborers in American factories and farms. In the 1860s, thousands of Hungarians served in the Union army during the U.S. Civil War alongside other groups of immigrants from different countries. In the crucible of war, Hungarians blended in with the larger white American population and acculturated to life in the United States, settling in occupations across the economic spectrum.

The second major group migration of Hungarians came at the turn of the 20th century, with almost 2 million Hungarians immigrating to the United States in search of improved economic prospects. These immigrants, unlike their educated gentry counterparts in the first wave of migration, were comprised mostly of the poorer classes seeking to better their lives in factories and mines across the industrialized north and midwest.

John Rosta, a first-generation Hungarian American from New Brunswick, New Jersey, remembered that his parents came to the United States in the early 20th century "for economic reasons mainly. They were peasants at the time, and they had a difficult time, and saw no future there." Like many Hungarians who came to the United States during this period, Rosta's parents settled in an area full of jobs, relatives, and community institutions, eventually raising their children as Hungarian Americans.

World War I had a significant impact on the Hungarian American community as immigration from Hungary was effectively curtailed. Restrictive American immigration laws enacted soon thereafter placed a quota on all European immigrants, with only a minute number of Hungarians allowed to enter the United States compared to the decades prior. The Hungarian Americans and their descendants during this time simultaneously strengthened their community institutions and assimilated into American culture, answering the call to arms during World War II by serving in all branches of the U.S. military with distinction. The third wave of major Hungarian group migration occurred in the 1950s, when nearly 40,000 Hungarians arrived in the

United States after fleeing the forces of the Soviet Union sent to crush the failed Hungarian Revolution of 1956. These political refugees became symbols of “freedom fighters” in American culture for their audacity to demand freedom in the communist system and found ready sponsors in local Hungarian communities across the nation.

From the 1960s on, Hungarian Americans have largely acculturated and can be seen in all walks of economic, political, and cultural life in their new homeland. Notable Americans of Hungarian descent from this period are Frankie Zoly Molnar, who was awarded the Medal of Honor during the Vietnam War; Joe Namath, Super Bowl winning quarterback for the New York Jets; and actresses Zsa Zsa Gabor and Mariska Hargitay.

As a memorial to the victims of the 1956 Hungarian Revolution, a flag waves at the Hungarian Parliament Building in Budapest. The declaration of the Republic of Hungary in 1989, a Hungarian national holiday, is also celebrated in the United States.

Culture

Hungarian Americans maintain their culture and traditions in a variety of ways. Hungarian American ethnic and cultural institutions celebrate three major holidays (March 15, Revolution of 1848; August 20, St. Stephen’s Day; October 23, Revolution of 1956), which provide opportunities for younger generations to hear the language and to eat ethnic Hungarian dishes. Foodways have been one of the most visible ways in which the Hungarian American community maintains its ethnic identity, as the preparation and eating of cuisine such as *kolbasz*, *kalacs*, *dios*, *makos*, *palacsinta*, and *szaluna* at festivals and informal gatherings allow the group to celebrate its history and traditions.

Hungarians, in many ways, readily assimilated into American language and culture after the group’s initial three waves of migration to the United States. Although initially pidgin languages of Hungarian and English were used by 19th- and 20th-century immigrants, English has become the primary language spoken by Hungarian Americans in the United States in the 21st century. Hungarian family life usually conforms to American patterns in terms of courtship, marriage, and familial structure.

The Contemporary Scene

The Hungarian American population has remained relatively unchanged since the 1970s, staying in the 1.3 million to 1.7 million range for the past five decades. Despite this stability, a major issue that has arisen among the population during this time period has been the ability to keep Hungarian cultural traditions alive, as later generations lack the ability to speak the language and know little of the modern country of Hungary because of the decreasing number of ethnic institutions, churches, and cultural organizations in the United States.

Notwithstanding this trend, Hungarian ethnic and cultural organizations continue to make important contributions to fostering Hungarian American identity and make a significant impact on the communities of which they are a part. The American Hungarian Foundation, founded in 1955, continues its mission as a national repository for Hungarian American history and holds local and national cultural events each year that make the general American public aware of the

ethnic group's rich history as well as celebrate Hungarian culture.

I

“I Have a Dream” Speech

Civil rights leader Martin Luther King, Jr., delivered his “I Have a Dream” speech on August 28, 1963, as part of the events of the March on Washington. In the speech, King described the ways America’s citizens of color had been denied the freedoms guaranteed by the U.S. Constitution and the Declaration of Independence, called for African Americans to demand their citizenship rights through nonviolent means, and articulated a vision of equality between blacks and whites. At the end of the speech, King began several statements in succession with the words “I have a dream,” the phrase that became the speech’s moniker, each statement imagining details of the racial justice King hoped to inspire and achieve.

Context Within the March on Washington

Preceded in the civil rights movement by the Montgomery Bus Boycott, sit-ins across the south at segregated lunch counters, Freedom Rides that strived to integrate interstate buses and bus stations, and protests in Birmingham, Alabama, the March on Washington for Jobs and Freedom brought a racially and geographically diverse crowd of about 250,000 to the National Mall to protest the Jim Crow laws and segregationist practices then in place in the United States. Among other changes, the marchers demanded

civil rights legislation ensuring that Americans of all races would have access to public accommodations, decent housing, integrated education, and the right to vote.

As the president of the Southern Christian Leadership Conference (SCLC), one of the groups sponsoring the march, King was influential in its planning. There was a full slate of singers and speakers for the protest, and King initially planned to keep his speech to five minutes, the time allotted to each of the other speakers. Organizers convinced him to take more time, given his talents as an orator and his position as one of the last speakers on the program. King delivered the Dream speech late in the afternoon, and his remarks lasted 17 minutes.

Drafting and Delivery

Four days before the march, King brainstormed with advisers and worked with SCLC colleagues on drafts. However, the speech was unfinished when he arrived in Washington, D.C., the night before, and King continued editing his remarks through the night and up until he reached the podium at the Lincoln Memorial. At the end of the speech, King deviated from his prepared version; the celebrated conclusion, which invokes the refrain “I have a dream,” was extemporaneous.

King had a fine baritone voice, and his stately, measured delivery of the Dream speech was

Martin Luther King, Jr., at the August 28, 1963, March on Washington for Jobs and Freedom, which was organized to help support the civil rights legislation proposed by President John F. Kennedy. King and other speakers agreed to keep their speeches calm and avoid provoking civil disobedience. The gripping "I Have a Dream" speech, delivered to over 200,000 supporters, was a defining moment of the American civil rights movement; in a 1999 poll of speech scholars, it ranked as the top American speech of the 20th century.

indicative of his background as a preacher in the black Baptist tradition. When King paused at the cadences of the speech, the crowd shouted responses such as "Yeah!" and "All right!" in the call-and-response style of a sermon.

Structure, Style, and Sources

King began by calling upon the memory of the Emancipation Proclamation, but then spoke out about the freedoms systematically denied to African Americans because of segregation and discrimination. He reminded his audience of the equality promised to all by the founding documents of the United States and emphasized the urgency of demanding these promises become reality for African Americans. King advocated civil disobedience, not physical violence, as a way to achieve these goals. In the improvised "I have a dream" section, King articulated a vision

of national racial harmony, ending by asking that freedom ring from coast to coast.

Stylistically, the Dream speech is marked by frequent use of metaphor, anaphora, antithesis, and biblical and literary allusion. In addition to the books of Matthew, Luke, Isaiah, Daniel, Amos, and Psalms, the speech alludes to the Gettysburg Address and Richard III. King also directly quoted from the hymn "America" and the spiritual "Free at Last."

King claimed he did not know what prompted him to begin the "I have a dream" portion of the speech, although some remember Mahalia Jackson calling out during the speech, exhorting King to tell the crowd about his vision. King had used the phrase "American Dream" in previous addresses; other elements of the speech, such as the quotation of the spiritual, were also in his established public-speaking vocabulary.

Reception and Legacy

Especially because it was nationally televised, the Dream speech secured King's reputation as an exceptional orator. Yet not all agreed with dreaming as a way to gain true racial equality. Nor was the speech a major reference point in the national conversations over the Civil Rights Act of 1964 or the Voting Rights Act of 1965.

Despite these victories, King wondered later in the decade, in the face of the Watts riots in Los Angeles and urban ghettoization in the north, whether his dream had become a nightmare. Only after King's assassination in 1968 did the Dream speech make a resurgence in public consciousness and come to represent King's memory and the legacy of the civil rights movement as a whole.

Americans continue to interpret the meaning of King's dream and how it should be realized. Different understandings of King and his philosophy came into play during the debate in the 1980s that ultimately led to the creation of a national holiday in King's honor. King's ideal of color-blindness has also been invoked on both sides of the affirmative action debate. No matter how it is read, the Dream speech endures as one of the great pieces of American oratory.

I Know Why the Caged Bird Sings

I Know Why the Caged Bird Sings is an autobiographical account of the early years of Maya Angelou, an African American writer and poet, one of the most renowned and influential voices of the 20th century. A poet, writer, singer, memoirist, historian, playwright, performer, stage and screen producer, director, and civil rights activist, Angelou was born Marguerite Johnson in St. Louis, Missouri, on April 4, 1928. She was educated at Lafayette Country Training School, George Washington High School, and Mission High School.

Angelou became the first black streetcar conductor in San Francisco, and her love and talents for the arts enabled her to do well in such fields as singing, dancing, and playwriting. She nourished herself upon the works of writers like Paul Lawrence Dunbar, W. E. B. Du Bois, James Weldon Johnson, and Langston Hughes, as well as canonical works by William Shakespeare, Charles Dickens, and Edgar Allan Poe.

Her screenplay, *Georgia, Georgia* (1972), based on one of her short stories, was the first short story by a black woman to be adapted for a feature film. Her experience of undisguised racial discrimination during her childhood stamped an indelible mark upon her life, leading to her lifelong career as a civil rights activist.

Introduction to the Novel

I Know Why the Caged Bird Sings was published in 1969 and earned Angelou widespread critical acclaim and enormous popular success. Among her numerous honors for the book, Angelou received a National Book Award nomination. Christopher Lehmann-Haupt in the *New York Times* regarded *I Know Why the Caged Bird Sings* as "a carefully wrought, simultaneously touching and comic memoir . . . [its] beauty is not in the story but in the telling."

The novel is a good example of how determination, will power, and a love of literature can help one fight against racism and childhood traumatic experiences. The book narrates Angelou's early years in the racist town of Stamps, where her grandmother ran the town's only black-owned

general merchandise store. Angelou vividly recounts the customs and harsh circumstances of black life in the segregated south, where economic hardship, hatred, and denigration were a routine part of daily life.

Many of the problems Angelou confronted in her childhood stem from the overt racism of her white neighbors. As she reflects upon their impact on her early years, she writes, "If growing up is painful for the Southern Black girl, being aware of her displacement is the rust on the razor that threatens the throat . . . it is an unnecessary insult."

Writing Style

Angelou's writing attempts to reenact her own life story and the whole African American experience that shaped her psyche and writing. Her autobiographies are written in a conversational manner, and she tries to appease the pain of her experience by using simple and colloquial language and allowing her readers to participate in her feelings. *I Know Why the Caged Bird Sings* is a spiritual odyssey about the survival of a black girl in a hostile society. And this is not the story of an individual black girl; it is the story of the whole African American race for whom Angelou is the spokeswoman.

In so doing she is able to infuse into the genre of autobiography fictional elements such as dialogues, full-fledged characterization, sensory details, plot design, and above all the first-person singular narrative point of view of an innocent child, thus creating a unique form of autobiographical style, or what she herself terms "literary autobiography." For example, the characterization of Mrs. Bertha Flowers not only includes her words, but also the vivid descriptions of her appearance, so that the reader knows clearly what kind of person she is.

Sentences found in *I Know Why the Caged Bird Sings* such as ". . . I sopped around the house, the Store, the school and the church, like an old biscuit, dirty and inedible . . . Her skin was a rich black that would have peeled like a plum if snagged. . . ." evoke an undeniable sense of a little, innocent girl's voice speaking to herself and to the readers. When she writes, "I have often tried to search behind the sophistication of years for the enchantment I so easily found in those gifts. . . . Childhood's logic never asks to be proved (all

conclusions are absolute)," a reflecting adult's point of view is clearly presented to the reader.

I Love Lucy

I Love Lucy was an American situation comedy that debuted on CBS in October 1951 and ran for six years. For four of its six years, it was the highest-rated series on television, and it remained in the top three for the two years that it slipped from first place. During those six years, it earned its place in television history through its innovative production, its challenges to what Americans would accept in family comedy, and, perhaps most significantly, its presentation of television's first multicultural family.

Lucille Desiree Ball was born in Jamestown, New York, on August 6, 1911, into a lower-middle-class, Protestant family. Desiderio Alberto Arnaz y de Acha III was born March 2, 1917, in Santiago de Cuba, the privileged son of the town's mayor until a military coup in Cuba forced a considerably poorer Arnaz family to flee to Miami. They met on an RKO lot where both were filming and were married on November 30, 1940. Ball, failing to find the movie stardom she had sought, was starring with Richard Denning in a CBS radio comedy called *My Favorite Husband* when CBS decided that the comedy about a ditzy woman and her banker husband would transfer to television. They wanted Ball to star, but she was interested only if the deal included Arnaz as her costar. The network didn't think America would tune in to watch a sitcom with a Latino husband. Ball turned down the offer.

She and Arnaz went on the road. They toured the nation, playing six or seven shows a day. Audiences' enthusiastic reception of the team was enough to persuade the network to give them a chance. CBS assumed the show would be shot in New York, as most shows were at the time. The plans were also to shoot in kinescope. Ball and Arnaz preferred to shoot the program in Hollywood, and Arnaz was insistent that it be shot on film, a more expensive proposition. When the network balked, Ball and Arnaz agreed to take \$1,000-per-episode salary cuts. In exchange, their production company, Desilu, would retain full ownership rights to the show.

On October 15, 1951, *I Love Lucy* debuted. It was also Arnaz's idea to use three cameras. He and cinematographer Karl Freund adapted the three-camera system, and the show became the first to

be filmed before a studio audience. Syndication was unheard of in 1951, but Arnaz had ensured the show's endurance and prosperity. Half a century later, the cost of broadcasting a single episode was \$100,000, 20 times what Arnaz paid for half the rights to all the episodes. *I Love Lucy* has been syndicated in 80 countries. Desilu went on to produce other top TV shows as well *Our Miss Brooks*, *The Untouchables*, *Mission: Impossible*, *The Andy Griffith Show*, and *Star Trek* among them. Ball bought out Arnaz's share in Desilu Productions when the couple divorced in 1960. She became the first woman to run a major television studio. She sold the company to Gulf-Western in 1967 for \$17 million.

I Love Lucy was an immediate hit. The sense of intimacy that was part of the television experience was heightened in the case of *I Love Lucy*. The show centered around events in the lives of the fictional characters Lucy and Ricky Ricardo and their friends Fred and Ethel Mertz (William Frawley and Vivian Vance), and reflected the lives of the postwar audience. At the heart of the show were Lucy's ongoing efforts to find a place outside the circumscribed domestic world but always failing and returning to the domestic sphere, an idea that held a particular resonance in a world where high marriage rates, the baby boom, and a push to redefine women's role in traditional ways were at odds with the number of women in the workforce.

Pushing Boundaries

Events such as Lucy's struggle to lose 12 pounds in four days to fit into a dress, Lucy and Ricky's clash over her spending habits, Lucy's fear that the honeymoon was over were all story lines that struck a chord with their audience. The most famous example of this identification occurred when Ball's real-life pregnancy was worked into the show's story lines. Ball became the first visibly pregnant woman to perform on television, thus challenging ideas of what was appropriate. Although censors refused to let the show use the word *pregnant*, they used Lucy's cravings and mood swings and Ricky's sympathetic morning sickness and concerns about impending fatherhood. Arnaz also refused to agree to sponsor Philip Morris's desire to hide Ball's pregnant body behind furniture. On the morning of January, 19, 1953, Lucille Ball gave birth to a son,

Desi Arnaz, Jr.; that night Lucy Ricardo gave birth to “Little Ricky” in an episode watched by 44 million Americans, the highest viewership up to that point. More people watched “Lucy Goes to the Hospital” than the inauguration of President Eisenhower five days later.

Once *I Love Lucy* was established as a hit, writers began using Ricky’s heritage. He sang Cuban songs in Spanish, he cooked *arroz con pollo* (a classic Latin American dish), and Ricky’s Cuban friends and his mother visited him, their Spanish conversations translated into English on the show. In the final season, the Ricardo family visits Cuba and Little Ricky speaks perfect Spanish with his relatives. For many Americans, Ricky Ricardo was their introduction to Latino culture. Ricky Ricardo was accepted on the show and in the living rooms of America without prejudice or discrimination.

I Remember Mama

Based on Kathryn Forbes’s fictionalized family memoir, *Mama’s Bank Account*, *I Remember Mama* is a 1944 comedy-drama by English playwright-cum-director John Van Druten. The play chronicles a close-knit Norwegian American family, led by its stalwart but loving matriarch, in a series of vignettes that explore their lives in 1910s San Francisco. Much of the action concerned Mama’s interventions in the lives of her

family members to help them realize their goals. It is related through the eyes of the eldest daughter, Katrin, a teenager who aspires to become a professional writer. In that Norwegian Americans comprised one of the 10 largest ancestry groups in the United States, *I Remember Mama* had a special, nostalgic appeal to many Americans.

John Van Druten was one of the most prolific and successful English playwrights of the 1920s and 1930s. After a string of successes in London and New York, Van Druten turned his attention to *Mama’s Bank Account* in 1944. Kathryn Forbes, who had worked initially as a scriptwriter for radio programs, based much of the book on the experiences of her grandmother, who had immigrated to California from Norway toward the end of the 19th century. Perhaps for this reason, the work was very adaptable.

Scandinavian immigration to the United States began in the early 19th century and peaked in the early 1880s. Most Scandinavian émigrés came to the United States in search of religious freedom, economic opportunity, or because of a famine in

Toni Campbell played the role of Dagmar on the CBS television program *Mama* in 1956, which featured a Norwegian American family. The popularity of the show prompted a national release of the film *I Remember Mama* in 1956.

Norway during the 1930s. They found the communities in the Pacific northwest and midwest especially welcoming. By the 1910s, during which the novel is set, nearly one million Norwegians had immigrated to the United States, and primarily lived in northern California, Oregon, and Washington, where they were mostly shipbuilders and farmers.

The work was set in San Francisco, which has had a thriving community of Americans of Norwegian, Swedish, Danish, and Finnish descent since the early 20th century; in fact, as of the 2010 U.S. Census, California has the second-largest population of Scandinavian Americans of any state in the nation. Although many Scandinavian Americans quickly learned English, they still preserved the ethnic traditions of their homelands through various cultural organizations, fraternal associations, and commercial centers. However, Norwegian Americans were the least likely of all Scandinavian immigrants to assimilate and gain English fluency. This tendency toward maintaining Norwegian customs is a recurring theme throughout *I Remember Mama*.

The Broadway production of *I Remember Mama* opened on October 19, 1944, and played 713 performances at the Music Box Theatre. Mady Christians, Oscar Homolka, and Joan Tetzl assumed the leading roles; Marlon Brando made his Broadway debut in a supporting role. The famed composing team of Richard Rodgers and Oscar Hammerstein II produced the play, which was received favorably by critics and audiences alike.

In 1948, George Stevens directed a screen adaptation, penned by DeWitt Bodeen. The film starred Irene Dunne, Barbara Bel Geddes, Philip Dorn, Sir Cedric Hawdricke, Ellen Corby, Rudy Vallee, and Edgar Bergen, with Oscar Homolka reprising his Broadway role. Named one of the year's Ten Best Films by *Film Daily*, *I Remember Mama* was nominated for five Academy Awards and three Writers Guild of America Awards, and Corby won the Golden Globe for Best Supporting Actress. Based on the film's success, a radio version was produced for *Lux Radio Theater*, and it featured Dunne, Homolka, and Bel Geddes in their film roles.

From 1949 to 1957, CBS ran *Mama*, a weekly comedy-drama series inspired by Forbes's and Van Druten's work. It retained the same setting

and characters as the play and film, and starred Peggy Wood, Dick Van Patten, Rosemary Rice, and Robin Morgan, who would go on to be a key player in the women's movement of the 1960s. Sponsored by Maxwell House, the series boasted strong ratings, and Wood was nominated for an Emmy for her role as the family's matriarch.

I Remember Mama was musicalized twice. In 1972, *Mama*, adapted by director Neal Du Brock and composer-lyricist John Clifton, was produced at the Studio Arena Theatre in Buffalo, New York, with Academy Award-winner Celeste Holm in the title role. Richard Rodgers returned to the play when he developed a musical adaptation of *I Remember Mama*. Rodgers contributed the score, with Martin Charnin and Raymond Jessel supplying lyrics, and Thomas Meehan wrote the libretto. The musical faced problems from the outset, and the original director and choreographer were both fired. In spite of strong ticket sales initially, poor reviews doomed the show, which opened on May 1, 1979, at the Majestic Theatre; it closed after only 108 performances. The cast included Liv Ullmann, George Hearn, George S. Irving, Armin Shimerman, and Ian Ziering. Although the production did not produce a cast recording, in 1985, the score was preserved by an all-star studio cast that featured Hearn and Irving from the Broadway version, as well as Sally Ann Howes, Patricia Routledge, Elizabeth Seal, and Ann Morrison.

I Spy

Airing on NBC from September 15, 1965, through 1968, *I Spy* was a secret agent espionage television series created and produced by Sheldon Leonard. Starring comedian and acting newcomer Bill Cosby alongside veteran television and film actor Robert Culp, the show aired 82 episodes over three seasons. The show's format capitalized on the popular espionage dramas of the time, following the lead of popular hits such as James Bond movies and *The Man From U.N.C.L.E.* TV series. But this series was different. It was a type of buddy movie that had not yet been invented for television, about finding out whether a "black guy" and a "white guy" could successfully team up and be welcomed into the living rooms of Americans. This formula proved to be successful and has been widely imitated on television in shows such as *Starsky & Hutch* and *Miami Vice* and in movies such as *48 Hours* and *Lethal Weapon*.

Two Points of Historical Significance

The historical significance of this show is twofold. First, it featured Bill Cosby, who was the first African American actor to costar in a weekly television series drama. This was groundbreaking for other black actors, and as *Variety* magazine put it, Bill Cosby was the Jackie Robinson of TV. Other programs such as *Amos 'n Andy* had featured African American actors, but those depictions were based on racial stereotyping. In *I Spy*, Cosby's character did not play second fiddle to the main white actor; he was a costar in every sense of the term. His character was a fully realized person. Not only was he a Rhodes Scholar who could speak seven languages, but he could also run, jump, karate chop, and shoot a gun.

Sheldon Leonard is widely quoted as saying that he consciously made the decision to cast an African American actor in this role as a result of the rising civil rights movement. The shifting racial attitudes of the 1960s supported by Presidents John F. Kennedy and Lyndon Johnson were beginning to be reflected on television. Although the show did not expressly confront racial issues through the use of themes, plots, dialogue, or other production tools, the program strived to be socially relevant. Cosby was aware of the racial implications of his role, but

he did not confront issues head-on because he did not consider that his style. His comedy routines, for example, were nonconfrontational and meant to show people that African Americans were the same humans beings as every other person with any other skin tone.

When *I Spy* premiered, it was shown on 180 stations covering 96 percent of the country. Although widely accepted, it became apparent that not everyone in the country was as forward-thinking as Leonard and his team. Stations in Savannah and Albany, Georgia, as well as a station in Dayton Beach, Florida, refused to air the show. Letters were also received that expressed a backlash against the pairing of white and black actors. Despite these objections, the show did not experience any problems with its sponsors.

The second feature of the show that highlights its significance was the unique use of international locations to film the program. In a rare move, Leonard chose to shoot over one-third of the show on location throughout the world, including locations like China, Greece, and Italy. This strategy made *I Spy* one of the most expensive television series ever produced at the time. This strategy allowed audiences to see an African American actor in a new light: Cosby's character was depicted as a representative of the United States traveling around the world on assignments to protect U.S. interests.

Story lines for the show centered on the two stars as undercover agents for the U.S. government working for the Pentagon. Robert Culp played the role of Kelly Robinson, who used the cover of being an international tennis player. Bill Cosby was Alexander Scott, whose cover was being the trainer.

I Spy was a popular program but was never a hit in the ratings. It never finished higher than 29th place in the ratings for any of its three seasons. Despite the lack of ratings success, the show was honored with several awards. The gamble of choosing a comedian to play a dramatic role paid off for the show, its creator Sheldon Leonard, and first-time actor Bill Cosby. Cosby won three consecutive Emmy Awards for Outstanding Continued Performance by an Actor in a Leading Role in a Dramatic Series in 1966, 1967, and 1968. Upon accepting the award, Cosby thanked NBC for having the courage to cast him. The

show received 15 additional Emmy nominations for a range of categories, including acting by Robert Culp, achievements in music, directing, writing, and more. In 1967 the show was awarded a Golden Globe Award for Best Dramatic Series in the 1966 to 1967 season.

Despite not confronting race issues head-on in the show's content, the implications of the actions by the show's creators, cast, and crew are far-reaching. *I Spy* was a groundbreaking series that influenced the future of television as well as race relations in the United States.

been founded by Leif's father, Erik the Red. Vinland is attested in the Norse sagas but was not independently confirmed until the 1960s, when the ruins of a Norse settlement were found in rural Newfoundland.

Today there are 42,000 Icelandic Americans, according to the most recently available census information, though the Icelandic Embassy claims the figure is more than twice that high. Some Icelandic immigrants undoubtedly arrived in the early 19th century, or even earlier, in the Revolutionary or colonial periods, and in some cases may have been recorded as Danish immigrants by officials. The first known groups of Icelandic settlers came to the United States in 1854 as part of a small wave of Icelandic immigrants who had converted to the Church of Latter-Day Saints. From the 1850s until the depression of the 1870s, the Icelandic community in Utah grew bit by bit, consisting mainly of skilled workers and farmers.

In the latter third of the 19th century, about 75,000 Icelanders immigrated to North America, but only 15,000 came to the United States; the rest settled in the New Iceland region in the Canadian province of Manitoba. Some of these Icelandic Canadians later relocated to the United States because of internal disputes in New Iceland. Icelandic Americans established communities in North and South Dakota, Minnesota, and Wisconsin, and continued to build up the Icelandic community in Utah. Plans for an Icelandic colony in Alaska, shortly after its acquisition from Russia, never came to fruition.

The Icelandic community in the Dakotas became the largest Icelandic presence in the United States, with a large number of German and Norwegian Americans as well. Milwaukee, Wisconsin, saw the largest growth of an Icelandic population in an urban area. The community in Washington Island, Wisconsin, was the first Icelandic community settled outside of Utah and today boasts one of the largest Icelandic populations outside Iceland. By 1910, there were at least 5,000 Icelandic Americans, but immigration had slowed nearly to a halt. Exact numbers and rates are unavailable, because the census continued to classify Icelanders as Danes until 1930—the figure of 5,000 is based on the number of Americans who reported growing up in a home where

Icelandic Americans

Iceland is a Nordic European island between the Arctic and North Atlantic Oceans that was settled in 874 by Nordic explorers. From the 14th century until the end of World War I, it was controlled by Denmark, becoming independent in 1918. The formation of modern Icelandic national identity began in the 19th century in the lead-up to independence, with a resurgence of interest in native Icelandic culture and language. The first Icelanders in North America founded Vinland, a Norse colony in northern Newfoundland, around 1000 C.E. They were led by Leif Ericson and departed from the Norse colonies on Greenland, which had

Icelandic was spoken, but in all likelihood, the total must have been somewhat higher.

During World War II, a number of American soldiers were stationed in Iceland, and a small wave of Icelanders immigrated to the United States at the end of the war—local women the soldiers married.

Today, Icelandic Americans are concentrated primarily in the west and midwest. California (6,512) and Washington (5,976) have the largest numbers of Icelandic Americans, followed by Minnesota (3,165), North Dakota (3,161), Utah (2,970), New York (1,427), Florida (1,348), Oregon (1,200), Ohio (1,156), Texas (1,147), and Illinois (981).

Outside of the Latter-day Saints community in Utah, Icelandic Americans are predominantly Lutheran and generally settled in areas already settled by Scandinavian immigrants. Icelandic American cultural organizations include the Icelandic National League of North America, based in Manitoba (Canada); the Society of Icelanders in Arizona; the Scandinavian Club of Sun City in Arizona; the Icelandic American Association of Southern California; the Icelandic Association of Northern California; the Icelandic Association of Washington, D.C.; the Icelandic American Association of South Florida; the Icelandic American Association of Central Florida; the Icelandic Association in Georgia; the Icelandic Association of Chicago; the Icelandic Association in Kansas City, Missouri; the Icelandic Society in Boston; the Fargo-Moorhead Iceland Klub; the Icelandic Hekla Club in Minneapolis, Minnesota; the Icelandic American Association of Minnesota; the Icelandic Society of New York; the Icelandic Heritage Society in North Dakota; the Icelandic Association of the Dallas–Fort Worth Area; the Icelandic American Association of Hampton Roads in Virginia; and the Icelandic Club of Greater Seattle.

Identity Development

Responding to the question "Who am I?" answers how individuals perceive themselves personally, socially, and morally. This question encompasses how people act, think, feel, and behave in relationship to a group, society, people, and environment. It focuses on individuals' racial, ethnic, gender, and/or sexual orientation perceptions in relation to the dominant culture group. Identity development model theories have emerged to explain the process of how individuals may develop or grow within society in comparison to the dominant group.

This process is similar to a lifecycle where individuals shed layers of old skin and acquire new skin. These models, influenced by psychologists, educators, and counselors, have illuminated individuals' experiences within the context of their group affinity or affinities (race, ethnicity, gender, and sexual orientation).

Erik Erickson's work on life span development is considered one of the influential studies on identity. He asserted that individuals develop in stages. Within these stages, there is a successful and unsuccessful outcome. The assumption is that the achievement of one stage affects the resolution of later stages to come. However, in recent years, many scholars have asserted that individuals may experience behaviors that reflect different stages at the same time, thus they may not sequentially occur. Consequentially, the terminology has shifted from stage to status.

Additionally, these models are multidimensional. In regard to ethnic identity, several dimensions include the terminologies or labels that individuals tend to self-identify with in relation to their group; their knowledge about their cultural beliefs, customs, and values; and their feelings about group membership, which some may opt to embrace or reject.

Black Identity Development

Events occurring in society influence how individuals view themselves as racial beings. Many of the racial identity development theories gained ground beginning in the 1960s, during the civil rights struggle and that decade's climate of advocating for equity. William Cross's 1971 psychology of "Nigrescence," or the "Nigrescence model," was used to describe the black experiences from a psychological and historical point of view. At that time, Cross identified five stages.

He asserted that many blacks/African Americans experience the beginning process of assimilating and internalizing the beliefs of the white culture (pre-encounter); become exposed to racial issues that trigger some consciousness that

reminds them of their blackness (encounter); begin to explore what it means to be black to the point that some have the tendency to openly display images of blackness (immersion/emersion); experience some comfort in the new black identity (internalization); reach the internalization/commitment status, and are deeply committed to issues and concerns relating to African Americans. Cross, in addition to others like Bailey Jackson, laid the foundation for other scholars to build upon.

White Racial Identity Development

Prior to classic works on white identity, African American scholar William Du Bois recommended that whites "turn their lens of analysis about race around and look at themselves in the mirror." The white racial identity development (WRID) theory is a six-status model (contact, disintegration, reintegration, immersion/emersion, pseudo-independence, autonomy) by Janet Helms that shows how whites move from an unhealthy unconscious color-blindness to a healthy, stable, positive, color/race-conscious white racial identity.

The goal for whites is to abandon their obliviousness of the social value of whiteness and ultimately transform into the autonomist identity where they understand and own the role that whiteness has played in society in oppressing people of color, are open about talking about it, and at a point where they begin to use their privilege as whites to address social injustices. In recent years, many scholars have criticized the WRID theory and continue to engage in new research to develop models that reflect the diversity and more contemporary experiences of whites.

Asian American Identity Development

This group consists of various cultures, ethnic groups/nationalities, religions, and languages. There will be differential experiences between American-born and immigrant Asians. Five different levels characterize this model: ethnic awareness, white identification, awakening to social political consciousness, redirection, and incorporation. Ethnic awareness is developed through an individual's interaction with family members. Those who have a positive sense of cultural identity have more exposure to cultural events and people in predominantly Asian-populated

A Native American demonstrates his cultural identity at the Indian Summer Festival, Henry Maier Festival Park, Milwaukee, Wisconsin, September 6, 2008. Research has found that identity development is linked to psychological well-being, positive self-evaluation and self-esteem, happiness, and decreased anxiety.

communities. In the white identification level, some people encounter name-calling and negativity, and do not know how to manage these experiences. They alienate themselves from the other Asians and internalize the dominant Eurocentric values and beliefs.

A renewed sense of awareness or consciousness emerges in the awakening to social political consciousness level. Individuals exhibiting this behavior begin to acknowledge the racial experiences of people of color and may seek support from various cultural groups. Individuals who experience redirection begin to embrace the Asian culture, attend programs and activities rooted in Asian experiences and become positive about being Asian, with some negative feeling and anger toward the dominant white group. As individuals become more immersed in their identity at the incorporation level, they develop a positive sense of cultural identity and don't have the desire to either identify with or against people of European descent.

Hispanic Racial Identity

This group is primarily diverse, based on ethnicity and linguistic patterns. Within the context of the United States, the developmental process of Hispanics will vary, based on the different experiences of American-born and recent immigrants to this country. Many more models are emerging that attempt to describe their development, but all agree that individuals will undergo experiences of initially not identifying with the group and transform into identifying and achieving a positive racial and ethnic identity.

Aureliano Sando Ruiz postulated that the process that Hispanics experience may be described within a five-typology model. Individuals at the casual status are influenced by negative, erroneous messages or encounters about the culture, which results in a failure to embrace their culture. They transition into the cognitive level, where they associate their group with poverty and perceive that the only way to functioning or achieving success within "mainstream" culture is to assimilate into the dominant Eurocentric society.

At the consequence level, such people become ashamed of their cultures and distance themselves from various cultural aspects (such as names,

accents, traditions). This results in emotional stress, which is symbolic in that they transition into the working-through level.

As they work through their stress, they are encouraged to embrace their cultural identity that was once disowned. Finally, individuals are able to resolve their cultural identity and feel positive and secure about being Hispanic in the successful-resolution status.

Native American Identity

They represent over 500 federally recognized tribes and are diverse with different clans, family structures, cultures, and beliefs. The diversity is even reflected regarding choices of labels for self or group identification. Some opt to use Native, American Indian, First Nations, or Native American. There is no generic Native American or American Indian development typology and individuals will demonstrate different levels of identity development, which explains the existence of various models, including the Bray Native American border community racial identity development (RID), and the Native American identity models. Michael Garrett and Eugene Pichette described five levels of acculturation that Native Americans experience.

Traditional is when they tend to identify with their traditional tribal values, language, and customs. Marginal is when some consider living between two worlds, are bilingual, but do not embrace the cultural norms of their tribal group or even identify with that of the dominant group. Vance Peavy refers to the marginal status as transitional, where certain individuals are often unhappy, unconscious of their experiences as a Native person, have low self-esteem, and are sometimes abusive.

Bicultural occurs when one adopts their tribal identity and that of the dominant group. For example, one such individual will embrace the collective clan family unit but also engage in the nuclear family pattern. Assimilated exists for people who have been accepted by the dominant Eurocentric group, and thus tends to embrace their cultural norms, behaviors, and values. The pan-traditionalists are individuals who have once assimilated but have consciously decided to return and embrace the traditional tribal customs and heritage.

Perry Horse reminds scholars to avoid generalizing Native Americans, but to approach their experiences as a developmental process that is influenced by five factors: how a person is grounded in their culture, whether one's ancestral heritage is accurate, if one adopts the collectivist view that is rooted in the Indian traditions, how one thinks of oneself as Indian, and if one is an officially enrolled member of a tribe.

Illegal Immigration Reform and Immigrant Responsibility Act (1996)

The 1990s marked a period of renewed anti-immigration sentiment and fears of terrorism connected to the first World Trade Center bombing (1993), the Oklahoma City Bombing (1995), and tax revolts such as California's Proposition 187 (1994), which proposed removing access to all state aid for undocumented immigrants; it was found unconstitutional. In 1996, Congress passed the Anti-Terrorism and Effective Death Penalty Act (AEDPA), which expanded the criminal grounds on which noncitizens, including permanent resident aliens, could be deported, and established provisions to expedite deporting criminal aliens through almost total curtailment of judicial review.

More aggressive policies toward criminal alien removal began with the 1988 Omnibus Anti-Drug Act (OADA). It stipulated that undocumented and permanent resident aliens convicted of "aggravated felonies," including homicide, drug trafficking, arms trafficking, and rape were to be immediately deported, which was legally termed "expedited removal," upon serving sentence. Access to a lawyer was not allowed, and expanded exclusion from reentry was implemented. OADA and subsequent law applied retroactively, and removed due process rights for noncitizens. An Institutional Removal Program (IRP) was organized to remove noncitizens who committed aggravated felony crimes upon sentence completion.

The 1996 Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA) classified an additional 50 categories of crime as aggravated felonies and mandated retroactive deportation or removal upon sentence completion. Under IIRIRA, any crime committed by an alien resulting in a sentence of more than one year, even a misdemeanor like drug possession, could result in removal. Although unauthorized entry over the U.S.-Mexico border or other land, sea, and air borders had previously been handled by deportation, IIRIRA established that mandatory detention should precede deportation. It mandated that the Immigration and Naturalization Service (now

under the Department of Homeland Security, with a subcomponent, the Immigration and Customs Enforcement) detain both unauthorized entrants and asylum applicants. Daniel Kanstroom has identified the impact of aggravated felonies and related deportation law on permanent resident and undocumented resident aliens as “post-entry social control.”

To implement identification of undocumented and criminal aliens, IIRIRA began the 287(g) program, in which state and local police can enter into a Memorandum of Agreement (MOA) with ICE. Officers trained for four weeks by ICE at the federal law enforcement training center are allowed to enforce immigration law. In the fall of 2011, 68 state and local MOAs were active, a low rate of cooperation.

The impact of changes in immigration law has been referred to as a “deportation regime” by Daniel Kanstroom. ICE has developed the Secure Communities program, which prioritizes criminal alien removal, and does not require a 287(g) MOA. It operates in 3,000 jurisdictions. ICE uses the Federal Bureau of Investigation (FBI) criminal database to match the records of criminal offenders and immigration databases to determine if an offender was unlawfully present or removable on criminal grounds. A chief objective of Secure Communities and ICE’s overall removal strategies is to remove violent offenders, although it has primarily deported nonviolent offenders.

During the George W. Bush and Barack Obama administrations, Immigration and Customs Enforcement (ICE) has enforced the law with record levels of deportation. After September 11, 2001, in 2002, 71,686 criminal aliens were removed. Figures moved slightly higher until the Great Recession of 2008, when removals peaked at 114,415 (2008); 136,348 (2009); 195,772 (2010); and 216,698 (2011). In 2011, 396,906 noncitizens were deported. Reflecting aggravated felony provisions, 54.6 percent were criminal offenders. Other prominent categories were repeat immigration violators (19.6 percent), border removals (11.6 percent), and immigration fugitives (4.7 percent). Targeting noncitizen criminals is an ICE goal; offenders removed in 2012 included those who had served terms for homicide (1,119), sexual offenses (5,848), drug-related crimes (44,653), and driving under the influence (35,927).

Immigration advocates have raised many issues about the denial of due process rights to noncitizens, detention conditions prior to deportation, and removal’s impact on birthright children, families, and communities. All U.S. citizens, including birthright children born to undocumented or permanent resident aliens, have the constitutional right to due process. One aspect of due process is legal representation. The expedited removal process denies court-appointed representation, and many detainees are unable to afford it. Further impediments to due process were built into ICE detention operations: transfer of detainees between detention facilities before family or legal advocates could contact them, and failure to notify detainees of the date of their judicial review, other than that they had been “denied.” This resulted in major issues in contacting families, and immediate deportation prior to notification that an appeal had been turned down. After removal, the United States considers that there are no legal grounds for contesting deportation because the individual is outside the country and has no legal status.

2011: Major Change in Procedures

During the Obama administration, a major change was made in procedures. In the fall of 2011, it was announced that the Department of Homeland Security (DHS) would focus on convicted felons and national security risks, and exercise judicial discretion in noncriminal cases. This was partly to reduce the caseload in the overburdened immigration court system. Homeland Security Secretary Janet Napolitano later initiated deferred action covering noncitizens who came to the United States before reaching age 16, continuously resided in the United States for five years, were attending school, had graduated high school or the equivalent, had served in the armed forces, did not have felony or significant misdemeanor convictions or multiple misdemeanors, and were younger than 30. Eligible individuals could apply for deferred action over a period of two years. Despite this change, the legacies of aggravated felony targeting and the expedited removal process that voids judicial discretion continue.

Imitation of Life

Imitation of Life, Jewish writer Fannie Hurst's 1933 best-selling novel exploring issues of race, gender, and class, was initially serialized in 1932 under the title "Sugar House" in the *Pictorial Review*. Universal Studios adapted the novel into a film twice, in 1934 and 1959, the latter becoming one of the most important 20th-century "race films."

Set in the 1910s to 1930s, the novel follows the young, white, widowed Beatrice Chipley who, to support her daughter, continues her husband's business of selling maple syrup to Atlantic City boardwalk hotels. Overwhelmed, Bea hires the black Delilah. Trading on Delilah's cooking talent and the "Mammy" image, Bea opens the B. Pullman pancake restaurant, which grows into a national chain. A decade later, Bea falls in love with her younger business manager, Frank Flake, who in turn falls in love with Bea's daughter, Jessie. At novel's end, Frank and Jessie are

married with three children, while Bea, plagued with loneliness, continues to build her business internationally, having lived only an "imitation of life."

Racial Subplot

The subplot follows Delilah and her light-skinned daughter, Peola. Citing her white skin, Peola resists a black identity and repeatedly passes as white, much to Delilah's despair. After attending a black southern college, Peola moves to Seattle and becomes a white librarian. Years later, Peola returns to announce her decision to marry a white engineer, move to Bolivia, and pass permanently. Having had herself sterilized, she argues that the intermarriage will not be a sin because there will be no children. With Peola gone, a heart-broken Delilah dies, and thousands, black and white, attend her grand funeral.

Imitation of Life was both a commercial success and, partly because of its sentimental style, a critical failure. The one element that many white critics praised was the "authentic" depiction of Delilah. Conversely, African American critics such as Sterling Brown objected to the novel's reproduction of derogatory racial stereotypes, particularly the faithful Mammy and the tragic mulatto. Although her image, labor, and recipe underwrite Bea's fortune, Delilah only desires to remain Bea's servant. Additionally, Delilah is the primary advocate of racial hierarchy, continually placing Jessie above Peola and insisting that Peola accept a second-class status. Peola's denunciations of racism offer a counternarrative to Delilah's subservience; however, as tragic mulatto, Peola is tortured by her own self-hate and racial betrayal. Although writers Zora Neale Hurston and Langston Hughes both initially praised the novel, Hughes later parodied it in *Limitations of Life* (1938), a play in which a white woman is willingly subservient to a black woman, and Hurston noted that the term *Mammy* is always derogatory to black Americans.

Director John M. Stahl's 1934 black-and-white film is more socially progressive in representing a single woman as a successful entrepreneur. Relying equally on business instincts and feminine charm, Beatrice Pullman (Claudette Colbert) first opens a pancake restaurant and then becomes rich by boxing and distributing Aunt Delilah's

Pancake Flour. When Jessie (Rochelle Hudson) falls in love with Bea's secret fiancé, ichthyologist Stephen Archer (Warren William), Bea indefinitely postpones her engagement in order to preserve her relationship with Jessie. Although Stahl's Bea temporarily sacrifices her romantic happiness, she is not burdened with the same sense of regret over the lost domestic sphere that haunts Hurst's Bea. She exits the film as a successful mother and businesswoman, with the promise of a future reunion with Archer.

The 1934 film also revises the racial subplot, so much so that Peola's struggle with her racial identity becomes the primary referent for the film's title. As in the novel, Peola (Freda Washington) repeatedly passes as white and is each time traumatically exposed by Delilah (Louise Beavers). When Peola declares her intention to pass permanently and flees, Delilah collapses and dies. A repentant Peola returns to beg forgiveness on her mother's casket. Peola's final acceptance of her blackness was generally lauded by black and white audiences.

Although panned by some critics as mere melodrama, Stahl's *Imitation of Life* was nominated for three Academy Awards, including Best Picture. The film was one of the first from Hollywood to represent "black issues" seriously and to offer comparatively complex black characters. Certain scenes also visually highlight racial inequities, as when Bea ascends the stairs to her bedroom while Delilah descends to her room below, following an all-white party in their home. The towering neon sign with Delilah's face and "32 million pancakes sold last year" looming over the mansion also reminds viewers that Bea's wealth was produced through the commercialization of black labor and the nostalgic romanticization of the Mammy image. Also notable, Peola is played by an African American actress, rather than a white actress. For many, however, these progressive moments do not balance the film's reproduction of racial stereotypes.

In director Douglas Sirk's better-known 1959 color remake, business mogul Beatrice becomes ambitious actress Lora Meredith (Lana Turner), while Delilah becomes Annie Johnson (Juanita Moore). No longer the dialect-speaking commercialized Mammy, Annie continues to serve as devoted maid; however, now she does so to

support her daughter Sarah Jane (Susan Kohner), rather than from a slavish devotion to a white mistress and ignorance over the importance of economic empowerment.

Despite such changes, Sirk's version arguably stays closer in spirit to Hurst's novel in critique of Lora's sacrifice of family for fortune. Lora has several chances for romantic happiness with Steve (John Gavin), now a photographer, but rejects them all to pursue greater individual fame. Near the film's close, Lora's daughter, Susie (Sandra Dee), admonishes Lora for her maternal failures and rejects her dramatic offer to release Steve, telling Lora to "stop acting" the martyr. Such scenes highlight Lora's vanity and reflect the growing post-World War II pressure for women to return to the domestic sphere.

Passing Subplot

The passing subplot, now even more central to the narrative development, is also updated to reflect the tension of the civil rights era. In a scene recalling Kenneth and Mamie Clark's doll experiments that were key in the 1954 *Brown v. Board of Education* Supreme Court case overturning segregation, a young Sarah Jane rejects the black doll offered by Susie. Later, when Sarah Jane's passing is discovered by her white boyfriend, Frankie (Troy Donahue), he violently beats her, enacting a simmering white anger against blacks during the 1950s.

The initial compassion that Sarah Jane receives after the beating is suspended when the details of the situation are revealed, and the incident is framed as a foreseeable, and perhaps even just, punishment for her racial transgression. After she is discovered passing again, Sarah Jane runs away to California, then returns, as does Stahl's Peola, to weep dramatically on her mother's casket and beg forgiveness. In the final scene, Steve watches approvingly as a more maternal, contrite Lora comforts Sarah Jane and Susie. The images of the reformed Lora, the repaired family, and the repentant Sarah Jane, however, remain only possibilities as the film ends.

Universal released the film simultaneously in black and white theaters in the south, an unprecedented but successful strategy. It became Universal's biggest moneymaker to date. Both Moore and Kohner were nominated for Academy

Awards for Best Supporting Actress, and Kohner won a Golden Globe (Moore was also nominated). However, not all reactions were positive. Some moviegoers resented a nonblack actress (Kohner is of Jewish Mexican heritage) being cast as Sarah Jane. Her passing, which generally manifests itself as a form of self-hate and envy of whites, also sparked anger in audiences. Furthermore, while Annie does voice a poignant critic of racism and segregation, many disliked her continued subservience.

Film critics disparaged the film's heavy melodrama, finding the acting stilted and dull, and overlooking what later critics have understood as deliberate irony and self-reflexive commentary on 1950s rampant consumerism. Despite such criticism, the film made over \$25 million by 1970, and a 1995 readers' poll in the *New York Daily News* ranked it as a top 10 all-time favorite. In 2007, it was ranked by *Time* as one of the 25 Most Important Films on Race.

Immigrants, Undocumented

Undocumented immigration refers to the indefinite residence of persons in the United States without U.S. authorization. Individuals who reside in the United States without proper authorization are known as undocumented immigrants, unauthorized immigrants, illegal immigrants, or illegal aliens. While these terms are perceived as synonymous, there is significant debate over which term is most appropriate. In particular, many groups have pressed for use of the terms *unauthorized* or *undocumented* in the mainstream press, arguing that "illegal" and "alien" are unnecessarily pejorative terms.

Frequently, the division over terminology parallels divisions between advocates for and adversaries of unauthorized immigrants. "Illegal" is understood by advocates as a pejorative term that links entry into the United States with criminal behaviors, and that wrongly targets certain racial and ethnic groups. Adversaries, however, often express a preference for the term, noting that this is the proper legal terminology for persons who are unlawfully present in the United States. In recent years, while "unauthorized" or "undocumented" have become commonplace, "illegal" continues to see mainstream usage. As recently as 2012, many large media outlets such as the *New York Times* have weighed in on the merits of using the word *illegal* in reference to immigration. While the *New York Times* and others have acknowledged the merits of both arguments and rejected the use of the terms *alien* and *illegal*, neutral usage of the term *illegal immigrant* is accepted practice.

A lack of consensus over the proper terminology for this class of immigrants is in part because unauthorized entry is a relatively new political concept. The concept of illegal or undocumented immigration did not emerge until the 20th century, with changes to immigration policy and law. Moreover, while unauthorized entry or residence is unlawful, it is not necessarily a criminal offense (removal hearings and detention proceedings, for example, are not criminal proceedings). As a result, debates over terminology reflect the continually shifting nature of immigration law and, by extension, what or who is unauthorized.

Early Immigration and Policy

Until the 20th century, immigration into the United States was relatively open because of the vast employment needs of industrialization and settlement. Congress first created the Bureau of Immigration in 1891. Prior to that period, the United States had open borders and relatively few mechanisms to deport unwanted arrivals. Some states had laws to remove the poor, however, and the Alien and Sedition Acts (1798–1801) allowed for political expulsion during wartime. Labor was in short supply, and thus many migrants arrived coercively, either as indentured servants or through the transatlantic slave trade. Moreover, it was not until the Treaty of Guadalupe Hidalgo (1848) that a border between the United States and Mexico was legally established, alongside the transfer of a significant proportion of Mexican territory.

Congress passed the first federal restrictions on entry in 1875, barring persons convicted of crimes of moral turpitude and prostitutes from entry. A short time later, Congress passed the Chinese Exclusion Act in 1882, which was the first formal effort to restrict immigration. In 1917, Congress passed the Immigration Act of 1917, which excluded all immigrants from the continent of Asia, as well as the poor, gays and lesbians, those with mental and physical handicaps, and various other “undesirable” persons. A literacy test and medical evaluation were also imposed, significantly extending deportability.

When World War I slowed European immigration, Mexicans were excluded from restrictions and were recruited for labor throughout the war period. When recruitment died down following the end of the war, Mexicans were required to apply for entry, but were still able to migrate unrestricted throughout the 1920s. The Canadian border was equally permeable during this period.

The war shifted international views on national borders, resulting in the introduction of passports and visas as normal immigration procedures. In the United States, restrictionist views became increasingly popular, and in 1924, Congress passed the Johnson-Reed Act (also known as the Immigration Act of 1924). This act formalized undocumented immigration, making all forms of entry without visa or inspection illegal; instituted quotas for immigrants from various countries

who were not in a nonquota category; and established the U.S. Border Patrol. Under the 1924 act, all persons ineligible for citizenship were barred from entry. Shortly thereafter, visas and passports replaced medical inspection in the country of origin, and deportation became a key activity of the immigration service.

The Illegal Immigration Period

It was not until 1929, however, that unauthorized entry could be subject to criminal punishment. Congress made unauthorized entry a misdemeanor, punishable by a \$1,000 fine or one year imprisonment. A second attempt doubled fines and imprisonment, and was classified as a felony, barring future reentry. Mae Ngai notes that this process served to introduce criminal prosecution into a civil violation, effectively depriving unauthorized immigrants of constitutional protections while simultaneously rendering them subject to more comprehensive punishment. The stock market crash in 1929 and subsequent Depression ramped up fears about immigrant workers, resulting in the first wave of Mexican deportation. Douglas Massey, Jorge Durand, and Nolan Malone note that a coordinated set of campaigns resulted in the expulsion of thousands of Mexicans from the United States, reducing the Mexican population by over 40 percent.

Restrictionist policies remained in place until the 1940s. The Chinese Exclusion Act was repealed in 1943 and replaced with a token quota. At the end of World War II, European refugees were also admitted under a series of Displaced Persons Acts from 1945 to 1953. The postwar period ushered in an economic boom that relaxed restrictions at the borders and incentivized the federal government to rethink its immigration policy. The McCarran-Walter Act in 1952 (also known as the Immigration and Nationality Act) unified all of the previous immigration legislation under a single quota system, establishing some special categories for admittance, including special talent and relatives of citizens and residents. In the mid-1950s, however, undocumented immigration became a major issue among citizens, as the end of the Korean War, a recession, and the McCarthy era mobilized citizens to push for border control and the monitoring of undocumented immigrants.

In 1954, Congress passed Operation Wetback, in which the Immigration and Naturalization Service (INS) began militarizing the border with Mexico. For the first time, the number of people apprehended rose to one million. This was coupled with the Bracero program, which recruited Mexican laborers on temporary visas. This strategy successfully removed undocumented immigrants while increasing documented flows across the border.

Immigration Reform Period

By the 1960s, the tide of opinion on immigration had shifted. The civil rights movement and related congressional reforms highlighted what was increasingly perceived as racist immigration policy. As a result, President Lyndon B. Johnson urged Congress to pass the Hart-Cellar Act of 1965, which took effect in 1968. Under this law, the quota system was abolished in favor of a hemispheric allocation system, in which national preferences were removed. Preferences for certain classes of individuals were retained, such as family members, spouses, skilled immigrants, and refugees, with family reunification later becoming prioritized. The Bracero program also ended in this period.

While this diversification of the visa process removed restrictions for many migrants to come to the United States legally, Mexicans were subject to restriction for the first time. They had to compete for visas and were no longer admitted under special labor programs. At the same time, economic stagnation resulted in new restrictions to legal entry, including barring U.S.-born children from sponsoring their parents for entry until they reached the age of 21. Mexico was also moved to the 20,000 per-country visa limit.

By 1981, Mexican visas had been sharply curtailed. Douglas Massey, Jorge Durand, and Nolan Malone report that between 1965 and 1986, nearly 28 million Mexicans entered the United States without documentation, compared to 1.3 million legal entries and 46,000 contract workers. As the number of undocumented immigrants became more visible, Congress attempted to legalize the growing undocumented population, while simultaneously discouraging future unauthorized entries.

The Immigration Control and Reform Act of 1986 (IRCA) offered amnesty to undocumented

immigrants who had been residing in the United States continuously before 1982. It also made knowingly hiring undocumented immigrants illegal, and increased enforcement through the militarization of the border. Increased border enforcement, however, meant that future undocumented migrants would choose to stay in the country longer rather than risk apprehension, resulting in a boom in undocumented residents, rather than the reduction it intended. In an effort to manage concerns over this growing population as well as national security, the last comprehensive immigration reform bill was passed in 1996, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), which reorganized several provisions for increased border patrols and enforcement and changed the procedure for deportation, including rules pertaining to terrorism and national security.

Economic growth in the 1990s tamped down concerns over illegal immigration until September 11, 2001, when terrorist attacks on the World Trade Center and the Pentagon were executed by men who had obtained legal visas. Shortly thereafter, immigration became a major national security concern, also fitting into a wider narrative of panic and anti-immigrant sentiment. This linking of immigration enforcement to national security again shifted federal priorities regarding immigration, pushed states to deauthorize access to drivers' licenses through the REAL ID Act, increased funding for enforcement, reorganized immigration agencies under a new Department of Homeland Security, and contributed to the rise of local-federal enforcement partnerships. Congress also made efforts during this period to criminalize any form of unauthorized presence in the United States. (As of 2012, only a very limited set of immigration violations constituted a felony violation, such as reentry after deportation.) This anti-immigrant narrative stalled further efforts at comprehensive immigration reform. Instead, some of the toughest measures against undocumented immigrants ever were proposed.

Undocumented immigrants and their communities were not silent in response to this backlash, engaging in a 2006 series of coordinated marches and demonstrations across the United States to protest widespread anti-immigrant sentiment. While this brought widespread attention to the

issue, it failed to tamp down anti-immigrant sentiment. Moreover, the global recession of 2008 only served to ratchet up anti-immigrant sentiment, inspiring several states to engage in local immigration policing for the first time through policies such as Arizona's Senate Bill 1070 and Alabama's House Bill 56.

Contemporary Patterns and Policies

Under the Barack Obama administration, the federal government has engaged in a patchwork of punitive and integrative policies. Deportations reached a record high, while at the same time the administration backed congressional efforts to pass the DREAM Act and comprehensive immigration reform. It also brought suit against several state and municipal enforcement efforts and issued a federal mandate for deferred action against persons who arrived in the United States as children. This executive order, known as the Deferred Action for Childhood Arrivals Program, provides two years of relief from deportation for eligible undocumented young adults and makes them eligible for employment authorization. In the first six months of the program, over 100,000 applications were approved. While some were critical of the policy, others saw it as a welcome interim step to immigration reform and passage of the DREAM Act. Deferred Action has also served as a talking point to reintroduce the issue of comprehensive immigration reform, an issue that has not seriously been addressed by Congress since 2001.

The Department of Homeland Security estimated that the unauthorized population of immigrants in the United States was 11.5 million in 2011, down from a peak of 11.8 million in 2007. Mexico was the highest source of undocumented migration at 59 percent (6.8 million), followed by El Salvador with 6 percent (660,000), Guatemala (520,000), Honduras (380,000), China (280,000), the Philippines (270,000), India (240,000), Korea (230,000), Ecuador (210,000), and Vietnam (170,000), representing 85 percent of unauthorized migrants.

Scholars find that most unauthorized immigration is motivated by economic or structural concerns. Most unauthorized immigrants come in search of work, often due to the structural conditions or economic decline in their home

country. In her analysis of the history of American immigration policy, Mae Ngai argues that unauthorized entry has been the most common form of illegal immigration since the 1920s. Many arrive by vehicle or on foot through the United States' borders with Mexico or Canada. Others enter legally, often as tourists, but overstay their visas. As many as half of unauthorized immigrants arrived in the United States through legal means. In recent decades, there has also been an increase in unauthorized immigration because of migrants fleeing war, fear of persecution, high levels of crime, or civil unrest in the home country. Many immigrants choose to flee, seeking asylum in the United States, rather than risk violence at home. Often, however, if migrants are not granted asylum, they prefer to remain in the country without authorization rather than return.

Illegal Immigration, Race, and Incorporation

Although undocumented immigrants represent a large sector of the U.S. workforce, they have often been racialized and marginalized. In addition, many families are of mixed status, meaning that some members of the family are authorized while others are not, so that all members may be impacted by anti-immigrant views and punitive immigration policies. As a result, immigration policy continues to play an important role in the incorporation process, even among the second and third generations.

Scholars find that undocumented migrants who arrive as children experience life in the United States differently than those who arrive as adults. Roberto Gonzales reports that among youth, the transition to adulthood is especially difficult because their status becomes more complex once they graduate from high school. Without access to legal employment and limited access to higher education, their aspirations are often cut short, disrupting their ability to integrate into U.S. society successfully.

border (though not exclusively of Mexican immigrants), conducted by "coyotes" who are professionals in the art of sneaking people past border checkpoints using a combination of bribes, off-road transit, and mechanisms for hiding passengers during inspections.

The Lure of Illegal Immigration

The United States is one of the most popular destinations for illegal immigration, for a variety of reasons. Its proximity to Latin America, many countries of which have suffered from waves of political oppression and economic turmoil, is certainly one factor. But the promise of economic opportunity beckons immigrants from farther afield as well, including eastern Europe, the Middle East, Asia, and sub-Saharan Africa. These economic incentives depend both on the United States' reputation as a land of prosperity and opportunity and on the willingness of employers to hire illegal immigrants.

Typically, the circumstance motivating illegal entry is one in which the employer is willing to pay a wage that is lower than what he would pay a legal resident but greater than what the immigrant could earn in his home country. A 1970s study of illegal migrant workers from Mexico in Oregon—workers who repeatedly illegally entered the United States for a season of work and then returned with their earnings to Mexico—found that even after deducting the cost of seasonal travel and the much higher cost of living in the United States, the workers earned a minimum of three times as much as they could have earned doing the same work in Mexico. In many developing countries, remittances (the money sent home by immigrant workers) are a significant source of foreign income and a key factor in economic stability.

Sanctions against employers who hire illegal immigrants are fairly mild, especially compared to the consequences to the workers so hired. As a result, being undocumented does not pose the difficulty in finding a job that it might in other countries, where penalties to employers are more severe. Historically, the labor needs of the American economy have made it politically difficult to change this. In the 21st century, the evidence suggests that because of the global financial meltdown, increased border security, and a

Immigration, Illegal

The population of undocumented immigrants in the United States is estimated to be between 11 and 20 million, about three-quarters of whom are from Latin America and about a quarter of whom are found in California. Since the 1990s, the illegal immigrant population has remained steadily ahead of the legal immigrant population. Undocumented immigrants are discussed in a separate article.

There are three ways in which a person can be considered an illegal immigrant. They may enter the country by unauthorized means, may enter legally but overstay their authorized period of visit, or may violate their terms of entry after arrival. About half of illegal immigrants are believed to have entered the country legally. Illegal entry is most strongly associated with the human smuggling operations along the Mexican

Immigrant rights marchers demonstrate for amnesty in downtown Los Angeles on May Day, 2006. The sign reads, "Today we march, tomorrow we vote." Illegal immigration, a long-standing issue in the United States, has created immense controversy, especially over U.S. citizens losing jobs to undocumented immigrants.

more vigorous crackdown on illegal immigration in key regions of the country, illegal immigration is diminishing.

Legislation and Restrictions

Not until 1986 were there any legal penalties for employers who knowingly hired illegal immigrants, unless some other criminal action could be demonstrated, such as conspiracy or forgery (and even then, prosecutions were seldom). The United States has a long history of limiting immigration as well as a considerable body of past legislation devoted to preserving a particular balance of ethnicities in the population, favoring western Europeans. It has an even longer history of importing workers for cheap labor in ways that limit or

eliminate their rights, beginning with indentured servitude and slavery and persisting today in the widespread practice of hiring illegal immigrants while limiting their legal rights.

The lack of sufficient access to legal immigration is a major contributing factor to the prevalence of illegal immigration, as immigration reform advocates have pointed out for decades. Despite the groundbreaking Immigration and Nationality Act of 1965, there are still considerable limits placed on legal immigration, including an annual quota (not counting spouses, parents, and unmarried minor children of citizens) of 675,000. Only 140,000 visas are issued for employment-related preferences, which makes legal entry for low-skilled workers difficult to impossible unless they can enter with one of the 480,000 visas issued under family-preference rules.

This is especially true since the 1964 termination of the Bracero program, which allowed entry to Mexican workers in the agricultural industry. The flow of workers did not stop; no incentive was created to encourage employers to hire legal workers instead, nor were means created by which these workers could easily obtain visas or become American citizens. The workers were simply turned into illegal immigrants instead of legal temporary workers.

Apart from the Fourteenth Amendment, which endowed U.S.-born children with citizenship, most 19th-century immigration legislation was created to restrict immigration, channel legal immigration toward a specific demographic profile, or restrict the rights of immigrants. Asian immigrants could not become naturalized citizens, for instance, and Chinese immigration was restricted after white workers felt threatened by western employers' reliance on cheap Chinese labor to work mines and build railroads. Immigration of other specific types of persons was also outlawed, notably "lunatics" in 1882 and anarchists in 1901.

This restrictiveness continued in the 20th century. The Emergency Quota Act passed in 1921 enforced quotas based on country of origin, intended to freeze the demographic makeup of the country in place, and remained in force until 1965. The Supreme Court case *United States v. Bhaghat Singh Thind* classified Indians as nonwhites and thus changed their eligibility

for immigration, which retroactively designated many Indian Americans as illegal immigrants. Even when the 1965 reforms were passed removing these country-of-origin quotas, Senate subcommittee chair Ted Kennedy promised, “It will not upset the ethnic mix of our society.”

While immigration legislation has not increased in restrictiveness since, treatment of immigrants has become increasingly harsh. In 1996, the Antiterrorism and Effective Death Penalty Act and the Illegal Immigration Reform and Immigrant Responsibility Act increased the variety of crimes for which immigrants can be deported, and imposed mandatory detention in some deportation cases, resulting in 2 million new deportations in subsequent years. The latter act also greatly increased the Immigration and Naturalization Service’s power in immigration proceedings by allowing the introduction of “secret evidence” if the evidence is classified but considered relevant.

Passed in part as a response to the 1990s terrorist attacks, the acts were further strengthened by legislation passed in the wake of the September 11, 2001, terrorist attacks, notably the REAL ID Act of 2005, which encouraged the building of border fences and made visas more difficult to obtain. Further, the USA PATRIOT Act empowered the federal government to deport illegal immigrants based on suspected (rather than proven) terrorist activity or affiliation with organizations designated by the secretary of state or attorney general. Affiliation even with undesigned organizations could be punished if it was deemed sufficiently suspicious, and the attorney general was empowered to declare specific illegal aliens threats to national security, a “certification” that bypasses due process because the immigrant is given no opportunity for a hearing.

In the mid-2000s, a series of bills were proposed in both the House and the Senate to raise the penalties for illegal immigration as well as to felonize the aiding and abetting of those remaining in the United States. The bills were highly controversial and led to a series of protests calling for a reconsideration of immigration and attitudes toward immigrants, illegal or otherwise, in the United States. A March 10, 2006, demonstration in Chicago by about 100,000 protesters was followed by a march of half a million protesters

in Los Angeles on March 25, and half a million more in Dallas on April 10, called a nationwide day of protest. The organization of this opposition helped lead to the progress toward immigration reforms seen in 2012 and 2013.

While many parts of the country, notably Arizona, have become increasingly concerned with illegal immigration and have strengthened their approach to it, other cities have become “sanctuary cities” in which law enforcement and city officials have been instructed not to respond to immigration crimes. Sanctuary cities include New York, Los Angeles, Chicago, San Francisco, Miami, Washington, D.C., and, despite the concerns about illegal immigration, in Houston, Dallas, and many other parts of Texas.

Immigration Acts

Throughout its history, the U.S. government has adopted legislation aimed at regulating immigration. Immigration acts adopted in 1917 and 1924 arose from the nativist and xenophobic sentiments of many American citizens who particularly disliked the influx of immigrants from Asia and southern and eastern Europe. The Immigration Act of 1952 reflected similar concerns about foreigners, including eastern Europeans who might be communists. However, the

nation's often harsh immigration policy was softened by new immigration laws adopted in 1965 and 1990.

Immigration Act (1917)

The Immigration Act of 1917, also known as the Asiatic Barred Zone Act, was passed by the U.S. Congress on February 5, 1917, overriding a veto by President Woodrow Wilson the previous December. The desire of this legislation was to control and curtail unwanted immigration into the United States. "Unwanted immigrants" included homosexuals, idiots, criminals, epileptics, alcoholics, beggars, polygamists, anarchists, and feeble-minded, insane, mentally and physically defective, and illiterate people.

This act was controversial since it called for the exclusion of immigrants who primarily came from Asia and the Pacific Islands; the mandate to restrict immigrants from these places was known as the Asiatic Barred Zone. Prior efforts to curtail Asian immigration were directed mainly at Chinese immigrants, under the Chinese Exclusion Act (1882), which disqualified immigrants from gaining entry to the United States. Unlike other restrictive immigration efforts, the Immigration Act of 1917 introduced literacy testing in order to exclude immigrants from entering the country. Although Wilson vetoed this requirement for newly arrived immigrants, it was later upheld by Congress.

Immigration Act (1924)

The Immigration Act of 1924 was signed into law by President Calvin Coolidge in May 1924. This piece of legislation contained additional efforts by U.S. government officials to control the number of immigrants coming from particular national territories. Under this law, also known as the National Origins Act, U.S. officials reduced the number of immigrants that could be admitted to the nation, decreasing the percentage of immigrants, based on national origin, from 2 to 3 percent of the number of people from a given country already living in the United States. This act also reduced the percentage of potential immigrants previously established by the Emergency Quota Act (1921). In a similar spirit to the Immigration Act of 1917, this law excluded Asians.

One of the primary aims of the National Origins Act was to further restrict southern and

eastern European migration. In particular, the government sought to curtail the entry of Jewish immigrants fleeing persecution in Poland and Russia, and began to prohibit immigration from India and Middle Eastern and east Asian countries. Some argue that the main purpose of the law was to preserve a homogeneous notion of American identity.

The act included provisions that gave preference to immigrants who were 21 years and older, and to agricultural laborers, their wives, and children. In addition, the law attempted to establish an official visa system that would be supervised by the State Department and the Immigration and Naturalization Service. As a result, no immigrant would be allowed to enter the United States without a valid visa issued by American consular officials. Those ineligible to enter lawfully were Japanese and Chinese immigrants. The law also imposed a fine on all companies that unlawfully transported undocumented immigrants to American soil.

This act was designed to uphold a homogeneous ideal of American identity, which nativists maintained was being threatened by immigrants from southern and eastern Europe. Nativists sought to ensure a homogenous balance (racial and ethnic) of native-born Americans over outsiders. A dominant ideology of this time was that the native-born were superior to immigrants who were starving, sick, and less able to contribute to American economy and culture.

The act controlled unwanted immigration through quotas and altogether barred people from Asia, including Japanese, Chinese, Philippine, Thai, Laotian, Vietnamese, Cambodian, Singaporean, Korean, Indonesian, Burmese, Indian, Sri Lankan, and Malaysian immigrants. Because these immigrants were nonwhite, they were disallowed from obtaining citizenship. Although the act was explicit about curtailing immigrants from particular national regions, it remained silent on limiting immigration from Latin American regions.

The law drastically reduced the number of Italian immigrants while giving preference to German, British, and Irish immigrants, since they had the highest quotas.

The restrictive nature of this law was also felt by southern and eastern European immigrants,

since a greater number of people had left these countries than were allowed to enter the United States. The national origins quotas established by this legislation would remain in place until they were challenged by the Immigration and Nationality Act in 1965.

Immigration Act (1952)

Congress enacted the Immigration and Nationality Act of 1952 in June of that year, despite its veto by President Harry S. Truman. Truman vetoed the measure because he deemed it discriminatory and un-American, and he argued it was “isolationist” in nature like the Immigration Act of 1924. However, his veto was overridden by a House of Representatives vote of 278 to 113 and a Senate vote of 57 to 26 in favor of adoption. This piece of legislation is also known as the McCarran-Walter Act, after Senator Pat McCarran (D-Nevada) and Congressman Francis Walter (D-Pennsylvania), who were concerned with the high levels of eastern European immigrants. McCarran argued the law was needed because Asian and European immigrants were an unassimilable enemy that poisoned the American haven.

An important contribution made by this law was the elimination of gender and race as categories to restrict and discriminate against potential immigrants. Instead, the U.S. government used nationality and region as criteria with which to control which ethnic groups were allowed entry. Preference was given to immigrants with special labor skills and to relatives of citizens who were exempt from the quota restrictions. The act also barred potential immigrants who were or had been affiliated with the Communist Party. Notable Latino public figures excluded under the act for their ideological character were Mexican author Carlos Fuentes, Colombian novelist Gabriel García Márquez, and Chilean poet Pablo Neruda.

A provision of this legislation allowed territories like Puerto Rico and Guam to be included as part of the United States. In this respect, the act stated that individuals born after December 23, 1952, would gain American citizenship. Portions of this law remained in place in 2012, but it had been amended many times since its adoption and modified substantially by the Immigration and Nationality Act of 1965.

The Immigration and Nationality Act (1965)

President John F. Kennedy criticized the nation’s harsh immigration policies during the civil rights movement, calling the quota system of immigration “intolerable.” Following Kennedy’s assassination in 1963, President Lyndon B. Johnson signed into law the Immigration and Nationality Act of 1965, also known as the Hart-Cellar Act.

The majority of Americans opposed this piece of legislation because of concerns that immigration reform would lead to ethnic, racial, and linguistic changes. Despite public sentiment, there was widespread political support for the act and it easily passed the House of Representatives by a vote of 326 to 70 and the Senate by a vote of 76 to 18.

In an effort to alter negative public opinion, political figures like Johnson and U.S. Senator Ted Kennedy assured the public that this legislation would not significantly alter the nation’s demographic composition. Legislators forecast that the primary applicants benefiting from this reform would be Europeans, not immigrants from other places.

The significance of this piece of legislation was that it served to abolish the national origin quotas that were in place since the 1920s. Instead of focusing on nationality as a category of admission, the Hart-Cellar Act gave preference to immigrants’ skills and whether potential immigrants had family ties with existing U.S. citizens. Although the act did establish a formula that capped immigrant visas for each country at 170,000 annually, it did not include immigrants in this quota if they were relatives of U.S. citizens.

The Hart-Cellar Act did away with the previously established harsh immigration policies that served to exclude Asian, African, and southern and eastern European immigrants. In conjunction with this legislation were other political and economic factors that contributed to spikes in immigration from Latin America and Asia, such as the end of the Bracero program (which resulted in increases in documented and undocumented migration from Mexico) and Cuban migration after the Fidel Castro revolution (which encouraged the Cuban elite and professional classes to flee an emerging socialist government).

Immigration following the Immigration and Nationality Act served to further diversify national demographics through greater inclusion

of immigrants from the Mediterranean area, Latin America, and Asia. Prior to the Hart-Cellar Act, population growth via immigration accounted for roughly one-tenth of the total population increases in the nation. By the 1990s, immigration would account for one-third of American population growth, with undocumented immigration making up one-quarter of this increase. The law also increased and diversified the ethnic composition of the nation, with a greater portion of foreign-born citizens coming from Latin America and Asia.

Immigration Act (1990)

On November, 29, 1990, President George H. W. Bush signed the Immigration Act of 1990. This piece of legislation made significant changes to immigration policies by increasing the limits of documented immigration. A secondary impact was that the law reviewed the criteria for exclusion and deportation of individuals. Among other important impacts this legislation had on immigration reform was the granting of temporary protection status to individuals of selected nations, reworked admissions categories for non-immigrants, and a modified visa program. This act also resulted in a review of previous naturalization requirements.

Among its notable changes, the act banned the use of homosexuality as a cause for excluding potential immigrants from entering the United States and made exceptions to the English-only testing requirement needed to achieve naturalization established under the Naturalization Act of 1906.

Following the enactment of this legislation, roughly 700,000 new immigrants were able to enter the United States, an increase over the numbers of entrants who arrived before this law. In a similar fashion to previous immigration laws, the Immigration Act of 1990 gave preference to immigrants who already worked in the United States and to highly skilled immigrants. Other barriers that were used to exclude potential immigrants were struck down by the act, including banning immigrant entrants who were victims of the human immunodeficiency virus.

Immigration and Customs Enforcement, U.S.

The Department of Homeland Security's major internal policing subagency is Immigration and Customs Enforcement (ICE). ICE is responsible

for detection of unauthorized immigrants and terrorism suspects.

ICE has over 20,000 employees who carry out mandatory detention and removal, and deported record numbers of immigrants. In 2011, ICE statistics indicated 396,906 noncitizen removals. A primary goal is the removal of "criminal aliens" through the Secure Communities program and 287(g) Memorandums of Agreement (MOAs) with local and state law enforcement to expand such enforcement through state or local police cooperation.

After September 11, 2001 (9/11), ICE was conceived when a major reorganization of immigration enforcement occurred. When the Department of Homeland Security was created, the former Immigration and Naturalization Service was broken into separate divisions, including ICE, and was placed under the Director of Homeland Security. Within ICE, Enforcement and Removal Operations (ERO) is the primary unit involved in arrests for immigration law violations. It is responsible for the apprehension, arrest, and removal (deportation) of undocumented immigrants. Removals include noncitizens who are convicted criminals, national security threats, immigration fugitives (individuals who fail to report for deportation), and unauthorized border crossers. ICE supervises individuals in custody or detention alternatives and transports individuals ordered to be deported for any reason, procedural or criminal. During removal, deportees are shackled until they are deposited in the country of origin.

ICE contains the Homeland Security Investigations (HSI) directorate, and its mission is criminal operations. It investigates international and domestic movement of people and goods, including immigration crime, human smuggling, and human rights violations. Internal enforcement has over 10,000 employees, including 6,700 special agents assigned in more than 200 U.S. cities and 47 overseas locations.

ICE Strategies

Daniel Kanstroom, an immigration lawyer, refers to a major operational function of ICE as post-entry immigration social control. This involves determining the location of workers, students, and permanent resident aliens approved to be in the country but determined removable after

committing a crime. ICE also carries out extended border control when it detains and removes individuals who entered without authorization from the Department of the Interior.

Policing strategies used by ICE have included worksite, community, and home raids. Citizens are legally protected from noncriminal raids. During the George W. Bush administration, workplace raid targets ranged from meatpacking to small businesses. A Bedford, Massachusetts, raid that separated immigrants mothers from their children, including a breastfeeding child, generated notoriety. Home raid searches are made for immigrants in violation of civil immigration laws, and are conducted without a court warrant or protection of the Fourth Amendment of the Constitution. Officers look for individuals who have committed civil immigration offenses, including entry without inspection or failure to report for a deportation hearing.

In his 2012 publication on deportation law, Daniel Kanstroom indicates that ICE has conducted predawn raids into private households, and that it is not always clear that informed consent was given. These raids have often involved bad information, targeting the wrong individuals or address, and ICE officers have had difficulty in separating immigration law violators from legal residents. Exclusionary rules regarding the legality of seizure of evidence are less likely to be applied in deportation hearings, and ICE agents are known to be willing to take advantage of home raids for extralegal evidence gathering. Concerns have been raised about the social and psychological impact of these raids on both citizens and noncitizens, especially U.S. birthright citizen children. During the Barack Obama administration, workplace and home raids declined but did not fully stop.

Since 9/11, ICE has forcibly removed or facilitated the voluntary departures of hundreds of thousands from the United States. These removals have caused social turmoil and population turnover in immigrant communities. One ICE goal has been the removal of criminal aliens through the operation of the Secure Communities program. It uses the Federal Bureau of Investigation (FBI) national criminal offender database to match the fingerprints of arrested individuals to immigration records. In the case of convicted immigrants, whether undocumented or permanent resident

aliens, ICE picks them up and deports them after they have served a criminal sentence. ICE prioritizes deportation based on the severity of the crime committed, but has primarily deported nonviolent offenders, repeatedly increasing the number of criminal offender deportations. In 2011, ICE removed 1,119 noncitizens convicted of homicide, and 5,848 convicted of sexual offenses. Other major crime categories for removal were drug-related crimes, including possession (44,653), and driving under the influence (35,927).

ICE has made the removal of criminal aliens its top priority. It began expanding enforcement with an invitation to state and local police agencies to participate in the 287g program with Memorandums of Agreement. Immigration enforcement training would be provided to officers. A total of 68 law enforcement agencies in 24 states have participation agreements, and are credited with identifying 279,311 noncitizens who were potentially removable—mostly at local jails. ICE expanded upon 287g with the stand-alone Secure Communities program, which seeks to remove individuals considered a threat to public safety and repeat immigration law violators. In 2008, Secure Communities was started in 14 jurisdictions, and it has spread to over 3,000 jurisdictions. Over 50,000 immigrants convicted of aggravated felonies designated under various immigration acts have been removed under this program.

Criticisms of the Program

Concerns about the Secure Communities program include whether it uses racial profiling and how it impacts immigrant communities. Several states and municipalities have attempted to restrict the operation of the Secure Communities program on the grounds of civil rights violations and, most importantly, that it primarily detains and removes nonviolent offenders. Immigrant advocates have weighed the impact of removal for nonviolent crimes and argue that the negative consequences for families and U.S.-born children should be considered by immigration judges, who have repeatedly been denied discretion because of mandatory detention and removal policies. The governors of New York, Illinois, and Massachusetts, all states with gateway cities as primary immigrant destinations, requested termination of operating agreements. In 2011, ICE announced that it was

terminating all state agreements but that it would continue to operate the Secure Communities program because it viewed its activities in the states as a federal requirement.

A central criticism of ICE mandatory detention and removal focuses on detainees' lack of due process rights under the Constitution. Citizens have the right to legal representation and full review of their cases but noncitizens, including legally admitted permanent resident aliens, are not recognized as eligible for due process. Whether they resist or give up, potential deportees at the border and in the interior face a situation in which noncitizens do not have the following rights: representation by court-appointed counsel if they cannot afford a lawyer; bail (because detention is mandatory); suppression of illegally seized evidence; protection against ex post facto/retroactive laws; and protection from selective prosecution on the basis of country of origin and political beliefs.

For noncitizens convicted of a crime classified as an aggravated felony, judges are not allowed to consider a range of discretionary concerns, including impact on economic and emotional

support of families and U.S. birthright children, or whether deportees had social and cultural ties to the sending nation to which they would be deported. As a result, both major family providers and youth who left their origin nations too young to have knowledge of its culture or social ties have been deported.

Detention Procedures

ICE detention procedures and the associated judicial review process administered by the Department of Justice are controversial. Until late in 2012, during the Obama administration, ICE transferred detainees to available beds in remote locations, often other states, without notice to families or legal advocates. An online detainee locator system has been operationalized for searches involving individuals over the age of 18. It allows searches by name and by the ICE A-number in conjunction with country of birth. Other concerns about detention have involved psychological and health conditions in ICE, and outsourced jail or prison facilities. Although noncitizens who have violated immigration law are technically not imprisoned criminals, they are subject to being stripped of their clothing and having personal possessions taken away and replaced by prison clothing, being placed in handcuffs and leg constraints, and being contained in large barracks-like rooms for from two weeks to one year.

Particularly when detainees are housed in jails or prisons, they are treated the same as other prisoners. Physical, sexual, and psychological abuse of detainees has been alleged, and the Obama administration has responded to criticism by creating the Office of Detention Policy and Planning. ICE has since issued performance-based national detention standards. The high number of noncitizens detained has made additional oversight critical. For example, in 2010, 517,000 foreign nationals were apprehended, 83 percent of whom were Mexican citizens. Illustrating the massive caseload, 363,000 noncitizens were detained. Although Mexican nationals constituted 61 percent of detainees, their stays were shorter, and they accounted for 36 percent of bed days. The continued detention of Mexican and other foreign nationals is posing serious fiscal and social costs.

ICE reports detention costs at \$122 per day, but when ICE operational expenses are included,

On December 11, 2008, U.S. Immigration and Customs Enforcement (ICE) and Removal Operations (ERO) officers arrest (and later deport) Carlos Garcia-Hernandez, a Mexican citizen and Houston, Texas, gang member, whom Mexican officials believe was involved in a double murder.

the cost is \$166 per day. Daily costs are \$5.5 million, and the DHS budgetary request was over \$2 billion. ICE operates six detention facilities and contracts for bed space at 250 jails and prisons. Private businesses such as the Corrections Corporation of America operate over 14,500 beds, and GEO Group, Inc., has over 7,000 beds. Considering detainee turnover because of removal, immigrant detention is primarily privatized or subcontracted to local and state authorities. The advocates at the National Immigration Forum suggest that less carceral alternatives would cost from 30 cents to \$14 a day. These include telephone and in-person reporting, curfews, home visits, and especially electronic monitoring. ICE uses electronic monitoring for individuals who pose no danger and are not a flight risk. Because only 11 percent of ICE detainees have committed violent crimes, National Immigration Forum advocates estimate that 80 percent of current spending—\$1.6 billion—could be saved annually through use of technological and caseload alternatives.

Immigration History Research Center

The Immigration History Research Center (IHRC) at the University of Minnesota began as a collaboration between academic researchers and a Minnesota working-class community in the mid-1960s and remains, in the 21st century, a site of community-engaged, multidisciplinary research and archival initiatives in immigration studies. In 1965, when the IHRC was founded, the University of Minnesota had already for four decades supported a distinctive "Minnesota school" of scholarship on immigration. Since the 1920s, historians Theodore Blegen (1891–1969) and George Stephenson (1883–1958) had emphasized the importance of creating publicly accessible archives that privileged immigrants' viewpoints, and collaborative scholarship that fostered interdisciplinarity, international partnership, community engagement, and history "from the bottom up." In the early 1960s, historians Clarke Chambers, Hy Berman, and Timothy Smith discovered a rich trove of materials during their research into the multilingual immigrant miners and industrial workers of northern Minnesota's Iron Range. They created the Immigrant Archives and the Center for Immigration Studies, which merged in 1965 to form the Immigration History Research Center.

Development

Between 1967 and 2005, the IHRC developed under the long-term directorship of Rudolph J. Vecoli, whose immediate vision was to collect and research the immigration to the United States of 24 immigrant and ethnic groups from southern and eastern Europe and western Asia. By the 1980s, under curator Joel Wurl, the IHRC began to collect and foster research on mid-20th-century

refugees and displaced persons from Europe and, eventually, also refugees from Africa and Asia. Vecoli and Wurl worked with ethnic community partners, formalized as the Friends of the IHRC in 1977. The IHRC became one of the most important centers for immigration research in North America. Its archives continue to attract scholars, archivists, and students from both local and international research communities.

During the 1970s and 1980s, Vecoli continued Blegen and Stephenson's focus on combining archival, research, and programming activities that were deeply embedded in community outreach and networks of international and interdisciplinary collaboration. In addition to working with local ethnic organizations and the Friends of the IHRC, Vecoli fostered transnational partnerships, worked to keep scholarship on older and newer European migrations in dialogue, and made the IHRC an important site for Atlantic studies of migration. During these years, the IHRC publication, *Spectrum*, pointed community- and library-based researchers to large interdisciplinary themes—language, autobiography, refugees, and the performing arts—to be explored in its collections.

As new waves of refugees began to reshape Minnesota's population, the IHRC collaborated with a new generation of scholars who inaugurated the Southeast Asian Refugee Studies project, later transformed into the Center for Refugee Studies (CRS). During its two decades' existence, the CRS numbered among a handful of university centers documenting post-Vietnam refugee movements and collected rich materials on both refugees from southeast Asia and the organizations that worked with these migrants. When the CRS was disbanded in 1998, the IHRC incorporated the CRS archives; materials on forced migrations and refugee settlement after 1945 soon comprised a third of IHRC holdings. In the late 1990s, the IHRC engaged in a fruitful collaboration with American Studies scholar David Roediger, focusing on whiteness among working-class immigrants and hosting the innovative and interdisciplinary "Race, Ethnicity, Migration" (REM) seminar and conference in 1999 and 2000.

In 2005, historian Donna R. Gabaccia succeeded Rudolph J. Vecoli as director of the IHRC. Under her leadership, the Immigration History

Research Center has expanded long-standing IHRC traditions (documentation, research, education, community engagement, and international collaboration) through work with the post-1965 immigrants and refugees. Strengthening the center's international networks, the IHRC embarked on the Digitizing Immigrant Letters project, which digitally archives letters written and messages recorded primarily between 1850 and 1970 by and to immigrants, translated from their native languages. In summer 2012, the IHRC will meet with more than 20 U.S. and international community partners in Vienna to discuss future steps for international collaboration and digitizing letters of migration.

During Gabaccia's tenure, the IHRC revived the interdisciplinary networks briefly fostered in the late 1990s through an innovative collaboration with the Institute of Global Studies that offered, and continues to offer, seminars and programming conferences focused on "Global REM," which bring together the more than 100 faculty members at the University of Minnesota whose research or pedagogy engages race, ethnicity, migration, or refugee life, as well as the IHRC's many international and local community partners. In addition, the IHRC brought together demographers, historians, and anthropologists to explore the topic of "gender ratios and global migrations," using the Minnesota Population Center's (MPC) digital archives of population records (Integrated Public Use Microdata Series [IPUMs] or IPUMs International). A 2007 conference on world migrations cosponsored by the IHRC, the German Historical Institute, and the Institute for Social History was coedited by Gabaccia and Dirk Hoerder, *Connecting Seas and Connected Ocean Rims* (2011). Essays from a conference on migration and belonging are being edited for publication, as are essays from a transatlantic workshop for graduate students from Europe and North America on "Europe—Migration—Identity."

Because Minnesota's foreign-born populations now include sizable numbers of refugees from Africa and southeast Asia and labor migrants from Asia, Africa, and Latin America, the Minnesota school's legacy of intellectual partnership and archive building has been revitalized by students expanding their research on immigrant youth culture and digital humanities. The IHRC's

Minnesota 2.0 project created a digital archive documenting and interpreting how 1.5- and second-generation Mexican, Somali, and Hmong youth use social networking sites. The IHRC partnered with a team of Somali students to collect over a dozen video interviews with young Somalis living in Minnesota and London. Their “Sheeko: Somali Youth Oral History Collection” is a digital archive of interest to youth, the Somali community, and researchers in many disciplines.

As Gabaccia ends her directorship in summer 2012, the IHRC enjoys wide collaborative relations with scholars, students, immigrant and refugee ethnic communities, and researchers from Minnesota, the United States, and the world. The mission of the IHRC to foster interdisciplinary research, develop collections documenting immigrant life, and engage communities in research activities will continue into the 21st century.

Immigration Reform and Control Act (1986)

The Immigration Reform and Control Act of 1986 (IRCA) was sponsored by Senator Alan Simpson (R-Wyoming) and Representative

Romano Mazzoli (D-Kentucky) and signed by President Ronald Reagan. The primary features of IRCA are the procedures for legalization of undocumented immigrants already living in the United States and, for the first time, sanctioning employers for knowingly hiring undocumented immigrants. Each of these two points has generated controversy: the provisions for legalization have been characterized as an amnesty for undocumented immigrants, and the employer enforcement provisions have suffered from a lack of enforcement.

Origins of the Act

The legislation that became IRCA developed over several sessions of Congress. The aftermath of the 1965 legislation that opened the way for Eastern Hemisphere migration and an increase in undocumented immigrants were two of the major issues that developed. In 1979 then-president Jimmy Carter appointed the Select Commission on Immigration and Refugee Policy (SCIRP) to deal with immigration reform. Observing the vast increase in undocumented immigrants and other challenges in the aftermath of the 1965 reforms, recommendations were made in a report issued February 1981. The report recommended legalization of a large number of undocumented immigrants, clearer and possibly higher quotas for migration from North America, greater border control and security, and the inclusion of sanctions on employers as an aspect of immigration policy for the first time.

Legislative History and Passage

Immigration legislation was considered seriously beginning in 1981. Business groups worried about access to an affordable workforce, whereas nativist groups sought to restrict immigration; groups representing the Latino community and labor groups were all involved. The lead sponsors of the legislation, Senator Alan Simpson, a Republican from Wyoming, and Representative Romano Mazzoli, a staunchly pro-life Democrat from Kentucky, may have been able to succeed because neither came from a state where mass immigration (documented or undocumented) was an issue. The Simpson-Mazzoli bill went through several incarnations. Even within interest groups and partisan factions, there was often substantial disagreement.

After several attempts to comprehensively reform the process, final passage of IRCA occurred in 1986. The final legislation included several attempts to resolve the competing interests and various factions involved in disputes and problems arising from immigration. For employers, knowingly hiring a person not authorized to work in the United States, continuing to employ someone not authorized to work, and hiring someone without requiring them to prove their eligibility became illegal. Several procedures were also created for legalization. Undocumented immigrants in continuous residence since January 1, 1982, became eligible for temporary legal status and a pathway to permanent residency. The Special Agricultural Worker Program gave certain agricultural workers permanent residency. Other programs were created for temporary agricultural labor shortages, opportunities for permanent residency for long-term unauthorized residents and for Cuban and Haitian entrants. Provisions were also made to increase Border Patrol funding, enforcement, and security. The conference report for the final bill was approved in the House of Representatives 238–173 and on October 17, 1986, in the Senate by a vote of 63–24. The bill was signed by President Reagan on November 6, 1986, and became Public Law 99-603.

IRCA provided for legalization of undocumented immigrants, increased border security, allowed certain exemptions for the agricultural industry, and created employer sanctions for the first time. However, it did not create a continuing guest worker program and it did not resolve the question of the status of people who immigrated to the United States after the deadline for legalization. The Immigration Act of 1990 implemented SCIRP recommendations relating to visas for highly skilled employees and increased the number of legal immigrants allowed, but challenges remained. In 1996 the Illegal Immigration Reform and Immigrant Responsibility Act created many restrictions on undocumented immigrants. Nevertheless, attempts to comprehensively reform the process have failed since 1986.

Impact and Legacy

IRCA has a complex legacy. The employer enforcement portion of the bill was constrained

by a severe lack of financial resources and a large-scale potential for fraud. The I-9 form, a ubiquitous feature of beginning legal employment in the United States, was established as a result of IRCA but enforcing key provisions proved difficult.

The most enduring legacy of IRCA involved about 3 million people legalizing their status and becoming permanent residents. The majority of the immigrants were residents of California, with Texas, New York, Illinois, and Florida also accounting for a substantial portion. This development, which far obscured the border security and employer enforcement provisions of the legislation, has become the most contentious aspect of IRCA's legacy. Attempts to reform the immigration process are often characterized by fears of an "amnesty." In addition, the legislation left undocumented immigrants who arrived after January 1, 1982, outside the window for legalization, and imperfect implementation also resulted in not everyone completing the path to permanent residency. As a result, supporters and opponents of large-scale immigrant and immigration legalization processes each found a lack of promise in IRCA, a shadow that continues to linger over debates regarding immigration.

Current debates over immigration often use the successes and failures of IRCA, a "grand bargain" that to some has failed to live up to its initial promise. The employer enforcement provisions have been plagued by a lack of resources and a reliance on education rather than the provision of resources for strict enforcement. Though immigration restriction legislation was passed in 1996 and the Border Patrol has been enhanced in resources and personnel, comprehensive immigration reform has proved impossible to pass because of an increasingly polarized Congress. Legislation at the state level has become increasingly contentious as well, with states such as Arizona passing stringent immigration restriction legislation. IRCA shows how often even the most complex and comprehensive policy prescription for immigration serves as part of a continuing process rather than an enduring solution.

Implicit Association Test

The Implicit Association Test (IAT) is a measure of a person’s automatic association of concepts and their favorability. An “attitude” is how favorably a person evaluates something, and “implicit” refers to an indirect or underlying nature. Many different concepts have been measured using the IAT, including those related to the multicultural world. Based on social psychological theories and ideas, it has received considerable research and media attention. Many benefits are purported to be derived from its use, such as understanding the origin and potential eradication of prejudices and discrimination. While there is some empirical support for its validity and reliability, there is also controversy surrounding what can actually be derived from the results and how its usefulness can translate outside the laboratory setting.

Development of the Test

In 1995, researchers Anthony Greenwald and Mahzarin Banaji discussed the idea of implicit and explicit memory extending to other social constructs. If memories outside of consciousness can affect behavior, then attitudes and behavior may also be affected by underlying cognitions. The IAT was first discussed in scientific literature in 1998. It is a measurement of how strong a person

automatically associates concepts with attributes, such as favorability. The strength of these mental associations is based on the rapidness of associations that people make. In some circumstances, a person may not be able to explicitly divulge their attitudes due to lack of self-awareness or due to social desirability bias and an unwillingness to divulge them. A better way to uncover and understand underlying attitudes was needed, and the IAT was developed to meet these needs.

The IAT is a 10- to 15-minute test conducted using a computer. The user needs to pair two concept words or images (such as black and white or Arab and Muslim) with preference words (such as pleasant or unpleasant or good or bad). This is done several times in varying orders with a requirement that the user try to indicate the required pairings as quickly as possible by typing corresponding keys on the keyboard once those pairings are displayed. The idea is that faster responses occur with easier pairings and should indicate a stronger association in a person’s memory. The IAT is readily available to use in research, and the public can access the tests for personal discovery as well as to take part in continuing research in this area.

Research, Application, and Controversy

Much research has been conducted on the validity and reliability of the test. If the test is repeated several times, it is possible to alter a person’s score, and there is concern that a person’s score will be biased in the direction of the first set of pairings. There is some disagreement that what is being measured is not truly about an individual’s implicit attitude but instead is a cultural attitude or awareness of stereotypes. Familiarity with the concepts can also affect the results, as people tend to show preference for things that are familiar. As the IAT is a measure of cognition and speed, those with a decline in cognitive responsiveness tend to show more extreme IAT scores, which may be a measure of cognitive control rather than an implicit judgment. Another possible interpretation of what the IAT is truly measuring is the cognitive development and distinction of in-groups and out-groups.

The IAT has been shown to correlate to a number of real-world decisions and behaviors better than explicit measures, but this is truer

for socially sensitive issues such as racial discrimination. It is possible for a person to fake their responses, but this is relatively difficult and not a common occurrence. Multiple attempts of the same test show a trend toward neutral scores but overall show good test-retest reliability. Altering methodology and assessment computations can take into account some of these known limitations.

The IAT has been used empirically in many areas in psychology, including social, clinical, developmental, and cognitive, as well as other disciplines such as marketing. Over 90 IATs have been developed that assess constructs such as gender, political preferences, races, ethnicities, age, and weight. While in most instances the IAT is given to adults, the Child-IAT uses sound and pictures, which makes it useful to measure underlying attitudes in children 4 years of age and up, as biases develop early. Also, it appears that automatic ethnic and racial preferences are universal.

Results of the IAT can be useful in helping individuals identify unknown underlying associations that may affect their decisions and behaviors. If a person is aware of these unconscious attitudes, the test can prompt him/her to identify areas in which conscious effort needs to be made to produce equal and just choices and actions. Over time, this effort can help reduce the incongruent cognition and create social change, as unconscious attitudes can be altered over time.

There are, however, limitations to how the results should be interpreted and used. Though the IAT developers and researchers have notes of caution as to what the tests mean and can be used for, public accessibility to the tests and results are of some concern if those taking it don't understand the true meaning and limitations of the results they receive. The IAT does not identify causes of biases and discrimination and does not definitively predict behavior.

In the Heat of the Night

The 1967 mystery film *In the Heat of the Night*, directed by Norman Jewison, follows two policemen as they track down the murderer of a businessman. However, the plot is invigorated by the fact that it is the first interracial police film. Local police chief Bill Gillespie (Rod Steiger) is white; his opposite number from Philadelphia, Virgil Tibbs (Sydney Poitier), is black; and the setting is Sparta, a small Mississippi town. Unlike the interracial "buddy" pairings of later films such as the *Die Hard*, *Lethal Weapon*, and *Rush Hour* franchises, the relationship between Gillespie and Tibbs is at first antagonistic. Tibbs is passing through town, returning north after visiting his mother, and is picked up at the railway station as an immediate suspect merely because of the color of his skin. When Gillespie discovers Tibbs is Philadelphia's leading homicide detective, he has to resentfully ask him for help; neither experience is conducive to friendship. This discord sets the stage for the film to explore racial prejudice in modern America.

Innovative and Groundbreaking Film

The personnel involved in the making of *In the Heat of the Night* ensured it would be innovative. Predating "blaxploitation" films such as *Shaft* (Richard Roundtree, 1972), with its Quincy

Jones score and signature song performed by Ray Charles, it was one of the first films to have a predominantly African American soundtrack. *In the Heat of the Night* was one of three films on race relations Poitier made during 1967, although the London-set *To Sir, With Love* in which he plays a schoolteacher and the interracial romance *Guess Who's Coming to Dinner* are far less challenging.

The Academy Award-winning editor of *In the Heat of the Night*, Hal Ashby, soon became a leading director of the trailblazing “New Hollywood” movement and it is his dynamic work that generates much of the film’s tension. At the outset, when Tibbs is hauled from the railway station to Gillespie’s police station, it is several minutes before both men are seen together in the frame; the perpetual cross-cutting from face to face sets up the crackling atmosphere of antagonism. Similarly, Steiger’s technique of chewing gum faster and faster to denote his nervousness as he discovers Tibbs is his career superior is contrasted with the stillness of Poitier’s style in establishing the power relations between the characters.

Playing a chain-gang escapee in *The Defiant Ones* (Stanley Kramer, 1957), Poitier, insisting that he and fellow convict Joker (Tony Curtis) head north, says: “I’m a strange colored man in a white southern town. How long before they pick me up?” Moving forward 10 years to *In the Heat of the Night*, these seem to be prophetic words for Virgil Tibbs. However, much has in fact changed. Virgil is a well-paid, high-ranking police officer; in Sparta, he is still addressed as “boy,” but in Philadelphia, they call him “Mr. Tibbs.” In this light, *In the Heat of the Night* is not so much an exploration of race relations across America as a critique of an American south that is seen to be out of step with the north, which apparently affords equal opportunities to all.

Sparta is beset by problems, of which racism is only one. Its police force make blunders such as failing to determine whether a suspect is right- or left-handed or to establish an accurate time of death, errors that seem to have been devised for Tibbs to showcase his skills. White locals, such as a young woman who likes to parade at her window naked and a psychotic diner counterman who is the actual killer, are depicted as typically underclass. In contrast, the only northerners that are encountered—Colbert, the murder victim

who is a Chicago businessman seeking to provide jobs for African Americans by opening a factory in Sparta, his dignified widow (Lee Grant) who recognizes Tibbs’s superior policing, and Tibbs himself—are beyond reproach.

Within the film’s context, the south continues to be tainted by its original sin, slavery. There is seen a latter-day version of this, as African Americans pick cotton on the Endicott plantation. Endicott (Larry Gates) is an unreconstructed racist, and the film’s most controversial moment—one that must have been electrifying when seen in 1967—occurs when Endicott slaps Tibbs across the face for daring to question him. Without missing a beat, Tibbs returns the blow, distilling onto the screen the turning point for Hollywood’s representation of race relations and answering the critics who felt Poitier had too often played the “Uncle Tom.” This moment also marks a turning point for Tibbs and Gillespie. Gillespie has long recognized the injustice of Endicott’s economic and class supremacy and Virgil’s action leads him for the first time to think about his taken-for-granted attitudes toward race. The crime—which is really an incidental plot device—later solved, Tibbs returns north, but Gillespie’s thoughtful farewell—“You take care, now, Virgil”—gives understated hope to the civil rights movement.

In the Heights

Winner of the 2008 Tony Award for Best Musical, *In the Heights* takes a snapshot of life in the predominantly Dominican neighborhood of Washington Heights in upper Manhattan, New York City. The musical tells the story of immigrants from the Spanish-speaking Caribbean and the sacrifices made in the hope of a better life in the United States.

In the Heights was created in 1999, when Lin-Manuel Miranda, who wrote the music and lyrics, was a sophomore at Wesleyan University. The musical has autobiographical elements: The son of Puerto Ricans who moved to New York City, Miranda was raised in Upper Manhattan. He attended the prestigious Hunter College High School before moving on to Wesleyan. After an on-campus production, *In the Heights* attracted the attention of schoolmates, including Thomas Kail and John Buffalo Mailer (the son of Norman Mailer). The play was next presented at the Eugene O'Neill Theater Center in Waterford, Connecticut, in 2005. It ran Off-Broadway in 2007 before moving to the Richard Rodgers Theater in March 2008; it played 29 previews and 1,185 performances before ending its run.

The story takes place on the Fourth of July weekend. The protagonist, Usnavi (named after a naval vessel his parents saw upon their arrival in the United States), is the owner of the local *bodega* (corner store), a gathering space where everyone stops for coffee in the morning on their way to work. Born in the Dominican Republic, he and his brother were raised in New York by Abuela Claudia, the Cuban-born matriarch of the neighborhood. Struggling to keep his business afloat, Usnavi yearns to return to the island of his birth. He also longs for Vanessa, a hairstylist who dreams of moving to the West Village. Vanessa works for Daniela, owner of a hair salon who can no longer afford the rent in the neighborhood and who ultimately moves her business to the Bronx.

The Rosario family lives in the neighborhood: Nina returns from her first year at Stanford University, a first-generation college student. Her parents, originally from Puerto Rico, own a local taxi dispatch and labor to keep it profitable as they sacrifice to pay for her tuition. Overwhelmed by the cultural differences and affluence of many of

her classmates, she contemplates leaving school permanently, only to decide to return. Over the weekend, she falls in love with Benny, a young black man who works for her parents; when they discover the relationship, the Rosarios vow to never accept him. Abuela Claudia dies, leaving an inheritance for Usnavi; though he wants to return to the Dominican Republic, he ultimately decides that his home is in the Heights.

Though there are inevitable comparisons to *West Side Story* (1957, the most successful Broadway musical to feature Latino characters), in interviews Miranda cites *Fiddler on the Roof* (1964), *Rent* (1996), and *The Capeman* (1998) as inspirations as well. For him, the story focuses on questions of home and traditions within a contemporary context. Featuring rap, salsa, merengue, and bachata, the musical updates the mythic tale of the immigrant searching for the American Dream.

Awards

As an Off-Broadway production, *In the Heights* won the 2007 Drama Desk Award for Outstanding Ensemble Performance, the Lucille Lortel Award for Outstanding Musical, the Outer Critics Circle Award for Best Musical, and the Obie Award for Outstanding Music and Lyrics. Miranda was also honored for his acting, winning the Theatre World Award for Outstanding Debut Performance. *In the Heights* was the most-nominated Broadway musical of 2008, garnering 13 Tony Award nominations: Best Musical, Best Book of a Musical, Best Original Score, Best Performance by a Leading Actor in a Musical, Best Performance by a Featured Actor in a Musical, Best Performance by a Featured Actress in a Musical, Best Direction of a Musical, Best Choreography, Best Orchestrations, Best Scenic Design, Best Costume Design, Best Lighting Design, and Best Sound Design. It went on to win five, including Best New Musical, Best Original Score for Lin-Manuel Miranda, Best Choreography for Andy Blankenbuehler, and Best Orchestrations for Alex Lacamoire and Bill Sherman. In addition, it won the 2008 Grammy Award for Best Original Cast Album and was a finalist for the 2009 Pulitzer Prize for Drama.

Indian (Asian) Americans

At about 2.9 million people in the 2010 U.S. Census, Indian Americans ("Asian Indians" in census parlance, to differentiate from "American Indians," or Native Americans) are the second-largest Asian American group (after Chinese Americans) and constitute roughly 1 percent of the American population. In older records, Indians are sometimes called East Indians, again to differentiate them from Native Americans. The term *south Asian* is sometimes preferred but would include Bangladeshis, Pakistanis, Sri Lankans, and perhaps those of Himalayan countries.

Indian immigration to the United States was scant in the 19th century, and in the early 20th

century, it was restricted by immigration quotas and restrictions on Indian Americans' naturalization rights. Until 1946, when a small quota of Indian immigrants was permitted, and the naturalization rights of Indian Americans was restored, many of the ethnically Indian immigrants to the United States immigrated to the United States from other countries—mainly the United Kingdom, Canada, African nations, and Suriname. In 1940, the Indian American population was only 2,405 and had remained within a few hundred of that figure for the previous 50 years. Most immigrants up to that point had arrived at the turn of the century, escaping conditions in British India. Predominantly Sikhs, they settled in California, Oregon, and Washington.

Immigration and Demographic Trends

The immigration stream has been steady, especially in recent decades. The Indian American population is especially densely concentrated in the northeast, with the New York–Newark–Bridgeport statistical area accounting for 573,329 Indian Americans. The San Francisco area, though considerably smaller, has the same percentage of Indian Americans as the New York area: 2.8 percent. The largest Indian American population by percentage is the San Jose, California, metropolitan area; 117,711 of the area's 1.8 million residents are Indian American, a 6.4 percent share. Outside those centers, Indian Americans are well distributed in the country's urban centers: There are large Indian populations in Los Angeles; Chicago; Dallas; Philadelphia; Houston; Washington, D.C.; Miami; Boston; Detroit; Phoenix; Seattle; Minneapolis; San Diego; St Louis; Tampa; Baltimore; Denver; Pittsburgh; Portland; and Orlando.

The 2010 census revealed some trends in Indian American demographics. Although Indian Americans are the fastest-growing ethnic group in the country, with an annual growth rate of 10.5 percent, the growth had been especially strong in Florida, South Carolina, Tennessee, and Kentucky—all of which saw more than 80 percent growth from 2000 to 2010—and in California, with a 68 percent growth in that period. In New York City, the Indian American population grew at twice the rate of the general population.

Indian Americans are generally more prosperous than the average American and are better

India Square in Jersey City, New Jersey, is one of at least 20 Indian American enclaves characterized as a Little India within the New York City metropolitan area. Hindi radio stations broadcast in areas with high Indian populations, some in the Tamil and Telugu languages. Many metropolitan movie theaters specialize in Indian movies, and cable and satellite providers offer Indian television.

educated; the median income of Indian American families in 2010 was \$69,470, compared to the national median of \$38,885. About 10 percent of physicians are Indian American, despite the ethnicity making up less than 1 percent of the general population; Indian Americans also make up 7 percent of the country's information technology workers, 3 percent of its engineers, and 8 percent of its surgeons. About two-thirds of Indian Americans over 25 have completed college, more than twice the percentage of white college graduates. There are more than 200,000 Indian American millionaires.

Indian Americans have also dominated the Scripps National Spelling Bee: 10 winners from 1999 to 2012 were Indian American, and in 2005, the top four competitors were all Indian American.

Indians obtain more employment-related green cards—given only to prospective immigrants with specific skills and worth to the labor market—than most nationalities, and thus the Indian American population, filtered through the immigration process, is a more highly skilled population.

Politics and Culture

Although often leaning toward the conservative socially, Indian Americans strongly support the Democratic Party, more so than any other Asian American group. Approximately 84 percent of Indian American voters voted for Democrat Barack Obama in 2008, making them the second-most Obama-supporting ethnic group after African Americans. In summer 2012, President Obama had a 65 percent approval rating with Indian Americans, even before the Democratic National Convention, which traditionally gives candidates a bump in ratings. Despite the presence of two Indian American governors at the Republican National Convention—Louisiana's Bobby Jindal and South Carolina's Nikki Haley—the Republican Party was seen as less and less inclusive, catering increasingly to Tea Party interests and the religious right. Not forgotten is Senator George Allen of Virginia's 2006 slur against Democratic campaign aide Sid Sidarth at a campaign appearance: "Macaca or whatever his name is. Let's give a welcome to Macaca here. Welcome to America." Sidarth had been born and raised in Virginia.

Desi

The term *desi* is often used to refer to members of the south Asian diaspora (although it is also sometimes used for people still in south Asia). Indian expatriates have distinct cultures that include elements of both their country of heritage and their country of residence. “Desi cuisine,” for instance, means the food of the Indian subcontinent, but when used in the diaspora, it especially refers to dishes that have been adapted to local ingredients and customs or that have been Westernized.

The meaning of *desi* depends on where one is, because a *desi* restaurant in India is not one serving Westernized food, but just the opposite: one serving traditional Indian cuisine rather than a more modern, fusion cuisine. Similarly, in India, “*desi* liquor” is native liquor (such as toddy or arrack, as opposed to English whisky or Caribbean rum), and a “*desi* chicken” is any indigenous breed.

Chicken *tikka masala*, while popular in western Indian restaurants, originated not in India but in the Indian community in the United Kingdom (possibly Glasgow or Newcastle). It became the most popular restaurant dish in the United Kingdom (UK) and spread to Indian restaurants in the United States and Canada.

Balti, a curry cooked and served in a specific wok-like dish, similarly originated in the UK’s south Asian community in Birmingham, and soon became so popular enough that *balti* curry seasoning blends became available in the United States.

Desi music and fashion incorporate both Western and Indian elements. MTV *Desi*, which launched in 2005, is an MTV subnetwork carried by some cable and satellite companies in the United States that is targeted at the Indian American population. It broadcasts *desi* music videos and Bollywood movies, comedy and other entertainment content, interviews with Indians and Indian American celebrities, and live coverage of *Desi* house parties. MTV *Desi* began its broadcast with “Bulla Ki Jaana,” a hit song in India by Rabbi Shergill, who fused Western rock music with Sikh and Punjabi influences to adapt the metaphysical poem by the 18th-century Punjabi Sufi saint Bulleh Shah.

Indian Appropriation Acts

Each year, the U.S. Congress provides funding for Native Americans as part of its trust responsibilities and treaty obligations for the exchange of native lands that constitute U.S. territory. These appropriations can be included under the U.S. Department of the Interior, Bureau of Indian Affairs budget in the general civil appropriations or as special appropriations. In the past, funds were included under the U.S. Army’s appropriation, with special allocations made for treaty negotiations and initial compensation for land and the guarantee of Indians’ welfare. Many treaties stated that payments would continue in perpetuity, although Congress has often expressed that these obligations were onerous and should cease.

Appropriations reflect American attitudes, court decisions about Native American policies, the role of the federal government in Indian lives and cultures, and political, social, and economic agendas. Special Indian appropriation acts have been created in order to fund special programs or address specific issues. Some of these programs dealt with removal from, or the purchase of, land via treaty or executive order. The Cherokee Trail of Tears and the removal of tribes from the eastern United States were funded by a special appropriation, as was the purchase of Osage lands on

which the Cherokee settled. The Navajo removal to Bosque Redondo in 1863 was part of the general Army appropriation, itemized as part of the Civil War budget to keep the lines of communication open to California. The concentration camp for the Navajo and the Mescalero Apache proved to be so costly, however, that the line item was eliminated in 1869 after the 1868 treaty.

Some appropriation acts had far-reaching repercussions and established or implemented policy. The Indian Appropriation Act of 1851 contained funds to establish reservations for Indian groups in the western United States, essentially everyone west of the Mississippi, and is the basis for the modern reservation system. This act was a response to population movements and to expansionism and economic growth as conceptualized in the idea of Manifest destiny. The removal of Indians to reservations was a continuation of President Andrew Jackson's policies, which maintained that Indians needed to be moved for their own protection. Commissioner of Indian Affairs Orlando Brown said that Indian reservations would be in isolated areas, that is, away from Euroamerican settlers and squatters and the lands they desired; be suited to agriculture; and have well-defined boundaries; he also said the Indians should be compelled to remain on the reservations until they were "civilized" and ready for civilization. Brown thought the reservations would protect the Indians (using the trust doctrine and the idea that Indian groups are domestic dependent nations) but also restrict their movements and lead to greater control by the military.

The Indian Appropriation Act of 1871 (25 U.S.C. Section 71) also had far-reaching policy implications. Under this act, the United States would no longer recognize Indian "tribes, nations or powers" as independent nations. This meant that Indian groups would not be treated as sovereign nations with whom the federal government would negotiate treaties, although previous treaties were not invalidated. Fishing rights were also upheld, and the federal government was given the duty of educating Indians, a responsibility that led to the Indian boarding school system. In addition, Congress directed that all Indians should be treated as individuals and legally designated "wards" of the federal government under the trust doctrine. Now all Native Americans were

seen as ignorant children of the government, an alteration in status that gave the federal government more control over Indian lives and a way to break up political entities. The bill also made it easier to secure Indian land cessions, which could now be done by congressional fiat, Supreme Court order, or executive order, thus saving the expense of treaty negotiations.

Other Indian appropriation acts dealt with land, including wresting it from Indian sovereignty. The act of 1885 permitted tribes in Indian Territory to sell unoccupied lands in their possession. It was an attempt to obtain some money from squatters, but it was not very effective because the act did not provide any means or funds to ensure that the transfers were valid. The Indian Appropriation Act of 1889 officially opened any unassigned lands in Indian Territory to white settlers under the Homestead Act of 1862. Originally, squatters who were already settled on or claimed lands were eliminated from participating, but an amendment adopted later in 1889 allowed the "sooners" to gain control over lands and natural resources. Similarly, the Indian Appropriation Act of 1892 opened up the remaining "unused" Indian lands in the northwest region to logging, mining, settlement, and the railroad companies. Like other appropriation acts that "freed" the land, this law paved the way for economic development.

Indian Boarding Schools

Indian boarding schools were residential educational institutions designed to assimilate Native American children into the dominant American society by using a Western-style educational model while attempting to destroy all traces of Indianness in students. Many boarding schools were run by religious organizations, though beginning in the late 19th century, most were run by the federal government.

At the beginning of the 19th century, this education effort was still largely the domain of mission organizations, though the government set aside funds to support the efforts of these organizations beginning in 1819, with the Civilization Fund Act. Toward the end of the 19th century, however, the government became more directly involved in Western-style education among the Native American population, cutting much of its support and funding to religious schools in order to support its government network of schools.

There were two types of boarding schools: reservation and off-reservation. Reservation boarding schools were usually located at the government headquarters on the various Indian reservations. Normally, students spent nine months of the year in residence at the schools, and then returned to their families for the summer. Off-reservation boarding schools were located away from the reservations in order to isolate students from their home communities. Most of the famous boarding schools, such as Sherman, Haskell, Carlisle, Phoenix Indian School, and Chilocco, were off-reservation boarding schools. Normally, students spent three to five years (or more) at an off-reservation school, without returning home. Although contact with parents or visits home occurred at some off-reservation boarding schools, it was unusual. In theory, the best students from the reservation boarding schools attended an off-reservation boarding school upon graduation.

Once a student progressed from a day school to his or her reservation boarding school, and finally graduated from one of the many off-reservation boarding schools, he or she would have received the equivalent of an elementary through high school education. The system seldom operated so smoothly. Many students entered off-reservation boarding schools with little or no prior education

in the lower schools, and only a small minority of off-reservation boarding school students ever completed the highest levels of coursework.

Organization, Curriculum, and Funding

Almost all boarding schools employed a military-style organization until the 1930s. Schools assigned students military uniforms, organized students into military units complete with officers, and trained students in military drills. Schools employed this military organization in part for pragmatic purposes; some schools had nearly 1,000 students to organize, and most schools remained perpetually understaffed. However, school officials also believed that the military organization would help induce discipline and pride in students. The first off-reservation boarding school, Carlisle Indian School, was organized by a former army officer named Richard Pratt.

Students at boarding schools split the school day between classroom instruction and industrial training. In the classroom, Native American students learned the same topics as students in American public schools such as math, history, and writing. Classroom instruction was almost always in English, and most schools enforced a strict policy against speaking in indigenous languages. In industrial training, students learned a trade, such as carpentry, blacksmithing, tailoring, or domestic science. Some of the more advanced off-reservation schools eventually offered auto repair, stenography, and even business classes. Though some students found ways to use their industrial skills after leaving school, most returned home to their reservation communities, where many of these skills proved impractical, aside from perhaps their training in agriculture or housekeeping.

Almost all boarding schools suffered from woeful underfunding. This had a profound number of effects on the educational mission of the boarding schools. Lack of appropriate funding meant limited classroom supplies, as well as limited clothes, towels, and other personal belongings issued to students. It also meant that many boarding schools had poor-quality food, inadequate living spaces for students, and insufficient medical supplies and personnel. Sickness and death were common at the schools.

Questioning the Goal of Assimilation

The boarding schools fell out of favor beginning in the 1920s, as educational reformers began questioning the wisdom of an educational model that separated children from their home communities for such lengths of time, then expected them to reintegrate back into those same communities. At the same time, many reformers began to doubt the supposed inferiority of Native American cultures and wondered if assimilation was necessary. Consequently, the government closed many boarding schools during the 1930s and 1940s. Those that survived became the target of further scrutiny in the decades that followed, as government officials looked for ways to slash funding spent on the Native American population and encouraged Indian children to attend nearby public schools instead. Several boarding schools still exist, but as tribally run schools, where Native American communities train their students as they see fit.

Ultimately, the boarding schools failed in their quest to fully assimilate Native American children. The schools deeply influenced how students understood the world and themselves, but few decided to reject their home communities and traditions in response to the assimilation demands of the boarding schools. Many students reported difficulties readjusting to life at home after school, but most reintegrated over time.

Some students had a positive experience and recalled their schools days with fondness as a time when they learned new things, made new friends, and sometimes even met future spouses. One of the most important legacies of the boarding school experience is the rise of a new pan-Indian identity as students from various tribes encountered each other and discovered what they had in common. Other students had such a negative experience in the boarding schools that they ran away from the schools (or at least tried to) or suffered for years from the effects of the psychological, emotional, and even sexual abuse that occurred at some schools. Suicide and alcoholism are both reported in surprising numbers among former boarding school students. The boarding schools have left their mark on the Native American communities subjected to them.

Indian Casinos

The rights of Native American tribes in the United States are complex. On one hand, tribes are considered quasi-sovereign entities, subject only to federal power; on the other, tribes have consistently negotiated their relationships with states. Although states do not have jurisdiction over tribes, an overview of the history of federal Indian policy shows that this scheme has been complicated by legislation and other agreements through which the federal government has handed particular types of oversight over tribes to states. Gaming for Indian tribes represents just such a complex relationship.

Tribes began gaming operations in earnest in the 1970s in California and Florida as a means to confront the challenging economic realities of many reservations. Most of these initial enterprises were high-stakes bingo operations. During this time, most states had antigaming laws in place, but the U.S. Supreme Court case *McClanahan v. Arizona State Tax Commission* (1973), which held that state law did not apply within

reservation boundaries, provided the necessary protection (and legal language) for tribes to commence gaming. The reaction on behalf of states was to continue to oppose Indian gaming, particularly because it was open to non-Indian patronage. In California, this long-standing conflict—in which state officials constantly threatened criminal prosecution of Indian gaming, and tribes challenged these threats in federal court—led to the Supreme Court case *California v. Cabazon Band of Mission Indians* (1987).

As stated earlier, the federal government has handed over to states some jurisdiction over tribal matters. One such law, Public Law 280, handed over criminal jurisdiction of tribes to a number of states. California was one such state. Based on Public Law 280, California argued that because it had criminal jurisdiction over tribes, and gaming was prohibited on a criminal basis in California, it had the authority to exercise criminal jurisdiction over Indian gaming in the state. However, the court found that California's power to regulate gaming was not framed as a criminal matter, but was instead a civil regulatory matter as indicated by its allowance of certain forms of

state-sponsored gaming, such as the lottery. If, however, a state outlaws all forms of gaming, then tribes cannot have gaming operations in the state (see *Texas v. Ysleta Del Sur Pueblo*, 220 F. Supp.2d 668).

During this period, tribes, states, and special interest groups were lobbying Congress to act on the matter of gaming. The *Cabazon* case reiterated the need for legislation on Indian gaming. Congress proposed a regulatory act to cover Indian gaming, which initially was opposed by states. States deemed it was already within their rights to regulate gaming operations. However, following the *Cabazon* decision, several states reversed their opposition to the proposed Indian gaming regulations and urged their passage as a way to have some control through compact negotiations between states and tribes, as well as financially benefit from the regulations. On the tribal side, to protect themselves from the states' efforts to limit gaming in courts, tribes sought legislative insurance against an unfavorable court ruling. Thus, in 1988 Congress passed the Indian Gaming Regulatory Act (IGRA) to regulate tribal gaming.

The Lucky Dog Casino of the Skokomish Tribe in Skokomish Nation, Washington. The National Indian Gaming Commission reports that 460 Native American gaming establishments are operated by 240 tribes in the United States. Most Indian gaming revenue comes from casinos in or near large metropolitan areas, and the populous West Coast represents the fastest-growing sector of the industry. The vast majority are much less financially successful, particularly those in the midwest and Great Plains regions.

Indian Gaming Regulatory Act

Under IGRA, gaming is divided into three categories: Class I gaming refers to traditional/cultural gaming that is solely regulated by tribes; Class II gaming, such as bingo and other noncard gaming, is regulated by tribes; and Class III gaming, which refers to casino gaming, requires state cooperation and is regulated by compacts entered into between tribes and the states in which the gaming operations are located. Specifically, states are obligated to negotiate compacts with tribes for Class III gaming if state law allows for such gaming. These compacts include the regulations and limitations for the Class III gaming operations that a tribe will undertake in the state. Thus, Indian gaming, unlike private gaming enterprises, has specific restrictions and requirements by which tribes must abide. For instance, IGRA requires that 70 percent of gaming profits be used for tribal benefit.

Gaming and Economic Development

The role of Indian gaming in tribal economic development is motivated by high rates of poverty and unemployment on reservations, yet it represents only a small portion of economic development across Indian country. Interestingly, the model of capitalism that has emerged in reservation communities makes the tribal government the main proprietor of major economic development projects such as gaming operations on reservations. Although such types of government-owned and led economic development are discouraged in the mainstream United States, they are the favored model of economic development in Indian country. Scholars of tribal economic development argue that this type of collective capitalism on reservations signals an inclination to apply tribal political and cultural values to economic development, as well as a disapproval of private enterprise on reservations. Gaming is not the major source of economic development for most tribes. Only a handful of tribes near major urban centers generate high revenue for both the local tribes and the surrounding non-Indian communities. For example, 20 Indian gaming operations account for about 50 percent of the revenue generated from Indian gaming. One of the most successful examples of gaming, the Pequots Massachusetts, share up to 25 percent of their revenue with the state, an arrangement unheard of for private enterprises.

In fact, as of 2005, only 224 tribes had gaming enterprises of some sort.

Indian Child Welfare Act (1978)

The Indian Child Welfare Act (ICWA) is a landmark bill passed by the U.S. Congress in 1978. The act limits the forced removal of Indian children

from their families and ensures that tribes play an active role in foster care and adoptive placements for Indian children. Though the ICWA strives to protect tribal rights, it has not been well enforced in most states. Indian children are still at high risk of unnecessary removal from their tribes.

The forcible removal of Native American children from their homes has a long history. In the 19th and 20th centuries, government officials, missionaries, and social workers routinely took American Indian children from their homes and placed them with white families or in off-reservation boarding schools to facilitate their assimilation into mainstream American society. These removals terrorized Indian families and threatened the future of tribes. By 1978, 25 to 35 percent of American Indian children had been separated from their parents and placed in non-Indian homes or institutions. The out-of-home placement rates for Indian children were 20 times higher than for non-Indian children. Many state laws also prohibited the placement of Indian children with other Indian families.

The Act's Passage and Provisions

American Indian activists began to rally Congress to pass the ICWA to end forced removals and to protect the rights of tribes and children. They demanded the repeal of state laws that made it illegal to place foster children with other Indian families. ICWA supporters also argued that child welfare officials had used ethnocentric reasoning to justify the removal of Indian children. For example, many children were removed from their homes because social workers deemed parents neglectful when they left children with extended family for long periods of time, a valued kin-care practice in many tribes. Similarly, case workers and state officials removed children not for abuse but because many Indians lived in homes that lacked physical comforts. ICWA activists argued that child welfare legislation must prioritize the emotional, not material, fitness of a home, and the rights of the tribe to raise its children. Supporters asserted that these removal practices amounted to genocide. Not only did families and tribes suffer emotionally from the removal of their children, but they also could no longer pass their cultures down to their displaced children.

ICWA passed with almost unanimous support. It had three main provisions. First, before parental rights are terminated in child welfare cases involving American Indians, states must make "active efforts" to provide rehabilitative services for the child's family. If removal is still necessary after these efforts, ICWA specifies an order of preference for child placement. For adoptions and foster care placements, Indian children should first be placed with a member of their extended family. If this is not possible, children should be placed with other members of the tribe, and then with families from other tribes. Foster care and preadoptive children may also be placed in a foster home that is licensed, approved, or specified by the tribe.

The second set of provisions regards jurisdiction over child welfare cases. The ICWA requires that the tribe be notified when an Indian child is placed in foster care or put up for adoption. The act also allows tribes to assume jurisdiction at any point leading up to legal proceedings. If the state cannot determine a child's parents, the secretary of the Interior must be notified and must make efforts to identify and notify the child's tribe.

The third provision of the act involves cultural sensitivity. The ICWA mandates that the termination of parental rights or the placement of an Indian child in temporary care can occur only after a qualified expert witness, someone familiar with the customs and cultures of the tribe, consults on the case. The ICWA also specifies that consent forms be presented to parents and tribes in a language they understand. These regulations require that child removal proceedings for American Indian children are governed much more intensively and with more attention to cultural heritage than are those for non-Indian children.

Implementing the Act

Although many have called the act a success for tribes and for American Indian children and families, there have been many problems with its implementation. First, caseworkers have faced problems of definition: who counts as an Indian child? This is an increasingly important problem, as more Native Americans live off-reservation than ever before and many claim no tribal affiliation. Second, the loose wording of the act has given judges much discretion in interpreting the law. Third, although tribes have legal authority

to govern child welfare cases, they often do not have the resources. After centuries of oppression, American Indian communities remain some of the poorest in the United States today. Nonetheless, the ICWA marks a unique effort to validate and protect the rights of American Indian tribes and communities.

Indian Citizenship Act (1924)

The Indian Citizenship Act, or the Snyder Act (proposed by New York Representative Homer B. Snyder), was signed into law by President Calvin Coolidge on June 2, 1924. The act, passed by the 68th Congress, authorized the secretary of the Interior to issue certificates of citizenship to American Indians, thus granting citizenship to all Native Americans in the United States. Unlike previous treaties or statutes, which naturalized Indian people on a limited basis under the assumption that U.S. citizenship was incompatible with tribal membership (and tribal citizenship), the Indian Citizenship Act of 1924 did not require Indian people to relinquish their allegiance to their tribe.

During the colonial era, the Indian nations' title of self-government was recognized under the law of nations and treaties signed between Great Britain and the colonies, whereby Indian nations were recognized as sovereign nations. The European doctrine of discovery granted the discovering European country title and ownership of the Indian land, turning Indian people into mere tenants; although the federal government recognized tribal ownership of Indian land in the trade and intercourse acts, it turned Indian people into second-class citizens and, through subsequent treaties, stripped Indian people of their property rights.

The Naturalization Act of 1790, targeting mainly white European immigrants, provided that any free white person could become a U.S. citizen after residing in the United States for a period of time, thus excluding both African Americans and American Indians from citizenship. The only Indians considered citizens by birth under the U.S. Constitution had not been born into tribal membership, or their tribe no longer existed. According to the commerce clause in the U.S. Constitution, Congress was authorized to regulate commerce with foreign nations, as well as with Indian nations. Therefore, Indian tribes were distinguished from foreign nations. The Fourteenth Amendment to the U.S. Constitution provided that "Indians not taxed" would not become citizens of the United States.

Reinterpretation of Indian Nation Status

In the early 19th century, in landmark Cherokee cases, the Supreme Court reinterpreted the status of Indian nations as independent sovereign nations in the context of the Indian Removal Act of 1830. The Cherokee Nation sued the state of Georgia in the Supreme Court in 1831, using its prerogative as a foreign state to challenge the enforcement of Georgia's jurisdiction within the Cherokee Nation. The Supreme Court declined to recognize the Cherokee Nation's right to sue, as a foreign nation, under the court's doctrine of original jurisdiction.

In the case *Worcester v. Georgia*, from 1832, the Supreme Court ruled that Indian nations were "domestic dependent nations," establishing a relation of wardship between the federal government and the Indian tribes, which Chief Justice

John Marshall called that of a ward to his guardian. In Justice Marshall's paternalistic description, Indian people looked to the U.S. government for protection. Although legally foreign to the United States, Indian tribes became a matter of domestic concern in 1871, when Congress discontinued the practice of treaty-making, denying the further recognition of Indian nations as sovereign entities.

About two-thirds of American Indians were already citizens by the time that the Indian Citizenship Act was passed in 1924. By 1906, approximately 166,000 Indians had been naturalized as U.S. citizens. Before 1924, the sources of naturalization included (1) previous treaty provisions, land allotments, and statutory measures; the stipulations of the Allotment Act of 1887 (which held that Indian allottees would become citizens of the United States and of the state in which they resided, if they adopted the habits of "civilized" life, for which they received certificates of citizenship); (2) after 1906, the granting of a patent in fee simple to Indians deemed competent; (3) Indian children born to United States citizens, as well as children whose mother was Indian and whose father was a white male citizen; (4) special acts of Congress, including provisions in 1901 for Indians in Indian Territory (now Oklahoma) to become citizens, and in 1921 for members of the Osage tribe to become citizens; (5) after Indian soldiers served in World War I, a congressional act in 1919 providing that Indian soldiers and sailors could become citizens; and (6) before 1922, marriage (Indian women who married U.S. citizens).

Calling attention to the status of the American Indian as neither a citizen nor a foreigner, a presidential commission aimed at reviewing the legal status of the American Indian was introduced in the House of Representatives by Charles Carter, a Chickasaw from Oklahoma, in 1912. Congressman Carl Hayden of Arizona introduced a controversial new Indian citizenship bill in Congress in 1917 (with stipulations for gradual taxation). Many were concerned whether a uniform U.S. citizenship would allow for retaining federal protection of Indian lands and other rights.

The Indian Citizenship Bill that was eventually signed into law by President Coolidge in 1924 offered that provision. It was first introduced in the House by Representatives Homer P. Snyder

of New York. In the initial draft, the bill provided for issuance of certificates of citizenship to Indians who applied; the later draft eliminated the application part and declared all native-born Indians citizens. For a long time, after the Indian Citizenship Act passed on June 2, 1924, the only direct benefit of the citizenship status for many Indian people was the power to vote in state and federal elections, although many states declined Indians the right to vote in state elections until the 1950s.

Indian Civil Rights Act (1968)

The Constitution does not limit the power of tribal nations to enact and enforce laws within reservation boundaries. This includes the extent to which American Indian civil rights are protected.

American Indians who live outside reservation boundaries are protected by the Civil Rights Act of 1965, while those who lived in Indian Country were not protected until 1968, when the U.S. Congress passed the Indian Civil Rights Act. The act adopts many elements of the Bill of Rights, including most aspects of the First Amendment (except the separation of church and state); most aspects of the Fourteenth Amendment (except the right to an attorney, and right to jury trial in civil cases); and the Fourth, Fifth, Sixth, and Eighth Amendments. In addition, the ICRA allowed federal courts to habeas corpus review. Several amendments to the ICRA were passed by Congress in 2010, which required tribal courts to provide effective counsel and a defense attorney (if the punishment involved more than a year of incarceration), and that a tribal judge be qualified to be a judge.

Becoming Citizens

In 1924, Congress made all American Indians citizens of the United States. However, the status of American Indian individuals is complex, made of a variety of laws, including those of the United States, the tribal nation, and the state. Prior to the passage of the American Indian Civil Rights Act, the Supreme Court ruled that the U.S. Bill of Rights did not apply in Indian Country. In 1896, the Supreme Court ruled in *Talton v. Mayes* that the Fifth Amendment of the Bill of Rights was not applicable to American Indian nations. In 1959, the Supreme Court ruled that the free exercise of religion or any other tribal government function, as established in the First Amendment of the Bill of Rights, does not apply in Indian Country. As a result of sovereignty, tribes were not subject to any provision of the Bill of Rights because tribes are sovereign entities and precede the Constitution of the United States. In addition, the bill limits the penalty that tribal courts can impose to a \$5,000 fine and/or one year in jail.

The 1960s increased the interest in civil rights. Civil rights abuses were addressed throughout the United States, which included tribal nations. Senate hearings were conducted in which there was anecdotal evidence regarding the lack of individual civil rights protection in Indian Country, which led to the passage of the Indian Civil Rights Act. The ICRA did not address the complex issues

The Alabama-Coushatta Reservation near Livingston, Texas, home to the Alabama and Koasati tribes, was formed after they were forced from current-day Alabama around the turn of the 17th century. The original intention of the Indian Civil Rights Act was to protect the rights of American Indians within reservation boundaries, but it came at the expense of tribal sovereignty.

that arise as a result of the demography that exists within reservation boundaries.

The 2010 census reports that 22 percent of individuals who self-identify their ethnic identity as mixed (identified themselves as American Indian and another ethnic identity) and 31 percent of those who identify themselves as having a single ethnic identity (having only an American Indian ethnic identity) live within reservation boundaries, on allotted land, fee land, or tribal statistical areas. This is important because of the jurisdictional issues that arise. The Supreme Court has said that tribes have jurisdiction over members, but tribes do not have jurisdiction over nontribal members, which impacts the ability to protect tribal members within reservation boundaries. Because tribes do not have jurisdiction over non-Indians when crimes are committed on the reservation by non-Indians, tribal courts have no jurisdiction.

Passage of the ICRA led to criticism by many tribal leaders; the act was seen by many as an imposition of individual rights on tribal governments and a limit to tribal powers. The act was seen as limiting tribal jurisdiction and therefore limiting sovereignty. There was concern that the federal government was bringing tribes under the auspices of the U.S. Constitution.

One of the major unintended consequences of the ICRA is the limitation on tribal courts in the sentencing of offenders, which has received extensive criticism. Since the tribal court is limited by the ICRA to one year and a \$5,000 fine, it has become complicated to sentence violent offenders in tribal court. An individual who is convicted of a violent crime faces the maximum penalty of one year of incarceration and/or a \$5,000 fine. This is further complicated by the inability of the court to retain jurisdiction over non-Indian offenders.

Although the original intention of the Indian Civil Rights Act was to protect the individual rights of American Indians within reservation boundaries, at the expense of tribal sovereignty, there was no enforcement authority provided to the federal courts. As a result, tribal courts were able to step in and assert their sovereignty. The Supreme Court has continued to support tribal sovereignty. In 1978, the Supreme Court maintained that the interpretation of the Indian Civil Rights Act was the business of tribal courts, which have interpreted the act in various ways, highlighting the diversity of tribal courts across the country and therefore strengthening tribal sovereignty. Tribal leaders believe that tribes are better at protecting the rights of their members than federal courts.

Indian Claims Commission

The Indian Claims Commission (ICC), established by the U.S. Congress in 1946, remained in operation until 1978. The ICC was part of a larger federal government effort to terminate its guardianship of Native American tribes and bands to promote their assimilation. The ICC adjudicated Native American claims against the federal government for past wrongs, mainly centered on treaty violations, land cessions, and federal mismanagement of Native American resources held in federal trusteeship. The Indian Claims Commission granted 342 monetary awards totaling \$818,172,606.64 before its adjournment by Congress in 1978.

The U.S. Congress established the Indian Claims Commission in August 1946 under the Indian Land Commission Claims Act that same year. President Harry Truman signed the bill into law on August 13, 1946, in a formal ceremony featuring Native American and federal government representatives. Congress created the ICC to assume the adjudication of Native American tribal claims against the U.S. government that had formerly come under the jurisdiction of the U.S. Court of Claims.

The ICC was an important component in the federal government Native American policy of termination, which lasted roughly from the end of World War II in 1945 until the early 1960s. Termination sought to sever federal guardianship and recognition of many Native American tribes or bands, transfer federal control of reservations

to the states, and move many Native Americans off the reservations, among other measures designed to promote their assimilation into mainstream American society. The federal government also claimed that settling long-standing Native American claims was in part recognition for their service during World War II.

The ICC functioned as a court of law, hearing claims brought by Native American plaintiffs and their lawyers; the U.S. government and its lawyers presented their defense. The ICC's three-judge panel, which was later expanded to four judges, was appointed by the president. Native American tribes and bands had a five-year deadline under which to register their claims before the ICC.

Tribes who brought a claim had to prove that they had title to the land. Acreage used by multiple tribes was sometimes discounted. Once their right to the land had been established, they next had to prove either that the land had been unlawfully seized or that federal compensation for ceded land represented less than its fair market value at that time. Both sides relied heavily on historians and anthropologists to serve as expert witnesses. Tribes whose claims were upheld received awards consisting solely of monetary compensation, as return of ceded lands had been excluded. The amount of compensation was calculated by subtracting the compensation already received from the federal government from the original fair market value.

Permanent Settlement

Native American claimants had to agree to the stipulation that once the monetary award granted by the ICC was accepted, the claim was permanently settled and could never be brought again. Some tribes were also forced to allow the termination of their federal status. Individual tribal member award allotments were often small. Awards that were invested in reservation development or other tribal-level projects received criticism from tribal members who lived off reservation and felt left out of the benefits.

Some Native American tribes refused to register claims before the ICC as a form of protest against their inability to regain lost land; others, such as the Lakota (Sioux) and Taos Pueblo tribes, refused to accept ICC awards for the same reason. Those who accepted the awards were angered over deductions for legal fees and federal

services rendered, federal stipulations on how some awards could be spent, and the fact that the awards did not include interest. They also argued that awards representing a land's fair market value did not account for its cultural or spiritual value as ancestral homeland.

One of the commission's well-publicized decisions involved the Lakota (Sioux) and their 1877 cession of the Black Hills region. The Lakota (Sioux) had initially been awarded \$17.5 million for the loss of the Black Hills, traditionally considered sacred land by several tribes. The decision was appealed, reaching the U.S. Supreme Court in 1980. The Supreme Court ruled that because the federal government had unconstitutionally forced cessation of the Black Hills, interest must be added to the original settlement. The Sioux declined to accept the settlement or interest and continued to demand return of the land itself.

In all, 176 Native American tribes or bands filed 370 claims with the ICC before the 1951 deadline. These claims were then separated into 617 dockets. Some tribes had organized into formal organizations for the first time in order to file claims with the ICC. The most common claims against the federal government involved illegal land seizures, inadequate compensation for ceded land, and mismanagement of tribal monies or natural resources under federal government control. The Indian Claims Commission cleared a total of 546 dockets. The commission granted 342 monetary awards totaling \$818,172,606.64. Individual awards ranged in size from hundreds to millions of dollars. The largest award was \$31.2 million.

The ICC adjourned in September 1978 and was terminated by Congress. The U.S. Court of Claims once again resumed jurisdiction over outstanding Native American claims against the federal government, including the ICC's 170 pending cases. Native American tribes would later use their legal experience while seeking to legally reverse federal termination of tribal recognition, self-determination, and control of natural resources on Native American reservations, as well as in cases involving gambling rights, the repatriation of Native American artifacts, and other contentious modern issues.

Indian Education Act (1992)

The Indian Education Act of 1992 may be cited as the Native American Languages Act of 1992 or Public Law 102-524, with the exception of section three, relating to grants. Throughout history, there have been five major phases of federal policies regarding American Indian educational reform. The final phase of reform, including the Indian Education Act of 1992, promotes the idea of self-determination where tribal sovereignty and American Indian activism have increased. In the early 1990s, there was a resurgence of interest in Indian education that paralleled the interest exhibited in the late 1960s and early 1970s.

Between 1970 and 1990, the U.S. Census Bureau reported a doubling of the American Indian and Alaskan Native populations. Three specific events indicate that the policy of self-determination was moving forward: signing of the Native American Languages Act of 1990, the U.S. Secretary of Education's Indian Nations At Risk Task Force Report in 1991, and the first-ever White House Conference on Indian Education in

1992, which eventually led to the establishment of the Indian Education Act of 1992.

In the 1990s, about 40,000 native students (10 percent of the total) attended some 170 Bureau of Indian Affairs (BIA) funded schools, about 10,000 (3 percent) attended private schools, and over 300,000 (87 percent) attended public schools. In these schools, a disproportionate number of native students achieve below national averages. Indian students have a higher dropout rate than all student populations. This prompted a need for a federal task force. The Indian Nations At-Risk Task Force found that schools that respect and support a student's language and culture are significantly more successful in educating those students. In the process of gathering information, the task force learned that there is a direct relationship between students' understanding of their culture and role in society, and their ability to function and achieve academic success. When students' relationships with the larger society are strained, their chances for academic success appear to diminish.

Task Force Recommendations

The task force recommended both establishing the promotion of students' tribal language and culture as a responsibility of the school, and training of native teachers to increase the number of Indian educators and other professionals. Furthermore, it recommended that school officials and educators integrate the contemporary, historical, and cultural perspectives of American Indians and give education a multicultural focus to eliminate racism and promote understanding among all races. In addition, colleges and universities needed to encourage scholarly work on curricula and textbook development that incorporates native perspectives. In the task force hearings held across the country in 1990 and 1991, parents, tribal leaders, and educators stressed the need for a cultural revival in native communities to fight problems of drug and alcohol abuse, unemployment, and dysfunctional families. Another recurring theme was the need for increased funding of native education programs, which led to the White House Conference on Indian Education.

The first-ever White House Conference on Indian Education took place in Washington, D.C., in January 1992. This conference was held

to explore the possibility of establishing an independent Board of Indian Education that would assume responsibility for all existing federal programs relating to the education of Indians, and to develop recommendations for the improvement of educational programs relevant to the needs of Indians. After months of deliberation with state officials, tribal representatives, and native educators, the Indian Education Act of 1992 was established to assist Native Americans in assuring the survival and continuing vitality of their languages. The status of the cultures and languages of Native Americans is unique, and the United States has the responsibility to act together with Native Americans to ensure the survival of these unique cultures and languages.

Special status is accorded Native Americans in the United States, a status that recognizes distinct cultural and political rights, including the right to continue separate identities. The traditional languages of Native Americans are an integral part of their cultures and identities, and form the basic medium for the transmission, and thus survival, of Native American cultures, literatures, histories, religions, political institutions, and values. Title VII was the result of the Indian Education Act of 1992. This portion of the act clarifies the United States' responsibility to the Indian people for the education of their children. This program provides direct funding to the local school system and requires an Indian Parent Committee to give input to the school system. The program was geared toward having Indian educators helping Indian students.

It is the purpose of this part to support the efforts of local educational agencies with a coordinator, or cultural liaison, to keep records for Indian tribes and organizations, postsecondary institutions, and other entities to meet the unique educational and culturally related academic needs of American Indian and Alaska Native students, so that these students can meet the same challenging state academic achievement standards as other students. All Indian students must be documented as being Indian to be included, and paraprofessionals are placed in major Indian population schools to assist with this process.

Indian Health Service

The Indian Health Service (IHS) is the primary federal health care provider for American Indian and Alaska Native peoples. The IHS serves 1.9 million of the nearly 3.4 million American Indians and Alaska Natives (AI/AN) today. Health services provided to members of 566 federally recognized AI/AN tribes are the result of the special government-to-government relationship that exists between Native nations and the U.S. federal government. The basis of this relationship was established in Article 1, Section 8 of the U.S. Constitution and has been substantiated through numerous laws, treaties, court decisions, and executive orders. This government-to-government relationship is unique among ethnic/racial groups in the United States. The IHS, in partnership with AI/AN communities, provides comprehensive, culturally acceptable health services.

Funds for Health Care

In 1819, the U.S. Congress appropriated \$10,000 to several missionary groups to “civilize” Indians. Although the emphasis was on “civilizing,” which meant Christianization, agriculture, and assimilation of American Indians, some of those funds were used by these groups to provide basic health services. During this time, Indian health and Indian affairs were under the jurisdiction of the U.S. War Department. Health care was provided by military physicians stationed at forts who were commissioned to provide service to military personnel. This often meant that health care for American Indians near military forts was at best unorganized and limited.

Access to health care was often written into treaty rights signed by tribes and the U.S. government. For example, in Article 5 of the 1837 Sioux treaty, the U.S. government agreed to pay \$8,250 a year for 20 years to provide medicine and a physician for the Sioux. Like the 1837 Sioux treaty, the 1854 treaty with the Oto and Missouri obligated the U.S. government to set aside funds for similar health care services. In Article 13 of the 1868 treaty with the Sioux-Brule, Oglala, Miniconjou, Yanktonai, Hunkpapa, Blackfeet, Cuthead, Two Kettle, Sans Arcs, Santee, and Arapaho, the United States again agreed to provide a physician. Such examples indicate that the U.S. government well understood the importance of a health policy for Native peoples.

The administration of Indian affairs was transferred from the War Department to the Department of the Interior (DOI) in March 1849. With the change, Congress authorized the expenditure of \$12,000 for public health. Yet, it wasn't until 1873 that the U.S. government developed a Division of Education and Medicine in the hope of centralizing administrative duties and to coordinate medical services. Four years later, the medical section of the division was closed because of a lack of funding. By 1880, the DOI employed 77 physicians to work in Indian country. From 1880 until the Snyder Act of 1921, the U.S. policy on American Indian health moved increasingly toward approaches based on public health models of disease prevention and health promotion. From the late 1880s through the 1930s American Indian health was greatly impacted not only by

the conditions found on reservations but also by the lack of funding.

In 1921, the Congress, via the Snyder Act, authorized funding for physicians and for health/medical services. Funding for American Indian health was at the discretion of Congress; as a result, Indian health policy was largely dependent on funding levels. The Snyder Act is considered the beginning of modern U.S. Indian health policy. With the legislation, the U.S. government gave formal authorization for Indian health services. From the 1920s to 1954, the Bureau of Indian Affairs managed Indian health. In 1955,

INDIAN BABIES HOW TO KEEP THEM WELL

This 1916 Office of Indian Affairs pamphlet for Indian mothers reflected concerns about sanitation and Indian infant death rates (one in three), but some of the advice illustrates the government's assimilationist philosophy. For example, while encouraging breastfeeding, the pamphlet advised clockwork feedings; "Some Indian mothers . . . nurse their babies for two or three years. This is a bad practice, both for mother and baby."

the Indian Health Service, under the Department of Health and Human Services, took responsibility for Indian health.

Congress passed Public Law 93-638 in 1973; the Indian Self-Determination and Education Assistance Act gave Native nations the option to assume the administration and operation of health services in their communities or to remain within the IHS direct health system. Under this law, as sovereign nations, tribal governments can develop innovative solutions to their health care delivery challenges. A year later, the Indian Health Care Improvement Act was enacted; it stated that U.S. policy is to elevate the health status of American Indians to a level of parity with the general U.S. population. Since its inception, the act has been reauthorized four times.

The IHS provides preventive as well as therapeutic measures that involve both environmental and educational components. Services can be provided directly by the IHS or through tribally contracted and operated health programs; services can also be purchased from private providers. Under self-determination, the IHS operates or funds reservation-based and urban health programs through 49 hospitals and 600 other facilities in over 35 states. Today the IHS, in consultation with tribal governments, sets program and budget priorities.

Indian Removal Act (1830)

In the 50 years following U.S. independence, white settlers expanded beyond the Appalachian Mountains onto lands occupied by Native Americans. In response to the growing conflict between settlers and Native Americans, Andrew Jackson signed the Indian Removal Act of 1830. The law sought the removal or acculturation of the Cherokee, Choctaw, Chickasaw, Creek, and Seminole Indians, and perhaps more important, it signaled a new phase of national policy whereby the U.S. government would open land, with force if necessary, for white settlement.

The colonists declared independence from England in 1776 for several reasons. Among the most pointed criticism directed at the Crown was the limit it placed on western expansion following the War of Empire with France and Spain during the 1750s and 1760s. English authorities passed the proclamation line of 1763, making it illegal for white settlers to cross the Appalachians. According to the Crown, the measure minimized conflict on the frontier and thus ensured stable trade relations on the coast. However, after independence, settlers (now U.S. citizens) abolished the proclamation line and streamed onto the western frontier, disrupting Native societies in the process. Not surprisingly, violence between settlers and Native Americans broke out, and fighting around the Great Lakes and the midwest cost the new nation much treasury. Moreover, many white citizens believed that God had offered the continent to people of European descent, while others believed that the Native Americans' unwillingness to adopt European customs such as private

property and Christianity rendered them an inferior population who stood in the way of progress.

Upon entering office in 1829, Andrew Jackson held a combination of these beliefs and was determined to use the presidency as means to open the trans-Appalachian west for permanent settlement. In the attempt to maintain their sovereignty, some Native groups like the Cherokee established representative government, adopted private property and sedentary agriculture, and even practiced slavery. However, Jackson maintained his opinion that whites and Indians could not live together; the latter must vacate their ancestral homelands to accommodate white advancement. Despite some contentious debate in Congress, Jackson's Indian Removal Act put these beliefs into practice.

Indian Resistance

Jackson signed the law on May 26, 1830. Shortly after, the United States began to relocate non-complying indigenous people west of the Mississippi River. Months later, the Choctaws, under threat of coercion, signed the Treaty of Dancing Rabbit. This agreement opened land in the Mississippi territory for white expansion and transferred over 11,000 acres of Choctaw land to the United States. Though the treaty allowed Choctaw Indians to remain in the territory as nominal U.S. citizens, it did not permit the Choctaw to communally work the land, nor did it grant them autonomy over the region's natural resources. As a result, between 5,000 and 6,000 Choctaw decided to walk hundreds of miles to modern-day Oklahoma, a trip that resulted in the death of hundreds if not thousands.

The act also forced the Creek and Chickasaw into negotiations with the U.S. government. The treaties of Fort Jackson and Washington paved the way for additional land cessations from the Creeks and, under threat of military action, the Jackson administration demanded that they too relocate to the newly designated Indian Territory. The Chickasaw agreed to financial compensation but, in violation of the terms, the federal government took nearly 30 years to pay for the land.

Most notably, the Indian Removal Act precipitated the Cherokee Trail of Tears and contributed to nearly 30 years of warfare between the United States and the Seminoles of Florida. The Cherokee, among the most politically organized

and westernized of the so-called Civilized Tribes, appealed their right to territorial sovereignty after a series of encroachments by settlers in north Georgia. After the Supreme Court ruled in favor of the Cherokee, it appeared as though they had secured their territorial rights and land claims, yet Jackson refused to enforce the ruling and permitted settlers to encroach further upon Cherokee land. Shortly thereafter, the relationship between the United States and the Cherokee deteriorated until finally, during the Martin Van Buren administration, the U.S. Army forcefully relocated the Cherokees to the west. Armed forces shackled about 15,000 Cherokees and forced them to walk over 1,000 miles to Tahlequah, Oklahoma. Four thousand Cherokee died during the trip from disease, exhaustion, starvation, dehydration, and accidents.

Meanwhile, in Florida, the Seminoles resisted the Removal Act for nearly 30 years. As with the Cherokee, Chickasaw, Creek, and Choctaw, the act placed tremendous pressure on the Seminoles to move west or risk violent relocation by the U.S. government. Although some did indeed make the move, many others stayed in Florida and fought through the 1850s until the army subjugated the remaining population. In sum, the Indian Removal Act was central to opening land west of the Appalachian Mountains for white settlers; however, the act had a devastating impact upon indigenous cultures as well as on thousands of Native Americans, many of whom died in battle against the U.S. government or in the long and treacherous relocation.

Indian Reorganization Act (1934)

The federal government legislates and implements policies that affect Indian tribes. Under the U.S. Constitution, the government has the ability to regulate commerce. Under U.S. Supreme Court decisions, Native nations are considered domestic, dependent nations. There have been several important laws with far-reaching effects on Indian Country. One of the most significant is the Indian Reorganization Act (IRA), or the Wheeler-Howard Act, often called the Indian New Deal. Signed into law by President Franklin Roosevelt on June 18, 1934, the bill was designed to reverse the General Allotment Act (Dawes Severalty Act) of 1887, which alienated millions of acres of Indian homelands and reservation lands and produced devastating poverty.

The bill was conceptualized by John Collier, the commissioner of Indian affairs, based on findings of the 1928 Meriam Report about social and economic conditions on reservations, the work of several reform groups and the administration's new deal policies. Collier wanted to stop what he called the "twin evils" of assimilation and allotment and help tribes preserve their cultures, which he felt added to the health and heritage of the United States. He also felt the law was a step toward social justice. Collier held that tribes deserved to be able to determine their own sociopolitical organization and how they would live, without being handicapped.

The IRA specifically aimed to stop allotments and change the system of land tenure for trust lands, enable tribal self-government with limited sovereignty, establish court systems, rebuild societies and rejuvenate cultures, and improve the ability of tribes to conduct business as corporations. Unallotted communal lands were returned to the tribes rather than reserved for Euro-American homesteaders. Congress also added provisions

that reduced self-government from Collier's model but still called for the establishment of tribal elections to accept or reject the bill's provisions for establishing tribal governments under the model outlined in the U.S. Constitution and for the acceptance or rejection of tribal constitutions or charters that would enable them to conduct their own business.

Congress insisted that the Bureau of Indian Affairs (BIA) and the commissioner have oversight and approval/veto power for all major governance acts, including leasing authority. This made the act primarily a new form of political organization rather than increasing true self-governance as originally envisioned. The IRA also established revolving credit programs for economic development, to purchase land, educate the young, and aid in establishing political structures. Conservation funds were made available to try to stop erosion and renew overgrazed and overfarmed land that had been hit by the droughts of the 1920s and 1930s. The IRA gave Indians preference in hiring, waiving civil service requirements.

These gains were restricted, however, to federally recognized tribes that accepted the IRA provisions—and not all tribes did, much to Collier's displeasure. Public hearings were held in states and on reservations, and there was opposition from people who wanted to purchase Indian lands or eliminate reservations and the trust status. One of the largest tribes to reject the IRA was the Navajo, who did not trust Collier or the BIA because of their sheep reduction program the year before.

Although the IRA applied to most of the Indian tribes, two other laws were necessary to implement Collier's agenda: the Thomas-Rogers Act, or Oklahoma Indian Welfare Act (1936), and the Alaska Reorganization Act (1936). Over 160 tribes and villages accepted the bill and adopted constitutions or business charters, and about two-thirds of Native individuals voted. Ninety-six groups wrote constitutions, although some were written by BIA employees. Many groups improved their economic conditions, garnered funds to employ people during the Great Depression and thereafter, and solidified their land base and bought back some land (about 600,000 acres). More children went to school, and health services improved in many areas. The act also

helped Indians fight for the vote in state elections. Although Indians had been given the right to vote in federal elections in 1924, in acknowledgment of their service in World War I, some states like Arizona blocked these efforts, and it was not until 1948 that most Indians were allowed to vote without artificial barriers.

The IRA is still considered the basis for the existence and organization of tribal governments and business councils today. It is not without controversy, for it has had a continuing effect on many Native nations today. Its requirement of American-style democratic elections and representative government has led to division among groups with factions of traditionalists, those who want to retain their traditional styles of government and those who embrace the American-style of government and corporate-style business. This has been especially hard on groups that are customary theocracies, with inherited leadership positions, dual systems of war and peace leadership, or communal decision making at the national level, and on previously autonomous communities that have been placed together as a single unit, such as Hopi, western Apache groups, and the Lakota.

Indian Self-Determination and Education Assistance Act (1975)

Since the days of Thomas Jefferson, tribes had been considered sovereign nations and were left to operate their own culture while the federal government maintained a paternal overlord status. Legally, they have been classified as "dependent domestic nations" under U.S. law. But in 1943, the federal government conducted a survey of living conditions on tribal lands and found most of the citizens were living in extreme poverty. The report blamed the Bureau of Indian Affairs (BIA) for mismanagement and, 10 years later, the termination policy was born.

In 1953, Congress adopted Public Law 280, a "termination" policy for American Indian tribes, designed to place Indians within the jurisdiction of the territorial limits of the United States. The move was made because government officials believed American Indians were ready to be part of mainstream culture and no longer needed federal protection. As a result, between 1953 and 1963, 109 American Indian tribes were terminated and removed from federal responsibility—jurisdiction over the people and property was turned over to state governments. This translated into approximately 2.4 million acres of land and resources being removed from federal protected status and sold to non-Indians. More than 12,000 people lost their tribal affiliation and culture.

But Native American tribes were not ready to part with their ways of life, their cultures and religions. After years of dissent and major civil rights events such as the takeover at Wounded Knee and the occupation of Alcatraz Island, Congress passed the Indian Self-Determination and Education Assistance Act (ISDEAA) of 1975, or Public Law 93-638, also known to tribes simply as 638. The law made the following three major changes to American Indian policy:

1. It allowed American Indian tribes the right to determine their own futures by assuming responsibility for federally

funded programs designed for their benefit; these previously had been administered by the BIA. Tribes could now negotiate their own contracts and compacts and deal directly with the federal government in running their own programs and delivering their own services, in much the same way that states operate.

2. It enhanced and empowered local tribal governments and their governmental institutions to preserve and control their own culture. This allowed tribal governments to establish policies and laws specific to their tribes and to use federal program funds formerly controlled by the BIA in ways that would best benefit the specific tribe.
3. It enabled tribes to operate their own educational systems for their children, to teach their own languages and cultural beliefs. This removed the BIA oversight of the schools, which was originally designed to eliminate native cultures; provided for federal-state or territory cooperation with tribes; and provided funding for Indian education. A subsequent amendment created advisory boards comprising parents of Indian children for schools that receive funding through the federal Johnson-O'Malley Act.

This was a significant change from the old law, under which the BIA decided whether a building or service was needed, or how a school curriculum was planned and conducted, and then contracted and oversaw development and operations. Under the ISDEAA, if a tribe wants to build a new school or senior citizens' center, the tribe can make the determination of need and contract with the appropriate government agency, and then the tribe oversees the construction and operation of the infrastructure and/or facilities. Tribes can also operate their own schools and include instruction on their culture in the curriculum.

The ISDEAA has been amended several times, most notably in 1988, when tribes were authorized to negotiate their own contracts outside the federal government, and in 1994, when tribes were able to take over their own health services.

Ada Deer, a Native American advocate and scholar, served as head of the U.S. Bureau of Indian Affairs from 1993 to 1997. She was instrumental in reversing termination and was a leader in regaining tribal status for her Menominee tribe.

Despite the law and its amendments, tribes still complain about confused oversight by both the BIA and the Department of the Interior (DOI).

Still, under the ISDEAA, tribes have been able to foster their own cultures and revitalize native languages and cultural institutions. The self-determination granted by the law has allowed many tribes to improve their financial status by developing industries and services. These tribal-run services include the following:

- Management of electric cooperatives
- Management of services/quasi-government offices, including land title recordings
- Tribal-run programs such as the Safety of Dams
- Significant firefighting services
- Forestry services and products
- Fisheries and wildlife management
- Manufacturing plants that offer products ranging from clothing to food products and other goods
- Tourism and ecotourism
- American Indian-associated gaming or casinos

Thanks to their self-sufficiency under the ISDEAA, many tribes are now assisting their local non-Indian communities in areas including highways and transportation, schools, wildlife habitats, and research grants.

Indian Territory

Indian Territory is the name given to land to designate a region for the resettlement of members of various Native American tribes during decades of land cession treaties in the 19th century. Ideologically, the origins of the notion of an "Indian territory" stemmed from British imperial

policies of attempting to establish Indian reserves to segregate Native Americans who lived east of the Appalachian Mountains. However, after the American Revolution, the emerging republic established new federal land boundaries, particularly as a result of the Louisiana Purchase in 1803, and attempted to relocate Native Americans to lands west of the Mississippi River. The Indian Territory geographic borders were codified in the statutes of the Indian Intercourse Act in 1834, which codifies land cession policies. This act defined what became known as "Indian territory" as being "all that part of the United States west of the Mississippi and not within the states of Missouri and Louisiana, or the territory of Arkansas. . . ."

Cherokee Legal Precedents

Many scholars assert that President Thomas Jefferson was one of the earliest advocates of relocating Native Americans to western lands as a result of the Louisiana Purchase in 1803. Legal scholar Stephen Bragaw describes Jefferson's ideas about federal Indian law as being shaped by 18th-century legal philosophies and Enlightenment-era ideas of the "noble savage." These ideas shaped the political discourse on beliefs about the "Indian question" and justified the belief in the different uses of land by Native Americans, in comparison to the use of the land to expand the institution of slavery.

Georgia's conflict with the Cherokees festered with escalating intensity early in the 19th century. The remaining Cherokee territory was located primarily on lands claimed by Georgia. Contravening earlier treaties, Jefferson signed the Georgia Compact in 1802 in which Congress promised to purchase the remaining Creek and Cherokee lands in the southeast. Conflict ensued, as prior indigenous treaties had encouraged assimilation, whereas the Georgia Compact promoted removal. In 1802, the federal governmental leaders did not expect resistance as a result of the compact. However, because of rapidly increasing white population in Georgia, pressure increased to remove all local Native Americans in the 1820s.

During Andrew Jackson's presidency, the federal Indian Removal Act of 1830 was the pinnacle of treaties that affected various Native American tribes of the 19th century to try to codify the

development of the Indian Territory. Upon Jackson's election, and spurred by the discovery of gold in Georgia, laws were passed to appropriate Cherokee lands and provide a lottery to distribute this land to state citizens. Cherokees combated these policies, and in *Cherokee v. Georgia* and *Worcester v. Georgia*, the Cherokee Nation was the first to gain sovereignty rights in the U.S. Supreme Court—and then have these rights violated. In addition to the Cherokees, the other members of the so-called Five Civilized Tribes were the Seminoles, Chickasaws, Choctaws, and Creeks, who all faced federal removal. A series of state and federal battles occurred during the 1830s pertaining to Indian removal, as federal agents tried to influence tribes to move after gold was discovered in the state and white settlers moved in, despite the *Worcester v. Georgia* decision of the Supreme Court.

Trail of Tears

The process of forcibly removing Native Americans—in particular, the Five Civilized Tribes of the Southeast to Indian Territory—led to the long history of what is called the Trail of Tears. After the treaty for removal, the Treaty of Echota, was signed by a faction of Cherokees, over 15,000 were forcibly evicted. Some evidence of the connections between Indian Territory and the lands of Native Americans prior to their removal appears in the names of new towns that bear the same names as towns in their former lands, for instance, in Alabama and Georgia.

The Native American population in Indian Territory included at least 30,000 people who lived in more than 100 villages of these nations, including several thousand African Americans and European Americans, particularly along the Tombigbee River and around the Natchez banks of the Mississippi. The Cherokee Nation was given a large portion of Indian Territory. Other parts were divided by other tribes. However, the Chickasaws, who were not originally given land, purchased land from the Choctaw Nation. After Indian removal, the borders of Indian territory were continually contested among tribes, including the Plains Indians, and as a result of European American and African American settlement. The Chickasaw, for instance, lived along the Texas border. By 1850, Commissioner of Indian Affairs Luke Lea recommended

the compression of Indian territories by assigning western Indians to reservations away from settlements and immigrant highways.

One hotly contested theme that historians have widely discussed, particularly over the last decade, is slavery in Indian Territory. Historian Celia Naylor described enslaved African Americans who lived in Indian Territory as “denizens” because they were not citizens of the United States and lived outside the national boundaries. She adds that they could be described as African Indians, as opposed to the more popular term, *Black Indian*, which addresses some of the complexities of determining cultural descent.

Late Nineteenth to Early Twentieth Centuries

In the aftermath of the Civil War and during Reconstruction, Native Americans in Indian Territory faced serious challenges in their relations with Indian affairs. Native Americans did not appear to be included in the passing of the Fourteenth Amendment, which was ratified in 1868, and tribal government laws were not considered valid in comparison to federal and state laws. Furthermore, Congress violated prior treaties and granted large amounts of tribal lands to railroad companies to build new lines through Indian Territory.

During the General Allotment (Dawes Act) of 1887, the territory was changed and the land was broken up, and parcels of land were allotted to individual families as opposed to being held communally. Land that was not allotted was sold by the government and used to build schools. Initially, the Five Civilized Tribe members were exempted by the Dawes Act. In the 1890s, many Native Americans protested allotment. By 1907, Indian Territory became the state of Oklahoma. It was not until 1924, when the Indian Citizenship Act was passed, that Native Americans were federally recognized as citizens.

Indigenous People's Day

Indigenous People's Day was established to celebrate and promote the culture and history of Native Americans. Sometimes referred to as Native American Day, Indigenous People's Day is typically held on the second Monday in October, coinciding with the traditional observance of Columbus Day, which is a federal holiday but is not observed as a holiday in every state. Throughout its 75-year history, and especially in the last two decades, Columbus Day and the man behind it have been a source of controversy, and protests and alternatives to its recognition and celebration have surfaced throughout the country.

Columbus Day Controversy

Resistance to Columbus Day is not a new phenomenon. It dates back to at least the 19th century, when anti-immigrant groups wanted to do away with the holiday because of its association with Catholicism (the Knights of Columbus, the world's largest Catholic fraternal service organization, had lobbied intensely for the national holiday).

The way in which Columbus Day is observed in the United States today varies quite a bit, from large-scale parades and events to total disregard. Three states—Hawai'i, Alaska, and South Dakota—do not recognize it. Numerous states and cities have either canceled Columbus Day—sometimes because of a lack of interest, or for budgetary reasons—while others have renamed and repositioned how the day will be acknowledged. For example, Hawai'i has renamed the holiday Discoverers' Day to commemorate the Polynesian discovery of Hawai'i. In South Dakota, the state has substituted Native Americans' Day, a public holiday that focuses on Native American history and traditions and provides an

opportunity for natives and non-natives to share in the contributions of native culture. In many places, powwows are hosted, with singing, dancing, and socializing.

Because Columbus was believed to be a native of Italy, a source of great pride to many Italian Americans, some have charged that Indigenous People's Day is "anti-Italian," or have criticized it for its "revisionist" interpretation of history. Some cities have chosen to rename Columbus Day Italian Heritage Day, and it has evolved into a celebration of Italian American history and culture. Others have renounced the day entirely, calling into question the traditional depiction of Christopher Columbus as a bold explorer, and pointing to the fact that following his arrival in the Bahamas, he and his men forced the native peoples there into slavery. Still others have sought to appease everyone by honoring American Indians as part of Columbus Day, or by designating two holidays on the same date.

The controversy surrounding how to correctly interpret Christopher Columbus and his impact continues today. It can be seen most recently in plans to place an art installation around the statue of Columbus that stands high above Manhattan's Columbus Circle. Some Italian Americans have expressed outrage over the "living room" installation, which they say makes a mockery of the explorer and trivializes history.

The proposal for an Indigenous People's Day was first put forward at the United Nations-sponsored International Conference on Discrimination Against Indigenous Populations in the Americas, which took place in Geneva, Switzerland, in 1977. The idea gained momentum in the summer of 1990, when 350 representatives from 120 Indian nations from every part of the Americas met in Quito, Ecuador, for the first Intercontinental Gathering of Indigenous People in the Americas to mobilize against the quincentennial (500-year) celebration of Columbus Day. The

New Yorkers, many waving Italian flags, watch members of the U.S. Navy Band march in the city's Columbus Day Parade, October 13, 2008. The 65th annual parade in New York is a distinctly Italian American heritage celebration. Some American cities have either cancelled their Columbus Day observances or renamed them "Italian Heritage Day," as Christopher Columbus is widely believed to be a native of Italy. Some efforts to honor American Indians as part of Columbus Day have been met with protests.

conference was attended by human rights, peace, social justice, and environmental organizations.

The following summer, in Davis, California, more than 100 Native Americans gathered for a follow-up meeting to the Quito conference. The final day of the conference was moved to Laney College in Oakland, California, and was opened to non-native people. There, a task force was formed, called the Berkeley Resistance 500, a group dedicated to promoting the belief that Columbus was responsible for the genocide of American Indians.

The Berkeley Resistance 500 investigated the historical record and concluded that Columbus's journey was not an exploratory expedition, but was rather a scouting mission for purposes of conquest. They petitioned the city council of Berkeley, California, to declare October 12 "a day of solidarity with indigenous people." Berkeley symbolically changed Columbus Day to Indigenous People's Day to call attention to the demise of Native American people and culture through disease, warfare, massacre, and forced assimilation. On October 13, 2012, Berkeley celebrated the 20th anniversary of this historical event with a powwow and an Indian market.

In 1994, the General Assembly of the United Nations (UN) designated August 9 International Day of the World's Indigenous People to recognize the first UN Working Group on Indigenous Populations that met in Geneva in 1982. Concerned about offending some member nations, it chose August 9, instead of the traditional Columbus Day, as the day of recognition. In addition to promoting and protecting the rights of the world's indigenous population, this event also recognizes the achievements and contributions that indigenous people make in addressing and improving world issues such as climate change. It is a UN day of observance, not a public holiday. The focus for the 2012 International Day was "Indigenous Media: Empowering Indigenous Voices." Its objective was to highlight how traditional and new media can promote the cultures and languages of indigenous people and communicate that knowledge in a way that is different from mainstream ideas.

Indigenous Transnationality

Although the presence of migrants with diverse cultural backgrounds in the United States is widely known, the specific group of indigenous migrants and their descendants is rarely acknowledged as such. However, a considerable number of migrants who arrive in the United States from Latin American countries have an indigenous background, a fact that is frequently overlooked because migrants are normally categorized and perceived according to their nationality. The few existing studies stress that indigenous migrants occupy specific positions within migrant communities in regard to their ethnic categorization. Although migrants share the same national citizenship, they differentiate between mestizo and indigenous migrants. The latter frequently experience diverse social borders and a subordinate positioning, even in their countries of provenance. Indigenous migrants can be discriminated against as migrants in the host country, and as indigenous by other migrants. Other social categories relating to gender, age, economic and educational background, and their

intersections can aggravate discrimination, leading to multidimensional discrimination.

Indigenous transnationality as a phenomenon in the United States derives mainly from migratory processes of indigenous groups, especially from Latin American countries. However, indigenous transnationality is also constituted through other kinds of transnational linkages, such as pan-American indigenous associations.

The concept of indigenous transnationality reveals the complexity and diversity among migrants, who are socially constructed as homogenized groups by the host society. Hence, it goes beyond widespread social categorizations, stereotypes, and conceptions that conceive indigenous people as inferior. This historical perspective has been prevalent in Latin American societies, where indigenous people are perceived as too isolated, earth-bound, and antimodern to leave their villages. At the same time, U.S. society categorizes indigenous migrants just as migrants in concordance to their nationality, and perceives no further diversity. Moreover, for a long time, academic perceptions were constrained, as migration scholars often overlooked the existence of indigenous migrants, and studies on indigenous people neglected the fact that they migrated. In contrast to these perspectives, historical studies show that indigenous people always had to be flexible to survive as such, which include becoming involved in migratory processes since precolonial times. In the paradigmatic case of Mexico, migration to the United States has been part of these strategies for several decades. However, research has just begun to broaden the perspective.

Types of Transnational Phenomena

There are several facets of indigenous transnationality. Transnationality in general encompasses diverse kinds of social, economic, and cultural flows. This results in new arrangements in transnational communities and beyond as cultural elements, ideas, and values flow through transnational networks. In this context, indigenous communities adapt their specific types of self-organization, thus transnationalizing them. This is the reason why the often-discussed relationship between migration and development is peculiar in the case of indigenous migration. Here, the contribution of transnational social and cultural

flows to development, or social remittances, can be highlighted. Newer studies also focus on the emotional elements of transnational migration, such as the nostalgic economy of migration that is frequently related to the idea of community among indigenous migrants.

It is often assumed that indigenous migrants work in farming, taking over positions of other migrants who experienced a social upgrading. However, this is not fully correct. Many indigenous migrants work in rural areas because they are accustomed to it from former experiences in internal migration. Nonetheless, indigenous migrants engage in a broad array of economic activities. In some regions, they work in the tourist industry, in landscaping, or in diverse plants. In several cases, they also own small enterprises or are renowned as traders. Such is the case of the Otavalo, an indigenous group from Ecuador, which built up far-reaching trading networks and gained considerable economic and political weight. These transnational economic activities benefit from their cultural background to maintain links and foster social cohesion and control.

There are several similar phenomena that can be regarded as partly transnational. Among these are indigenous groups that were “split up” by national borders but maintain a common social organization and initiatives, such as Canadian First Nation associations, which engage in development projects for indigenous people in Latin America.

A considerable part of indigenous transnationality is produced in day-to-day interactions. Additionally, most of these practices relate not so much to nations but to specific localities that are interwoven by social links. Therefore, rather than speaking of transnationality, the relevant processes could also be conceptualized as translocal.

Organized Indigenous Transnationality

Typical examples of well-established indigenous transnationality are migrant organizations such as hometown associations, clubs, and overarching unions. The most famous among a multitude of organizations across the United States is the Frente Indígena de Organizaciones Binacionales (FIOB) in California. These organizations had an important part in raising awareness for the rights of migrant workers, including their living

conditions, and engaged in social and political activity in the United States and the respective country of provenance. They are important actors of a migrant civil society. However, it is necessary to distinguish between organizations that were built up from migrant initiatives and those that were fostered by party-connected actors with strong (personal) political interests.

Despite the strong public and academic focus on formal organizations, there are other forms of transnational organization among indigenous migrants. Many migrants neither establish nor join formal organizations for diverse reasons such as insufficient time or a feeling of insecurity among undocumented migrants. Furthermore, this way of organizing often does not fit into their logic of social organization. Studies indicate that this can be especially true for indigenous migrants, who are more used to thinking of their social group as a community. They frequently prefer to organize in a manner that fits the patterns of community-based social organization with which they are accustomed.

Indigenous groups all over Latin America organize themselves as communities on a village level and sometimes even on higher levels. This concept of community entails personal, organizational, social, and political dimensions. For instance, the community provides a formal framework to attend local concerns and organize its members to implement local projects and maintain the infrastructure because the state regularly does not fully attend to these concerns.

The concrete shape of communitarian organization differs from place to place, but it always has certain membership regulations and rules that attend to diverse aspects of communitarian life. These rules, often called *usos* and *costumbres*, are frequently criticized in a stereotypical way as traditionalist, antidemocratic, and patriarchal. In contrast to this perspective, this kind of social organization is very flexible and open and can easily be adapted to new circumstances in migratory contexts. So, even though community members have lived for several years in the United States, they are still regarded as active members and are expected to fulfill their obligations. In return, they preserve their membership and rights in the community. This results in strong social links and a feeling of belonging to the respective community.

As this offers experienced ways to articulate demands in the locality of origin or to contribute to its development, indigenous migrants often do not see the need to establish separate associations. Therefore, a supposed lack of formal organization can be a sign of more far-reaching and intense ways of transnational social organization.

Transnational Identity Politics

The existence of indigenous transnationality has strong political implications, both in Latin America and in the United States. In the last two decades, the situation of indigenous people in Latin America has attracted increasing attention as specific social movements were heard on a global level. This is also reflected in the global reception of alternative development concepts that have indigenous roots, such as *buen vivir* (good living). As a consequence, the perception of indigenous people and cultures has changed as much as their self-perception. Although discrimination and stereotypes prevail, the social categorization of indigenous people is changing in a slow but steady process of social renegotiation. Indigenous transnationality is an important dimension of this process because it grants moments of reflection, resources, and opportunities through which indigenous actors change their socioeconomic position, often defying old stereotypes. Moreover, the self-assuredness of Latin American indigenous groups can be fostered when their migrants interact with Native Americans.

At the same time, the growing awareness of a shared experience of multidimensional discrimination has led to alliances between different indigenous organizations, creating an overarching panindigenous consciousness. For example, FIOB turned from an ethnically defined exclusive organization into one that incorporates members of other indigenous groups, transforming its self-conception. The resulting activities and solidarity, encompassing members of various indigenous groups, is therefore not so much the result of an idea of a similar cultural background but of the consequences of social categorization of indigenous persons in their countries of provenance and in the United States. This created a prospective for successful social and political activism.

Along translocal networks, political experiences are transferred to other localities and

countries. Therefore, in several parts of Latin America, such organizations have achieved political influence on diverse political levels. Local and national state actors and activists from political parties in the countries of provenance also try to adapt to this new situation. Migration often means that persons leave informal political control and learn about political and societal ideas that differ from those they were accustomed to. Because ruling political actors can perceive this as a risk, they try to maintain the migrants' attachment by visiting them or addressing them in public discourses. In several countries, party-friendly organizations seek to transnationally reestablish clientelist networks. This normally corresponds to transnationalism in a classical sense, but in the case of indigenous migrants, a special emphasis is put on the ethnic background to foster political bonds. Therefore, indigenous migrants often tend to rely on their forms of organization, as they are cautious of being politically misused.

Indigenous transnationality is likely to grow for several reasons. Transnational migration between Latin America and the United States will prevail, and a considerable share will be of indigenous background. At the same time, a growing number of migrants are likely to identify themselves as indigenous, then engage in indigenous transnational practices. Finally, although it is uncertain if future generations will maintain links to their parents' places of provenance, indigenous migrants are more committed to activities that aim at assuring these bonds. Because of their community orientation, the practice of sending children "home" for a while, constant circulation of people, and the transmission of elements of indigenous cultural knowledge and practices, future generations are likely to live in transnational networks with strong ethnic dimensions. Moreover, prevailing social categorization and ongoing (occasional) discrimination strengthen the self-perception as indigenous. The existence of villages and quarters in the United States that have a considerable population of indigenous migrants and their descendants indicates that indigenous transnationality is going to be an important and durable element of a multicultural United States.

Indochina Migration and Refugee Assistance Act (1975)

The Indochina Migration and Refugee Assistance Act of 1975 was created to provide assistance to refugees from Vietnam and Cambodia who had to flee their countries and could not return after the Vietnamese War for fear of persecution. The bill was supported by U.S. President Gerald Ford. In the act, Congress appropriated \$455 million to fund the assistance. In carrying out some provisions of the law, four resettlement centers were set up. From these centers, the refugees were processed and aided in moving to permanent locations in the United States.

When the war in Vietnam ended in May 1975 and the United States withdrew from South Vietnam, there was an immediate flight from the country of tens of thousands of Vietnamese people who feared for their lives in light of the North Vietnamese takeover of South Vietnam. In addition to evacuating by air approximately 7,000 American citizens, the United States airlifted out approximately 40,000 South Vietnamese before the

airports in the country closed. Many other Vietnamese people left their country by boat. Some of these people were picked up by U.S. military ships, some made it to other countries, and many were lost at sea. Some traveled over land routes to Thailand. A humanitarian crisis of immense proportions developed as the refugees fled South Vietnam, depending on other nations to take them in. On a much smaller scale, Cambodians also fled their country as a government sympathetic to North Vietnam took over. Refugees also fled from Laos. The act was amended in 1976, adding Laotian refugees to the provisions of the legislation. The U.S. government granted immediate entry to many of these refugees, initially willing to take in 120,000. That number increased during the year and was raised again in subsequent years.

By the time this act was passed by Congress, Vietnamese refugees were already being brought into the United States. Processing centers were established at U.S. bases in the Philippines, Guam, and Wake Island. Reception centers were set up in the United States at Camp Chaffee in Arkansas, Camp Pendleton in California, Ft. Indiantown Gap in Pennsylvania, and Eglin Air Force Base in Florida. The refugees were brought to these locations for further processing so that they might be quickly resettled throughout the United States with the help of nonprofit agencies.

Even though unemployment was high in the United States and many feared that an influx of refugees from southeast Asia would take the jobs of Americans, there was strong support for this legislation. President Ford supported the act, and many felt that helping these refugees was one way of opposing communism. The Indochina Migration and Refugee Assistance Act was introduced shortly after the fall of South Vietnam. It was passed by Congress and signed into law by the president on May 23, 1975. The law stipulated that the funds would be available for a relatively short period.

Of the \$455 million that the law set aside to help these refugees, a substantial amount went to the Defense Department as reimbursement for transportation of the refugees out of Vietnam, from ships at sea, from other countries, and into the resettlement centers. The Defense Department was also reimbursed for the cost of resettlement centers located on military bases. The Department of Health, Education and Welfare received a

significant sum for the welfare and medical needs of refugees. The Offices of Refugees and Migration received funds, much of which was given to voluntary agencies that gave direct help to the refugees.

Agencies that helped in the resettlement process included the U.S. Catholic Conference Migration and Refugee Services, American Fund for Czechoslovak Refugees, Church World Service Immigration and Refugee Program, and Lutheran Immigration and Refugee Service. These agencies were charged with finding places for the refugees to resettle. The newcomers were scattered throughout the United States to prevent any undue impact on an area where large numbers might settle. In spite of these efforts, Texas and California became the most popular places for refugees to settle.

By the end of 1975, 130,000 refugees had been processed by the resettlement centers and the centers were closed. These agencies aided the southeast Asians in finding sponsors, housing, jobs, financial assistance, and education.

By the time of the release of the 2010 U.S. Census, over one and a half million people with a Vietnamese origin lived in the United States. The Vietnamese population was the fourth largest of the Asian populations in the country. Many centers of Vietnamese populations in the United States still show the strong identity that they have with their culture. The same census showed that over a quarter of a million Cambodians lived in the United States, and almost 200,000 Laotians.

Indonesian Americans

As of the 2010 U.S. Census, 95,270 Indonesian Americans lived in the United States, and about a third of them in southern California. Indonesia is an archipelago of 17,508 islands between southeast Asia and Australia. Known to Europeans as the Spice Islands during the Age of Discovery, Indonesia was colonized by the Dutch for 350 years and regained its independence after World War II. The islands comprise numerous ethnic, cultural, and linguistic groups, the largest of which is the Javanese. There are over 300 native ethnic groups in Indonesia, speaking 742 dialects, in addition to groups that originated elsewhere, the largest of which are the Chinese Indonesians, who make up about 3 percent of the population and control a disproportionate amount of its wealth and businesses.

The Indonesian language is a prestige dialect of Malay, and the Malay ethnic group is a significant one in the country (some of the islands in the Indonesian archipelago are divided between Indonesia and Malaysia). Religions in Indonesia include Muslim, Christian, Hindu, Buddhist, and Confucian; most of the country is Muslim, but Hinduism and Buddhism figure largely in the country's history and culture. Christianity is the fastest-growing religion in Indonesia, and the demographics of recent immigrants to the United States reflect this. Chinese Indonesians are usually Buddhist or Confucian; both faiths were introduced to the islands by the Chinese.

A Dozen Different Indonesian Groups

During the Dutch colonial period, Indonesia was known to the West as the Dutch East Indies. Numerous Europeans immigrated to the islands during and after the Industrial Revolution.

Indonesians of mixed Indonesian and European descent are called Indo-Europeans, or Indos, and represent the majority of Indonesia's population of European descent. Very few Indonesians are known to have immigrated to the United States before World War II, and those who did may have been given any number of classifications by immigration officials. The first Indonesians to move to the United States after independence were Indo students who arrived in southern California as part of a program begun in 1953 that allowed Indonesian medical professionals to study at the University of California at Berkeley.

When immigration restrictions were reformed in 1965, more Indonesians immigrated to the United States, and most continued to settle in California. In the 1960s, most Indonesian immigrants were Chinese Indonesians, many of whom were political refugees. Immigration accelerated in response to chaos in Indonesia, tripling between 1980 and 1990. Most immigrants settled in established Asian American communities in large cities; there are no well-established Indonesian American enclaves, because of how recently Indonesians arrived in the United States but principally because of Indonesians' ethnic and cultural diversity. Although there are certainly common elements of culture in Indonesia, it is more difficult to preserve a cultural heritage within a community whose members are drawn from a dozen different Indonesian groups.

Cultural association within the Indonesian American community is conducted less through enclave neighborhoods and more through cultural organizations in cities with large Indonesian populations like Los Angeles, San Francisco, Chicago, and Washington, D.C. There are also numerous Indonesian churches, which function as social centers as well as places of worship. That said, although Indonesians do not live in Indonesian enclaves, neither do they fully assimilate. Marriage to non-Indonesians—though not rare—is discouraged, though perhaps also inevitable given the age at which most Indonesian immigrants arrive in the country and the ratio of Indonesians to non-Indonesians.

Indonesian arts are popular in the Indonesian American community, especially the Bali court dances, puppet dramas, and clothes made of batik, a cloth dyed using hot wax or a printing stamp.

At Maker Faire 2008 in San Mateo, California, Teresa Mak displays her batik art, which is very popular among the Indonesian American community. About one-third of Indonesian Americans live in California.

Indonesian food is highly seasoned, reflecting the many spices indigenous to the Spice Islands, and reflect south Asian influences in the use of curries, coconut milk, and skewer-roasted meats. One significant difference between Indonesian food and the customs of Americans is that Indonesian food, especially when served buffet style, is often served at room temperature—which makes sense in such a hot country.

The United States is an especially popular destination for Indonesian students, and many remain after college; about a quarter of Indonesian Americans are aged 25 to 34 years. The number of Indonesian college students in the United States has steadily grown since 1980.

Many Indonesians work in the import-export business, and trade relations between the United States and Indonesia have long been strong. The United States exports farm goods, heavy equipment, and aircraft and imports commodities like oil, coffee, spices, tin, tea, and rubber. This trade has been encouraged by the American Indonesian Chamber of Commerce, which was founded in 1949, in anticipation of Indonesian independence.

Since 1988, the *Indonesian Journal* has been distributed free every month through Indonesian cultural organizations, churches, and even restaurants. It is supported by advertisements and printed in Indonesian. The *Indonesia Letter* is a monthly newsletter for Indonesian Americans, distributed nationally from Los Angeles.

Intelligence Testing

The first intelligence test was developed by Alfred Binet, from France, in the early 1900s. Binet was charged with developing a tool by which one could differentiate levels of intelligence between different groups of students. The goal was to be able to identify children who were intellectually inferior and intellectually superior so that they could be placed in schools that

catered to students with similar intelligence levels. The Binet scale was created, and a standard was developed based on the data from these test scores, and as a result of this standard, the term *intelligence quotient*, or *IQ*, emerged and entered the education system.

H. H. Goddard believed that Binet's intelligence test should be used to screen students for his school, the Vineyard Training School in New Jersey. He decided that Binet's IQ test was a tool that he could use to label and classify students as normal, idiots, imbeciles, and morons. Goddard believed that intelligence was not only inborn, but also fixed and could be measured. Lewis M. Terman believed that intelligence was fixed and hereditary.

In 1916, the Stanford-Binet test was revised as a result of Terman's beliefs, and the test became the standard intelligence test used in the United States. As a result of Goddard's and Terman's work, American educators believed that this was a universal tool that they could use to measure intelligence and identify students who required special instructional services in their schools. Intelligence testing continues in American schools.

In 1917, the U.S. military gave psychologist Robert Yerkes permission to administer the intelligence test to over 1.75 million army recruits. The Army Alpha test was developed as a group-administered written test for recruits who were deemed literate, and it was meant to measure a variety of parameters, such as verbal and numerical abilities and the ability to follow directions. Another test, the Army Beta test, was a pictorial test for men who were deemed illiterate and had no formal schooling, and who failed the Army Alpha test. Questions on the test were developed to measure aptitude and required recruits to identify what was missing from a picture and to complete number sequences.

Yerkes believed that these tests measured one's native intellectual ability, and that innate intelligence was not affected by one's culture or educational opportunities. On the other hand, Carl Brigham, one of Yerkes's colleagues, believed that people from certain ethnic groups were intellectually superior to others. As a result, people started to believe that genetic differences between races existed and that the intelligence tests could help

identify these innate racial differences among various ethnic groups.

Terman, Goddard, and Yerkes advocated eugenics. Eugenacists believed that people from minority groups were contributing to a national degeneration and they pushed to keep unfit people or degenerates from reproducing, marrying, and entering the United States. The goal for eugenacists was to create a better human race, and the founding fathers of eugenics viewed intelligence testing as a way to achieve this goal. Later, Brigham would develop the Scholastic Aptitude Test, or SAT, which is commonly used as a requirement for entrance into higher education, and Yerkes served as the president of the American Psychological Association.

Goddard, like his fellow eugenacists, argued that the reconstruction of society should be regulated and determined by intelligence test scores because he truly believed that intelligence levels were based on innate fixed abilities. As a result, he concluded that many non-northern European immigrants were morons, despite the fact that they were administered the intelligence test in English, with questions based on American culture and a language that they did not know.

Intelligence Testing on Racially Diverse Groups

The discrepancies in intelligence test scores that exist between whites and racially diverse groups have been contested since World War I, when tests were administered to military recruits. The literature on the measurement of intelligence and levels of ability continue to report a significant divide between Caucasian and minority students, with minorities continuing to perform lower in these areas. Though differences in IQ test scores have been attributed to genetics, no exact cause has been pinpointed, but several variables have been identified that may contribute to lower performance, such as culture bias, language, cultural deprivation, family values, home environment, and/or disadvantages of students from diverse backgrounds. Despite this, intelligence testing continues to be used in educational settings and to place minority students in specialized programs.

Critics claim that these tests are biased because they are normed using mostly middle-class white

children. Other scholars believe that students from diverse backgrounds are culturally different, but not culturally disadvantaged or deficient, and that test performance among diverse students is impacted by their culture.

Therefore, low performance on tests does not mean that students from diverse backgrounds are inferior when it comes to intelligence. However, students from diverse backgrounds continue to be consistently underrepresented in gifted programs and overrepresented in special education programs because of their performance on IQ tests. Educational misplacements because of school officials only looking at IQ test scores and because of deficit thinking and stereotypes about diverse students can be detrimental to students from racially diverse groups.

Research studies between 1920 and 1929 concluded that low performance on tests among Mexican American children was due to heredity and inferior genetics. Examinations of these studies claim that variables such as socioeconomic status and language or limited English proficiency were not addressed. It was not until 1931 that Mexican American scholar George Isidore Sanchez challenged and critiqued research related to intellectual measurement.

Sanchez identified several issues with mental measurements and how they were used regarding Mexican American students. First, tests used to test Mexican American students were not standardized on students whose first language was Spanish. Second, test items on these exams were biased and did not represent the culture of Spanish-speaking students. Third, there is no universal consensus on what intelligence constitutes or how to accurately measure it, especially with students whose first language is not English. Fourth, scholars, educators, and the public continue to accept test scores of Mexican American students as valid, rather than critically reviewing the contents of the tests and without consideration of the fact that the tests do not represent the language or culture of Spanish-speaking students. Fifth, tests that have been revised do not necessarily mean they are better tests and are adequate measures of intelligence. Sixth, tests are used as a result of attitudes and prejudices toward non-English-speaking students and seventh, the educational system continues to be

heavily influenced by the rhetoric behind testing. Years later, these seven issues remain prominent in testing reform.

Research studies between 1916 and 1930 also concluded that low performance on tests among African American children was because of heredity, home environment, and social socioeconomic status. Critics of these studies claim that some tests, like the Goodenough Draw-A-Man test, were culturally biased. African American scholars of the 1920s, such as Horace Mann Bond, Francis C. Sumner, E. Franklin Frazier, Charles H. Thompson, Charles S. Johnson, Howard H. Long, Ira D. A. Reid, Joseph St. Clair Price, and Herman C. Canady, challenged deficit thinking and critiqued studies claiming that African Americans were inferior. It was not until the desegregation mandate and the civil rights movement that the debate over group-administered IQ tests in classifying African American students for special education reemerged at the forefront of testing and education.

Similar to intelligence testing with Mexican American and African American students, research studies concluded that low performance among American Indians was a result of heredity and genetics, particularly inferiority in Native intelligence. Again, the research during this time did not address variables such as socioeconomic status, culture, language, and educational factors.

As a result of discrepancies in research related to intelligence testing and Mexican Americans, African Americans, and American Indians, and the high numbers of these students placed in specialized programs, in 1970, members of these groups fought against the use of intelligence testing to place students in special education. Their fight influenced testing mandates, which now required that multiple data be used to assess students; if a student's first language was not English, assessment must be in the student's dominant language; and all students must be allowed due process. This was not the end of the fighting and critiquing of intelligence testing in education. The concern about intelligence tests being culturally biased because test items are based on white, middle-class experiences continues to be raised. For members of groups who are not white and middle class, these tests place their

children at a disadvantage as a result of accepting test scores as absolute.

Intelligence Testing and Tracking in Education

The development of the Stanford-Binet Intelligence Scale contributed to the practice of tracking because test scores were widely perceived as scientific. As a result, IQ test scores were seen as an objective and efficient way to sort students. This test soon became the standard intelligence test used in the United States, and was used to place students into tracked classes.

With John Dewey's progressive movement in the 1920s, the practice of tracking was questioned. In Dewey's eyes, the use of intelligence test scores was inadequate because they reflected a limited perception of intelligence. Intelligence was more than a test score; it was made up of many different behaviors, some of which could not be measured by intelligence tests. However, proponents of gifted education like Leta Stetter Hollingsworth, a professor at Teachers College at Columbia University, viewed the intelligence test as a valid tool to identify students who were intellectually superior.

Test scores were soon used to identify the intellectually superior from the intellectually inferior, and students were sorted into different tracks like gifted education, remedial education, and special education programs. As a result, more than two million American children were tested to determine the right track for them in schools. It was not until the 1960s, during the civil rights movement, that the educational practice of tracking was once again brought to the forefront and challenged because tracking was perceived to have damaging effects on poor children and children of color.

The practice of tracking resulted in some legal implications. In the case *Hobson v. Hansen* (1967, 1969), the courts ruled against grouping based on one's ability as measured by a student's performance on a standardized intelligence test. Once students were grouped according to their test score, students stayed in their assigned track permanently. Additionally, the court ruled that resources were unequal among tracked groups of students, and the school failed to provide evidence of learning from students grouped by

ability, nor were they able to prove that students had a positive experience in tracked classes. Furthermore, the practice of tracking was defined as an unequal practice because students were permanently placed in tracks based on one test score, and no resources for learning were provided for students placed in the lower tracks.

As a result of the largely accepted belief that intelligence tests were accurate and scientific and could measure one's innate ability and intelligence, the mass use of the Stanford-Binet tests and other tests like it created a multimillion-dollar testing industry. The intelligence test, or IQ test, has been identified as one of the most significant scientific discoveries of the 20th century, along with nuclear fission, DNA, the transistor, and flight by the American Academy for the Advancement of Science. With the publication of the *Bell Curve* in 1994 by Richard Herrnstein and Charles Murray, the idea of differences in innate intelligence and ability was once again brought to the forefront. Intelligence testing still creates considerable controversy.

Practices such as using multiple assessments and assessing multiple intelligences, rather than relying solely on an intelligence test score, are examples of alternatives to testing. According to Howard Gardner, tests scores should be used to help students rather than classify or rank them. Furthermore, Gardner asserts that there are many varieties of intelligences that are ignored by IQ tests, and that multiple intelligences cannot be measured by a single IQ test because IQ tests measure only linguistic and logical/mathematical intelligences, and do not adequately measure human cognitive abilities.

Intercultural Communication

Intercultural communication is the study and practice of communication across cultural contexts. It applies equally to domestic cultural differences such as ethnicity and gender, and to international differences such as those associated with nationality or world region. Intercultural communication is an approach to relations among members of these groups that focuses on the recognition and respect of cultural differences, seeks the goal of mutual adaptation leading to biculturalism rather than simple assimilation, and supports the development of intercultural sensitivity on the part of individuals and organizations to enable empathic understanding and competent coordination of action across cultural differences.

Communication

Communication is much more than a simple transmission of information: it is the mutual creation of meaning. Information is not, in itself, meaningful; it is only when information is intended and interpreted in some way that it attains significance. For instance, if one person (Jim) is telling another (Susan) about a movie he just saw, Jim probably intends for Susan to understand what the movie is about as well as

something about Jim's experience and evaluation of it. Jim poses the information in a language known by Susan, using references to concepts and other films Susan might know; and in conveying his feeling, Jim assumes that Susan is able and willing to access his experience. For Susan's part, she tries to interpret the information in the way Jim intended it by using common meanings for words and concepts and by recognizing both their common experience of similar events and the uniqueness of Jim's personal experience in this particular event.

Of course, the exchange described above is an ideal that is seldom achieved in one pass (or many). What usually happens is that Susan's interpretation is both more and less than what Jim intended. It is less in Susan's probable failure to assign exactly similar meaning to words and concepts that Jim uses, and it is more in that Susan probably projects many of her own feelings about similar events onto Jim's description. In Susan's response (feedback) to his message, Jim may recognize some of Susan's discrepant interpretation and correct it. Assuming that this is not Jim's first communication with someone like Susan, he may have already anticipated some of her likely misinterpretation by tailoring his message to her in the first place. Therefore, both Jim's intention and Susan's interpretation are in play as they attempt to negotiate a mutually acceptable match. The final meaning of the communication event is neither just Jim's intention nor simply Susan's interpretation; it is their mutual creation of an agreeable position.

Culture

The sense of "culture" used in intercultural communication is that of "worldview." Culture is a generalization about how a group of people coordinate meaning and action among themselves. One way they do that is through institutions such as religious, political, and economic systems, and family and other social structures. But underlying these institutions is a habitual organization of how the world is perceived, and thus how it is experienced. These habits are often referred to as cultural assumptions and values, and they occur in all groups, not just national societies. In general, intercultural communication focuses on this worldview aspect of culture and not so much on the institutions of culture. Human communication

is conducted by people, not institutions. The concern of any study of communication is therefore with the way that human beings organize meaning. All human beings are influenced by the institutional structures that they internalize as part of socialization, and understanding those institutions may give insight into how they habitually organize their perceptions, but in the end it is their human worldviews that generate meaning, not institutional structure.

An essential element of culture is the boundary that distinguishes “us” from “them.” Every human being belongs to groups defined by boundaries. Typical boundaries are those formed by nation-states (Americans, Japanese, Nigerians) or by ethnic groups composed of people with a particular tribal, national, or regional heritage (Kurdish, Jewish, Russian, European, African). Within a boundary, people communicate with each other differently than with people outside the boundary. The difference may or may not involve using a different language or jargon, but it always includes different kinds of agreements on meaning and action. A cultural boundary indicates a greater amount of interaction and need for coordination among those enclosed by it.

In the case of some ethnic heritage, family interaction may be primarily responsible for preserving the cultural agreements, but for many ethnicities there is also likely to be greater interaction with other members of the ethnic group (such as Chinese Americans). This is particularly true if color (race) is involved, since people naturally distinguish themselves by color and thus may group more easily with people who are physically similar. Color discrimination is not necessarily associated with prejudice, but it certainly can be used for that purpose, as can other distinctions among groups.

Skin color is a particularly complex boundary, since in many societies it does represent a particular type of social experience vis-à-vis prejudice or privilege, and that common experience may produce certain agreements on meaning (such as an understanding of “driving while black”). Yet color is not necessarily associated with any particular ethnicity (such as black people of African versus Caribbean heritage, and white people of Anglo versus Teutonic versus Latin heritage). The ethnic boundary is a much more powerful cultural indicator than the color boundary, since it rests

on a deeper set of institutions. For instance, black Caribbean Americans may experience prejudice similarly to African Americans, but that fact does not obviate the significant cultural differences between those two groups.

In multicultural societies, national and ethnic boundaries are often combined to indicate membership in both groups (such as African American, European American, Malay Singaporean, Russian Kazakhstani). In addition to these common distinctions, boundaries are also formed by geographical regions within or across national boundaries (such as southern Italians, Pacific Northwest Americans, western Europeans, Sub-Saharan Africans) Also importantly, the boundaries of organizations often indicate very strong and distinct cultural worldviews (such as corporate cultures, police culture, armed services culture, Peace Corps culture). Within organizations, different functional groups, such as accountants, service people, engineers, or detectives, are likely to share a culture. Within societies, cultural boundaries may also include gender, sexual orientation, generation (age), and other groupings. In these and other cases, the culture is generated not by any particular belief or behavior of the group, but by the need to coordinate meaning and action among more frequently interacting people. For instance, gay culture is not about homosexuality per se; it is about how people communicate with other people with whom they are more likely to be in contact because of shared sexuality. In this same way, some religious or political groups can generate culture, not because of their particular beliefs, but because people in the groups are spending more time with others who agree with them.

When an intercultural approach is used in domestic multicultural situations, it commonly generates some controversy. The argument against the assumption of domestic cultures generally goes like this: Cultural differences, if they exist among different ethnic and racial groups, are not nearly as important as differences in power, privilege, and access to sources of wealth and well-being. So even if they exist, a focus on cultural differences is just a distraction from the more pressing concerns of social and institutional equity. Roughly this same argument is used against focusing on the intercultural communication aspects of gender relations.

One counterargument is to note the “humanizing” effect of worldview. Focusing on the unique experience of a cultural worldview is a direct antidote to an objectification and exploitation of people that is based simply on their color, gender, or heritage. Intercultural communication necessitates understanding the unique experience of others as the key to coordinating meaning and action toward some common goal. Another argument in favor of intercultural communication is that culture must be understood relative to its own context. Culture cannot be judged against an absolute standard of civilization, and therefore people of one culture are not intrinsically superior or inferior to people of another culture. They are just different.

Intercultural Communication

Since “communication” is the mutual creation of meaning and “culture” is the coordination of meaning and action in a group, it follows that “intercultural communication” is the mutual creation of meaning across cultures. This means that intercultural communication is the mechanism whereby people of different groups perceive and try to make sense of one another. Although there is no guarantee that people will be respectful of the differences they encounter in this process, it is

In “hanky code,” a system employed among men in the leather subculture of male homosexuality, different bandana colors indicate different preferences and fetishes. Within societies, culture can be generated by the need to coordinate meaning or action among people who have a common culture or values.

certainly a criterion of good communication that people seek to understand the intentions of each other in nonevaluative ways. For that reason, intercultural communication incorporates particular strategies that encourage people to attribute equal humanity and complexity to people who are not part of their own group.

The most common tactical goal of intercultural communication is to inform one-way cross-cultural adaptations in situations such as teaching in multicultural classrooms, providing social services (including policing) in multicultural communities, traveling for business or pleasure, and some kinds of international study. In those cases, sojourners need to recognize cultural differences that are relevant to short-term communication, to predict misunderstanding that may arise from those differences, and to adapt their behavior as necessary to participate appropriately in the cross-cultural encounter. Central to this application is having a good system for identifying cultural differences that are relevant to communication. Whatever system is used, the outcome of employing tactical intercultural communication is generally to decrease stereotyping of the cultures encountered, increase knowledge of cultural differences, and broaden the behavioral repertoire of the adapters.

A more substantial practical goal of intercultural communication is to contribute to the success of cross-cultural projects such as transferring knowledge, conducting long-term business, or effecting change through community development projects. In these cases, more people involved in the cross-cultural encounter need to make adaptations toward one another in order to coordinate meaning and action adequately. When intercultural adaptation is two-way, or mutual, it tends to create “third cultures” in which two or more cultural patterns of coordination are themselves coordinated. Third cultures are virtual conditions that come into existence for the purpose of intercultural communication and then dissolve when that communication is not active. Third cultures may become longer-lasting when they are constantly employed in multicultural groups or communities, but by definition third cultures do not supplant the original cultural patterns that they coordinate.

The most strategic application of intercultural communication is to derive the value of cultural

diversity. This has long been the goal of multicultural societies, and it more recently is being touted by global corporations. After some mistaken hope that diversity in itself would generate value, it is now accepted that cultural diversity creates the potential but not the actuality of added value. The potential of diversity is to offer alternative perspectives and approaches to tasks, thus contributing to innovation and creativity. However, the actuality is that diversity is frequently suppressed or eliminated in the name of unified action, as exemplified by the phrase “my way or the highway.” This is particularly notable in immigration policies and in corporate mergers and acquisitions, where the rhetoric of added value is generally at direct odds with the practice of demanding assimilation to the stronger culture. Assimilation destroys the potential for added value from diversity. One-way adaptation preserves the potential of added value, but it does not actualize it. Only mutual adaptation can generate third cultures that support the coordination of cultural differences, and it is from those coordinated differences that value is added.

Other Intergroup Relations Terms

Within the context of intercultural communication, the term *multicultural* is used to refer to the multiple cultures represented in a group. For instance, the U.S. workforce has become more multicultural, meaning that there is more diversity of national heritage because of immigration, more variation in domestic ethnic groups, more gender and age diversity, and more representation of minorities such as people with disabilities. Communities become multicultural as immigrants settle there, and teachers face increasingly multicultural classrooms.

The term *diversity* is sometimes used synonymously with the term *multicultural*, referring to the existence of cultural difference. For instance, when a company has a diversity policy, it often refers to how minorities will be actively recruited, thus creating a more multicultural organization. Sometimes the term *diversity* or the term *inclusion* is used more generally to refer to dealing with issues associated with multiculturalism, such as prejudice, stereotyping, segregation, denial of equal rights, and other inappropriate or illegal behavior. Occasionally, the term *diversity* is used

to refer to actual cultural diversity, and diversity training moves beyond prejudice reduction toward recognizing, respecting, and dealing productively with cultural differences.

The term *cross-cultural* refers to contact between cultural groups. For instance, in a company with a multicultural workforce, there is more likely to be cross-cultural contact among the workers. More substantially, expatriate managers or exchange students who live in a different cultural context have significant amounts of cross-cultural contact. Cross-cultural contact in itself is not necessarily contributive to good intercultural relations. Under some conditions, it may generate negative stereotypes or defensiveness, and at best it increases tolerance and reduces stereotyping. Cross-cultural contact may also refer to comparative studies of culture; for example, in a cross-cultural study of smiling, Thai respondents were more likely than Americans to interpret that facial gesture as embarrassment.

The term *intercultural* refers to interaction among members of two or more distinct cultural groups. The term is seldom used synonymously with multicultural, so groups are not described as intercultural unless they are specifically set up to encourage interaction (such as the “intercultural workshop”). The term *intercultural* is usually used as a modifier, as in “intercultural communication” or “intercultural relations.” The term *intercultural sensitivity* has a long history of referring to an ability to make complex perceptual discriminations among cultural patterns, and recently the term *intercultural competence* has been used to refer to an array of characteristics and abilities that seem related to successful intercultural interactions.

The following statement follows the definitions: A multicultural workforce is likely to have a lot of cross-cultural contact that demands more competence in intercultural communication from everyone.

Intercultural Sensitivity and Competence

The Developmental Model of Intercultural Sensitivity (DMIS) developed by Milton J. Bennett is a framework that explains how people experience and handle cultural difference. The DMIS is grounded theory; it is based on observations made in both academic and corporate settings about how people become more competent intercultural

communicators. The model uses concepts from constructivist psychology and communication theory to organize these observations into positions along a continuum of increasing sensitivity to cultural difference.

The underlying assumption of the model is that as one's perceptual organization of cultural difference becomes more complex, one's experience of culture becomes more sophisticated, and the potential for exercising competence in intercultural relations increases. By recognizing how cultural difference is being experienced, predictions about the effectiveness of intercultural communication can be made and educational interventions can be tailored to facilitate development along the continuum.

The DMIS continuum extends from ethnocentrism, the experience of one's own culture as "central to reality," to ethnorelativism, the experience of one's own and other cultures as "relative to context." Positions along the continuum define the general ways in which perception of cultural difference is being organized into experience. Generally, developmental movement is one-way and permanent, although there may be retreats from one ethnocentric position to another, and some ethnocentric issues may remain unresolved as people move into ethnorelativism. Nevertheless, each individual or group has a predominant experience of cultural difference, described by the following positions:

Denial: Denial of cultural difference is the experience in which cultural difference is not perceived at all, or it is perceived only in very broad categories such as "foreigner" or "minority." The constructs available for perceiving one's own culture are far more complex than those available for other cultures. People experience psychological and/or physical isolation from cultural difference, and they are disinterested in or perhaps even hostilely dismissive of intercultural communication. It is difficult to recognize the essential humanity of others who are obviously different from oneself, and naïve questions about the other culture may appear disrespectful. In the extreme, power may be used to exploit others without sensitivity to their feelings of degradation.

Defense: Defense against cultural difference is the experience in which cultural difference is

perceived in simplistic stereotyped ways. Cultures are organized into "us" and "them," where typically the "us" is superior and the "them" is inferior. People at Defense are threatened by cultural difference, so they tend to be highly critical of other cultures and apt to blame cultural difference for the general ills of society. Power derived from institutional dominance or from nondominant posturing is used to support segregation.

Defense/reversal: An alternative form of Defense reverses the polarity of "us" and "them," where an adopted culture is romanticized, while one's own group is subjected to greater criticism. Reversal has traditionally been found in nondominant groups as "internalized oppression," in which the dominant group culture is valued more highly than the nondominant one. When dominant group members discover that their own group is the oppressor (externalized oppression), they sometimes switch sides and take on the cause of a nondominant group with extreme zeal. Internationally, this also may happen when exchange students "go native." In both cases, the experience is one of self-criticism combined with "exotification" of other groups.

Minimization: Minimization of cultural difference occurs when elements of one's own cultural worldview are experienced as universal. People tend to assume that their physical or psychological experiences are shared by people of all cultures, and/or that certain basic values and beliefs transcend cultural boundaries. The stressing of cross-cultural similarity reduces Defense, so people here are much more tolerant of cultural diversity, although the tolerance generally does not extend into appreciation of substantial cultural differences. People who move from Defense and settle into Minimization may feel that they have arrived at an enlightened position. They are likely to label any discussion of cultural difference as a form of Defense, because that is their only prior experience of cultural difference. Because they now think that intercultural understanding is based primarily on similarity, they tend to overestimate their sensitivity to people who in fact are quite different from themselves. At this position, people of the dominant group underestimate their racial and cultural privilege—their exaggerated assumption of

similarity leads them to also exaggerate equality of opportunity. Also, dominant group members may engage in certain forms of political correctness that stress similarity, such as being “color-blind.”

Acceptance: Acceptance of cultural difference is the experience in which one’s own culture is just one of a number of equally complex worldviews. Cultural difference becomes important again, this time out of curiosity rather than threat. In accepting difference, people acknowledge that people of other cultures, while equally human to themselves, are in fact organizing their experience of reality differently—according to the different assumptions of their culture. Acceptance does not mean agreement with or liking other cultures—cultural difference may be judged negatively—but the judgment is made in a contextually relative way. The recognition that people are equally complex, but different, is a strong antidote to bigotry. Rather than trying to directly reduce prejudice (which, if successful, just creates Minimization), the move to Acceptance extends the boundary of human similarity and difference to include other groups. In other words, people of other cultures are afforded equal and unique humanity.

Adaptation: Adaptation to cultural difference occurs when people build on their Acceptance of cultural difference by temporarily trying to organize the world in different ways. Using a process of cognitive frame-shifting, people can create a “facsimile worldview” that organizes their perception of events in a way corresponding more closely to that of the other culture. The alternative worldview generates an alternative experience—one that is more appropriate to the other culture. By basing behavior on the alternative “feeling of appropriateness,” people at this position can intentionally modify their behavior to communicate both authentically and effectively in another culture. When both parties to a communication attempt to adapt their behavior in this way, it generates virtual third cultures—new contexts that emerge intentionally from particular cross-cultural interactions.

Integration: Integration of cultural difference is the experience of self that includes movement in and out of different cultural worldviews. People at

this position maintain complex multicultural identities and exist in a kind of liminal state in which they are constantly in the process of becoming something different. This makes them outsiders to most groups and generates ethical ambiguity, but it also pushes them toward cultural bridge-building and sophisticated ethical commitments. Integration is more likely to occur among non-dominant minority groups, long-term expatriates, “global nomad kids,” and others with primary or acquired multiculturality.

Intercultural Communication Institute

The Intercultural Communication Institute (ICI) is a nonprofit organization based in Portland, Oregon, founded on the idea that everyone shares a

moral and ethical imperative to bridge intercultural gaps. The ICI was founded by Milton and Janet Bennett in honor of Milton's father, Stanton D. Bennett. Stanton Bennett was an international businessman who devoted his life to the pursuit of world peace and international friendship. Bennett's ethical pursuits and his dedication to education are reflected in his endowment, which now supports the Summer Institute for Intercultural Communication (SIIC).

Goals and Aims

The goal of the ICI is to nurture and promote understanding of and appreciation for international, domestic, and local cultural differences. The ultimate aims of this intercultural work are to reduce conflict between people of different cultures; inspire informed, culturally sensitive leadership; and foster understanding across the board.

The ICI offers two main courses of study: the Master of Arts in Intercultural Relations (MAIR), and the Intercultural Certificate Program through the Summer Institute. The MAIR is offered by the ICI as a more traditional graduate program with some residency requirements. The program was designed to give a specialized, intensive education in intercultural studies for people across a variety of professional disciplines.

The annual Summer Institute for Intercultural Communication (SIIC), designed to provide diversity-based professional development opportunities, is the shorter, more practical course of study offered by the ICI. The SIIC course of study is designed for teachers and other educational professionals, trainers, businesspeople, staff groups from businesses, and consultants, and is considered one of the best sources of education on intercultural communication.

The ICI bases its SIIC Summer Institute and MAIR coursework on the understanding that all professionals have an inherent moral duty to promote understanding and reduce conflict between people of different cultures by engaging in intercultural work. Therefore, the ICI sponsors the Summer Institute and master's program as part of its larger intercultural mission. It also offers the largest intercultural research library in the world, which boasts more than 30,000 volumes. Although the Summer Institute happens annually in July, these other programs are available

throughout the year. The ICI also promotes a variety of professional growth activities, provides information, and refers interested parties to professionals who can assist them with their goals.

Students of the SIIC and MAIR choose from more than 40 focused workshops and seminars on a wide range of intercultural topics that also have broader corporate applications. The ICI spotlights diversity issues in each course, including conflict management, global leadership, training techniques, and corporate management. The summer program also features social activities daily and encourages honest, open interaction between participants.

Each cohort of SIIC fellows and MAIR students is made up of professionals from many different countries and from different areas within the United States. Workshops are tailored for intercultural trainers, human resource professionals, diversity trainers, and education professionals.

As technology allows increasing international cooperation in the workplace and migration patterns ensure that diverse groups continue to share workplaces, the mission of the ICI becomes even more relevant.

Intercultural Competence

Intercultural competence is a set of cognitive, affective, and behavioral skills and characteristics that support effective and appropriate interaction in a variety of cultural contexts. What this means is that people will interact more meaningfully with those from other cultures if they cultivate certain abilities. Many researchers have suggested lists of attitudes and capabilities that foster such competence. However, it is important to remember that those capabilities must be integrated and tailored to adapt to different cultures and different contexts, and with different goals. Intercultural competence is a complex undertaking.

Rationale for Developing Intercultural Competence in Multicultural America

For many people in multicultural America, the significance of intercultural competence is not always self-evident. Individuals will sometimes suggest that because various ethnic groups are living inside the geopolitical boundaries of the United States, they belong to a single culture, the American culture. However, there is an extensive list of cultural groups in America that share a national identity that provides unity and differing ethnic backgrounds that provide diversity. Americans are both unified and diversified, a core source of the idea of a multicultural America.

Therefore, intercultural competence is not simply a skill to be used only when traveling or receiving global visitors but a daily requirement in the United States. The social context of Americans provides constant opportunities for interaction across cultures, where a person may negotiate, collaborate, resolve conflicts, and form significant relationships with those from other cultures, whether in business, government, the military, religious organizations, health care, education, or other arenas. That is the gift of living in a multicultural society. The concomitant responsibility is to learn to interact well.

Development of the Concept of Intercultural Competence

Historically, professionals rarely suggested that intercultural competence was a basis for

successful human interaction. As global mobility was building in the 1950s and civil rights thrust cultures together, few considered culture competence intrinsic to the social transformation.

When the field of intercultural communication gained influence in the 1970s, it offered a new way to think about human discourse. Intercultural communication is the interactive process of creating shared meanings between people from different cultures. This communication inevitably takes place in a cultural context, with significant psychological, relational, and physical influences. Culture is learned through communication and, in turn, reveals the individual's cultural identity to others. Humans both create and express culture by communicating.

Whereas other models of communication build on the basis of similar values and beliefs, intercultural communication more often relies on the exploration of differences, a perspective particularly useful for building intercultural competence. For instance, in many places in the United States, people succeed in job interviews because they can clearly explain their accomplishments and enumerate their valuable skills. But there are many group-oriented cultures in the United States that consider forthrightness about one's own talents to be unseemly, and such articulate, self-promoting job seekers may not be hired. Interculturally competent applicants would endeavor to know the difference and adapt appropriately. Interculturally competent interviewers would understand that they should not expect stylistic conformity.

During the 1970s and 1980s, scholars and practitioners in management, psychology, linguistics, education, and communication began developing models of intercultural competence and creating lists of necessary components of a culturally competent mind-set and skill set. Brian Spitzberg and Gabrielle Changnon have enumerated approximately 300 such components. Although no one suggests that all such attributes and skills are essential to achieve competence, there is recognition that certain components are fundamental to becoming effective across cultures. However, the breadth of this listing supports the notion that intercultural competence varies by context; not every competence is essential in every situation.

By the 1990s, professionals were designing assessment strategies, both quantitative and

qualitative, to measure intercultural competence for purposes of selection, performance improvement, coaching, and personal development. In addition, assessment instruments are now being used in research to measure the effectiveness of programming designed to improve intercultural competence. Accreditation agencies for health care, education, and social services have widely adopted measurement of cultural competence as a part of the accreditation process, and many organizations have incorporated it into their mission statements.

Over the last four decades, a variety of terms have been used to refer to various approaches to intercultural competence, including the terms *multicultural sensitivity*, *culture learning*, *cross-cultural competence*, *intercultural effectiveness*, *cultural intelligence*, and *global leadership competence*. Although there are no doubt many other such terms, what they generally rely on—at least in part—is intercultural communication, the interactive process used by individuals and groups to create shared meanings across cultures, whether globally or domestically. The ability to communicate across cultures requires one to temporarily suspend judgment, demonstrate cultural humility, and mutually adapt. The process of effective intercultural communication is intrinsic to the demonstration of intercultural competence. For instance, the teacher who misunderstands nonverbal communication and interprets a student’s lack of eye contact as disrespectful, or silence in class as disengagement, is most likely not educating in a culturally responsive way.

Further, the distinction between what is cultural and what is intercultural is essential. Culture refers to the learned and shared values, beliefs, and behaviors of a community of interacting people. Culture can therefore refer to a community of Native Americans, a group of Somali refugees, a small town of Greek immigrants, a neighborhood of African American families and, of course, a group of European Americans, sometimes referred to as Anglos. Further, the term is commonly applied to nations, ethnic groups, gender groups, age groups, class and education levels, sexual identities and orientations, physical abilities, occupations, and a variety of other groups and their shared values, beliefs, and behaviors.

Research can tentatively describe cultural patterns, knowing that people in any given culture group differ widely in adherence to any given pattern. These descriptions are loosely held generalizations and can support understanding of a culture experienced for the first time. Most often, a majority of members of any culture group will agree with an appropriate, research-based generalization. For instance, it is a generalization that some Native American cultures are more likely to use a softer tone in conversation. Generalizations contrast with stereotypes, which is a “hardening of the categories” that rigidly applies generalizations to every person from that culture group. Using this information as a stereotype, a person would then insist that all Native Americans use a soft tone, an observation that is certainly unlikely.

But knowledge of such cultural patterns does not constitute competence. Competence is achieved through the analysis and understanding of the interaction between a person with one cultural frame of reference and a person with a different worldview, with an application of appropriate skills. What happens when the person raising his voice interacts with the person who whispers? Feeling unheard, does he raise his voice more, intensifying the confrontation? Does she retreat? Does he realize he may be damaging the relationship in unrecoverable ways? It is this analytical perspective that builds competence, in association with the skills and characteristics discussed below.

Components of Intercultural Competence: Attitudes, Knowledge, and Skills

Although most individuals will not likely master 300 competencies, it is important to focus on a few core attitudes, knowledge areas, and skills that are frequently recognized as central to becoming more capable across cultures.

Attitude refers to the positive disposition to learn more about other cultures. The most important attitude is curiosity, the capacity to reach the limits of understanding and take advantage of the ambiguity as a teachable moment. Instead of ignoring differences, eradicating differences, or fleeing differences, the interculturally competent person attempts to generate multiple perspectives to achieve a more complete understanding. When

Sandia National Laboratories researcher Elaine Raybourn explores and develops new communication methods using collaborative virtual environments via the Internet. Her unique focus is to create environments that support intercultural communication competence because, as she notes, "differing cultures make for complex and largely misunderstood social interactions."

presented with an unknown cultural situation, the flexible individual can imagine many possible explanations. In addition to curiosity, tolerance of ambiguity, and cognitive flexibility, the affective dimension of intercultural competence also includes such core competencies as suspension of judgment, respectfulness, forgiveness, openness, and cultural humility.

Although knowledge of other cultures is certainly helpful, knowledge of one's own cultural worldview is primary. Therefore, knowledge of others is necessary but not sufficient for developing intercultural competence. People must first have cultural self-awareness, recognizing that their own patterns are not universal but rather only one possible way to do things. Without knowledge of their own cultural patterns, they will be more inclined to view others as inferior versions of themselves, as people who have not yet mastered the "right" way to handle interactions.

Knowledge of cultural patterns allows individuals to adapt behaviorally to nonverbal cues; interaction rituals; communication, thinking, and conflict styles; and value differences. For instance, those who use a narrative, circular

communication style may be perceived as uneducated by those from more linear cultures. Those with circular styles may perceive the more linear cultures to be rude and superficial. Through cultural self-awareness and the use of intercultural skills, mutual adaptation may replace negative evaluation.

Intercultural competence requires more than knowledge, a positive attitude, and being in the vicinity of another culture group. It requires engagement with difference, using a variety of skills that make that engagement effective and appropriate.

The core intercultural skill is empathy, the capacity to understand others by imagining their worldview. According to Tom Pettigrew and Linda Tropp, it is essential for reducing prejudice, counteracting stereotypes, and developing cognitive flexibility, an ongoing need in multicultural America. Empathy is not simply "walking a mile in the other person's shoes" or shifting one's position, but rather shifting one's frame of reference into the other person's perspective. Anyone who has ever experienced the loss of a loved one can readily recall comments from others that were not empathic and did not resonate. Often, such comments are based on an assumption of similarity—how that individual would feel experiencing your loss. Trying to be responsive and supportive, the unempathetic person may say the very thing the recipient least wants to hear. Because intercultural interactions are often grounded in differences, empathy becomes even more challenging across cultures, and yet it is one of the most frequently cited requisite competencies.

The second core skill is anxiety reduction, which mediates reduction of prejudice and fosters a climate of curiosity and inquiry, where forgiveness, not perfection, is the hallmark of a competent interculturalist.

In addition to empathy and anxiety management, the necessary behavioral competencies include the abilities to gather cultural information, build trust, listen, adapt, resolve conflict, and manage social interactions.

The Consequences for Multicultural America

For groups who share cultural patterns that contrast with those of people in power, the result of

intercultural incompetence might very well be what George Renwick termed *depotentialization*, which refers to the opposite of development. In each context, they may be taught to assimilate to the culture in power, which eventually results in a sense of alienation and internalized oppression. Whether in organizations or in classrooms, there is a loss of a resource when this assimilation takes place, with lost opportunities and talent.

In contrast, the interculturally competent organization attracts talent, leverages diversity as a resource, promotes inclusion at all levels, and becomes a more productive and effective component of multicultural America.

multicultural education have retained some of the core principles of intercultural education.

History

The intercultural education movement emerged in the aftermath of World War I as a response to the ethnocentrism that had resulted in the conflict. In the context of the United States, the movement was also informed by a range of internal political, economic, and social tensions. Migration of African Americans from southern to northern American cities, along with increasing numbers of immigrants from southern and eastern Europe, was rapidly changing the face of the American public sphere. Fears about whether the new immigrants would be able to integrate into the social, cultural, and political fabric of America were commonplace. These fears were especially pronounced with reference to the assimilation of children—the “second generation problem.” During the 1920s, heightened fear of immigrants led to the enactment of the National Origins Quota Act, which imposed restrictions on the number of immigrants from southern European countries.

During the Great Depression and World War II, conflicts based on ethnicity, religion, and race intensified in the United States. For instance, discrimination against particular ethnic groups such as Japanese and Italians, religious groups such as Jews and Catholics, and racial minorities such as African Americans was institutionalized through segregated schools and housing, anti-Semitism, and biased curricula. It is in this context that the intercultural education movement emerged to address the prevailing prejudices and anxieties in society, and schools were determined to be the ideal places to prepare future generations for peaceful relations.

Philosophy and Intellectual Contributions

Scholars have placed the origins of the intercultural education movement anywhere between 1924 and 1930 and believe that it retained its influence through the 1950s. At its core, the movement sought to promote understanding of, and respect for, difference. It aimed to improve relations among peoples from different ethnic, religious, and racial backgrounds. Intercultural education scholars incorporated findings and

Intercultural Education

Intercultural education refers to an educational movement and ideology that sought to promote mutual understanding and respect among people of different races, ethnicities, cultures, and nationalities. As a movement, it emerged during the interwar period and remained influential through the 1940s and 1950s. During the latter decades, however, it was predominantly known as intergroup education. Contemporary ideologies of

theories from other social science disciplines into education and identified critical sites and issues for further research.

One of the significant contributions of the movement was a critical engagement with, and critique of, the then prevalent models of intergroup relations. Models such as assimilation, amalgamation, and melting pot were discussed and, to some extent, discredited by intercultural education scholars; they pushed for a redefinition of citizenship, such that it incorporated a possibility for people to maintain loyalty to particular subgroups even as they remained committed to the nation-state. This model, also called cultural pluralism (and later, cultural democracy), argued for the creation of a community around a core set of principles but allowed groups to maintain their heritage, languages, and cultures. Intercultural education scholars proposed new theorizations of democracy and viewed the purpose of education as promoting democratic living in society. Democratic ideals, it was believed, would become a set of common principles that different groups could adhere to while maintaining their distinct cultural affiliations. These principles, thus, were to provide a platform around which different groups could unite.

In practice, the philosophy and mission of intercultural education took various forms and appeared from different intellectual locations. Therefore, to locate a single unifying form of intercultural education beyond the general principles would be simplistic. Intercultural education scholars, for instance, held different views about the types of social issues that educational programs must focus on, as well as the location of such programs. Although some believed that adult education sponsored by churches, labor groups, and businesses was best placed to undertake intercultural work, others emphasized that such work should be spearheaded by schools, with youth being the target audience.

In terms of social issues, some scholars saw religious differences as the major cause of conflict and prioritized the creation of a just environment for religious groups to practice their faith. They called for religion to be taught in public schools, not from a devotional and confessional perspective, but from a historical and contextual perspective that saw religion as a system of ideologies

that influenced people. Others focused on issues of racial equality, particularly during the 1960s in light of the continued marginalization of African Americans in the United States. Thus, the core principles of the movement informed a range of different intellectual efforts. It was precisely this diversity that gave the movement its potency.

The movement influenced educational practice in public schools in a variety of ways. Intercultural education scholars pushed educators to engage with issues of racial, religious, and ethnic differences in classrooms. One of the earliest projects was the introduction of ethnic studies curricula in schools. It was envisioned that a study of the history and cultural contributions of the various ethnic groups would help raise the self-esteem of immigrant and minority students, as well as increase awareness about their cultures among other students. Intercultural education scholars undertook wide-ranging curriculum reform efforts and spearheaded the rewriting of textbooks to include a study of international political, economic, and social problems. Organizations provided scholarships to students and teachers so they could travel and study outside the United States. Through these efforts, the movement hoped to increase cultural literacy, engender discussions about contemporary and historical difficulties associated with the integration of minorities in the United States, and promote democratic and participatory styles of learning.

The intercultural education movement, however, has been criticized for promoting diversity only insofar as it concerned the promotion of the cultures and languages of white, European immigrants. Analysis of race in education, especially with reference to the education of African Americans, was lacking until after the Supreme Court's 1954 *Brown v. Board of Education of Topeka* decision, which declared the separate but equal education system unconstitutional. In addition, the movement has been criticized for promoting cultural relativism. It is contended that it sought to minimize differences among racial, ethnic, and religious groups by highlighting commonalities. In doing so, it argued for acceptance of cultural minorities in spite of their differences rather than engaging in productive and deep dialogues about differences. In order to reduce tensions and harmonize social relations among different groups,

the movement focused on the creation of a shared mainstream with limited emphasis on how these differences enriched the particular groups or what they meant for those who embodied them.

Leading Organizations

Although a range of different individuals and organizations can be considered pioneers of the intercultural education movement, one educator stands out—Rachel Davis DuBois. In 1934, DuBois, who was then at Teachers College, Columbia University, founded the Service Bureau for Education in Human Relations, which is seen as one of the founding organizations of the intercultural education movement. The organization aimed to provide curricular resources to teachers and administrators in New York City, held workshops and trainings for educators across the eastern and midwestern United States, and conducted research on emerging issues related to intercultural education. Renowned progressive education leaders such as Harry Giles and William Kilpatrick, social scientists such as Franz Boas and Margaret Mead, and education specialists such as Stewart Cole, among others, were affiliated with the bureau.

The organization was also briefly connected with the Progressive Education Association but ended the arrangement in 1938 to revive its original mission and was thereafter called the Service Bureau for Intercultural Education. DuBois directed the organization through 1940, after which Dr. Stewart Cole, a professor of religious education at Crozier Theological Seminary, took over its leadership. In 1943, the organization was renamed the Bureau for Intercultural Education, and it remained active through 1954. Other programs and organizations that promoted intercultural education included the Intergroup Education in Cooperating Schools and the College Study in Intergroup Relations.

These organizations highlighted the contributions of the various racial and ethnic groups to American society. They conducted research to establish a philosophy of democratic living, provided curriculum and teacher training, and drew attention to problems faced by minority groups. The broad scope of the movement, however, is sometimes viewed as its failure by some scholars because it prevented the movement from becoming institutionalized. However, the movement's

core principles remain relevant, and it is viewed as a precursor to the multicultural education movement that succeeded it in the 1960s.

Intercultural Education Today

Although the term *intercultural education* is out of popular use in the United States, it has retained some currency in Europe, where it is primarily used to denote the broader ideas of promotion of respect, cooperation, and understanding through education. It is also sometimes used as an umbrella concept for synthesizing the major concepts within multicultural, human rights, and antiracist education movements, as well as to draw attention to a variety of social justice issues related to race, language, class, ethnicity, and gender.

Several universities and nonprofit organizations continue to take up intercultural education but situate it in the context of promotion of cooperation and understanding among nation-states. The Center for Intercultural Education and Development at Georgetown University in Washington, D.C., for instance, provides educational and technical support to individuals and organizations internationally to strengthen democratic values and support sustainable development (cied.georgetown.edu). Other examples include international networks, such as the Society for Intercultural Education Training and Research (www.sietareu.org) and the International Association for Intercultural Education, that bring together scholars, professionals, and activists interested in issues of social justice. These organizations provide curricular resources, host annual international conferences, and publish academic journals, such as *Intercultural Education* (formerly known as the *European Journal of Intercultural Studies*).

Interculturalism

Interculturalism is an ideological model for or approach to the political or social management of ethnic and cultural diversity. It is essentially an integrationist vision, based broadly on concepts of cross-cultural dialogue, consensus, and cultural commonality, and can be distinguished in this sense from multiculturalism, a policy that has been criticized for its tendency to result in social fragmentation in the form of separate ethnic ghettos, as well as for encouraging an attitude of relativism that weakens the traditional institutions of a society. Interculturalism is perhaps best known in Canada, especially in Quebec, and in Europe, where it is increasingly seen as an alternative to the perceived shortcomings of multiculturalist policies.

Interculturalism is said by its proponents to embody an essentially pragmatic stance, in that it avoids what is seen as the extreme relativism of the multiculturalist model and the naïve and illiberal universalism of assimilationist ideology. In common with many other political philosophies, interculturalism stresses as a foundational tenet that the cohesive identity of a nation or society requires more than such factors as territory, a unified legal code, or an official language. Myths and symbols are also of paramount importance in creating a sense of national identity, and these are historical concepts, normally transmitted across generations of the majority group by institutions such as education, religion, and the family. At the same time, most Western-style democracies subscribe to a pluralist view with regard to their diverse populations, consciously

opposed to any discrimination based on cultural difference.

The potential ensuing tension between the historical idea of the nation and the different values orientations embodied by minority groups or immigrants therefore requires a political response, the form of which depends to a large extent on a kind of national self-conception, or what Gérard Bouchard, a leading scholar and advocate of interculturalism, has called paradigms, for him the first level of analysis for ethnocultural diversity. Before going on to discuss the special characteristics of interculturalism, therefore, a review of Bouchard's paradigms is necessary in order to define the conceptual environment for any approach to the management of cultural plurality.

Bouchard's Paradigms

Bouchard's first paradigm is diversity, an orientation with an emphasis on individual freedom of expression exemplified by the United Kingdom, the United States, Anglo Canada (excluding Quebec), Australia, and India. Under this conception, the nation is a collection of theoretically equal individuals and ethnocultural groups under one law with no statutory recognition of majority and minority cultures. The diversity paradigm is thus the most likely to be associated with strictly egalitarian multiculturalist policies. In contrast to this situation is the paradigm of homogeneity, in which there is an insistence on a degree of ethnocultural similarity, at least in public life. Bouchard's examples of this mind-set include France, Japan, and Russia. The third paradigm is multipolarity, in which two or more ethnocultural groups are recognized as constituting the nation, as in Malaysia, Belgium, or Switzerland.

Bouchard's fourth paradigm, duality, stands for a conception of diversity as a somewhat unequal relationship between minority or immigrant cultures and a recognized majority culture that he calls foundational, referring to its long-term effect on the structure and outlook of the present society. National identity is therefore strongly influenced by this foundational majority, through its transmission of tradition and the collective memory by means of its institutions. The overwhelming majority of Western nations in the early 21st century, including the United States as well as Quebec, claims Bouchard, is either currently

operating under this dualist paradigm or may be moving toward it. Although this conception of a nation can potentially lead to a divisive, “us versus them” mind-set, Bouchard argues that it is the social divisions that shape the paradigm, rather than the other way around, and that rather than challenging the paradigm itself, a more productive approach would be to tackle the factors that contribute to the existence and perpetuation of the divide. With its emphasis on dialogue and consensus, as well as its acknowledgment of a majority or foundational culture, the interculturalist approach is, Bouchard maintains, the best suited to this task.

Bouchard’s fifth and final paradigm is that of *mixité*, the transculturalist idea that, through miscegenation and other intercultural relationships, the ethnocultural diversity of the nation will over time diminish to the point where a new cultural entity will emerge independent of its constituent elements. Bouchard sees this paradigm as operating primarily in Latin America, especially in Brazil and Mexico.

The paradigms identified by Bouchard need not themselves hold significant long-term cultural importance, but are collective or political decisions that can be changed according to circumstances and evolving attitudes. Between 1960 and 1970, Australia and Canada moved from homogeneity paradigms that produced such initiatives as the White Australia policy to diversity, while Quebec changed from a French-Canadian homogeneity perspective to duality. The debate over the perceived failure of multiculturalist ideologies in western Europe in the second decade of the 21st century has seen both Germany and the United Kingdom moving from espoused diversity paradigms to duality, a shift that may facilitate the introduction of interculturalist policies in those countries.

It is also worth emphasizing that the association of a country with one paradigm can be misleading. In the United States, the diversity paradigm may be officially endorsed, and multicultural attitudes may be widespread, yet the duality paradigm, in the form of the idea of a “mainstream” culture in contradistinction to nonintegrating minorities, is also clearly in operation, as is a homogeneity paradigm expressed in radical assimilationist attitudes.

Integration Within a Common Public Culture

As mentioned above, the first defining characteristic of the interculturalist approach to diversity is its acknowledgment of and concern with the fears and anxieties of the majority and the perception that its culture is being threatened or diluted by immigration. The tensions thus occasioned between the continuity of the foundational culture and the diversity introduced by immigration need to be conciliated by mutual adjustments reached through dialogue based on a focus on similarities and shared concerns rather than on cultural differences. The context for this emphasis on interaction and negotiation, however, is a respect for the traditions of the foundational culture as embodied in legal and traditional institutions, the goal being to integrate all citizens within a common public culture. Interculturalism thus requires that all citizens take responsibility for helping achieve this state of mutual accommodation, with the courts standing only as a last recourse to protect minorities from arbitrary majority discrimination. In this sense, the interculturalist perspective strongly encourages the integration of diverse traditions and cultures, differentiating it from the assimilationist mindset, while simultaneously avoiding the fragmentation or separation that has been said to result from failed multiculturalist policies.

The idea of the courts as a final resort is in keeping with the interculturalist ideal of ad hoc arrangements, in which accommodations between foundational and minority cultures are essentially context-driven, with the involved groups eschewing universalist approaches in favor of temporary solutions reached through flexibility and mutual agreement but guided by precedence and the traditions of the foundational culture. In this way, although respect is accorded to minority traditions and every effort is made to incorporate them into a diverse polity, such traditions will necessarily give way if they conflict with the most important values of the foundational society, such as gender equality in most developed nations, separation of church and state in secular countries like France and the United States, social equality in Scandinavian countries, and the like. Above all, interculturalism seeks to avoid the polarization of, on one hand, rigid adherence to majority tradition, and on the other hand, narrow commitment to minority rights.

A vital element of the interculturalist vision is the notion of a common culture, a dynamic sense of social or national identity that is based on, yet distinct from, original cultural identities. It is inevitable that, over time, minority and majority cultures will change each other to greater or lesser degrees and, given its demographic and institutional advantages, the majority culture will exert the greater influence in this respect. A willingness to evolve, to incorporate new cultural features, is therefore particularly incumbent on members of the majority if the society at large is to avoid either absorbing its minorities into a de facto assimilationist state, or excluding those minorities in disenfranchised and resentful ghettos. The vision of a fully integrated common culture can be realized only through mutually respectful dialogue between parties equally committed to the interculturalist ideal and prepared to adapt and reciprocate in pursuit of that goal.

Critics of interculturalism most frequently make the charge that the dialogue it encourages too often remains at a superficial level, appropriate for solving immediate problems but unable to tackle structural problems of institutional discrimination, poverty, and power inequality. Dominant groups may even conceal an assimilationist goal behind an apparent interculturalist façade, permitting discussion and minor adaptation only to the extent that the continuance of the foundational cultural tradition is not threatened. For this reason, therefore, governments and local authorities, as representatives of the majority culture, need to create spaces and opportunities for interaction that can lead to real changes in attitude, behavior, and policy.

For Bhikhu Parekh, an important advocate of interculturalism (which he calls “interactive multiculturalism”), immigrants and minorities need, as a basic condition of citizenship, to respect the

Tribal members of the Leech Lake Band of Ojibwe take part in a ceremony with members of the U.S. Forest Service at the Chippewa National Forest in Cass Lake, Minnesota. Approximately 90 percent of the Leech Lake Indian Reservation lies within the Chippewa National Forest boundary, and the two governments have made significant improvements in their relationships. This cooperation is an example of interculturalism, which requires an openness to the culture of another person or group.

values and traditions of the dominant culture, while at the same time reserving the right to challenge and debate those they find unfair or uncongenial. The dominant culture, for its part, needs to accept that its own culture is both dynamic and internally diverse, and engage in open critical discussion of those elements that may be taken for granted. As an essential precondition to the achievement of a common civic culture, all the members of a society must recognize the value of diversity and the value of interacting with and learning from all their fellow citizens, of whatever ethnic background.

Amartya Sen, another eloquent proselytizer of interculturalist ideas, is particularly critical of the miniaturizing effect of classifying people by means of ethnic or national terms, and also of the dangers of what he calls singular affiliation to a particular identity. Although he accepts the importance of group identification and grants that people should be free to choose if and how they should be labeled, Sen argues that the external attempt to categorize individuals within a limited set of ethnic, religious, racial, or national terms is both absurdly limiting and dangerously divisive, effectively removing the possibility of open dialogue without preconceptions. He is roundly scornful of the “clash of civilizations” views of writers such as Samuel Huntington but is equally concerned that people realize that they have the freedom to choose the extent to which they want to commit themselves to one particular identity among the multiple identities they may simultaneously have. For Sen, an individual member of a pluralist society may be a devout Muslim, a loving father, a passionate football supporter, a volunteer social worker, and a committed local politician, and will prioritize one or more of these identities according to circumstance while still remaining loyal throughout to the ideal of a common civic culture.

Management of Cultural Diversity

In a sense, the interculturalist project has a long historical pedigree in the management of cultural diversity. The multiethnic territory of Mauryan India, under Emperor Ashoka in the 3rd century B.C.E., exhibited many features of an interculturalist polity, as did Islamic Spain in the 10th century C.E. In both of these examples, an integrationist society functioned relatively smoothly

while avoiding the extremes of cultural relativism and values universalism.

Contemporary states may be even more diverse and face greater challenges, but the dialogue-centered focus of interculturalism may represent the best approach to resolving these difficulties. There is a somewhat idealistic component to interculturalism in that its basic requirement is sufficient goodwill and openness on the part of all parties, along with a willingness to interact and engage with those perceived as different, attitudes that may not be shared by all members of a society. Nevertheless, responsible governments and cultural institutions can do much to promote a shared commitment to the interculturalist vision of a pluralist, egalitarian society with the greatest possible amount of individual freedom and justice commensurate with a mutually agreed civic cultural code that pays due respect to the traditions of the foundational culture as well as protecting the basic rights of minorities.

Intergroup Contact Theory

Understanding intergroup communication is most pertinent in a multicultural society like the United States. Regular contact among group members can promote understanding and reduces group stereotyping. However, not all contacts increase quality. To promote high-quality intergroup relationships, Gordon W. Allport postulated four conditions that must be present. Contact theorists predict that if intergroup communication is conducted appropriately, prejudice and negative attitudes will decrease. Although the theory has received wide empirical support and debate, much work has been done to extend Allport's work. Contemporary theorists generally agree that intergroup contacts may be mediated or moderated by a more complex process. Thus, there is a need to understand various contextual factors at play.

Intergroup Contact

The United States is a multicultural society characterized by one of the most diverse ethnic and cultural populations around the globe. As the dynamic shifts in the American population following the liberalization of the immigration law in 1965 continue to unfold and enrich America's cultural diversity, understanding intergroup contacts in a cross-cultural context is a research subject of urgency. Although it is imperative for all ethnic groups to live harmoniously in support of unity in the midst of this demographic change, the strategy to preserve high-quality intergroup relationships has always been the focus of a heated debate.

The intergroup contact theory developed by Allport can be used to comprehend the complex contact process that involves members of various groups. Widely used to explain relationship dynamics, the theory is formulated based on the premise that communication through contact is bound to increase understanding. To increase quality of contact, Allport posited four requirements that must be present among the groups. First, both parties must enter the relationship with equal status. Second, both parties must have a mutual goal and work toward the attainment of this common goal. Third, both parties must have the opportunity to become acquainted and

get to know each other at a deeper level, perhaps through the engagement or accomplishment of a similar task. Finally, both parties must share and support similar social norms and customs that govern group behaviors and settings.

Although most of the research on intergroup contact theory originated from World War II, the theory has been expanded and tested pervasively on different ethnic, religious, gender, and age groups. It has also been extended to include different types of contacts such as indirect intergroup contact, imagined contact, and extended contact. However, the theory has also received wide empirical debate since its formulation. Some theorists asserted that intergroup contacts are much more complex than what Allport originally proposed. Some questioned the rigorosity of the research set up to test the theory. But most contact theorists today generally agree that intergroup contact is a multidimensional process that is guided by an array of various elements. In addition to the conditions spelled out by Allport, contemporary contact theorists suggest that the contact process is mediated and moderated by various mechanisms such as group functional relations, behaviors, affect, knowledge, and social representations of the groups. Through this process, group members generalize their perceptions and attitudes toward the group members and the group as a whole.

Although there are varied ways to understand the interactive flow, group members, through contact, may attempt to restructure their group boundaries in order to accommodate the group's goals and needs. It is essential to consider various contextual factors at play that may interfere with the effectiveness of the contact, as a lack of understanding among group members can breed group conflicts. Likewise, conflicts often occur when group members overgeneralize about the out-group members. This generalization is often done without the most accurate and complete information about the opposite party.

In line with this explanation, contact theorists postulated that the outcome of contact is best if the interaction is genuine or if group members see themselves as an integral part of the same team rather than a separate entity. That is, they become interdependent on one another. Hence, a group relationship is most successful in a cooperative

type of relationship rather than one characterized by competition. Similarly, if members constantly have pleasant contact and positive affective reactions toward the other parties, their perception about the group member can generate a better impression that can be extended to the group as a whole.

Multicultural Society

In a cross-cultural nation such as the United States, group members are often characterized by different racial memberships, values, customs, attitudes, and languages. Understanding intergroup contact by assessing multiple cultural factors can offer the advantage of reducing group conflicts and facilitate appreciation of various ethnic groups. Stereotyping and overgeneralization caused by ineffective interaction can prevent group members from fully understanding the other ethnic groups and may result in favoring one and disliking the other group. Social policy planners' and practitioners' attempts to understand social norms and culture at play are imperative so various ethnic groups can be taught to be more inclusive when interacting with one another. Intergroup contact theory can serve as a guideline to understand this complex interactive process.

Intergroup Education

Intergroup education was a program devised during the 1930s to attempt to foster understanding between different groups, especially Christians and Jews. Housed at the University of Chicago, a group of curriculum experts and researchers worked to develop materials to be used by teachers and schools interested in intergroup education. Over more than three decades, intergroup education examined a variety of issues that would later be of similar interest to other progressive educators, including those involved in antiracist education, bilingual education, critical race theory, and multicultural education. During the period it was in use in the schools, intergroup education helped many teachers and students explore issues of equity and equality.

Background

During the Great Depression, competition for jobs, food, and other necessities of life caused stress in the lives of most Americans and negative interactions between members of different groups. Of particular concern were reports of increased racism and anti-Semitism, which were perceived as threats to national unity. In 1934, in an effort to combat these threats, the National Conference of Christians and Jews (NCCJ) and the American Council on Education (ACE) entered into a collaboration that sought to reduce prejudice and conflict through education. This collaboration, formally known as the Intergroup Education in Cooperating Schools Project, worked to create curriculum and provide professional development and training to teachers and administrators interested in the project's goals.

In 1944, Hilda Taba became involved with intergroup education when she was asked to lead a summer workshop at Harvard University. The workshop led to the publication of *Democratic Human Relations*, which was published as a yearbook by the National Council for Social Studies. Born in Estonia in 1902, Taba immigrated to the United States, where she earned a master of arts degree from Bryn Mawr College and a Ph.D. from Teachers College at Columbia University, where she was a student of John Dewey. After receiving her doctorate in 1932, Taba worked as curriculum director of the Dalton School in New York City,

where she met Ralph Tyler, who was in charge of the Eight-Year Study, a major evaluation of how students from progressive secondary schools fared when they transitioned to college work. Taba joined Tyler in this work, moving to the Ohio State University to become part of the Eight-Year Study team. In 1938, Taba followed Tyler to the University of Chicago, where she became director of the Curriculum Laboratory. Taba was appointed in 1945 as director of the Center for Intergroup Education, which was also located at the University of Chicago. Taba served in this role until 1951 and made major contributions to intergroup education's development of curriculum as well as evaluation of its effectiveness. As Taba was a leading proponent of progressive educational thought, her influence on the project was immense.

Implementation and Effectiveness

As the Intergroup Education Center's director, Taba supervised a staff of eight curriculum specialists. Under her direction, they worked directly with the teachers and administrators at 72 schools located in 18 states. Taba was known for her interactive and progressive curriculum, and this was reflected in the intergroup education work. The curriculum devised by the intergroup education specialists featured a variety of progressive instructional strategies, such as conflict resolution, literature circles, and role playing. In keeping with the project's original goal of reducing prejudice and conflict, the intergroup education curriculum addressed a variety of topical issues, including community relations, economic instability, housing patterns, and issues of newcomers. Because much of the conflict and prejudice emanated from patterns of immigration, the intergroup education advocates worked to address these issues and to help students and their families feel a part of the school community, regardless of their place of birth. The intergroup education classrooms featured teachers who acted as mediators who assisted children in learning to think, unlike traditional classrooms where the instructors lectured almost exclusively.

Taba also used her extensive background in evaluation to determine the effectiveness of the intergroup education project. Rather than using traditional models of evaluation, which relied mostly upon student performance on standardized tests, Taba initiated a variety of new approaches that

would better measure children's social responsibility and cooperative behavior. To that end, Taba utilized a series of progressive evaluation tools that were barely known at the time, including anecdotal records, book reviews, field logs, group activities, informal conversations, interviews, and reading logs. In so doing, Taba examined the social phenomena that shaped attitudes and problems in students' lives. In this way, Taba gained information regarding outlooks and perspectives regarding class, ethnicity, and race that would have been all but impossible using traditional methods. These evaluations showed the intergroup education curriculum was effective, although unable to cure all the social ills that existed in the communities in which the schools were located.

Legacy

Although Taba left the Intergroup Education Center in 1951 to take a position at San Francisco State University, the influence of the curriculum she helped develop continues to the present day. Progressive ideas used in the intergroup education curriculum, such as infusing projects with students' heritage and culture and seeking to incorporate students' preexisting knowledge into their work, have remained touchstones of later attempts to craft multicultural curricula. The continued emphasis on interhuman relations and citizenship represented curricular goals very different from those traditionally sought. The idea of a transformative curriculum that involves the families of students being served and members of the neighboring community was revolutionary for the time and reflected the influence of Dewey.

The intergroup education project was not without its critics. Many argued that assimilation and integration into American communities were not merely worthy goals but synonymous with each other. The intergroup education project's efforts to validate and legitimize immigrant culture, for example, were seen as slowing down the inevitable and desired outcome of assimilation. As cultural changes such as the civil rights movement of the 1960s increased interest in curriculum that celebrated multicultural aspects of American society and worked to support social justice, the intergroup education project's efforts continued to be influential. Like intergroup education's researchers, multicultural education proponents believe

that the United States' teachers and administrators should respond to the increasing ethnic, language, and racial diversity that is occurring in their classrooms. Also, multicultural education advocates share a desire to reduce or eliminate racism and prejudice and, like the advocates of intergroup education, are willing to address these issues through the curriculum developed for students. The use of interactive instructional strategies, the emphasis upon equality and equity, and the willingness to embrace more qualitative evaluation tools all have been important legacies of the intergroup education movement.

ethnic backgrounds, but it can also refer to religion, class, or other status groups. Intermarriage is also referred to as mixed marriage, interfaith marriage, interracial marriage, interethnic marriage, cross-cultural marriage, or, more broadly, exogamy.

Throughout history, social scientists have observed that people tend to marry within their social group or status. Until the mid-20th century, endogamy, or marriage between partners of a similar social group or status, was constrained by both law and social norms. Although partner choice has included marriages across racial, ethnic, religious, and other status lines for generations, such marriage choices were, and often continue to be, grounds for sanction or exclusion from one's family, religion, or social group. Because the United States historically has been most concerned with racial barriers (as opposed to religious or class based), intermarriage in terms of interracial marriage has been of significant interest throughout U.S. history.

Pre-Civil Rights Era

F. James Davis finds that mixed relationships and some intermarriage became common between white indentured servants and slave and free blacks in the 17th century in Chesapeake area colonies. Even though these relationships occurred primarily among the underclass, they were widely condemned and eventually subject to legal sanctions. Moreover, as plantation slavery spread and the number of encounters between free whites and black slaves increased, so did the level of sanctions against mixed-race relationships and intermarriage.

In the wake of the Civil War, most states increased their efforts to maintain the current racial order; this included criminalization of interracial marriage in many states, as well as legal residential segregation, black codes, and other Jim Crow-era policies. Additionally, in 1882, the Supreme Court determined in *Pace v. Alabama* that state bans on interracial marriage were constitutional. Moreover, groups such as the Ku Klux Klan took to terrorizing blacks as a method of preventing social relations between white women and black men. These vigilante efforts to protect white women also extended beyond blacks to enforce social distance between

Intermarriage, History of

Intermarriage refers to marriage between two distinct social groups. Most often, this refers to marriage between two people of different racial or

white women and Mexicans, Chinese, Jews, and other non-Anglo groups.

The world war period, however, introduced a number of challenges to the Jim Crow system, as well as other gender, sexual, and class constraints. The participation of thousands in the war effort resulted in massive residential change, exposure to new countries and populations, a backlash to lynching and other violent terrorist practices, and a broadening of labor force participation for women and minorities in a variety of sectors, including technical and industrial fields, resulting in a boost in the diversification of unions. These shifts were not continuous, however, as Michael Rosenfeld notes; increased suburbanization and residential segregation at the close of the war period temporarily curtailed the expansion of intermarriage until postsecondary education became widespread at the end of the baby boom.

Milton Gordon reports that by 1957, intermarriage even between European ethnics, Catholics, and Protestants was relatively rare, with over 91 percent of Protestants in homogeneous marriages. At that time, 90 percent of minorities were black, distanced from whites by law, social sanction, and often force. Thus, until the 1960s, intermarriage between racial, ethnic, and religious groups was rare.

Contemporary Intermarriage

In the 1960s, a significant shift in the social and legal restrictions on intermarriage greatly expanded the number of individuals who intermarried. In addition to legal shifts such as *Loving v. Virginia*, which fully overturned state bans on interracial marriage in 1967, racial and ethnic minorities and women asserted their rights to equal status, breaking down many barriers to partner choice. Greater social movement during this period, including higher education, military service, and labor force mobility, meant that many young adults were no longer under the strict supervision of their parents. Rosenfeld finds that individuals who experience what he calls the independent life stage are more likely to enter into nontraditional unions because of reduced parental control. At the same time, many religious groups liberalized and lifted traditional bans on the recognition of religious intermarriage. Moreover, the 1965 shift in immigration laws greatly diversified

the racial and ethnic composition of communities throughout the United States, further expanding the possibilities for intermarriage.

Nevertheless, despite significant growth in intermarriage, most marriages continued to occur between persons within their group (endogamy) or close in status (homogamy). Studies indicate that racial endogamy is considerably more persistent than religion and socioeconomic status, which have declined more significantly in importance in marriage choice over time. From 1960 to 1990, the number of same-race married couples declined only from 99.6 percent to 93.1 percent in 2010.

Matthijs Kalmijn explains that although intermarriage is important in that it reflects changes in cultural and social boundaries, marriage patterns are somewhat constrained by both preference and opportunity. Choices can be constrained by a variety of factors, including demographic change, composition of the local marriage market, and residential segregation. Despite these caveats, Kalmijn notes that intermarriage not only can indicate the permeability of boundaries but also provide important signals of intergroup relations. Therefore, slow but increasing levels of intermarriage suggest that although social boundaries, including religion, class, and especially race remain, they have weakened over time.

Intermarriage Court Decisions

A series of social, scientific, and religious debates about intermarriage between people of different races began in Maryland in 1664, when colonial legislators passed a law that banned white people from marrying black indentured servants or slaves. The arguments persisted for over three centuries. Their evolving nature can be traced through significant court decisions issued between the ratification of the Fourteenth Amendment in 1868 and the 1967 U.S. Supreme Court ruling in *Loving v. Virginia*, which ended all bans on racial intermarriage throughout the United States.

Laws to ban sexual relationships and intermarriage between black people and white people were primarily used to strengthen white supremacy. In the 17th and 18th centuries, such laws defined marriage as a privilege reserved only for free (white) people and denied to enslaved (black) people. The laws often punished white people who ignored or rejected white supremacy. For example, if a white person married a free black person in Virginia after 1705, the white person could be imprisoned for up to six months.

After the Civil War, during Reconstruction, Congress passed the Fourteenth Amendment, and its charge to the states to uphold "equal protection" of the law for all citizens put racial intermarriage bans to a sharp test. Slavery had ended, and critics of racial intermarriage could no longer define marriage as a privilege reserved for free people. In 1870, a grand jury indicted a black man for violating Indiana's intermarriage ban by marrying a white woman, but the trial

judge dismissed the case, ruling that Section 1 of the Fourteenth Amendment (the equal protection clause) overturned Indiana's ban on racial intermarriage. The state appealed to the Indiana Supreme Court, which ordered in *Gibson v. State* (1870) that the Fourteenth Amendment could not affect marriage rights, which were traditionally reserved to the states.

The equal protection clause had a different impact in *Burns v. State* (1872), an Alabama Supreme Court case involving a justice of the peace indicted for violating Alabama's racial intermarriage ban by officiating at the wedding of an interracial couple. Proponents of Alabama's ban argued that it did not violate "equal protection" of citizens' rights because all citizens were denied the option of marrying a person of a different race. The pro-Reconstruction judges on the Alabama Supreme Court rejected this reasoning. The judges defined marriage as a contract between two people and ruled that a ban on racial intermarriage violated the newly won right of black citizens to make legally binding contracts with other citizens, including white ones. All citizens were accordingly free to choose racial intermarriage under the Fourteenth Amendment.

Although *Burns v. State* did not affect intermarriage bans in other states, state courts in Texas and Louisiana also overturned their states' bans in the early 1870s, and through other legal processes, four other former Confederate states legalized racial intermarriage. These changes were short-lived. Reconstruction crumbled, and in Alabama in 1876, when white power increased through violent suppression of black voters, legislators ignored *Burns v. State* and created a new law that banned interracial marriage and created heavier penalties for interracial couples committing fornication or adultery. A jury quickly convicted a white woman of violating this statute by marrying a black man. New justices on the Alabama Supreme Court upheld her conviction and incarceration in *Green v. State* (1877).

In *Green*, the justices decided that "equal protection" simply meant that laws had to treat white people and black people identically, and this happened if both races were punished equally for marrying outside their race. *Green* reversed the *Burns* definition of marriage as a civil contract. Marriage was not just a civil contract between

Actor Robert De Niro and wife Grace Hightower, here at the Tribeca Film Festival on April 17, 2012, crossed the racial divide when they married in 1997, 30 years after the Supreme Court overturned Virginia's ban on racial intermarriage in *Loving v. Virginia*. Interracial marriage in the United States has been fully legal in all U.S. states since that decision.

two people, *Green* claimed, as society rested upon harmonious marriages. Alabama could block racial intermarriage to keep families from experiencing the shame of having a family member defy racial norms. *Green v. State* also argued that because bans on racial intermarriage were commonly accepted and found outside the former Confederacy, the Fourteenth Amendment could not have been written to overturn them.

Prejudice against interracial relationships was further reinforced by a second Alabama Supreme Court ruling in *Pace and Cox v. State* (1881). The judges found that just as Alabama's 1876 law had not violated the Fourteenth Amendment in banning racial intermarriage, it did not do so in imposing harsher penalties for those committing interracial fornication or adultery than for those committing monoracial fornication or adultery. Citing arguments that flourished after the Civil War against so-called "mongrelization," the ruling claimed that Alabama had an interest in preventing the birth of biracial children. Pseudo-scientists argued that biracial children

were mentally and physically inferior and created costs for the state. Leaning on *Green v. State*, the court also ruled that disparate punishments for interracial and monoracial couples were not racially discriminatory, since black and white people engaged in interracial fornication or adultery were treated identically.

The U.S. Supreme Court upheld *Pace and Cox v. State* in *Pace v. Alabama* (1882), a crucial ruling affecting racial intermarriage and interracial relationships. Unanimously, the Supreme Court found that states could regulate sexual relationships and marriages. What looked like intimate personal decisions actually were profoundly public, the court reasoned, because they affected society. The U.S. Supreme Court's decision in *Pace v. Alabama* upheld the Alabama Supreme Court's findings (in *Green v. State* and *Pace and Cox v. State*) that such bans created no racial discrimination because they punished black and white people identically.

State bans on racial intermarriage flourished in the wake of *Pace v. Alabama*. At some time during their history, 41 of the 50 states in the United States banned some form of interracial marriage. Between 1880 and the 1930s, laws expanded to create a wider range of prohibited partnerships. Some prevented white people from marrying people of Asian and South Pacific Islander ancestries or prevented American Indians from marrying black people.

Confusion about racial identification processes also grew, and although no major court decisions between 1882 and 1948 directly dealt with racial intermarriage, courts did define the ambiguous markers used to denote racial identity. Such decisions further complicated marriage rights. For example, courts generally defined Latinos as white and let them marry non-Hispanic white people but blocked Latinos from having black spouses.

Although 30 of the nation's 48 states banned various categories of racial intermarriage by 1940, anti-racist activism increasingly put pressure on such laws. After World War II, general revulsion at Nazi racial policies contributed to growing rejection of arguments about racial purity that courts had routinely accepted in the past. In 1948, a couple (a black man and a Latina) sued the Los Angeles County Clerk when his office refused to issue them a marriage license. *Pérez v. Sharp*

reached the California Supreme Court, where the majority dismissed *Pace v. Alabama* as a precedent and ruled that California's intermarriage ban violated the Fourteenth Amendment, because a person wishing to marry someone of a different race was treated very differently from one wishing to marry someone of the same race. The ruling also thoroughly rejected the "mongrelization" arguments common in earlier court decisions.

During the 1950s and early 1960s, the U.S. Supreme Court avoided addressing the arguments made in *Pérez v. Sharp* by refusing to hear cases that challenged intermarriage bans in Alabama (*Jackson v. Alabama*, 1954) and Virginia (*Naim v. Naim*, 1955). In *McLaughlin v. Florida* (1964), the court did overturn a Florida law that criminalized interracial cohabitation but it explicitly avoided addressing that state's ban on interracial marriage, despite its clear implication in the plaintiffs' argument that they had cohabited because they could not legally marry.

Finally, in 1967, the U.S. Supreme Court unanimously overturned Virginia's ban on racial intermarriage in *Loving v. Virginia*. The ruling emphatically reinforced the argument in *Pérez* that intermarriage bans violated the Fourteenth Amendment and rested upon irrational prejudices and traditions. Although honoring the general right of states to make laws about marriage and divorce (voiced by the U.S. Supreme Court in *Maynard v. Hill* [1888]), *Loving* nevertheless sided with *Pérez* in declaring that the right to marry was fundamental and could not be infringed upon by a state. In many respects, the *Loving* decision bore strong similarities to *Burns v. State* (1872), the Alabama Supreme Court decision issued almost a century earlier, but unlike that ruling, which authorized interracial marriage in just one state and for only a few years, *Loving* authorized it in every state and remains in effect in the 21st century.

Intermarriage Demographic Trends

The 2010 U.S. Census determined three large categories of intermarriage status: (1) householders with a partner of a different race—interracial, (2) householders with a partner of a different Hispanic origin—interethnic, and (3) householders with a partner of a different race and/or origin. They are then broken down into two subcategories: (1) husband/wife and (2) unmarried partner household. Of all husband/wife households, the 2010 census reported that a household and spouse of different races constituted 6.9 percent, a household and spouse of different Hispanic origin 4.3 percent, and a household and spouse of different races and/or origins 9.5 percent, increasing respectively from 5.7 percent, 3.1 percent, and 7.4 percent in the 2000 census. The rates of interracial unmarried couples were higher than those of interracial married couples. The rates differed by region, with the west (such as Hawai'i) having the highest rates of intermarriage of the three types, ranging from 7.5 to 15.9 percent, and the midwest (such as Iowa) having the lowest.

In a report published in 2012 by the Pew Research Center, based on the data from the U.S. Census Bureau's American Community Survey from 2008 to 2010 and from the center's data collected through telephone surveys with 2,884 adults, Wendy Wang indicated the popularity of

intermarriage that doubled in rates from 6.7 percent of newlyweds in 1980 to 15 percent in 2010. The race with the highest intermarriage rate was the Asian population (28 percent), followed by Hispanics (26 percent), blacks or African Americans (17 percent), and whites (9 percent). By gender, Asian females (36 percent) had higher rates of intermarriage than their male counterparts (17 percent), whereas among blacks or African Americans, the pattern was reversed.

In terms of income, white/Asian married couples (\$70,925) earned significantly higher incomes than both white/white (\$60,000) and Asian/Asian (\$62,000) married couples. As for perceptions of intermarriage, 43 percent of those surveyed reported that it was good for society; 11 percent that it was a change for the worse and 44 percent were neutral. The acceptance of intermarriage increased sharply. In 1986, 28 percent said that it was not acceptable for people to marry different races, whereas in 2010, 63 percent said that it “would be fine” with them for people to marry those outside their races.

Classical assimilation theory has frequently been used to explain increasing trends of intermarriage, arguing that intermarriage is the ultimate assimilation process of minority group members adapting into the mainstream society in terms of language, culture, and politics. When classical assimilation theory was criticized as an ethnocentric and asymmetric explanation, contemporary assimilation theory emerged. As explained in Richard Alba and Victor Nee’s *Remaking the American Mainstream*, this theory suggests that marriages between minority and majority group members are a result of a new trend in contemporary America’s celebration of multiculturalism.

This trend allows members of both minority and majority groups the opportunity to interact more frequently with one another in a two-way assimilation process that reduces social distance between groups, which in turn increases the likelihood of intermarriage. Demographic factors, such as an increase in the biracial population, rapid immigration, cohabitation, and educational upgrading, also play a key role in intermarriage trends. Zhenchao Qian and Daniel Lichter found that educational attainment reinforces intermarriage with whites for Hispanic and Asian Americans, but not for African Americans.

Cohabitation, an indicator for low marriage commitment, was common among African Americans and those with low education, and Qian and Lichter suggested a slow increase of intermarriage between blacks and whites.

Matthijs Kalmijn’s 1998 study is the most cited article in intermarriage scholarly studies. Kalmijn proposed three general notions of intermarriage: (1) individual preferences, (2) structural opportunities, and (3) third-party intervention. In later work, Kalmijn combined these three notions to two: cultural (norms, values, and preferences) and (2) structural explanations (meeting and mating opportunities based on size and residential segregation), finding that both notions played a key role in intermarriage but that cultural explanations were more important than structural explanations.

Regarding marital stability of intermarriage, studies found inconsistent results. Based on a sample of 23,139 married couples, Yuanting Zhang and Jennifer Van Hook found no difference in the risk of divorce between intermarriage and same-ethnic marriage after controlling for couple characteristics. However, Jenifer Bratter and Rosalind King, based on a sample of 5,676 drawn from the 2002 National Survey of Family Growth, found a higher risk of divorce among intermarried couples than among same-ethnic couples.

In terms of relationship quality, Bryndl Hohmann-Marriott and Paul Amato found that diminished relationship quality (as examined by satisfaction, conflict, and perceived relationship instability) was more common among interethnic couples than among their same-ethnic counterparts, regardless of gender and married or cohabitation status. Contributing factors included relationship histories, cultural value differences, and parental support. With respect to intimate partner violence (IPV), Rachel Fusco found that a history of prior IPV, mutual assault engagement that results in perpetrator arrest, was more common among interracial married couples than same-race couples; however, drug and alcohol use before and during the IPV event were more common among white couples than among their interracial couple counterparts.

International Education

In the United States, which has a strong tradition of local political control of education and a long-standing commitment to public schools as a primary institution for cultural integration, the role of international education in preserving ethnic identity and language has been minimal. Rarely have immigrant groups established their own educational systems, and the few traditionally defined private international schools that have developed culturally specific programs have generally served small, elite populations of globally migratory families. However, international education programs and philosophies have, in a few cases, offered minority communities an opportunity to maintain and strengthen their identity. The U.S. government has used international education programs as a tool for minority-focused, comprehensive school reform and desegregation. Increasingly, the aims of multicultural and intercultural education are becoming difficult to distinguish— at both the elementary/secondary and postsecondary levels.

A rapid increase in the number of U.S. charter schools since 1991 has offered communities and local activists opportunities to develop internationally focused programs that provide advanced educational options for minority groups. In East

Los Angeles, urban Atlanta, and inner-city Chicago, schools offer community-based internationalized alternative schools that affirm ethnic identity, preserve indigenous language, or seek to build racially balanced specialized learning communities. Forty-one states make provisions for charter schools.

Two U.S. Department of Education grant programs provide incentives to implement international education programs that serve the interests of minority students in 14 states. Beginning in 1965, the Magnet Schools Assistance Program (MSAP) has offered federal support for implementing court-ordered and voluntary desegregation plans to foster meaningful interaction among students of different racial and ethnic backgrounds in order to improve equal access to high-quality education (20 U.S.C. 7231–7231j, incorporated into Public Law 107-110 [No Child Left Behind Act], Title V/Part C). As early as 1998, international magnet programs received start-up funding as part of various comprehensive school reform initiatives.

In 2004, almost two-thirds of magnet school assistance grants were devoted to international education (mostly for the implementation of elementary and middle school programs developed by the International Baccalaureate Organization). In 2010, 23 public school systems received more than \$125 million to initiate district programs that included international education. Even after the MSAP revised its terms of reference after Parents United, it continued funding for 35 grantees and made two additional awards, one of which supported an International Baccalaureate (IB) program.

Advanced Placement

Local education authorities have also used Advanced Placement Incentive Program grants to implement international education opportunities designed to increase educational opportunities for minority students. School systems in Pittsburgh, Minneapolis, San Diego, Yonkers, and the Rio Grande Valley (Texas) developed international education programs, and a grant to the IB supported the implementation of international education programs in Title I schools. The resulting increase in minority students' access to university education has been the detailed study of

University of Wisconsin students participating in a study-abroad program in Thailand cheer with a group of children, January 6, 2010. At the university level, international education has grown beyond the study-abroad program and is becoming more adept at managing cultural differences inside and outside the classroom.

researchers at the University of Chicago and New York University. Though the advanced academic character of international programs has been the focus of government funding, the programs have found currency especially among large urban school districts characterized by extensive ethnic, racial, and cultural diversity. The programs also resonate with local educational goals that support cultural identity and community integration. Increasingly, the objectives of multicultural (or culturally sensitive) education overlap with values-oriented international education.

The United Nations Educational, Scientific and Cultural Organization (UNESCO) identifies seven aims of international education, including four that are directly relevant for the promotion of multiculturalism: understanding and respect for domestic cultures, communication skills, individual and group rights, and community activism. These and other hallmarks of the international education movement echo the National Association of Multicultural Education's goals for developing programs that are inclusive, represent diverse perspectives, focus the social construction of knowledge, inspire self-knowledge, and promote social justice. International education also offers expertise in managing issues of

student behavior, identity, and pedagogy that arise in internationally diverse multicultural contexts. In their development, international schools have gained valuable experience in building open-minded learning communities that value multiple perspectives and demand critical reflection on personal viewpoints and prejudice.

At the university level, internationalization efforts in curriculum, administrative structure, and educational experiences have also begun to influence U.S. multiculturalism. Originally with a narrow interest in "study-abroad" programs, offices of international education on many college campuses are gaining expertise in managing cultural differences both inside and beyond the classroom.

According to the Institute of International Education's Open Doors survey, new enrollments of foreign students in U.S. colleges and universities increased 27 percent between 2005 and 2010. In 2010 and 2011, 723,277 students from abroad were studying at U.S. institutions of higher learning (approximately 3.5 percent of total enrollment). Almost half of those students were from China, India, and South Korea, a pattern that mirrors broader U.S.-Asian immigration patterns according to the 2010 U.S. Census.

Internet

A global network of computer systems, the Internet has grown extremely rapidly from its origins in the U.S. Department of Defense in the 1960s to one of the most important sites of social and cultural communication in the lives of a majority of Americans. Although access to the Internet is still marked by notable inequalities, the speed, depth, and consistency of interaction it enables are helping reshape, or reinforce, notions about social and cultural identity.

Building on work done at the RAND Corporation in the early 1960s, the Advanced Research Projects Agency (ARPA) at the U.S. Department of Defense and the private computer consulting firm Bolt Beranek and Newman began developing the Internet in 1966. The initially small network grew steadily through the development of new technologies, such as the data transmission protocol TCP/IP and common standards for e-mailing, which made the Internet more accessible and useful to more people. Despite these innovations, it remained largely a space dominated by computer scientists and enthusiasts until the early 1990s.

In 1990, while working for the European nuclear agency CERN, computer scientist Tim Berners-Lee developed a computer language known as Hypertext Markup Language (HTML), which dramatically increased the interactive and expressive potential of the Internet. As a result of this new technological development, users could now create

and access personalized "pages" on a global network that was dubbed the World Wide Web.

Even so, the Internet's basic community of users was slow to change, and it was not until 1992, when a change to U.S. "fair use" policy allowed businesses to begin using the Web for commercial purposes, that the network began attracting a broader segment of the population as users. In 1992, for instance, the Web contained less than 100 Web sites, but three years later that number had increased more than 100-fold to more than 10,000 Web sites, mainly commercial.

By the same year, more than 35 percent of Internet users reported that they had three years or less of computer programming experience, and almost 17 percent had no experience at all. These figures illustrate the beginnings of the change in the Internet and its demographics, from a space dominated by computer science professionals and serious hobbyists to one that was used primarily by people without high levels of technical training.

By the same token, the last decades have also seen a rapid increase in the number of people who have consistent access to the network. The 2010 U.S. Census reports that the number of households with Internet access has risen sharply since the 1990s. Whereas less than 20 percent of households reported having access to the Internet in 1997, 68.7 percent of the U.S. population reported having Internet access at home in 2009.

The Digital Divide

Despite the rapid growth of Internet use in American life, there remains a significant segment of the population that has no consistent access to the Internet. As the Internet has become an increasingly important element in everyday social, cultural, political, and economic life, the division between those who have consistent access to the Internet and those who do not has come to be known as the digital divide. This division is an important caveat to the popular notion that the Internet offers a uniformly democratic access to information.

Significantly, the digital divide is structured in many ways by sociocultural distinctions such as race, ethnicity, age, class, gender, and educational attainment. For instance, the 2010 census reports that whereas about 79 percent of adults aged 18 to 44 regularly access the Internet, less than half as many adults over the age of 65 do so. Furthermore,

whereas 79 percent of white non-Hispanics and more than 84 percent of Asian American individuals have Internet access in their home, only 60 percent of African Americans and 57 percent of Hispanics report home access. Finally, whereas around 90 percent of college graduates had consistent Internet access in their homes in 2009, only around 25 percent of people with less than a high school diploma accessed the Internet regularly.

However, the shape of inequality in Internet access and usage has changed significantly in the last decade. For instance, a 1998 survey by the Graphic, Visualization and Usability Center at Georgia Tech found that more than 87 percent of Web users reporting in the survey identified themselves as white, while those identifying as Asian, the next most reported group, represented only 2.9 percent of users. This stands in stark contrast to the much larger percentage of Asian American users reported in 2010. Still, the persistence of the digital divide requires closer attention to the underlying causes of the discrepancy.

Although it is often taken for granted that differences in Internet access are purely a result of economic factors, studies reveal that the actual causes can range widely. While in some cases the underlying issue is economic, in others it can result from cultural or social factors or from physical barriers to access. A 2012 study by the Pew Research Center, for example, found that the most frequent explanation given by adults who do not regularly access the Internet is that they do not feel that the Internet is relevant to their lives.

Interestingly, these findings are also consistent with research on issues of race and gender in the informational technology (IT) field. For instance, in a recent study, Latina IT professionals cited both lower levels of access to computer technologies in their early lives and the pervasive assumption that computers were a male domain as important barriers to their consideration of the IT industry as a relevant and potentially successful line of employment. As this example and the census data suggest, it seems likely that the widespread association of computers with certain sociocultural identities has contributed not only to direct discrimination and inequality in the IT industry but also to a closing off of computer technologies like the Internet as a useful and relevant feature of everyday life.

Finally, disability has also been found to be a significant factor in the digital divide. Recent studies show that 27 percent of persons with disabilities do not regularly access the Internet, and 2 percent of adults report that they are physically unable to access the Internet as a result of disability or illness.

Changes to existing technological infrastructure appear to be contributing to an ongoing shift in the digital divide. Access to the Internet through mobile devices such as smartphones has been particularly instrumental in this shift. Accordingly, studies by the Pew Research Center show that although ownership of a smartphone is generally more likely among younger people, it is also much more evenly distributed by race/ethnicity and gender. However, it is also the case that smartphones are more likely to serve as the main source of Internet access for younger people, racial and ethnic minorities, and those with lower levels of educational attainment and income.

Race and Ethnicity Online

Being composed of many different communication channels and venues, from text-based forums to social media sites like Facebook and Twitter, or video hosting sites like YouTube, the Internet provides a variety of ways for people to interact, exchange ideas, and form a sense of social identity. Because of this variation, it is not possible to define a single way that the Internet shapes the identity or culture of a group. Still, in its capacity to allow for faster, richer, and more continuous levels of communication across great distances, the Internet has become a central force in the landscape of contemporary American culture and society.

However, the Internet has often been characterized as a place where individuals' normal offline social identities cease to be relevant. We can, we are told, be anyone we want to be online. Although this sense of unmoored identity is an important feature of some parts of the Internet, it often belies the more complex systems of identity representation that function in digital environments.

Leaving aside social media sites, where a focus on actual world identity is amplified rather than suppressed, there are also many cases of seemingly identity-free interactions on the Internet that are

To spur economic development in five disadvantaged neighborhoods across Chicago, the city's Smart Communities program created the Business Resource Network, which provides free access to broadband, business software, and technology workshops. Despite the proliferation of Internet use, a significant segment of the U.S. population remains cut off from consistent access. This "digital divide" between those connected and those unconnected to the Internet contradicts the idea of a uniformly democratic access to information.

in fact heavily structured by contemporary ethno-racial politics in a variety of ways. First, notions about ethnicity and race can be encoded directly into the digital infrastructure of online environments. Players of the MMORPG (Massively Multiplayer Online Role Playing Game) "World of Warcraft" (WoW), for instance, are asked to create an "avatar," or digital visual representation of themselves, to represent themselves in the game. These avatars, of course, are not required to reflect the actual appearance of the player but instead are constructed entirely at the discretion of the user. Still, as Americanist Kimberly Lau has observed, the underlying choices available for WoW avatars expose the ways in which ideas about ethnicity and race continue to structure virtual representations. Although users are offered a variety of skin tones to choose for the avatar, almost all of the tones reflect either a "white" racial identity or a fantastic nonhuman one (purple, blue, etc.). By contrast, only one available skin tone could be said to represent a black racial identity. Thus, the racial identity choices provided to players essentially amount to white or fantasy.

This limitation of the racial identities possible for player avatars in WoW ties into a second significant phenomenon in many digital environments—the assumption that unless it is otherwise indicated, all users are white. Perhaps because of the demographic history of the digital divide, studies of users in various role-playing environments reveal that even where the presentation of a nonwhite avatar is made possible by the underlying programming, the assumption of nonwhite avatars is often treated as a cosmetic choice rather than an indication of real-world racial or ethnic identity. In fact, conversation that indicates the nonwhite racial identity of a user in the actual world is often actively discouraged by other users as intentionally divisive.

Old Stereotypes in "New" Media

Thus, although it is often conceived as radically new, the Internet as a communication technology has a great deal of continuity with older forms of media in terms of its relationship to sociocultural identity. Communications scholar Lisa Nakamura, for instance, has pointed out that the way

that users perform online racial or ethnic identities different from their own tends to conform to the same performance “types” that are presented on television, in film, or in literature. Thus, although it is possible to take on a different gender, sexual, ethnic, or racial identity on the Internet, in practice this is often done by emulating the stereotypical ways that these identities have been presented in the past.

The Internet and Immigration

However, in some ways the Internet is opening up radically different cultural possibilities. For example, the wider availability of the Internet as a communication technology has contributed to the increasing development of “transnational” communities among migrants. Through the constant expressive contact allowed by Internet technologies and other digital forms of communication, local communities of migrants in the United States can maintain close, daily social ties to their former local communities. Through this process of close and constant contact, new ideas, beliefs, and practices can be shaped on both ends of the migration. Furthermore, the Internet can also serve as a route by which immigrant parents can provide their children with social and cultural exposure to the sending community.

Besides maintaining existing ties between members of preexisting local communities that have been separated by migration, the Internet is also a place where members of a social group who have no existing offline relationship can come together. Online spaces dedicated to a particular ethnicity or race, for example, are increasingly common features of Internet geography.

One recent study, for instance, has shown that both Trinidadians living on the island and those living abroad in the United States or the United Kingdom have come to use Web sites like Trinidad-Online.org as places to meet and socialize with other “Trinis,” talk about Trinidad, and engage with Trini culture. The location, of these kinds of cultural performances and social interactions on the Internet, however, can subtly shift the ways in which they are done. For instance, the potential that anyone, regardless of whether they know anything about Trinidad, can access Trinidadian Web sites puts these social and cultural encounters in a gray area between intra- and

intergroup interactions. People interacting on the site are simultaneously aware that their cultural performances are explicitly presented to an audience of other Trininis but implicitly presented to the non-Trini world at large; thus, they tend to present a more uniform and idealized picture of Trini identity than one might find in other settings.

Globalization and the Internet

In addition to its role in maintaining or creating social relationships based on shared identity, the Internet also provides an arena for the formation of new types of social identities. For instance, as a major component in the process of globalization, the Internet has helped give rise to pan-ethnic political movements such as the Indigenous People’s Movement, a relatively recent identity movement that is defined by perceived similarities in the historical experiences of “first peoples.” The aims of the movement often include the defense of local communities and “traditional” modes of life against the incursions of homogenizing global culture.

However, the globally accessible online venues in which much of the organizational and conceptual discussion of the movement takes place have at times created a space for the formation of new social alliances that might not have been able to take place in offline settings. For example, as one recent study has pointed out, Palestinian nationalism has become a point of increasing focus on Web sites dedicated to indigenous peoples. This is a notable shift both because the movement originated as an effort to bring together peoples from the Americas, Europe, Australia, and the Pacific Islands and because there is little indication that the shift resulted from actual social or political alliances formed with Palestinian leadership. Thus, the push to include the cause of Palestinian nationalism in the movement’s dialogue demonstrates the extent to which the Internet allows for the expression of ethnic political and cultural solidarities that have their bases in a globalized ideology made possible by global communications rather than in actual social, cultural, or political relationships.

Intersectionality

The term *intersectionality*, as coined by legal scholar and prominent black feminist Kimberlé Crenshaw in her 1989 essay critiquing American antidiscrimination laws, has become a central concept in feminist studies. The application of the term is broad; however, scholars generally use intersectional analyses to study and theorize "intersections," places where markers of differentiation, such as gender, class, race, ethnicity, sexual orientation, age, and dis/ability, overlap to create loci where structural inequalities are augmented.

For instance, in the context originally cited by Crenshaw, black women plaintiffs in a number of cases faced structural disadvantage in antidiscrimination legislation because they could not simultaneously make a claim on the basis of race and sex discrimination. Hence, Crenshaw's intersectional analysis sought to make clear the multifaceted ways in which the identities of "black" and "woman" were distinct, yet interlocking. When it came to discrimination on the basis of race or sex in the workplace, the black women

plaintiffs were subject simultaneously to both. Hence, intersectional analyses give attention to the ways in which sociocultural identities create—or are leveraged to produce—discriminatory policies and practices.

Scholarship on interlocking and intersecting social structures preceded discussions of intersectionality, yet the term became widely popular within critical feminist discourses as scholars of color and working-class backgrounds, in particular, contended that white middle-class feminism had not sufficiently raised issues of relevance to other women, including women of color, women of nonbourgeois socioeconomic positioning, and lesbians. In this sense, theories of intersectionality grew out of the challenge to integrate a variety of marginalized perspectives within feminist studies, and to nuance the category of "woman" from what was previously conceived of within a one-dimensional, rather than a multidimensional, framework.

Branching Out From Feminism

From its inception in feminist antidiscrimination and antiracist discourses, the intersectional framework has developed into a popular analytical tool for discussing forms of social disadvantage and discrimination. Intersectionality has garnered currency in an array of fields in the humanities and social sciences, including within law, education, psychology, politics, anthropology, literary and media studies, cultural studies, technology studies, management studies, disability studies, and masculinity studies. Within critical feminist studies, the use of intersectional analysis has become fashionable to such a degree that it is possible to speak of a subfield called "intersectionality studies."

Across fields, intersectional analyses seek to highlight ways in which (1) sociocultural identities are multifaceted or multidimensional and (2) social relations, social structures, and human experiences are often organized according to various intersecting and often hierarchical axes of identity. Hence, intersectional analyses are applied to an array of contexts, from courtrooms to classrooms, living rooms to sports fields, offices to military bases, and beyond. Intersectionality offers an important analytic tool for understanding how homogenizing, discriminatory, or

oppressive structures of various kinds often work in tandem.

Because the concept encourages a dynamic understanding of social relations along shifting lines of power and social privilege, intersectionality is often used in combination with theoretical lenses such as queer theory, poststructuralism, and postcolonial studies. Hence, when it comes to understanding the social fabric of multicultural America, intersectional analyses can help scholars and activists to understand and analyze the experiences of persons of particular identities, for instance, queer people of color or female migrants.

Feminist intersectional analyses often celebrate diversity in human experience as a potentially unifying force in political activism; as such, intersectional analyses can be applied in electoral politics, where multiple factors of identity are in play as coalitions are built around common interests. The concept can also be applied to planning strategic outreach for social service providers or social entrepreneurs, for example, where the needs of a specific population of vulnerable persons are at stake.

Some argue that the framework is particularly susceptible to political or activist manipulations. Others suggest that the concept is rendered too diffuse because of the extensive combinations of variables. There is also concern that multifarious appropriations of the concept occlude the original context in which the term was developed. In response to such criticisms, those who apply intersectional analyses often do so with an overt recognition that it is one in an array of methods to study and analyze a given social reality, but not a complete framework.

Iranian Americans

Iranian, or Persian, Americans numbered 448,722 in population as of the 2010 U.S. Census. A Middle Eastern nation, Iran was known as Persia until 1935. Persian Americans may so identify themselves either because they or their ancestors immigrated to the United States before the name change, or to emphasize their cultural association with the earlier nation, before the Islamic theocracy took control following the 1979 Iranian Revolution. The term *Persian* is sometimes also used in reference to the ethnic group, which descends from the ancient Indo-Iranians; Persians are not an Arab or Semitic people, a fact often lost on Westerners.

Iran is predominantly Muslim, but before the conquest of Persia by Muslim Arabs, Zoroastrianism was the state religion, and the Zoroastrian community survives to this day as a very small minority. The religious makeup of Iranian Americans differs significantly from that of Iranians. Although Muslims are still the largest group, they are not a majority. Nearly as many Iranian Americans identify as irreligious as Muslim, and a full one-fifth are Christians (mainly ethnic Armenians or Assyrians), Jews, Baha'is, or Zoroastrians.

A Cultural Divide That Is Difficult to Cross

Iranian heritage is important to Iranian Americans, but naturalization is very common—more than 80 percent of Iranian Americans are citizens, and 15 percent are permanent residents. Few return to Iran permanently. Muslim Iranian Americans have the most difficulty with assimilation; though religion is important in the United States, American culture is fundamentally secular, and Islam is a religion with traditions, beliefs, and practices that assume living in a religious culture. The public sphere in the United States is very different for traditional Muslims.

Although this has meant some changes to religious practice—Iranian American women are more active in the community and participate more in the mosque than they did in Iran—it has also created a divide. That separation is sharpest for women. In the United States, it is common for women to work outside the home, but not so in Iran. Women wearing traditional modest garb may attract negative attention and stand out in a crowd in exactly the way such garb was originally intended to prevent. Many Muslim families worry about their teenagers growing up in the culture of the United States, where access to drinking and drugs is easier, and sexual relations are less taboo. Further, though the United States is home to dozens of different Christian groups with very different beliefs, Muslims face an American public that understands and acknowledges few to none of the differences among various strains of Islamic belief.

It is nearly impossible to determine the number of Persian immigrants to the United States before the middle of the 20th century. Because those leaving were not supposed to depart for the West, their destination was recorded as Egypt. Once they arrived in the United States, immigration officials labeled them as Arabs if they arrived before 1900 and as Syrians between 1900 and 1930 or so. Most “Arab” immigrants to the United States before the World War II years were Lebanese Christians; there were certainly some Persians arriving, but their numbers cannot have been great. This changed in the 1950s, after Iran became friendlier with the West (in part because of a coup orchestrated with the help thereof). About 1,500 Iranians a year immigrated to the United States from 1950 to 1977, just before

the Iranian Revolution. Additionally, thousands more students came to the United States to study; the United States was one of the most popular destinations to which well-off Iranian families sent their children for college.

From 1978 to 1980, just before and just after the Iranian Revolution, over 100,000 Iranians a year came to the United States, refugees from the new fundamentalist regime. The immigration during this period is one reason the religious makeup of Iranian Americans differs so much from Iranians, which is not to say that non-Muslims were the only ones with motives to leave Iran. Many of those who departed were the prerevolutionary elite—professionals and skilled workers, well educated and often well-off. Many arrived with a great deal more money than the typical immigrant family. Since the revolution, about three million Iranians have left Iran, many intending to return if conditions improve.

Iranian Americans have faced considerable prejudice in the United States. Plans for an Islamic cultural center in Manhattan attracted controversy in 2011 because of its proximity to the World Trade Center site and a planned cultural center in 1985—in Oklahoma—was protested and eventually abandoned because of Americans who suspected it was a cover for a terrorist group. Even in the State Department, there were some who suspected that the Iranian American community included sleeper cells of state-sponsored terrorists and who advised caution in the U.S. handling of the Iran–Iraq War of the 1980s rather than risk waking those sleepers. Anti–Middle Eastern and anti-Muslim sentiment has been high during much of the time that Iranian Americans have lived in this country, because of unrest in the Middle East, terrorist attacks, and energy crises, and that sentiment has rarely differentiated between different countries in the Middle East, much less between individuals and their home countries.

Iraqi Americans

A Middle Eastern country about the size of California, Iraq is a predominantly Muslim country. Known to the ancient Greeks as Mesopotamia, Iraq was a major cultural center of the ancient world and the home of the Babylonian Empire. From 1968 to 2003, Iraq was controlled by the Arab Socialist Ba'ath Party, a reign that ended with the invasion of American forces. The withdrawal began in 2011 after a seven-year battle with the insurgency. The new constitution defines Iraq as an Islamic democratic federal republic.

The estimated number of Iraqi Americans ranges from the 90,000 reported in the most recent census data to the 350,000 the Arab American Institute considers the outside figure. The discrepancy is due in part to undocumented immigrants and in part to self-reported ethnic identification data. Most Iraqi Americans arrived in the United States in the last few decades. Very few, if any, Iraqis immigrated before the 20th century, and from 1924 to 1965, a maximum of 100 Arabs per year were allowed to immigrate because of ethnicity-based immigration restrictions designed to preserve a certain racial balance in the country. Arabs, including Iraqis,

who did immigrate during that time were motivated mainly by economic opportunities.

Escaping War and Oppression

Iraqi immigration increased somewhat after immigration restrictions were liberalized. Many Iraqis immigrated after the Gulf War in 1991, both Kurds (a minority ethnic group in Iraq) and Shia Muslims who opposed Saddam Hussein's regime. In the 21st century, once the Iraq War began, the U.S. government increased the number of Iraqi refugees who would be admitted from 500 to 7,000 per year. Another 5,000 per year would be allowed to immigrate if they worked for the U.S. government in some capacity during the war or the insurgency. However, neither of those figures has been reached; the State Department has admitted to problems with processing requests quickly and has consistently remained behind in reaching its targets. More than one-third of Iraqi Americans have been granted refugee status either during or after their immigration to the United States.

Although earlier waves of Middle Eastern immigrants had been well educated and in many cases were fluent in English before immigration, and thereby able to become assimilated quickly, the Iraqi immigrants of the turn of the 21st century were very conservative and traditional and resisted assimilation. Some tried to continue practices that are foreign to, or even taboo in, the United States, including arranged marriages of very young girls in order to prevent premarital sex.

It is not necessarily accurate to say that Iraqis are more resistant to assimilation than other groups have been; the Iraqi American story is simply still in an earlier chapter. Many 19th-century immigrant groups were slow to join the melting pot; 200 years later, they are the assimilated "natives" critical of Iraqi immigrants retaining their traditional ways. Another factor is rampant anti-Muslim and anti-Arab sentiment. Although there is a long history of this, it has been especially fierce in the period during which most Iraqi immigration has occurred. Americans as a group have not distinguished well among Arab or Muslim groups, and Iraqis who came to the United States because they opposed U.S. enemy Saddam Hussein were nevertheless received with suspicion by some, even in heavily multicultural, ethnically diverse metropolises.

Chicago is home to the oldest Iraqi community in the United States and only significant Iraqi community established before the 1980s. Chicago is home to the largest Assyrian population in the United States and has long had a large Arab and Middle Eastern population. When Iraqis began to immigrate to the United States after the loosening of immigration restrictions in 1964, ethnic Assyrians from Iraq settled in Chicago, joining the existing Assyrian community. They were joined by nearly 1,000 Assyrian Iraqi refugees in the following decade, during the Lebanese civil war. More refugees joined the community during the Iran–Iraq War of the 1980s and the Gulf War that almost immediately followed. These later war refugees included not only Assyrians—joining a community of over 100,000 Assyrians throughout Illinois, of various countries of origin—but also Muslim Iraqis escaping political persecution.

Those Muslim Iraqis joined a smaller, but distinct, community of Iraqi American Muslims in the Chicago area, and included economic refugees from the late 1970s, former prisoners of war, and members of a failed coup against Hussein. Lacking the existing community to join that the Assyrian Iraqis had, the Muslim Iraqi immigrants founded the Iraqi American Association, which provides assistance and guidance to its members and a social network for new arrivals to the country. Though Chicago also has small Kurdish Iraqi and Turkoman Iraqi populations, they attend the mosques of Arab Iraqis.

Outside Chicago, Iraqis have primarily settled in metropolitan areas with well-established Middle Eastern populations: Detroit, New York City, Boston, Philadelphia, and Washington, D.C. San Diego County is also home to a large number of Iraqi Americans, including over a quarter of the refugee population. Many of them are Assyrian Catholics.

The Michigan area is home to a community of Mandaean Iraqis. There are roughly 60,000 Mandaeans worldwide. An ancient Iraqi religion, they are one of the religions whose practice is permitted in Muslim countries, fulfilling the two basic requirements: that they were founded by a prophet who preceded Muhammad (John the Baptist) and that they have a holy scripture. Mandaeans originally spoke Aramaic, but most of them assimilated into Iraqi culture completely

enough to have lost their ties to that language. The central concern of the Mandaean diaspora today is keeping the religion alive. Marriages to non-Mandaeans are disapproved for that reason.

Irene Morgan v. Commonwealth of Virginia (1946)

In 1944, more than a decade before the legendary bus ride of Rosa Parks, African American Irene Morgan boarded a Greyhound bus in Gloucester, Virginia, heading home to Baltimore. Morgan was able to find a seat at the back of the bus as was mandated by local law and custom, initially by sitting on the lap of an accommodating black female passenger; however, as her journey progressed and passengers shifted seats, she found herself sitting in proximity to a white couple and was instructed by the bus driver to vacate her seat. As Parks would do in a similar situation some years later, Morgan refused to move, and a deputy sheriff was called to arrest her.

Though some of the details of Morgan's story are not altogether clear—in some versions, she was simply sitting too close to the couple, and in others, the couple wanted her seat—what is

discernible in most accounts is the vehemence of Morgan's response to the request as well as Morgan's refusal to capitulate to the prevailing segregationist policies of the day. Some descriptions suggest that Morgan went so far as to bite the sheriff to prevent him from removing her from the seat, while others indicate that Morgan only thought about gnawing the law enforcement officer but did not follow through because "he was dirty," so she "clawed him instead" and "ripped his shirt."

Regardless of her form of refusal, Morgan was ultimately arrested, incarcerated, and charged with resisting arrest. She also stood accused of violating Virginia's Jim Crow transit law, which mandated "separate but equal" accommodations for white and black passengers. She spent seven hours in a county jail in Saluda, Virginia.

Irene Morgan (top left, shown in her later years), was arrested and jailed in 1944 for refusing to give up her seat on a Greyhound bus. Rosa Parks (top right) followed her lead more than 10 years later and became known as the first lady of civil rights. Two of the National Association for the Advancement of Colored People (NAACP) lawyers representing Morgan were Thurgood Marshall (left) and Spottswood Robinson (right).

On October 18, 1944, Morgan presented herself in court to Middlesex County Circuit Judge J. Douglas Mitchell. Morgan pleaded guilty to the charge of resisting arrest, agreeing that she had indeed done so. She willingly paid the \$100 fine as a consequence.

However, to the apparent dismay of Judge Mitchell, she refused to pay the \$10 fine and the attendant court fees for violating a 1930 Virginia law requiring separation of white and black passengers; she resolved instead to take the case to the Virginia Supreme Court of Appeals. Her appeal was later denied when the court upheld her original conviction; however, the U.S. Supreme Court's ruling reversed her conviction and, as a consequence, revoked the Jim Crow, or segregation, laws for interstate travel.

Appealing Morgan's Case

Morgan's appeal attracted the attention of members of the National Association for the Advancement of Colored People (NAACP), which had been looking for possible test cases regarding the constitutionality of the state's Jim Crow transit law. Thus, in fall 1944, NAACP lawyers Spottswood Robinson, Oliver Hill, Martin A. Martin, and Thurgood Marshall accepted Irene Morgan's case and filed a further appeal to the U.S. Supreme Court in the case of *Irene Morgan v. Commonwealth of Virginia*. On June 3, 1946, the U.S. Supreme Court ruled in favor of Morgan, less because of moral outrage at the segregationist practices and more because the law placed an unconstitutional burden on interstate commerce. Moreover, in Justice Stanley F. Reed's majority opinion, the court ruled that Virginia could not impose segregation practices that impacted interstate travel. Thus, racial segregation became illegal on public interstate transportation as a result of Morgan's appeal.

Although the decision did not directly condemn segregation, Marshall called his client's victory "a decisive blow to the evils of segregation" and "one of the most momentous decisions in the history of the country."

Significance

Although the *Morgan* case does not have the same historical currency as Rosa Parks's more enduring story of triumphing over intrastate segregated

transportation, the Supreme Court decision was a landmark pronouncement in that it put an end to segregation as a legal practice on bus travel that crossed state lines. For the first time, the Supreme Court overturned a law that enforced segregation on public transportation. Shortly thereafter, in 1947, in order to test the new legislation emerging from her case, 16 civil rights activists took part in the first Freedom Ride, taking buses and trains throughout the south.

Later Years

Long after the resolution of her case, Morgan went on to live an industrious life, pursuing education in her later years and earning a bachelor's degree from St. John's University in 1985. She also earned a master's degree in Urban Studies from Queens College in 1990. Because of her heroic stance on the Jim Crow laws, she was eventually offered an honorary doctorate from the historically black, well-renowned Howard University, but she turned it down, asserting it was inappropriate to receive a degree she had not earned.

More than half a century after her public stand against segregationist laws in Gloucester, Morgan was honored by the community in its 350th anniversary celebration. On January 8, 2001, President Bill Clinton awarded her the Presidential Citizens Medal, the country's second-highest civilian honor.

Morgan passed away in 2007 in Hayes, Virginia, at the age of 90.

Irish Americans

The Irish were the first and largest early group of immigrants into the United States. Today, Irish Americans remain one of America's largest ethnic groups, with almost 37 million Americans of Irish descent. They take great pride in both their American identity and their Irish heritage and traditions, elements that have infused the national culture.

Even before the United States gained independence, more than 100,000 Irish, both Catholics and Protestants, had already arrived. One Irish American, Senator Charles Carroll of Maryland, signed the Declaration of Independence (he was also the only Catholic), and another, Representative Thomas Fitzsimons of Pennsylvania, signed the U.S. Constitution.

Since most Irish spoke English (however, many were illiterate), they did not face the linguistic isolation experienced by most of the later groups of immigrants. Yet, they soon encountered discrimination based on their physical appearance, on their willingness to take low-paying jobs, and, in the case of Irish Catholics, on their religion. Enmity between the Irish and the British was already deeply entrenched. That enmity quickly influenced American perceptions of Irish immigrants.

Generally poor, most Irish looked for inexpensive places to rent. They quickly clustered into urban neighborhoods in such eastern cities as New York, Boston, and Philadelphia. Irish urban enclaves often bordered on, or crowded next to, neighborhoods that housed poor, but free, African Americans.

This established a pattern that later immigrant groups would replicate: the creation of

self-contained ethnic neighborhoods, often referred to as ghettos. Over time, many large cities became dotted by ethnic neighborhoods that defended their turf. Those who crossed the lines of demarcation could face possible reprisal from ethnic gangs, some of which were in well-established Irish American neighborhoods.

An Irish American stereotype soon emerged, combining visual representation and pejorative labels. Irish American neighborhoods became viewed as shantytowns, so “shanty Irish” entered the American lexicon as one of the early ethnic pejoratives. Anglo-American cartoonists delighted in exaggerating certain facial characteristics by creating an “Irish” look, characterized by a pug nose, a long upper lip and jaw, and certain curly hair styles. Men were depicted as “paddy,” the cheerful local bartender, or the street tough with a chip on his shoulder. Females were labeled “biddy,” the fumbling and inefficient domestic worker.

Religious Conflict

In 1789, there were only about 30,000 Catholics in the United States, most in Maryland and Pennsylvania. The arrival of postindependence Irish immigrants swelled that number. Although many of the early Irish settlers were Protestants from Ulster, by the 1830s, most Irish immigrants were Catholic. The Catholic Church helped provide a special sense of identity, as well as places to meet, organize, find recreation, and learn of job opportunities, yet it also contributed to Irish Americans becoming a target of prejudice.

America’s first organized anti-immigration hostility focused on the Irish, with the formation of such groups as the Know-Nothing Party and, later, the American Protective Association. Some nativists used anti-Catholic scare tactics, proclaiming that Irish Americans were part of a papal plot to take over parts of the United States. Outraged by the presence of “heathens” in their midst, some Americans responded by burning Catholic churches and convents. In some cities, anti-Catholicism became so severe that the Knights of Columbus escorted Catholic women on the streets.

This animosity contributed to Irish Americans coalescing further into a distinct ethnic group. In the process, they began to reshape Catholicism in America, redefining traditional theology

without totally rejecting it. Private and public schools forced Irish American children to recite Protestant versions of the Lord’s Prayer. This led to student strikes and ultimately to the formation of Catholic parochial schools.

Moreover, conflicts emerged between Irish Americans and Catholics of other ethnic backgrounds. The latter did not always welcome Irish priests, viewing them as uneducated and holding them partially responsible for the drunkenness and violence that were seen as characteristic of Irish American neighborhoods. This was exacerbated by the emergence of mid-19th-century Irish gangs, and ultimately Irish participation in organized crime.

Although Catholics dominated the Irish American public image, Irish Protestants settled in the Appalachian Mountains and took up subsistence farming. Unlike Irish Catholics, they accepted regional mores like prohibitions against dancing, theater, and card playing. This helped them blend in with the larger group known as British Borderers. From this arose the concept of the Scots-Irish.

Immigration and War

Ireland’s Great Famine (1845–52) produced the next major wave of Irish immigrants, numbering approximately one million. Half settled in Massachusetts, New York, Pennsylvania, and Illinois. In Boston, Irish American men soon constituted half of all unskilled laborers. In New York, Irish American women became almost three-fourths of domestics.

Between 1860 and 1890, an additional two million Irish arrived. By the beginning of the 20th century, approximately five million first- and second-generation Irish Americans were living in the United States. After 1920, the pace of Irish immigration declined.

Irish Americans fought on both sides during the Civil War. Some 20,000 took up arms for the Confederacy, but the majority fought for the Union. However, many Irish Americans joined the Union Army simply to provide themselves with food and regular wages, not from any commitment to preserving the Union. Since the law allowed those drafted to “hire” a substitute, prosperous men would pay as much as \$300 for a substitute. This served as an inducement to poor Irish Americans to fill the slots.

Irish Americans were in competition with African Americans for jobs. Therefore, they were not generally supportive of President Abraham Lincoln's Emancipation Proclamation, which they feared would jeopardize their progress. The announcement of a new draft quota from New York City sparked further anger. On July 13, 1863, working-class Irish Catholics took to the streets of New York, wielding weapons in the New York Draft Riots. The following week brought violence and looting, including the burning of an African American orphanage and the lynching of black men from lampposts. By the time that Union troops had quelled the rioting, more than 1,000 people had lost their lives, and the property damage totaled in the millions.

Moving Up and Out

Despite their rural roots, the majority of Irish immigrants remained in cities near their ports of arrival or moved to other port cities. Many men became priests, policemen, firemen, or saloon keepers, while women who aspired to move beyond domestic service became nuns and schoolteachers.

Through hard work and the accumulation of resources, many Irish Americans achieved economic and social success. Some gained fame for their achievements, such as Robert Fulton, the child of Irish immigrants, who invented the first working commercial steamboat. Many who could afford better housing moved out of Irish American neighborhoods. In the process, they became known as "lace-curtain Irish," contrasting with the "shanty Irish."

Westward expansion and the development of industry also provided new opportunities. Soon, many Irish became involved in canal and railroad construction, mining, and the burgeoning textile, iron, and steel industries. Along with this came growing Irish participation in labor protests. Ultimately, Irish Americans took major leadership roles in the labor movement, with such figures as Terence Powderly, head of the Knights of Labor, and later Philip Murray, president of the Congress of Industrial Organizations (CIO), and William George Meany, president of the combined American Federation of Labor-CIO.

A minority of Irish Americans became known as "two-boat Irish," traveling westward to take up farming along the American frontier as it

advanced from Michigan to California. By the late 19th century, San Francisco became noted for its cluster of shanty and lace-curtain Irish. The late 19th century also saw a surge of Irish American monetary remittances to family members remaining in Ireland.

Politics provided yet another avenue for Irish Americans to participate in American society. They joined, and worked their way up within, local political machines, sometimes becoming political bosses and candidates for elected office. These achievements provided them with access to political patronage, which allowed them to place other Irish Americans in police and fire departments, as well as in lucrative jobs within city bureaucracies. Irish American ward politicians and city bureaucrats could ensure that Irish American companies and workers participated in government-funded construction contracts.

Irish American President

In 1960, a major breakthrough for Irish Americans and Catholics occurred: the election of John Fitzgerald Kennedy as president of the United States. In 1928, another Irish American, Democratic Governor Alfred Smith of New York, had run for the presidency, the first Catholic to do so. He was soundly defeated by Republican Herbert Hoover, with anti-Catholicism playing a significant role in his defeat.

The Kennedy family reflected the history of Irish Americans. John Kennedy's grandfather had emigrated from Ireland during the Great Famine. His father had become wealthy in the liquor business and was appointed by President Franklin Roosevelt to head the newly formed Securities and Exchange Commission.

The Kennedy family was concerned about a possible replay of the Smith campaign. John Kennedy, however, publicly confronted concerns about his religion, assuring voters that the Pope would play no role in American politics. After receiving the Democratic nomination, Kennedy defeated Republican Richard Nixon in the general election. Contributing to his victory were changes in post-World War II American society. Irish Americans, including war hero Kennedy, had acquitted themselves with honor during World War II. After the war, they took advantage of educational opportunities provided by the G.I. Bill.

Kennedy's victory was the culmination of the Irish American dream of becoming an integral part of the United States. Following Kennedy's 1963 assassination, his brother Robert stepped to the plate. At the time of his 1968 assassination, Bobby Kennedy had become a front-runner for the Democratic presidential nomination. By the time Ronald Reagan, a third-generation Irish American Protestant, won the presidency in 1980, his ethnic background was not an issue.

Culture

As symbolized by John F. Kennedy, Irish Americans have successfully become integrated into American society, often through intermarriage. At the same time, they have made their mark on U.S. culture. Nowhere is this more evident than in the celebration of St. Patrick's Day. A Catholic commemoration of the man who brought Christianity to the Emerald Isle, St. Patrick's Day has evolved into an annual celebration in which Americans of all backgrounds partake. Because of the day's popularity, it is said that everyone becomes Irish on March 17, while the "wearing of the green" has become almost compulsory for those with as much as a hint of Irish ancestry.

Irish fiddle music is considered to have strongly influenced the evolution of American country music, particularly in the Appalachian area. Irish musical instruments such as pipes, flute, fiddle, concertina, and harp have spread from parlor performances to the stage. Professional dancers perform Irish jigs and reels throughout the country. Irish folklore and humor have merged into the American mainstream.

Irish restaurants specialize in such dishes as Irish stew, soda bread, and black-and-white pudding. Although it has become modernized, the Irish wake is still held to honor the dead.

Irish Americans have had a particularly powerful impact on popular culture. Major figures include playwright Eugene O'Neill, novelists F. Scott Fitzgerald and John O'Hara, composer Victor Herbert, humorist Will Rogers, television host and newspaper columnist Ed Sullivan, and circus clown Emmett Kelly. Many Irish American actors have achieved stage and screen renown, including Buster Keaton, James Cagney, Spencer Tracy, Bing Crosby, John Wayne, Errol Flynn, Maureen O'Hara, Maureen O'Sullivan and her daughter

Mia Farrow, Grace Kelly, Mickey Rooney, Carroll O'Connor, and Jack Nicholson.

Contemporary Scene

The 1980s saw another wave of 100,000 to 150,000 Irish immigrants. Many were well educated, and many were undocumented. Most found work in bartending, construction, and food service in established, Irish-owned businesses.

In 2010, about one-third of Irish Americans held at least a bachelor's degree and some 92 percent of those eligible had finished high school, compared to 85 percent of the total American population. Irish Americans tend to be slightly wealthier than the average American, with a median income of \$52,290, as compared to a national average of \$52,029. Among Irish Americans in the workforce, some 40 percent were in management and professional fields, 27 percent in sales and office work, 15 percent in service occupations, 10 percent in production and transportation, and 8 percent in construction or similar work. More than 70 percent of Irish Americans owned their homes.

Measured by the census and financial standing, as well as their ascension to the highest public office in the land, Irish Americans have arrived.

Irish Potato Famine

The Irish Potato Famine, also called the Great Famine, the Irish Famine, and other combinations of these phrases, refers to the disaster of the mid-19th century that resulted in the starvation of millions of Irish as well as many others in the European continent. The combined effect of widespread death, lowered fertility rates, and emigration to other countries reduced the country's population by about a quarter.

Setting the Stage for Famine

Barely a century and a half later, it can be difficult to understand how the loss of a single crop could so devastate a country, but Ireland's food supply was deeply dependent on the potato, specifically the Irish Lumper variety. From 1844 to 1847, the Irish potato harvest fell from about 15 million

tons to just over 2 million tons. The expansion of the Irish economy in the late 18th century had been conducted on the back of the potato, which became the staple food of the poor during winter and times of poor harvests because of its long-keeping properties, its ease of production, and its flexibility as a crop. Two-thirds of the country depended on farming for their livelihood, and few farmers were paid a significant wage; most lived off of, or were given a portion of, the crop they raised, which gave them very little flexibility during times of crop failure. Further, they had few choices in what to grow, and Irish farming was nearly a monoculture devoted to the potato crop. Though they knew the crop could be unreliable—the government had recorded 24 failures of the potato harvest of varying severity since 1728, including a total failure in 1839—this was also true of most other crops, and the fungus-like

An illustration in the December 4, 1886 issue of Frank Leslie's Illustrated Newspaper depicts Irish peasants seizing the potato crop of an evicted tenant in Kerry. Although the Irish Potato Famine had ended over 30 years earlier, its long-term effects would shape Irish society for nearly a century. The subdivision of small peasant landholdings ended; since access to rural Irish land was essential to support a married couple, landholding fathers arranged their children's marriages. Many remaining, unmarried women emigrated to America.

oomycete responsible for the 1840s potato famine had not previously appeared. Before then, most crop failures resulted from a condition farmers called “dry rot.”

At the start of the famine, 40 percent of Irish tenant farms were under 15 acres, and about a quarter were under five acres. As a result, few Irish had enough land on which to ranch, and few crops available at the time, other than the potato, could be produced in great enough quantities to provide enough reliable sustenance, especially in the winter months. Some potatoes could be kept in cellars, while tubers could lie safely in near-frozen fields and laboriously be dug up as necessary, alongside winter crops like carrots and rutabagas.

Under the 1801 Act of Union, Ireland was directly governed as part of the United Kingdom under the lord lieutenant and chief secretary, both of whom were appointed by the British government. Most Irish legislators in the House of Commons and House of Lords were landowners, and the peasant population had little political voice or power, similar to the Catholic population. Although Catholics constituted at least three-quarters of the population, they had been forbidden by law, during most of the 18th century, from owning or leasing land, voting, holding office, entering a profession, or obtaining an education.

Before the famine, the country had for decades dealt with rampant unemployment, widespread poverty, and a population frequently on the brink of economic calamity. The peasant farmer system, which kept numerous farmers poor and dependent on the land while raising cattle for the British market, was dependent on the potato to feed both its peasants and its cattle and other livestock. About a third of the crop in late prefamine years was used for livestock, which suffered considerably when this crop was lost.

The proximate cause of the famine was the fungus-like organism *Phytophthora infestans*, one of several organisms commonly referred to as blight. One of the reasons the *P. infestans*-induced failure was more serious than previous crop failures may be the degree to which *P. infestans* is contagious. It easily travels from plant to plant, its spores frequently crossing countries on the wind; researchers believe it was introduced to Europe by ships traveling from North America, only to reinfect North America a few years later. Blight

affects all members of the nightshade family, notably potatoes and tomatoes, and especially prospers in cold, damp conditions, as sunlight limits its ability to propagate. *P. infestans* struck Ireland for the first time in 1845. In fact, much of Europe was hit; the potato crop of the Scottish Highlands was lost beginning in 1846, leading to a six-year famine among the Scots. Belgium, Denmark, Sweden, France, Wurttemberg, Prussia, the Netherlands, and Spain were also impacted, though only Belgium's crop was as severely impacted as Ireland's—in most countries, the crop declined by 25 to 50 percent. In all of Europe outside Ireland, the death toll is believed to have been about 100,000. The toll was at least 10 times higher in Ireland, a much smaller geographic area. Fertility fell by about 10 to 15 percent in the affected continental countries and by a third in Ireland.

Response to the Crisis

The government was slow to respond to the crisis. Requested by a delegation of citizens from Dublin to lift a ban on importing foreign grains—one of the remedies used by the Belgian government, facing a smaller version of the same problem—the lord lieutenant responded that their alarm was premature. The government even refused to temporarily suspend distillation of liquor, which could have diverted grains to providing food for the hungry. The Corn Laws, which kept the price of bread prohibitively high through tariffs on imported grain, were finally repealed in 1846, but by that point, the famine had worsened to the point that it was too little help. Some historians have pointed out that food exports actually increased during the famine years; far from indicating that the famine was less serious, it actually points to the declining purchasing power of the Irish at the time. Although bacon and ham were still produced in the country, the domestic market for them had shrunk: poor farmers previously living off potatoes could not afford to buy ham instead.

The Irish prided themselves on not accepting English charity, although unbeknownst to them, the British prime minister had arranged for the purchase of American corn, which was sold on the Irish market at a loss. The effort was to little effect, as the Irish had little experience with dried corn, which is laborious to cook and would have

required stone grinding in grist mills for easier cooking applications. One of the more famous donations to the Irish poor came from a group of U.S. Choctaws, who collected over \$700, having only recently recovered from starvation themselves after the Trail of Tears.

Irish nationalist sentiment—which bristled under the yoke of English rule—strengthened fast during the famine, which the Irish increasingly blamed not on *P. infestans* but on English mismanagement of resources and an inept (or uncaring) response to the crisis. When the young political writer John Mitchel, looking back on events, wrote in 1861 that “The Almighty sent the potato blight, but the English created the famine,” he crystallized both conventional wisdom and dangerous sedition. He was convicted of felony treason and exiled to Bermuda for 14 years. Mitchel had been part of the Young Ireland party, which campaigned for the repeal of the Act of Union and freedom from the United Kingdom. A failed nationalist uprising, the Young Irelander Rebellion was one of the many revolutions of 1848 that transpired across Europe in response to issues exacerbated by famine.

Fleeing Ireland

Legally, landlords were responsible for paying the rent of tenants who weren’t able to pay the full amount of their rent to the government, which resulted in the eviction of their poorest tenants to avoid the burden of growing debt. Some of these evictions were especially unscrupulous: Unpaying tenants could be sent to debtors’ prison, and summoning such tenants to court was usually sufficient to impel them to flee town. In many cases, it was in the landlord’s financial interest to pay to send poor families overseas (usually to Canada), with promises of work awaiting them or money to see them through—promises that were not kept. The Encumbered Estates Act in 1849 also contributed to evictions in Ireland, providing further motivation (or need) for emigration. Although mass emigration from Ireland began in the 1700s and accelerated in the 19th century, the famine contributed to a significant spike.

The steady flow of emigration out of Ireland slowed but did not abate once the famine conditions improved. By the end of the century, 40 percent of people born in Ireland were living in

another country; by World War I, about 5 million had moved to the United States. The steady flow of Irish immigration to the United States contributed to the saturation of Irishness in the population. Although there are parts of the country with larger Irish populations than others, in general the Irish is one of the best-distributed ethnicities, with about one-seventh of the United States identifying Irish as their primary ethnicity.

During the famine years, emigration commonly flowed to England, the United States, Canada, and Australia, countries where English was spoken, cultural ties existed, and fair opportunities could be expected. Many of those who left Ireland sent remittances (a portion of one’s pay) to support their families back home. Despite the common portrait of immigrant groups consisting of a mixture of whole families and single men, just as many women left Ireland as did men, meaning that a surprising percentage of emigrants was made up of single women. Most of the Irish immigrants to the United States in this period settled in eastern cities, and by the 1850s they made up at least a quarter of the population of cities such as Boston, New York, Philadelphia, and Baltimore (as well as Toronto, Canada).

About as many left Scotland as Ireland (an estimated 1 million famine refugees), assisted by the government as part of the ongoing Highland Clearances, which had begun in the previous century. The Highland Clearances were a prolonged emigration from Scotland by its native inhabitants over the course of a century, mostly involuntary, in response to economic and political changes forced upon the population by the aristocracy. The Scottish diaspora settled much of eastern Canada (Nova Scotia is Latin for “New Scotland”) and settled in the United States and South America as well.

Iroquois Confederacy

The Iroquois Confederacy has long been recognized, studied, and discussed as one of the earliest Native American democracies. The Iroquois Confederacy comprised five original signing nations and a sixth that joined in 1722. The Haudenosaunee, as they refer to themselves, comprised the nations of Seneca, Cayuga, Onondaga, Oneida, Mohawk, and Tuscarora. The Haudenosaunee have been referred to as the Iroquois Confederacy and the Five (and later Six) Nations, historically. The original homelands of the Haudenosaunee are centered in upstate New York, with the Seneca Nation in the west, the Mohawk Nation in the east, and the core centered at the Onondaga Nation in present-day Syracuse, New York.

Treaties and Contact

The Haudenosaunee have long been leaders in indigenous rights and recognition issues, beginning with contact with the early explorers. One of the first treaties negotiated between the Haudenosaunee and a European power was originally made between the Mohawks and the Dutch explorers in 1613. The belt that records this treaty is known as the Guswenta (Two-Row) Wampum. The Guswenta became a tool of negotiation between the Haudenosaunee and those who succeeded the Dutch, including the English, the French, and eventually the Americans. The Guswenta would serve as a model of diplomacy for the next two centuries, arguably even into the modern era. Other major treaties and frameworks between the Haudenosaunee and Western peoples include

the Covenant Chain of Friendship, the Treaty of Canandaigua of 1794, and controversial treaties like the Treaty of Fort Stanwix.

Metaphors of the Iroquois Confederacy

Using the metaphors of the great white pine tree, bundled arrows, and notions of consensus in reaching decisions affecting clan, nation, and confederacy, the Iroquois codified these frameworks into the Great Law. At the core of the Great Law is thinking with the Good Mind. Debate has centered on two unique aspects of the Great Law of Peace and the Iroquois Confederacy. One is the founding date of the confederacy. The other debate centered on whether or not the Founding Fathers were influenced or borrowed ideas from the Great Law of Peace in their vision for the United States.

Age of the Iroquois Confederacy

The founding date has long been a source of contention between academics and traditional thinkers and oral historians of the confederacy. Academics have stated the date of the formation of the Iroquois Confederacy as between 1450 and 1650, often preferring the 1650 date. Academics have long believed that the confederacy formed in direct or inferred response to European contact and trade. William N. Fenton, Elizabeth Tooker, Dean Snow, and others spearhead this line of thinking. Barbara Mann, Jerry Fields, and Bruce Johansen have argued for an earlier date of formation, using elements contained in the oral history of the Great Law, placing the date at 1142—far earlier than previously thought.

Some holders of tradition, speakers of the longhouse, and oral historians and leaders of the traditional communities place the date of the formation of the Great Law in the late 10th century, based on the oral culture so heralded for the verbatim recitations recounted by early observers and academics alike of the Haudenosaunee.

Iroquois Influence Theory

A debate has raged for 25 years about the influence of the Iroquois on the Founding Fathers. Donald Grinde and Bruce Johansen are most noted for advancing this argument. All the while, Fenton, Tooker, Snow, and other scholars of the Iroquois have resisted the argument for influence of the Haudenosaunee on the Founding Fathers.

Benjamin Franklin wrote the following in a letter to James Parker in 1751:

It would be a strange thing if Six Nations of ignorant savages should be capable of forming a scheme for such an union, and be able to execute it in such a manner as that it has subsisted ages and appears indissoluble; and yet that a like union should be impracticable for ten or a dozen English colonies, to whom it is more necessary and must be more advantageous, and who cannot be supposed to want an equal understanding of their interests.

The following quote by Onondaga Chief Canasatego, addressing the British colonists at the Treaty of Lancaster in 1744, also points toward the influence of the confederation of the Iroquois as a model for the Founding Fathers:

We heartily recommend union and a good agreement between you our brethren. Our wise forefathers established union and amity between the five nations; this has made us formidable, this has given us great weight and authority with our neighboring nations. We are a powerful confederacy, and by your observing the same methods our wise forefathers have taken, you will acquire fresh strength and power.

Perhaps the most definitive acknowledgment stemming from, but by no means solving, this long-simmering debate, the House Concurrent Resolution 331 in October 1988, acknowledged the influence of the Iroquois upon the Constitution and Bill of Rights. Seneca scholar John Mohawk once said the following:

Is it possible that the Founding Fathers would have arrived at Confederation as a model for their government, based upon European thinking and ideas alone? It is possible, but given the fact that they were surrounded by seas of Indian confederacies up and down the eastern seaboard, is it more likely they observed functioning models of democracy upon which to build their new government and political thought.

Model of Governance

What was this model of governance as outlined in the constitution of the Iroquois Confederacy? To the Haudenosaunee, decisions were reached through a model of consensus in a true model of participatory democracy. Clanmothers and chiefs represented their clans or extended families involved in this decision-making process that affected the entire Confederacy. Each nation had a set number of clans.

The nations were divided into Younger Brothers (Cayuga, Oneida, and Tuscarora) and Elder Brothers (Seneca, Onondaga, and Mohawk). Any issue facing the confederacy was passed across the council fire for deliberation, finally arriving at a solution. These decisions were not only passed across the fire, but decisions also were always made with those “generations yet unborn” in mind. The leaders would ask themselves, “What will those generations yet unborn say of those decisions we make here today?” This was the guiding principle and aim of the Great Law. The leaders and the people were to always use the good mind in reaching consensus by passing issues across the fire in order to solve them.

The Younger Brothers would take up an issue and, through debate and discourse, arrive at a decision based upon consensus. Once consensus had been reached by the Younger Brothers, the issue was passed over to the Onondagas, who were the keepers of the council fire. At this point, the Onondagas would raise concerns, ask questions, or return the issue to the Younger Brothers for further deliberation.

If consensus was reached among the Onondagas, the issue was passed over to the Elder Brothers (Seneca and Mohawk) for consideration. Here, too, once consensus was reached among the Seneca and Mohawk, the decision was returned to the Onondagas. As with the Younger Brothers, the Onondagas would raise concerns, ask questions, or return the issue to the Seneca and Mohawks for further deliberations before it was passed to the Younger Brothers.

At this point, the proposed solution to the issue facing the confederacy was then passed across the fire to the people for final approval. Only if the proposed solution was agreed to by the people was the issue then considered resolved. When the proposed solution was not agreed to by the

people, then the council and leadership resumed deliberations to solve the issue to the people's satisfaction.

Consensus Among the Iroquois

Consensus was not merely unanimity of thought or majority rule. Consensus was allowing all voices to be heard but arriving at a point where the best outcomes for the people won out, rather than sustained personal objections. The value and genius of the Great Law lay in that all voices were heard, and participation was valued highly, for it affected the future generations. All people were included in this process; men, women, and children were allowed and even encouraged to participate in the decision-making process of the Great Law.

Good Mind, Great Law, and Thanksgiving

A cornerstone of the Haudenosaunee philosophical worldview and framework was the notion and understanding of the Good Mind. The Good Mind brings forth decisions that benefit all, not just the individual. In other words, the Good Mind begins with the extended family, or the clan. The clan, clanmother, and chief use the Good Mind to help make decisions for individual nations. The nations met to agree on the best course forward for the confederacy, all the while keeping in mind those future generations yet unborn.

The root of the Good Mind is acknowledging all the bounty of the natural world and the people with a grateful mind or with thanksgiving at the heart of it. A model for understanding this notion of the Good Mind is contained in the Thanksgiving Address, which was spoken at any event, be it social, political, or ceremonial in nature. Most of these frameworks are also contained in the narrative of creation and demonstrated by those spiritual that created this world around us, which rests upon the Great Turtle's back.

Israeli Americans

Israelis have immigrated to the United States since Israel gained independent statehood in 1948. Israeli Americans have, in this relatively short time period, become a culturally and politically powerful force in the United States with unique social and cultural trends that demarcate a much different immigrant experience from what is typical for newcomers to America.

Historical Development

Israel gained its independence in 1948, and soon thereafter Israelis started to immigrate to the United States in two waves. The first wave of Israeli immigration saw more than 300,000 Israeli citizens relocate to the United States in the 1950s and 1960s. The second wave of Israeli immigration started in the mid-1970s and remains in force today. Interestingly, estimates of how many Israelis arrived during that period vary wildly, and U.S. Census data are unreliable on this point; the official 2010 count says that there are approximately 140,000 Israeli Americans, but other sources

think that number is much higher in reality. The Israeli consulate in New York states that there are more than 600,000 Israeli Americans today. One reason for this discrepancy could be that many Israelis are originally from other countries and might have listed their countries of origin when they arrived in the United States. The size of the largest urban populations of Israeli Americans seem to belie the census numbers.

The second (and continuing) wave of Israeli migration to the United States is connected in large part to ongoing political upheaval and violence in the Middle East that results in feelings of insecurity in the region. Israelis are also motivated to relocate to America because the close connections between Israel and the United States render American culture familiar to Israelis. In the 1990s, Sephardic Israelis found ethnic discrimination another factor that made immigrating attractive. Finally, because such a high number of Israelis are well educated and skilled, they have a distinct advantage in the American job market in contrast to the Israeli market, which is more saturated with skilled, educated workers.

Large populations of Israeli Americans are located in New York, California, and Florida, although Israeli Americans can be found all over the United States. Because of chain migration—by which immigrants from certain areas follow others from their home city or neighborhood to a particular city or neighborhood in their new country—New York City and Los Angeles are home to almost half of the Israeli Americans living in the United States.

Israeli American Culture

Israeli Americans have achieved what has probably been an easier transition to American life than has been experienced by most immigrant groups. A very high percentage of Israeli immigrants are highly educated and have discrete occupational skills; this fact sets them apart from most other immigrant groups, which experience the difficulties of ghettoization in low-paying, unskilled occupations. Israeli Americans tend to achieve material independence and the security that comes with it relatively quickly.

Most Israeli immigrants also have both familial and community support networks in place in the United States. These networks aid transitioning

into American culture and also insulate Israeli Americans from feeling alienated by those aspects of the U.S. culture that are more at odds with their past experience. Israeli Americans have formed widespread, active communities within their areas of resettlement and in this way have remained connected to Israel. Hebrew language media as well as hobbyist and professional groups bring Israeli Americans together.

Overwhelmingly, Israeli Americans profess their eventual intent to return to Israel. This protects them from total American assimilation and serves as a protective measure against the backlash they experience from both the state of Israel (which resists Israeli immigration to America) and American Jews. American Jews are generally welcoming toward Jewish immigrants, but the influx of Israelis to the United States tends to contradict the message of Zionist success that has been supported by American Jews. Thus, immigration carries with it a connotation of failure and even disloyalty, as reflected in the Hebrew term *yordim*, applied to Israeli Americans, which means that rather than rising up out of the diaspora and entering Israel (*olim*), they have abandoned Israel in favor of diaspora. Although approximately one-third of Israeli immigrants acquire permanent U.S. citizenship through marriage and many others become citizens through alternative channels, overwhelmingly Israeli Americans identify as Israelis rather than as Americans—probably in large part because of these negative associations with immigration.

Judaism and Israeli Americans

Israeli Americans maintain a stable of traditions that are rooted in Judaism. The Torah is the name for the first five books of the Hebrew Bible and is alternatively known as Jewish written law. The Torah sets forth holidays, the Sabbath, and the 613 *mitzvoh*, or commandments, which are the basis for many traditions. Circumcision of male children, the reading of the *Shema* morning and night, the prohibition of travel on Shabbat, the laws of kosher eating—these all arise from the 613 *mitzvoh*.

Other Israeli American customs are more of an amalgam of Jewish traditions and earlier, geographically based practices. An example of this is belief in the “evil eye,” which is most familiar to mainstream Americans through the image of the

hamsa, the image of the eye with the hand in the palm. Customs like the use of the hamsa spring from designs of fending off evil forces, especially in the context of the birth of a child.

Jewish holidays are important in Israeli American communities. The holidays arise primarily from the mitzvoh but are also influenced by rabbinical mandate and tradition. Shabbat itself, the day of rest on the seventh night of each week, is central to Israeli American culture. Shabbat begins at sundown on Friday and ends at sundown on Saturday. It is often said that “as Israel has kept the Shabbat, the Shabbat has kept Israel.”

Of the holidays that come less frequently, Yom Kippur is the holiest day of the year and focuses on atonement. Most commonly, Israeli Americans will fast and refrain from working on Yom Kippur (with the observance starting at sundown, as with all holy days). Occurring soon before Yom Kippur in autumn, Rosh Hashanah is the Jewish New Year or day of remembrance. Like the “twice a year” Christians that make up much of American culture (attending church only on Christmas and Easter), “twice a year” Israeli American Jews generally attend synagogue on Rosh Hashanah and Yom Kippur. Passover, which commemorates the Exodus of the Jews from Egypt, comes in springtime. In Israel, Passover is seven days long, and this is most commonly the observance of Israeli Americans as well.

Of the less important holidays celebrated by Israeli Americans, most notable are probably Hanukkah, Sukkot, and Purim. Hanukkah gets extra attention from mainstream American culture because of its proximity to Christmas, but this is incidental and unrelated to the holiday itself, which commemorates the rededication of the Temple in Jerusalem after a successful revolt. Although the date of each holiday of import to Israeli American culture changes each year according to the U.S. calendar, the holidays are actually on the same date each year according to the Jewish calendar, which is lunar.

Language and Culture

The official languages of Israel are Hebrew and Arabic, although most Israeli Americans speak Hebrew rather than Arabic. The preservation of Hebrew has historically been an important bonding point for Jews worldwide, and Israeli

Americans are no exception; probably 80 percent of first-generation Israeli Americans speak Hebrew at home. However, compared with other immigrant groups in the United States, Israeli Americans tend to learn English quickly, and only about 5 percent are not proficient with English. Similar to other immigrant groups in America, each generation born in the United States becomes more entrenched in mainstream culture: Those born in second- or later-generation Israeli American homes are much less likely to speak Hebrew in the home. Ashkenazic Israelis (those who originated in Europe, with the exception of the Iberian Peninsula) also tend to speak Yiddish, which is a blend of Hebrew and German. Sephardic Israelis came to Israel from Spain, Portugal, North Africa, and the Middle East, and they often speak Ladino, a sort of Spanish/Judeo language, in addition to Hebrew.

Family and Cultural Values

Given the history of persecution faced by Jews, it is no surprise that family and community are of the utmost importance in Israeli American society. Many traditions such as observing the Sabbath, even when practiced by essentially secular Israeli Americans, in practice bring families closer. Most Israeli American immigrants in the United States marry and have children.

There is at times a tension between the Israeli American emphasis on child rearing and the difficulty of inculcating American-born Israeli American children with more traditional values. Israeli American cultural values are often in conflict with mainstream American cultural values; competitive and materialistic attitudes as well as lack of motivation to succeed (whether real or perceived) are seen as problematic American values that conflict with Israeli American ideals. One result of this struggle to ensure that Israeli American children are exposed to the culture of their homeland has been the creation of various programs designed to involve Israeli American children in the culture of Israel. For example, each summer, many Israeli American young people spend their school break experiencing Israel in programs like Tzofim Chetz V’Keshet. Locally in larger U.S. cities like New York and Los Angeles, the Israeli American community sponsors educational programs and cultural events.

Judaism is a patriarchal belief system and, historically, Jewish women have been restricted to their roles within the family. In the past, they often missed educational and professional opportunities. Today, though, Jewish women worldwide have made significant strides toward equality of opportunity, and most female Israeli Americans are as educated as their male peers. Even so, Israeli American women are more likely to stay at home to raise their children than are women in American society as a whole; this is more of a cultural decision than an enforced norm.

There is an unexpected conflict at times between Israeli Americans and American Jews when it comes to the role of religion in day-to-day life. American Jews generally are more religiously observant than are Israeli Jews, in part because American Jews have had to maintain their culture and belief systems despite outside pressures to assimilate. For American Jews, their cultural space is their religious space; this is different in Israel, because although the broader society is Jewish, the culture exists outside religious groups and gatherings. Israelis are not accustomed to minority cultural experiences and at times see American Jews as overly religious. Not surprisingly, then, American Jews are often offended by what they perceive to be a nonchalance on the part of some Israeli Americans toward Judaism and take it as a personal insult, especially given

widespread Jewish American support for Zionism. Further division is caused by what Israeli immigrants see as a Jewish American adoption of American materialism.

In the final analysis, Israeli Americans find themselves torn between American Judaism, which is largely religious, and Israel's more secular version. This is an uncomfortable dilemma, especially for a people who place the cultural education of their children at a premium. Many Israeli Americans eventually choose to place their children in American Jewish schools or other programs; after all, American Jewish culture is not as far removed from Israeli American culture as is mainstream American culture. Paradoxically, first-generation Israeli immigrants often find themselves in conflict with their children, the parents more culturally traditional and the children more religious.

Contemporary Scene

Israeli Americans continue to have higher average incomes than the rest of the United States. As a group, they are well educated and focused on entrepreneurial success. Israeli Americans have the second-highest rate of self-employment among all immigrant groups in the United States. Even as they transition to life in the United States, Israeli Americans are much less likely than other immigrant groups (or native-born Americans) to

*As a group, Israeli Americans tend to be well educated, are focused on entrepreneurial success, and have higher-than-average incomes. The fame and success of a number of Israeli Americans have impacted American culture. Some examples include Ami Miron (left), entrepreneur and television technology developer; Natalie Portman (center), actress and star of numerous films, including *Black Swan* and *V for Vendetta*; and Yuval Waldman, violinist and conductor, teacher, and professor at New York University.*

use government benefits and tend to have a low unemployment rate.

Israeli Americans generally maintain strong ties to Israel and follow Israeli politics. Israeli newspapers and other publications are commonly found in the American cities with larger Israeli American communities. Even those Israeli Americans who become naturalized U.S. citizens tend to support American politicians who adopt pro-Israel policies.

Israeli Americans impact American culture as they find fame and success in mainstream culture. Notable Israeli American actors are Topol and Natalie Portman, and many Israeli Americans have become producers, screenwriters, and other behind-the-scenes entertainment professionals. Musicians Itzhak Perlman and Gene Simmons have attained international acclaim, and there are many Israeli American political players of note, such as Rahm Emanuel, mayor of Chicago and former White House chief of staff.

Although they do find themselves part of larger groups—immigrants in the United States, Jews in the United States, Israelis worldwide—Israeli Americans maintain a unique cultural identity. Their continued ties to Israel despite the many contributions they have made during their lives in America give the community a unique flavor, characterized in large part by the uncertainty of any final destination as a group.

Italian Americans

By the time the 1921 and 1924 immigration quota acts put an end to the mass influx of Europeans to the United States, Italians had become the second-most-numerous immigrant minority in the country, after Germans. Today, Italian Americans are the fifth-largest ethnic group, as roughly 17.6 million people claimed an Italian ancestry in the 2010 U.S. Census. The number of Italian Americans who acknowledge their national descent has increased in the last three decades, yet their ethnic heritage has acquired a primarily symbolic meaning that expresses itself mainly in leisure-time activities. Instead, as for their hard-core identity, most individuals from Italian background now think of themselves as either Americans or white Europeans.

The Italian presence in North America dates back to colonial times. The Virginia Company sent Italian glassworkers to Jamestown in the early 17th century. Tuscan Filippo Mazzei was a friend of Thomas Jefferson, and his political thought probably inspired the preamble to the Declaration of Independence. The signers of the latter included William Paca, a descendant of Italian Waldensians.

However, the number of Italian immigrants remained negligible until the late 19th century. In 1860, fewer than 12,000 Italians lived in the United States. Most of them were merchants, artisans, music or language teachers, and political exiles who had fled their native land in the wake of the early struggles for the political unification of their nation. They became fluent in English and joined the middle class. As such, they were welcome as the dignified progeny of Dante

Alighieri or the great artists of the Renaissance. Almost nobody doubted that they could be easily assimilated. After all, they demonstrated their attachment to their adoptive country by fighting loyally with the troops of their respective home states during the Civil War.

Mass Immigration and Anti-Italian Prejudices

It was only after the 1870s that immigration from Italy became a massive influx. From 1880 to 1920, more than 4.1 million people from this country landed in the United States, with a peak of some 2 million between 1901 and 1910. Repatriation was high and equaled 30 to 50 percent of arrivals, according to different estimates. Most Italians had a sojourner mentality. They planned to go back to their birthplace and to enjoy there the money they anticipated making in America in a few years of hard work and saving. Yet not many became wealthy. The leading exception was California-born Amadeo P. Giannini, who founded the forerunner of the Bank of America in 1904 and made it the largest privately owned financial institution in the world. His family remained in America. So did the almost 1.8 million Italian immigrants who still resided in the United States in 1930.

The beginning of the mass entries coincided with major changes in the regional origin and training. Contrary to their predecessors, most newcomers arrived from southern Italy and were illiterate and unskilled laborers from agricultural backgrounds who intended to pursue job opportunities in industrializing America. They settled primarily in slums in the major cities of the East Coast where they had disembarked, or moved inland as they got work in road and railroad construction. Living close to relatives and fellow villagers who had sent for them, they turned their neighborhoods into ethnic enclaves that often reproduced the regional or local divisions in the motherland and insulated the residents from the larger host society. The so-called Little Italy was, in fact, an urban patchwork of a Little Sicily, a Little Naples, a Little Calabria, and so on.

Unlike their light-skinned and tall northern fellow countrypersons, southern Italians—especially Sicilians—looked more similar to African Americans than to white Europeans because of their olive complexion, dark hair, sloping foreheads,

and stocky builds. Such traits changed the public perception of the Italians and confined this national minority to a racial middle ground between blacks and fully fledged Caucasians. The few immigrants who took agricultural jobs on southern plantations worked shoulder to shoulder with African Americans, and disregarded racial segregation further blurred the divide between the two groups.

Those physical characteristics and lifestyles corroborated the conclusion of eugenicists' pseudo-scientific treatises, according to which southern Italians belonged to a Mediterranean "race" whose members were inferior to the Anglo-Saxons because of their secular contamination with

Vendors display their wares in Little Italy, New York, during the 1908 Italian Festa. Today, the Little Italy neighborhoods consist of many Italian stores and restaurants, but the areas occupied by Little Italy have diminished over the years.

African blood. Such theories added to the innuendos that Italians were too emotional as well as prone to violence and crime. Catholicism was another liability. Portrayed as hordes of new barbarians who lived in filthy tenements in self-segregated ghettos, broke strikes, accept working for substandard wages, corrupted American democracy by bartering their votes for money and political patronage, undermined the Anglo-Saxon and Protestant fabrics of U.S. society, and were unassimilable, the turn-of-the-20th-century Italian newcomers fanned the flames of nativism, resulting in legislation that closed mass immigration by the mid-1920s.

World War II and Accommodation

The disruption of constant waves of fellow ethnics and the rise of a U.S.-born second generation began to loosen Italian Americans' ties to their ancestral country in the late 1920s and 1930s. Immigrants applied for U.S. citizenship to benefit from the New Deal programs during the Great Depression and World War II, further speeding up their Americanization.

Many Italian immigrants revealed pro-fascist feelings in the interwar years out of nationalistic redress after decades of discrimination. After dictator Benito Mussolini had apparently made Italy into a great power that inspired awe worldwide, Italian Americans thought that they could no longer be misrepresented as an inferior "race." Yet identification with Italy turned from an asset into a liability as soon as Mussolini declared war on the United States. Consequently, Italian Americans disavowed fascism and proclaimed their attachment to their adoptive country.

Roughly a half-million Italian Americans served in the U.S. armed forces during World War II. Volunteers, however, initially enlisted in the Marines to fight the Japanese in the Pacific and to avoid battling in the Mediterranean against Italian soldiers. Such scruples revealed the retention of at least sentimental links to Italy. Actually, as soon as the latter surrendered to the Allies, Italian Americans mobilized under the auspices of the Order Sons of Italy in America and other ethnic organizations to lobby against the imposition of a punitive peace on their motherland and for the shipment of humanitarian aid to the Italian population in the areas under U.S. military occupation.

The war years also eased Italian Americans' integration. The army and the defense plants in which many immigrants and their offspring found jobs broke the insulation of the ethnic communities and enhanced the Americanization of the newcomers and their progeny, including women, whose pivotal economic contribution to the family budget had theretofore hardly resulted from employment outside the home. Furthermore, when race upheavals erupted in cities such as New York and Detroit during wartime, Italian Americans sided with whites in attacking blacks and definitively distanced themselves from African Americans, making their first steps toward the mainstream.

Whitening

The Servicemen's Readjustment Act contributed to the demise of the Little Italys by providing low-cost mortgages that encouraged veterans and their families to move to the suburbs. It also offered the payment of college expenses and loans to start a business, which let the children of working-class Italian immigrants pursue higher education, become professionals, and enter the middle class. At the same time, established Italian occupational niches—such as barbering, tailoring, and shoemaking—shrank.

Against this backdrop, Italian Americans consolidated their white identity in the postwar decades. In the 1960s and 1970s, they joined forces with other national minorities of European extractions in conflict until then because of inter-ethnic rivalries, to oppose the racial integration of public housing projects and schools, to resist busing, and to antagonize affirmative action. In the wake of African American urban riots, Mayor Frank Rizzo of Philadelphia (1972–80), a former police commissioner who made himself a name for his controversial strong-arm methods in quelling the activities of the local chapter of the Black Panther Party, became the epitome of Italian Americans' white backlash.

Italian Americans were not impervious to the ethnic revival of the late 1960s and 1970s. As the Vietnam War questioned traditional U.S. values, making acculturation less attractive, and as African Americans took pride in their ancestral roots, the Italian immigrants' descendants, too, rediscovered their ethnic heritage. The renewal

of identification with the ancestral land, however, hardly went beyond such forms of superficial behavior as eating Italian food, wearing Italian fashion, celebrating Columbus Day, attending the San Gennaro Feast in honor of Naples's patron saint, and vacationing in Italy. "Kiss me, I'm Italian" was trendy on T-shirts. Nonetheless, when it came to getting married, in the 1980s at least three-quarters of Italian Americans chose a spouse who was not of Italian extraction but was from European background. Inter marriage went across ethnic and confessional boundaries, but it stopped at the color line, as unions were almost exclusively with other people of European origin.

Culture

The transformation of an ethnic festivity such as Columbus Day into a national celebration and the fact that pizza and macaroni now taste as American as they are Italian offer evidence of the eventual accommodation of Italian Americans into U.S. society. However, their contributions to American culture have not been confined to these lowbrow achievements.

Lorenzo Da Ponte introduced opera to American audiences as well as the teaching of Italian language and literature in U.S. universities. Constantino Brumidi painted the frescoes of the dome of the Capitol Rotunda. Pietro Di Donato's *Christ in Concrete* (1939) was a vivid example of the interwar proletarian novel. Associate Justice Antonin Scalia has established himself as an eminent—albeit contentious—authority on constitutional law.

Popular culture has been a field for further accomplishments. James (Nick) La Rocca was a prominent performer of jazz in the formative years of this musical style. Madonna and Lady Gaga have won acclaim in pop music, as did rocker Frank Zappa. Reflecting the polyhedral interests of numerous Italian American performers, Frank Sinatra was both an outstanding singer and a prominent actor. Cinema is rich with Italian American personalities, including movie directors Michael Cimino, Francis Ford Coppola, Sophia Coppola, Martin Scorsese, and Quentin Tarantino; actors Rodolfo Valentino, Robert De Niro, Sylvester Stallone, and Leonardo Di Caprio; and actresses Mira Sorvino and Marisa Tomei.

The Contemporary Scene

The prejudices that used to affect Italian Americans and to cause their social marginalization have undergone a significant decline since the early 1990s, notwithstanding the survival of Mafia-related and other stereotypes that found echoes in such popular television series such as *The Sopranos* and *Jersey Shore*. In particular, Rudolph Giuliani helped relegate the image of the Italian American as a potential gangster to the dustbin of folklore. Besides displaying his leadership in the aftermath of the terrorist attacks of September 11, 2001, he effectively prosecuted the "Mafia's Commission" as the U.S. attorney for the southern district of New York in the 1980s and successfully wiped the control of organized crime from key local economic activities such as the Fulton Fish Market and trash hauling during his two terms as mayor of New York City (1994–2001).

Income, occupation, and education show that Italian Americans are nowadays a solid part of the U.S. mainstream; their attainments in these areas are higher than the national average. As of 2010, their median household income is over \$64,000, almost 40 percent of the employed are in managerial or professional occupations, and one-third of the population older than 24 years of age holds at least a bachelor's degree. Very few, however, can speak Italian, an additional proof that their acculturation allowed the retention of only a symbolic ethnic identity.

Jamaican Americans

According to the 2010 Census, there are approximately 994,500 Americans of Jamaican descent, accounting for 0.3 percent of the total population of the United States. Nearly 61 percent of them were born in Jamaica. There are significant communities of Jamaican Americans in New York City, Miami, Philadelphia, Boston, Orlando, Baltimore, Cleveland, Atlanta, and Washington, D.C. In addition, New Jersey, Connecticut, and Maryland also have considerable Jamaican American populations. The earliest Jamaican American communities of note were established in the New York City metropolitan area in the early 20th century.

Unfavorable Conditions in Jamaica Lead to Mass Exodus

As early as the 1850s, the primary factor behind emigration had been a lack of suitable employment on the island. From the mid-19th century to the Great Depression, as many as 150,000 underprivileged Jamaicans moved to other parts of the Caribbean, Central America, and the United States in search of work.

In the years after World War II, Jamaica's economy grew considerably. A rise in the disposable income of many Americans combined with the embargo against Cuba to make Jamaica an alluring tourist destination in the 1950s. Increased tourism

and the success of bauxite production, which is crucial in the manufacturing of aluminum, brought in a steady current of foreign capital. Although the bauxite industry was thriving, it provided few jobs and was almost entirely foreign-owned.

Similarly, tourism dollars primarily went to the foreign entities that owned the resorts. Foreign ownership of the financial sector and lending institutions limited economic growth. For a nation already severely afflicted with widespread poverty, and where more than 80 percent of the available land was too mountainous to be used for agricultural purposes, a poor distribution of the land further contributed to the failure of the farming industry and caused Jamaica to be almost entirely dependent upon imports.

There have been three distinct phases of Jamaican immigration: between 1900 and 1929, between 1930 and 1969, and between 1970 and 1989. There was a somewhat less robust Jamaican presence in the United States prior to those periods. After the abolition of slavery, workers from Jamaica were recruited to work on American plantations in order to assist with annual harvests. Between the 1880s and World War I, nearly 90,000 Jamaicans were sponsored by the United States to assist in building the Panama Canal. During the interwar period, Jamaican men were brought to the United States to work at American military bases.

Between 1962 and 1972, the unemployment rate in Jamaica doubled. The oil crisis and the worldwide economic recession that occurred in the 1970s certainly had an adverse effect on Jamaica's economy. More than 30 percent of children were suffering from malnutrition, and 40 percent of adults were functionally illiterate. Added complications were brought about by the mass exodus of educated and professional Jamaicans from the island throughout the 1970s. As much as 15 percent of the total population left Jamaica in the 1970s; much of this group comprised lawyers, doctors, scholars, and other skilled professionals. The civil rights movement made the United States a particularly appealing destination for this group.

Cultural Contributions of Jamaican Americans

Jamaicans have contributed to increased political engagement and activism in the black community since before the dawn of the 20th century. Influential 19th-century abolitionist writer and Liberian colonial-era leader John Brown Russwurm was of Jamaican descent. Marcus Garvey, a Jamaican immigrant who arrived in the United States in 1916, led a worldwide pan-Africanist, economic empowerment movement known as Garveyism. At its height, his Universal Negro Improvement Association had an estimated six million members in over 700 chapters across the globe.

Since that time, a number of Jamaican Americans have become civic leaders: Colin Powell, former secretary of state and chairman of the Joint Chiefs of Staff; Susan Rice, U.S. ambassador to the United Nations; David Patterson, former governor of New York; Anthony G. Brown, lieutenant governor of Maryland; Kamala Harris, attorney general of California; Congresswoman Yvette Clarke of New York; James S. Watson, one of the earliest black judges in the state of New York; and Kenneth Reeves, mayor of Cambridge, Massachusetts.

Jamaican Americans have made many significant contributions to arts and entertainment. Reggae, the Jamaican-imported music that has had a global impact, has influenced various American musicians from Stevie Wonder and Lauryn Hill to Pitbull and Gwen Stefani. Americans of Jamaican descent including Africa Bambaataa, KRS-One, Heavy D, Busta Rhymes, Slick Rick, Missy Elliot, Christopher Reid (of Kid 'n Play), Luther

Campbell, Sandra Denton (of Salt-n-Pepa), Heavy D, Travie McCoy, DJ Drama, and the Notorious B.I.G. have been at the vanguard of hip-hop music since its genesis. Grammy Award winners Gil Scott-Heron and Chrisette Michele have been acclaimed for their jazz recordings.

Jamaican American actors have had extensive careers in film (Harry Belafonte, Delroy Lindo, Madge Sinclair), on television (Kim Fields, Wentworth Miller, Dulé Hill), and on stage (Sheryl Lee Ralph, Corbin Bleu, Lillias White). Several popular fashion models, including Naomi Campbell, Tyson Beckford, and Grace Jones, are of Jamaican descent. The Jamaican American experience has been chronicled on film in *Belly* (1998), *Shottas* (2002), and *Hoover Street Revival* (2002) and on stage in *Reggae* (1980) and *Jamaica* (1957), as well as in novels by Claude McKay, Thomas Glave, and Staceyann Chinn.

Furthermore, American athletes of Jamaican descent have excelled in a number of sports, including basketball (Patrick Ewing, Simone Edwards, Ben Gordon), track and field (Carl Lewis, Sanya Richards-Rodd, Sandra Farmer-Patrick), baseball (Charles "Chili" Davis, Justin Masterson, Rolando Roomes), football (Dwight Freeney), skiing (Errol Kerr), and soccer (Jeff Cunningham, Robin Fraser). In 2007, Barrington Irving became the youngest person to circumnavigate the globe alone at age 23.

Japanese American Citizens League

The Japanese American Citizens League (JACL) is the oldest and largest civil liberties group representing Japanese Americans in the United States. Its existence is the result of the many statutes that restricted the freedom of Japanese Americans in the early 1900s. This group has been instrumental in working with the U.S. government to protect the freedom and rights of Americans, and it has promoted and pursued reparations and education about Japanese internment camps in the United States during World War II. The JACL continues today to advocate for equality and justice for all Americans.

As a nonprofit organization, the JACL has a mission of advocating for the civil and human rights of Japanese Americans and all Americans. Its vision is to honor diversity and to demonstrate and support respect for fairness, equality, and social justice. It aims to support and maintain the cultural heritage and values of Japanese Americans, as well as educate about the lives and experiences of Japanese Americans.

The Japanese American Citizens League was founded in 1929 and held its first national convention in 1930 in Seattle. At that time, the majority of Japanese Americans were living in California, a state that had over 100 statutes restricting their rights. The JACL initially had several aims, including supporting World War I veterans of Asian descent attempting to obtain U.S. citizenship. It also advocated for the right of Japanese Americans to serve in the U.S. military.

The JACL was instrumental in the elimination of legislation that contained discriminatory immigration quotas, antimiscegenation laws, and property rights. It has worked since its inception to eliminate discriminatory language from government and legal documents at the local, state, and national levels.

Response to Japanese Internment

During World War II, a time of anti-Japanese sentiment, the U.S. government adopted Executive Order 9066 in 1942. President Franklin D. Roosevelt signed this order requiring people of Japanese descent living in the United States to report

to internment camps with only the few possessions they could carry in sacks. Their placement in a camp was solely based on their ethnicity. At the time, the JACL did not actively oppose this government directive because the organization did not want to increase the already existing distrust and hatred toward Japanese Americans.

However, after the war, the JACL worked to reacquire the rights Japanese American citizens had lost during World War II, including the ability to purchase and own land in California. It assisted those placed in internment camps in dealing with their property losses and pursuing redress for these losses. In 1944, though unsuccessful, the JACL filed a legal brief with the U.S. Supreme Court in support of the *Korematsu v. United States* case, which challenged the legality of the orders that forced those of Japanese descent into relocation camps.

In 1988, after the JACL spent many years pursuing reparations for internees, the U.S. government, under the leadership of President Ronald Reagan, finally issued an official apology and some monetary reparations for those whose rights were violated by the forced segregation and internment during World War II.

Twenty-First-Century Agenda

Many activities represent the direction of the JACL in the early 21st century. Although the organization was founded to advocate for the rights of Japanese Americans, this goal has been expanded to include all Asian Pacific Americans and equality for all Americans, generally. This is demonstrated through the organization's aim of eliminating all discrimination and its support of affirmative action, immigrant rights, and same-sex marriage rights.

The JACL also works to combat anti-Asian hate crimes and is involved in many legal cases in support of this objective. Its encouragement and support of youth and leadership development are demonstrable through the many scholarships, internships, and fellowships offered annually. They provide opportunities for young adults to become familiar with and active in legislation in support of the JACL's goals. The JACL also develops and conducts many types of workshops throughout the United States. These include citizenship workshops to support elderly Japanese in

their efforts to obtain U.S. citizenship. It also has workshops to educate the general public about the Japanese American experience, including the World War II internment camps and related prejudices.

Some of these workshops are designed to aid teachers in their development of curriculum to educate their students on these topics. The JACL also has successfully obtained, and continues to campaign for, federal funding for the preservation of the World War II Japanese internment camp sites and artifacts. To further educate the public about the Japanese American experience, it has published books and other materials with relevant information, including a biweekly newspaper, *Pacific Citizen*.

In 2012, there were over 23,000 members of the JACL throughout the United States. The national organization comprises seven districts based on geographical location. Each district contains many local chapters, with a total of 112 local chapters throughout the country. There are elected leaders at all levels. The national headquarters are located in San Francisco, and there are national offices with locations in Seattle; Chicago; Washington, D.C.; Los Angeles; and Fresno.

Japanese American Internment

Following the Japanese attack on Pearl Harbor on December 7, 1941, President Franklin D. Roosevelt ordered the military to relocate nearly 120,000 individuals of Japanese ancestry (two-thirds of whom were U.S. citizens) who lived on the coast of the United States to internment camps located farther inland. They were forced to leave their homes as a preventive measure against any sabotage or espionage that might be perpetrated against the United States during World War II.

In 1944, the Supreme Court ruled against the detention of U.S. citizens without cause and rescinded the order. The last camp closed in 1946. A previous study conducted by the State Department had concluded that the people of Japanese ancestry living on the U.S. west coast posed no threat to the United States, but after the assault on Pearl Harbor, President Roosevelt issued Executive Order 9066, which placed the matter under the jurisdiction of the Secretary of War. The U.S. Western Defense Command designated the west coast and the border of Arizona as an exclusion zone and issued orders for all Japanese men, women, and children living in the area to be removed to relocation centers.

Under the jurisdiction of the War Relocation Authority, individuals were rushed into temporary quarters arranged at fairgrounds or former racetrack stables. Allowed to take with them only what they could carry, people boarded trains without knowing their destination and were deposited at army-managed assembly centers. With the U.S. victory over the Japanese at Midway in June 1942, and thus the removal of any likelihood of attack by the Japanese on the mainland, the relocation program forged ahead and moved the evacuees from their temporary quarters to 10 relocation centers. They were Heart Mountain in Wyoming, Minidoka in Idaho, Topaz in Utah, Amache in Colorado, Tule Lake and Manzanar in California, Poston and Gila River in Arizona, and Rohwer and Jerome in Arkansas. Because most detainees were evacuated from the west coast and had no idea of their destinations, they failed to pack appropriately for winters like those in Wyoming.

The sparse facilities in the internment camps met international laws but left much to be desired. Many structures were quickly built by contractors during the summer of 1942 and were poorly equipped for family living. Because most detainees were evacuated from the West Coast and had no idea of their destination, they failed to pack appropriately for winter weather.

Many of the dwellings were tar-papered barracks built for soldiers; they were only partially completed and contained no plumbing or cooking facilities. Each block contained a mess hall and facilities for latrines, showers, and laundry. The centers were enclosed with barbed-wire fences and was watched by army guards in watchtowers. The residents faced problems of housing, food, employment, medical care, education, internal security, and religious worship.

In the centers, there were three groups of residents: the Issei, the elders, who had been born in Japan and had come to the United States during

the early 20th century; the Nisei, the second-generation, American-born citizens of the United States; and the Kibei, also second generation and American-born, who had received much of their education in Japan, and were more Japanese than the Issei. Dissatisfaction arose in the close living quarters between pro-Japanese and pro-American residents, whose points of view regarding their lack of freedom, loss of family controls, and pressure from outside extremist groups diverged.

The discontent, fueled by hatred and anxieties, led to physical violence, frequently from

gang-related beatings; consequently, the War Relocation Authority transported 15,000 persons in and out of Tule Lake, the segregation center. Tule Lake was a large center that was the site of two outbreaks of violence and was under military control for a time. Persons designated for detainment at Tule Lake had applied for repatriation to Japan and had not withdrawn their applications; those who had answered “no” on the loyalty oath (some were provided opportunities for reconsideration); those with indications of hostile behavior on their record; and family members who elected to remain with the family.

At the beginning of Japanese American confinement, farm labor was desperately needed, primarily in sugar beet fields. The War Relocation Authority director proposed the formation of a work corps, but when the idea was rejected by the evacuees, a plan was made for seasonal leave. Soon, 10,000 evacuees were on seasonal leave, and some students were granted educational leaves.

Short-term medical or personal leave was also granted, as was indefinite leave for specific jobs in agreeable communities. Also, as many of the 6,000 Nisei in the armed forces had earlier been dismissed as unacceptable, the 442nd Combat Team, a voluntary unit consisting of about 6,000 volunteer Japanese Americans, was organized. During the war, approximately 9,000 Japanese Americans served with the unit.

In 1943, the War Relocation Authority, feeling that there was slight chance of any evacuee posing a threat to the war effort, negotiated with Washington officials to allow the evacuees to return home. The announcement of the closing of all centers came at the same time that the U.S. Supreme Court declared a revocation of the relocation orders.

Returning evacuees faced racist opposition as terrorists burned their property or frequently shot into homes to frighten evacuees off in plots hatched to steal their land. However, through the dissemination of large amounts of factual information about the Japanese Americans to the local communities, and through the press and radio, racial intolerance decreased.

Japanese Americans

Japanese Americans constitute one of the oldest Asian American groups in the United States; they are also the only group to experience a decline in numbers, beginning in the 1980s. This decline is mainly because of the lack of new, large-scale immigration from Japan and because of the high rate of out-marriage, that is, interracial or intra-ethnic marriages. Japanese Americans have made substantial contributions to American literature, politics, music, law, and other areas of culture and society.

On May 5, 1806, Japanese survivors of the disabled *Inawaka-maru* arrived in Hawai‘i, which at that time was still an independent country. According to Paul Spickard, the first attempt in 1868 to bring Japanese laborers (from Yokohama) to Hawai‘i ended in failure. Another attempt, in 1869, to establish a settlement in Gold Hill, near Sacramento, California, also failed. Large-scale importation of Japanese labor to the Kingdom of Hawai‘i—eventually the 50th state of the United States—began in the 1880s, after Japan legalized emigration, and when the modernizing effort of the Meiji Restoration brought unprecedented social and economic upheaval and distress to the Japanese. Farmers lost their land and merchants their businesses as the country painfully adjusted to its

entry into a global capitalist system by veering from inflation in the 1870s to depression in the 1880s. City wages were low, and the government attempted to suppress labor unrest.

Beside labor activists, emigrants also included political refugees opposed to Meiji policies and draft dodgers after Japan established national conscription in 1873, and then entered a series of foreign wars: the Sino-Japanese War of 1894 to 1895, and the Russo-Japanese War from 1904 to 1905.

Samurai lost their positions and had to subsist on government pensions; some ex-samurai began to emigrate later in the Meiji period, when their fortunes further declined. Recent scholarship indicates that women composed 20 percent of earlier emigration. Many of the emigrants were Christian, establishing communities in Brazil and Peru.

Japanese immigration to the continental United States took place mainly in the 1900s and 1910s, with numbers increasing after passage of the Chinese Exclusion Acts of the 1880s. They came from Hawai'i or directly from Japan, and they took the place of Chinese labor in the mines, fish canneries, and lumber industry. Increasingly, they also took up small-scale farming. The first port of entry in the United States was Seattle; eventually, Japanese migrants could be found throughout the western states.

The rise of Japan affected Americans' perception of Japanese laborers, in that they were more highly regarded than the Chinese. The Japanese government actively sought better treatment for the Japanese in the United States. Nonetheless, virulent anti-Asian agitation resulted in the Gentlemen's Agreement of 1907, which included the stipulation that the government would limit even further its issuance of travel documents to Japanese wanting to come to the United States.

In the 1910s, the number of female Japanese immigrants increased, while the total number of Japanese immigrants began to decline. With more women arriving, this first generation—the Issei—changed from predominantly male to female family units. The second generation is known as Nisei (born between 1915 and 1940), the third generation is called the Sansei, and the fourth generation is Yonsei. Immigration legislation in 1924 banned all new Japanese immigration.

Japanese Americans in Hawai'i

The decimation of the native Hawai'ian population throughout the 19th century led to plantation owners bringing in Chinese, Japanese, Puerto Rican, Korean, and Filipino labor. On February 8, 1885, 153 Japanese arrived to work on sugar cane plantations exclusively owned by American businessmen. In 1890, the number of arrivals rose to over 12,000. By 1898, 60,000 lived in Hawai'i. Until 1930, that number increased by 30 percent every 10 years.

Life on the plantations was harsh, and workers often had to extend their contracts in order to pay off the cost of the passage and other debt owed to the plantation. Owners sowed division among the ethnic groups that worked for them, primarily by segregating the various groups into separate camps. In the 2000 U.S. census, Japanese Americans—at 201,764—constituted the majority of Hawai'i's Asian-descended population. This number decreased to 185,502, according to 2010 census figures, making Japanese Americans the second-largest Asian group, after Filipino Americans.

Japanese Americans From 1900 to 1941

The Issei relatively quickly became farmers and small-scale merchants. According to Spickard, a 1929 survey in California found that 51,000 independent farmers either owned or leased farmland, while another 13,000 worked as hired field hands. In the late 19th and early 20th centuries, Alien Land Laws were passed in order to prohibit “aliens ineligible for citizenship” from owning agricultural land. The Issei tried to skirt these laws, either by leasing the land or by placing land titles in the names of their children, the Nisei. Eventually, such loopholes were closed.

Although the Nisei were born in the United States, they faced discrimination in education, jobs, and other facets of civic life. This led the Nisei to develop a social world that consisted of everything that could be found in Anglo-American society, including baseball and football leagues, ballroom dancing, homecoming events, churches, Boy Scout troops, and beauty pageants. Nisei were fully acculturated Americans, yet they could not find work in mainstream America; antimiscegenation laws further segregated the Japanese American community from mainstream society.

World War II and Executive Order 9066

Pearl Harbor and Executive Order 9066 still came as a shock to the Japanese American community. Approximately 120,000 Japanese Americans were ordered to evacuate to assembly centers, from where they were taken to 10 internment camps scattered throughout the western interior of the United States. Many were forced to sell their shops and belongings at a tremendous loss in order to meet evacuation deadlines. The harsh life of the camps has been vividly depicted in literary and historical narratives. It took the community decades to recover from the trauma of the period. Even though Nisei knew that they had not been disloyal to the United States and that they did not deserve to be placed in concentration camps, many felt shame and anger at what had happened to them and their Issei parents. For decades after the war, many formerly interned Japanese Americans refused to talk about their experiences, even to their children, the Sansei.

Camp conditions were difficult. Conflicts in various camps among the communities made the situation worse. Some Japanese Americans blamed members of the Japanese American Citizens League (JACL) for their role in the internment; to these Japanese Americans, the JACL had talked the rest of the Japanese Americans into going quietly. In a few camps, inmates attacked JACL members. In the 1960s, the JACL again came under intense criticism from the Sansei for the same reasons. Contrary to popular perception, a small but significant group of Japanese Americans protested their treatment, approximately 18,000, according to Spickard.

Other Japanese Americans—outraged at their treatment—demanded repatriation to Japan. Resistance came in the form of the refusal to sign the loyalty oath, in work stoppages, or in open protests. Some Nisei refused to be drafted into the U.S. Army while their families were still interned. However, 2,355 interned Nisei joined the military; others signed up after their release from the camps. Altogether, 20,000 Japanese Americans served in the armed forces during the war.

By the end of 1944, only 35,989 Japanese Americans were allowed to leave the camps: college students and individuals who could find jobs. In January 1945, approximately 75,000 Japanese Americans were still imprisoned in the camps.

Upon their release, some attempted to return to their prewar homes; most ended up resettling elsewhere. Most communities never recovered from the war or internment. The Redress Movement began in 1976 and concluded in 1990, when the first checks of \$25,000 per person were mailed (the last checks were mailed in 1994). By 1990, most of the Issei generation had passed away. However, the movement brought the Japanese American community together and made the rest of the country aware of the injustice suffered by Japanese Americans during World War II.

Post–World War II to Present Day

Sansei strived to recover from the war: They went to college and did whatever they could in order to send their children, the Yonsei, to better schools and into the professions. Postwar Japanese Americans became the original Asian model minority, even as many of the older Sansei entered the tumultuous 1960s and 1970s opposing the Vietnam War and criticizing American policies at home and overseas. They reacted to the postwar trauma suffered by their parents and grandparents by demanding the truth about the internment and by joining, and helping build, the pan-ethnic Asian American movement. They also began to speak up and to openly oppose racism and injustice. The third generation also began to assimilate more than previous generations by marrying outside their ethnicity in significant numbers. In the 1980s, 50 percent of Sansei married someone of a different ethnicity. This trend has continued in the Yonsei generation.

U.S. Census on Japanese Americans Today

Figures from the 2000 census reveal that over 34 percent of Japanese Americans live in California and 26 percent in Hawai'i. The size of this ethnic group has decreased from about 848,000 in 1990 to 797,000 in 2000. However, in 2002, the U.S. Census Bureau published statistics that showed 1.15 million Americans who claimed at least partial Japanese ancestry. From a different perspective, Japanese Americans have doubled in number from 1970 and have tripled in number from 1950, with two-thirds born in the United States. Japanese Americans who selected for two or more races increased by more than 50 percent, from 296,695 in 2000 to 462,462 in 2010. The

total population of Japanese Americans grew from 1,148,932 in 2000 to 1,304,266 a decade later. In the early 1970s, about 4,000 Japanese immigrants arrived annually in the United States. That number rose to 25,000 per year in the late 1980s.

Jazz and Ethnic Diversity

As a primarily urban genre originating in early 20th century America, jazz embodies the harmonies and tensions of ethnic diversity. Its originality as an art form derives not only from its instrumental ensembles, characteristic chords and key signatures, and use of popular standards but also from its musical enactment of American history, presence, freedom, and multiple possible futures. In its improvisational, collaborative form, as well as the identities of its performers and audiences, jazz lyrically captures histories of ethnic struggle, breaks down ethnic barriers,

and generates possibilities for emancipation and empowerment.

Locations of Jazz in America: Cities, Regions, Ethnic Landscapes, and Race

The earliest jazz thrived in New Orleans in the 1890s and then came into its own as a distinct music from the turn of the 20th century to World War I. Jazz moved up the Mississippi River to Kansas City and north to Chicago. New Orleans Jazz originated not only in clubs but also in the late 19th-century marching band tradition of performance in street parades and funeral processions distinctive of the city. Kansas City jazz in the 1930s was swing. White-owned clubs hosted “battles” of the bands involving intense musical sessions marked by instrumental competitions among the musicians, most of whom were touring African American performers. In Chicago, there existed two jazz cultures in which white musicians developed music borrowed from African American musicians from New Orleans.

The 1920s became known as the Jazz Age in the United States. It was at this time that jazz became popular in New York City, particularly at clubs in Harlem, most famously the Cotton Club in the 1920s and 1930s and the Apollo Theater from the 1930s. At the Cotton Club, jazz musicians were almost exclusively African American, while audiences were predominantly white, but this was not the case with jazz elsewhere in New York City or in other cities. In New Orleans and Kansas City, the spirit of the music was shared among all ethnicities, even as performances typically exhibited stark racial divides between white audiences or owners and black performers. In New York City and Chicago, jazz was often localized to particular neighborhoods, such as Harlem. Another hotbed of jazz in New York City was a single city block on the west side of midtown Manhattan—West 52nd Street between 5th and 6th Avenues. There, in contrast to the Cotton Club some 73 blocks north, racial barriers were erased as both white and African American musicians entertained an ethnically diverse audience of jazz enthusiasts.

U.S. Jazz Cultures Engage the Music of Latin America

The first truly international genre of jazz was bebop, which emerged from New York City's jazz

scene in the 1940s. One of the progenitors of the movement was African American trumpeter John Birks “Dizzy” Gillespie, originally from the American south. He was among the first U.S. jazz musicians to embrace musical styles of other cultures, breaking down ethnic barriers in the process. In performing a genre of Afro-Cuban music, Gillespie introduced Latin American music to the jazz culture in the United States. In 1954, a contemporary of Gillespie, African American jazz trumpeter and composer Kenny Dorham, recorded what he called an “Afro-Cuban” album dedicated entirely to such Latin jazz-centered rhythms, time and key signatures, and melodic and harmonic motifs. The album included an integrated band of African American jazz musicians and Latinos. Gillespie composed music for his own band that incorporated the rhythms of Latin America in songs such as “Tin Tin Deo” and “Manteca.” He recorded such compositions with ethnically diverse musicians, including Latinos.

Latino percussionist Tito Puente composed, performed, and recorded a much more developed Latin jazz throughout his long musical career. He first received recognition in jazz in the 1950s, when he began integrating Afro-Cuban rhythmic and compositional devices into his recorded music.

Sonny Rollins, an African American jazz saxophonist-composer, was born and raised in Harlem, but his parents were from the U.S. Virgin Islands. This ancestry informed his music. His composition “St. Thomas” framed a popular melodic motif from the Caribbean with a calypso structure.

Formative jazz saxophonist and clarinetist Sidney Bechet was steeped in the fin de siècle Creole culture of his native New Orleans. He was a pioneer of Latin jazz in the United States, performing and recording songs infused with Latin American rhythms and compositional motifs for audiences as early as 1938.

The African American Experience of Jazz and Its Political Representations

By the 1960s, avant-garde jazz had emerged as a vehicle for African American musicians to protest racial segregation and institutional racism in the United States. In 1959, bassist Charles Mingus composed and recorded for a major label a song titled “Fables of Faubus,” protesting Arkansas’s

segregationist governor Orval Faubus, who had attempted to prevent the court-ordered desegregation of Little Rock’s Central High School in 1957. African American writer LeRoi Jones (known today as Amiri Baraka) addressed issues of race by hosting a panel on race in jazz that was published by the music’s authoritative trade magazine *Down Beat*. Jones also recited his poetry of social protest and descent in a jazz recording session with the New York Art Quartet in 1964.

African American avant-garde jazz saxophonist and composer John Coltrane wrote a song titled “Alabama” as a response to a Ku Klux Klan bombing of a Baptist church in Birmingham in 1963 that claimed the lives of four girls. Coltrane performed his song during a live recording of an album at the Birdland Jazz Club in New York City in front of an ethnically diverse audience. He also performed the song for an episode of a popular jazz series on television, broadcast to an ethnically diverse audience in 1960s America. In 1961, he penned the composition “Song of the Underground Railroad” for his *Africa/Brass* recording sessions that were released as an album that year.

A group of African American jazz musicians and composers living in Chicago formed an artists’ collective named the Association for the Advancement of Creative Musicians (AACM). It offered educational and artistic opportunities to younger generations of African American jazz musicians.

Female African American jazz musicians also emphasized themes of racism. The jazz popular among African Americans in the 1920s included the songs of African American blues singer Bessie Smith. She grew up in the south in the early 1900s, and her lyrics emphasized themes common in early-20th-century African American culture. The formative African American jazz vocalist Billie Holiday performed a composition titled “Strange Fruit” in the 1930s that protested racism. She first performed “Strange Fruit” in Greenwich Village at Café Society, the first racially integrated jazz club in New York City. African American jazz singer Nina Simone was also a civil rights activist.

Prominent African American bandleaders included Fletcher Henderson, Count Basie, Duke Ellington, and Billy Eckstein. These bandleaders employed African American musicians. A jazz pianist who originally worked in the Fletcher

Henderson band, African American Sun Ra, would go on to start his own band, named the Sun Ra Arkestra, and pioneered a genre of intellectual thought known as Afrofuturism, extending a form of Afrocentrism to American arts and culture.

Contributions of Jewish Americans to Jazz

Jewish American bandleaders in jazz emerged in the 1920s. These included Benny Goodman, Artie Shaw, and Buddy Rich. Goodman was among the first bandleaders in jazz to employ, record, and perform with a racially integrated band. The same night as his famed 1938 Carnegie Hall performance in New York City, his orchestra performed at the Savoy Ballroom in Harlem in a battle of the bands competition with the African American jazz band led by Count Basie. Goodman's orchestra had also participated in the same battle of the bands format a year earlier, at which time the pairing was with the African American jazz musician and bandleader Chick Webb's big band. As on the baseball diamond with exhibitions pitting all-white Major League teams like the New York Yankees against all-black Negro League teams, jazz venues in this era enabled audiences and performers to glimpse all too briefly a possible, desegregated future in America.

Jewish American jazz songwriters and composers were quite common in the first half of the century, including many of the music's most prolific American composers. The Gershwin brothers, composer George and lyricist Ira, were brought up in a Jewish community in Brooklyn, New York. George Gershwin was fascinated with African American music and culture from the American south and devoted his 1935 opera *Porgy and Bess* to that theme. Several compositions from that work became jazz standards performed by instrumentalists and vocalists of diverse ethnicities. These jazz standards, most notably "Summertime," are still performed and recorded today by jazz musicians of all ethnicities.

Another prominent Jewish American jazz composer was Irving Berlin. Like the Gershwin brothers and other Jewish American jazz songwriters, he spent time working at Tin Pan Alley in New York City, an area of Manhattan known as a gathering point and collective for leaders in music lyrics and composition at a time when jazz was among the most popular music in America.

Also popular was Jewish American jazz songwriter Harold Arlen. Yet another who earned wide recognition in the popular culture of the Jazz Age of the 1920s and the swing and big band periods of jazz in the 1930s and 1940s was Jerome Kern. Richard Rodgers and Lorenz Hart were other notable Jewish American songwriters popularizing jazz in America at the time.

Jewish American saxophonist and composer John Zorn led an avant-garde jazz quartet named Masada in the 1990s and started his own record label named for the Hebrew term *Tzadik* (generally translated as "righteousness" or "justice"). Zorn's record label continues to commission a series of albums devoted to Radical Jewish Culture, some of which are jazz recorded by Jewish Americans. He has often performed ethnically robust music on New York City's Lower East Side, historically home to a significant portion of Jewish Americans and their former generations of immigrants who entered the United States by way of Ellis Island.

Jewish American producer George Wein has been a major patron and promoter of jazz since the second half of the 20th century. He has organized many jazz festivals. Another Jewish American, Norman Granz, produced and promoted concerts known as "Jazz at the Philharmonic" while trying to racially integrate jazz beginning in the 1940s. Jewish American jazz critic Nat Hentoff, formerly of the *Village Voice*, *Downbeat*, and many other publications, is a highly respected name among the music's followers and has historically befriended a group of racially diverse musicians, sharing their stories with jazz audiences.

New Ethnicities Represented in the Jazz of the United States

A significant number of Israeli Americans have emerged on two jazz scenes in the United States. Many originally studied jazz at music conservatories in New York City and Boston. The famed Berklee College of Music in Boston has gained a reputation for training prominent Israeli American jazz musicians. The same is true for the New School for Jazz and Contemporary Music and Manhattan School of Music in New York City.

Indian (Asian) American jazz pianist and composer Vijay Iyer and saxophonist and composer

Rudresh Mahanthappa have emerged in recent years as new leaders in the music. Asian American violinist and composer Jason Kao Hwang and percussionist and composer Susie Ibarra have also recently received critical acclaim from the collective jazz press.

Jazz Singer, The

Directed by Alan Crosland and produced in 1927, *The Jazz Singer* was the first feature film to incorporate music and voice into a film. Starring Al Jolson, the film was based on Samson Raphaelson's short story from 1922, "The Day of Atonement." *The Jazz Singer* was a landmark film for two reasons: First, it showcased the rise of sound technology and its integration into the movies in the 1920s, and second, it reflected the general acceptance of jazz music and Jewish immigrants' acculturation to American society.

The story of *The Jazz Singer* is that of a conflict between personal ambitions and cultural tradition. On one hand, it illustrates Jakie Rabinowitz's aspiration to become a popular singer. On the other hand, born to Jewish immigrant parents in New York, he is expected to become

the cantor in their synagogue, as the successor to his father. He defies his family's Jewish tradition by leaving the family to pursue his career in jazz. He changes his name to Jack Robin and experiences enthusiastic receptions from the audience at a cabaret.

With the help of a musical dancer, Mary Dale, he secures his career on the vaudeville circuit. He returns to his father only on his 60th birthday. Jack sings and plays Irving Berlin's "Blue Skies" for his mother on his father's piano. His father tells Jack to stop and leave the house. Jakie's father becomes ill only two weeks after this encounter. His final wish is clear: He wanted his son to sing "Kol Nidre" for Yom Kippur, the Day of Atonement, as a substitution singer at the synagogue. Jakie, however, was scheduled to perform on Broadway. He manages to fulfill his father's wish and still makes it to Broadway.

Immigrants and their families, especially youth who were born in the United States, undergo difficult decisions about the old world values that their parents subscribe to and the new world values that are frequently more appealing to them. *The Jazz Singer* promotes balancing of ethnic identity and acculturation to the new society to achieve economic success in the early 20th century. For Jakie, the means for such prosperity is jazz, the symbol of American culture, values, and lifestyles.

The Jazz Singer is also significant because of its use of blackface in Jack Robin's Broadway stage production. Jack wears a minstrel costume to prove his American identity. This is a replication of earlier European immigrants' assimilation processes, through which they resorted to blackface in order to integrate into their new American society by participating in a form of popular culture that was prototypically American. It granted them privileged status at the cost of African Americans. Although Samson Raphaelson explains that the film used blackface not as a means for Jews to attain whiteness, but for them to realize modern Jewish identity, it is ironic that the film reinforced stereotypical depictions of African Americans from the 19th century. The author also explains that the inspiration of his short story came from Al Jolson, a Russian-born Jewish performer who performed in the musical *Robinson Crusoe, Jr.*, in blackface.

Critical Response

Critics have reacted to Jack's blackface performance in different ways. Corin Willis recognizes that blackface plays a central role in the film, more so than in other films produced around the same period. W. T. Lhamon discusses that blackface was a sense of agency that Jack found as a Jewish singer. Through blackface, he found his identity in a multicultural society. Lisa Silberman Brenner is sympathetic to Raphaelson. She agrees that blackface was a new form of Jewish identity of the 1920s. Seymour Stark, however, disagrees. He is in agreement with other scholars who argue that *The Jazz Singer* simply underscored African American stereotypes.

The Jazz Singer is often erroneously considered the first sound film. Although the movie's distributor, Warner Bros. studio, was the first company to add sound to movies with music and conversations, an American inventor, Lee de Forest, had produced early sound-on-film movies using Phonofilm four years before *The Jazz Singer* premiered. The film, however, was the first feature-length sound movie. Although it heavily relied on title cards and had limited voice recordings, it effectively used spoken dialogue to capture Jack's struggles between two worlds.

Three additional versions of the film with the same title exist. In 1952, Danny Thomas and Peggy Lee starred in its television remake. In the 1959 television remake, Jerry Lewis played Jack's role. Despite the name, the son was not a jazz singer. Furthermore, there was no blackface in this version. In 1980, Neil Diamond played the role of Jack. The 1952 version, unlike others that portrayed the Jewish family as a lower-class family, positioned it in the middle class. A significant difference between the original version and the 1959 version is that the late-1950s creation incorporated a clown face in lieu of blackface. The 1980 production, however, went back to the portrayal in blackface.

In 1929, *The Jazz Singer* was nominated for an Oscar for Best Writing (Adapted Screenplay) for Alfred A. Cohn and won a Special Academy Award given to Warner Bros.' production chief, Darryl F. Zanuck.

Jehovah's Witnesses

Jehovah's Witnesses is a religion with origins in late 19th-century America. Of primary importance to the denomination is its focus on evangelism, millenarian beliefs, resistance to many outward forms of patriotism, and biblical literalism. In the mid-20th century, Jehovah's Witnesses became the central figures in several key legal trials that helped reshape American law as it relates to the free exercise of religion, and church and state law. Today, the organization represents a diverse body of believers throughout the world and a variety of ethnic groups within the United States.

Initially, the community that would come to be referred to as Jehovah's Witnesses was known simply as Bible Students. This group united through their mutual respect for the writings of a minister in Pittsburgh, Charles Taze Russell. In 1879, the community began to publish a monthly periodical, *Zion's Watchtower and Herald of Christ's Presence*, the predecessor of the current *Watchtower* newspaper. Between 1886 and 1904, Russell also published his views in a popular six-volume book series, *The Millennial Dawn* (later renamed *Studies in the Scriptures*). His teachings rejected Trinitarian beliefs, the inherent immortality of the human soul, and the existence of

hellfire. Inspired by Adventism, most important to Russell was the message that the millennium was fast approaching. He emphasized several prophetic dates, pruned from his reading of biblical passages but seemingly equally grounded in a belief that the Great Pyramid of Giza represented a blueprint for the last days' events.

In these initial years, Bible Students met in congregations that elected their leadership. In many ways, Russell only led the movement inasmuch as followers accepted his teachings as authoritative. In 1881, the Zion's Watchtower Tract Society, now known as the Watchtower Bible and Tract Society, was established as a headquarters for the Jehovah's Witnesses and the publishing house for the society's materials. In 1909, the Watchtower headquarters was relocated from Pennsylvania to Brooklyn, New York.

Joseph Rutherford and Nathan Knorr

Charles Russell died on October 31, 1916, and in time, he was replaced as president and editor of the *Watchtower* by Joseph Franklin Rutherford. Under Rutherford, various moves to centralize the organization and place more control in the presidency were initiated. Rutherford published a seventh volume of the *Millennial Dawn* series, which many Bible Students considered a reversal to some of Russell's theological tenants. Soon, the society determined to cease distributing the *Millennial Dawn* series and Russell's other writings altogether. Schisms broke out in 1917, and by the end of Rutherford's ministry, perhaps only 25 percent of the original followers of Charles Russell remained. Partly to distinguish between Bible Students who had left and those who remained under the Watchtower's leadership, Rutherford renamed his flock the Jehovah's Witnesses in 1931.

Rutherford's ministry saw great growth in membership as a result of an intensified emphasis on proselytization and a new prophetic date. In 1920, he published a book titled *Millions Now Living Will Never Die*, which claimed that in 1925, the world would see the resurrection of various biblical figures and the second coming of Jesus Christ. Although the botched calculation of dates of end times led to some disaffection, the proselytizing campaign garnered both an intensification of belief among Witnesses and extended knowledge of the sect, including new conversions.

During the 1930s and 1940s, Jehovah's Witnesses faced intolerance on both sides of the Atlantic. This was often based on the group's resistance to public demonstrations of patriotism. In Nazi Germany, Witnesses were imprisoned and sometimes placed within concentration camps for their refusal to offer open support to Adolf Hitler's regime. Thousands were executed. In the United States, Witnesses came under fire for refusing to enlist in the war and instructing their youth not to salute the flag. In many locations, laws were established to prevent door-to-door proselytizing and street preaching.

In 1938, a family of Jehovah's Witnesses brought a case against the Minersville, Pennsylvania, School District for the expulsion of their children after their refusal to recite the Pledge of Allegiance. In 1940, the Supreme Court in *Minersville School District v. Gobitis* upheld the school district's decision to enforce a mandatory pledge. However, three years later, the decision was overturned in a similar case: *West Virginia State Board of Education v. Barnette* (1943).

Another landmark case involving Jehovah's Witnesses was *Cantwell v. Connecticut* (1940). The case was appealed to the Supreme Court after three Jehovah's Witnesses were found guilty of disturbing the peace and proselytizing without a license for soliciting in the state of Connecticut. They denied disturbing the peace and argued that rules that forced them to obtain a license impeded their constitutional rights. The Supreme Court overturned the charges against the Cantwells and for the first time, argued that the First Amendment freedoms of religion should be applied to individual states as well as to the federal government.

In 1942, Nathan Knorr succeeded Rutherford upon his death. Under Knorr, in 1947, the Witnesses set out to produce a translation of the Bible. The first edition of the New World Translation of the Holy Scriptures was published in 1961, and it remains the denomination's official biblical translation. The translation has met criticism for siding with witness theology against more traditional readings of the scriptures. This involves rendering all references to deity as the Hebrew-based word Jehovah, even in the Greek New Testament.

After World War II, Jehovah's Witnesses continued to increase in membership. Perhaps the most important event to have occurred since the

publication of the New World Translation is the expected apocalypse in 1975. As with the 1925 date, Witnesses experienced a rival in membership and participation, leading up to the prophesied date. When 1975 came and went without any apparent fulfillment, hundreds of thousands of Witnesses left the organization. Since 1975, the Witnesses have not established dates for the apocalypse, although they insist on the imminent return of Christ and the establishment of his kingdom.

Beliefs and Organization

Although their core beliefs are distinct from Christianity, Jehovah's Witnesses subscribe to traditional morality shared by many conservative Christian denominations. The society teaches against fornication, adultery, and other extramarital sexual practices. Members are discouraged from drunkenness and tobacco, as well as foods prepared with blood. Witnesses do not celebrate Christmas, Easter, or other holidays that are considered pagan in their origins. In addition, members are warned against idolatry, including the worship of national symbols, as well as lending support to all governments, except Jehovah's Kingdom. Controversially, Witnesses are also well known for their teachings against blood transfusions.

Most distinctive of Jehovah's Witnesses theological teachings is the insistence that Jehovah is God's personal name, as well as an emphasis on specific ideas related to the afterlife and apocalypticism.

The denomination's structure is based largely on geography. Jehovah's Witnesses meet regularly at their local church buildings, which they refer to as Kingdom Halls. These local congregations are led by a body of lay male ministers referred to as elders. In turn, groups of approximately 20 congregations are referred to as circuits. Traveling circuit overseers, ministers who work for the Jehovah's Witnesses headquarters, visit individual congregations regularly. The international hierarchy of the Watchtower Bible and Tract Society is referred to as the governing body. This body is seen as a theocracy, consisting of representatives of Christ's Kingdom, directing the larger association.

A key component of Jehovah's Witness practice is proselytizing. This proves such a crucial dimension of the denomination that those who do

Jehovah's Witnesses are perhaps best known for their door-to-door efforts to spread their beliefs. If someone shows an interest in their beliefs, free home Bible studies are offered and are presented with the aid of books, brochures, and magazines. Some of their literature is available in 500 languages. Witnesses are told to devote as much time as they can to ministry and have to submit a monthly report to the elders.

not serve as missionaries are not counted on the official rolls of the organization. Thus, members are divided between those who can volunteer 10 hours a month, who are referred to as "publishers," and those who can volunteer substantially more, who are referred to as "pioneers." A segment of the denomination also volunteers at the national headquarters, where they look after the everyday affairs of the Watchtower Society.

Jehovah's Witnesses are frequently the focus of "anti-cult" or "counter-cult" groups targeting unorthodox forms of Christianity. Criticisms are often focused on the Witnesses' rejection of Trinitarian beliefs and millenarian beliefs, including the failed expectations of 1975. Particular attention is focused on the *Watchtower's* teachings on the 144,000. In 2012, Jehovah's Witnesses numbered roughly 7.5 million worldwide. There are over 1.2 million adherents in the United States. According to the most recent Pew U.S. Religious Landscape Survey (2008), Jehovah's Witnesses are one of the more diverse Christian bodies in the nation. The denomination's membership is 48 percent white, 22 percent black, and 24

percent Hispanic. They are growing at a rate of 2.4 percent, making them one of the fastest-growing denominations in the United States.

Jewish Americans

In September 1653, 23 Jewish refugees of Spanish and Portuguese origin fled the Inquisition in the Dutch colony of Recife, Brazil, and arrived by boat in New Amsterdam (later renamed New York City by the English). They were not warmly received.

Governor Peter Stuyvesant, a vehement anti-Semite, wanted to deport them at once, but he was overruled by his superiors at the Dutch East India Company in Amsterdam, and the Jews were grudgingly allowed to stay. Thus began the extraordinary saga of the Jewish presence in America, a presence that would prove disproportionately beneficial to every aspect of political, cultural, commercial, academic, philanthropic, and scientific life in the United States. Although the Jewish population of America is small—estimates range between 5.28 and 6.54 million, according to the 2010 North American Jewish Data Bank—their entry into the open and increasingly pluralistic environment of America enabled them to acculturate swiftly and productively.

Educationally, 59 percent of American Jews have completed college or postgraduate education, compared to 27 percent of Americans in general. Approximately 30 percent of all Ivy League students are Jewish, as are 20 percent of all professors at elite universities. After the early years of anti-Jewish restrictions at the university level, many of America's top colleges have been led by Jewish presidents, including Rick Levin at Yale, Judith Rodin and Amy Guttmann at the University of Pennsylvania, Larry Summers at Harvard, James Freeman at Dartmouth, Harold Shapiro at Princeton, Larry Bacow at Tufts, Henry Bienen at Northwestern, Jeffrey Lehman at Cornell, and Stephen Trachtenberg at George Washington.

A total of 47 percent of American Jews report incomes of over \$100,000, compared to 19 percent of Americans in general. About 45 percent of the top 40 of the *Forbes* 400 richest Americans are Jewish, and 40 percent of the partners in leading law firms in Washington and New York are Jewish. A total of 37 percent of all American Nobel Prize winners are Jewish, as are 30 percent of all American Nobel Prize winners in science. Currently, three of the nine justices on the Supreme Court are Jewish, the highest number in the history of the court.

There are 13 Jews in the U.S. Senate and 27 Jews in the House of Representatives, a far higher proportion than Jews in the overall American population. However, the road to Jewish success in America was not always easy. Anti-Semitism, discrimination, quota systems, and occasional violence against Jews—most infamously, the mob lynching of Leo Frank in 1915—caused decades of anxiety and frustration in the Jewish community.

Ashkenazic and Sephardic Jews in America

The original Spanish Jewish community (Sephardim) was later joined by German Jews (Ashkenazim) after the failed revolutions in Europe in 1848. By 1880, the American Jewish population reached 250,000, mostly comprises secular, educated German Jews, although a minority of the original Sephardic community in New York remained influential.

It was not until the late 1880s that a massive wave of Jewish immigrants poured into America

from large areas of the Russian empire, home at that time to two-thirds of the world's Jewry. After the assassination of Czar Alexander II in 1881, an outbreak of anti-Semitic pogroms drove over 2 million Yiddish speaking Jewish immigrants into the free world of America and Canada.

Struggling to break out of the teeming and poverty-stricken ghettos of American cities, the eastern European Jews aroused increasing nativist anger and prejudice, leading ultimately to the passage of the National Origins Quota of 1924 and the Immigration Act of 1924. These anti-immigration edicts remained strictly in effect throughout the entire period of the Holocaust (1933–45), prohibiting entry of desperate European refugees into America and dooming hundreds of thousands of Jews to death in Nazi gas chambers.

Challenge of Anti-Semitism

Anti-Semitic attitudes remained very strong in America from the 1930s until the 1960s, as proven by the systematic polls conducted by the American Jewish Committee, and these attitudes affected official American policy against Jewish immigration. America's indirect role in the destruction of European Jewry remains a painful and fiercely controversial issue.

American Jews nevertheless proved deeply loyal to their adopted country: 250,000 Jews served in World War I, and 500,000 Jews served in World War II, half of all Jews in America between the ages of 18 and 50. A total of 11,000 Jewish soldiers died in battle in World War II. A total of 52,000 were given awards for bravery, including three Medals of Honor, 157 Distinguished Service Medals, and over 1,600 Silver Stars.

After World War II, anti-Semitic attitudes subsided, allowing unprecedented opportunities for Jewish professional and commercial advancement. Thousands of Jewish families joined the great American exodus to the suburbs, and thousands more moved further westward, ultimately making Los Angeles the second-largest Jewish community in America. In the 19th and 20th centuries, Jews methodically abandoned the idea of race as a means of group identification, especially after the nightmare of the Holocaust, and embraced the notion of cultural and ethnic identity instead. Jews characterize themselves

as a "people," a global and historical community with a shared history, religion, and cultural heritage, rather than a group defined by race or "blood."

Jewish responsibility for the security and welfare of all Jews became manifest in a vast network of communal organizations, both in the United States and in every country where Jews continued to live. Philanthropic federations in 227 cities in America currently raise hundreds of millions of dollars annually to help Jews locally, nationally, and globally. Hundreds of private Jewish charities benefit the state of Israel, Jewish day schools, Jewish hospitals, Jewish homes for the elderly, Jewish community centers, Jewish family and children's services, and Jewish vocational services. The Jewish community, from its origin in 1653, has been notably self-sufficient.

Jewish Religious Affiliation and Observance

Jews are religiously divided into four basic denominations—Orthodox, Conservative, Reform, and Reconstructionist—but only 3.4 million Jews call themselves "religious," according to a 2008 American Religious Identification Study. A 2003 Harris Poll puts the number of "strongly connected" Jews at 4.3 million, 46 percent of whom belong to a synagogue. That same study shows that 38 percent belong to Reform synagogues, 33 percent Conservative, 22 percent Orthodox, 2 percent Reconstructionist, and 5 percent other types. At one end of the religious spectrum, the number of Jews identifying themselves as only "culturally Jewish" has risen from 20 percent in 1990 to 37 percent in 2008, and Jews identifying themselves as having no religion rose from 8 percent to 15 percent from 1990 to 2008. At the opposite extreme, the number of Orthodox Jewish members of synagogues rose from 11 percent in 1971 to 21 percent in 2000, and the number of Ultra-Orthodox Jews in America rose from 360,000 in 2000 to 470,000 in 2006—an astonishing 9.4 percent of the total Jewish population in America.

American Jews tend to be significantly more secular than Christian Americans. According to the 2008 American Religious Identification Study, about half of all American Jews—including those who consider themselves religiously observant—claim that they have a secular worldview and see

no contradiction between that outlook and their faith. American Jews tend to be more atheist or agnostic, compared to Christians: A 2003 Gallup Poll found that 79 percent of Protestants and 90 percent of Catholics believe in God, compared to only 48 percent of Jews. When asked if they were “absolutely certain” of God’s existence, 66 percent of Americans said they were, and only 24 percent of Jews said the same. A 2009 Harris Poll showed that American Jews are the religious group most accepting of evolution, with 80 percent believing in the theory, compared to 51 percent for Catholics, 32 percent for Protestants, and 16 percent for born again Christians. Jews were also less likely to believe in supernatural phenomena such as miracles, angels, or heaven.

Jews and Politics

Throughout the 20th century, Jews have been engaged in the American political process with passionate fervor. Their 84 percent voter turnout rate far surpasses that of any other ethnic group, and though Jews account for only 2.2 percent of the American population, 94 percent of them live in 13 key electoral college states, which combined have enough electoral votes to elect the president. Though Jews span the political spectrum, the majority of Jews vote for Democratic candidates. In the 2008 presidential election, for example, 78 percent of Jews voted for Barack Obama, and only 21 percent voted for John McCain, despite Republican attempts to connect Obama to Muslim and pro-Palestinian causes.

Since 1916, when 55 percent of Jews voted for Woodrow Wilson, Jews have never wavered from their support of the Democratic Party: 90 percent voted for Roosevelt, and 90 percent voted for Lyndon Johnson against Barry Goldwater in 1964. Proportionately more Jews than Catholics voted for John Kennedy in 1960, and Hubert Humphrey and Bill Clinton each received an overwhelming 80 percent of the Jewish vote in 1968 and 1992, respectively. Even George McGovern, perceived by many to be potentially inimical to Jewish interests, received 65 percent of the Jewish vote in his race against Richard Nixon in 1972. The majority of American Jews support a liberal domestic political agenda. On any given issue—abortion, gay rights, same sex marriage, church–state separation, gender equality,

affirmative action, civil rights, free expression, and privacy protection—Jews far outdistance the closest ethnic group in support of liberalism.

Popular Culture

Perhaps the greatest Jewish impact on American life is in the field of popular culture. Aside from Walt Disney Pictures, Jewish “moguls” founded every major Hollywood film studio as well as the major radio and television networks—NBC, CBS, and ABC. Other Jews quickly assumed prominence in the fields of popular song, jazz, folk music, vaudeville, Broadway dramas, and musicals. In fact, Jews were so numerous in the Broadway musical and popular song writing fields that they became known as “Jewish industries.” Post-war American fiction was dominated by Jewish writers like Jerome (J. D.) Salinger, Bernard Malamud, Saul Bellow, Philip Roth, Norman Mailer, and Joseph Heller, and American poetry was enhanced by the works of Allen Ginsberg, Karl Shapiro, Charles Reznikoff, and Muriel Rukeyser.

Jews founded the comic book industry and continue to play a leading creative role in that industry. Joe Shuster and Jerry Siegel created the figure of Superman in 1938, and other Jewish writers and artists established Marvel Comics and all the superheroes that currently provide the biggest film blockbusters in contemporary American and global mass entertainment—Batman, the Fantastic Four, Spider Man, the Hulk, Captain Marvel, Thor, Iron Man, and the X-Men. Nor can one discuss the fashion and beauty industry without reference to Ralph Lauren, Calvin Klein, Ann Klein, Donna Karan, Isaac Mizrahi, Levi Strauss, Diane von Furstenberg, Kenneth Cole, and Helena Rubenstein.

Jewish Future in America

In America, Jews, like so many people around the world, are seeking personal, ethnic, and spiritual identity. Since the global Jewish population is only 13 million people, Jews worry about their demographic future. Inter-marriage rates in America are over 50 percent, and only one-third of children in these mixed marriages are raised as Jews.

The organized Jewish community has strived to retain Jewish commitment, particularly among the young. Birthright, a free, 10-day trip to Israel

for young Jews up to the age of 26, has graduated 300,000 people from the program, with encouraging results. Orthodox membership has surged, and Young Leadership Development programs in mainstream Jewish social and philanthropic agencies have successfully recruited new generations of communal leaders.

Jewish identity continues to coalesce around the two most important events in modern Jewish history—the Holocaust and the creation of Israel. Commemoration of the Holocaust and political and financial support of Israel have taken on religious dimensions. If the Holocaust represents the physical death of the Jewish people, the establishment of the Jewish state in 1948 represents their resurrection. “Am Yisrael Hai” (“the Jewish people live”) has become the rallying cry at every major Jewish demonstration. Since their quiet arrival in New Amsterdam in 1653, American Jews have overcome all impediments in their drive toward self-fulfillment, and in the process, they have added immeasurable benefits to every conceivable aspect of American life.

Jewish Federation

A Jewish federation is a community-based organization that raises money to support a variety of programs that provide charitable, cultural, social, and educational services to a local American

Jewish community, as well as to Jews living in Israel and other countries. As of 2012, there were about 200 Jewish federations in the United States and Canada, including federations in 40 states and the District of Columbia.

The federations enable local Jewish communities to organize their philanthropic activities. Beginning in the 1820s, as an increasing number of Jews immigrated to the United States, American Jews set up communal charities to provide these immigrants with food, clothing, hospital care, orphan asylum, and other social welfare services. Each of these services held its own fund-raising events, each agency vying with the others for needed money.

This already unwieldy situation became even more ineffective by the late 19th century, as Jewish communities in New York City, Chicago, Philadelphia, Boston, Baltimore, and elsewhere struggled to meet the needs of a mass influx of eastern European Jews.

In response to this problem, the first Jewish federation was organized in Boston in 1895, creating a new form of “one-stop philanthropy.” For the first time, the city’s social welfare organizations and charities were united under one federation, which raised money in one central appeal and then distributed these funds among all of its affiliated agencies. In this manner, more money could be raised to support these agencies than would be provided if each agency held its own fund-raisers. A similar Jewish federation was founded in Cincinnati in 1896, followed by federations in Chicago, Philadelphia, Cleveland, St. Louis, Kansas City, and many other cities.

Founding Principles

These federations for the most part were created by secular Jews who wanted to help newly arrived immigrants assimilate into American life. In its earliest stages, the Jewish federation movement embodied the four following primary characteristics:

- *Autonomy:* Each federation was a separate organization, independent of federations in other parts of the country; each federation ran its own fund-raising appeals and funded services tailored to the specific needs of its community.

- *Localism*: The federations responded to the needs of Jews living in the local communities they served. Although the federations would later expand their activities to assist Jews in Israel and other countries, meeting the needs of the local Jewish community remained a central goal of federations into the 21st century.
- *Americanism*: The programs funded by the federations aimed to provide services that would enable Jewish immigrants to learn the language, culture, and values of their newly adopted country so they could integrate into the mainstream of American society.
- *Communalism*: The federations broadly concentrated on the needs of the communities they served, assisting numerous agencies and the largest possible number of Jewish people rather than simply focusing on any one agency or on the needs of individuals.

In the late 19th and early 20th centuries, the federations supported family, child welfare, and health care organizations, including hospitals and orphanages. They opened Jewish community centers in many cities, which provided cultural, educational, and recreational programs. Many communities also established vocational education or training programs and provided loans to help people start businesses.

In 1932, federations in 15 cities founded the Council of Jewish Federations and Welfare Funds, which would develop standards, principles, and programming for the local organizations. At that time, there were 70 Jewish federations and welfare funds in the United States, raising less than \$40 million annually; by 1995, federations affiliated with the council operated in 190 cities and generated about \$800 million in annual campaigns.

In the 1930s, as American Jews became alarmed about reports of anti-Semitism in Nazi Germany and other places, the federations began to widen their activities to provide funds to rescue and rehabilitate

The Six-Day War had a significant impact on the federations in 1967. The war was fought by Israel and the neighboring states of Egypt, Jordan, and Syria. Within six days, Israeli forces had taken control of the Gaza Strip and the Sinai Peninsula from Egypt, the West Bank and East Jerusalem from Jordan, and the Golan Heights from Syria. A new pride swept the American Jewish community, resulting in an emphasis on Jewish education in North America.

Jews living under discriminatory conditions. This new emphasis on helping Jews who lived outside the United States dramatically expanded after the establishment of the State of Israel in 1948. The federations began to allocate their welfare funds to help the United Jewish Appeal resettle Holocaust survivors from Poland, Hungary, and other countries in Israel. In later years, the federations would similarly finance resettlement efforts for Jews from Ethiopia and the former Soviet Union.

A New Emphasis

The federations underwent a significant change in 1967, after Israel defeated its Arab opponents in the Six-Day War. A new wave of pride, as well as Holocaust awareness, swept the American Jewish community. The federations responded by placing a new emphasis on Jewish education, which would eventually become the single largest component of federation assistance, receiving an average of 25 percent of the funding allocated by each North American federation.

The publication in 1990 of the National Jewish Population Survey resulted in new concerns for Jewish federations. The survey concluded that half of the 5.5 million Jews in the United States were born in 1955 or later, after the Holocaust and the establishment of Israel. With each generation, Jews had become increasingly assimilated, and 52 percent of Jews were marrying non-Jews. Jewish assimilation, once a desired goal of the federations, now seemed to be posing a threat to the existence of the very communities that federations traditionally served.

These findings, as well as a declining donor base, forced many Jewish federations to grapple with questions of Jewish affiliation and identity. With younger Jews expressing less attachment to Israel and Jewish organizations, federation officials worried they could no longer maintain a continued source of funding. They were particularly concerned about the high rates of intermarriage, pointing to research that showed that households in which both partners were Jewish were four times more likely to donate to federations than households of interreligious couples.

Federations were also concerned that the social and human services they helped finance had become increasingly dependent upon government funding, which was being severely reduced. Because many

of the hospitals and other welfare organizations that once served only Jews were now assisting other Americans, federation officials wondered what was truly “Jewish” about these services and whether the federations were obligated to continue supporting them. In addition, federations were placing a new emphasis on strategic investment in Israel, including creation of new models of charitable giving to support Israeli culture and the arts.

Jewish Theological Seminary

Founded in 1887, the Jewish Theological Seminary, located in New York City, is the educational and religious center of Conservative Judaism in the United States. The idea for the new school sprang from the 19th-century debate within the ranks of American Judaism concerning the range

of reform. A group of religious centrists thought that Hebrew Union College, founded in 1875 in Cincinnati, Ohio, was tied too closely to the most radical in Reform Judaism: the Jewish Theological Seminary (JTS) would offer an alternative. In 1902, the seminary was almost ready to close when Solomon Schechter, an internationally acclaimed scholar from Cambridge University, became president. He established the school's reputation. During the tenure of Louis Finkelstein, programs were expanded and ecumenical institutes established. Controversies surrounding the ordination of women in the late 20th century and gays in the 21st century led some Conservative Jews to withdraw their support of the seminary, but it remains Conservative Judaism's most influential higher-education institution.

In the late 19th century, Reform Judaism was moving further away from traditional Jewish theology and practice. In 1883, Hebrew Union College, at the time the only rabbinical seminary in the United States, celebrated its first graduating class with a dinner at which nonkosher food was served. Some guests protested by leaving the dinner. Two years later, the 1885 Pittsburgh Platform, which minimized ritual and emphasized social justice, was adopted by the Union of American Hebrew Congregations. The combination pushed a group of centrists with both traditionalist and modernist leanings into founding a new school. The first class of 10 students met in the vestry of the Spanish-Portuguese Synagogue, New York's oldest congregation, in 1886. In its first 15 years, JTS ordained only 15 rabbis. Funds as well as students were in short supply, and the school's history threatened to be a short one.

But half a million dollars, much of it contributed by wealthy German Jewish businessmen, allowed the school to extend an invitation to Solomon Schechter, who was internationally known for his discovery of rare manuscripts from the Cairo Geniza. His acceptance of the presidency of JTS in March 1902 rejuvenated the school. Outstanding scholars joined the faculty, and JTS became a recognized center of Jewish learning. Under Schechter's leadership, a library was added that would ultimately become the largest Judaica library in America, rabbinical training was transformed into a graduate-level course of study, and a teacher-training school was added. Schechter was

succeeded by Cyrus Adler (temporary president, 1915–24, president, 1924–40), who focused on the school's growth. During his tenure, JTS graduated 236 rabbis and 364 teachers. In 1925, with a core collection, he began the school's Jewish Museum.

Adler's most notable achievement may have been the grooming of his successor. He hired Louis Finkelstein in 1925 as a lecturer in theology and steadily promoted him. In May 1940, Finkelstein became president. His long tenure, from 1940 to 1972, saw major changes within JTS and in the larger American culture. His vision for JTS included its playing an influential role in American Jewry and in the broader American society. To this end, he created ecumenical institutes, notably the Institute for Religious and Social Studies, and expanded the school's educational outreach to include radio and television programming. Concern about the vacuum in Jewish knowledge caused by the Holocaust led to the addition of the Cantorial School in 1952. Finkelstein also engaged JTS in cooperative work with neighboring Columbia University. In 1953, the two schools opened a dual degree program for undergraduates. Other expansions under his leadership included a youth leadership program and an honors-level Hebrew high school. Expansion was not limited to the original campus. A West Coast affiliate, the University of Judaism, opened in 1947, and a Seminary Center in Israel began in 1962.

Controversial Years

The Finkelstein years were not without controversy. The 1960s brought an end to JTS's carefully cultivated apoliticism when seminary students joined theologian Abraham Joshua Heschel in the civil rights marches, in the Soviet Jewry movement, and in opposition to the Vietnam War. Finkelstein drew censure from within the ranks of Conservative Judaism for his attention to American and world Jewry at the cost of denominational service. His legacy suggests that the concern of Conservative Judaism's leaders was justified. The service of eminent JTS alumni in other institutions of higher education helped decentralize Jewish learning and end the exclusivity that JTS once held.

Not even the political activism of the 1960s generated the level of controversy that rocked JTS when the announcement was made that beginning in fall 1984, classes entering the rabbinical school

would include women. JTS was under pressure from an increasing number of Conservative Jews to admit qualified women to its Rabbinical School. Gerson D. Cohen, who succeeded Finkelstein in 1972, had been opposed to the change in policy at first, but he became a staunch proponent. In 1983, he succeeded in gaining approval for the reform. Opponents of the change responded by forming a new organization, the Union for Traditional Conservative Judaism. In 1990, the organization, newly named Union for Traditional Judaism, opened its own rabbinical school.

In 2007, Arnold M. Eisen, then chancellor-elect of JTS, announced that the seminary would immediately begin admitting qualified gay and lesbian students into its rabbinical and cantorial schools. The announcement followed a decision in December 2006 by the Conservative movement's legal authorities to reverse the movement's traditional ban on gay clergy. On May 19, 2011, Rachel Isaacs became the first openly gay rabbi of either sex to be ordained by the Jewish Theological Seminary. JTS continues to be the premier seminary in training Jewish scholars and professionals within Conservative Judaism.

social customs and norms that arose as a result. For a century following the Emancipation Proclamation in 1863, U.S. citizens of African ancestry were targeted by laws denying them the same rights as white citizens, enacted primarily in the former Confederate states of the south but facilitated by the federal government. The slow process of dismantling those Jim Crow laws began in earnest in the 1950s and culminated in the Voting Rights Act of 1965. As recently as the 2012 presidential election, however, remnants of Jim Crow were seen in the creation of voter identification laws that purported to combat voter fraud but were generally acknowledged to impact people of color disproportionately.

President Abraham Lincoln's Emancipation Proclamation on January 1, 1863, ended slavery in the southern states. It did not apply to the north or to border states not officially "in rebellion" against the Union, but it still affected over 3 million people. However, the words didn't have impact as long as Confederate troops remained in control. In Texas, word of the Emancipation Proclamation did not arrive until June 19, 1865, when Union soldiers landed at Galveston, Texas (now celebrated as "Juneteenth"). Even then, it was not widely enforced. The Thirteenth Amendment to the U.S. Constitution outlawed slavery in all states when it was adopted in December 1865, following the final surrender of Confederate forces. It was the first time that the Constitution had been amended in more than 60 years and was quickly followed by two more Reconstruction amendments.

Reconstruction was the process of returning the former Confederate states to the Union. Under the Reconstruction Acts of 1867, the Confederate states were required to accept the Thirteenth and Fourteenth Amendments to the Constitution. The first section of the Fourteenth Amendment declared: "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside." This definition reinforced the one used in the Civil Rights Act of 1866 and nullified the Supreme Court's earlier ruling, in *Dred Scott v. Sanford* in 1857, that people of African descent brought into the United States as slaves and their descendants were not U.S. citizens. The ratification of the Fifteenth Amendment in 1870 gave men of color the right

Jim Crow Laws

The term *Jim Crow* became the face of the racial segregation in the United States that followed slavery. It is a term that includes both the laws authorizing segregation and the accompanying

to vote. Congress then passed the Civil Rights Act of 1875, forbidding discrimination in restaurants, theaters, hotels, trains, and other public spaces.

Although federal legislation and constitutional amendments sought to equalize rights of citizenship for whites and nonwhites, moves at the state level were aimed at changing as little as possible the imbalance of power between the races. Laws known as the Black Codes had been passed immediately following the Civil War. They were based on the earlier slave codes that had given owners absolute power over enslaved people as property. Among other things, the slave codes had made illegal reading or writing by enslaved people (and teaching them to read or write), forbade enslaved people from planting certain kitchen garden crops or keeping farm animals, from owning or operating a boat, or from wearing clothes finer than “Negro cloth.”

As their legal successors, the Black Codes imposed duties and obligations on persons of color that did not apply to whites. For example, South Carolina’s laws required nonwhites to obtain a prohibitively expensive license before becoming an artisan, mechanic, or shopkeeper. Mississippi allowed “freedmen, free negroes and mulattos” to serve on juries and testify in court only in cases involving other people of color. A vagrancy law required African Americans to carry written proof of employment, similar to the written passes required during slavery. One statute outlined the relationship between “master and apprentice,” allowing minors to be compensated for their labors in room and board, not infrequently by their former slave owners. Most states allowed persons of color to marry one another, but marrying a white person was a felony. Black Codes were not limited to the southern states. Some northern states, such as Indiana and Illinois, banned blacks from moving into the state. The character of Black Codes in the south was to imitate the condition of slavery. These laws ended in a convergence of federal and state actions: the passage of the Fifteenth Amendment and the participation of freedmen in state elections under Reconstruction supervision.

Although Reconstruction ended the Black Codes, it did not change attitudes. While the national legal tide was moving to protect former enslaved people, the Ku Klux Klan (KKK)

A sign is displayed for the “colored” waiting room from a Durham, North Carolina, station in 1940. The Jim Crow laws mandated segregation in all public facilities in the southern states of the former Confederacy. This separation led to inferior conditions for African Americans and contributed to economic, educational, and social disadvantages.

demonstrated the limits of the law. Organized as a social club for former Confederate soldiers in 1865, the KKK grew into the “invisible empire of the south,” enforcing through terrorism what could not be accomplished through laws. Violence reached a peak in advance of the 1868 presidential election. The KKK opposed Republican candidate Ulysses S. Grant, who would continue programs for racial equality. However, the murders, violence, and mob riots instigated by the Klan may have galvanized northern opposition. Grant won the election, and Republicans won a majority in Congress. This first era of the Klan ended as new laws made racial subjugation once again legal. It would later return, when legal parity threatened white superiority in the 1960s.

The lesson of the Black Codes and Reconstruction laws was that former slaves and persons of color could not be officially treated as less than equal with whites. Thwarted in attempts to maintain a master–slave relationship, whites moved instead to segregate themselves from nonwhites in parallel societies. Undergirding this separation was the belief that African Americans were inferior in intelligence, morality, and behavior, and therefore whites were entitled to better conditions.

Who Was Jim Crow?

Jim Crow was a character in an early 1830s minstrel show. In such musical stage shows, white men performed in blackface, singing and dancing to lyrics that amused white audiences in their denigration of people of color. The character of Jim Crow was created by Thomas Dartmouth “Daddy” Rice. He pretended to be enslaved, singing “Jump Jim Crow” in an exaggerated imitation of “Negro” vernacular. The character of Jim Crow came to represent the network of laws, social customs, and etiquette that gave lip service to equality while enforcing a rigid racial caste system from 1877 to the mid-1960s. The social norms under Jim Crow prohibited any actions that would make it appear that a black person was in any way equal to a white person.

A black male could not offer his hand to shake hands with a white man because it implied being socially equal; blacks were introduced to whites, never whites to blacks; whites did not use courtesy titles (such as “Mr.”) when addressing blacks, who were referred to by their first names; blacks were never to hint that a white person was lying; blacks were never to claim or demonstrate superior knowledge or intelligence; blacks could never curse or laugh derisively at a white person; and blacks could never comment about a white female. These social customs mirrored laws enacted at the local, state, and federal levels.

Separate and Unequal

The stage for Jim Crow’s segregated society was set by two Supreme Court cases in the late 1800s; both passed with only Justice John Marshall Harlan in dissent. In 1883, the Court ruled that the Civil Rights Act of 1875 was unconstitutional, which made it possible to again segregate public spaces. Then, in 1896, it upheld a law that required segregated trains in *Plessy v. Ferguson*. In a deliberate test case, Homer Plessy was arrested when he tried to board an all-white rail car because the “colored” car was full. Plessy was born free and was seven-eighths white, but he was classified as black under Louisiana law. The Supreme Court ruled that equality of the races did not mean that it was necessary to abolish distinctions based on color, “or to enforce social, as distinguished from political equality, or a commingling of the two races unsatisfactory to either.” The resulting

separate but equal doctrine encouraged segregation, with no attempt to provide African Americans with anything approaching equality.

Despite the passing reference to social, rather than political, equality, concerted efforts were made to prevent nonwhites from voting through the use of literacy tests, poll taxes, property requirements, and other difficult registration rules. With fewer African Americans able to vote, post-Civil War gains were rolled back, and laws slightly more subtle than, but similar in spirit to, the old Black Codes were passed with impunity. Examples include the following:

All bus passenger stations must have separate waiting rooms and separate ticket windows for white and colored races.

It is against the law to serve food in a restaurant if white and colored people are served in the same room, unless a solid partition seven feet high divides them, and separate entrances are provided from the street.

There were some limits. In *Buchanan v. Warley* (1917), the Supreme Court found unconstitutional a Louisville, Kentucky, law that compelled racial segregation in residential housing by prohibiting the sale of real property to African Americans. Efforts to use the common law nuisance doctrine to accomplish residential segregation were also generally unsuccessful at the state court level. As entrenched as the separate but equal attitude was under Jim Crow, exceptions like these kept the nation from devolving into a strict apartheid.

Poignant Protest

Within that segregated environment, entertainment by and for African Americans thrived on the “chitlin’ circuit,” a term for the clubs and halls where nonwhite singers, musicians, and comedians could perform. Not restricted to the south, the circuit included theaters in every major city, in black communities, isolated inside white cities. Others were solitary outposts in small towns across the south. In the 1930s and 1940s, live performances on the circuit were largely unknown to white audiences. By the late 1940s and early 1950s, recordings made it possible to share the music, although buying “race” records was an under-the-counter endeavor. Performers now

famous for blues, jazz, and R&B performed first on the “chitlin’ circuit” before integrating venues in the 1960s. Although they were barred from performing for white audiences and from air play on white radio stations, many white musicians and performers “covered” the work of black artists, profiting from sanitized versions of their works.

One of the most haunting performances from that time is Billie Holiday’s rendition of “Strange Fruit,” a song about lynching written first as a poem in 1937 by a Jewish public school teacher in New York City named Abel Meeropol. He wrote the song after seeing a photograph of a lynching, one of perhaps 4,000 nationwide from 1882 to the 1950s. The lyrics juxtapose the beauty of the trees bending with the breeze and the sweet scent of magnolias with the brutality that hanged black bodies like the fruit of “a strange and bitter crop.” The three brief stanzas evoked such an emotional response that it was called the song of the century by *Time* magazine in 1999. It has been recorded by many artists and has inspired other songs, as well as novels, articles, plays, and television shows.

Presidential Progress

Jim Crow found allies in 14 U.S. presidents, from Rutherford B. Hayes (1877) through Franklin D. Roosevelt (1909). They turned a blind eye as civil rights for African Americans were rescinded and they were disenfranchised.

Theodore Roosevelt was openly opposed to black suffrage, believing that blacks were intellectually inferior. President William Howard Taft perpetuated the idea that blacks should not participate in politics. President Woodrow Wilson segregated federal offices in Washington, requiring that job applications include a photograph. The administrations did little to investigate lynchings or KKK activities. The first voice from the White House in support of civil rights for blacks was that of First Lady Eleanor Roosevelt, in the late 1930s.

President Harry S. Truman (1945) became the first president to address the National Association for the Advancement of Colored People (NAACP) or to endorse civil rights. He issued executive orders giving African Americans equal treatment in federal jobs and desegregating the military, and the secretary of the U.S. Army was forced into retirement a year later for refusing to desegregate. The slow reversal of Jim Crow laws began

after four new justices were appointed to the Supreme Court, and Thurgood Marshall undertook a case-by-case assault as the general counsel of the NAACP. Finally, in 1954, *Brown v. Board of Education* declared that separate was unequal and that segregation was inherently unconstitutional. That ruling removed the legal justification for Jim Crow laws but did not automatically take them off the books. It wasn’t until 1967 that the Court found laws preventing racial intermarriage unconstitutional in *Loving v. Virginia*.

At the same time that Thurgood Marshall pressed legal challenges, civil rights leaders such as Martin Luther King, Jr., challenged the social customs associated with Jim Crow. Efforts to eat at lunch counters and ride public transportation were met with hostility and renewed KKK activity. President John F. Kennedy took to television in 1963 to commit all three branches of government to supporting civil rights, and his brother, Attorney General Robert Kennedy, actively prosecuted voting rights violations. With the support of President Johnson, the Civil Rights Act of 1964 and the Voting Rights Act of 1965 combined to invalidate Jim Crow laws in all states. Almost a century and a half after the Emancipation Proclamation, the U.S. House of Representatives passed a resolution apologizing for the “injustice, cruelty, brutality, and inhumanity” of slavery and Jim Crow laws on July 29, 2008.

Jordanian Americans

A Middle Eastern kingdom bordering Israel, Iraq, and Saudi Arabia, Jordan is predominantly Arab, with roughly 1 percent minorities of Circassians and Armenians. The Arab population includes both Transjordanians, who are native to the region east of the Jordan River and therefore within the current boundaries of the state of Jordan, and Palestinians, who are the Muslim or Christian natives or descendants thereof of the British mandate of Palestine, which existed from 1922 to 1948, west of the Jordan River—the modern territory of Israel. Jordan is predominantly Muslim, of the Sunni denomination.

History

The state of Jordan was created when it became independent from Britain in 1946, having previously been part of the British mandate of Palestine (and briefly, the British-controlled Emirate of Transjordan). Jordan was one of the last Middle Eastern nations to recognize the Palestine Liberation Organization (PLO) as the political and diplomatic representative of the Palestinians.

It is possible that some residents of the lands that now constitute Jordan immigrated to the United States in the 19th century, when they would have been noted only as Arabs or Syrians. Arab immigration at the time was fairly low, however, and most Arabs immigrating in that era were part of specific groups (largely settling in Chicago or Detroit), especially Christian Arabs. Sustained Jordanian immigration does not seem to have begun until the late 1940s, shortly after the creation of the modern state. There are today about 67,622 Jordanian Americans, according to the most recent figures released by the U.S. Census Bureau.

The first Jordanian American communities were established in the Near West and Southwest Sides neighborhoods of Chicago. Some immigrants returned home to Jordan after working for a few years, but others opened stores and other establishments and put down roots. New York City, with its ample opportunities and general embrace of immigrants, attracted a community as well. There were about 1,000 Jordanian Americans in 1950, split more or less between the cities of Chicago and New York and the Southwest (mainly Phoenix and California). Immigration

categorized these immigrants as “Palestinian/Jordanian,” as both Jordanians and West Bank Palestinians were allowed to use Jordanian passports.

In the 1950s, 5,762 Jordanians immigrated to the United States; nearly twice that many immigrated the following decade; and 27,535 immigrated in the 1970s. Some sought economic and educational opportunities, and some wanted to join relatives who had already settled in America. Others fled the chaos of the Arab–Israeli War. The relaxing of many immigration restrictions in 1964 played a role in accelerating Jordanian immigration and Arab immigration as a whole.

Though many of the early immigrants returned to their homeland after they had earned enough to help out their families, or earned a college degree, as they immigrated in greater numbers, more and more Jordanians remained in the United States, becoming permanent residents or citizens. The Jordanian American population grew quickly.

A definite class divide was present with respect to where these immigrants settled. Wealthy Jordanians, who were more likely to have traveled abroad and were accustomed to urban life, settled in large metropolitan areas or the suburbs thereof, such as in the New York, New Jersey, Chicago, and Washington, D.C., areas. The rest were more likely to settle in the southwest and California.

Major Jordanian American communities include Little Ramallah, or Little Istanbul, in Paterson, New Jersey. Little Ramallah is both the largest Turkish American enclave in the United States and home to large Jordanian, Palestinian, Syrian, and Lebanese populations. It is located in the 6th Ward of Paterson in the Lakeview section, which includes a variety of ethnic enclaves and numerous Middle Eastern restaurants and markets. This is fairly emblematic of the areas with large concentrations of Jordanian Americans: the neighborhood is rarely exclusively Jordanian but includes a strong support system for Middle Eastern immigrants, including Arabic-language newspapers (and sometimes signs on businesses, and menus in restaurants), restaurants and markets, cultural centers, mosques or churches, and, in general, a social and cultural connection to the larger Arab world.

Most Jordanian American families hope that their children will marry within the Arab American community, but marrying outsiders is not as

frowned upon as it is by some recent immigrant groups. Nor is arranged marriage at all common. However, marriage is treated somewhat differently than in mainstream American society; the groom's family, for instance, pays for the wedding, and divorce is strongly discouraged. Couples having trouble in their marriage can expect to have relatives on both sides of the family intervene to pressure them to stay together and resolve their differences. Though Jordan is predominantly Muslim, the Jordanian American community is predominantly Christian and only 8 percent Muslim. The Eastern Orthodox Church is the most common faith, with Catholics close behind; Protestants, a rarity in the Arab world, are less common.

third the stories of their daughters. The mothers belong to the generation of Chinese women born at the turn of the century who experienced transition in the society from Confucian to Communist order, World War II and Japanese invasion, immigration to America, and assimilation into the American society. The monologues of the daughters deal with the struggle of Asian Americans to find their identity in the post-civil rights era in American society.

Tan does not present monolithic images of Chinese and American society because her characters come from different families, classes, and regions. This also enables her to counteract negative stereotypes about Chinese Americans. Each protagonist is faced with a task to define herself in a moment of conflict or loss. The mothers have Chinese belief systems that help them to cope with war, immigration, and family crises; the daughters feel divided between Chinese and American customs, which is reflected in their stories through lack of communication and misunderstandings with their mothers.

The form and the structure of the novel are in unison with narrative strategies because they reflect themes of connectedness and disconnect-edness in the novel. The narration shifts between the omniscient narrator in the prologues and first-person narration in the monologues, which allows for relativity of experience. The function of four prologues (with fantastic content that has roots in Chinese culture) is to present a background for each narration and to connect different protagonists and their monologues, their Chinese past and American present. Overlapping of reality and fantasy, history and narration, questions the idea that there is only one version of history. Tan uses historiographic metafiction by focusing on the stories of women and immigrants and by subverting institutionalized national Chinese and American history.

Feminist Themes

The novel bears resemblance to works of other multicultural women writers, not just through structure and form but also through its themes: the search for matrilineal heritage, overcoming of silences, giving voices to women, and narrating the common experience of female oppression. Apart from the feminist discourse, the novel also

Joy Luck Club, The

Amy Tan's novel *The Joy Luck Club* (1989) consists of 20 chapters divided into four cycles of narration. The first and fourth cycles present the stories of four mothers, and the second and

deals with problems of national discourse. The characters are first- and second-generation immigrants, so they question identity, ethnicity, and race. Because of the narrative strategies that put into focus the relativity of history and personal experience, the novel resists the conclusion that it is easy to reach a final definition of ethnic identity. Rather, the narration of each character suggests that it is tentative and subject to change.

Tan's skillful mixing and switching of codes in her usage of English, Chinese, and Chinese American languages is also of crucial importance in the novel. There are several levels of language in the text, of which some serve as language doubling: the standard English of the second generation, the broken English of Chinese immigrants that represents a mixture of Chinese and English, and the fluent English that is a covert translation of their Chinese. In the end, language is an instrument in breaking the silence of Chinese American women.

Their language is a testimony to their will and strength to survive and pass on their story to the next generation. For their daughters, narration is a way to confront parts of their Chinese identity that they have been denying. Sharing stories enables them to start acquainting themselves with their Chinese heritage and to try and understand it. The breakthrough in the novel happens when the daughters start really listening to their mothers, and the mothers decide to reveal the stories about secrets and shameful parts of family history. By showing their vulnerability and narrating stories about past and present, the mothers and daughters finally reach middle ground. The daughters start speaking Chinese American and claim their Chinese names, achieving reconciliation with their ethnic heritage and identity.

The Joy Luck Club became a bestseller and opened the way for new generations of Asian American writers, especially women. It decentralized the American canon, making it a more accurate reflection of the multicultural American society in which the Asian (and especially the Chinese) population grew faster than any other race group. Numerous scholarly works have been written on the novel, and it became part of courses on American literature, American studies, multiculturalism, and anthropology. It was translated into more than 20 languages.

The film was made in 1993, directed by Wayne Wang, with Tan as one of the co-producers and co-screenwriter. Wang successfully conflated images of China filmed on real locations with those of the modern-day United States, using flashbacks and voiceovers. Similar to the novel, the film features a range of different Asian American characters, particularly women played by prominent Asian American actresses. Rather than casting Asian American women solely in stereotypical Hollywood roles of seductresses, mystical objects of desire, or women warriors, the film foregrounds family stories of Asian American mothers and daughters. The film received some negative criticism for its stereotypical portrayal of Chinese men. However, it is notable as a box-office success, breaking ground for other films featuring predominantly Asian American characters.

Juneteenth

Juneteenth is a portmanteau of the words *June* and *nineteenth*. The term signifies the day on which the last enslaved persons in the Confederate state of Texas learned of their newly acquired freedom. Those nearly 250,000 bondsmen received word of their liberation only after a ship carrying 2,500 Union troops and General Gordon Granger arrived at Galveston on June 19, 1865.

Black Independence Day

Two months after the end of the Civil War, slaves throughout the state were finally informed of the Emancipation Proclamation, which was first promulgated by President Abraham Lincoln in September 1862. That Texas had minimal Union supervision throughout the war meant that bondsmen in the state knew little about Lincoln's decree and thus their long overdue freedom. When General Granger delivered General Order Number 3 on June 19, word slowly made its way across the state, and since then, many former Texas slaves and their descendants have commemorated that day of jubilee every subsequent year. Presently, black citizens in Texas and all across America celebrate Juneteenth as a black Independence Day.

Early manifestations of Juneteenth celebrations were marked by a host of private and public celebrations, both simple and elaborate. Black Texans paused to reflect on a slave past and to acknowledge whatever triumphs their newfound freedom brought, no matter how modest or fleeting. In fact, some of the first Juneteenth commemorations were both educational and activist in scope. The Texas Freedmen's Bureau and black community leaders, for example, used the day as an opportunity to teach former bondsmen the value of their most basic civic right—the right to vote.

In many Texas towns and cities throughout the 19th and early 20th centuries, it was not uncommon for black churches to hold thanksgiving ceremonies and even mixed-race community gatherings on Juneteenth. These spectacles oftentimes included plenty of music, revelry, and, of course, food. In Texas, particularly, barbeques were and still are quintessential staples at most Juneteenth celebrations. Some celebrants also serve strawberry soda and sweet watermelon alongside their

barbeque feasts, as both items were products cheaply available to slaves and freedmen.

Though the focus of the day was to celebrate, the seriousness of and cause for those festivities were not lost. Black activists oftentimes took advantage of the large crowds gathered in local churches or “emancipation parks” to preach racial uplift and self-determination. They encouraged blacks not to dishonor the legacies and hard-won gains of their ancestors.

Today, many municipalities, civic groups, and formalized Juneteenth committees across the state host parades, festivals, and pageants in honor of the holiday. Houston and Dallas, both Texas cities with large black populations, organize well-attended public parades, concerts, and educational seminars for the day. After all, it was a Houston-area state representative, Al Edwards, who in 1979 introduced a bill in the Texas legislature calling for Juneteenth to become an official state holiday. The bill passed, and Governor William P. Clements signed it into law, which made Texas the first state to grant Juneteenth holiday status.

Today, more than 40 other states either observe Juneteenth or have granted it full state holiday status. With Juneteenth a state holiday in Texas, government and some private-sector employees in the state enjoy the day off from work. Though government offices are not closed for the day, staffers have the liberty to use the holiday time at their discretion. Juneteenth celebrations in Texas and elsewhere help energize African Americans and other citizens as the nation gears up to celebrate Independence Day during the month of July. Though meant to honor the long-awaited news of emancipation, Juneteenth has evolved into a holiday that looks not only backward but forward as well.

Jungle, The

The Jungle is a “muckraking” novel published in the United States in January 1906. Its author is Upton Sinclair. The novel chronicles the struggles of Jurgis Rudkus, a recent immigrant to the United States from Lithuania. Rudkus works at the Chicago stockyards, and the novel uses his immigrant experience to comment on the unfair working conditions for the workers in the Chicago stockyards at the turn of the century. It was the intent of the author, Sinclair, to write a book that would draw attention to this issue in particular.

Upton Beall Sinclair, Jr., the author of *The Jungle*, was born September 20, 1878, in Baltimore, Maryland. Sinclair grew up in a poor family. His father experienced great difficulty in achieving economic success and abused alcohol much of his life. Sinclair’s mother belonged to a family of some affluence, but this in no way provided any benefit to Sinclair’s immediate family.

The family moved to New York City by the time Sinclair was 10 years old. Sinclair began attending school, and by the time he was 14, he was eligible to attend City College of New York (CUNY). Sinclair also began writing dime novels at this time and graduated from CUNY at age 18.

Following his studies at CUNY, he continued to write, attended graduate school, and published several novels. He also became more interested in socialism. In 1904, Sinclair spent seven weeks in Chicago living with the workingmen of the packing plants in the stockyards of Chicago. This experience became the basis for the novel *The Jungle*.

In telling the story of Jurgis Rudkus, the novel is able to convey the story of many eastern European immigrants at the turn of the century. During the period from 1900 to 1910, the number of Lithuanian, Slovakian, and Polish immigrants to the United States increased significantly. This was especially true in the city of Chicago.

As the novel opens, Jurgis is marrying a young teenager he met in Lithuania named Ona Lukoszaite. They both recently immigrated to the United States because of the country’s reputation as a land of opportunity and freedom. Ona’s cousin, Marja, handles the wedding. The opening wedding scene exposes the reader to important traditions of the eastern European culture of Lithuanians and also to the financial challenges that exist beneath the surface for these turn-of-the-century immigrants. This conflict is self-evident as the older Lithuanians observe a custom of providing monetary gifts to the bride to pay for the feast and the wedding. The younger Lithuanian immigrants do not observe this tradition, as they recognize the financial challenges they all face in their new country.

Jurgis and Ona, the new couple, reside in Packingtown. It is a neighborhood in Chicago where many new immigrants reside, but especially individuals and families from Poland and Lithuania. The conditions in the neighborhood are not good, as the community is impoverished and there is little support outside the community. Jurgis begins working in the stockyards in this area to support his family and hopes to support his larger family as well. His job is shoveling animal intestines. Although the work is difficult, Jurgis is strong and feels confident in his ability to withstand the labor.

As *The Jungle* proceeds, the story of the meat-packing industry and the various problems with the industry are revealed. Some workers are paid far less than other workers, and conditions in the plant are less than healthy for the production of beef for consumption by the public. Jurgis is a witness to these practices and is quite disturbed.

Jurgis's own tough work is compounded by the fact that his wife, Ona, also must work due to the financial challenges they face as new immigrants.

There are other challenges for Jurgis in the story. There are fluctuations in wages he receives because of decreased work, political control and influence over the stockyards, labor unions, and difficult days during the cold winter months. There are also the continuing financial challenges the family confronts overall due to the loss of wages and, on occasion, the loss of a job by a family member. The challenges for Jurgis and his family worsen when Jurgis is severely injured on the job and the family loses all of his income for several weeks. This forces several children in the family to leave school and work to earn income as well.

The saga of Jurgis and Ona does not get any better as Sinclair presents life for them in the United States as new immigrants in a very stark form. Jurgis is unable to return to meatpacking, and finding alternate work is very difficult. He has no connections in America as a new immigrant, and his resistance to the union when he first began working proves costly. Jurgis eventually learns that Ona was raped by her boss, Connor, and also had to provide sexual favors to him in order to keep her job and for her family members to keep their jobs. Jurgis confronts Connor, assaults him, and is arrested.

Overall, *The Jungle* is a story of struggle, but also one that seeks to validate the common man

and laborer in the quest for a better, more equal life in America in the middle of the Industrial Age. This is proven true as the novel portrays the triumph of the collective over the forces of exploitation, not only in Chicago but nationwide, politically and socially. When it was finally published, Sinclair, who had already written other novels, became a writer of some note, and it established him permanently in American letters, despite the overt politics of much of his work. Publication of *The Jungle* led to more attention being focused on the meatpacking industry and to the reform of the industry. It is still used today in academia by sociologists and law professors to teach courses in employment and labor law and social history. The history Sinclair presents of immigration by Lithuanians is especially important.

K

Kansas-Nebraska Act (1854)

The Kansas-Nebraska Act, passed by Congress in 1854, created the territories of Kansas and Nebraska, allowing settlers in these areas to determine through popular sovereignty whether they would allow slavery there. The act arose from proposals in the early 1850s, for the construction of a transcontinental railroad to link the eastern United States with the Pacific Coast. However, there were disagreements on exactly where the railroad should be built. One of the contenders as the eastern terminus was Chicago, which had the backing of Stephen A. Douglas, the prominent Illinois senator who was also chair of the Senate Committee on Territories. However, Douglas's proposed route could not be viable unless the land along which the railroad traveled was organized into official territories.

At the same time, the area that eventually became the state of Kansas had sufficient population to enable it to apply for admission to the Union. This injected into the western territories the recurring question of slavery. Would this new state be a “free” state or a “slave” state? Since the territory in which Kansas was located was part of the Louisiana Purchase of 1803, it was subject to the Missouri Compromise of 1820.

Under that agreement, any states admitted to the Union in the future were to be “free” if they were above the southern boundary of Missouri or “slave” if they were below that line. Thus, Kansas ought to be free.

Southerners, however, vehemently opposed this. For a generation, the Missouri Compromise had worked well, with each free state being offset with the admission of a slave state, but in 1850 California entered the Union as a free state, giving the north two more votes in the U.S. Senate than the south. With no other southern areas ready for admission in the near future, southerners hoped to have Kansas admitted as a slave state to restore the balance of power in the Senate.

Popular Sovereignty

The expansion of slavery into the western territories had, by this time, become a major national issue, dividing pro- and antislavery forces. Increasingly, politicians were called upon to publicly express a position on the issue. In an attempt to end the controversy over Kansas and to facilitate construction of the transcontinental railroad west from Chicago, yet avoid being drawn into the slavery controversy, Douglas proposed that the issue be solved through “popular sovereignty,” a device first agreed to in the Compromise of 1850. Under popular sovereignty, the people in a territory—in this case, Kansas—would vote on

whether they wanted to enter the Union as a free or slave state prior to submitting their application for statehood. Douglas believed this would be an acceptable compromise that would end the stalemate without him having to declare his position on the slavery issue.

Southerners supported the measure because it would effectively end the Missouri Compromise and give them the possibility of adding new slave states in an area where they had previously been prohibited. For southerners, popular sovereignty was an affirmation of their long-held theory of states' rights; that is, the people in a state, or in this case a territory, have the right to decide whether slavery will or will not be legal. Moderate northerners, seeking a compromise to end the growing crisis, rallied behind Douglas to ensure passage of the measure, but the growing antislavery faction in the north regarded this as a sellout and was ruthless in its condemnation of Douglas, whom some labeled a traitor. Opponents took to referring to the principle as "squatter sovereignty."

Although Congress passed the Kansas-Nebraska Act, the issue of the westward expansion of slavery remained unresolved and continued to grow in importance in the national political dialogue, further sectionalizing the nation. Southerners began moving into Kansas from neighboring Missouri in an effort to boost the proslavery population prior to the upcoming elections, while others, labeled "Border Ruffians" by northern abolitionists, merely crossed the border at election time to vote illegally in local Kansas balloting. Northerners, too, known as "Jayhawkers," began moving into Kansas to boost the free-state vote potential. Ely Thayer formed the Massachusetts Emigrant Aid Society, later known as the New England Emigrant Aid Society, for the purpose of financing people who wished to move west to settle in Kansas on the condition that they vote for a free state. Another New Englander, Henry Ward Beecher, began shipping large crates to Kansas labeled "Bibles," but the contents were later revealed to be muskets.

Violence soon erupted. Proslavery forces attacked the free-state settlement at Lawrence, Kansas, on May 21, 1856, killing men and burning part of the town. Free-state raiders led by John Brown retaliated by dragging proslavery men from their homes in the middle of the night and slaughtering them.

The result was a civil war, referred to in the press as "Bleeding Kansas," that cost over 200 lives in 1856 alone. The ongoing conflict led to a physical attack on Senator William Sumner by a southerner on the floor of the U.S. Senate following a speech he made critical of southerners and slavery; it also led to the rapid growth of a new political party, the Republicans, who attracted disgruntled anti-slavery Democrats, northern Whigs, and others in sufficient numbers to run their first presidential candidate in 1856 on an antislavery platform, and to elect Abraham Lincoln in 1860.

Karaoke

Karaoke is a popular sing-along form of entertainment in which an amateur singer sings while following the words of a song on a television screen. Typically, the singer has a microphone and the main lyrics of a well-known popular song are dropped, so only the amateur singer can be heard. The singer is guided by lyrics on the screen with a moving symbol or video images. Karaoke originated in Japan in the 1970s, although it has quickly spread around the world as a popular pastime at restaurants, hotels, bars, and home dinner parties. Throughout Japan's history and culture, it was common to provide musical entertainment when entertaining guests in the home.

The development of karaoke caught on quickly in Japan for this reason.

Karaoke can be traced back to the 1970s Japanese singer Daisuke Inoue. Many people wanted to sing along to his songs, so Daisuke made a sing-along tape recorder that would play his music when money was deposited. Although originally regarded as expensive, the fad soon caught on in hotels and bars, which were referred to as “Karaoke Boxes.” Karaoke machines soon began spreading throughout southeast Asia, and eventually the world. In 2004, Daisuke was awarded the Ig Nobel Peace Prize, a parody of the Nobel Peace Prize, awarded to unsuspecting individuals for trivial scientific research, for inventing the karaoke machine. It was said to have provided “an entirely new way for people to learn to tolerate each other.”

While Daisuke was forging ahead with his creation, a Filipino inventor by the name of Roberto del Rosario was also coining a music machine accompanied by vocals in the early 1970s. By 1974, Del Rosario had invented the Sing Along System (SAS), which, in addition to having a microphone and amplifier, could manipulate and add effects to the singer’s voice such as reverberation, which causes a voice to echo. Del Rosario’s machines did not have a visuals screen for lyrics to be displayed, but they often came with songbooks. As the inventor continued to outsource his machines to manufacturers in Japan, he soon saw similar machines being created and entered legal battles for patent rights. He won against Janito Corporation, and in 1985, was awarded the Gold Medal for Best Inventor by the World Intellectual Property Organization.

In the West, the stage was already set for a karaoke invasion. The idea of singing along to music was already a popular one with the 1960s television series, *Sing Along With Mitch*. At the time, the network would superimpose song lyrics to the bottom of the viewers’ screen for them to sing along. By the 1990s, karaoke had made its way to the United States, and the art of the singing phenomenon was brought to a new level. The devices began to sell more in Western markets once they were advertised as not solely karaoke system but also home theater systems that could amplify and enhance television viewing. Cassette tapes have long been replaced by

CDs, DVDs, and interactive video games. A popular game played on home machines is Karaoke Roulette, in which vocalists do not know what popular song will come up next that they must perform.

The entertainment and restaurant industries have found karaoke both engaging and lucrative for business. Many night lounges and bars have karaoke nights on a weekly basis, with televisions around the bar displaying the screens. Since karaoke reached the West, its popularity has only grown, becoming a universally popular pastime in restaurants in nearly every city and in popular culture.

The Singing Bee is a game show that aired in 2007, originally on NBC and later on CMT, which hosts a karaoke singing competition in a spelling-bee format. The show debuted a mere weeks before *Don’t Forget the Lyrics*, another karaoke game show, aired in 2007 on FOX. In this show, contestants are asked to complete song lyrics to win increasing amounts of money. Karaoke has commonly been used in television plot lines in shows such as *Friday Night Lights*, *The Office*, *Ugly Betty*, and *The Sopranos*.

Karaoke has become so popular that competitions are held, involving amateur vocalists from around the world. The pinnacle of competitions is the Karaoke World Championships, which has been in existence since 2003 and to date has 29 countries participating. It is the largest karaoke competition in the world, and in 2011, was home to the American network ABC television series *Karaoke Battle USA*. A representative from each country is sent to compete. In 2012, the event took place in Finland on November 28. Karaoke has evolved from a simple machine to a universally renowned means of music appreciation around the world.

Karate Kid, The

Martial arts films enjoyed an increase in popularity during the 1980s, but even Chuck Norris, the martial arts star of the period best known by mainstream audiences, never had a blockbuster hit. That status was reserved for *The Karate Kid*, a 1984 film directed by John Avildsen (who also directed *Rocky*) with a screenplay by Robert Mark Kamen. The movie stars Ralph Macchio as Daniel LaRusso, a teenager who moves with his mother from Newark, New Jersey, to Los Angeles, and Pat Morita as Mr. Kesuke Miyagi, a maintenance man with a tragic history who is a karate master. With Daniel's ethnic name and Mr. Miyagi's obvious ethnicity and rich history, something new was added to martial arts films. Mainstream audiences embraced the movie. It was one of the year's most popular films, and it spawned three sequels. Pat Morita's character became an essential figure in the genre. A 2010 remake added new cultural ingredients to the mix.

The first *Karate Kid* movie combined the underdog theme of *Rocky* with a juvenile hero and the wisdom of the benevolent sensei figure. Although the movie assigns no particular ethnicity to Daniel LaRusso, both the character's name and his appearance are in marked contrast to his enemy, Johnny Lawrence, leader of the Cobra Kai (played by Billy Zabka). Lawrence's name, Scots-English in origin, and the character's fair-skinned blondness plus his wealth identify him as the one with the power. Lawrence and his Cobra Kai buddies look like a Nazi youth group. Daniel is smaller, darker, poorer, and weaker. Macchio's ethnic background is a mixture of Italian and Greek. Although Mr. Miyagi teaches Daniel discipline, balance, and nonviolence, it was his defeating the Cobra Kai against all odds plus ending up with a classic car and the girl that had boys all over America signing up for karate

classes and practicing moves from the movie if no classes were available.

It was Mr. Miyagi who made the movie more than an entertaining action film for males under 14. An immigrant from Okinawa, Miyagi left his home to avoid a fight to the death. During World War II, he and his wife were interned in the Manzanar camp. He joined the Army and fought with the 442nd Infantry Regiment, receiving the Medal of Honor. (Manzanar was one of the 10 internment camps for Japanese Americans in World War II, and the 442nd was a Japanese American regiment, the U.S. Army's most highly decorated regiment.) While he was serving his country, his wife died in childbirth; their son died as well.

Morita, the son of Japanese immigrants who spent part of his childhood in a Japanese internment camp in Arizona, played Miyagi with humor, grace, and wisdom persuasive enough to make audiences believe in the benevolence and special gifts of Miyagi. The film industry recognized the strength of his performance by nominating him for an Academy Award as best supporting actor. He reprised his role for the three sequels. *The Karate Kid* earned more than \$90 million. *The Karate Kid, Part II* (1986) took Daniel and Mr. Miyagi to Okinawa, but other than bringing Miyagi's personal story into present time and adding Japanese setting and actors, it did little more than repeat a formula that had proven successful. Nevertheless, box office receipts topped the previous movie, reaching \$115 million in domestic grosses and making it the second-highest-grossing martial arts movie. *The Karate Kid, Part III* (1989) earned only a fraction of the first two and ended Daniel's role. Mr. Miyagi adopted a new mentee in *The Next Karate Kid* (1994). Whether the fourth movie failed because the new protagonist was female (played by Hilary Swank) or because a new audience found the formula less appealing is unclear. Either way, the minuscule \$9 million grossed sent the message that it was time to end the series. By this time, however, Mr. Miyagi's influence on the genre was established: the wizened, benign martial arts master with a touch of mystery had become a convention of the genre.

The remake, which opened in U.S. theaters in the summer of 2010, brought the same story to a new generation while making some cosmetic changes. The student is Dre Parker, played by

12-year-old Jaden Smith (son of African American actors Will Smith and Jada Pinkett Smith), and the master is Mr. Han, played by Jackie Chan (an international star, a veteran of more than 150 films, and a martial arts icon). Dre is younger than Daniel, his move is from Detroit to Beijing, the bully is Cheng (Wang Zhenwei), the action is more violent, and the Chinese maintenance man teaches Dre kung fu rather than karate, but the story essentially repeats the original. The movie received mixed reviews, but box office receipts for its summer run in the United States topped \$176 million. It is too soon to tell, but it seems unlikely that the new Karate Kid, who more accurately should be the Kung Fu Kid—despite the combined charms of Smith and Chan—will attain the cultural significance of Daniel-san and Mr. Miyagi.

Kerner Commission Report

In 1968, the National Advisory Commission on Civil Disorders released what was known as the Kerner Report, one of the most important and prophetic government documents of the 1960s. The product of a commission constructed by President

Lyndon B. Johnson, the report was often blunt, and its discerning language spelled out the perils and issues of blackness in America. The commission investigated the circumstances surrounding urban unrest in major cities across the United States.

To urge social and racial change, the commission tried to persuade legislators, politicians, and citizens that, "It is time to make good the promises of American democracy to all citizens—urban and rural, white and black, Spanish-surname, American Indian, and every minority group." The Kerner Report continues to be an important document whose proposed solutions remain unfulfilled more than 40 years after its release.

The 1960s was a difficult time for the United States. Women agitated for the right to be treated as equals and to have access to the same opportunities as their male counterparts. Young people demonstrated against the Vietnam War, the defenders of the war, and those who sought to limit free speech and civil liberties. By the end of the decade, homosexuals also moved to put an end to the persecution inflicted upon them by society. Great men were assassinated as President John F. Kennedy, Malcolm X, Martin Luther King, Jr., and Senator Robert F. Kennedy each fell victim to an assassin's bullet. Arguably, however, nothing was as consequential as the movement that sought to rectify the wrongs brought about by America's original sin—slavery.

The Civil Rights Movement

Since the revolutionary era, African Americans had consistently pushed for equal rights and first-class citizenship. The Civil War and its subsequent conflict-ridden era known as Reconstruction succeeded in ending the horrific institution of slavery but failed to deliver upon the basic hopes of the newly freed blacks for fairness and justice. Instead, by the 1890s, states across the south instituted the equally abhorrent system known as Jim Crow. Northern cities moved quickly to subjugate the new arrivals with a northern style of Jim Crow. Police brutality, segregated neighborhoods, and lack of access to public resources characterized these people's lives.

By the end of World War II, African American impatience reached its zenith. Between 1945 and 1968, the civil rights movement moved swiftly to capitalize on the rhetorical promises of the federal

government to preserve democracy and extend freedom through the defeat of Japan and Nazi Germany. Through court cases, sit-ins, demonstrations, and civil disobedience, African Americans made slow yet steady progress. The combination of the Cold War—the Soviet Union’s propaganda damaged America’s reputation as a place of freedom—and changing social mores helped the cause of African Americans. As the civil rights movement reached its climax with Martin Luther King, Jr.’s, soaring oratory at the Lincoln Memorial in Washington, D.C., young African Americans in northern and western cities, disillusioned with the southern-based movement under King’s leadership, turned to alternatives that deeply shocked and frightened much of white America.

Black Power

By the late 1950s, many African Americans inhabiting urban communities found themselves drawn to the rhetoric and teachings of Malcolm X and the Nation of Islam. Talk of self-empowerment, self-reliance, and defending oneself resonated with an urban community weary of daily struggle and injustice. Combined with the failures of law enforcement to adequately protect the African American community, many became disillusioned and angry with the nonviolent rhetoric of southern-based civil rights leaders.

As the violence and discrimination against African Americans persisted, and federal and state assistance lagged behind, tempers boiled over. Young black leaders such as Stokely Carmichael advocated for what he termed “Black Power.” The Black Panther Party, Carmichael, Malcolm X, Angela Davis, and others sought to fight back. They organized and marched, taught African Americans how to take care of their communities, and issued blistering condemnations of capitalism, militarism, and injustice.

By 1967, scores of American cities had gone up in flames as Watts, Newark, Washington, Baltimore, and Philadelphia, among others, saw their share of urban unrest. It is in this context that the Kerner Report was initiated and completed.

The Commission

In an effort to get the violence and disorder under control and to understand the problems plaguing America’s cities, President Lyndon B. Johnson in

July 1967 created the National Advisory Commission on Civil Disorders to investigate and provide solutions in the form of recommendations. This 11-member body comprised Democrats and Republicans and was chaired by Otto Kerner, the governor of Illinois. For the next year, the commission held hearings, talked with experts, interviewed witnesses, and drew conclusions as to why cities, and America, were descending into violence and anarchy.

The report’s conclusions were shocking to many Americans because it labeled the United States an “apartheid” society. The report blamed white America for creating a situation in which injustice and discrimination were allowed to flourish. Moreover, the commission found that structural, political, and economic barriers, as well as media representations of African Americans, all served to create a climate of hate and distrust. To the extent that the media impacts society, the negative representations of blacks solidified the negative perceptions of many whites.

The ghetto was at the heart of the unrest. As the report emphasized, “What white Americans have never fully understood but what the Negro can never forget—is that that white society is deeply implicated in the ghetto. White institutions created it, white institutions maintain it, and white society condones it.” For the twin evils of poverty and segregation at the heart of the urban black experience, the commission maintained that the solution must be the elimination of oppression and repression. In looking at the unrest, the commission found that severe discrimination and segregation, deep resentment and frustration, and lack of opportunity and basic resources had provoked African Americans to violence.

The Kerner Report argued that greater freedom and opportunity had to be extended in the forms of police protection, economic assistance and development, extension of educational opportunity, reform of the welfare system, improvement of federal housing programs and facilities, and an effective justice system. As the report noted, “This is our basic conclusion: Our nation is moving toward two societies, one black, one white—separate and unequal.”

King Philip's War

King Philip's War (1675–76) was an Anglo-Indian struggle centered primarily in New England. It was one of America's bloodiest conflicts, and several scholars have cited it as the deadliest war in U.S. military history on a per capita basis. Approximately 2,500 settlers died, of a total New England population of 52,000. In addition, 12,000 homes, 8,000 head of cattle, and numerous farmlands were destroyed. The adversaries in this clash were the English settlers, mainly Puritans, and a loose confederation of Algonquian tribes, namely the Narragansett, Nipmuc, and Wampanoag, led by the Wampanoag sachem, or chief, called King Philip by the English or Metacom by his people.

In a rapid, massive Indian attack, King Philip's forces attacked about half of the 110 colonial settlements in New England, sowing fear and panic throughout the region. New England faced a substantial population shift as refugees from vulnerable frontier towns flooded Boston and other locations along the eastern seaboard, away from the wilderness. For the deeply religious Puritans who suffered the majority of these attacks, it appeared that God was punishing the chosen people. The war directly or indirectly affected every colonist—and indigene—in New England.

Although the impact of the war was severe among the English, it was catastrophic among the Indians. Approximately 5,000 natives were killed. Because of their smaller population of 20,000, already ravaged by disease, these war casualties were shattering. Furthermore, over 1,000 insurgents were sold as slaves to the West Indies in a reversal of the growing African slave trade, and thousands more left the New England area and headed west into the wilderness because of fears of white retribution. The Native American presence in New England essentially ceased to exist, opening the land for further white colonization.

The causes of the war were many, but they essentially stemmed from issues regarding land and attitude. Indians criticized the insatiable white desire for Native American land, while a new generation of settlers complained of the growing resentment among the Indians to the English, who had brought them civilization and religion. The change in attitude is surprising, considering the relative peace among the Algonquian Nation and the settlers during first contact.

The Indians of New England had tolerated and, it could be said, had welcomed the Pilgrims in 1620. The Algonquian people were instrumental in settler survival during the harsh early years.

The Battle of Bloody Brook was fought during King Philip's War. English colonial militia were ambushed by a band of Indians led by descendants of the Algonquian peoples of Nippenet while escorting a train of wagons carrying the harvest from Deerfield to Hadley, Massachusetts.

Natives taught the newcomers how to fish and to plant, and the story of the goodwill of Samoset and Squanto has become part of American folklore. Massasoit, the Wampanoag sachem, attended the first thanksgiving along with 100 other Indians who brought fresh deer meat and other foodstuffs to the celebration. Massasoit later signed a peace accord with the settlers that would last until the advent of King Philip's War in 1675. Massasoit's son, King Philip (Metacom), would later become sachem of the Wampanoag and the principal actor in the unfolding struggle that bears his name.

Metacom was troubled by continued colonial incursions into Indian land and culture. In addition, he viewed the policies and decisions of colonial leadership as arbitrary and English-centric when it came to handling Indian grievances. For example, disputes regarding land claims or addressing damages caused by roaming colonial livestock usually favored the English. Furthermore, the conversion to Christianity of natives, called "praying Indians" by the colonists, undermined Native American spirituality and culture.

The vast influx of settlers during the Great Migration of the 1630s, when approximately 20,000 Puritans entered New England, increased the demand for land, with the resultant marginalization of the native population as they were pushed farther from their traditional territory. English diseases such as smallpox and mumps decimated the indigenous population. Tension and resentment steadily increased throughout the decades, resulting in open warfare in 1675.

The war started well for the Indians, who used superior tactics and the wilderness to their advantage. Colonial forces were constantly befuddled by Native Americans who quickly emerged out of the wilderness, effectively attacked exposed frontier settlements, and then rapidly disappeared into the woods and swamps. They scored spectacular victories at Lancaster, Medfield, and Sudbury, Massachusetts, to name a few, prompting panicked Boston authorities to consider building a wooden wall around the town. The destruction of Lancaster is significant because one of the captives, Mrs. Mary Rowlandson, would write what is considered by many critics to be the finest captivity narrative in colonial literature: *The Sovereignty and Goodness of God*, published in Boston in 1682. A devout Puritan, Rowlandson offers a

firsthand account of this Anglo-Indian struggle on a personal and spiritual level.

Eventually, the settlers triumphed because they learned to fight Indians Indian style, allowed praying Indians and other friendly natives to act as scouts and soldiers, and possessed a larger economic and population base than the Native Americans. In addition, the insurgents faced a unified English alliance in contrast to a splintered Native American coalition, wherein several tribes fought against King Philip or remained neutral during the war. The defeat of King Philip's confederates was in some ways inevitable, and the vanquished tribes—depleted by war, disease, and expulsion—allowed white expansion into valuable Indian land.

To many Native Americans, Metacom was and is a hero who dared to protect his people and culture from English hegemony; to many settlers, King Philip was a traitor who deserved his fate. Killed in battle, he was later quartered and beheaded, his head stuck on a pole in Plymouth, Massachusetts, as a trophy and as a warning. It remained for many years.

Kiowa

The Kiowa are a southwestern Native American people of the Tanoan language family. The Kiowa are considered among the tribes that best

characterize the Plains Native American culture, one of the last of the Native American cultural groups to develop in the early 1600s. They were known for their raids among other Native American tribes and Euro-American settlers before their settlement on federal reservations in the mid-1800s. Most modern Kiowa reside in and around Oklahoma and seek to preserve their cultural and linguistic heritage.

The Kiowa were historically a nomadic hunter-gatherer culture whose oral histories place their origin in the northern United States along the Yellowstone and Missouri Rivers in present-day Montana. Southward migration brought them to their traditional territory in western Oklahoma, northeastern New Mexico, and the Texas Panhandle. Their linguistic similarities with the Pueblo suggest a possible common heritage. Kiowa culture was nomadic, and camps could be quickly packed and transported. They generally lived in tepees, which are easily portable. The Kiowa used dogs and, later, horses to transport goods loaded onto travois.

The buffalo were their primary source for food, clothing, housing, tools, and goods. They supplemented their buffalo meat diet with plants, roots, and berries. Males were warriors, hunters, and guards. Females cooked, tanned hides, made clothing, gathered food, and packed or set up camps. Tools and weapons included the bow and arrow, spear, tomahawk, knife, axe, and needles. Horses became central to the Kiowa's Plains culture shortly after their adoption from the Spanish and other Native American tribes.

Extended families were the main unit of social organization, and clans were nonexistent. A head chief provided overall political leadership, but there were also camp leaders and war chiefs. Military society members were known as Dog Soldiers. Social organizations were based on age groupings. Traditional dress consisted of breechclouts and shift-style dresses of animal skins, leggings, moccasins, jewelry, and fur coats in winter. Hair was worn long, whether loose or in braids. Beadwork was an important traditional Kiowa art form.

The Kiowa practiced a polytheistic religion based on animism and sought supernatural assistance or appeasement. Religious ceremonies also served social functions, helping unify the tribe.

The Sun Dance, held in the early summer months, was the most important of the tribal ceremonies. Peyote worship was also practiced. Oral tales and pictographic calendars preserved tribal histories.

Relationships With Other Tribes and the United States

Kiowa relations with neighboring tribes included a close alliance with the Comanche as well as shifting alliances with the Cheyenne, Arapaho, Crow, Flathead, and Sarsi. Spanish records mentioning the Kiowa date back to the early 1700s but are largely references to hearing of them from other tribes. French explorer Rene Robert Cavellier, Sieur de La Salle in the 1680s and American explorers Meriwether Lewis and William Clark in 1804 to 1805 also both recorded hearing of the Kiowa.

Later meetings with the Spanish and trade relations with other tribes allowed the Kiowa to obtain horses, guns, and slaves. Historically, disease and war introduced by contact with Euro-Americans decimated the Kiowa, like other Native American populations. The efficiency of hunting on horseback as well as the widespread U.S. slaughter of the buffalo disrupted the traditional Kiowa lifestyle, resulting in starvation.

The Kiowa were among the Plains tribes that raided U.S. wagon trains across the Santa Fe Trail in the early to mid-1800s, along with the Kiowa Apache, Comanche, Southern Cheyenne, and Arapaho. Kiowa raiders ranged as far south as Mexico and northward close to the Canadian border. The United States dispatched Army troops to the region. One of the most publicized incidents was the Warren Wagon Train raid (aka Salt Creek Massacre) of 1871, for which Kiowa warriors Satanta and Big Tree were tried and sentenced to death in the U.S. court system. The sentence was commuted, and they were later paroled.

Some Kiowa wished to maintain peaceful relations with the United States and/or assimilate. The first treaty between the Kiowa and the federal government was signed in 1837. Many Kiowa moved to an Oklahoma reservation located between the Washita and Red Rivers alongside the Comanche, Kiowa Apache, Caddo, and Wichita in 1868. Many joined the Comanche, Kiowa Apache, and Cheyenne in rebellion

from 1874 to 1875. Much reservation land was lost when the reservation was allotted to family or individual ownership under the 1887 Dawes Severalty Act, with the remainder sold into non-Indian ownership.

Much of the modern Kiowa population resides in Oklahoma, within or around the cities of Anadarko, Fort Cobb, Mountain View, and Carnegie. They hold a variety of occupations. The Native American population grew from the 2000 to the 2010 U.S. census. The 2010 figures count 13,787 people who identified themselves as being of full or partial Kiowa ancestry, out of a total of over 5.2 million Native Americans. The total U.S. population in 2010 was 1.7 percent Native American, 22 percent of whom lived within American Indian areas such as reservations. The Kiowa seek to preserve their cultural heritage through museums, arts and crafts, and language. Notable Kiowa include Pulitzer Prize-winning author N. Scott Momaday, author of the 1968 book *House Made of Dawn*.

Kirpan

The *kirpan*, in a Sikh American context, challenges the boundaries of multiculturalism in the United States because it directly addresses the free exercise of religion guaranteed by the

Bill of Rights. For Sikhs, the *kirpan* (a type of sword or knife), is an article of faith that affirms their commitment to Sikh values and honors the teaching of their gurus. Along with four other Sikh articles of faith, the kirpan were gifts of love from the divine, which the 10th Sikh guru, Guru Gobind Singh Ji, proclaimed as part of the Sikh physical identity.

On the day of Vaisakhi in 1699, Guru Gobind Singh Ji initiated five men, from varied caste backgrounds, into the Khalsa (army of the pure). The mission of the Khalsa was to uphold Sikh principles of equality and justice. Thus, Guru Gobind Singh Ji's designation of the kirpan as an article of faith means that Sikhs, particularly those initiated into the Khalsa, must display bravery and fearlessness in order to combat oppression. With such an honor comes great responsibility.

The *kirpan* is only to be employed in defense, when all other options have been exhausted, because "failure to do so at that time would be tantamount to complicity in acts of evil and oppression," according to V. Lal. Therefore, the kirpan is not merely a symbol but an article of faith bestowed upon Sikhs to honor their love and commitment to the divine higher power (*Waheguru*). Thus, many Sikhs believe it would be dishonorable to carry the kirpan outside its original form and as instructed in the Sikh *Rehat Maryada* (code of conduct).

The kirpan as an article of faith and not simply a symbol directly challenges American notions of celebrating multiculturalism. Legal issues (in schools, employment, and public spaces) center on the kirpan as a weapon. This perspective makes it a criminal offense to carry the kirpan, although it is a mandated faith-based practice for Sikhs. Thus, balancing the freedom of religious practice and public safety is a constant challenge for Sikh civil rights organizations, American civil society, and the judiciary.

The Sikh Coalition, a Sikh civil rights organization, has defended the right of many Sikhs to carry a kirpan, despite this obstacle. Kirpans can be found in Sikh houses of worship, on display at *Nagar Kirtans* (Sikh parades), and worn on the bodies of Sikh men and women in a *gatra* (strapped sheath) under or over clothes. The Sikh *Rehat Maryada* mandates the wearing of a strapped kirpan but does not specify the length.

Therefore, the length of a kirpan varies from several feet to two or three inches.

Employment Discrimination

Many American schools and employers assert that the kirpan threatens their ability to provide a safe and secure environment. Sikh organizations have sought to protect equal employment opportunities for Sikhs who carry the kirpan as part of their religious identity. The Sikh Coalition has filed lawsuits against state and local governments, as well as private companies. A few new notable interventions include the Internal Revenue Service (IRS), Federal Protective Service (FPS), and AT&T.

Often, immigrant Sikhs encounter compounded discrimination because of their faith-based identity and limited English proficiency. They fear complaining about discrimination because of a system backlash that they would not be able to navigate. Thus, many will pursue job opportunities that are below their skill level but allow them to freely practice their faith. Moreover, when Sikh truck drivers, such as Sahadur Singh, are pulled over by law enforcement for a traffic violation, they are served with a weapons charge for carrying a kirpan.

Sahadur Singh's experience was presented in the form of testimony in March 2009 for AB 504, legislation that would require educating California law enforcement officers on the Sikh faith and the kirpan. AB 504 passed all levels of the California legislature but stopped at the governor's desk. It was vetoed by then governor of California Arnold Schwarzenegger. However, training on Sikhs and the kirpan was still implemented by the California Commission on Peace Officer Standards & Trainings (POST).

Children and Schools

The 1994 case of *Cheema v. Thompson* highlights how the free exercise of religion, a First Amendment right, challenged constitutional notions of American pluralism in a school setting. The Cheema children, Rajinder, Sukhjinder, and Jaspreet, attended school in Livingston Union School District in California. During December 1993, the three children were initiated into the Khalsa, which required the carrying of the kirpan in a gatra. In January 1994, the children returned to school in their mandated Sikh uniform (the five Sikh articles

of faith). A classmate told Rajinder's teacher that he was carrying a kirpan. Soon, all three siblings were questioned by school officials as to why they were carrying the kirpan. The Livingston Union School District was unsatisfied with the children's response that the kirpan was worn for religious purposes, and determined that the children be suspended from school. They were in violation of the California Penal and Education Codes and other district regulations, which classified the kirpan as a weapon that compromised school safety.

Shortly thereafter, the American Civil Liberties Union (ACLU) requested that the school district reconsider its decision. The members of the board refused, and in April 1994, the Cheema family filed a suit under the Religious Freedom Restoration Act (RFRA), requesting that Sikh children be allowed to attend school while freely practicing their religion, which included carrying the kirpan. During this time, a bill unanimously passed in the California Senate that would have allowed all Sikh children to carry kirpans to school because it was an integral part of their constitutional right to freely practice religion.

However, Pete Wilson, then governor of California, vetoed the bill because he could not "abandon public safety to the resourcefulness of a thousand school districts." Ultimately, this case was one of the first to be tried under the Religious Freedom Restoration Act (RFRA) of 1993, which placed the responsibility upon the state to show that restraining the free exercise of religious practice was "the least restrictive means of furthering [a] compelling governmental interest." It was determined that there was no evidence that the school district's policy was the least restrictive means possible. Thus, the Cheema children were allowed to wear the kirpan to school per agreed-upon specifications.

During the Cheema family's legal proceedings, many pieces of evidence were presented from American and Canadian school systems to argue that Sikh students carrying kirpans posed no threat to school safety. For example, administrators from the Selma Unified School District and the Surrey School District in British Columbia (Canada) stated they were not aware of any kirpan-related incidents in their schools that compromised safety. Sikh students were allowed to carry kirpans as part of their faith-based practice.

Thus, the issue of school safety versus free exercise of religion represents America's struggle to be comfortable with otherness.

Klamath

Culturally similar to the Modoc and other northern California tribes, the Klamath people lived in Oregon, around the region of Upper Klamath Lake, Klamath Marsh, and the Williamson River. The richness of their environment provided them with food, clothing, and shelter, and their seclusion protected them from raids by larger tribes. The first white men who reached Klamath villages were traders and explorers. Within a few decades, settlers, missionaries, and ranchers followed, disrupting the peaceful lifestyle of the Klamath.

In 1864, the Klamath ceded to the U. S. government more than 20 million acres of land, reserving for themselves the rights to hunt, fish, and gather in safety on the lands. Even in the reservation age, the Klamath prospered, but termination of the reservation and the tribe's tribal recognition in 1954 was devastating. With their land lost and their cultural identity disintegrating, the Klamath almost disappeared as a people. It was the battle to protect the land and the water that preserved some sense of identity, a battle that continues into the second decade of the 21st century.

Before the first European contact, the Klamath depended on the land to provide their food, clothing, and shelter. The villages near Klamath Lake consisted of earthen houses; those at the lower end of Klamath Marsh were log houses, built on the water atop stone and gravel foundations. In summer, the Klamath ate antelope and gathered wocus, the seed of a water lily, which they used in soups or mixed with flour. They lived mostly secluded from other Indians.

In 1825, mountain men Finan McDonald and Thomas McKay arrived in the Klamath Basin with a party of 32 men. The Klamath warned the party against the Modocs. McKay returned a year later in a party led by Peter Skene Ogden, famed as a beaver trapper. Ogden's party consisted of two dozen mountain men, who did the hunting and trapping, and their Indian wives, who prepared game and cured hides.

Ogden described the tribe as a "happy race" and regretted the coming intrusions that he predicted would destroy the unique quality of the Klamath. The next recorded contact between the Klamath and Europeans came in 1843, when explorer and map surveyor John Charles Frémont and his party of 25 men, including the famous Kit Carson, met a band of Klamath north of Upper Klamath Lake. Frémont returned in 1846 with a larger party.

Ogden's concern about the intrusions proved well founded. The decades after Frémont's exploration brought a steadily increasing stream of military personnel and civilians into the Klamath's world. Conflicts, some of them violent, became common. In 1864, the Klamath, the Modocs, and the Yahooskin (a band of Northern Paiutes) ceded more than 20 million acres of Native American land to the U.S. government, with 2 million set aside for a reservation. The treaty merged the three tribes into the Klamath Tribes and brought them together on what had been exclusively Klamath territory. The reservation boundaries were redrawn a number of times; the land area was ultimately just over half of what had originally been designated. The Dawes Act of 1887 divided reservation land into allotments, which could be sold. Many were, some of them to non-Indians.

Even with all these changes, the Klamath survived. Revenue from tribal timber provided tribal individual income nearly on a par with the rest

of the population in Oregon, and provided health and social services to tribal members. They were the only tribes in the United States who paid for all the federal, state, and private services used by tribal members. Another blow came in 1954, with federal legislation that terminated the reservation and ended federal recognition of the Klamath Tribes. Poverty became widespread, natural resources were jeopardized, and tribal identity was quickly eroding.

Legal Battles and Victories

Two court decisions in the 1970s helped preserve a sense of cultural integrity. In 1974, the U.S. Supreme Court ruled that the Klamath Tribes' fishing and hunting rights survived the termination process. Another legal victory in 1979 guaranteed minimum stream flows in the Klamath River to protect fish and wildlife. Most significantly, on August 26, 1986, the Klamath Tribes officially regained federal recognition under the Klamath Restoration Act. However, the Restoration Act did not restore former reservation lands. Tribal efforts to regain a tribal land base continue, as do their efforts to protect the ecosystem on the land they already have.

The Klamath River is vital to the Klamath's physical and cultural survival. If the flow of the Klamath is interrupted, the fish do not migrate. Dams on the river have resulted in the loss of salmon in the upper Klamath River system, once the third-most-productive salmon run on the west coast. Through all the changes that have shaped the life of the Klamath tribe, their claim to the Klamath's waters has remained one of the few constants. Their legal rights to the river's water have been confirmed over nearly 150 years of legislation, but despite the laws, drought and dams left salmon endangered, the Klamath fishery closed, and an estimated 4,000 jobs were lost.

In December 2011, the tribes won six legal victories for tribal water rights, victories that followed decades of litigation. In April 2012, Administrative Law Judge Joe L. Allen ruled in favor of quantification of the tribes' water rights for two water sources, the Klamath River and Klamath Lake, in the amounts claimed by the tribes and the U.S. Bureau of Indian Affairs. The rulings adopted the water amounts sought by the tribes and confirmed, once again, the tribal water rights.

The total membership of the combined tribes was approximately 3,400 in 2011.

Knowledge Construction

Knowledge construction is the process by which beliefs are incorporated into a curriculum, canon, or society. Study of the knowledge construction process is the second element of James A. Banks's five dimensions of multicultural education, a frequently cited metapedagogical taxonomy. The other four dimensions are content integration, prejudice reduction, equity pedagogy, and empowerment of school culture.

Multicultural education in general, and the knowledge construction process in particular, challenges the common, but generally unspoken, belief that the content of a curriculum or scholarly tradition is intrinsically bias-neutral, objective, meritocratic, and fair. Instead, study of knowledge construction encourages students to take a revisionist view toward history—examining the role that an author's or tradition's social and cultural context may have played in the development of ideas, and viewing that author or tradition through narrative and hermeneutic lenses that are not necessarily complementary to the author's or tradition's implicit biases.

A conventional U.S. history of World War II, for example, would look at the war primarily from the perspective of American politicians, soldiers (largely white, male, and implicitly heterosexual),

journalists, and war historians. Implementing study of knowledge construction into the curriculum would encourage students to examine World War II from the perspectives of those who are often treated as bystanders, such as civilians in nations that were affected by fighting but were not directly involved in the war, and those who were treated as beneficiaries of Western intervention, but not necessarily as heroes in their own right, such as leaders of the Jewish underground in Germany.

Study of the knowledge construction process also calls attention to the ways in which marginalized voices are often misused to support a dominant narrative. When the Works Progress Administration (WPA) interviewed formerly enslaved African Americans during the late 1930s, for example, oral historians were surprised to learn that many of the elderly interviewees expressed nostalgia for their enslaved lives.

This is frequently interpreted as a sign that slavery was not necessarily unpleasant, a narrative that favors the conventional idea of a dignified but misguided white Confederacy. However, through a different narrative lens, a closer examination of the interview transcripts reveals that former slaves usually discussed slavery as pleasant only relative to their contemporary conditions—as a means of expressing how unpleasant their contemporary conditions were. That reflects more on the prejudice and grinding poverty of the Great Depression than it does on slavery.

A study of the knowledge construction process is generally revisionist, as the authors operating within the Western canon have historically been taught to downplay any personal biases they may have, and present themselves as objective representatives of their respective disciplines. Recontextualizing bodies of knowledge as the products of flawed and biased human beings, rather than as pure data discovered by objective analysis, recenters the discussion in a way that many conventional scholars may find challenging, or even solipsistic.

This is one of the primary reasons why the very idea of multicultural education remains controversial and has inspired a backlash among educators, theorists, and political leaders. In 2010, legislators in Arizona and Texas began targeting ethnic studies curricula that use the study of knowledge construction to critique traditional

white historical narratives, and they were successful in removing much of this material from public ethnic studies curricula.

Know-Nothing Movement

The Know-Nothing movement was an anti-immigrant and anti-Catholic movement in the 1850s led by nativist politicians who were commonly known as Know-Nothings. Drawing widespread support from native-born Protestant Americans, the Know-Nothings achieved substantial electoral success in 1854 with a proscriptive platform against foreigners, especially Catholics. Although the Know-Nothings lost their influence in the political scene within a few years, their nativist language and legislative agenda were inherited by subsequent anti-immigrant movements in the United States.

The origins of the Know-Nothing movement date to the 1840s. In 1844, a secret fraternal society called the Order of United Americans (OUA) was formed in New York City for the purpose

of influencing politics for anti-immigrant ends. Another organization, named the Order of the Star-Spangled Banner (OSSB), was founded in 1850, again in New York City, with a similar objective. The OSSB later expanded by incorporating members of the OUA, and at some point between May 1853 and May 1854, the OSSB came to be known as the “Know-Nothings.” It has been commonly believed that the name *Know-Nothings* came from the members’ alleged practice of saying “I know nothing” to questions about their activities for the protection of their secrecy, but the precise origin of the name has not been identified.

From 1845 to 1854, the United States received approximately 2.9 million immigrants, meaning that more immigrants arrived in America in that decade than in the seven previous decades combined. This unparalleled influx of foreigners, especially poor Catholics from Ireland and the German states, stimulated intense antagonism against Catholic immigrants among Protestant Americans. In 1854, the growing anti-immigrant sentiment resulted in the rise of the Know-Nothings in local, state, and national politics.

In the fall elections of 1854, the American Party—the Know-Nothings’ official organization—won stunning victories as a third party. The Know-Nothings were particularly popular in northern states, not only for their anti-immigrant ideology but also for their antislavery inclination. Disenchanted with the Whigs and Democrats for their failure to prevent the passage of the Kansas-Nebraska Act of 1854, which opened western territories to slavery under the principle of popular sovereignty, northern voters regarded the American Party as an alternative to the traditional parties. By the end of 1855, the Know-Nothings had captured more than 100 seats in Congress; eight governorships; mayor’s offices in Boston, Philadelphia, and Chicago; and thousands of local elected positions.

As they sat down in their new offices, the Know-Nothings started to pursue their nativist policy based on their two principal tenets. First, they believed that Protestantism defined American society and that Catholic immigrants, with their hierarchical and despotic church, were attempting to overturn American society. Second, the Know-Nothings believed that only native-born

Americans could understand and operate American republican institutions.

Following these convictions, the Know-Nothings sought to deter naturalization and curtail the political power of immigrants. Most notably, the Know-Nothings in Congress proposed extending the probationary period before naturalization from the existing five years to 21 years, although this attempt ultimately remained unfulfilled. Nativists were more successful in implementing their policies at the state level. Know-Nothing state legislators disbanded Irish militia companies and reduced the number of judges qualified to administer the process of naturalization, thereby delaying immigrants’ participation in elections. To limit the Catholic Church’s wealth and political influence, the Know-Nothings also enacted church property laws, which required lay boards of trustees instead of diocesan officials to hold title to church real estate.

In Massachusetts, where hostility against Irish Catholics was exceptionally strong, the Know-Nothings were most successful. Nativist legislators required public schools to read the Protestant King James Bible every day. They also appointed a so-called nunnery committee to investigate Catholic priests’ alleged sexual misconduct and torture of nuns at convents and Catholic schools. In an investigation of a convent school, committee members harassed and terrorized nuns and children, only to find nothing after all. Regarding foreigners’ poverty as an economic and moral threat to American society, nativists deported destitute immigrants back to Europe. While pursuing these radical nativist policies, the Massachusetts Know-Nothings promoted antislavery by passing the Personal Liberty Act, which protected fugitive slaves in the state from return to their masters under the federal fugitive slave law.

The pace of the Know-Nothings’ decline was as striking as the swiftness of their rise to power. Divided between northern and southern members over slavery, the national American Party declined precipitously after failing to sustain its 1854 showing in the 1856 presidential elections, which signified the demise of Know-Nothingism as a national political movement. Despite its short prosperity, the Know-Nothing movement demonstrated how nativist sentiment could be manifested in the form of proscriptive legislative action

and set precedents for the activities of later anti-immigrant organizations in the United States.

Korean Americans

Although the first documented arrival of Korean immigrants in the United States dates back to the turn of the 20th century, today most Korean Americans are part of a larger group who are often referred to as post-1965 immigrants. This group of immigrants are a culturally, economically, and racially diverse group who were allowed to legally immigrate to the country as a result of the Immigration and Nationality Services Act (INS Act) of 1965. Prior to that legislation, it was difficult for non-European whites to enter the country. Influenced by the civil rights movement and legislations of the era, the INS Act of 1965 sought to eliminate national origin as the criteria for admission and replaced it with the concept of family reunification and needed skills.

As of 2010, there are about 1.7 million Koreans living in the United States, and their number makes up roughly 10 percent of Asian Americans. Factors like relatively recent immigration history, residential concentration in large urban centers, merging kinship networks, and common experiences shared in the United States as

Americans of Korean descent may have fostered and maintained a strong sense of community among Korean Americans. As members of the larger Asian American community, they face racism directed against Asian Americans as they are perceived to be unauthentic Americans and have job ceilings in their careers.

There were three major waves of Korean immigration to the United States. The first wave took place from 1903 to 1924, when roughly 8,000 Korean laborers arrived in Hawai'i to work on sugar plantations. However, pressure from Japan, which forcibly annexed Korea in 1910, and anti-Asian sentiment, as shown in the Oriental Exclusion Act of 1924, ended Korean immigration.

The second wave (1952–65) started with the enactment of the McCarran-Walter Act of 1952, which allowed Asian immigrants but still adhered to a racist quota system that limited their numbers. Many Korean immigrants of this wave were war brides, married to American men who served in the Korean War. Without adequate educational and cultural preparation regarding the United States and support from established ethnic communities, many experienced difficulties in adjusting to their husbands' country. Others were orphans of the Korean War who were adopted by American families. Also, a small number of

The Ahn siblings, Ralph, Philip, and Susan, were from California's first Korean immigrant family. In 1942, they enlisted in the U.S. military, making Susan Ann Cuddy the first Korean American woman to do so and the first female Navy gunnery officer.

college students came, seeking to earn academic degrees from American universities.

The third wave (1965 to present) came with the enactment of the INS Act of 1965, which lifted the quota system against persons of color. About 92 percent of Korean Americans held a high school diploma or higher, and roughly 53 percent held a college degree or higher, compared to 86 and 28 percent, respectively, of the national norm. However, the median household income of Korean Americans, at \$52,103, is lower than the national norm at \$62,763. Also, more Korean Americans rent (52 percent) than other Americans (34 percent). Additionally, the higher percentage of college-educated Koreans may be misleading because a degree earned in Korea may be of little value in the United States. This may explain the unusually high rate of self-employment for Korean Americans—24 percent, compared to whites (13 percent) and African Americans (5 percent) in 2000.

Koreatowns, often unofficially named, can be found in large cities throughout the United States; however, the largest two, in the greater Los Angeles and New York metro areas, together comprise roughly one-third of all Korean Americans. They often settle in areas near their kin, who serve as resources, and the kinship networks of different families often merge at ethnic religious institutions to play an important role in Korean American communities.

These Korean religious institutions play active roles in transmitting the cultural values of the community to children and serve to endorse the teachings of parents at home. Politically, these churches become a place for mobilizing the group. For instance, these churches and temples mobilized Korean Americans to both financially and socially support Korean shop owners and their families who were caught in the middle of racial protests in the Los Angeles civil unrest of 1992. Soon after the racial protests, the religious leaders organized interracial dialogues with African American and Latino religious organizations.

Though the co-ethnic community helped with achieving a level of comfort in the United States, Korean Americans can find themselves as targets of individual and institutional racial prejudices and discrimination. Like other Asian Americans, many complain about the sense of being

“perpetual guests” in the United States, regardless of length of residence, and a job ceiling in corporate America whereby they are often ignored in promotion considerations.

At the same time, many Korean Americans actively participate in mainstream America. Academics like Elaine Kim of the University of California, Berkeley (Ethnic Studies), and Peter S. Kim of Merck Research Laboratories (Biology) are respected scholars in their fields. In the popular media, there are people like Daniel Chun (co-executive producer of *The Simpsons*) and Margret Cho (comedian and actress). Athletes like Sammy Lee (two-time Olympic gold medalist) and Michelle Wie (professional golfer) are well known. Additionally, Michelle Rhee (former chancellor of the District of Columbia Public Schools) and Herbert Choy (U.S. federal judge) are two notable Korean Americans in public office.

Korematsu v. United States (1944)

Korematsu v. United States was a U.S. Supreme Court decision issued on December 18, 1944, that upheld the confinement of individuals of

Japanese ancestry in the United States to internment camps. *Korematsu* is one of the most controversial decisions ever issued by the U.S. Supreme Court because of the racial nature of the decision. It is also the most famous of the Japanese internment cases.

The *Korematsu* case began when Fred Korematsu, an American citizen of Japanese ancestry, was arrested for failing to leave San Leandro, California, an area designated as a military zone by Civilian Exclusion Order No. 34. Korematsu decided to evade and then challenge his confinement by refusing to report for confinement as ordered by the U.S. military. Civilian Exclusion Order No. 34 was issued on May 9, 1942. The order was the result of the military conflict between the United States and Japan, which officially began on December 7, 1941, when Japan attacked the U.S. naval base located at Pearl Harbor, Hawai'i. As a result of the attack on Pearl Harbor, President Franklin Roosevelt issued Executive Order 9066 on February 19, 1942. Executive Order 9066 authorized the internment of tens of thousands of American citizens of Japanese ancestry and resident aliens from Japan under the policy of military necessity.

It afforded the military broad powers to ban any citizen from a 50- to 60-mile-wide coastal area stretching from Washington State to California, extending inland into southern Arizona. The order also authorized transporting these citizens to assembly centers hastily set up and governed by the military in California, Arizona, Washington State, and Oregon. The same executive order (and other wartime orders and restrictions) was also applied to smaller numbers of U.S. residents of Italian or German descent.

For example, 3,200 resident aliens of Italian background were arrested, and more than 300 of them were interned. About 11,000 German residents—including some naturalized citizens—were arrested, and more than 5,000 were interned. These wartime measures were most sweeping for Japanese Americans because they uprooted entire communities, targeting citizens and resident aliens.

Fred Korematsu

At the time of Roosevelt's order, there were over 125,000 Japanese Americans living in the United

States as citizens. Of that population, over 88 percent resided in the states impacted by Roosevelt's order. Executive Order 9066 led to over 100 military orders of confinement of individuals of Japanese descent in the states, including a May 9, 1942, order that included Fred Korematsu.

Korematsu, at the time of the order, was a factory worker in California, married to a Caucasian woman, Ida Boitano. Boitano was not allowed to accompany Korematsu into the internment camp. Korematsu initially attempted to evade internment following the order by undergoing eye surgery to look Caucasian. However, he was eventually arrested for occupying the forbidden area, was confined to the internment camp, and was charged.

The American Civil Liberties Union refused to accept his case. Korematsu received the assistance of volunteer lawyers who were successful in challenging his confinement all the way to the U.S. Supreme Court. However, the U.S. Supreme Court, by a vote of 6–3, ruled that Executive Order 9066 was constitutional.

In upholding the confinement of Korematsu and all of the others in the camps, Justice Hugo Black, a respected U.S. Supreme Court justice, wrote that Korematsu was “not excluded from the Military area because of hostility to him or his race. He was excluded because we are at war with the Japanese empire. . . .”

At the time of his arrest, Korematsu was an American citizen. His parents had immigrated to the United States in 1905. He was born in Oakland, California, on January 30, 1919. He had attended public schools in California and worked in his family's flower nursery. In 1940, he attempted to enlist in the U.S. military but was rejected because of stomach ulcers. He eventually worked as a civilian on the war effort, but following the attack on Pearl Harbor on December 7, 1941, he was fired from all defense-related work for the United States.

Redress

Overall, 120,000 Americans of Japanese descent were forcibly removed from their homes in 1941 and 1942 into internment camps on the west coast of the United States. These individuals and families suffered losses in property and income, and incurred serious psychological damage as a

result of the policy. Following the end of World War II, the internment of individuals of Japanese descent as a result of President Roosevelt's order and the *Korematsu* case entered the phase of redress for the policy and the damage incurred on those who were forcibly removed. In 1948, Congress enacted the Japanese American Evacuation Act, the first piece of legislation designed to correct the wrong of Roosevelt's order. The law was inadequate.

On July 31, 1980, the Commission on War-time Relocation and Internment of Civilians Act was passed by the United States it was signed into law by President Jimmy Carter. The law established a commission to study the removal of the Japanese Americans and the effects upon their lives, and to make recommendations for redress as a result of the policy. On June 16, 1983, the commission concluded that racial prejudice and hysteria led to the internment of individuals of Japanese descent. The commission also recommended presidential pardons for those convicted of crimes relating to the policy and set aside \$1.5 billion to provide compensation for each surviving victim of the policy. On October 9, 1990, pursuant to the Civil Liberties Act of 1988, the federal government began to make its first payments to the surviving victims.

In addition to these efforts to exonerate the victims of the policy, lawyer and political science professor Peter Irons began working in 1982 to reverse the original conviction of Fred Korematsu and others convicted of violating the internment laws. Through a Freedom of Information Act request, Irons uncovered evidence of government cover-up and misrepresentation in the *Korematsu* case that led to his conviction and perpetuated the hysteria surrounding the internment. Irons organized a legal team to assist Fred Korematsu and had his case re-opened in federal court based upon the evidence. In 1983, a federal court overturned Fred Korematsu's conviction.

Irons also was instrumental in reversing the conviction of Gordon Hirabayashi, another well-known internment era defendant. Hirabayashi had lost an appeal before the U.S. Supreme Court in 1943 involving violation of a curfew imposed upon Japanese Americans. As in the *Korematsu* case, evidence had been withheld and suppressed by the government. In 1985, Hirabayashi's

conviction was also overturned by a federal court as a result of Mr. Irons' efforts.

In 1998, Fred Korematsu, the individual who originally challenged the internment policy put forth by President Roosevelt by refusing to leave his isolated area, was awarded the Presidential Medal of Freedom by President Bill Clinton. The state of California honored Fred Korematsu in 2010, by declaring January 30 "Fred Korematsu Day." Mr. Korematsu and Gordon Hirabayashi are remembered as heroes by many Americans.

Kosher

The word *kosher* means "fit" in Hebrew and Yiddish. It holds a place in American vernacular as a procedure or product that has undergone considerable scrutiny to arrive at a quality standard. The actual practice of *kashrut* (Hebrew noun: "keeping kosher") hinges on ancient religious commandments but is subject to later interpretations, numerous technicalities, variations among Jewish communities, and interactions with regulators and the world beyond. Advocates align it with animal rights, (more recently) human rights, and a healthful diet. As verdict and vernacular, then, it may be easier to pronounce something "not kosher" than "kosher."

The Torah or Five Books of Moses, primarily in the Book of Leviticus, first categorized the animals that the Jewish people could eat: those

that chew their cud and have split hooves (cattle, sheep, lamb), domesticated fowl, and seafood with fins and scales. Pork products and shellfish, therefore, are prohibited. It is also forbidden to “seethe a kid in its mother’s milk.”

Consequently, kosher households do not eat meat and dairy products at the same time. With evolving agriculture, food processing, and commerce, the rabbis from the Talmudic period to the present defined how kashrut would be conducted and supervised. Since Jewry throughout most of history has been geographically dispersed, local communities followed the pronouncements of their rabbinic authorities. Leading actors in the process are the rabbis, certification inspectors (sometimes rabbis), butchers trained in ritual slaughter, kosher retailers, the butchers they employ (in the past, some also slaughtered the animals), and consumers.

Kosher in America

Kashrut in the United States went through several stages. Skilled practitioners were in tremendous demand on the western frontier. Polish-born Joseph Newmark, a certified *shochet* (ritually trained slaughterer), arrived in Los Angeles shortly after California attained statehood. With the knowledge of religious tradition required of his profession, he doubled as the first lay rabbi for a community that barely numbered more than a *minyán* (10-person prayer quorum). Rabbis in larger settlements were concerned that their congregations would not be adequately provisioned. New York’s Congregation Shearith Israel hired a *shochet* before opening in 1730—and maintained a monopoly on kosher *schehitah* (slaughter/processing) until 1825, when other congregations adopted the practice.

At roughly the same time that Newmark entered Los Angeles, New York City counted approximately 16,000 Jewish residents. An anarchical commercial system soon arose: certified *shochets* and less trained colleagues could be found working in impure, unsupervised, and substandard conditions. After a bogus certification scandal, 18 New York, Philadelphia, and Baltimore synagogues combined their resources to provide stricture and structure to kashrut.

They imported Rabbi Jacob Joseph from Vilnius, Lithuania, in 1888, as author Sue Fishkoff

explains, to become America’s “first and only chief rabbi, a sort of Jewish pope for the New World.” The rabbi hired a cadre of inspectors, or *mashgichim*, who affixed *plumbas* (pins with the authority’s stamp of approval) to the chickens they deemed kosher. Butcher shops had to pay a tax for this service before even undergoing inspection.

The synagogue-based cooperative model died with Rabbi Joseph. (One legacy may be the *hekshers*, or logos, that still designate kosher products). More an episode than a turning point, it nevertheless illustrates some persistent problems; namely, it can be difficult to maintain integrity if the inspectors’ pay is assessed to those who are supposed to be regulated. Depending on economic and other conditions, kashrut also has the potential to factionalize its stakeholders. Such results were visible on a national scale when kosher butchers unionized during the late 1920s and 1930s.

Certification was and remains an expensive proposition for any industry. Fees are required at various levels to support it. Inspectors charge for their services, and kosher business owners pass the cost to consumers, who keenly feel the difference between certified and noncertified products. (A similar situation affects today’s organic poultry and livestock market, except that government regulators set some of the parameters.)

During 1902, again in New York, the price of kosher meat rose from 12 to 18 cents per pound in just a few weeks. Jewish homemakers organized a boycott; the fervor boiled over on May 15, when a mob ransacked kosher butcher shops, igniting and otherwise destroying the products. The incident ended when rabbinical authorities sided with the protesters. Meat prices declined to 14 cents.

Similar demonstrations occurred in other cities with large kosher markets during the 1910s. New York City’s Jewish population by 1910 had grown to 1,250,000, and kashrut subsequently became a consumer issue. In 1915, the state of New York enacted the nation’s first regulation outlining fraud in the sale of “kosher meat and meat preparations, kosher articles of food and food products” and defining such violations as misdemeanors.

Outside the larger east coast and midwest cities, however, the public conceived kashrut primarily

as a quaint folkway. Blue laws prevented kosher butcher shops from being open on Sunday, reducing public exposure and the potential for sales among Jewish customers. Limited ethnic appeal—and, for the first few decades of the twentieth century, unreliable food safety—also rendered production a strictly local affair. Inspection was carried out by various *hashkakhah* (supervisory) authorities, often affiliated with Jewish religious communities. Indeed, even today the regulation of kosher markets, restaurants, and catering establishments is largely conducted in the same localized way.

A National Kosher Infrastructure

Many credit the rise of a national infrastructure to the Orthodox Union (originally an association of Orthodox Jewish congregations organized during the 1880s in response to the fledgling Reform movement), which began a private, nonprofit certifying operation in 1923. The story is more complicated. The U.S. kosher infrastructure may be attributed partially to products that bound together Jews from diverse countries and traditions.

Passover, for example, remains the most commonly observed religious holiday, and few will argue with the centrality of matzoh, the unleavened, cracker-like bread that is the centerpiece on seder tables throughout the world. Although its processing requires some vigilance, the ingredients tend to be few and the expectations of consumers not wildly divergent.

The “Big Three” U.S. matzoh bakeries all arrived early: Horowitz-Margareten in 1884, Manischewitz in 1888, and Streit’s in 1916. By the end of the 19th century, Rabbi Dov Behr Manischewitz traded his then-standard coal stoves for gas-fired ovens, enhancing quality control. He also improved packaging so that his potentially crumbly products could travel, intact, not only to Jewish communities in the United States but also to Europe, Egypt, and New Zealand. Horowitz-Margareten and other matzoh manufacturers used food brokers to bolster their out-of-town sales. Indeed, while Horowitz-Margareten is now part of Manischewitz, all three brands continue—with national name recognition and diversified product lines.

Food technologies continued to impose major changes: They distinguished kosher production

sectors and increasingly made inspection a more scientific operation. Improvements in transportation and growing urbanization, for example, physically separated wholesale from retail operations, particularly in kosher meat. On the other hand, it was not uncommon to see European-born butchers and shop owners in major cities slaughtering and preparing for sale their own poultry well into the 1970s.

Orthodox and Conservative rabbis carefully deliberated standards on such items as commercial wine and cheese. Still, as kosher libations became increasingly popular (culminating today with some truly impressive examples), the inspectors developed a sense for how chemical and manufacturing processes—including “cooking” for less expensive “mevushal” wines—affected both kashrut and taste.

Delayed somewhat by the Great Depression and World War II, demography yielded a more potent influence. The majority of Jewish American adults were native born by 1950. The relatively assimilated, younger folks cashed in their G.I. benefits on suburban homes. While typically enjoying the memories associated with “Jewish food,” they veered away from strict dietary practices. (“Kosher style” delicatessens subsequently became popular.)

For most of the 1950s and until the urban unrest of the 1960s, the kosher retail infrastructure generally remained in the urban areas, catering to older, more observant customers. These neighborhoods no longer glared Yiddish or Jewish-themed signage, leaving the remaining businesses to stand out—and occasionally entice multiethnic neighbors with their food.

Changing Demographics and New Clientele

Two U.S. Supreme Court cases in 1961 challenged blue laws dealing with kosher retail sales. Both were upheld, but state-level enforcement already had grown lax. A few urban retailers, therefore, retained Jewish Sunday (or occasional) customers and, at the same time, developed new clientele. When the author’s uncle reopened his kosher butcher shop in Pittsburgh during the late 1970s after a fire, he advertised the event on an African American music station. Langer’s Delicatessen Restaurant in Los Angeles and Russ and Daughters in New York, both kosher style, have

successfully endured in their old, now multiethnic, neighborhoods.

Beyond local commerce, larger corporations and movements reacted to changing demographics, utilizing contemporary methods to gain market shares across the United States. Some, like New York-based Levy's bread, pursued multicultural advertisement during the late 1960s. Their then-innovative regional campaign featured aficionados dressed in ethnically revealing attire (Irish police officer, Native American with traditional braids)—all asserting that “You Don't Have to be Jewish to Love Levy's Jewish Rye.” A bigger push was through distribution channels.

Today, bagels are considered an American food, yet Lender's began freezing them in 1965, with an eye toward national supermarket chains—a pioneering act, later recognized at a national Jewish Federation conference. As this more welcoming

attitude emerged, Orthodox leaders sought to elevate and impress traditions. They responded to a set of infractions by introducing *glatt* standards, requiring an inspection of the animals' lungs. (*Glatt* pervades all kosher meat certification today.)

Memorable advertising (such as Hebrew National products reporting to a “higher authority”) and supermarket access drew both Jewish and general customers to prepacked kosher products. Like vegetarians, those who followed special diets appreciated clear labeling: meat, dairy, or neutral *pareve*. (Federal regulations more recently have practices with the same consumer-oriented intentions.)

The only two religions to codify animal slaughter, quite similarly, are Judaism and Islam; both prohibit pork products as well. Muslims have been given permission to use kosher meat when no halal is available. A few days before

Workers at Penn State prepare a kosher Passover buffet. Offering kosher food makes students feel more welcomed and included. Kosher foods conform to the regulations of *kashrut*, which is Jewish dietary law. Food that may be consumed according to *halakha* (Jewish law), is termed *kosher* in English, which means “fit.” Food that is not in accordance with Jewish law is called *treif*.

September 11—and after considerable retrofitting—Mount Holyoke College opened a kosher/halal kitchen, one of the first in the United States. It continues today, but few other institutions have been bold enough to embark on the detailed planning and initial expense that such an operation requires.

Relative observance of kashrut among the Jewish population reached its height in the early 20th century, but there are currently more than 1,000 active certifying agencies. With more rigorous inspection, kosher meat and poultry remained high-ticket items. Most large cities witness occasional scandals, often with shop owners substituting nonkosher meat for the real product. These episodes often are self-regulating, uncovered by rabbi-inspectors who, because of price or some other reason, suspect less-than-kosher dealings.

Of a different nature, the most widely discussed recent infraction occurred in 2008, when federal authorities raided the kosher slaughterhouse Agriprocessors in Postville, Iowa. Charges included the employment of undocumented workers as well as numerous health and safety violations. In its wake, advocates from the Conservative movement proposed *Heksher Tzedek*, kosher certification that in addition to traditional standards emphasized ethical treatment of workers and greater consideration of animals.

“Postville” (as this episode and a related book were called) heightened interest in moral aspects of kashrut but did not create them. New ecological, dietary, and ethical concerns became noticeable during the late 20th century. *Mazon: A Jewish Response to Hunger* (1985) derives its name from the Hebrew word for “food.” Backed by strategic initiatives, Mazon uses the Jewish traditions of giving and social awareness to nourish its completely nonsectarian grant-making program.

Not to be confused by the name, Hazon (1999) means “vision.” It raises funds through long bicycle rides and seeks to “create healthier and more sustainable communities in the Jewish world and beyond.” Educational programs, including a farm fellowship for young adults, are part of its organizational menu.

One increasingly associates kashrut with “mindfulness.” Far-flung issues and interests

recently have raised awareness among Jewish Americans at all levels of observance and brought others back to their heritage. It will be interesting to see how future connections—with diverse commercial partners, dietary practitioners, and activists—redefine “kosher.”

Ku Klux Klan

The Ku Klux Klan (also referred to as the Klan or the KKK) constitutes the oldest and best-known hate group in the United States still in existence. Viciously racist and anti-Semitic, the Klan has relentlessly promoted an ideology that merges doctrines of white racial supremacy with American patriotism and Christian religiosity since the 1860s.

The Klan has engaged in numerous incidents of violence, harassment, and ethnic intimidation over the past century and a half. Members of the Ku Klux Klan, referred to as Klansmen, are easily distinguishable through their trademark wardrobe and rituals, which consist of wearing white robes and tall, pointed hoods while frequently conducting nighttime burnings of large wooden

crosses. Klansmen refer to these fiery nocturnal ceremonies as illuminations.

The present-day Ku Klux Klan does not represent a single, unified organization. Rather, the Klan comprised many different state and local chapters that operate independently of one another and feature their own respective membership, agenda, and programming. From its relatively humble origins in Tennessee in 1866, the Klan expanded geographically and splintered into dozens of smaller factions throughout the 20th century.

The size of the Klan's membership, as well as its degree of social influence, has fluctuated considerably over the years in response to larger sociopolitical developments within American society and more local regional contexts. However, the Klan reached its all-time peak in terms of both membership and influence during the 1920s, when more than four million men and women donned the notorious hood and robe. After diminishing in size and scope throughout the 1980s and 1990s, the Ku Klux Klan has increased in recent years amid a resurgence of white supremacist organizations across the United States, prompted by new political, economic, and demographic changes throughout the nation.

Early Years

The Ku Klux Klan grew out of the ashes of the remnants of the former Confederacy. Six ex-Confederate soldiers founded the Ku Klux Klan in Pulaski, Tennessee, on December 24, 1866. Originally established as a quasi-fraternity for Confederate army veterans, the organization named itself for the Greek word *Kuklos* (meaning "circle" or "band") and added *Klan*, a Scottish word denoting the strong family-like bond between members that also reflected the heavy Scots-Irish ancestry of white southerners. The Ku Klux Klan shrouded itself in mystery and modeled itself as a secret society.

Members adopted the notorious white hoods and sheets as the Klan's official costume during this time. Claiming to be the ghosts of dead Confederate soldiers, the hooded Klansmen conducted nighttime rides on horseback through black neighborhoods in an effort to terrify newly freed slaves. Although early activities consisted primarily of scaring former slaves and promoting camaraderie for veterans of the Confederacy, the Klan's actions

became increasingly hostile and violent as its membership grew over the next few years.

By the end of the 1860s, the Klan had expanded from the small town of Pulaski into other areas of Tennessee, as well as into other southern states. A convention of Klansmen held in Nashville, Tennessee, in 1867 led to a more rigid structuring of the Ku Klux Klan modeled on a military hierarchy and the use of unique labels to distinguish the varying ranks of members, such as the title "Grand Wizard" for the organization's supreme leader and the label "ghouls" for newly initiated members. The addition of former Confederate army officers, such as Lieutenant General Nathan Bedford Forrest and Brigadier General George Gordon, into the Klan's ranks provided the hooded order with the military leadership it craved.

Forrest emerged as Grand Wizard in 1867, marking the start of a more vicious edge to Klan activities. Around this time, the Klan relocated its headquarters from Pulaski to Memphis, and by 1868 it had expanded its membership into eight other states, reaching as far north as Maryland and West Virginia. Humiliated by defeat in the Civil War, resentful of emancipated slaves, and angry at the Reconstruction policies implemented by the Radical Republicans of northern states, the Klan quickly became the nation's earliest domestic terrorist organization and attracted attention from the federal government.

Activities included efforts to intimidate blacks and suppress them from voting in southern elections, and engaging in acts of violence, such as shootings, beatings, castrations, rapes, and lynchings of former slaves and so-called carpetbaggers (a pejorative southern term for northerners) overseeing Reconstruction efforts. In short, the Klan aimed to protect the "white southern way of life" from liberated blacks and northern Reconstructionists. Forrest declared that he was fully prepared to lead his Klansmen into battle with federal troops stationed in the Old Confederacy, should they have infringed on Klan sovereignty:

The Klan is a protective, political, military organization. . . . If the militia are called out [to suppress the Klan], we can only look upon it as a declaration of war. In all the Southern states there are about 550,000 Klansmen. . . . If the militia goes to hunting down and shooting

these men, there will be war, and a bloodier one than we have ever witnessed.

Amid widespread acts of Klan violence toward southern blacks, President Ulysses S. Grant signed the Civil Rights Act of 1871 into law on April 20 of that year. The act, more commonly referred to as the Ku Klux Klan Act, called for the federal government to carry out a more stringent crackdown on Klansmen in order to ensure the rights and freedoms of former slaves.

The act granted the president the ability to suspend habeas corpus, which permitted known or suspected Klansmen to be taken prisoner and held without being formally charged with a crime or tried in court. By 1872, the Reconstruction-era Ku Klux Klan had largely disbanded and receded into greater seclusion as a result of the 1871 act and personnel issues. Forrest left the Klan in January 1869 and futilely ordered the organization to dissolve, although Grant's relentless crackdown on the Klan drove it into temporary submission.

Early-Twentieth-Century Revival

Virtually crushed by the Ku Klux Klan Act and rendered nearly insignificant as a social force in the south following the termination of Reconstruction in 1876 (which gave rise to "separate but equal" Jim Crow segregation), the Klan disappeared during the final decades of the 19th century. Nevertheless, the hooded empire reemerged in 1915, the same year that D. W. Griffith's landmark motion picture *The Birth of a Nation* was released. Griffith's film depicted the Reconstruction-era Klan as a noble and patriotic force committed to protecting the sanctity of white womanhood from the alleged sexual savagery of black men.

One of the most influential movies in Hollywood history, *The Birth of a Nation* sparked a pro-Klan nostalgia throughout the south. Capitalizing on these sentiments, a white supremacist Methodist preacher from Alabama named William Joseph Simmons officially revived the hooded racist organization. Simmons established the Knights of the Ku Klux Klan during an illumination ceremony held in Stone Mountain, Georgia, on October 15, 1915. Simmons held another cross burning in Stone Mountain a few weeks later, on Thanksgiving Day.

During the early 20th century, the United States experienced one of the largest influxes of immigrants in its history. These newcomers came primarily from southern and eastern European societies (such as Italy, Greece, Poland, Russia, the Austro-Hungarian Empire, and the Baltic region) and differed significantly from earlier waves of immigrants who hailed from northwestern Europe (the British Isles, northern Germany, and Scandinavia). Roman Catholics constituted the vast majority of turn-of-the-century immigrants, and approximately 10 percent practiced Judaism.

The ethnic, religious, linguistic, and cultural differences of immigrants generated fears among many Anglo-Protestant Americans toward the newcomers, resulting in a period of intense nativism. "Racial" concerns also influenced anti-immigrant sentiments, as the prominent anthropologist Madison Grant and various Anglo-Protestant political figures viewed southern and eastern Europeans as belonging to allegedly inferior "Mediterranean," "Slavic," and "Hebrew" races that supposedly lacked the moral integrity and intellectual capabilities of the Anglo-Saxon "Nordic" race. The nation enacted Prohibition in 1919 in a failed attempt to return "moral purity" to America, and World War I had exacerbated antiforeign sentiments among many Americans. The Red Scare of the 1920s generated widespread fears of a communist revolution on American soil.

Amid this cultural backdrop, the Ku Klux Klan reached its all-time high in membership as it expanded beyond the south and established footholds in northern, midwestern, and western states. The Klan's targeted list of enemies also expanded during this era to include Catholics, Jews, immigrants, and suspected communists, in addition to African Americans.

Far from being a clandestine organization during the 1920s, the Klan reflected and tapped into mainstream nativism, racism, and paranoia. The Klan also attempted to soften its image and broadened its appeal by presenting itself as a moral agency protecting America's Protestant Christian religious heritage. By 1925, the Klan had established chapters in all (then) 48 states and claimed a membership of more than four million. Membership included approximately half a million women as well as many middle-class and

educated professionals, such as doctors, lawyers, bankers, businessmen, and intellectuals.

Klansmen wielded tremendous political power over local and state elections during the 1920s through running their own candidates for public office, as well as their voting bloc power. Klan-affiliated mayors, governors, judges, sheriffs, and other officials won elections in numerous states, but the degree of Klan political influence was particularly strong in Ohio, Indiana, Arkansas, and Texas. Rumors even abounded that President Warren G. Harding was secretly inducted into the Ku Klux Klan by Simmons at a White House ceremony.

In a vivid display of its political power, a contingent of 40,000 robed and hooded Klansmen marched down Pennsylvania Avenue in Washington, D.C., on August 8, 1925. The 1920s marked the final days of the Ku Klux Klan as a national, unified organization; its decline during the 1930s led to a splintering of numerous smaller regionally and locally based Klan offshoots.

The Civil Rights Era

After declining during the Great Depression and World War II eras, the Ku Klux Klan reestablished a foothold in American social and political life during the racial upheavals of the civil rights movement in the 1950s and 1960s. Whereas the Klan of the early 20th century often marched in lockstep with a federal government that generally shared its antiforeign, anti-immigrant, and isolationist ideals, the Ku Klux Klan during the mid-20th century found itself at sharp odds with and under the surveillance of the U.S. government.

The mandated desegregation of public schools under the Supreme Court's 1954 ruling in *Brown v. Board of Education*, along with efforts to ensure social equality and voting rights for African Americans and efforts to overturn state bans on interracial marriage, put the Klan on the defensive, thereby prompting members to take violent offensive measures.

Arguably the most notorious case of violence occurred in September 1963, when four members of the United Klans of America used explosives to blow up the Sixteenth Street Baptist Church, a prominent black church that served as a focal point for civil rights activists, in Birmingham, Alabama, killing four adolescent black girls—Addie Mae Collins, Denise McNair, Carole

Robertson, and Cynthia Wesley. Members of the United Klans of America also murdered Viola Liuzzo, a white civil rights activist from Michigan, 20 miles outside Selma, Alabama, on March 25, 1965. Another notorious act of violence occurred on June 21, 1964, when members of the Mississippi White Knights of the Ku Klux Klan beat and lynched three civil rights activists—James Chaney, Andrew Goodman, and Michael Schwerner—near Philadelphia, Mississippi. All told, more than 225 bombings and 1,000 incidents of racial violence occurred in southern states between 1955 and 1965.

The Klan's reign of violence and terror sparked governmental action. President Lyndon B. Johnson launched a federal investigation of the Ku Klux Klan following Liuzzo's murder, and the triple murders in Mississippi galvanized support for the passage of the Civil Rights Act of 1964. The Federal Bureau of Investigation (FBI) began infiltrating the most violence-prone Klan chapters under its COINTELPRO program in September 1964, ultimately weakening the "Invisible Empire." During a national address in 1965, Johnson said of the Ku Klux Klan:

. . . [They are] the enemies of justice who for decades have used the rope and the gun and the tar and the feathers to terrorize their neighbors. . . . My father fought them many years ago in Texas, and I have fought them all my life because I believe them to threaten the peace of every community where they exist. I shall continue to fight them because I know their loyalty is not to the United States, but instead to a hooded society of bigots.

David Duke's Legacy and Recent Years

The Klan declined considerably throughout the 1970s and 1980s, wounded by passage of civil rights legislation and court decisions that outlawed racial segregation, ensured blacks the right to vote, and rescinded state bans on interracial marriage. However, during this time period, David Duke, arguably the most high-profile Klansmen that mainstream America has ever known, emerged as a national figure. Duke founded the Louisiana-based Knights of the Ku Klux Klan in 1975, and just four years later its membership had increased to 1,500.

Duke attempted to modernize and mainstream the Klan by wearing business suits in place of hooded robes, eradicating the Klan's anti-Catholic stance, and appearing frequently on network television programs such as *Donahue* and *The Jerry Springer Show*. Duke drew nationwide attention for his foray into politics, winning election to the Louisiana House of Representatives in 1989 and losing the 1991 Louisiana gubernatorial election, in addition to running unsuccessfully for president in 1988 and 1992. Duke remained an avowed anti-Semite and white supremacist despite his clean-cut image, however, proposing in a 1984 issue of his self-published newsletter that the United States be reconfigured into distinct "racial districts" to quarantine specific racial and ethnic minority groups in peripheral regions of the country. Duke is also a notorious Holocaust denier.

Scholars contend that the number of Klan chapters, Klan members, and white supremacist organizations in general have increased considerably over the past decade as a result of a changing social and political landscape in American society. Specifically, experts cite three factors for contributing to the resurgence of the white supremacist movement: the worsening of economic conditions and increased unemployment, the large numbers of Latino and Asian immigrants entering the nation, and the election of the first black president in U.S. history.

Kurdish Americans

The Kurds are an Iranian people without a state of their own. They are indigenous to Kurdistan, a region of about 100,000 square miles to 150,000 square miles that includes parts of Turkey, Iraq, Iran, Syria, and Armenia. The closest Kurds enjoy to self-rule is the autonomous region of Iraqi Kurdistan established within Iraq in 1970, after years of conflict.

The Iran–Iraq War, which transpired over most of the 1980s, was followed by an uprising of Iraqis against Saddam Hussein during the 1991 Gulf War; both events wreaked havoc on Iraqi Kurdistan, driving many refugees to the surrounding areas and into the Kurdish diaspora. Since the end of the Hussein regime in 2003, many Kurds have immigrated to Iraqi Kurdistan, which has also attracted a number of non-Kurdish immigrants drawn to the region's relative stability.

There are about 10,000 Kurdish Americans as of the most recent statistics released by the U.S. Census Bureau, most of whom are Sunni Muslims. Many of them immigrated from Kurdistan, but many also came from the Kurdish diaspora, which includes enclaves in Georgia, Russia, Azerbaijan, Lebanon, Israel, and Europe. Waves of Kurdish immigration followed World War I, the 1958 Iraqi Revolution, the 1979 Iran Revolution, the Iran–Iraq War of the 1980s, the Gulf War in 1991, and the invasion of Iraq by U.S. forces in 2003.

The Gulf War wave was the largest, as reprisals against the Kurds by Hussein's government were severe; because Kurdistan overlaps with both Iraq and Iran, many of the Kurds supported Iran in the Iran–Iraq War, and the supposedly autonomous region of Iraqi Kurdistan was invaded by Hussein's forces. Kurds were attacked with chemical weapons, an action condemned by the international community.

The largest Kurdish American community is found in the Nashville, Tennessee, metropolitan

area: nearly a quarter of Kurdish Americans live here. In the last few decades, Nashville has been a popular city for recent immigrants, especially those who are not drawn to an established ethnic community settled by earlier immigrants; the area offers employment opportunities and a low cost of living relative to the coastal cities.

Nashville has large Cambodian, Laotian, Vietnamese, and Bantu communities in addition to the Kurdish Americans. (Nashville also has a climate similar to these countries, lacking the harsh winters of northeastern cities.) Many of them settled in the area in the 1990s, after Hussein's attack on Kurdistan and the subsequent civil war between Iraqi Kurdistan's two major political factions. The U.S. government assisted with the evacuation of many Kurds to Guam, from where they later immigrated to the mainland United States as refugees.

The first Kurds in Nashville, however, settled there in 1976, assisted by the Catholic Charities of Tennessee. They were refugees fleeing Iraqi Kurdistan after an attempted uprising against Hussein that had been supported by Iran and the United States. More Kurds settled in Nashville following the Iranian Revolution a few years later.

Nashville's Kurdish community has received some media attention for being the home of the only known Kurdish American street gang, the Kurdish Pride gang, consisting of a few dozen young Kurds. Unlike most street gangs, most of the Kurdish Pride gang members come from middle-class two-parent families; the Nashville police have identified ethnic pride and pressure from gangs of other ethnicities as the motives driving the gang. Except for this aberration, Kurds fit in well in Nashville, where the strong religious culture underpins a conservatism Kurdish Americans appreciate. The Muslim community meets at the Salahadeen Center of Nashville, established in 1998.

An important organization for the Kurdish diaspora is the Kurdish Human Rights Watch, which advocates for Kurdish interests and offers financial assistance to Kurds throughout the world who are displaced or homeless. It is one of many organizations that have urged the United States to develop a consistent Kurdish policy.

Though U.S. troops were instrumental in safeguarding the Kurdish people from Iraq—a no-fly

zone was patrolled over Kurdistan from the Gulf War right up until the 2003 invasion to prevent Hussein from again attacking his own people—foreign policy has not taken more than a half-step past that, and the White House and the State Department have failed to develop a specific relationship with the Kurds. Lacking the resources and the connections necessary, Kurdish Americans have for the most part been in no position to lobby for one.

The Kurdish American community is also served by the *Kurdish Herald*, an English-language news publication that has been published irregularly with coverage of political, economic, and cultural issues relevant to the Kurdish diaspora. It has given especially broad coverage to the changes in Iraq since the U.S. invasion, from coverage of the elections to stories about new restrictions on polygamy in Iraqi Kurdistan to the fate of Kurdish political prisoners.

The American Kurdish Information Network has been established in Washington, D.C., to foster Kurdish American understanding, particularly following the immigration of so many Kurds to the United States. It also acts as an advocacy group for Kurdish rights issues.

The Kurdish American Youth Organization is a nonprofit group with chapters in Nashville, Dallas, San Diego, and Los Angeles. Its goal is to provide a social organization for young Kurdish people in the United States.

Kwanzaa

Kwanzaa is a seven-day holiday that honors the cultural heritage of African Americans. It is celebrated annually from December 26 to January 1. Maulana Karenga was inspired to establish Kwanzaa by the traditional first fruits celebrations of the Zulu and Ashanti peoples.

Maulana Karenga, Architect of Kwanzaa

Maulana Karenga, who, as of 2012, was a professor of Africana Studies at California State University, Long Beach, trained as a researcher in political science, social ethics, and African studies at Los Angeles City College; the University of California, Los Angeles; Alliant International University; and the University of Southern California, beginning in the late 1950s. The writings, speeches, and philosophy of Malcolm X were significant influences on Karenga. During the 1960s and 1970s, Karenga was a significant actor in the Black Power and Pan-Africanist movements. Along with Hakim Jamal, he founded the black

nationalist group Organization Us, which was a rival organization of the Black Panther Party.

The Origins of Kwanzaa

Karenga constituted Kwanzaa to facilitate African American engagement with African culture on a broad, communal level. Kwanzaa itself was an outgrowth of the Black Power movement. It first was celebrated during the winter of 1966 to 1967, and Karenga articulated that the holiday was an alternative to Christmas, as he viewed Christianity as being hostile to African Americans. He selected the name of the holiday from the Swahili phrase *matunda ya kwanza*, which means “first fruits of the harvest.” Swahili was chosen because of its status as a lingua franca in east Africa, where it is spoken by more than 60 million people across ethnic and national lines.

The Seven Principles of Kwanzaa

Kwanzaa is centered on *Nguzo Saba*, or the Seven Principles of African Heritage: *Umoja*, or unity; *Kujichagulia*, or self-determination; *Ujima*, or

The creator of Kwanzaa, Maulana Karenga (center), celebrates the holiday at the Rochester Institute of Technology in Rochester, New York, in December 2003. The celebration honors African heritage in African American culture. It is observed between December 26 and January 1, culminating in a feast and gift giving. Karenga's goal in creating Kwanzaa was to give African Americans an opportunity to celebrate themselves and their history rather than simply imitate the practice of a dominant society.

collective work and responsibility; *Ujamaa*, or cooperative economics; *Nia*, or purpose; *Kuumba*, or creativity; and *Imani*, or faith. Each principle corresponds to one of the seven days of the festival. Furthermore, the principles are embodied physically in effigies known as the Seven Symbols: *Mazao*, or the crops; *Mkeka*, or the decorate mat; *Vibunzi*, or the ear of corn; *Mishumaa Saba*, or the seven candles; *Kinara*, or the candleholder; *Kikombe Cha Umoja*, or the unity cup; and *Zawadi*, or gifts. The traditional greetings for the holiday are “Joyous Kwanzaa” and *Habari Gani?*, which roughly translates as “What’s the news?”

The Practice of Kwanzaa

During observances, men typically wear shirts called dashikis and caps known as kufis. Women often wear dresses known as kaftans, along with headdresses. Drumming, singing, dancing, recitations of poetry, and reflections on African and African American history are regular facets of many Kwanzaa celebrations. By the holiday’s very design, all community members are encouraged to participate in Kwanzaa celebrations. Children, adults, and the elderly pay homage to their ancestors and heritage. During each of the seven nights, one candle is lit. In the process of *Kikombe cha Umoja*, libations are taken by everyone present through a shared cup. Kwanzaa’s end is recognized each year with a large, communal meal.

Numerous large-scale Kwanzaa festivals are celebrated in the United States, including the Spirit of Kwanzaa at the John F. Kennedy Center for the Performing Arts in Washington, D.C., which features performances and poetry readings; the Kwanzaa Festival and Marketplace at the New Jersey Performing Arts Center in Newark; and the Kwanzaa Celebration at the American Museum of Natural History in New York City.

By the 2000s, Kwanzaa was a global holiday, celebrated in Canada, Jamaica, France, England, and Brazil, where it is celebrated on November 20 as Black Awareness Day. Many mainstream organizations also had begun celebrating Kwanzaa by that time.

Kwanzaa’s Participation Rates

At the time of Kwanzaa’s establishment, African Americans accounted for 25 percent of the total population of the United States. After the holiday

gained in prestige and popularity, Karenga began encouraging adherents to celebrate Kwanzaa in tandem with other cultural observances during the season.

As of 2012, there were no firm data on how many Americans recognize Kwanzaa each year. Some estimate that fewer than one million celebrate the holiday; others claim that there are as many as 30 million adherents of Kwanzaa.

Commemorations of Kwanzaa in the Media

Nickelodeon’s popular cartoon *Rugrats* televised a Kwanzaa-themed episode called “A Rugrats Kwanzaa Special” in 2001, which featured African American actresses Irma P. Hall and Cree Summer. The same year, Disney’s *The Proud Family* cartoon also aired a Kwanzaa special, titled “Seven Days of Kwanzaa,” utilizing the voice-over talents of Kyla Pratt, Tommy Davidson, Paula Jai Parker, Karen Malina White, Cedric the Entertainer, Vivica A. Fox, and JoMarie Payton.

The Black Candle, a 2008 documentary produced by M. K. Asante, Jr., and narrated by Maya Angelou, was the first full-length film about Kwanzaa’s history and significance. It won the 2009 Award for Best Full-Length Documentary at the African World Documentary Film Festival.

In addition, Kwanzaa has been commemorated by the U.S. Postal Service twice: the first postage stamp, with artwork by Synthia Saint James, was released in 1997; the second postage stamp was designed by Daniel Minter and made its debut in 2004.

Kye

Korean American communities in the United States are comparatively tightly knit and supportive. One form of this support deals with small businesses in the community; this is the Americanized version of the traditional Korean loan system, *kye* (pronounced “keh”). The term *kye* refers to a grassroots bond that diffuses business risk among a group. A *kye* is an amount of money pooled and shared by a group of small business owners. It functions like a temporary loan but with more favorable terms that serve the collective interest.

Historical Roots of Kye

Korean Americans faced many kinds of discrimination when it came to securing employment in the early years of their immigration boom. Discriminatory laws prior to World War II prevented Korean Americans from gaining their citizenship, and, as a result, very few of them were able to work in their former professional roles. Although the law changed in later years, many Korean American immigrants were still unable to work in their trained professions in large part because of the language barrier they encountered upon relocating to the United States. They therefore accepted menial labor and low-end service jobs until they were able to start their own businesses. Eventually, many Korean immigrants moved into small business ownership out of economic need.

Kye in Practice

First, a sponsor initiates the process by deciding what the size of the fund will be. This organizer then recruits donors (often from past recipients), collects funds, and acts as the contact point for the borrower. In exchange for this work and the risk he or she takes on through his role, the organizer/sponsor receives status and benefits within the network; he or she receives the first lump sum collected.

Take a hypothetical group of small business owners: Mr. A, Ms. B, and Mr. C. They are probably aspiring to run similar types of businesses. For our purposes here, let's say they all are trying to run corner stores in their area. They each pool all available money, along with at least one other person who has already succeeded in business in the past—this is the last member of the *kye* chain, and he or she is solely a lender. When the *kye* chain has run its course, this last link receives the total amount contributed to the fund, plus any interest earned. The members who make up the middle ranks act as both borrowers and lenders.

Once the kitty is collected, that sum goes to work for each of them. First, Mr. A will take the sum and use it for his store. The group will have agreed to the terms in advance, but generally, Mr. A will be allowed to take the entire sum as it stands at that point and use it for some period of time—this will vary based on his rank in the group but will be enough for the business to get on its feet. During that time, Mr. A will be allowed to keep his profits rather than pay back the group; in this way, he has a much stronger chance of success. Then, after that period is over, Mr. A passes on that sum to the next would-be business owner, Ms. B, and the cycle repeats.

Usually, the kitty received at any given point will be less than the total amount of payments, and the difference represents the interest earned. Notably, this interest is often significantly less than the going rates charged by banks or other money-lending agencies, and no collateral is demanded by the *kye*. Instead, one's reputation in a close-knit community is at stake, and the social pressure associated with the loss of neighbors' funds further insures the *kye*. Ideally, all participants in the chain succeed and continue to support the *kye*.

Unfortunately, the *kye* system has not been entirely positive for Korean Americans. A number

of erstwhile Korean American liquor store owners found themselves unable to navigate the hurdles of the California Liquor Control Board because the informality of the kye system that helped them secure funding rendered them unable to document their financing. This in turn led the board to deny these businesses liquor licenses, which led to the failure of many businesses.

This phenomenon highlights the cultural conflict between the informal and traditional ways of Korean businesses and state agencies. Although in more recent years, government agencies like liquor boards have changed some of their policies to accommodate the cultural differences of their constituents, the conflict overall has caused the loss of savings, businesses, and trust in the system.

L

La Bamba

“La Bamba” is best known as the ethnic hit song by Richie Valenzuela (later changed to “Ritchie Valens”), turned cinematic drama in 1987. The upbeat tune reached far back into Mexican culture. The traditional version of “La Bamba” integrates several ethnic musical styles for which there is no literal English translation. “La Bamba,” played at weddings, symbolizes the bride and groom’s ritual dance of unity.

Much ethnic folk music in North America dates back to the 19th century. Traditionally, it’s rooted elsewhere and accompanies immigrant populations, for which it functions as a reminder of traditions specific to a respective culture. It also provides individuals a means to preserve timeless customs rooted in identity survival.

Most traditional ethnic folk music brought to the United States is passed down through generations. As each generation adapts to new surroundings, cultures tend to change. This is exemplified when traditional folk songs are mainstreamed and popularized through American music venues, much like Ritchie Valens’s hit adaptation in 1958 of the Mexican folk song, “La Bamba.”

Valens was inspired by the new sounds of rock and roll and was proud of his Mexican heritage. He successfully integrated the two to create one of rock and roll’s earliest hits, “La Bamba.” To date,

it is recognized as one of *Rolling Stone’s* Top 500 Songs of All Time. “La Bamba” is the only song on this list not sung in English. Over the years, Valens’s “La Bamba” has been re-recorded by artists such as Los Lobos, Harry Belafonte, and disco singer Antonia Rodriguez.

In 1987, “La Bamba” was repopularized in a biographical film that depicted the life of Valens, his short-lived fame, family history, struggles with success, and tragic end of his life. The film, released in July, marked the first time in U.S. history that both Spanish- and English-speaking moviegoers would view the movie on its original release date. Previously, the English version of a film would be released first; months later, the Spanish subtitled version would be released, which subtly reinforced the segregation of the Spanish-speaking populace in America, such as those coming to the smaller, local theaters in predominantly Latin American neighborhoods.

The Mexican American star Ritchie Valens, was inducted into the Rock and Roll Hall of Fame in 2001, and he has a star on the Hollywood Walk of Fame. Valens’s music has lived through generations, and “La Bamba” is one of the most influential rock and roll songs of all time.

Ritchie Valens’s success is an important symbol of the integration of Latino culture into mainstream America. Music is one way that members of oppressed cultures seek to celebrate their

freedom and preserve and assert their uniqueness in an ever-changing social climate. Music is a means through which many U.S.-born Americans are exposed to a wide range of cultural experiences and musical styles. Richie Valenzuela was the first Mexican American in the rock and roll era of the 1950s. The unique fusion of his cultural roots and rock and roll guitar riffs shed light on the Latin culture and popularized the unique sounds of Latin American music. Valenzuela paved the way for future Latin artists such as Selena, Carlos Santana, and Los Lobos.

Mexican American filmmaker Luis Valdez, who is decorated as the father of Chicano theater, influenced mainstream American culture, using his Chicano roots to bring Ritchie Valens's infamous story to life. Valdez's film and portrayal of Valens's family is full of Chicano culture and symbolism, speaking much to Valdez's experiences as a Latino man, which U.S. moviegoers viewed at first hand. Valdez not only paved the way for future Latino filmmakers but also brought Chicano culture into the lives of American cinematic patrons, a culture that continues to grow today. Luis Valdez's role in the making of *La Bamba* and other Chicano-based films allowed him to explore his own racial and cultural consciousness, therefore creating an accurate as well as passionate depiction of Latino life through film.

Although the movie *La Bamba* reached an unprecedented number of Americans, it inadvertently promoted stereotypes that left a scar on the way in which Latinos are viewed as a whole in this country. For example, Valens's brother Bob was unflatteringly depicted as a lazy, abusive, alcoholic who had impregnated his girlfriend. Although Valens's success was depicted as his achieving the "American dream," he was asked by his manager to change Valenzuela to "Valens" in an effort to reach a wider American mainstream fan base.

Ritchie Valens arguably began the integration of Mexican American culture and mainstream media. Many feel that the Latino influence on popular culture and media today all started with one young man and a guitar intro that is now recognized worldwide.

Labels

The social constructionist perspective suggests that perceptions of reality are based on social and cultural norms. In the case of ethnicity, "race" is an example of a social construction. The labels *black*, *white*, and *Asian* do not conform neatly to three distinct, real biological categories. Further, who is considered part of each group is socially constructed and changes over time. For example, historically, the dominant group in the United States, whites, determined who was considered part of the white group. In the past, Irish and Italians were not considered part of the "white" category, but over time, these groups assimilated to the dominant culture and were relabeled as white within the American context.

Labeling Theory

Labeling theory focuses on how individuals are affected by the labels they are assigned and how it changes the ways others treat them. For example, in one classic social psychology study by Robert Rosenthal and Lenore Jacobson, researchers labeled some students in a classroom "Bloomers" who would experience substantial gains in IQ over the next year. The teachers were told which of the children had received each label. This label, however, had no basis in reality—the researchers had assigned the labels completely randomly. Over time, however, the students labeled Bloomers showed substantial gains in their IQ, presumably because this label caused teachers to treat them more favorably.

This effect is called the Pygmalion Effect: We have an expectation of how someone will behave, and then we treat them differently according to this expectation, which then causes them to behave in the way we expected. Psychologists have proposed that this may be one factor that contributes to group differences in academic achievement. People hold a stereotype that Asian and white students are smarter than black and Hispanic students, which may cause teachers to treat Asian and white students more favorably and to challenge them to grow and achieve more. This, in turn, may create different levels of achievement between the groups.

Labeling theory suggests that the dominant culture deems certain people, acts, and behaviors as deviant. However, the things that are categorized as deviant depend on the time and place within which they occur: deviance is socially constructed. For example, laws against interracial marriage were once commonplace, but as attitudes changed, interracial marriage was no longer labeled as deviant, and these laws were repealed. Alabama was the last state to repeal anti-interracial marriage laws in 2000.

Labeling theory also explores how labels affect perceptions of whether someone is committing a deviant act. A prime example occurred during the news reporting on the aftermath of Hurricane Katrina, which created devastation and desperate situations for millions of people living in Louisiana. Photos featuring African Americans taking food from a supermarket described them as “looters,” whereas Euro-Americans were not labeled as such. In this case, biases against African Americans caused their behaviors to be labeled as deviant, whereas whites were spared this label. Labeling theory suggests that the mere categorization of an individual as African American triggers stereotypes associated with their racial/ethnic group, which then alters perceptions of their behaviors.

Experimental psychologist Claude Steele suggested that simply being reminded of the label for one’s group can have a notable impact on one’s behavior or performance. In a series of studies, Steele and others found that simply asking African Americans to identify their ethnicity before taking an exam impaired their performance on an exam. This effect is called “stereotype threat,” when simply reminding a person of their label can change their performance so that they perform

more in accordance with stereotypes of this group. For example, women also perform worse on math tests if they are asked about their gender before taking the test. The negative impact on performance is likely due to a variety of factors, such as stress caused by being reminded of one’s ethnic group and the negative stereotypes associated with the group.

The effects of choosing a label are not always negative, however. When Asian Americans are asked to identify their ethnicity before taking a math test, they tend to perform better on the test, a phenomenon known as “stereotype lift.” A powerful demonstration of this is displayed when the interaction of gender and ethnicity is considered: asking Asian American women to identify their gender (only) before a math test induces stereotype threat, whereas asking Asian American women to identify their ethnicity (only) induces stereotype lift. These findings suggest that simply being reminded of the label for one’s group can impact achievement.

African American Labels

The label *Negro* was used in the 15th century by Spanish and Portuguese explorers to refer to Africans in sub-Saharan Africa. The term *Negro* translates to “black” in English. The label is still sometimes used (such as the United Negro College Fund). Some have argued, however, that the term *Negro* automatically activates connotations of slavery because this term was used in the United States in the 1800s, and thus suggest that this term should be abandoned. Given this historical link with slavery, the label *Negro* may not be preferred because it may automatically cause a person to assume that an individual with this label lacks social, political, or economic power and/or freedom.

During the civil rights movement, African Americans began using the term *black* to reject the negative connotations implied by the term *Negro*. The label *black* was also used to denote a political identity. Slogans such as “Black is beautiful” were developed to combat the negative stigma and stereotype that could be implied by the term *Negro*. The label *black* may refer to a time when Americans of African descent were working to improve and empower their group. Not all scholars agreed with the label *black*. Some scholars argued that the label *black* was inaccurate because Americans

of African descent have a variety of skin tones and do not actually have black skin or complexion. As a result, Americans of African descent developed the term *African American*. The label *African American* signified the political, social, and economic striving of the group but also denoted a cultural component of identity. The label was similar to the labels of other groups, such as Italian American or German American.

The term *African American*, however, is also potentially problematic. Many previously non-white groups, such as Italian Americans, ultimately were simply referred to as American, whereas this has arguably not occurred for African Americans. In addition, some Americans of African descent felt that the term did not represent their identity as they did not feel a connection to the continent of Africa. "African American" is the most current label used to identify and represent a period of time in the United States when the group had more power than in past years, although "black" is also frequently used.

Irish American Labels

Irish Americans were for many years geographically, socially, politically, and economically segregated from other ethnic groups. One of the main disadvantages faced by the group was that they were not racially/ethnically labeled white and thus did not experience the positive effects of being labeled white in the United States. Most Irish immigrants were also Catholic, which was also highly stigmatized. The Irish were labeled nonwhite, non-Anglo-Saxon, and Catholic. As a result, they were oppressed and highly discriminated against. However, Irish Americans were able to assimilate and unionize in working sectors and had a strong representation in state jobs. Through years of political solidification, Irish Americans were able to socially, economically, politically, and, most importantly, racially assimilate. The racial label "white" in the United States affords a number of powers and privileges. Scholars have referred to this as "white privilege."

Asian Americans

Asian Americans were once labeled "Oriental." The term is no longer used in the United States and is considered a racial pejorative. The label *Orient* means "east" and applies to Asia in

geographic reference to Europe. In addition, *Oriental* is typically used to describe objects such as rugs and is no longer used to refer to people. The popular belief at the time was that people from the Orient were exotic, barbaric, wild, uncivilized, and uneducated. The term *Oriental* also suggests the colonization of countries in the Far East by Europeans.

Today there is a distinction in the United States between countries that are labeled "Asian" and "Middle Eastern." According to the U.S. Census Bureau, individuals of Chinese, Filipino, Indian, Vietnamese, Korean, or Japanese descent are considered Asian American. In recent history, individuals who are called Asian American have become more socially and politically empowered. Asian Americans tend to score higher on academic testing than their white counterparts. However, Asian Americans were highly discriminated against. In fact, Japanese Americans were interned during World War II based solely on their ethnic ancestry.

Racial Ambiguity

Skin color has a substantial impact on how people are judged in the United States and forms one basis by which racial and ethnic group labels are socially constructed. But what happens when individuals do not fit perfectly into the racial categories set forth by the dominant group? These individuals may be classified as multiracial.

People tend to be uncomfortable with individuals or situations they are unable to categorize. Thus, multiracial individuals must contend with a number of challenges and disadvantages. For example, high school students who take the SAT must choose one racial/ethnic label to identify them. While the option of "Other" is given, multiracial students are not permitted to choose more than one racial/ethnic label. Other major institutions that do not permit multiracial identification are health care companies, schools, and many private companies. It is often the case that multiracial individuals must label their identity with only one categorical choice, suggesting that their identity as multiracial is not legitimate or important.

The history behind this type of forced labeling may be traced back to the "one-drop rule." The one-drop rule asserts that anyone with "one drop"

of African American blood is considered African American. The racist ideology behind the concept is that African American blood would “pollute” the bloodline. To categorize/label children solely in relation to their oppressed group identity is referred to as “hypodescent,” which means they are labeled based solely on their membership in an oppressed group and not on their membership in an empowered group. The use of hypodescent as a means for group identification is problematic for a number of reasons.

First, it requires that an individual deny group membership by assuming one label that defines only part of his/her racial/ethnic identity. Individuals who are forced to define and label themselves in such a way have been found to have lower self-esteem and higher anxiety. Second, hypodescent labeling suggests that culture and ethnicity are transmitted through “bloodlines.” One approach to racial/ethnic labeling is for institutions to allow individuals to choose several racial/ethnic labels.

Language Brokers

“Language brokers” are children of foreign-born parents, many of whom are the first members of their family to attend U.S. schools and learn English. Their parents often rely on these children to interpret and translate for them in a variety of situations. In acting as language brokers, these children play a linguistic intermediary role between their non-English-speaking parents and English speakers of U.S. society.

Children serving as language brokers can be found among all language minority immigrant groups. In addition, language brokering is prevalent in Europe and other countries experiencing an influx of immigrants. Through the schooling children receive in the host country, they also become familiar with the new culture and therefore serve as cultural brokers as well as language brokers. That is, in addition to translating and interpreting, they help their parents and family to understand U.S. culture and society.

Children who serve as language brokers have always been a part of the settlement and acculturation experience of immigrants coming to the United States. The millions of eastern and southern European immigrants who came to this country between 1892 and 1915 relied on their U.S.-schooled children to help navigate American society. Despite their important role in family adaptation to American society, they were overlooked in the behavioral science research on immigrants of this era, which focused on adults. Only in the last 15 years has research on children as language brokers emerged in the scientific literature on immigrants.

The majority of this research has focused on two multinational groups: Asian Americans and Latino Americans. Since language brokering has only recently gained public attention, it is often perceived as a uniquely Asian and Latino cultural practice, rather than as a shared experience among all immigrant groups coming to the United States since English became the dominant societal language. For persons of Mexican descent, language brokering takes on a unique historical significance in the conquest of Mexico by the Spaniards. In 1519, in Mexico, a 14-year-old Indian girl named Malintzin, or Malinche, was presented to the Spaniards as a gift. Adept at learning languages, she became a translator for

Hernán Cortés, giving him valuable insights into the culture and mythology of the Aztec, which he exploited and used to defeat them in 1521. Today, in Oaxaca, Mexico, some indigenous children educated in Mexican public schools serve as language brokers between their Zapotec-speaking parents and Spanish-speaking Mexicans.

Who Are Language Brokers?

The age at which children begin language brokering varies depending on whom you ask. Age 10 is often reported by language brokers as their earliest recollection of this activity. Parents and teachers, however, report children language brokering as early as age five or younger. At this young age, parents rely on children for simple translations when older language-brokering siblings are not available. English monolingual teachers rely on young language brokers to help them communicate with children in their classrooms who do not speak English. Most research on language brokering, however, involves adolescent and college samples.

An intriguing question is how children become language brokers. The obvious answer is that parents choose the oldest child for this responsibility. This is often the case, but not always. In Asian and Latino cultures, the oldest child usually has more responsibility than younger siblings, thus making him or her the likely choice to assign the role of primary language broker for the family. However, younger children are just as likely to become the family's primary language broker. Some contend that this happens when younger children exhibit more aptitude for language brokering, such as greater bilingual proficiency, self-confidence, and motivation to serve in the role of language broker.

In some cases, older children may have been born outside the United States and brought to this country after some years of schooling in their native country. Although proficient in their native language, they enter American schools without any knowledge of English. They may temporarily assume the role of language broker. However, their younger siblings, who begin their schooling in the United States, grow up hearing and speaking some English before entering school and are immersed in English thereafter. With time, the younger siblings' early familiarity with English may motivate parents to assign them responsibility as the

family's primary language broker. It has also been proposed that in families with multiple children, parents simply pick the brightest child to serve as the language broker.

In some families, all children have some responsibility for serving as language brokers at one time or another. For Latinos, this is more often the case in those parts of the country where there are few, if any, Spanish-language resources. The 2010 census showed a dramatic growth of Latinos in the south (57 percent), midwest (49 percent), and northeast (33 percent). These areas of the country represent relatively new settlement sites for Latinos, and as such do not have familiar cultural resources, such as historically long-standing Latino communities in the southwest and northeast. Because these new settlement areas are devoid of Spanish-speaking resources, parents must rely even more on children to serve as language brokers. In these situations, having multiple language brokers in the family is a valuable asset.

In Latino families with male and female children, there is a cultural tendency for language brokering to become a gendered activity. That is, regardless of birth order, girls become the primary language brokers. This has been attributed to the gender role socialization of girls in Latino culture, which engenders the expectation that they will be emotionally closer and more spatially accessible to their parents than boys. This emotional and physical propinquity makes it more convenient for parents to call upon girls to serve as language brokers. Boys, on the other hand, have more liberty to distance themselves from parents, therefore decreasing their parents' reliance on them as language brokers. This gendered family dynamic has implications for how Latino girls and boys adjust to their role as language brokers.

Language brokering involves much more than being bilingual. Unencumbered bilingual individuals are usually free to use their dual language skills at their own convenience and for their own purposes. Language brokers, however, speak on behalf of others. For the most part, they do not select the people, places, or things that will require their bilingual translating and interpreting skills. Moreover, they must interpret in the moment, often involving adults with more power, and with conflicting viewpoints. In these situations, they are sometimes expected to express themselves

with the same emotional gesturing and vocal tone as the adult speakers are conveying to each other.

At all times, however, Latino children are expected to be respectful of parents and not make them feel belittled because they do not speak English. This means children may adopt nonverbal gestures and posturing to convey messages to parents in order to avoid having to outright tell the parent something that might come across as disrespectful. In fact, it has been theorized that over time, the parent and child learn to act as a team, with the goal of presenting the parent in the best possible light in order to achieve a desired goal.

Mental Health

A popular assumption is that language brokering is bad for children because it creates a role reversal in parent-child relationships, and burdens children with stress that can produce long-standing psychological impairment, such as depression. Individuals having no firsthand knowledge of the settlement challenges faced by immigrants sometimes hold such assumptions. From their perspective, it seems abusive to have children do what parents should be doing for themselves. However, when viewed from the perspective of Latino and Asian immigrants, language brokering represents one of several ways in which children can fulfill the cultural expectation of family obligation.

In the case of Latinos, family obligation is instilled in socialization through the values of *familismo* (familism) and *respeto* (respect). These values hold that the interests of one's family come first, and that parents are shown respect in all situations. Within this cultural context, which is strongest in immigrant families, children and parents see language brokering as a way of fulfilling family obligation. Children's perception that they are successfully meeting an important family value may mitigate the stress associated with language brokering. In addition, assisting parents through language brokering demonstrates respect for them rather than a role reversal usurping their authority.

Adherence to a group's cultural values carries with it an identity with the group. Not surprisingly, therefore, among Latinos and Asians, language brokering is associated with a stronger ethnic identity. Research shows that a strong ethnic identity among people of color buffers the deleterious

effects of discrimination and increases self-esteem. Among Mexican Americans, language brokering is also positively related with biculturalism and social self-efficacy. Biculturalism is having the cultural competencies to successfully interact in two distinct cultural groups. Social self-efficacy refers to a personal belief that one can get people to agree with you. Also for Mexican Americans, doing more language brokering is associated with obtaining a higher high school grade point average (GPA). In particular, it has been shown that the more places where one language brokers, the higher the GPA. Having to language broker in more distinct places creates opportunities and challenges to develop new vocabularies connected with these settings. Thus, the vocabularies and knowledge created in these different settings may carry over into the classroom and facilitate classroom learning.

Given the developmentally precocious circumstances under which these new vocabularies and knowledge are acquired, it has been suggested that language brokers should be considered gifted, in the same way as other children showing advanced cognitive development.

Multidimensionality

The association between the places where children interpret and translate and their high school GPAs underscores the complexity of language brokering. Simply asking children if they interpret or translate for others is not sufficient to establish that they are language brokers. Some children may only translate notes from school or interpret phone messages at home. Regrettably, the research literature is becoming saturated with studies using only a single question to assess language brokering: Do you ever interpret or translate for your parents?

Given the inadequate assessment of language brokering in single-question studies, it is not surprising that the results of such studies are mixed and inconclusive. The findings showing more biculturalism, social self-efficacy, and higher GPAs are based on multidimensional research instruments incorporating persons, places, and things in the assessment of language brokering. Those interested in language brokering should critically assess how this multidimensional construct is being measured and interpreted.

In addition to persons, places, and things, language brokering also involves an emotional

component relating to one's feelings about translating and interpreting for parents and others. How individuals feel about their language brokering experiences has been shown to affect their relationship to parents and their own psychological well-being. Chinese American and Mexican American children who feel positively about their language brokering experiences report a stronger parent-child bond. In addition, children who feel better about language brokering report less depression.

The psychological literature consistently shows that a positive parent-child relationship buffers children from the effects of adversities in their family and community, such as economic hardship. This same family dynamic appears operative in homes where children feel good about language brokering. In these situations, children feel a strong bond to their parents, which in turn mitigates stress associated with language brokering.

In Asian and Latino immigrant families, children may feel personal satisfaction knowing they fulfill their family obligation by language brokering for parents. This satisfaction, along with the awareness of their parents' sacrifices revealed through their language brokering experiences with them, increases children's emotional bonds with parents. This emotional bond, in turn, dissipates the potential stress and depression associated with language brokering. As previously noted, girls language broker more over time than boys in Latino families, perhaps because of differing gender role expectations. Not surprisingly, therefore, it has been shown that adolescent Latino boys who language broker for more people report more depression than girls. Without strong parental support, boys may be more prone to the consequences of stress associated with language brokering.

Future research should attempt to discover how parents feel about their children's language brokering, and how they express their satisfaction with their children's contribution to the family. It is also important to understand how children come to perceive that parents either do, or do not, appreciate their language brokering services, because this has serious implications for their psychological well-being.

Lifelong Roles

A growing body of literature indicates that for many individuals, language brokering represents

a family role that is carried into adulthood, even after they leave home and begin their own families. The parent-child bond formed in the earlier years of language brokering may create a personal relationship going beyond the domain of language. Perhaps because of their children's deeper knowledge of American culture in its many manifestations in business, health care, and other areas, parents come to depend on them to continue serving as advisors through their roles as language brokers.

Even after parents learn enough English to satisfactorily navigate American society, many young adults report they continue to respond to their parents' requests to interpret and translate for them. Results of recent research with college students of many nationalities who continue serving as language brokers indicates that this does not have an adverse effect on their psychological well-being.

The children of immigrants have been invisible agents in helping their parents and families adjust to life in the United States. The growing body of research on children as language brokers is at last giving these children the recognition they deserve.

Language Usage in the United States

Although English is not de jure the official language of the United States, it is de facto the language spoken by the majority of Americans and is used in all public domains. At the same time, the languages of the indigenous population, settlers other than the British, enslaved people, and immigrants are also broadly spoken in the United States. The territory that was to become the United States was teeming with languages prior to 1776. At the time of the European encroachment, there were upward of two million Native Americans, speaking over 300 languages, north of what is today Mexico. Conflict and warfare with the colonizers, and the disease they brought, decimated the Native American population.

By 1868, the Indian Peace Commission recommended that “their barbarous dialects” be “blotted out.” Indigenous children were removed from their parents and were put in boarding schools, where instruction would be only in English. According to the 2010 U.S. Census, today there are only 373,949 speakers of Native American

languages. The rich linguistic diversity of Native Americans has also been greatly reduced. The 300 Native American languages that were spoken in what is today the United States had been reduced to 133 by 2010. Today, 46 percent of Native Americans speak Navajo, and only the languages Yupik, Dakota, Apache, Keres, and Cherokee have more than 10,000 speakers. Only 7 percent of the Native American population is now bilingual, and most Native Americans today speak only English.

The same story of linguistic decimation can be told about the languages of people who were enslaved. From the early decades of the 18th century until the end of the Civil War in 1865, over 12 million Africans, speaking many African languages as well as Arabic, were enslaved and brought to the United States. The policy of separating Africans who were able to communicate with each other resulted in a gradual shift to English. Today, some African Americans show, in their speech, features that some attribute to a process of “decreolization.” That is, what is often described as African American English Vernacular, or Ebonics, consists of a substratum of features that some argue come from African languages. However, African Americans today are, for the most part, English monolingual, although many are bidialectal. If Native American languages have significantly shrunk, the languages of the African people who were enslaved were simply wiped out totally, with only traces of features remaining in the speech of some.

The early white European colonizers and settlers brought with them many other languages besides English, especially Spanish, French, and Dutch, but also Danish, German, and Swedish. Spanish was spoken in Florida, Las Californias, and Santa Fe de Nuevo Mexico; French was spoken in Louisiana; Dutch was spoken in New Netherlands (New York); and Swedish was spoken in New Sweden (Delaware). From the 18th century on, Germans settled especially in Pennsylvania, where by 1830, one-third of the white population was of German descent. The first U.S. census, taken in 1790, showed that 25 percent of the white population spoke languages other than English.

German was so strong during the 18th century that the Continental Congress (1774–79) published

its legislative documents in German. By 1776, there was a sizable network of German medium schools in Pennsylvania and Ohio, and these continued to grow until the late 19th century. When Germany became the enemy during World War I, the teaching of German became severely restricted. The rich network of German institutional resources, including the large network of German newspapers, became extinct, as German speakers started to shift toward English only.

When Louisiana was purchased from the French in 1803, French speakers were the majority in Louisiana, and schools were bilingual. Although the first four Louisiana constitutions stipulated the promulgation in French and English of laws and public records, the 1921 Louisiana Constitution was silent on French and required that all public schools teach in English.

Spanish, spoken by original settlers, endured the same fate as German and French. Spanish was originally used in legislation, education, and the press in the territories that came to be part of the United States as a result of the Treaty of Guadalupe Hidalgo (1848) that ended the Mexican-American War. For example, when California became a state in 1850, all the laws and regulations were published in English and Spanish. But only five years later, in 1855, the publication of state laws in Spanish was suspended. The same occurred when the territory of New Mexico was added to the Union in 1850. In 1874, 70 percent of schools in New Mexico were in Spanish, and 5 percent were in English only. By 1889, 42 percent of schools were in English only, and 30 percent were in Spanish.

Between 1890 and 1930, 16 million immigrants entered the United States, speaking, beyond German, many dialects and languages, including Italian, Yiddish, Russian, Ukrainian, Lithuanian, Polish, and Finnish. The immigrants were not only white Protestants as in the past, but also included Jews, Catholic Italians, and Irish. These immigrants were often seen as nonwhites. The forceful “blotting out” of languages, as was done with Native Americans and enslaved peoples in the past, was not appropriate at a time in which workers were needed as a result of the Industrial Revolution. The melting pot mechanism came into full force to encourage linguistic and cultural assimilation.

Melting Pot and Cultural Pluralism

In 1908, Israel Zangwill inaugurated his play *The Melting Pot*, about the forced assimilation of European immigrants. This ideology dominated the first quarter of the 20th century. Theodore Roosevelt stated in 1915: “There is no room in this country for hyphenated Americans. . . . We have room for but one language here, and that is the English language.” The great Americanization campaign, with its emphasis on the cultural and linguistic assimilation of immigrants, was on its way. The isolationism and nationalism that surrounded the United States between the world wars, coupled with the increased anti-immigrant, xenophobic sentiments, meant that public schools took a leading role in stamping out languages other than English, requiring that students shift to all English. By 1923, regulations requiring that English be the sole language of instruction in U.S. schools had been adopted by 34 states.

The turning point in the legal restriction of instruction in languages other than English occurred in 1923, when, in *Meyer v. Nebraska*, the U.S. Supreme Court overturned a 1919 Nebraska statute that restricted the teaching of languages other than English. With this important decision, the Court extended the protection of the Constitution to all who spoke languages other than English, and concluded that the learning of English could not be coerced. The tide was now turning to support cultural pluralism.

A more tolerant attitude toward languages other than English and bilingualism accompanied the cultural pluralism championed by Horace Kallen, who in 1915 critiqued assimilationist theory and proposed that language and cultural differences must exist side-by-side. During this time, supplementary bilingual community schools were organized by the Chinese, Japanese, Greek, and Jewish communities. But World War II brought back a xenophobic atmosphere, especially with the imprisonment of Japanese Americans, some Nisei (U.S.-born Japanese), in concentration camps. It wasn’t until the era of civil rights that languages other than English were once again tolerated in the United States.

Civil Rights Era and Beyond

By the 1960s, Native Americans, African Americans, and those of immigrant descent were

speaking mostly English. Among the foreign born, German and Italian were the two largest spoken languages. Spanish was a distant third. Throughout the 20th century, the National Origins Act of 1924 (also known as the Johnson-Reed Act) had limited the number of immigrants who could be admitted from any country to 2 percent of the number of people from that country who were already living in the United States in 1890, guaranteeing white immigration.

Throughout the late 19th and early 20th centuries, Spanish speakers, mostly from Mexico but also from Cuba and Puerto Rico after the end of the Spanish-American War, joined the Spanish-speaking descendants of those who had been incorporated into the United States in 1848. Once the Great Depression and World War II ended, laborers were needed. In 1942, the Bracero program started bringing Spanish-speaking Mexican temporary contract laborers to the southwest. Puerto Ricans, U.S. citizens since the Jones Act of 1917, came to New York in great numbers with the advent of air travel in the 1950s. U.S. Spanish was largely spoken in poor Mexican and Puerto Rican enclaves when the civil rights era began.

Different forces combined to promote a more tolerant attitude toward U.S. bilingualism. In 1957, the Russians launched Sputnik. As a result, the following year, the National Defense Education Act was passed, increasing funding for the study of “foreign languages.” Shortly afterward, Joshua A. Fishman published *Language Loyalty in the U.S.*, reminding the nation of the many language resources that existed in ethnic communities. At the same time, the civil rights era was in full swing, addressing the restriction of civil and educational rights of minorities, especially those of African Americans, Native Americans, Mexicans, and Puerto Ricans.

Around this time, Cuban exiles from the Fidel Castro government started to arrive in Miami in great numbers. As exiles from a communist government that the U.S. government considered “dangerous,” they were given a warm welcome. In 1963, a two-way bilingual education program was established in Miami, a way to ensure that Cuban children would continue to develop Spanish literacy while developing English. The increased presence and educational failure of Mexican Americans and Puerto Ricans in the

nation’s schools, coupled with the success of bilingual education programs educating Spanish speakers not only in Miami but also in Texas, California, and Arizona, led to a new tolerance toward the use of languages other than English in bilingual instruction.

In 1968, the federal government passed Title VII of the Elementary and Secondary Education Act, supporting bilingual education as a way to improve the education of poor language minorities, especially of Mexican Americans, Puerto Ricans, and Native Americans. The Bilingual Education Act, as Title VII was known, provided financial assistance to school districts that wanted to develop bilingual programs. In its first reauthorization, in 1974, bilingual education was defined as transitional, and the use of languages other than English was restricted only to while students were learning English. Title VII was reauthorized five times before 2001, when No Child Left Behind replaced the Elementary and Secondary Education Act.

The judicial system joined the legislative branch in upholding the rights of students who did not speak English to have a meaningful education. In 1974, in *Lau v. Nichols*, the U.S. Supreme Court ruled that something had to be done to educate students who didn’t speak English. This ruling was supported in *Castañeda v. Pickard* (1981), when the Fifth Appeals Circuit Court said that schools must take “appropriate action” to educate those who didn’t speak English, and that such action must be based on sound educational theory and produce results.

The tolerance toward bilingualism was not long lived. In 1981, Senator Samuel Hayakawa introduced the first constitutional amendment to make English the official language of the United States. Although those efforts at the federal level have been abandoned, 28 states had passed English-only laws as of 2012. The backlash against bilingualism in education has also been felt. California (1998), Arizona (2000), and Massachusetts (2002) passed laws restricting bilingual education programs.

At the same time, the linguistic complexity of the United States had begun to change by the end of the 20th century. The Immigration and Naturalization Services Act of 1965 (also known as the Hart-Celler Act or INS Act of 1965) abolished the immigration quotas that had been in effect since

1924. As a result, immigrants from many countries in Latin America, Asia, and Africa started to come in large numbers. Despite renewed restrictions toward bilingualism, approximately 20 to 25 percent of the U.S. population has always spoken languages other than English. That is still the sociolinguistic situation today, although the linguistic heterogeneity has never been greater.

U.S. Bilingualism and Multilingualism Today

In 2010, 55,076,078 people spoke languages other than English in the United States. That accounts for 20 percent of the total U.S. population. The language most spoken in the United States other than English is Spanish—62 percent of people speak Spanish, 19 percent other Indo-European languages, 15 percent Asian and Pacific Island languages, and 4 percent other languages. Although the negative attitudes toward bilingualism have resulted in lots of attention to a lack of English facility, most Americans who speak languages other than English are bilingual. Only 8 percent of those who speak languages other than English at home do so because they do not speak English, and over half (56 percent) speak English very well, with over three-fourths (76 percent) speaking English well or very well.

Although bilingualism is the mark of most Americans who speak languages other than English at home, not all groups exhibit the same degrees of bilingualism. Americans who speak Indo-European languages are the most bilingual. For example, even though only 3 percent of those who speak Indo-European languages claim not to speak English at all, 11 percent of those who speak Spanish and 5 percent of those who speak Asian languages are not bilingual. Also, 67 percent of those who speak Indo-European languages claim to speak English very well, in contrast to 53 percent of Spanish speakers and 51 percent of Chinese speakers.

Reporting languages according to the four language groups used by the U.S. Census masks the rich language resources in the United States. Besides English, of the 15 most-spoken U.S. languages today, less than half are European languages. Five languages—German, Italian, Polish, Spanish, and French—were among the six most important languages spoken in 1940. However, the order has changed significantly. Whereas

German was the numerically strongest language in 1940, followed by Italian, German is now in sixth place, and Italian is in ninth place. In contrast to European languages, Asian languages have significantly increased since 1940.

Although no Asian language figured among the 20 most-spoken languages other than English in the United States in 1940, today, Chinese occupies second place; Tagalog and Vietnamese are among the first five predominant U.S. languages; and Korean, Hindi, and Japanese figure among the first 15. Arabic, which was not even counted in 1940, is now in 10th place. French Creole, a non-dominant language in the world, is now among the United States' most important 15 languages. The United States is today among the richest linguistic landscapes in the world, with language groups that rarely interact on a daily basis.

This linguistic richness becomes even more prevalent considering the next 25 most spoken U.S. languages, spoken by over 100,000 people. U.S. speakers of these familiar U.S. languages hail not only from Europe and from Asia, as did those of the first 15 U.S. languages, but now also include people and languages of the Middle East, Africa, and an indigenous Native American language. In addition, the presence of Pennsylvania Dutch, a language that came to be in the United States as a result of the large immigration to Pennsylvania of people from Germany and Switzerland in the late 17th and early 18th centuries, is indicative of the linguistic resourcefulness of the United States.

The United States ranks fifth in the world in linguistic diversity. According to the 16th edition of *Ethnologue*, published in 2009, there were a total of 364 languages in the United States. Only Papua New Guinea, Indonesia, Nigeria, and India have a greater number of languages. The United States also has the most immigrant languages in the world, by far. *Ethnologue* reports 188 immigrant languages in the United States. Canada, which ranks second in terms of immigrant languages, has 83. Canada is followed by Australia, the United Kingdom, and the Russian Federation.

Even when indigenous languages are considered, the United States is well endowed. The 176 U.S. indigenous languages are no match for the 830 in Papua New Guinea, but the United States ranks 10th in the world in the number of indigenous languages. There is a mismatch in the United

States between the linguistic culture, which is greatly multilingual, and an implicit language policy that favors English monolingualism.

U.S. Bilingualism in the Future

Despite the rich linguistic resources in the United States, U.S. society continues to be suspicious of bilingualism. Despite the call for attention to critical languages, especially by the U.S. Department of Defense, languages other than English are only marginally taught in the United States. But the situation is different today. Although immigrants to the United States in the past shifted to English within three generations, the situation is not the same today.

Globalization and technology have brought citizens of the world closer together. Languages are no longer spoken in isolated national territories, but diasporic communities are using their language resources flexibly and simultaneously, the result of increasingly transnational lives.

Although in the past, bilingualism was conceived as two separate languages and bilinguals were viewed as two persons in one, today bilingualism is understood as dynamic, not simply additive. Bilingualism is not the sum of two whole parts, but the dynamic and flexible use of language practices that may have been socially defined as two languages, but that bilinguals experience and process as features of their complex grammar.

To speak about these more complex bilingual practices, scholars increasingly speak of translanguaging, and not simply of code-switching, which implies a change of language codes. Translanguaging refers to the complex bilingual discourse norm in which language practices socially assigned to separate languages are fluidly used by bilinguals.

With the increased movement of people spurred by globalization, language use among people in the United States does not consist of a single monolingual language standard, whether “English” or a “heritage” language. Bilingual Americans are increasingly the norm, able to use language bilinearly, to translanguaging, as they construct a U.S. multilingual and multicultural identity.

Laotian Americans

According to the 2010 U.S. Census, there are 232,130 Laotian Americans, although national Laotian American organizations estimate there are at least 100,000 more. The discrepancy may be due in part to ethnic Chinese or Vietnamese Americans from Laos identifying as Chinese or Vietnamese Americans on the census form, and the tendency of Hmong and Yao people from Laos to disclaim the Laotian identity. The word *Laotian* is used broadly to refer to national origin; the Lao people are the largest ethnic group in Laos. Laos is a landlocked country in southeast Asia that was formerly a French protectorate. A lengthy civil war after independence in 1953 ended with the victory of the communist faction, which remained in power in 2012.

Most early Laotian immigrants arrived in the United States as “boat people”—refugees fleeing

the country en masse by boat—in the 1970s and 1980s, many of them having first fled to refugee camps in Thailand during the civil war or in its immediate aftermath. By 1980, the Laotian American population was just under 50,000. Many settled on the west coast, in California, Washington, and Oregon.

The Laotian population is very well distributed, with significant communities in Minnesota; Texas; Illinois; Wisconsin; Kansas; Virginia and the Washington, D.C., area; New York and New Jersey; Ohio; Oklahoma; Iowa; Utah; Colorado; Florida; Delaware; North Carolina; Michigan; Alabama; Louisiana; and all of New England. The largest communities are in Wausau, Wisconsin (the Hmong are 11 percent of the population, the largest ethnic minority); the San Francisco area; Sacramento; Seattle; Minneapolis; Dallas; San Diego; Fresno; Providence; Elgin, Illinois; and Los Angeles. The federal government continues to assist with the resettlement of refugees.

Laotian Americans face particular health concerns, including one of the highest teen pregnancy rates in the country and an epidemic of lung cancer, which kills 87 percent of Laotian American men. Laotian Americans are the number one carriers of the Hepatitis B virus, an inflammatory liver disease transmitted by body fluids, in the United States. Though Hepatitis B rarely leads to death, chronic Hepatitis B leads to liver cancer, the second-highest cause of death among Laotian Americans.

The Laotian American National Association (LANA) is a nonprofit organization that was founded in 1999, growing out of talks at the 1997 National Association for the Education and Advancement of Cambodians, Laotians, and Vietnamese. LANA is principally an organization for distributing information to the Laotian community, facilitating professional and social networking while disseminating information about relevant government policy and legislative actions

The largest Laotian cultural festival is the celebration of the Lao New Year. It takes place in April, with vendors, food, music, and dance. These dancers are in Lao traditional garb. The Lao New Year is the most widely celebrated festival in Laos and is also celebrated in the United States, Canada, France, and Australia. The U.S. Census reported 232,130 people identifying as Laotian Americans in 2010.

and other community concerns. It represents the interests of the Laotian American people in coalitions with other immigrant groups, civil rights groups, and Asian American organizations.

The goal of LANA is to prevent or correct the marginalization of the Laotian people in the United States. LANA hosts the Laotian American National Conference. The first of these conferences was held in 2010, and panels included discussions of Hepatitis B and other health concerns for the Laotian American community, oral history, Laotian culture, and education. Fund-raising was another area of concern at the conference, as LANA provides financial assistance and other services to Laotian Americans.

LANA is also one of the organizations that hosts the International Lao New Year Festival, the United States' largest Laotian cultural festival. The Lao New Year is celebrated in April, with vendors, food, music, dance, the Miss Lao International Pageant, and an awards ceremony. In 2010, LANA also participated in the Smithsonian Folk Life Festival, on the National Mall in Washington, D.C., arranging an exposition of Laotian cultural heritage and traditions.

In San Francisco, the Southeast Asian Arts and Culture Coalition hosts a Mid-Autumn Harvest Festival in which the Laotian community is involved, along with Vietnamese, Burmese, Filipino, and Thai organizations. The festival features food, an ethnic fashion show, and southeast Asian arts, with the intent of educating the public about the heritage of San Francisco's southeast Asian community.

Other major Laotian American cultural organizations include the Lao American Women Association (founded in 1995 in Virginia), the Laotian American Society, the Lao Association of Connecticut, the Laotian American Museum in San Diego, Legacies of War, the Lao American Community Services, Lao Community Cultural Center of San Diego, the Khmu National Federation, the Merced Lao Family Community, the Lao Family of Stockton, the Lao Family Community of Minnesota, and the Lao Family Community Development Inc. Among the services these organizations offer are language and culture classes, scholarships, financial assistance, guidance for refugees, help in finding employment, and social networking. A Laotian American magazine, *Lao*

Roots, began publishing in 2007, in English. Aimed mainly at younger Laotian Americans, it ceased publication but was succeeded by the online LaoAmericans.com.

Last of the Mohicans, The

The Last of the Mohicans (1826) is James Fenimore Cooper's most famous and influential novel. A historical romance, the story concerns the abduction and rescue of two white women in the wilderness of upstate New York during the French and Indian War (1754–63). The captives are the fair Alice and the dark Cora, daughters of the English Colonel Munro, who battles the French and their Indian allies in colonial America.

Violent, the novel is replete with multiple tomahawkings, scalplings, and shootings, highlighting the dangerous wartime and wilderness environment. The rescuer in this story is the skillful frontiersman called Hawkeye, a white man living in the forest, whose dramatic wilderness exploits would give rise to future frontier heroes in American culture such as Davy Crockett and other rugged individualists who shun civilization.

Hawkeye lives in harmony with nature and natives. He praises the beauty of the forest and is saddened by its disappearance because of the encroachment of white civilization. Hawkeye laments the disappearance of the indigenous population and praises the inhabitants of the forest, namely his friends Chingachgook and his son Uncas, the last of the Mohicans. Cooper presents a sympathetic portrayal of Chingachgook, Uncas, and other selected Native Americans. However, Cooper is careful to portray the good Indian with the bad, and Magua fulfills the role of the evil Indian. Magua causes mayhem and abducts the Munro sisters. Magua, however, is ultimately foiled in his evil designs by the ever-present and resourceful Hawkeye, his two Indian companions, Major Duncan Heyward, and psalmodist David Gamut, the last two representing courageous, albeit inept, colonists in the woods.

Cooper praises the Indians in an early salute to the noble savage concept. Natives are not dehumanized as in early American literature, namely colonial captivity narratives, which portrayed Native Americans as a monolithic block of evil. Cooper individualizes the Indian, and the protagonist states that whites can learn from Native Americans. More provocative is Hawkeye's assertion that the heaven of the red man and the white man is the same, a bold statement for early-19th-century America.

In addition, purity of blood is not an issue to Native Americans, who welcomed interracial unions. Hawkeye, however, constantly adds the racial disclaimer that he is a man without a cross, meaning that he is white with no admixture of Indian blood. The text presents an interesting paradox, with Hawkeye praising the red man but emphasizing his—and others'—whiteness. This motif is reinforced by the dark countenance of Cora, a white woman of mixed racial identity. The text later reveals that her mother, Colonel Munro's first wife, since deceased, had lived in the West Indies and had black ancestry.

Cora falls in love with Uncas, who reciprocates the feeling. However, both die, suffering the tragic fate of doomed love, which provides several societal and racial implications. Cora is cast as the tragic mulatta and her death implies the non-viability of miscegenation within the new American

republic. And the death of Uncas—the last of the Mohicans—portends the doom of overall Native American society. To further the point, the fair Alice, who is the offspring of her father's second marriage, to a Scottish woman, is white and of unmixed blood. She and Major Heyward marry to live the proverbial happily ever after, implying continuation of the white race.

Cooper's ambiguity regarding race, however, does not extend to the wilderness. The novel foregrounds the vast and dramatic northeastern landscape of America. The text is full of descriptions of thick forests, dense thickets, secret caves, steep mountains, magnificent waterfalls, and fast rivers. Despite the wartime environment, the wilderness is described in romantic terms. It is majestic and grand and, in some ways, parallels the portrayal of Native Americans. *The Last of the Mohicans* presents an almost nostalgic view of a threatened environment, its primal mystery and beauty fading away before the relentless onslaught of Western civilization.

Cooper would go on to write a total of five novels with Hawkeye as the protagonist (under various names, but most notably Natty Bumppo) in various frontier escapades during different phases of his life, but *The Last of the Mohicans* was Cooper's most popular novel. The entire collection came to be known as the Leatherstocking Tales, leatherstockings being the hide of animals used by Indians and frontiersmen to cover the legs.

The Last of the Mohicans enjoyed tremendous success, with its exciting cycle of capture-rescue-escape involving Cora, Alice, Hawkeye, and his Indian companions in a frenetic series of wilderness adventures. However, the text and Cooper have fallen out of favor with modern audiences: stilted language, obsolete worldviews, and changed reader perspectives have marginalized Cooper and his most famous work. They are no longer part of the current American literary canon. Despite its decline, *The Last of the Mohicans* was a significant force in the early 19th and 20th centuries in helping shape the views of a young republic regarding race and wilderness.

The text gained a new lease on life in cinematic form. The movie version (1992), loosely based on Cooper's novel and an earlier 1936 film, was a commercial success. Its modern treatment of race and ethnicity is one of several changes from

the text. The opening scenes show an acceptance of red man and white as they dine together in a frontier cabin. Later, the movie depicts a friendly lacrosse game with Indians and colonists. The bonhomie and harmony among the races are evident in the frontier, at least until the start of the war. Also, in contrast to Cooper's text is the strong romantic link between Cora and Hawkeye (usually called the Scout). Cora's mixed race is never mentioned, and the end of the film suggests that they live happily ever after in frontier bliss.

Latinos

At 50 million plus, Latinos are the largest minority group in the United States. After decades of growth through migration and natural births, Latinos surpassed African Americans. If estimated census projections are correct, by 2050, Latinos will reach 132 million and will far surpass African Americans or Asians as the largest minority ethnic group. Only non-Hispanic whites will be a larger percentage of the U.S. population than Latinos. For a society that attempts to hold on to its view as a homogenous population, Latinos add a new dimension to racial identity in the United States.

Latinos do not neatly fit into one racial category; rather, they have tremendous diversity.

Latinos are a racially mixed group. Because of centuries of colonization by Spaniards, Latinos are very light skinned and also dark skinned. The Spaniards who invaded Mexico, and later Latin America, had sexual relationships with the indigenous women with whom they came into contact. Mestizos are the combined Spanish and indigenous Native American population. The importation of slaves from Africa further added to racial mixing. Today, Latin America is racially mixed. Latinos who have migrated to the United States or who are now several generations into settlement add to the complex racial hierarchy.

Multiple Identities

The term *Latino*, like other forms of ethnic identity, has multiple meanings. The term also has multiple definitions and possible origins. The most commonly agreed definition suggests it refers to people with Latin American origins. However, it can also take into account those individuals who may have come from Spain or Portugal. Generally speaking, "Latinos" refers to Mexicans, Puerto Ricans, Cubans, El Salvadorans, Guatemalans, Costa Ricans, Colombians, Argentine, Spaniards, and Chileans.

The term *Latino* is also confused with the term *Hispanic*. It is not unusual to see both terms used to describe the same group. The popular media tend to use the term *Hispanic*, rather than *Latino*. Even competing magazines attempt to draw interest among readers using either "Latino" or "Hispanic" in their magazine titles.

A survey conducted by the Pew Hispanic Center found that the term *Latino* or *Hispanic* is not used exclusively. According to the survey results, only 24 percent of Latinos or Hispanics identify with either term. In short, Latino and Hispanic are complex concepts and any attempt at making either a definitive form of identity is problematic.

For non-Latinos, the term is even more confusing. However, there is tremendous diversity among Latinos. The diversity of Latinos can be by area of settlement, social class, racial features, or identity. For example, the difficulty of only using one form of identity dilutes the comparative differences. Researchers who examine Latinos can make similar mistakes. Rather than accounting for the differences among Latinos, lumping them into one category results in limited

research conclusions. Accounting for diversity helps define how Latinos are different than other racial or ethnic groups.

Demographics and Latinos

The term *Latino* is becoming one form of identity used to describe the growing population of ethnic groups from Mexico and Latin America. Since 1965, the changes in the immigration laws of the United States have increased the number of migrants from Mexico and Latin America. Also, immigration has surged because of economic development in Mexico and Latin America. Mexico and Brazil are among the leaders of Latin American countries rapidly industrializing. One of the results of industrialization has been increased population growth. Because of the lack of well-paying jobs, which does not match the population surge, out-migration for Latino immigrants led to settlement throughout the United States. Now, all 50 U.S. states have a Latino presence.

The U.S. Census estimates that there are more than 50 million Latinos in the United States. Not included in the census figure are an estimated 6 million undocumented immigrants from Mexico. Through increased social networks, Latinos from Mexico and Latin America continue to move north to find opportunities not available in their countries. Further increasing the population growth of Latinos was the passage of IRCA (Immigration Reform and Control Act of 1986). Despite its passage, after only a few years, the number of undocumented immigrants began to increase again.

IRCA was proposed as a means to control the flow of undocumented immigrants, but critics argued that it only temporarily slowed the flow. Mexico, for example, was unable to compete with the foreign importing of products from the United States following the passage of NAFTA on January 1, 1994 (North American Free Trade Agreement). This forced Mexicans to consider the alternative, to migrate north to find employment. Transnational migration for Mexicans has been a method of survival. Entire communities have been seen abandoned in Mexico and have reappeared in the United States. The social networks created by the flow of Mexican immigrants have led to the long-term migration and settlement of Mexican immigrants. Ultimately, Mexican

immigrants add to the growing Latino population in the United States.

Subgroups of Latinos

People of Mexican origin make up the largest group of Latinos in the United States. At 30 million, Mexicans or Mexican Americans make up the largest subgroup of Latinos. Originally settled in the southwest, northwest, and midwest, they have recently settled in the northeast and south.

After 1848, many Mexicans became U.S. citizens. The United States acquired half of the northern territory of Mexico, and the entire southwest became part of the United States. Following the end of the Mexican-American War, there was not a significant number of Mexicans populating the southwest. Not until the connection of the southwest through the development of the railroads from Mexico did Mexicans begin to migrate north.

By the early 20th century, Mexican immigrants were recruited north to work in the United States as contracted laborers. Immigration restrictions imposed upon southern and eastern Europeans following involvement in World War I called for strict requirements to enter. Quotas, fees, and literacy exams were enacted to deter further immigration. Mexican immigrants were exempted from strict immigration laws. Previously, in 1911, the Dillon Commission provided evidence that Mexicans were adequate workers. Mexicans were suggested to be smaller in stature than other workers, allowing them to be physically closer to the ground.

By the 1930s, the Great Depression changed the attitude toward Mexicans. Throughout the decade, Mexicans and Mexican Americans were asked to return to Mexico. Although Mexican Americans, were citizens, raids throughout communities in the southwest also targeted Mexican Americans who were repatriated back to Mexico. One estimate of the number of Mexicans and Mexican Americans sent back was 500,000.

By the early 1940s, and with the United States entering World War II, a bi-national guest worker agreement between the United States and Mexico was signed. In September 1942, the first wave of braceros arrived in Stockton, California. Although the Bracero Program was scheduled only for the duration of the war, it was extended several times before it was ended in 1964. In all, over

2.4 million braceros were contracted through the guest worker program.

Following the end of the Bracero Program, Mexicans continued to migrate through the social networks created while working as braceros. Former employers would encourage their former guest workers to return from Mexico. Letters written by employers sponsoring braceros was common. By the 1970s, the first signs of undocumented Mexican immigrants created concern that too many were in the United States. By the 1980s, the undocumented population from Mexico had reached unthinkable levels. Under the Ronald Reagan administration, an attempt to legalize the undocumented population occurred with the passage of the 1986 Immigration Act, called, IRCA (Immigration Reform and Control Act). Only two or three million undocumented immigrants were able to legalize their status. By the early 1990s, undocumented immigrants from Mexico began to surge north again.

On January 1, 1994, the North American Free Trade Agreement (NAFTA) treaty was signed between Mexico, Canada, and the United States. Supporters of the treaty argued that it would encourage employment and opportunities among the three nations. For Mexico, it created competition from the United States and all but ensured a high rate of unemployment. Few Mexicans gained from the passage of NAFTA, creating a new stream of Mexican migration north.

Currently, there are an estimated six million undocumented immigrants from Mexico in the United States. Unable to develop a comprehensive immigration reform proposal, states have turned to extreme measures to control the undocumented population. In Arizona, passage of SB 1070 has created a climate of fear among the undocumented population. Under the law, if there is a suspicion by local law officials, they can require a person to prove legal status. Critics argue that the legislation encourages racial profiling. There is a similar law in Alabama. Even though there is support for these laws, they do not ensure that undocumented immigrants will return to Mexico. Rather than risk apprehension by returning to Mexico, immigrants simply move to friendlier states.

Puerto Ricans

Since 1898, Puerto Ricans have had the benefit of commonwealth status. Following the end of the

Spanish-American War, the island of Puerto Rico became a U.S. territory. Puerto Ricans have commonwealth status, which allows them to migrate back and forth from the mainland to the island of Puerto Rico. Migration for Puerto Ricans occurred in three stages.

The first stage is known as the pioneer migration. Beginning in the first decades of the 20th century, Puerto Ricans migrated because of the low levels of income generated by the agricultural industry on the island. The second wave is the period known as Operation Bootstrap. Beginning in the late 1940s, Puerto Ricans were recruited to the mainland and the island of Hawai'i. The third stage is called circular migration, where Puerto Ricans migrate back and forth from the mainland to the island. With no immigration restrictions, Puerto Ricans have few obstacles when entering the United States.

However, commonwealth status provides only limited access to rights of citizenship that Americans take for granted. As a commonwealth people, Puerto Ricans cannot vote in a national election. As a result, they cannot vote for the president of the United States. However, unlike Mexicans, Puerto Ricans can migrate freely from the island to the mainland.

Labeled the Rainbow People, Puerto Ricans are a mixture of many racial groups. However, the average racial features of Puerto Ricans resemble those of African Americans. Their dark racial features place Puerto Ricans in the low rungs of the racial hierarchy. One theoretical explanation for the situation of Puerto Ricans is that of the underclass. Similar to African Americans, Puerto Ricans have high levels of poverty because of large numbers of families headed by single female parents, high unemployment levels, and high levels of criminal activity among young males.

The high level of poverty for Puerto Ricans resulted from the restructuring of the northeast economy, resulting in the loss of manufacturing jobs. Another plausible explanation is the economic instability caused by Puerto Ricans who migrate back and forth from the island to the mainland. The back-and-forth migration has created what some scholars argue is the instability of long-term, steady employment. For Puerto Rican women, the number of single-parent families headed by women has reached alarming levels.

Cubans

Cubans came following the Cuban Revolution and settled in the United States as political refugees. The first wave of Cuban refugees was transported to New Jersey. Eventually, Cubans would relocate to the city of Miami or Hialeah, Florida. Establishing a formable presence in south Florida, Cubans created an international city. Connecting the city to global markets has been the success story of Cubans. Sociologists have marveled at the entrepreneurship found in what they call a Cuban ethnic enclave of former Cuban refugees. Cubans have turned the city of Miami into an international city of trade and commerce. The first generation of Cuban immigrants who fled the island after the revolution remains vigilant of a free Cuba and the removal of Fidel Castro. Anti-communist sentiment is strong, but Cuba remains under the ruling revolutionary party. Undaunted, Cubans have supported conservative efforts to undermine the communist-ruled island. Cubans remained hopeful that Cuba will return to the former independent nation.

Called the most successful of Latinos, Cubans are a formidable group. Forging political power from conservative groups such as Republicans, Cubans have effectively controlled their image. Few Cubans are portrayed in the media as harshly as Mexicans or Puerto Ricans. However, recent polls indicate that younger Cubans born in the United States are taking a hard conservative stance. Few newer Cuban immigrants look to support a sponsored overthrowing of the Cuban government, in contrast to older, first-generation Cubans.

Latin Americans

By the 1980s, a surge in Central American migration, partly because of the civil unrest in countries such as El Salvador and Guatemala, led to the settlement of Central Americans in Los Angeles, San Francisco, Miami, and Houston. Throughout the 1980s, refugees from El Salvador and Guatemala fled their countries rather than face death squads. Under the Reagan administration, the illegal funding of the Contras allowed for the overthrow of freely elected Daniel Ortega in Nicaragua. A congressional investigation of the illegal funding of military arms would lead to the imprisonment of Oliver North. Migrants from Guatemala and El

Salvador relocated to the United States, and their settlement in cities such as Los Angeles added to the diversity of what has become a Latino city with their inclusion.

Unlike previous periods, immigrants from Latin American countries are finding their way to the United States. There are growing ethnic enclaves of Colombians, Venezuelans, and Brazilians in the United States. The immigration of Latin Americans is subject to variation from country to country. Colombians come in part because of the drug wars. Brazilians have come because of the problems associated with economic development. Countries such as Chile and Argentina remain important trading partners with the United States. Venezuela has drawn considerable attention because of the leadership of President Hugo Chavez, who at times has stirred controversy, often challenging U.S. policy in the region. Chavez has gained political support for his policies by attempting to provide for the poor in Venezuela and other parts of Latin America. The future relationship between the United States and the various countries that make up Latin America will dictate continued migration from Latin America.

Conclusion

If current population predictions are correct, migration and settlement of Latinos in the United States will continue well into the current century. There will also be growth through natural birth rates because Latinos remain a relatively young population. Despite efforts to control the number of immigrants, the United States remains a destination for Latino immigrants.

Should the United States continue to increase its number of Latinos, the cultural makeup of the United States will be re-examined, as Latinos bring a diverse cultural background of Spanish language and Latino culture. Although not all Latinos are close to their culture of origin, it remains important to see how this diverse group fits into the model of Americanization. So far, signs from second- and third-generation Latinos show that they have bought into the American cultural lifestyle.

A pan-Latino identity may best describe the recent adaptation of the Latino population. Future generations of Latinos will set the stage for what is to be the continued settlement of Latinos. Unlike previous immigrant groups, Latinos are

not estimated to stop migrating north any time soon. Rather, Latinos will outpace other immigrant groups migrating into the United States. Centuries of establishing social networks between the United States and Mexico and Latin America will stimulate Latinos to increase their population in America.

Latvian Americans

Latvia is a Baltic country in Europe, bordered by Estonia, Russia, Belarus, and Lithuania, with which it has strong cultural and linguistic ties. Mainly Protestant except for the Catholic minority in the south, Latvia has a sizable ethnic Russian population (about 27 percent, larger than all other minorities combined) and was formerly controlled by, first, the Russian Empire and, later, the Soviet Union. It declared independence in 1991 during the collapse of European Communism and today is one of the fastest-growing economies in the European Union.

There are 93,498 Latvian Americans as of the 2010 census information. The population is fairly well distributed. Large Latvian American populations are found in California, New York, Illinois, Florida, Michigan, Massachusetts, New Jersey, Pennsylvania, Washington, and Maryland. Latvian immigration began very early, with Latvians settling in Massachusetts, Delaware, and Pennsylvania in the 17th century; it is very likely there are more Americans with Latvian backgrounds than realize it, for this reason alone. More Latvians arrived in 1849 in response to the Gold Rush, many of them remaining in California after the rush faded.

Larger numbers of Latvians began arriving in the country in the late 19th century, dissatisfied with the state of affairs in Latvia under the thumb of the Russian Empire. Though many of them in this period failed to congregate in sufficiently dense numbers to create enclaves, the notable exception was in Boston, where Latvians arrived in 1888 and settled in Roxbury. Other Latvians settled in major cities throughout the country, including New York, Philadelphia, Chicago, Cleveland, Seattle, Portland, and San Francisco.

After the failure of the 1905 revolution against Russian rule, another wave of Latvians arrived, fleeing reprisals. Many of them were former revolutionary soldiers or political opposition leaders. It was members of this wave that founded the first Latvian church in America, in Lincoln County, Wisconsin. Although Latvians are predominantly Lutheran, a well-established Latvian Baptist community formed in Bucks County, Pennsylvania.

In this era, friction among the Latvian American community was a real problem—those who had arrived in the 19th century were more conservative politically than the failed revolutionaries, and political differences were a leading contributor to the breakdown of the Lincoln County Latvian community. The two groups also had different attitudes about assimilation.

Earlier-arriving Latvians put a priority on assimilation, on their children “being Americans.” This was less true of the ex-revolutionaries (as well as of the post–World War II immigrants). Some of the 1905 wave, especially the political radicals, returned to Latvia in the following decade, after the Bolshevik Revolution in Russia and the independence of Latvia in 1918. That independence

lasted only a generation: the Soviet Union occupied and annexed Latvia after World War II, and although immigration quotas had been put in place in 1924, 40,000 Latvian refugees were allowed into the United States from 1949 to 1951 with the assistance of religious and charitable organizations.

Though many refugees were skilled workers or well-educated professionals, they faced the challenge many immigrant groups have faced: proving professional or educational credentials when moving to a new country. In many cases, no paperwork or records could be produced, because of the state of things back home or the manner in which the refugees left; in other cases, the lack of any sort of reciprocity agreement or other means of gauging the worth of a foreign credential meant that the credentials were irrelevant.

Many white-collar Latvians found themselves in blue-collar jobs, working on farms or in other manual-labor positions. Most Latvian immigrants since World War II have been college graduates. Many of them considered themselves not immigrants but Latvians living in exile with the hope of returning. Few did so, though since Latvia's 1991 independence, 9,000 Latvian Americans have declared dual citizenship. Many Latvian Americans send money home to relatives or to political or charitable organizations to help rejuvenate the young democracy.

Because Latvian Americans have mostly not settled into Latvian enclaves, they depend on cultural and social organizations to maintain their links. There are active Latvian American organizations in California, Chicago, Indianapolis, Michigan, New York, Florida, and elsewhere, and today many of them have a strong Internet presence. The *Baltic Times* newspaper, published in English in print and online, helps many stay informed as well.

The American Latvian Association (ALA) was founded in 1951 to promote understanding of Latvian concerns and culture in the United States, and 10 years later it cofounded the Joint Baltic American National Committee. There are 160 local and regional member organizations of the ALA, which is the main representative organization for Latvian Americans. Its activities today are organized into four programs: information and assistance for newly arrived Latvian immigrants; humanitarian aid to Latvia; promoting the study of the Latvian language and

culture; and facilitating cooperation in the Latvian American community.

Fluency in Latvian is said to be common even among third- and fourth-generation Latvians, an uncommon thing for European immigrants. A number of Latvian traditions are kept alive as well, including using wool mittens and socks as adornments in wedding ceremonies, taken from the Latvian tradition of a bride showing her merit by knitting elaborately decorated mittens. Latvian folk music remains alive and well in the United States, and there are dozens of Latvian American folk ensembles. The first Latvian song festival in the United States was held in Chicago in 1953, and it continues to be held each year.

Lau v. Nichols (1974)

Lau v. Nichols (1974) was a pivotal case based on educational accessibility and equality, but it reached beyond the school to strengthen civil rights in many sectors of life in the United States. Whereas past cases such as *Brown v. Board of Education* (1954) addressed the issue of intentional segregation of public school students, *Lau v. Nichols* sought to further push school reform by addressing exclusionary practices of schools even if they were not motivated by discrimination.

The San Francisco school system was integrated as a result of a federal court decree in 1971. At the time of the integration, approximately 2,800 students of Chinese ancestry were registered in the school system but did not speak English. Following integration, approximately 1,000 Chinese students received supplemental courses in the English language, but the remaining students did not receive additional instruction. As a result of the schools not providing additional English language instruction for all students, a class action suit was filed on behalf of Chinese-speaking students against the San Francisco Unified School District officials. The suit was based on the infringement of Fourteenth Amendment rights, as it alleged that all students were not provided with equal educational opportunities.

The original suit sought relief against alleged unequal educational opportunities based on the Fourteenth Amendment. Unlike in other education cases (e.g., *Brown v. Board of Education* and *Plyler v. Doe* [1982]), the focus of the petitioners was not to request that a specific action occur allowing for educational integration; rather, the emphasis was directed toward the desire for the Board of Education to use its expertise to rectify the indirect disparity in the educational training available to students. Two suggestions were proposed, namely, English language instruction for Chinese students and native language training.

The district court denied relief, and the court of appeals affirmed the original ruling, holding that there had not been a violation by the district under the Fourteenth Amendment's equal protection clause. The argument put forth by the court of appeals is that every student brings different advantages and disadvantages that are completely separate from the contributions made by a school system and, thus, the school district could not be held accountable for the role of outside influences (i.e., language, poverty).

U.S. Supreme Court

The U.S. Supreme Court granted a petition for certiorari based on what it deemed to be the public importance of *Lau v. Nichols*. The ruling, which overturned the court of appeals ruling and found in favor of the petitioners, was based not on the equal protection clause argument of the petitioners but on Section 601 of the Civil Rights

Act of 1964. Additional protection was granted when the guideline had been expanded in 1970 to include students with language deficiencies.

Under the 1970 expansion, schools were also to provide the tools to rectify the determined language deficiency. The Supreme Court found that the California Education Code required English to be the basic language of instruction in all schools, and it was the policy of the state to ensure that all students in the schools had a mastery of the English language.

The San Francisco Unified School District had received substantial federal assistance, and as a recipient of this type of funding the school system had to ensure that all students, regardless of race, color, or national origin, were not denied opportunities provided to other students in the same school system. Based on state educational requirements, a student who had not met the minimal state standards of proficiency in English and other core curriculum would not be allowed to receive a high school diploma. In addition, the state required compulsory full-time education for all children between the ages of six and 16.

Under the state-imposed standards, the court determined that the school district did not provide for equitable treatment of students. Simply providing the same functional educational support (for example, books, teachers, and lessons) did not mean that students were given equal opportunity, especially if the student was an English-language learner who was not receiving meaningful and comprehensible instruction. The ruling also noted that in this case, basic English skills were at the core of the school district's curriculum. The court ruled that without these skills, a student would be unable to effectively participate in the educational learning processes, thus making a "mockery" out of public education.

Civil Rights Act

The shift of the court findings to the Civil Rights Act of 1964 from the equal protection clause had important implications. First, it affirmed the authority of the U.S. Department of Health, Education and Welfare (HEW) to enforce the Civil Rights Act of 1964. Second, it affirmed the validity of the extension of the Civil Rights Act of 1964 to language-minority children. Third, it affirmed the authority of HEW to require affirmative remedial

efforts to occur with attention specifically focused on language-minority children.

The decision itself was based on the continued struggle concerning the depth of power of the U.S. Congress. The finding in *Lau v. Nichols* reaffirmed that the power of Congress to prohibit behavior does not overstep its constitutional powers. It also validated Title VI of the Civil Rights Act and provided further enforcement for government agencies in the realm of civil rights protection and authority. Although later court cases would erode some of the implications of the case, perhaps most notably an individual's right to sue for Title VI protection, the case has an important role in language-minority student rights litigation, establishing the Lau Plan. The Lau Plan is an equal access plan designed to help protect English-language learners through identification, program design, development, and student assessment.

Law and Ethnic Diversity

The history of the United States of America is deeply rooted in religious freedom, protected by the First Amendment of the U.S. Constitution that was adopted in 1791; however, legal protections to foster ethnic diversity have been less forthcoming. Early arrivals to U.S. settlements in the 1600s included European settlers from England,

France, and the Netherlands, and Spanish and African slaves from Angola, Gambia, Ghana, Guinea-Bissau, Nigeria, and Senegal. Although the Naturalization Act of 1790 gave citizenship to most white inhabitants of the country, blacks remained excluded.

Despite ethnic diversity, slavery based on race existed, even in the northern and predominantly abolitionist state of New York, until emancipation on July 4, 1827, which was granted by the Act for the Gradual Abolition of Slavery of 1799 (however, slaves born before July 4, 1799, remained in legally indentured servitude until death).

Efforts to abolish slavery created a path toward legal protections to foster racial and, by extension ethnic diversity in the United States. In 1865, the Thirteenth Amendment abolished slavery and involuntary servitude. Within five years, other important rights would follow for former slaves. The Civil Rights Act of 1866 and the Fourteenth Amendment, adopted in 1868, gave all "persons born or naturalized in the United States" citizenship status with "equal protection of the laws." This provided blacks the right to rent, hold, sell, and buy property. The Fifteenth Amendment, adopted in 1870, provided voting rights to all citizens, regardless of "race, color, or previous condition of servitude."

In the 1870 census, those who reported their country of birth as other than the United States represented various nationalities, with primarily European origins and two notable exceptions. Chinese and African nationalities were confounded with race. Chinese was treated as both a race and an ethnicity. African was listed as a nationality, rather than any specific African nationality. These exceptions demonstrate the emphasis still placed on European ancestry at the time. Regardless, large cities had significant foreign-born populations, including nearly half of the population of New York, according to the 1870 census.

Immigration Law

Immigration feeds ethnic diversity in the United States. In response to immigration, legislation has been adopted to facilitate or hinder the influx and immersion of new immigrants into the population. Because Chinese immigrants were feared as an economic threat, the 1882 Chinese Exclusion Act banned Chinese from immigrating to the

United States. The Chinese were the only dominant ethnic and racial group other than whites and blacks in the United States at that time.

In the 1920s, a series of laws were adopted to further restrict immigration. The Immigration Restriction Act of 1921 and its replacement, the Immigration Act of 1924, further restricted Asian immigration and established a per-country quota system anchored in the ratio of previous numbers of people from each country present in the United States during the 1910 and 1890 censuses, intending to maintain the country's homogeneity. This quota system has been criticized for making immigration particularly difficult for Jews fleeing persecution in southern and eastern Europe. The National Origins Act of 1929 fixed 150,000 as the cap for immigration and upheld previous proportions and limitations.

Change in the restrictive trend of U.S. American immigration policy started with the Magnuson Act in 1943, which allowed limited Chinese immigration into the United States for the first time since the Chinese Exclusion Act 1882, which it repealed. Adapting to a Cold War mindset, the controversial Immigration and Nationality Act of 1952 shifted the focus of immigration policy to skill, rather than solely ethnicity, while retaining a quota system. This enabled the government to weed out those who were politically suspect from entering the country, and to accept those who could be viewed as contributing to the nation's economy and labor force through their unique skill set. The Immigration and Nationality Act of 1965 replaced the 1952 version and set the tone for future immigration policy by abolishing the quota system that had remained in place since 1921.

Civil Rights Movement

Removing quotas was a boon for those entering the United States. The civil rights movement of the 1950s and 1960s helped improve the quality of life for those from ethnically diverse groups within the United States. In 1954, the Supreme Court decision in *Brown v. Board of Education of Topeka* resulted in the elimination of racial segregation in schools. Later, the Civil Rights Act of 1968 made housing discrimination illegal.

During the civil rights movement, a series of laws focused on securing voting rights for citizens,

rights that had already been granted by the Fifteenth Amendment and were viewed as necessary to protect blacks who continued to be disenfranchised. The Civil Rights Act of 1957, the Civil Rights Act of 1960, and the Voting Rights Act of 1965 made efforts to thwart voting punishable by fines and imprisonment. Adopted in 1964, the Twenty-Fourth Amendment made the collection of poll taxes illegal in federal elections. That same year, the Civil Rights Act of 1964 further aided voter access and provided considerable protection from discrimination for citizens, regardless of English language proficiency, gender, religion, race, or ethnicity in employment and a variety of other contexts.

Societal Institutions and Discrimination

Once civil rights were more firmly established within the United States, finer laws were enacted to negotiate the treatment of members of ethnically diverse groups within specific societal institutions. The workplace, the health care industry, and the legal system remain among the most integral institutions to a person's survival.

In the workplace, the Civil Rights Act of 1964 mandated the creation of the Equal Employment Opportunity Commission and introduced affirmative action. It directed that "Even in the absence of past discrimination, a recipient in administering a program may take affirmative action to overcome the effects of conditions which resulted in limiting participation by persons of a particular race, color, or national origin." Extending this 1964 version, the Civil Rights Act of 1991 allows employees who are victims of employment discrimination to sue for monetary damages.

Although narrowly focused on federal employees, the Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act), effective since 2003, establishes various policies to thwart federal agencies from engaging in discrimination or retaliation against whistleblowers. Access to ethnic equality in the workplace is limited by immigration status. The 1986 adoption of the Immigration Reform and Control Act requires, with few exemptions, employers to be accountable for the legal immigration status of their employees.

In the health care industry, the most controversial recent legislation to be enacted in the

President Barack Obama enacted aspects of the DREAM Act despite not having legislative approval, by changing some policies related to immigration. The Dream Act would provide conditional permanent residency to certain young undocumented immigrants.

United States is the Patient Protection and Affordable Care Act of 2010. By providing health care options that apply to the full range of income levels, the law seeks to create parity and improve the quality of life of members of racially and ethnically diverse groups. It will revolutionize access to health care for those in the United States, regardless of socioeconomic status. This will also be, by default, an equalizer for access to health care for ethnically diverse groups.

Within the legal system, the cultural defense has been used to argue that some seemingly criminal acts are beyond the purview of American courts because they are prescribed or requisite religious or cultural actions. By this argument, the application of American laws in these cases is tantamount to discrimination against a person's religion or culture. The defense has been used since the mid-1990s. Honor killings and female

genital mutilation are among the most controversial applications of this defense. In these cases, defendants have argued that what is considered a criminal and heinous act in the United States is normatively appropriate in their culture, and legal. Less controversial instances of using the cultural defense as a legal strategy have been supported by the courts.

In a much-publicized 2009 New Jersey court case, a husband was accused of raping his wife. The cultural defense was used to argue that his religion allowed for the husband to have authority over his wife regardless of her protestations. The court upheld the defense, arguing that his intent was not criminal and was permissible in his religion. An appellate court reversed the decision, stating that the husband was aware that the intercourse was not consensual, regardless of religious precept.

However, in a somewhat similar case in California, *People v. Moua* (1985), the cultural defense was upheld when the court determined the defendant lacked the necessary intent for the charges of rape and kidnapping. Among the Hmong, the tradition of "marriage by capture" is culturally accepted, which served as a mitigating circumstance that resulted in a plea bargain.

Less controversial instances of using the cultural defense as a legal defensive strategy have also been supported by the courts. In addition to being used as a defensive argument, the cultural defense has been used, though less so, as an offensive argument against a defendant to establish intent (such as honor killings), refute a defensive argument, or secure a harsher punishment. The cultural defense has also been used for dispute resolution to justify a form of cultural pluralism when conflict arises among ethnic and religious groups.

Hate Crimes

In addition to laws enacted to provide improved quality of life within societal institutions, hate crime laws provide protection against violence stemming from ethnic and racial prejudice, as well as other types of prejudice. This protection was established via the hate crime-related provisions in the Civil Rights Act of 1968. However, the thrust of hate crime legislation began with the Hate Crime Statistics Act of 1990, which merely

required law enforcement agencies to begin to collect and report data on victims of crimes that “manifest prejudice based on race, religion, sexual orientation, or ethnicity.”

Later, hate crimes were criminalized in the extensive Violent Crime Control and Law Enforcement Act of 1994. Clarifying finer distinctions in what constitutes a hate crime, the Hate Crimes Act of 2000 provided a clear definition of hate crimes and articulated requirements related to sentencing for these. The Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act, passed in 2009, expanded the definition of hate crimes to include disability, gender, gender identity, and sexual orientation. Hate speech, in contrast, is not considered a hate crime. Rather, except in specific instances, it is included with the right to free speech protections under the First Amendment of the Constitution.

Economic Prosperity and Ethnicity

In the United States, ethnic diversity is tied to economic prosperity. For example, according to the 2010 U.S. Census, there are more employed foreign-born workers (as a percentage of population) than native-born workers. Thus, laws related to immigration can impact the U.S. American economy. Three recent examples demonstrate this connection between economic prosperity and ethnicity.

Farm workers, comprising predominantly non-native, English-speaking, Mexican-born males, contribute to the U.S. economy. However, nearly half of these workers are not legally authorized to work in the United States. Current immigration laws threaten their willingness to work. For example, the 2010 Arizona Senate Bill 1070 was criticized as a form of racial profiling because it allowed traffic stops based on suspicion of illegal immigration status.

Results from a study conducted by the Center for Demography and Ecology at the University of Wisconsin, Madison, suggest that migrant workers contribute considerably to local economies, and their absence in this industry would lead to the closure of farms. Such a result could have larger effects, such as impacting the availability and price of fresh produce.

The ability of U.S. companies to employ high-level technology workers from India has been impacted by immigration laws. H1B visas, which

allow foreign workers in specialty industries to be employed within the United States, have a cap that limits the number allowed per year. Business leaders in technology industries have argued that caps limit the ability of their companies to hire the most talented workers available around the globe. In 2007, Bill Gates, chairman of Microsoft, testified to the U.S. Senate Committee on Health, Education, Labor and Pensions that the cap hurts the ability of the United States to be competitive, saying “These employees are vital to U.S. competitiveness.” According to the Global Competitiveness Report 2012–2013, produced by the World Economic Forum, the United States declined in rank in global competitiveness for the fourth year in a row.

The DREAM Act would enable those who were brought to the United States as minors to be eligible for permanent residence status by graduating from a four-year academic institution in the United States, or serving for two years in the military. This controversial act eventually bypassed legislation when, in 2012, President Barack Obama enacted aspects of the DREAM Act by changing some policies related to immigration, despite not having legislative approval. The DREAM Act is premised on the idea that highly educated, potentially high-income-earning citizens are better for the U.S. economy than uneducated, undocumented workers.

Although laws have made immigration and assimilation into the United States easier for some ethnic groups, others have not been as welcome. After the terrorist attacks of September 11, 2001, additional laws were created or tightened under the auspices of preventing further terrorist attacks, such as the 2001 USA Patriot Act, 2001 Aviation and Transportation Security Act, and Enhanced Border Security and Visa Entry Reform Act of 2002. Regardless of their perceived benefits, these laws nonetheless limit ethnic diversity.

League of United Latin American Citizens

The League of United Latin American Citizens (LULAC) was founded in 1929 through the merger of three existing Mexican American community groups. LULAC was primarily based in Texas, was a predominantly middle-class organization, and fought for increased opportunities for people of Mexican origin and other Latinos. It worked to incorporate Mexican Americans into

American society through promoting the English language, cultural understanding, and participation in the political process. Although the institution is often noted for its historical influence in the 1930s and 1940s, LULAC remains active today, with councils throughout the nation.

LULAC was founded in 1929 in Corpus Christi, Texas, when the Order Sons of America, the Latin American League, and the Order Knights of America combined to form one organization. The organizers included many leading Mexican American community leaders, such as Ben Garza, Alonso Perales, and J. T. Canales, who would play influential roles both through LULAC and individually in gaining rights and opportunities for Mexicans and Mexican Americans.

LULAC focused on combating discrimination and rejected broad-scale redistribution, instead working to changing attitudes toward Mexicans and Mexican Americans and increase their opportunities for educational and economic advancement. Although traditionally characterized as a conservative organization, the agency used a variety of methods to achieve its mission and goals.

The LULAC code was drafted shortly after the organization's founding and included many references to assimilation and "American" language and values. Reviewing the monthly publication *LULAC News* during the 1930s and 1940s shows the difficult line that LULAC followed. The assimilationist LULAC code, with an emphasis on adopting the English language, is printed on one page and is translated into Spanish on a subsequent page. *LULAC News* also provides some interesting insights into the organization's tactics. After successfully assuring that people of Mexican origin would be counted as white in the 1940 census, it was noted that "time, tact and patience" had been the primary ingredients for successful lobbying.

LULAC was a mainly male organization, with many members drawn from the small Mexican American middle class of Texas. The local chapters worked on a variety of issues, and relatively quickly after the organization's founding, expansion occurred. In the atmosphere of the early 1930s, with mass deportations of people of Mexican origin, LULAC worked to craft discourse and actions that would allow for greater incorporation into society.

LULAC's difficulties exhibit the peculiar place of people of Mexican origin in Texas and broader American society. Many of LULAC's tactics called for assimilation on the basis of language and cultural practice, strategies similar to those utilized by European immigrants. However, LULAC also had to deal with the racialization experienced by people of Mexican origin in the southwest, particularly in Texas. Part of the response was to work toward white racial classification in the U.S. census, which created a Mexican racial classification for the 1930 census but did not continue it on the 1940 census form.

LULAC's Texas efforts have received the most scholarly attention, but some research has also been done regarding chapters and efforts in states such as New Mexico during this period. Activities in New Mexico, where (in contrast to other states) Mexican Americans held prominent roles in elected office, extending up to the U.S. Senate, focused more on education.

After World War II, in 1948, LULAC was joined by the American G.I. Forum. Formed by Dr. Hector P. Garcia, the G.I. Forum included many veterans of World War II, who brought generational differences from the earlier founders of LULAC. The organizations had broadly similar goals, and each represented predominantly middle-class leaders. Although many LULAC councils were inactive during World War II, LULAC and the G.I. Forum were two of the major community organizations mobilizing for Mexicans and Mexican Americans in the 1950s. With the rise of more militant leadership, particularly from the Chicano movement of the 1960s, LULAC was sometimes characterized as an overly conservative, assimilationist organization. However, although the tactics exhibited by LULAC in 1930s, 1940s, and afterwards lacked the revolutionary zeal of more militant groups and social movements, the organization worked on several levels to advance its members, Mexicans, Mexican Americans, and other Latinos.

Many of LULAC's programs were fairly innovative. For example, in 1957, it created Little Schools of the 400 to teach young children of Mexican origin and other Latino backgrounds a basic English vocabulary. This program was tapped by President Lyndon Johnson's administration when it designed the Great Society's Head

Start Program. During the 1960s, LULAC also worked to create low-income housing.

In addition, LULAC worked to create the Mexican American Legal Defense and Education Fund (MALDEF), an organization responsible for winning the *Plyler v. Doe* Supreme Court decision that protected undocumented children's right to a free public education under the Fourteenth Amendment to the Constitution. The organization has a surprising breadth of activity, showing the full range of ways to assist a particular community. From political activism to the provision of social programs, LULAC worked to address specific problems, with the broader goal of reducing discrimination. Although never interested in the radical redistribution of wealth, LULAC worked for the good of "la Raza."

During the 1960s, Cesar Chavez and his organization of farm workers and the emerging Chicano movement gained more public attention and resources. Although what has been characterized as the Mexican American generation of the 1930s through the 1960s that typified LULAC membership was referred to by some in the more radical movements as "Tio Tacos" for their perceived focus on assimilation, LULAC survived as an organization and remains active. LULAC continues to exist as a national organization, with 700 councils in states such as Illinois and Iowa, in addition to Puerto Rico. The agency also continues to have a national presence and an impact on civil rights issues and mobilization. It represents some of the most enduring aspects of the Mexican American civil rights movement.

Lebanese Americans

For a relatively small, mountainous country on the Mediterranean (4,015 square miles, or 10,400 square kilometers, and a population of about 4 million), Lebanon has a large diaspora, with communities in Australia, South America, North America, Europe, and throughout the Arab world. The first immigrants from Lebanon began arriving in the United States in the 1870s. Many came from what was then known as the Mount Lebanon area of Greater Syria, part of the Ottoman Empire. The vast majority of the early immigrants were Christian men (Catholic and Orthodox), though many women and small numbers of Muslims (Shi'a and Sunni) and Druze also came. Working mainly as peddlers, shop owners, and factory workers, immigrants from Lebanon settled in cities and towns across the United States.

Most came for economic reasons, and many planned on returning to Lebanon after earning a significant amount of money. Though some returned home, many stayed, and many more followed. Lebanese immigration ebbed and flowed according to developments in Lebanon, with immigration peaking during periods of violence in the homeland, particularly throughout the long civil war from 1975 to 1990.

Today, Lebanese Americans are the largest nationality group within the Arab American community. Estimates of the population range from 500,000 to 1.5 million, and about half are Christian and half are Muslim. Lebanese Americans have always been a transnational community but have also built families and institutions in the United States, making a broad impact on the culture, politics, and scientific advancement of the nation for over a century.

Demographics

Lebanese Americans are diverse and can be Maronite or Melkite Catholic, Greek Orthodox,

Shi'a or Sunni Muslim, Druze, or from smaller religious sects. Lebanese Americans can be recent immigrants or can have great-grandparents who immigrated more than a century ago. Some left Lebanon for economic reasons, to join family already living in the United States, or were fleeing war and civil strife.

Between 1899 and 1914, immigrants from Greater Syria (the majority of whom came from present-day Lebanon) were arriving at an average of 5,300 per year, according to the 1925 Report of the Commissioner General of Immigration. Combined with those who had been living in the United States since the 1870s, the Lebanese American population was estimated at 200,000 in 1924. The majority of these immigrants were Christians. Druze began immigrating in large numbers after 1900, and other Muslim groups (Shi'a and Sunni) followed. Early population numbers for Lebanese Americans, like other Arab American communities, are difficult to determine because of the classification systems used by immigration officials and census enumerators, who often labeled people from Lebanon as Syrian, Asian, or Turkish.

Even today, it is difficult to determine the population of Lebanese Americans. Because the 1977 Race and Ethnic Standards for Federal Statistics directive classified all people of Middle Eastern and Arab ancestry as "white," anyone who traces their ancestry to Lebanon is counted as white. Since Lebanese and other Arabs are not counted as a distinct racial group on the decennial census, more accurate population numbers can come from the American Community Survey (ACS), as it records "Lebanese" as an ancestry.

According to the 2010 ACS, there are about 500,000 Lebanese Americans, roughly 30 percent of the total Arab American community. Because of the many ways that Arab Americans self-identify (many Lebanese Christians do not self-identify as Arab, and some Lebanese may identify more with being Arab than Lebanese), the ACS numbers for Lebanese and Arab Americans could be significantly low. The Arab American Institute (AAI) estimates that there could be as many as 1.5 million Lebanese Americans.

Metropolitan Detroit

During the 19th century, immigrants from Lebanon settled mainly in east coast industrial centers,

such as New York City and Boston, but their work as peddlers and store owners eventually took them all over the country. Because of this, there are Lebanese communities in almost every major city in the United States, as well as in dozens of smaller cities. Although California, New York, Texas, and Florida have large populations of Lebanese Americans, Michigan, particularly the metropolitan Detroit area, has the largest concentration of Arab Americans, including Lebanese Americans, anywhere in the nation.

The majority of Lebanese began settling in metropolitan Detroit in the early 1900s, mainly working in Ford automobile factories. In 1921, Lebanese Muslims from South Lebanon and the Beqaa Valley opened the country's first purpose-built mosque in Highland Park, Michigan. Though the mosque closed shortly after the community moved to Dearborn, the descendants of this early Lebanese Muslim community now operate one of the largest mosques in the country, the Islamic Center of America. Lebanese Christians, both Catholic and Orthodox, also have large, long-established institutions in the Detroit area. The majority of Dearborn's 35,000 Arab Americans are Lebanese Muslims, and there are thousands more Lebanese of all faiths living in metropolitan Detroit.

Transnationalism

Lebanese Americans have always been transnational, through both their movements between the United States and Lebanon, and their focus on political, religious, and humanitarian developments in their homeland. For example, following the breakup of the Ottoman Empire after World War I, prominent Lebanese Americans in New York were vocal in their support for an independent Lebanon, and some participated in the Paris Peace Conference that ultimately led to the creation of the State of Greater Lebanon in 1920, under French mandate. Lebanon would not become an independent nation until 1943.

Throughout the long civil war in Lebanon (1975–90) and during subsequent war and civil strife, Lebanese Americans continually focused their attention on their homeland by raising money for victims, and pressuring American and world political leaders to act on behalf of the Lebanese people. However, the diversity of the

Lebanese American community often creates fissures along generational and religious lines.

For more than a century, Lebanese Americans have been impacting the culture, politics, and scientific advancements of the nation, from artist, poet, and author of *The Prophet* Kahlil Gibran to groundbreaking journalist Helen Thomas, and from pioneering heart surgeon Dr. Michael DeBakey to tireless consumer advocate Ralph Nader.

Many Lebanese Americans have become household names because of their television and film roles. Danny Thomas, actor and founder of St. Jude's Children's Hospital, as well as Jamie Farr, Kathy Najimy, and Tony Shalhoub, are some of the more recognizable Lebanese Americans. The Arab American National Museum in Dearborn, Michigan, highlights theirs and other stories from the diverse Lebanese American community.

Lenape

The Lenape are a northeastern Native American tribe and are among the several hundred tribes within the Algonquian linguistic family.

European and Euro-American settlers referred to the Lenape as the Delaware. The Lenape were part of the Eastern Woodlands culture. Their traditional lifestyle was based on subsistence agriculture. After centuries of Euro-American population growth and the federal government's decision to remove all eastern Native Americans to the west in the early 1800s, many Lenape were forced to relocate to the western United States within present-day Oklahoma and Kansas. Today, the Lenape live both in their ancestral homelands and in western territory and seek to preserve their cultural heritage.

The Lenape, also known as the Lenni-Lenape, traditionally inhabited a region in the northeastern United States that they referred to as Lenapehoking, or Land of the Lenape. This region encompassed parts of the states of Delaware, Pennsylvania, New Jersey, New York, and Connecticut. The area was heavily wooded and had numerous rivers and streams. The traditional Lenape lifestyle was largely sedentary and centered on subsistence agriculture and the surrounding natural environment, which also provided a spiritual base.

Two related linguistic and cultural groups composed the Lenapi: northern-based Lenapi who spoke a Munsee dialect and southern-based Lenape who spoke a Unami dialect. Some Lenape recognize three groupings: the Munsee (Wolf), Unami (Turtle), and Unalachigo (Turkey). The Lenape refer to themselves as Lenape, which is variously translated as true, original, or common people. Some scholars credit the name "Delaware" as coming from the English settler Lord de la Warr, whereas others credit the name's origin to a Swiss colonial mispronunciation of a Lenape word. Land was communal, and resources were freely shared among tribal members.

Like other Eastern Woodlands tribes, the Lenape practiced settled agriculture on the rich farmlands within their traditional territory. Crops included corn, squash, and beans. The Lenape were also hunters and gatherers. Food included deer, elk, bear, beaver, otter, muskrat, raccoon, mink, wild cats, fish, and various birds and waterfowl. Tools included fish weirs, bows and arrows, dugout canoes, and stone tools such as axes, spears, and arrowheads. Religion was centered on the natural environment and was both animistic and polytheistic.

A 1915 photo of Jennie Bobb and her daughter, Nellie Longhat, both from the Lenape tribe, also called Delaware Indians because their territory was alongside the Delaware River.

Most Lenape lived in small villages or bands, although a few large villages did exist. Longhouses and wigwams were typical Lenape dwellings. Work was divided by gender, with children receiving instruction at an early age. Male roles included woodworking, land clearing, building houses, and hunting, trapping, and fishing. Men also served as warriors. Female roles included planting, harvesting, gathering, food preparation and seasonal storage, pottery, weaving, and making clothing.

The extended family was the basic social unit. Related families were organized into one of three clans: Wolf, Turtle, and Turkey. Clan membership, like Lenape society as a whole, was matriarchal. Male chiefs, also known as sachems, provided

political, social, and religious leadership for the various clans and villages. A chief and council of elders provided overarching political leadership, while other tribal members played advisory roles. Military leadership was separate.

Initial relations with European colonists were largely peaceful. As the settlers grew in number and sought more land, however, the two peoples increasingly came into conflict. Cultural differences and conflict over land resulted in centuries of wars and skirmishes with the rapidly expanding Euro-American population. The Lenape also lost land through fraudulent land exchanges or purchases. In the early 1800s, the U.S. government adopted a policy of separation between the conflicting cultures by relocating eastern Native American tribes to the trans-Mississippi west.

The remaining Lenape came under the Indian Removal Act of 1830, passed by Congress during the Andrew Jackson administration. Many were voluntarily or forcibly relocated west to designated Indian Territory in present-day Oklahoma and Kansas, where many of their descendants still reside. Those Lenape who relocated faced the difficulty of adjusting to life within a new environment on reservations where they were integrated with western tribes and other groups of relocated eastern tribes, often with many cultural differences.

Existing Lenape and Delaware nations include the Delaware and Ojibwe tribe of Kansas; Delaware Indian Nation of Muncee; Delaware Indian tribes of western Oklahoma, Colorado, and Ohio; Eastern Lenape Nation of Pennsylvania; Laurel Ridge Lenape tribe; Lightning Valley Lenape tribe; Nanticoke Lenape Indians of New Jersey; Ontario Delaware Nation of Muncee; Ontario, Canada, Red Thunder Lenape tribe; Thunder Mountain Lenape Nation; and Wyonink Schukuney Mawemin Lenape. Not all Delaware nations have federal recognition.

The Native American population grew from the 2000 to the 2010 U.S. Census. The total U.S. population in 2010 was 1.7 percent Native American, 22 percent of whom lived within American Indian areas such as reservations. Many modern Lenape reside in Oklahoma and Kansas, where their ancestors had settled after forced removal and relocation. Still others reside in their ancestral homelands. Their struggle for the preservation of

their cultural and linguistic heritage despite centuries of forced removal and assimilation continues.

“Lift Every Voice and Sing”

“Lift Every Voice and Sing,” the rousing hymn that would eventually become known as the “Negro National Anthem,” “Negro National Hymn,” and “Black National Anthem,” remains an immensely popular song over a century after its composition. Regularly performed at church services, large community events, formal gatherings, and black graduation ceremonies across the United States, and often sung after the U.S. national anthem (“The Star-Spangled Banner”), the enduring hymn became the official song of the National Association for the Advancement of Colored People (NAACP).

Its stirring lyrics urge the listener to remember the trials and sacrifices of the “dark past,” the perseverance of the ancestors, the progress of African Americans today (“A song full of hope that the

present has brought us"), and the victories yet to come ("Let us march on till victory is won").

Originally written as a poem at the turn of the 20th century by attorney, journalist, educator, principal, early civil rights activist, songwriter, and author James Weldon Johnson (1871–1938), with the musical score written by his younger brother, John Rosamond Johnson (1873–1954), who studied music composition at the New England Conservatory, the song remains a celebration of racial uplift. Together, the brothers would compose over 200 songs for musical theater.

James Weldon Johnson, whose philosophy of racial advancement through self-education and hard work in the face of racism most closely aligned with Booker T. Washington, as opposed to W. E. B. Du Bois, worked a number of public-serving jobs, including principal of the Stanton School at age 23, founder of an African American newspaper highlighting racial issues called the *Daily American*, U.S. consul to Venezuela (1906) and Nicaragua (1909), and field secretary and later general secretary of the NAACP.

Matriculated at Atlanta University, he later studied law under a prominent Jacksonville attorney and was admitted to the Florida Bar Association in 1897, the first African American to do so since Reconstruction. His professional activities alternated between political activism and creative writing, often with overlap between the two.

Johnson enjoyed a prolific career before his life was cut short by a train accident. He wrote his only novel, *The Autobiography of an Ex-Coloured Man* (1912), served as editor of the influential poetry anthology *The Book of American Negro Poetry* (1922), compiled and edited with his brother *The Book of American Negro Spirituals* (1925), wrote his own anthology of poems titled *God's Trombones: Seven Negro Sermons in Verse* (1927), and wrote his work of prose titled *Black Manhattan* (1930), to name a few selected works.

History of the Hymn

The history of "Lift Every Voice and Sing" is tied to two U.S. presidents. Composed in honor of President Abraham Lincoln's birthday, 35 years after emancipation and first performed by 500 schoolchildren at a Lincoln celebratory event

in Jacksonville, Florida, on February 12, 1900, "Lift Every Voice and Sing" is a stirring song of commemoration, remembrance, and promise. Long after the Johnson brothers forgot about the hymn and moved to New York, the schoolchildren in Florida continued to sing it. Its popularity spread to other schools across the south, and by the 1930s, it was known as the Negro National Anthem.

During the civil rights movement of the 1950s and 1960s, "Lift Every Voice and Sing" regained popularity as a fitting liberation song. Most recently, minister and civil rights leader Reverend Joseph Lowery recited the third stanza of the poem almost verbatim as the opening to his benediction at the inauguration of the 44th U.S. president, Barack Obama, on January 20, 2009. It is likely that Reverend Lowery selected an excerpt from this spiritual song for its bold optimism, as Johnson wrote it at the nadir of American race relations. The third stanza, in particular, offers a cautious mandate to remember the past always and God's guidance through those "weary years," even on the momentous occasion of the inauguration of the first black president.

Overall, the poignant call for positive action against racial injustice, the unapologetic optimism, and the promise of a better day coming found in "Lift Every Voice" continue to inspire the African American community to this day. The song works rhetorically because it offers an evaluation of racial progress as a function of time and history, remembering the sobering and painful past, deriving hope from the advances of the present, and striving toward the gleaming future, creating a sense of the steady march toward equality.

Lift every voice and sing,
Till earth and heaven ring,
Ring with the harmonies of liberty;
Let our rejoicing rise
High as the list'ning skies,
Let it resound loud as the rolling sea.
Sing a song full of the faith that the dark past
has taught us,
Sing a song full of the hope that the present has
brought us;
Facing the rising sun of our new day begun,
Let us march on till victory is won.

Stony the road we trod,
 Bitter the chastening rod,
 Felt in the days when hope unborn had died;
 Yet with a steady beat,
 Have not our weary feet
 Come to the place for which our fathers sighed?
 We have come over a way that with tears has
 been watered,
 We have come, treading a path through the
 blood of the slaughtered,
 Out from the gloomy past, till now we stand
 at last
 Where the white gleam of our bright star is cast.

God of our weary years,
 God of our silent tears,
 Thou who has brought us thus far on the way;
 Thou who has by Thy might
 Led us into the light,
 Keep us forever on the path, we pray.
 Lest our feet stray from the places, our God,
 where we met Thee,
 Lest, our heart drunk with the wine of the
 world, we forget Thee;
 Shadowed beneath Thy hand,
 May we forever stand,
 True to our God,
 True to our native land.

Literature and Ethnic Diversity

To some, it seems that there is little diversity in American literature before the end of the 19th century, but this is an illusion. European literary forms were not immediately adopted by other groups in the United States. There are many examples of authors of diverse backgrounds who wrote before the appearance of the “first novel” by a person of color. In fact, by the end of the 19th century, a multicultural tradition of literature had developed to satisfy a reading public that was interested in the conditions of and insights from people of color.

Notions of “regional” American literature helped support the publication of literature by authors of diverse backgrounds, and the early 20th century was marked by literature by immigrants as well as the flowering of African American literature known as the Harlem Renaissance. In the years around World War II, authors began to question the mimetic forms of literature, and a more stylized literature emerged. After the experimentation and protests of the 1960s, a recognizable group of authors began to emerge who thought of themselves as writing mainstream American literature. This group increasingly gained acceptance at the end of the 20th century.

One of the first recognized African American writers was Phillis Wheatley, whose *Poems on Various Subjects, Religious and Moral* was published in 1773. An enslaved person, Wheatley was taught to read and write by the wealthy Boston family to whom she was sold. Her poetry was used by both proslavery advocates and abolitionists to support their arguments. While the abolitionists said that the poems showed creativity and intelligence, proving that people of African descent had equal capabilities to Europeans, those who supported slavery said that Wheatley was simply mimicking her masters. Thomas Jefferson wrote in *Notes on the State of Virginia* that the poetry was written thanks to her religion, not her creativity.

Another form of early literary diversity was the autobiographical narrative. Slave narratives include the biographical account *The Interesting Narrative and the Life of Olaudah Equiano or*

Gustavus Vassa, the African, by Olaudah Equiano, which was published in London in 1789. This genre blossomed in the next century. William Apes, a Pequot Indian, wrote the spiritual confessional *A Son of the Forest* in 1829. Black Hawk, the leader of the Sauk Nation, told his story to a journalist, and the resulting *Black Hawk: An Autobiography* was published in 1833. More literary efforts in this genre are seen in *Narrative of the Life of Frederick Douglass, an American Slave*, published in 1845, and *Incidents in the Life of a Slave Girl*, by Harriet Jacobs, which was published in 1861.

In this period, collectors of African American and Native American culture also made contributions. In 1850, *The Traditional History and Characteristic Sketches of the Ojibway Nation* was published by George Copway; in 1867, W. F. Allen's *Slave Songs of the United States* was published, followed by Daniel Brinton's *Myths of the Americas* the following year. Joel Chandler Harris began publishing his Uncle Remus tales in 1876, and the first collection of them, *Uncle Remus: His Songs and His Sayings*, appeared in 1880. Although not written by people of color, collections such as these offered insight into a cultural life that was unfamiliar to the wider public.

It was not until the middle of the 19th century that prose fiction began to appear. The first African American to publish a novel was William Wells Brown. *Clotel; or, the President's Daughter* was a protest novel about the horrors of slavery, published in London in 1853. Harriet Wilson's *Our Nig*, an autobiographical novel published in the United States in 1859, is considered the first published novel in North America by an African American.

One of the first Asian American books was the autobiographical *When I Was a Boy in China*, by Lee Yan Phou (1887). Probably the first Native American novel, *Wynema, a Child of the Forest*, by Sophia Alice Callahan, was published in 1891, wherein the protagonist introduces her teacher to the Creek Nation. Among the first Mexican American novels are Eusebio Chacón's *The Son of the Story* and *The Calm After the Storm*, both published in 1892.

Multicultural Realism

With the large numbers of immigrants to the United States during this period, and the

newspapers that were established to serve them, a corresponding literature of the immigrant experience developed. The most famous of this genre of immigration literature includes Abraham Cahan's *Yekl: A Tale of the Ghetto* (1896) and *The Rise of David Levinsky* (1917). Jacob Riis, the Danish immigrant who became famous for *How the Other Half Lives: Studies Among the Tenements of New York* (1890), wrote the novel *Out of Mulberry Street: Stories of Tenement Life in New York* in 1898. Hutchins Hapgood's *The Spirit of the Ghetto* appeared in 1902.

People of color began to receive serious attention from the mainstream at the end of the 19th century. Although few were able to earn significant financial gain from writing, many received accolades from the wider reading public. These authors embraced the growing trade in specialty newspapers. Paul Laurence Dunbar, the son of former enslaved persons, was one such author. His first collection of poetry, *Oak and Ivy*, appeared in 1893. Charles W. Chesnutt, another important realist, began his writing career as a journalist. Chesnutt started writing short stories in 1885; in 1887, he published his iconic story "The Gophered Grapevine" in the *Atlantic Monthly*. This story and other magical stories of the postwar south were collected in *The Conjure Woman, and Other Conjure Tales* (1899). His novels, such as *The House Behind the Cedars* (1900) and *The Marrow of Tradition* (1901), explore the issues surrounding the color line.

Another important writer who began working in the period was W. E. B. Du Bois, who earned his Ph.D. in history from Harvard and was a cofounder of the National Association for the Advancement of Colored People (NAACP) in 1909. His sociological study *The Philadelphia Negro* (1899) sought to explain the socioeconomic conditions of African American residents. He published a collection of his essays, *The Souls of Black Folk*, in 1903. Du Bois opens *Souls* with the prediction that the problem of the 20th century would be how to draw and maintain the "color line" between whites and blacks.

Pauline Hopkins was another important author of this period, one who embraced the popular press, writing plays and several novels. Although her novel *Of One Blood: Or, The Hidden Self* appears to be an adventure story, the import of the

narrative is that there is only one race of humanity, an important question facing scientists at the time. The novel was serialized in *The Colored American Magazine* in 1902, at the time when she was also working as the magazine's editor.

Native American authors also continued writing in this period. In 1899, the partly biographical *Queen of the Woods*, by Simon Pokagon, a Potawatomi chief, appeared. In 1902, Charles Eastman, a Sioux, published *Indian Boyhood*, and in 1916, he published *From Deep Woods to Civilization*, among other novels of his experiences in the white world. Jewish American author Gertrude Stein's *3 Lives* and Yung Wing's *My Life in China and America* were both published in 1909. Sui Sin Far's newspaper stories of life in west coast Chinatowns were collected as *Mrs. Spring Fragrance* in 1912. Mexican American writer Victor Bernal published a collection of poetry, *First Fruits*, in 1916.

Multicultural Modernism

Contemporary with the American and European movements of the early 20th century known as modernism was a flowering of African American arts that came to be known as the Harlem Renaissance. Some of the first and best-known authors of this group were the poet Langston Hughes, whose first book was a 1926 collection of his poetry, *The Weary Blues*, and Claude McKay, also a poet, who published the novels *Home to Harlem* (1928), *Banjo* (1930), and *Banana Bottom* (1933).

Today, one of the most well-known figures of this period is Zora Neale Hurston. Her first novel, *Jonah's Gourd Vine*, appeared in 1934. The following year, she published a fictionalized account of her attempt to document African American folklore, *Mules and Men*. So that she might conduct field research in Jamaica and Haiti, Hurston received a Guggenheim Fellowship; *Tell My Horse* (1938) describes her investigation. *Their Eyes Were Watching God* (1937), written while doing her research, is her best-known work.

One of the interesting aspects of literature in this period is its depiction of mixed-race individuals. Nella Larsen's *Quicksand* (1928) and *Passing* (1929) have mixed-race protagonists, following the lead of Charles W. Chesnutt's *The*

William Edward Burghardt (W. E. B.) Du Bois was an American civil rights activist, Pan-Africanist, author, and editor. He rose to national prominence as the leader of the Niagara Movement, a group of African American activists who wanted equal rights for blacks. Du Bois is pictured in the middle row in the white hat.

House Behind the Cedars, which depicts the arbitrary nature of the color line. *Passing* is the eponymous example of stories about people of mixed descent who could be accepted as white. Although not part of the Harlem Renaissance, Native American authors also took up the theme of mixed-race protagonists. John Oskison, a Cherokee, wrote *Brothers Three*, about a part-Cherokee family in Oklahoma, in 1935. Darcy McNickle, a Cree-Salish, wrote *The Surrounded* (1936), about a mixed-blood hero who is unwittingly implicated in murder.

In contrast to the radical experimentation under way in modernist arts and literature, many texts by authors of diverse backgrounds in this period take a more conventional approach to telling their stories in an effort to educate readers about the plain facts of people of color. W. E. B. Du Bois contribute two novels of this type. *The Quest of the Silver Fleece* (1911) tells the story of a young black woman who is foiled in her effort to be treated equally in the marketplace and founds an all-black town. *Dark Princess: A*

Romance (1928) tells the story of a young man who unsuccessfully seeks to become part of the labor movement and joins with an international group of people of color.

Immigrant literature in this period increased in its literary stature, even when it did not engage in modernist experimentation. Notable in this period is the 1932 *Black Elk Speaks*, which concerns the life of a Sioux who wants to become a medicine man. Nina Otero Warrant's *Old Spain in Our Southwest* (1936) is a portrait of life at the end of the 19th century, and Fray Angélico Chávez's collection of stories *New Mexico Triptych* (1940) describes life in Hispanic villages.

The first Mexican American literature to reach a widespread audience was *Mexican Village* (1945), by Josephina Niggli, about a Mexican-born American; *Mexican Village* was made into a film starring Ricardo Montalbán in 1953. Also in this tradition is Jade Snow Wong's *Fifth Chinese Daughter* (1945), an autobiographical story of an American-born Chinese woman that was widely read.

Texts with a harder edge found it difficult to reach an audience, such as Mike Gold's *Jews Without Money* (1930), which describes the hardships of working immigrants in the 1920s and describes one character's hope for a Marxist revolution. Also set in the 1920s is Italian American Pietro Di Donato's *Christ in Concrete* (1939), which describes his father's life as a bricklayer and his death in a construction accident. Carlos Bulosan's *America Is in the Heart* (1946) describes the harsh conditions faced by Filipino laborers, Monica Sone's *Nisei Daughter* (1953) explores an immigrant family's experiences around World War II (including the time they spent in an internment camp), and John Okada's *No-No Boy* (1957) dramatizes an American-born Japanese man's refusal of the draft while in such a camp. In this group is Louis Chu's *Eat a Bowl of Tea* (1961), depicting problems in the Chinese American community, a novel that Maxine Hong Kingston has stated was an inspiration to her.

Literature and Civil Rights

Toward the middle of the 20th century, the notion that biology was separate from culture began to be heard. Whereas those inspired by the polygenic movement of the 19th century and the eugenics movement of the 20th century had

supposed that mental aptitudes and even social conditions like poverty or illness were racial, in the years before World War II, the effort to discredit this kind of scientific racism started to succeed. Literature thus began to explore the implications of this new attitude toward difference.

One of the best-known works in this regard is Richard Wright's *Native Son* (1940). In his study of Bigger Thomas, a figure from the slums of Chicago who commits a murder, Wright takes pains to describe the painful pressure behind crime. The psychological portrait of hopelessness in the face of toxic societal structures was so memorable that for many years *Native Son* was the only novel by an African American that was accepted into the literary canon. Ralph Ellison's *Invisible Man* (1952) explores the mental contradictions involved in Du Bois's concept of double consciousness.

With wider acceptance of the culture concept of difference, there is a correspondent feeling that essentialized notions of character in literature help contribute to the idea that characteristics are biologically determined. One author who overtly tried to combat this attitude was James Baldwin. In *Another Country*, his 1962 novel, Baldwin crafts characters that fail to fulfill their types. Baldwin's *Go Tell It on the Mountain* (1953), his best-known work, and *Giovanni's Room* (1956), which depicts a vexed gay relationship, also seek to disrupt readers' expectations of unified characters. Gwendolyn Brooks's poems combine a street vernacular with social observations in a striking, fragmented manner. Her iconic poem "We Real Cool" appeared in her third collection of poetry, the 1960 *The Bean Eaters*. Brooks was the first African American to win the Pulitzer Prize, and in 1962, President John F. Kennedy invited her to read at a Library of Congress poetry festival.

One effort seeking an end to discrimination was known as the Chicano movement, and in creating awareness of the plight of Mexican Americans, it developed a distinct literature. Rodolfo "Corky" Gonzales's poem "Yo Soy Joaquín" (1967) unified the sentiments of the movement under the term *Chicano*. In early 1968, thousands of Mexican American students walked out of their schools to protest the substandard education and prejudiced curriculum to which they were subjected. Oscar

Zeta Acosta, the lawyer who defended the organizers of the protest, wrote a novel of Chicano awareness and activism, *The Revolt of the Cockroach People*, which appeared in 1973 with a frank approach to the human foibles of activists. Rudolfo Anaya's novel *Bless Me, Ultima* (1972) depicts the burgeoning Chicano consciousness in New Mexico after World War II.

Literature of the Multicultural Canon

The successful critique of mainstream depictions of race and ethnicity paved the way for a rich offering. Alice Walker, whose book of poems *Once* appeared in 1968, became an acclaimed novelist of the multicultural canon with *Meridian* (1976) and *The Color Purple* (1982); she was also notable for reviving the work of Zora Neale Hurston, finding her unmarked grave in 1973. Maxine Hong Kingston's *The Woman Warrior* appeared in 1976, weaving together many voices, as well as folklore, to tell the story of Chinese Americans. A similar approach is taken in *Ceremony*, a 1977 novel by the Laguna Pueblo writer Leslie Marmon Silko that depicts the struggle of a World War II veteran who struggles to craft an identity for himself.

Sandra Cisneros, a Mexican American writer, wrote *The House on Mango Street* (1984) as a series of poetic vignettes that provide fragmentary glimpses into the community. Amy Tan, best known for her novel *The Joy Luck Club* (1989), likewise avoids an essentialized notion of race by tracing the lives of four different immigrant families. These authors received critical acclaim, their work is standard fare in college courses, and they are regularly found on lists of multicultural literature.

Toward the end of the 20th century, authors from diverse backgrounds began to gain even greater acclaim. Maya Angelou, who titled her autobiography *I Know Why the Caged Bird Sings* (1969) after a poem by Dunbar, was asked to read one of her poems by President Bill Clinton at his 1993 inauguration. Toni Morrison, who wrote her first novel, *The Bluest Eye*, in 1970, won a Pulitzer Prize in 1988 for *Beloved* and became the first African American to win the Nobel Prize in Literature in 1993.

After World War II, literature addressing multicultural themes reached a mainstream audience,

sometimes with controversy. Harper Lee's *To Kill a Mockingbird* (1960), with its riveting tale of race relations during the Great Depression, became a bestseller and won the Pulitzer Prize. William Styron was both criticized and acclaimed for writing literature from the point of view of ethnic groups. His novel *The Confessions of Nat Turner* (1967) won a Pulitzer Prize, and his *Sophie's Choice* (1979) was a bestseller. Philip Roth's 1959 collection *Goodbye, Columbus and Five Other Stories* earned him the National Book Award for fiction at the same time it earned him notoriety for its portrayal of Jewish characters. His 1969 novel *Portnoy's Complaint* continued to cause controversy. Mario Puzo's 1965 novel *The Fortunate Pilgrim* and his 1969 *The Godfather* (which was made into the well-known movie) portrayed Italian American life.

Playwrights from diverse backgrounds have entranced audiences with their use of multicultural themes for the stage. David Henry Hwang's *The Dance and the Railroad* (1982) depicts a Chinese opera star in an American 19th-century labor camp. *M. Butterfly*, inspired by the relationship between a French diplomat and a Peking opera singer, won the Tony Award in 1988 and was made into a film in 1993. He wrote an autobiographical play in 2007, the satirical *Yellow Face*, and *Chinglish* was performed on Broadway in 2011.

Another important playwright is Suzan-Lori Parks, whose *Venus* (1996) depicts the life and death of Sarah Baartman, the "Hottentot Venus" who was captured and brought to London and Paris for ethnographic display in the early 19th century. That same year, she wrote the screenplay for Spike Lee's 1996 film *Girl 6*. Parks's play *Topdog/Underdog* (2001) won a Pulitzer Prize in 2002.

American authors today are frequently admired for the way in which they embrace a multicultural aesthetic. Barbara Kingsolver's novels, starting with *The Bean Trees* (1988), embrace an intentionally multicultural cast of characters. *Bastard Out of Carolina* (1992), the autobiographical novel by Dorothy Allison, depicts racial and class relations in Greenville, South Carolina. Jhumpa Lahiri, who won a Pulitzer Prize for her short-story collection *Interpreter of Maladies* (1999), is one such author. Her novel *The Namesake* (2003) was made into a film in 2007. Another author

who is frequently named on lists of multicultural literature is Dominican American Junot Díaz, who received a Pulitzer Prize for his 2007 novel *The Brief Wondrous Life of Oscar Wao*. Work by Haitian American author Edwidge Danticat, including her 1996 collection of stories *Krik? Krak!* and her 2004 novel *The Dew Breaker*, earned her a MacArthur “genius grant” in 2009.

Lithuanian Americans

Lithuania is the largest of the three Baltic states, on the shore of the Baltic Sea in northern Europe. The Lithuanian language is one of the only surviving languages of the Baltic family, along with Latvian. The Grand Duchy of Lithuania was once the largest European country, controlling much of the region along with Ukraine and parts of Russia; with Poland, it formed the Polish-Lithuanian Commonwealth, a two-state union, from 1569 until 1795, when the Russian Empire succeeded in annexing most of it. Lithuania regained independence from Russia after World

War I only to be occupied throughout World War II and annexed by the Soviet Union. It was the first Soviet republic to declare independence, doing so in 1990, precipitating the collapse of European Communism.

Today there are 712,165 Lithuanian Americans, according to the most recent census information—a decline of nearly 100,000 since the 811,865 reported in the 1990 census. The first Lithuanian immigrant was Aleksandras Karolis Kursius, a Lithuanian noble who arrived in New Amsterdam in 1659 and founded the first Latin school in the colony. However, he left two years later because of a salary dispute. Still, he was indicative of the pre-Civil War Lithuanian immigrants to the United States, who continued to arrive in small numbers throughout the 17th and 18th centuries: largely professionals, well educated, often nobles or wealthy, fluent in the language of the colony or country in which they resided and often other languages as well. Immigration to the United States in greater numbers began in the Gilded Age, as hundreds of thousands of Lithuanians arrived in the country.

Advances in transportation had made travel safer, faster, and cheaper, a factor driving much of the 19th-century immigration to the United States for all European groups, both because it made it easier to come to the United States and because, once in the country, there were lands to be claimed in the west, which was quickly growing because of expansion of the railroad. What prompted the Lithuanian migration at this time was the combination of a country-wide famine and the abolition of the institution of serfdom, which gave many Lithuanians the legal right to relocate—something they had previously lacked. This accounts for the initial surge.

Waves of Lithuanian immigration continued because of increased Russian tyranny in its treatment of Lithuania and other vassal nations as well as the economic depression prevailing in Lithuania (though the United States experienced a prolonged depression as well, in the later quarter of the century). The combination of Lithuanian independence in 1918 and new U.S. restrictions on immigration in 1924 ended the influx. In 1930, the Lithuanian American population equaled 6 percent of Lithuania's total population—a large number given that the transfer

in population had occurred in only two or three generations.

The next wave of Lithuanian immigration came during and after World War II, as refugees (*Dipukai*, in Lithuanian) fled their country, which was occupied first by Nazi Germany and then by the Soviet Union, which annexed it and turned it into a Soviet republic. Many of these refugees were well-educated professionals, even political leaders. Many of them considered themselves not immigrants but exiles, intending to return to Lithuania when the Communists left power. It took 50 years—and some did return, or their children or grandchildren did, which may account for the population loss of the last 20 years. Many others, though, were too acclimated to their American lives and had no desire to spend their twilight years in the country of their birth after they had spent their lives in an adopted country.

Lithuanian Americans settled all over the country, but the majority of them settled in urban areas and Pennsylvania coal country. Many of the 19th-century immigrants traveled extensively within the country, going wherever the work was—following the railroads, for instance—but Lithuanian American settlements soon developed in northeastern and midwestern cities. About a fifth of Lithuanian immigrants before World War II settled in Chicago. Most of the rest were in New York, Cleveland, Detroit, Pittsburgh, Boston, and industrial towns throughout New Jersey and New England.

Today, the city with the highest percentage of Lithuanian Americans is New Philadelphia, Pennsylvania, where one in five people are Lithuanian. Large Lithuanian communities are found around New Philadelphia in Pennsylvania's coal country, as well as in the mining regions of Ohio and the West Virginia Panhandle.

The greatest numbers of Lithuanians are found in Chicago; the Lithuanian community in Chicago is the second largest in the world. Many refer to Chicago as the second capital of Lithuania, and Lithuanian Americans in Chicago have been very active politically. The community first came to national attention in 1906 when Upton Sinclair published his muckraking novel *The Jungle*, which details the working conditions of Lithuanian immigrants in the meatpacking industry.

Prominent Lithuanian Americans include Illinois's senator Dick Durbin, the Senate majority whip; Victor David Brenner, the sculptor who designed the Lincoln penny; George Maciunas, leader of the Fluxus art community and coordinator of "happenings" in the 1960s; and perhaps most notable, Valdas Adamkus. Adamkus was born in Lithuania and was a member of the underground resistance to Soviet occupation in World War II. He fled the country toward the end of the war, eventually immigrating to the United States, where he served in Army Intelligence before settling in Chicago. He remained active in Lithuanian issues and concerns, and he had a lengthy career in the Environmental Protection Agency (EPA). After retiring from the EPA, he moved back to Lithuania in 1997, seven years after the country regained independence—and was elected president the following year.

Little Big Man

Little Big Man is a 1964 novel by Thomas Berger that was adapted into the Arthur Penn film (1970) by the same name. The fictional Little Big Man has only a tenuous connection to the real-life Little Big Man, an Oglala Lakota chief who was a rival and a lieutenant of Crazy Horse and fought

at the Battle of Little Bighorn (as did the fictional Little Big Man).

The fictional Little Big Man was a white man, Jack Crabb, and the book is his memoir dictated at age 111. Over the course of the picaresque episodic novel, Crabb is captured by both Indians and whites, is rescued from the same, and encounters many of the famous historical figures of the Old West, including lawmen Wyatt Earp and Wild Bill Hickok, entertainer Buffalo Bill, and General George Armstrong Custer. Crabb takes on a great many roles, allowing Berger to emulate many of the tropes of the western genre and shift modes of storytelling. Crabb is a man adrift in his era, at home neither with the whites of his birth nor with the Plains Indians who named him Little Big Man.

A World War II veteran who served in a medical unit with the occupation forces in Berlin, Berger worked as a librarian and a copyeditor of *Popular Science* after the war, until he was able to focus on writing full-time. *Little Big Man* was his third book and his biggest commercial success, although in 1984 his novel *The Feud* was nominated for the Pulitzer Prize for Fiction by the fiction nominating committee. (The Pulitzer board overrode the recommendation and selected *Ironweed* by William Kennedy.) His other novels include crime novels, science fiction, and a retelling of the King Arthur legend called *Arthur Rex*. He is generally described as a satirist, and he published his 21st novel, a sequel to *Little Big Man* titled *The Return of Little Big Man*, in 1999.

Marlon Brando originally secured the film rights to *Little Big Man* but was unable to attract backers to fund a production. When a new production began, directed by *Bonnie and Clyde*'s Arthur Penn, Brando was offered the role of Chief Old Lodge Skins but turned it down. The role was instead played by Chief Dan George, a chief of the Tsleil-Waututh Nation in British Columbia. George was subsequently nominated for the Academy Award for Best Supporting Actor, as well as winning several critics' awards.

Dustin Hoffman played Crabb in the film, fresh from of his Oscar-nominated performance in *Midnight Cowboy*. One of the film actors most associated with "method" acting, Hoffman prepared for his scenes as the old Crabb by screaming repeatedly for an hour until his voice was hoarse.

The film was widely acclaimed and brought renewed attention to the novel. In dramatizing the satirical view of both white pioneer and Lakota Indian civilization in the 19th century, *Little Big Man* became one of the key films of the revisionist westerns—films that rebelled against the traditional casting of the Indian as villain and of white westward expansion as Manifest destiny. The Native Americans in the film are largely sympathetic, particularly Old Lodge Skins (who survives in the movie, unlike in the novel), while the cavalry is portrayed as outright villainous.

The movie was released in 1970, when protests against the Vietnam War had reached a fevered pitch and public sentiment was turning against the war. Though the cavalry's role in the west is not paralleled to the U.S. military's role in Vietnam, the negative portrayal of the military was received as a comment on the Vietnam War—reflecting the growing antimilitary sentiment of the time—and the most violent actions of the cavalry are in many ways a response to reports of the violence against women and children in the war, and of racial violence in general. Penn explicitly compared the cavalry's actions to the Holocaust in interviews.

Even apart from the appropriation of the name of the real Little Big Man, the story has many historical inaccuracies, though this is par for the course for most westerns, whether novels or films. The cavalry's attack at the Battle of Washita River is made bloodier and more villainous in the movie, in which women and children are massacred; in real life, Custer did target non-combatants, but there were likely more warriors and fewer noncombatants present than depicted in the film. Other events are depicted out of order, notably the Sand Creek Massacre, which also features in *Soldier Blue*, another revisionist western, released in 1970.

The historical inaccuracy most obvious to the general public is the death of Wild Bill Hickok. Although in the film Hickok is killed while Crabb is in Deadwood, the lawless town where the real Hickok was killed, the circumstances of his death are very different. The real Hickok's death is one of the most famous in the history of the Old West; he was shot by Jack McCall in the back of the head while sitting with his back to the door during a poker game. Hickok's hand, aces over eights, has been called the "Dead Man's Hand" ever since.

Though Custer's outright lunacy in the film, portrayed by Richard Mulligan, is satirical, it has been criticized as a caricature of a man who, while employed on the wrong side of history, was actually a vocal opponent of the federal government's plans to expand into Indian lands and who was sympathetic to the Indian cause.

Little Bighorn, Battle of

The Battle of Little Bighorn, or the Greasy Grass Fight, was an 1876 military confrontation between invading U.S. military and defending Lakota and Cheyenne forces on traditional Lakota Montana land that resulted in a victory for the Lakota, Cheyenne, and Arapaho nations. It was one of the last Native American military victories and highlights the injustice of U.S. genocidal campaigns against Native Americans.

The Battle of Little Bighorn was a fight to preserve a spiritual and hunting way of life as one aspect of cultural and political sovereignty. In the context of skirmishes with the Anishnaabe and Cree, and the deadly epidemics such as smallpox brought by mostly English and French colonists, the Lakota began a century of permanent migration west from the upper Mississippi region out to the northern plains in the late 1600s. By the late 1700s, they partially displaced both Cheyenne and Kiowas and came into conflicts with the Crow, Shoshone, Mandan, Hidatsa, and Arikara of the northern plains. With the aid of horses, Lakota life changed from an agricultural to a hunting

base, with bison central to spiritual and cultural well-being. White Buffalo Calf Woman brought seven ceremonies to the Lakota, including the Wiwanyang Wacipi or Sun Dance ceremony that occurred at Little Bighorn.

The century after the July 4, 1776, independence of the United States brought a series of wars leveled against all Native Americans in order to obtain land by any means necessary. The ultimate goal of U.S. Manifest destiny was to completely control the U.S. section of the North American continent from the Atlantic to the Pacific. Treaties between sovereign U.S. and Native American nations followed wars. The Lakota, Cheyenne, and Arapaho wars, known as Red Cloud's War, were to end with the 1868 Treaty of Fort Laramie. The treaty set aside the sacred Black Hills as part of the Great Sioux Reservation, as well as vast unceded hunting lands for the Lakota and Cheyenne, even if many Native Americans rightly disbelieved in the treaty process and U.S. government.

The massacre of Cheyenne and Arapahos at Sand Creek in 1864, the 1870s illegal invasion of white gold prospectors in the Black Hills, the settlement of white settlers on Lakota land, and the indiscriminate killing of most bison herds were four prominent examples of the failure of the Fort Laramie Treaty to honor Lakota and Cheyenne nations that were prominently allied against the U.S. forces at Little Bighorn. The gold rush was precipitated in 1873 by Lieutenant Custer, who was sent to the Black Hills with armed forces to protect the surveyors, gold-seeking mineralogists, and plans to build a transcontinental railroad through Lakota and Cheyenne hunting grounds. After attempts to evict white settlers from lands promised to Native Americans by the 1868 treaty, President Ulysses S. Grant ceased to prevent whites from encroaching on those lands. Instead, Grant merely ordered Lakotas and Cheyenne to stay within their reservations and off of the hunting grounds ceded by treaty.

1876 Battle of Rosebud

In light of the growing crisis of white settler incursions, the Hunkpapa spiritual and military leader Sitting Bull voiced a communal will to gather, discuss, and renew at Little Bighorn, where the Sun Dance had been held before.

Several thousand camped together. The largest contingent was the Lakota Seven Fires, or sub-bands, which include the Oglala, Sicangu, Hunkpapa, Mniconju, Itazipacola, Oohenunpa, and Sisasapa. With them, the hundreds of Cheyenne (Tsitsistas) also camped, as did smaller numbers of Nakota, Dakota, and Arapaho. It was this largest gathering of northern plains Native Americans, along with advanced military planning that tipped the battle in the favor of the Native American nations.

Although there were many important military leaders among all the bands and nations present, the Cheyenne leader Two Moon and the Oglala Lakota leader Crazy Horse are famous for their leadership role in the Battle of Rosebud. After tirelessly riding all night with a contingent of warriors, they led an attack on the army of

General George Crook on June 17, 1876. The result was a virtual standoff, with dozens of casualties, but this also meant that Crook was forced to regroup and wait for more ammunition and supplies; thus, his military regiment was effectively taken out of the Battle of Little Bighorn.

At Little Bighorn, Sitting Bull's and Crazy Horse's military leadership also proved effective. The 7th Cavalry, led by Armstrong, was separated from Crook's forces and ultimately splintered and faltered in its aggressive attacks against the larger native forces. It was the victorious outcome that Sitting Bull had earlier predicted in a Sun Dance vision in which the U.S. military rained down into the Little Bighorn encampment. Perhaps anticipating an easy victory and political glory, Custer led his 7th Cavalry into Little Bighorn instead

This is a scene from Pawnee Bill's Wild West Show called "Death of Custer," circa 1905. Sitting Bull is stabbing Custer while dead Native Americans are lying on the ground at their feet. Interpretations of Custer's fight are all conjecture, as none of his men survived the battle and the accounts of surviving Native Americans are unclear. Custer was found with shots to the chest and left temple.

of waiting an extra day for the backup forces of General Alfred Terry and Colonel John Gibbon to converge there, as previously planned.

Fearing that the camps would scatter and escape, Custer split his men into a three-pronged attack that ultimately weakened his position. While Custer took five companies, Major Marcus Reno took control of three companies in the attack, while the remaining three companies of Captain Frederick Banteen set up a defensive perimeter and guarded the pack train of supplies. Reno's initial thrust across the Little Bighorn River was repelled, and he suffered heavy losses without cover on the river and was permanently separated from Custer's forces. Leading an aggressive attack, Custer thrust his forces into the camp, only to be attacked on his flank and outnumbered. After a battle of a few hours, Custer was shot and died with the entire five companies that were under his command.

The timing of Custer's death and the United States' military defeat resounded powerfully during the blighted U.S. celebration of the 1876 centennial that was supposed to mark recovery from the horrors of the Civil War and several prolonged Native American wars. Although the deaths of Custer's men numbered only 263, the implication of a military defeat and opposition to Manifest destiny enraged many U.S. citizens. As newspapers proclaimed a massacre of innocent U.S. citizens, President Grant came under political fire for his campaign to continue any non-military negotiations with various Native American nations and to honor treaty rights.

Grant and his Republican government blamed Custer for blundering the assignment and set off decades of controversy regarding the reasons why Custer failed at Little Bighorn. The ensuing Great Sioux War battles, or continuing Black Hills War, of the next years resulted in losses for Lakota and Cheyenne bands that were devastated by illnesses and the loss of buffalo, overwhelmed by the greater numbers of U.S. military, and fragmented geographically as some eventually fled to Canada or were dispersed to various reservations across the northern and southern plains. Ultimately, Native American lands were reduced drastically, and decades of assimilation and Christianization programs were set up to target native culture and religion. Both the Black Hills and Little Bighorn

were claimed by the United States as non-Indian lands, despite treaty rights.

Century of Consequences

A century of U.S. news media, books, and film regarding the Battle of Little Bighorn that tended to side with the United States shifted with the Native American movement of the late 1960s and 1970s. Native American occupations of Alcatraz Island, Wounded Knee, and the Washington, D.C., Bureau of Native American Affairs building woke the United States from the stereotype that Native American had long ago disappeared and provided motivation to increase Native American sovereignty through a series of laws and programs. Only with effort has an honoring of the defensive Native American presence been recognized at the Little Bighorn National Monument.

By the time of the U.S. bicentennial, the book *Black Elk Speaks* (1932), based upon translations from Lakota, gained popularity among some Native American movement activists, who related to Black Elk's Oglala narrative that documented the immoral genocide that Black Elk and others fought at Little Bighorn. As a medicine man, Black Elk also heralded a return to traditional beliefs for some Native Americans, although critics find that the book was manipulated through translation and led to New Age non-native appropriation of native beliefs.

Through the translated recompiled narrative, Black Elk recounts how he rushed out to defend his mother and relatives during the Battle of Little Bighorn in a purely self-defensive moment. He relates a series of spiritual visions that give an Oglala religious context to the brutality of U.S. actions that targeted not only the Lakota but also the natural balance of the world and its various lifeforms. The 1970 film *Little Big Man* also showed sympathy for the Cheyenne victory at Little Bighorn and criticized Custer for his record of targeting dozens of non-military women and children under truce at the Washita River in 1868.

After a century of anti-Indianism, the Battle of Little Bighorn site is beginning to more widely represent the victorious resistance of Lakota, Cheyenne, and Arapaho nations. Situated in the Crow (Apsáalooke) Nation, the 1886 National Cemetery of Custer's Battlefield Reservation originally cast Native Americans as villains and honored

the fallen U.S. white soldiers. In 2001, federal legislation renamed the 1946 Custer Battlefield National Monument the Little Bighorn National Monument, eventually adding memorials and art installations to honor fallen Native Americans.

For example, Oglala-Sicangu Lakota artist Colleen Cutschall created the metal Spirit Warriors sculpture at the Little Bighorn Aboriginal Memorial, which evokes the rich art tradition and oral traditions that document the battle in Native American oral and art traditions. Although Lakota and Cheyenne nations have never relented in the quest to regain ceremonial access to the Black Hills, Lakota nations have spent several decades intensifying federal litigation regarding their sovereign treaty rights to the Black Hills.

Little Italy

With mass emigration from Italy during the 1880s, the majority of Italians settled in ethnic districts called Little Italies, mostly in U.S. northeastern cities such as East Harlem and the Lower East Side in New York, the North End in Boston, and Federal Hill in Providence. There were also large communities in Chicago (Near West Side) and San Francisco (Fisherman's Wharf). In addition, thousands settled in small towns in states such as New Jersey and in upstate New York, while a tiny minority chose rural settlements.

The choice to live in these districts was made because of the low cost of housing and their proximity to workplaces, coupled with the persistence of Italian culture with the continual arrival of further migrants as a result of diffused seasonal mobility from Italy. Inside the Little Italies, migrants originating from the same town or region were usually concentrated in the same streets and lived in tenements composed of dark and uncomfortable apartments, where families would share amenities. In the 1890s, photographer Jacob Riis reported on conditions in these ethnic areas, showing their poor conditions and crime.

A typical example of an ethnic quarter was the Lower East Side of Manhattan, which between the late 1800s and early 1900s was inhabited mostly by Italians and Jews. "Boarding," the practice of renting parts of an apartment or subletting a bed to a relative or a fellow townsman arrived from Italy, was widely common. As noted by Donna Gabaccia in her study of Sicilians located in Elizabeth Street in the Lower East Side, this practice—unknown on the home island—profoundly changed customs of patriarchal Sicilian families, which placed great importance on the control of the morality of wives and daughters.

The geographic fragmentation that characterized the majority of Little Italies reflected a clash between different local identities imported from Italy. The bulk of Italian migrants were peasants with a loose sense of national identity, since the Italian state was perceived as an enemy that imposed military service or high taxes. People mostly relied on village's identities, reproduced in the United States in myriad small mutual-aid societies. These provided financial assistance in cases of sickness or death, and sponsored ethnic events such as balls and picnics. These associations often welcomed only Italians from the same regional origins, taking the names of places or saints, or well-known Italians, including Christopher Columbus or Giuseppe Garibaldi. John Andreozzi estimates that around 20,000 ethnic organizations were created by Italians in the United States from the 1830s until the end of the 20th century, the largest being the Order Sons of Italy in America.

The ethnic quarter re-created services vital for the existence of immigrants, including banks, shops, steamship agencies, and restaurants. In 1940, over 10,000 Italian grocery stores and 2,000

bakeries were operating in New York alone. In the Little Italies, the *prominenti* (ethnic leaders) often led the ethnic associations. They were middle-class individuals (teachers, office workers, notaries, or journalists) with a remarkable social status in the Italian communities, but some were even employed in criminal activities. However, they played an important role in mediating the immigrants' transition to American society, encouraging it for reasons including electoral potential. The *prominenti* also worked to control the Italian ethnic press, a medium that circulated news on Italy, the United States, and the Italian American communities. Italians also had Catholic churches and reproduced their native religious festivals in their districts.

Localism was partially replaced by a sense of Italian nationalism between World War I and World War II, when many Italian Americans expressed appreciation toward Italian fascist dictator Benito Mussolini. Because Italy and the United States were enemies in World War II, Italian Americans accelerated their Americanization and showed their loyalty to their host country. As many Italians served in the U.S. armed forces, they received veterans' benefits granted by the Servicemen's Readjustment Act of 1944 and improved their status. As a result, after the war, many abandoned the old ethnic areas to move to the suburbs.

Today, the phenomenon is particularly noticeable from the urban morphology of neighboring areas in New York, where surnames that reveal an Italian origin are numerous. Further indicators of the postwar disappearance of the oldest ethnic wards and their culture were the loss of readers of the Italian press and listeners of Italian radio programs, as the new generations were often unable to read and speak the language of their ancestry.

Today, Little Italies are no longer residential districts but rather—to use the words of Jerome Krase—“Ethnic Disneyland” at the disposal of tourists and of “weekend ethnics,” third- or fourth-generation Italian Americans who visit these areas to rediscover their ethnicity by buying ethnic products, eating in Italian restaurants, or taking part in religious celebrations or *feste popolari* (grassroot festivals).

Little Rock School Desegregation

In 1957, a group of nine African American students enrolled in the previously all-white Little Rock Central High School. Although this desegregation was in compliance with the U.S. Supreme Court's holding in *Brown v. Board of Education* (347 U.S. 483 [1954]), Arkansas governor Orval Faubus resisted it and initially prevented the black students from entering the school. In what became one of the more significant events of the civil rights movement, President Dwight D. Eisenhower intervened, taking actions that permitted the enrollment of the students who became known as the “Little Rock Nine.”

Background

The National Association for the Advancement of Colored People (NAACP) legal department, led by Thurgood Marshall and Charles Hamilton Houston, became involved during the late 1940s in a campaign to reverse the separate but equal principle reached in *Plessy v. Ferguson* (163 U.S. 537 [1896]).

After making a strategic decision that obtaining relief in state legislatures was nearly impossible because of Jim Crow laws that prevented many African Americans from voting, the NAACP decided to challenge segregation on the grounds that segregated facilities were separate but not equal.

After Houston's death in 1950, Marshall and the NAACP took up a series of cases that challenged school segregation. In the case that ultimately became known as *Brown v. Board of Education*, the U.S. Supreme Court held in a unanimous opinion that state laws establishing separate schools for African American children violated the U.S. Constitution. Two kinds of segregation can exist in schools and other organizations: de jure and de facto. De jure segregation is that which is mandated by law, and de facto segregation is that which occurs as a result of human behavior and custom.

Determining that separate facilities were inherently unequal, the decision in *Brown v. Board of Education* abolished de jure segregation and paved the way for integration. Though the ruling eliminated the legal justification for segregation, many state and local governments resisted the ramifications of *Brown*. For that reason, for the next several years the NAACP and others approached a variety of segregated white schools throughout the south to register black students, which would result in the integration of the schools. The Little Rock School District, located in Arkansas's capital city, had long maintained segregated schools. When approached by the NAACP in 1955, however, the Little Rock School Board agreed to enroll African American students in Little Rock Central High School, an institution that had long served only white students. The school board instructed Virgil Blossom, the superintendent of schools, to work with the NAACP to develop a plan to integrate Little Rock Central High School.

Working together with the NAACP and parents, Blossom formulated a plan for the gradual integration of the Little Rock public schools. Although his earliest preference had been to begin desegregating the elementary schools, parents wary of long bus rides to integrated schools convinced Blossom to begin with the high schools.

Pursuant to Blossom's plan, integration would begin at the start of the 1957 to 1958 academic year at Central High School, commence at the junior high school during the 1960 to 1961 school year, and proceed to the elementary schools during 1963 and 1964. The plan met with the approval of the NAACP and the Little Rock School Board. In anticipation of the integration

of Central High School, the NAACP selected nine students to enroll there. Each of the nine had stellar academic records and outstanding patterns of attendance. These students, often referred to as the "Little Rock Nine," were Minnijean Brown, Elizabeth Eckford, Ernest Green, Thelma Mothershed, Melba Pattillo, Gloria Ray, Terrence Roberts, Jefferson Thomas, and Carlotta Walls. In September 1957, they were prepared to enroll in Central High School, and the integration plan was approved by the district court.

Opposition From Segregationists

When word of the integration plans for the Little Rock School District became known, they were highly unpopular among certain groups. Segregationist councils began to organize protests outside the school and appealed to the chancellor of the Pulaski County Schools for a delay in the integration of Central High School. Chancellor Murray Reed granted the segregationists' request on the grounds that integration could cause violence. In response, the NAACP went to federal court to obtain relief. U.S. District Court Judge Ronald N. Davies, from the District of North Dakota, was appointed by Chief Judge Archibald K. Gardner of the U.S. Court of Appeals for the Eighth Circuit to hear the Little Rock desegregation cases. After reviewing the desegregation plans of the Little Rock School District, Judge Davies on August 30 ordered the integration of Central High School to take place as planned on September 3.

Governor Faubus, disregarding Judge Davies's order, called out the Arkansas National Guard and created a constitutional crisis by ordering it to Little Rock Central High School to maintain order. Once in place, the Arkansas Guardsmen turned the Little Rock Nine away at the schoolhouse door. Faubus, who made derogatory comments regarding the racial backgrounds of the Little Rock Nine and Judge Davies's Catholic faith, ordered the Arkansas National Guard to remain at the school in contravention of the district court's order that the integration proceed. As the international media descended on Little Rock, President Eisenhower had Faubus flown to his vacation retreat in Newport, Rhode Island, to discuss the matter. On September 14, Eisenhower instructed Faubus not to interfere with implementation of

the desegregation of public schools mandated by the Supreme Court's *Brown* decision.

To support the Little Rock Nine, Eisenhower dispatched a group of attorneys from the U.S. Justice Department to Arkansas. The attorneys filed a petition with Judge Davies requesting an injunction against the Arkansas National Guard's deployment at Central High School. On September 20, Judge Davies granted the injunction, ruling that Faubus's motivation in deploying the Guard had been to thwart integration of Central High School and not to preserve law and order.

Davies ordered the removal of the Guardsmen and, after an uncomfortable 24-hour period of uncertainty, Faubus complied. When the Little Rock Police Department attempted to escort the Little Rock Nine to school on September 23, however, a mob of angry parents, led by the Mother's League, surrounded the building and prevented the students from attending classes. The outnumbered police withdrew, creating another stalemate.

The following day, Little Rock's mayor, Woodrow Wilson Mann, asked President Eisenhower to send federal troops to help enforce Judge Davies's desegregation order. On September 24, Eisenhower ordered the U.S. Army's 101st Airborne Division—the "Screaming Eagles"—to Little Rock to enforce the court's order. That same day, Eisenhower also federalized the entire Arkansas National Guard, removing them from Faubus's control. Eisenhower ordered the Guardsmen to assist with the desegregation of Central High School, thus recognizing the authority of the judicial system to carry out desegregation orders.

The Mother's League filed a petition with Judge Davies asking him to remove the federal troops from Little Rock. Judge Davies dismissed the petition, and the U.S. Army and the Arkansas National Guard continued to escort the Little Rock Nine to school and to protect their safety.

Throughout the process, Judge Davies received, through the U.S. mail and other channels,

Soldiers escort African American students to Central High School in Little Rock in September 1957, after the governor of Arkansas tried to enforce segregation by deploying the National Guard to support the segregationists. The school district issued a statement condemning the governor's deployment of soldiers, and President Dwight Eisenhower summoned the then-governor to a meeting, warning him not to defy the Supreme Court ruling.

thousands of threats against his life and menacing his family's well-being. Standing only five-feet-one-inch tall, Davies was not intimidated by these threats and continued his work on judicial matters in Little Rock until he was able to return home to North Dakota. Davies did accept protection from the U.S. Marshal's Office, which guarded him around the clock. Other school personnel received threats as well, and numerous reports of bombs being placed within Central High School were made and investigated, although all proved false. For the remainder of the 1957 to 1958 academic year, Central High School remained integrated.

"The Lost Year"

During the spring of 1958, Faubus again began attempts to thwart desegregation of Arkansas schools. Superintendent Blossom was removed from office and the Little Rock School District was placed under state control. When Faubus filed a petition on behalf of the Little Rock School District asking that the desegregation plans be delayed because of the disruption caused, U.S. District Court Judge Harry J. Lemley (Davies had returned to North Dakota by this time) granted the request. However, in August 1958, the U.S. Court of Appeals for the Eighth Circuit reversed the district court's decision, and was affirmed a month later by the U.S. Supreme Court.

In response, Faubus convinced the Arkansas legislature to pass statutes permitting him to close all of the Little Rock public schools. Although Faubus had intended to lease the Little Rock school buildings to private organizations that would operate segregated institutions, this plan was thwarted when the NAACP challenged it in court. As a result of Faubus's actions, the Little Rock schools remained closed throughout the 1958 to 1959 school year. In spring 1959, a more moderate group of school board members was elected and announced plans to reopen the schools. Although Faubus was unable to prevent this, he was reelected governor in 1958, 1960, 1962, and 1964, after which he chose not to run for reelection.

Consequences

The desegregation of the Little Rock schools established the federal courts' authority to enforce decisions on state governments, even if

the elected politicians in those states disagreed with the courts' rulings. Because the supremacy clause of Article VI of the U.S. Constitution made that document the supreme law of the land and because *Marbury v. Madison* (5 U.S. 137 [1803]) established the U.S. Supreme Court's authority to conduct judicial review of statutes and other government acts, states could be bound by rulings of the federal judiciary. During the 1950s, many segregationists discussed the alleged rights of nullification and interposition.

Nullification suggested that states had the right to nullify any federal law that the states deemed unconstitutional, while interposition asserted that states had the right to declare certain federal actions unconstitutional. The Little Rock school desegregation battles resulted in the U.S. Supreme Court rejecting the doctrines of nullification and interposition and affirming that only the federal courts, not the states, have the authority to determine the constitutionality of federal laws.

The desegregation of Central High School was undoubtedly made easier by the strong academic backgrounds of the Little Rock Nine. All nine students demonstrated academic success after their time at Central High School. Brown attended Laurentian University after leaving Central High School, while Eckford went to Knox College, Green and Walls studied at Michigan State University, Mothershed graduated from Southern Illinois University at Carbondale, Pattillo attended San Francisco State University, Ray graduated from the Illinois Institute of Technology in Chicago, Roberts went to California State University Los Angeles, and Thomas studied at Wayne State University.

The sacrifices and courage of the Little Rock Nine were recognized by President Bill Clinton with the Congressional Gold Medal, the highest civilian award in the United States given to those who perform an outstanding deed or act of service to the security, prosperity, and national interest of the country. In 2007, the U.S. Mint also honored the Little Rock Nine by featuring them on a commemorative silver dollar.

Lone Wolf v. Hitchcock (1903)

Between 1890 and 1899, the issue of what to do with Indians, as they were known then, was becoming more pressing and increasingly confused as diverse groups of Anglo Americans proposed their solutions to the “Indian problem.” As both citizens and new immigrants looking for the American Dream of becoming landholders in their own right focused on Indian Territory, the most important aspect of the problem facing the U.S. government was how to separate the Indians from their incredibly vast land holdings and redistribute those lands and resources to Anglo Americans.

Massachusetts Senator Henry L. Dawes soon put forward a plan to survey and divide tribally held lands into 160-acre allotments that would be individually owned by each head of household Indian claimant enrolled in the tribe. Dawes deemed 160 acres a sufficient land base for subsistence farming. Furthermore, by turning the very mobile hunter-gatherers into sedentary agrarians,

it would free up millions of acres. The balance of this “excess” land would then be opened up to claim by Anglo homesteaders. The Dawes Severalty Act, otherwise known as the General Allotment Act, was passed by Congress in 1887.

Contested by Indians and their Anglo advocates throughout the 1890s, it was this congressional action that led to the 1898 legal filing by Lone Wolf of the Kiowa tribe from the Comanche/Kiowa/Apache Reservation surrounding Fort Sill in the southwest corner of Indian Territory. This reservation had been created as part of the Medicine Lodge Treaty of 1867. Congress’s pronouncement that it was going to open up 2,150,000 acres of the reservation’s land to Anglo settlement was a direct breach of the treaty.

By 1901, Lone Wolf’s hired lawyers had fought their case throughout the court system all the way to the U.S. Supreme Court. The action named Secretary of the Interior Ethan A. Hitchcock; hence, *Lone Wolf v. Hitchcock*. Lone Wolf contended that the land had been held in a nontitled communal fashion by the entire tribe and that the Dawes Act was a direct violation of existing treaties. Lone Wolf argued that if the Dawes Act were allowed to go forward, it would lead to the catastrophic loss of hunting, foraging, and ceremonial grounds held by the Comanche, Kiowa, and Apache tribes. Additionally, it would destroy the Indians’ lifestyle, resulting in the loss of the ability and the right to feed and clothe themselves as they had for millennia, as well as the loss of access to their cultural and religious sites.

The court, however, ruled against Lone Wolf. The opinion of the court stated,

Plenary authority over the tribal relations of the Indians has been exercised by Congress from the beginning, and the power has always been deemed a political one, not subject to be controlled by the judicial department of the government. . . . We must presume that Congress acted in perfect good faith in the dealings with the Indians of which complaint is made, and that the legislative branch of the government exercised its best judgment in the premises. In any event, as Congress possessed full power in the matter, the judiciary cannot question or inquire into the motives which prompted the enactment of this legislation.

Thus, the Supreme Court upheld Congress's right to abrogate treaties with Indian tribes and handed control over tribal land claims to the U.S. government. The 1890 census reported the total U.S. population at 62,622,250, with 325,464 listed as Indians in, on, or near territories or reservations. Of this number, 13,167, including Lone Wolf and the Comanche, Kiowa, Apache, and other tribes, lived in what would be renamed Oklahoma Territory. The *Lone Wolf* case would change Indian–U.S. government relations forever, as well as shift Anglo westward expansion into high gear.

In 1880, the average land holding for the Comanche, Kiowa, and Apache on the Fort Sill Reservation was actually less than 160 acres per capita. By 1934, this dropped to an average of 17 acres per capita as the allotment lands were, more times than not, unsuitable for farming. Some Comanche and Kiowa did become ranchers or were fortunate to have the ability to lease their lands to Anglos for grazing cattle. Nonetheless, many times even this effort led to failure and/or the loss of allotment lands for those Indians who did not speak English and were taken advantage of by Boomers and Sooners.

The loss of *Lone Wolf v. Hitchcock* in the Supreme Court led to fundamental changes in how Indians were dealt with by the U.S. government. As the result of this case, Indians became subject to the whims of Congress. Nevertheless, there were a few illuminating moments in Indian land cases in the early 1900s. In 1919, the Supreme Court ruled in favor of the Pueblo of Santa Rosa and limited the secretary of the interior's authority to seize tribal land, stating that such a seizure "would not be an exercise of guardianship, but of confiscation."

In 1935, following a finding in favor of the Creek Nation, Justice Willis Van Devanter wrote in his finding that Congress's "plenary power was not unlimited" in dealing directly with Indian tribes. In 1946, Chief Justice Fred M. Vinson wrote in his opinion of *United States v. Alcea Band of Tillamooks*, an Indian land claims case, that the "power of Congress over Indian affairs may be of a plenary nature; but it is not absolute. It does not enable the United States to give the tribal lands to others, or to appropriate them to its own purposes, without rendering, or assuming an obligation to render, just compensation for them."

Then again, despite some measured victories since *Lone Wolf*, Indians have continued to lose their lands, as well as their control over their lands. Currently, the U.S. government lists 275 Indian land areas in the United States in the form of reservations, pueblos, rancherias, and communities. The largest—approximately 16 million acres spread across parts of Arizona, New Mexico, and Utah—is held by the Diné (Navajos). Many reservations are composed of 1,000 acres or less, and the smallest is less than 100 acres. The Bureau of Indian Affairs manages and administers 55.7 million acres that are held in trust for the Indians.

Long Walk of the Navajo

On January 14, 1864, Commissioner of Indian Affairs William P. Dole wrote to Secretary of the Interior John P. Usher that a reserve had to be established for Apache Indians. An area had been found at Bosque Redondo, a 40-mile-square site on the Pecos River, isolated from whites. In December, 1863, Superintendent Michael Steck told Dole that the proposed reservation was well adapted "for Indian purposes" but would support no more than 3,000 individuals. However, he used a formula that was applicable to the east, not to an arid climate.

Steck had the land surveyed by the General Land Office, which estimated that by using irrigation, 6,000 acres could be cultivated. Dole recommended that the reserve be for the exclusive use

of Apache Indians, the land held from preemption and settlement. Usher agreed and sent the request to the president. Abraham Lincoln approved and signed an executive order, which did not require congressional approval, the next day. There was now a place to confine the Mescalero Apache and the Navajo (Diné): it is called Fort Sumner, or Hwéeldi. There were no negotiations with either indigenous group: they were treated as prisoners of war. The Navajos call this bitter period the Long Walk, because the military forced over 8,000 Navajo to walk 250 to 450 miles from their homeland within the Four Sacred Mountains to live on Mescalero Apache land. This government policy of forced removal to distant reserves, which some activists consider ethnic cleansing, was part of the Union's military strategy to keep routes to California open and safe, as well as to stop Confederate advances into New Mexico and Arizona.

A Pattern of Warfare and Raiding

The 1840s through the early 1860s were times of intensified raiding as the Navajo economy shifted from agriculture to pastoralism. When the United States assumed control over the territories, the area was described as one of relentless intermittent warfare combined with extensive trade networks. Apache groups raided New Mexican homesteads and Pueblo communities for sheep, cattle, and horses. These groups in turn raided Apachean camps and took women and children as slaves, a well-established pattern that was intensifying as Euro-American and New Mexican Hispanic settlers moved onto Apachean lands. Utes and Comanches raided Navajos, and they in turn retaliated against communities that were not their trading partners. Anthropologist Edward Spicer estimated that between 1846 and 1850, 20,000 horses and mules and over 800,000 sheep and cattle were stolen in northwestern New Mexico by all parties. In addition, almost half of the Navajo population (as many as 6,000 women and children) were living as slaves with New Mexican families, and others had been taken to Mexico. The last Navajo slave was not freed until the late 1880s.

The United States had promised settlers protection, because of the small number of troops assigned, Navajo and Apache sociopolitical organization, and their scattered homes, the military was ineffective. Although the government and

the Navajo had signed several treaties, only the members following their local leader were bound by these agreements; the Navajo had no centralized political authority. Though the military built forts on Navajo homelands, it could not keep New Mexican residents from invading Navajo lands. Many Navajo felt that acquiring livestock was payment for the theft of their land. In turn, New Mexican slave raiders considered taking and selling Navajo slaves as reimbursement for their economic losses. When many troops were pulled out for the Civil War in 1861, an already bad situation worsened. Scholars have described it as chaos, a cyclone of raids and counter-raids.

Removal of the Apache and Navajo

General James Carleton, the military commander of New Mexico Territory, decided to eliminate Apachean raids by restraining and then removing Mescalero Apache and Navajo. He simultaneously put a halt to New Mexican raids and their civilian vigilante groups but did not order these peoples to be removed; Carleton respected the rights of Euro-American families to their property but not Indian rights to their homelands. The Mescalero campaign lasted five months. Then Carleton turned to the Navajo, supported by 700 New Mexican militiamen. He ordered the Navajo to surrender on July 20, 1863. When no Navajo appeared, Carleton ordered Kit Carson to round up people, to make their living conditions so bad they would have no choice but to congregate around Fort Defiance and Fort Wingate.

Using a scorched-earth policy to abolish an enemy's economic subsistence base, Carson's troops destroyed hogans, crops, and orchards; poisoned waterholes; slaughtered livestock; and killed people. Utes, Puebloans, and New Mexicans were encouraged to increase their raiding and slave-capturing activities to demoralize "The People" and leave them little room to maneuver. After a devastating winter with unusually heavy snowfall, Navajo subsistence resources were destroyed. Their choice was extermination or removal. Over 8,000 Navajo surrendered, but an equal number evaded the U.S. Army and hid in isolated canyons around Navajo Mountain or went to live with the Southern Paiute to the north and the Apaches to the south. They slowly returned over the next few years.

The Long Walk was a death march, similar to the 80-mile Bataan Death March in the Philippines during World War II in which 75,000 prisoners of war trudged to a concentration camp; with the deaths of 10,000 on the trek, it was later judged by the international community as a war crime. The Navajo march was carried out with over 50 units by seven routes between August 1864 and the end of 1866. The Long Walk is remembered by Navajo descendants for the atrocities, suffering, and humiliation inflicted on the Diné.

People walked from Fort Defiance to the Rio Grande and the Pecos River and then headed south. Some soldiers marched the long lines of people through Santa Fe and Albuquerque so that New Mexicans could see the supposedly defeated Indians. There were few wagons for the 18-day journey; soldiers shot stragglers, and slavers stole children and women. The old and infirm were left to die. It is estimated that 200 people perished and another 2,000 succumbed to disease and starvation at Bosque Redondo within months.

Bosque Redondo means “round forest” in Spanish, a colloquialism for pleasant river bottomlands with cottonwood trees. The incarceration was labeled an Indian experiment—the first Indian reservation west of Indian Territory—by the military, but it was by all accounts an unmitigated disaster. First, the Mescalero Apache and the Navajo, who had raided each other in the past, were mistrustful of each other and kept apart. Second, the Mescalero Apache had been given what little good agricultural lands there were, leaving almost nothing for the Navajo families. Third, the estimated amount of irrigable lands had been greatly exaggerated by the government land survey, an occurrence that was not uncommon in the west.

Fourth, there were simply too many people. At its densest population, there were over 9,000 Indians interned in an area that could not support 1,000—well below the Indian Service estimate. Fifth, the government was to supply food, blankets, and shelter, but there was not enough for more than half the population. In addition, Congress would not appropriate enough monies to adequately support confined peoples and their needs, even though it is estimated that the experiment cost the federal government \$1.5 million (\$24,264,714.41 in 2010 dollars).

Sixth, everything that could go wrong did: crops failed, worms got into the corn, drought occurred, flooding repeatedly destroyed the irrigation system, disease ran rampant because of the brackish water and waste problems, firewood and wildlife were used up, and Comanches raided and stole children and horses. Navajos began counter-raiding the Comanche, and many started to simply leave and walk home.

Throughout this period, Navajo leaders like Barboncito, Ganado Muncho, Mauelito, and Largo prayed to the Holy People and asked their help in returning them to their homeland, where they knew they would prosper. In 1868, the government decided that the Bosque Redondo reserve was simply too expensive and would allow the Navajo to return to a fraction of their original homelands (not the eastern section, where there was heavy New Mexican settlement) and the Mescalero Apache would go to a new reserve.

The Treaty of 1868 shows Navajo diplomatic negotiation skills in placing their homeland in the central place. It also contains the standard treaty services of protection, education, and medicine as payment for the seizure of their lands. Following the signing of the treaty, the Navajo as a group began their “Long Walk” home. The line of people was said to be 10 miles long.

Lord Dunmore's War

The ending of one war often sets the stage for another. The roots of Lord Dunmore's War of 1774 trace their way to the end of the French and Indian War. As part of their agreement made with the French at the 1763 Peace of Paris, the British pledged that no English settlement would cross the Appalachian Mountains. Yet, settlement expanded unabated, and violent conflict escalated between settlers and natives. In the hope of stemming the violence while at the same time acquiring control over a vast trans-Appalachian region, in 1768, the British signed the Treaty of Fort Stanwix with the Iroquois Confederacy. Also called the Iroquois League, its six nations included the Mohawk, Tuscarora, Seneca, Oneida, Onondaga, and Cayuga peoples.

The problem with the treaty was its disregard for the enemies of the Iroquois, Shawnee, Delaware, and Mingo tribes, who claimed hunting rights to the same area. Believing that they now had every right to do so, white settlers began crossing the mountains in droves and settling in what was hoped to become a new English colony, called Vandalia. This area comprised most of modern West Virginia and parts of eastern Kentucky.

Native Raids and Settler Reprisals

What followed was a series of brutal, mainly vengeful native raids on the white settlers, and reprisals from the settlers. The level of violence became so horrific that the governor of Virginia, a Scottish nobleman named John Murray, 4th Earl of Dunmore, launched a retaliatory campaign in May 1774. Six months later, Lord Dunmore's War ended with the colonists' victory over the Indians at the Battle of Point Pleasant.

Logan, a Mingo chief who initially sought peace with the whites, lost several members of his family in a fight near Steubenville, Ohio, and his punitive raid into Pennsylvania took the lives of over a dozen colonists. The Yellow Creek Massacre references a series of back-and-forth atrocities. One of these included Logan's loss of more family members in an ambush at a cabin near Wheeling, West Virginia. Enraged, Logan and other natives sought out and killed nearly every white person that they encountered. For example, pioneering legend Daniel Boone's attempt to move his family

into Kentucky was thwarted by the capture and torture of his son James near the Cumberland Gap. Terrified settlers moved into nearby forts for protection. These and other events sparked Lord Dunmore's War.

With the approval of Virginia's House of Burgesses, Lord Dunmore gathered a militia force and divided it into two columns. He personally led one toward Fort Pitt, in Pennsylvania, and then down the Ohio River. Meanwhile, Andrew Lewis led a force of approximately 1,100 men into the Little Kanawha Valley. Lord Dunmore sent word to Lewis to cross the Ohio River for a rendezvous. Before Lewis's force could cross the river, Chief Cornstalk's force of an equal number of Shawnee, Delaware, and Mingo warriors ambushed his column on October 10, 1774, near modern-day Point Pleasant, West Virginia. The native force was defeated at the battle of the same name (also referred to as the Battle of Kanawha).

Because of their defeat, the Indians met the whites near present-day Chillicothe, Ohio, and agreed in the Treaty of Camp Charlotte to free all prisoners, to cede all claims to lands south of the Ohio River, and to allow its free passage.

The Battle of Point Pleasant achieved fame in both the colonies and Europe. Notably lacking at the Camp Charlotte meeting were Logan and the Mingo tribe. Although its authenticity is questioned, the sentiment behind "Logan's Lament" is valid, and his speech became one of the most recognized in the history of Native Americans. The war may have ended, but the Shawnee seethed with resistance. On many occasions, they crossed the river to attack settlers in Kentucky and Virginia. At one point, Daniel Boone's daughter was captured and rescued, and Boone was captured but later escaped. Boone's brother and another son both died at the hands of Indians.

The hostility engendered by their defeat directly contributed to many Native Americans of the region siding with the British during the Revolutionary War. The Americans remembered what they believed to be native treachery, and at war's end, reprisals from both sides led to the Shawnee losing all of their territory on either side of the Ohio River and being forced to move westward. The domino effect of eastern tribes moving west disrupted the balance of power among Native American tribes, fomenting generations of hostility.

As tensions escalated between the American colonies and Great Britain, Lord Dunmore bore the brunt of Virginians' resentment. Some accused him of having incited the war, even plotting the destruction of Lewis's force in order to weaken Virginians' military strength. There is historical evidence supporting Dunmore's treachery.

Ultimately, he fled to England, but not before attempting to instigate a failed slave rebellion in Virginia. He remained governor of Virginia, albeit in name only, throughout the Revolutionary War. Dunmore became a member of the House of Lords before his death in 1809.

Lore

Lore, or folklore as scholars generally refer to it, consists of the traditional expressive practices of a group. These practices can include verbal genres, such as telling a folktale, joke, or urban legend; customary genres, such as celebrating a holiday or festival; material genres, such as making a quilt or preparing a traditional meal; or musical genres, such as singing a folk song or playing a traditional tune. The groups that perform these genres of folklore can range widely in size and composition but have often been defined as sharing at least one common feature of cultural identity that can serve as a basis for the creation and performance of a shared set of expressive practices. Thus, folklorists tend to think of these practices not in terms of how old or "authentic" they are but rather as living forms of expression through which members

of a group define and redefine their sense of identity, history, or environment.

Performance and Variation

Although the way we often talk about folklore seems to suggest that traditional stories, songs, or customs are an unchanging and uniform set of things, scholars have importantly noted that they exist only because they are performed. A legend, for instance, is more than just a plot outline repeated in the same way; it is something that is told by a person to other people under specific circumstances and for specific reasons.

Because each situation in which folklore is performed is different, it is important to understand that no two performances of folklore will be exactly the same. The timing of adding spices to a stew, the tone of voice used in a story, the pitch of a note in a song, and myriad other features may shift across different performances, dramatically changing the meaning or effect created by the performance.

Accordingly, over time, these differences may also result in variations in the traditions themselves. A widespread cluster of folktales from both African and African American traditions, for example, recounts a deceptive game of tug-of-war initiated by a trickster character. However, in some versions of the story the deception by the trickster involves tying his end of the rope to a tree, while in others the trickster orchestrates a tug-of-war between two large animals who are each unaware of their opponent's identity and strength.

Similarly, the identity of the trickster character can shift depending on the region where the folktale is being told. In African American versions of this and other folktales, the primary trickster character is usually a rabbit, whereas in Afro-Caribbean traditions it is generally a spider. These variations, although seemingly superficial, often reflect differences in social or cultural identities and can result in significant differences in performance and in the possible meanings that narrators can create with their stories.

Genres

Like other artistic or expressive forms, folklore has often been described as being organized into genres. Loosely speaking, folklore genres are sets of rules, often unspoken and learned from

previous observation that guide the production of traditional performances. Although the genres of folklore are too numerous and diverse to easily catalog, better-known examples might include proverbs, riddles, jokes, rhymes, myths, folktales, legends, tongue-twisters, insults, e-mail forwards, games, songs, beliefs, customs, dances, folk drama, forms of dress, festivals, foodways, folk arts, folk crafts, folk architecture, and folk decoration. This incomplete listing shows something of the range of forms by which scholars categorize folklore.

In practice, however, particular communities may recognize a set of genres that is very different from those listed above. These systems of insider-defined “ethnic” genres can reveal a great deal about the artistic frameworks that guide how members of a group perform their traditions. In one well-known case of this type of divergence, recorded by folklorist Barre Toelken, a Yurok Native American woman who was invited to teach a class on Yurok basket making spent a majority of her time teaching students how to sing traditional songs. Asked about this approach, the woman explained that in Yurok traditional culture, the genres of singing and basket making are so intertwined that baskets may be described as “songs made visible.” Although anecdotal, this account suggests some of the important variations in the ways that groups can categorize their own expressive products.

As a diverse body of genres that can be adapted for individual performances, folklore can be used to create an extraordinarily large variety of meanings. A few examples will illustrate both some common genres and some of the meanings that performances of folklore in these genres can create or convey.

Material Folklore: Foodways

One of the forms of folklore that is most associated with cultural identity in the United States is foodways. Knowing how to prepare, serve, and consume certain foods is a key component of the way in which many people define a sense of identity, particularly ethnic identity. In fact, unlike heritage languages, which tend to disappear from ethnic groups within a generation or two, foodways have proven among the traditions most doggedly maintained as symbols of ethnic identification.

Food-based traditions may be performed on a frequent basis as a part of the routine of daily life; however, they may also be performed on recurring occasions that have significance for a family or ethnic group. For instance, some Italian American families may regularly produce Italian American dishes such as *pasta alla marinara* or *pesto* for everyday meals, while other Italian American foods may be reserved for special regularly occurring occasions associated with ethnic identity, such as marking the Feast of the Seven Fishes on Christmas Eve by making and eating *baccala*, a form of dried salted codfish. Other types of foodways may be associated with events that occur only at special times in a person’s life span. For instance, certain simple foods may be prepared as part of the *ge wei jiu*, a traditional postfuneral meal in the Chinese American community.

Despite their seemingly static form, it is important to note that it may be the flexibility of foodways that makes them so enduring. Even foods that are intimately associated with a particular ethnic group are rarely mere reproductions of Old World traditions.

In fact, as food scholar and historian Donna Gabaccia has argued, Americans have from the earliest days of their history blended or borrowed elements from different ethnic cuisines, as well as inventing new elements to integrate into existing ethnic foodways. For example, although now not always seen as an intrinsically ethnic food, the popular pairing of bagels and cream cheese was long viewed as a tradition in Jewish American cuisine. However, though the American bagel did have origins in Jewish immigrants from Poland in the late 1800s, cream cheese seems likely to have been developed by Pennsylvania Quakers at least a century earlier. It was, then, through this blending together of elements from different ethnic and regional cuisines that a popular contemporary American dish came into being.

Musical Folklore: Folk Songs

In addition to the role that folklore can play in symbolizing ethnicity, it can also say something about the value structures of a social group. In some cases, these values are made by clear by the general trends in the ways that performative variation in the folklore takes place.

Folk singers along the Texas–Mexico border at the turn of the 20th century, for instance, developed a variant form of the *corrido* (ballad or narrative song) that, unlike the *corridos* of other regions of Mexico, tended to focus on heroic everyman outlaws like Juan Cortina, Gregorio Cortez, or José Mosqueda. These heroes were generally real individuals, and the incidents described in the *corridos* are often based in historical fact; however, the ways in which these historical circumstances are embellished can be revealing.

For instance, although each version of a particular ballad may present a slightly different take on the hero, scholars of *corridos* have noted that the cluster of qualities, such as hard work, physical skill, humility, honesty, and honor, ascribed to the heroic characters provide insight into the values that were prized by the border *tejanola* (Texan-Mexican) community that created these songs.

These trends are most striking in cases like the *corrido* concerning José Mosqueda. In reality, Mosqueda was a train robber known for a high-profile heist in south Texas. In the ballad, however, Mosqueda is transformed into a heroic fighter in the ongoing border conflict.

Furthermore, inasmuch as these characters are always pitted against Anglo *rinches* (a pejorative term for the Texas Rangers), who are presented as having all of the opposite qualities as the hero, *corrido* scholars have also argued that these works represented a form of cultural resistance against the real-world oppression often experienced by the *tejano* community in this period.

Customary Folklore: Parades and Festivals

Similarly tied to both resistance to and the maintenance of the status quo are some of the customary genres, such as parades, festivals, or rituals. Parading traditions, for instance, significantly involve the physical occupation of a public space by performers. When parades are tied to cultural events, they can often serve as a message or reminder about the presence and strength of a particular group.

Thus, the advent of parading traditions to mark ethnic holidays such as Saint Patrick's Day in the Irish American community or Columbus Day for Italian Americans serve not only to showcase different segments of those ethnic communities but also to create a sense of the strength of the community as a whole.

In addition to their role as public displays of power, festive occasions are importantly occasions that are experienced together. As such, festivals can be times in which a community gathers to renew its sense of cultural identity and social cohesion. In this way, for instance, religious festivals such as *fiestas* dedicated to important saints in the Italian American community, though at times discouraged by ethnic leaders, have been described as periods when the community gathers to reaffirm its shared sense of faith and social cohesion and to renew respect for the social order.

At the same time, festive or ritual occasions can also often include elements that invert or distort the normal social order. These forms of play can include elements like the lifting of everyday prohibitions about sexuality, the consumption of intoxicants, or other elements of social propriety. However, they can also allow performers to alter their normative social identities; performers can change genders, race or ethnicity, or social status.

Masks or costumes that represent identities that would normally be unavailable can become usable during a festive period. During Mardi Gras traditions in the southern United States, for instance, masking or costuming traditions may allow men and women to cross-dress or performers to cross more normally rigid ethnic or racial lines.

Louisiana Purchase

In 1803, the United States purchased the Louisiana Territory from France for about \$15 million. In current coinage, this would equal about \$250 million, or less than 42 cents an acre. This landmark event allowed the United States to double in size and became the catalyst for American expansion into the west and across the continent, creating modern-day America.

The deal included an area covering 828,000 square miles (2.1 million square kilometers) that is now the equivalent of 15 states, or a 23rd of the current United States, including all of Arkansas, Missouri, Iowa, Oklahoma, Kansas, and Nebraska, and parts of Minnesota, North Dakota, South Dakota, New Mexico, Texas, Montana, Wyoming, Colorado, and Louisiana. The deal also included parts of Alberta and Saskatchewan, but these were later ceded to Canada. Prior to the purchase, parts of the territory were controlled by Native American nations, the Spanish, and the French. The United States, however, did not intend to gain control over all this land in the original brokering of the Louisiana Purchase. Luck and circumstance precipitated the event.

Although the land purchase would end up being called one of the greatest deals in American history, there were many concerns by politicians and the American public that had to be addressed before the purchase was made. It was also necessary to present a new vision about what the American landscape would entail, one that involved incredible imagination for such a fledgling nation.

Prior to the Louisiana Purchase, American democracy was still an experiment. The U.S. Constitution had been ratified only a decade earlier,

and since then, only four new states (Vermont, Kentucky, Tennessee, and Ohio) had joined the original 13 states. Thomas Jefferson was only the third president of this “empire of liberty.” The idea that America could double in size with one land deal was unimaginable at that point.

Brokering the Deal

Robert Livingston and James Monroe, acting as agents for the United States on the orders of President Thomas Jefferson, brokered the deal on April 30, 1803. Even before the deal, Jefferson had Robert Livingston, his minister to France, offer Napoleon \$2 million for an area of land on which they could build a seaport. After no response, Monroe and Livingston offered \$10 million for the Floridas and the port of New Orleans, but the French countered with an area even larger than many countries in Europe for \$15 million. This was a surprising offer because the United States was only seeking control of the port of New Orleans or to establish a similar nearby port. The primary decision facing Monroe and Livingston was whether or not to accept the purchase as a whole territory; ultimately, it was a deal they could not pass up.

When President Jefferson learned of the surprising offer, he was concerned about the constitutionality of such a purchase; this concern was tempered by the fact that the purchase would stretch the nation across the entire continent. Jefferson was also eager to make the deal despite his concerns because there was a worry that Napoleon might renege.

Other concerns involved how the deal would affect America’s relationship with other sovereignties with a presence in the Louisiana Territory, such as Spain. Since France had been defeated during the Seven Years’ War in 1763, Spain had controlled the area that had been originally settled by the French. In agreeing to give over control to the Spanish, one of the terms of the treaty was that France would not sell the territory to any other party. Many feared that Spain would try to reclaim the territory after the purchase.

The Louisiana Purchase arose out of France’s difficult circumstances. The French had dealt with costly wars in the lands they controlled. They had also been at war with Great Britain for over 10 years and were struggling financially. Napoleon

was having a difficult time maintaining other territories, such as those in the Caribbean, which he needed to continue the sugar trade. Additionally, both the United States and France were at odds with the British; to have the United States purchase the land, Napoleon said, “affirms forever the power of the United States, and I have given England a maritime rival who sooner or later will humble her pride.” Ironically, banks in Great Britain were used to broker U.S. financing because French banks either saw the deal as too risky or did not have the funds to underwrite such a purchase. The financing included a 20-year term loan at 6 percent interest; this was paid off between 1812 and 1823, with about \$8 million additional interest.

There was a major public interest in whether or not to make this purchase. Newspapers covered the congressional debate about the Louisiana Purchase, and Americans from colonial areas wondered how expanding the territory would change not only the American landscape but also the political and financial conditions of the original territory. Having more land opened up more possibilities, but many feared that it could inspire more troubles as well.

One of the arguments made to the American public was that the purchase would give the nation control over the port of New Orleans, which was geographically located to control access to the Mississippi River and therefore the trade routes to the west. Another argument was based on Manifest destiny, in which expansion was associated with becoming an even greater nation. Inspired by the idea that “bigger was better” and that it was in America’s best interest financially, many Americans were supportive of the purchase.

Exploration of the Territory

When French and American officials met in Paris in 1803, they found particular complications surrounding the negotiation of a treaty to transfer ownership of the purchase from France to the United States. Very little of the territory had been explored, and thus there was no accurate information about the exact boundaries of the territory. Essentially, France was asking America to purchase a large amount of land sight unseen. Many believed that the territory would include all the land west of Missouri and to southern Florida, but the area was little explored. Prior

to the purchase, in 1803, Jefferson had secretly asked for authorization from Congress to fund an expedition in the foreign-controlled territory “for the purpose of extending the external commerce of the United States.” This request was approved, and \$2,500 was appropriated to fund the secretive operation. Before this secret operation could take place, however, the Louisiana Territory was purchased by the United States.

After the purchase, federally funded explorations better defined and reported on the boundaries of the purchased territory. The Lewis and Clark expedition was also inspired by this purchase. Jefferson asked Meriwether Lewis, his secretary, to head the expedition, and William Clark, who once had been his commanding officer in the army, to be the co-captain. Jefferson hoped Lewis and Clark would discover water routes connecting the Pacific Ocean with the Mississippi River system, which would give the new territory access to even more ports.

Prior to the Louisiana Purchase, settlers such as Daniel Boone had explored some of the territory. Because the title for the land he had settled in foreign-controlled Louisiana was invalidated after the Louisiana Purchase, Boone offered his exploration services in exchange for the return of the land title. Exploring along the Wilderness Road, Boone and his fellow pioneers would navigate the Ohio and Mississippi rivers, creating settlements along the way. This exploration would prove invaluable after the Louisiana Purchase, and years later, Boone was rewarded by the United States with the title for his land.

The Louisiana Purchase also meant that anyone living in the area would be subject to the rule of the United States and would be guaranteed all the rights and protections of citizenship. With the Spanish no longer in control, there were many disputes about who owned the land, leading to many complicated legal disputes, even among family members. Compared to the earlier foreign control of the area, the United States had stricter laws against squatter’s rights. Many people who believed they had legitimate claims to remain on the land were displaced.

Unintended Consequences

There were many unintended consequences as a result of the Louisiana Purchase. For example,

much of the land was inhabited by Native American tribes and nations who were willing to go to war over the right to control that land. It would take a century of wars and treaties for the United States to have complete control over the territory.

Manifest destiny, one of the primary rhetorical arguments made in favor of the expansion, was based on the belief that America had a divine obligation to expand across the continent. Beyond political and economic motivations, proponents of the expansion argued that Americans were spiritually called to tame both the wild lands and the Native Americans. American missionaries were just as eager as those interested in trade routes to expand the nation westward. At the core of Manifest destiny was the common belief that America was culturally, spiritually, and racially superior to the natives. For believers in Manifest destiny, the Louisiana Purchase was seen as a way to prove that superiority.

Southern farmers seeking more lands to cultivate also saw the Louisiana Purchase as an opportunity to expand the practice of slavery, which resulted in a number of conflicts. Many owned slaves in the territory at a time when there was great debate within the United States. Another consequence of the purchase was the Missouri Compromise, which was a way to temporarily stave off the question of slavery's role in the nation. The Louisiana Purchase would inspire a national debate between slave and free states over political and economic advantages.

Not all of the unintended consequences were negative. During the time of the Louisiana Purchase, women in Europe and America did not have the same rights as men, including the right to own property. Women who settled in the new territory could own land and slaves, which opened up vast new opportunities for women who would have otherwise been financially dependent on a husband or male relatives. The Louisiana Purchase also ushered in a multicultural "frontier mentality" that was very different from the original 13 colonies.

The territories also challenged the primarily Anglo-Protestant fabric of America; in fact, the Louisiana Purchase was viewed as a foreign country, with many inhabitants from Africa, the Mediterranean, and the Caribbean who had been under the rules of both France and Spain. It was

a place where a multitude of ethnic groups lived in relative peace with each other. New waves of Americans would develop out of this purchase, with Creole, French, Spanish, German, and Native American ethnicities changing the makeup of the United States. The Louisiana Purchase, therefore, set the stage for the continuing diversity of America.

Loving v. Virginia (1967)

In 1967, the Supreme Court of the United States ruled that Virginia's long-held ban on interracial marriage was unconstitutional. The court also decided that Mildred and Richard Loving, an interracial couple who had been banished from their home state of Virginia after allegedly violating the state's 1924 Racial Integrity Act, could return home. More broadly, the decision overturned *Pace v. Alabama* (1883), which set the post-Civil War precedent for the criminalization of interracial marriage.

Loving was thus a landmark victory for the civil rights movement and a defeat for southern conservatives and others who advocated segregation, believed in the natural inferiority of non-white Americans, and maintained that sexual relationships between people of different racial,

ethnic, or religious backgrounds threatened the moral character of the nation.

The case had its roots in the late 1950s, when the eventual defendants, Mildred Delores Jeter, a woman of African and Native American descent, and Richard Loving, a white man, met in Central Point, Virginia, and began to date. At 18 years old, Jeter became pregnant, and the couple decided to marry.

However, Virginia's 1924 Racial Integrity Act had barred whites and people of color from marrying, so the two instead traveled to Washington, D.C., to obtain a marriage license (where an interracial marriage ban had been lifted years earlier). Soon after they returned to Virginia, local authorities broke into the Loving residence on an anonymous tip that they had violated the Racial Integrity Act.

Violation of Anti-Miscegenation Laws

Richard Loving reportedly presented the marriage certificate to the officer, who in turn claimed that it was invalid in Virginia. Later that morning, July 11, 1958, both Mildred and Richard Loving were taken into custody for violating Virginia's anti-miscegenation laws. Richard Loving spent the day and night in jail, and the pregnant Mildred Loving was there for nearly a week. Both were eventually released and ordered to appear in court for sentencing.

Six months later, the judge of Virginia's Fifteenth Judicial Circuit, Leon Bazile, found the couple guilty and sentenced both to one year in prison. However, Bazile reached a plea agreement with the defendants and offered to suspend the sentence for 25 years if the couple left Virginia. The Lovings reluctantly agreed, settled their court costs, and moved to Washington, D.C. Once there, they struggled financially and wished to return to their families and hometown.

Richard Loving even contacted Attorney General Robert F. Kennedy. Kennedy referred them to the American Civil Liberties Union (ACLU), a legal organization that had developed a strong reputation for advancing civil rights through the courts. Lawyers with the ACLU met with the Lovings and concluded that Virginia had violated the couple's right to equal protection as articulated in the Fourteenth Amendment of the U.S. Constitution.

By the middle of the 1960s, the *Loving* case had become a cause célèbre among the burgeoning civil rights movement and proponents of marriage equality. The ACLU appealed the Fifteenth Circuit's ruling, and over the next several years, lawyers Bernard Cohen and Phillip Hirschkop took the case before the Virginia Supreme Court of Appeals. Still, they received no resolution to the case, and it seemed clear that it would eventually reach the Supreme Court. During the appeal process, the Lovings had two additional children and made several illegal return visits to Virginia, though they always traveled separately.

On June 12, 1967, nearly 10 years after the couple had married in Washington, the high court heard their case and quickly reached a decision. In a relatively rare unanimous ruling, the justices ordered Virginia to recognize the Loving marriage and lift all restrictions regarding the couple's cohabitation and travel in the state. Further, *Loving v. Virginia* declared that all laws barring interracial, interethnic, and interfaith relationships and marriages were unconstitutional because they failed to provide equal protection.

As the court ruled in favor of the Lovings, it broke with over 300 years of discriminatory colonial and state policy. Since the colonial era, white-led assemblies as well as local and state governments had legislated various measures that criminalized interracial sex, childrearing, cohabitation, and marriage. Virginia, as both a colony and a state, led the way with such laws. Virginia's "one-drop" rule declared that anyone proven to have one drop of nonwhite blood (African, African American, or Native American) was not legally white and was thus ineligible to exercise the rights of free, white—typically male—citizens.

The Pocahontas Law provided an exception for mixed-race Native Americans to marry whites, if they could prove they were descendants of Pocahontas, the famous daughter of Powhatan, whom the first English settlers relied upon in the early 17th century. After the Civil War, Virginia maintained its prohibition on interracial relationships and even bolstered its laws with the passage of the Racial Integrity Act in 1924. The act implemented some of the strictest anti-miscegenation laws in the United States and was designed to thwart what its proponents claimed was dangerous racial mixing or "amalgamation."

However, in the decade following World War II, the civil rights movement pressured legislators and the courts to chip away at the legal basis of racist public policy. Still, even by the 1960s, interracial marriage remained illegal in all of the former Confederate states as well as Oklahoma, West Virginia, Kentucky, Missouri, and Delaware. Thus, when the nation's high court declared that any law restricting interracial marriage was a thinly veiled effort to "maintain white supremacy," advocates of racial equality received a major victory.

The *Loving* decision is believed to have implications in the debate over same-sex marriage and is regarded as a positive use of judicial review to expand individual rights and end marriage discrimination. Moreover, since the decision, Americans have shifted their views on interracial marriage considerably. At the time of the decision, roughly three-quarters of those polled believed that interracial marriage was unnatural or unacceptable; currently, over three-quarters of Americans approve of these same relationships. As further evidence of the impact of *Loving v. Virginia* on a multicultural America, June 12 is known as Loving Day, a day to celebrate interracial, interethnic, interfaith, and same-sex marriages and relationships.

Lumbee

With 55,000 members, the Lumbee Tribe of North Carolina is the largest Native American group east of the Mississippi River. Despite their numbers and recognition as Native Americans by North Carolina in 1885, the Lumbee have so far been unsuccessful in gaining federal recognition and have struggled to assert their identity as American Indians. Nevertheless, Lumbee population numbers are the reason North Carolina is in the top 10 states for Native American population.

Most Lumbee reside in southeastern North Carolina in the counties of Robeson, Hoke, Cumberland, and Scotland and neighboring counties in North and South Carolina. With a population of more than 49,000, Robeson County has the largest number of Lumbee, with the Lumbee, at 38.6 percent, being the largest single ethnic group in the county, surpassing both whites, at 33.1 percent, and blacks, at 24.9 percent.

The most probable origin of the Lumbee can be found among the small, coastal Carolina Indian groups devastated by war and new European diseases. By the late 17th century, these populations had declined considerably. During the Tuscarora War (1711–15), some of the surviving groups fled south seeking refuge among the Cheraws, who are probably the main ancestral Lumbee group. After further population decline, some surviving Cheraws, remnants of still other small Indian groups, whites, and African Americans became the basis of the contemporary Lumbee Indians. Because of the number of ancestral Indian groups, all speaking different Indian languages, English, with a distinctive Lumbee inflection, became the language of the Lumbee.

The lack of a surviving Indian language is one of several characteristics, along with the lack of reservation lands and a native religion, pointed to by skeptics who claim the Lumbee are not Native Americans but merely a generally nonwhite, "triracial isolate" like the Melungeons of Tennessee and Kentucky. (Recent DNA testing of the Melungeons documents an ancestry that is largely European and African, with very little Native American.)

Ancestry, however, is both genetic and cultural. Many Cherokees, for example, have more European than Native American ancestry. Most American Indians have struggled with the issue of

genetic ancestry, or “blood degree.” The Cherokee Nation in Oklahoma has done away with blood degree altogether and includes anyone descended from an individual listed on a particular roll, no matter how little Cherokee ancestry. By contrast, the Utes of Utah have raised their blood degree minimum to five-eighths (the equivalent of having one full-blood parent in addition to one parent who is at least one-quarter blood degree).

Henry Berry Lowrie

The Lumbee clearly have a Native American time line, both self-identifying and being identified as Indians by their non-Indian neighbors for centuries. Arguably, the Lumbee also possess many traditional Native American values, such as putting the well-being of the group over that of the individual. Historically, the famous Lumbee leader Henry Berry Lowrie embodied that value.

From 1865 until 1872, Henry Berry Lowrie and his gang of Lumbee Indians, newly freed black slaves, and “buckskin whites” (poor Gaelic-speaking Scots-Irish folk) hid out in the swamps and were supported with supplies by the local population. The group fought for the rights of poor Indians, blacks, and whites in the Robeson County area and resisted the high taxes imposed upon the poor. Henry was the youngest of the 10 sons and two daughters of Allen and Mary Lowrie and witnessed the murder of his father and one of his brothers by pro-Confederate whites.

The Lowrie gang was the inspiration for the Lumbees’ adaptive strategies of both violent confrontation and the creation of alliances used over the years. Over almost a decade, the gang experienced Robin Hood–like adventures as they “stole from the rich and gave to the poor.” While he probably died in 1872, Lowrie’s body was never recovered. The dangerous lifestyle of the gang resulted in only one of its members surviving into old age.

Henry Berry Lowrie has continued to be an important Lumbee hero. In times of crisis, the Lumbee ask, “What would Henry Berry Lowrie do?” In 1958, several hundred gun-toting Lumbee routed an anti-Indian Ku Klux Klan rally in Robeson County, thus ending Klan intimidation of the Lumbee. This violent response to the Klan stood in stark contrast to the nonviolent approach advocated by Martin Luther King, Jr., and other black leaders during the same time.

Some of the many cultural traits that serve today as symbols of Lumbee Indian culture include the uniquely Lumbee accent of English, the traditional Indian value of putting the well-being of the group over that of oneself, clothing adorned with the pine cone patchwork design created by one of Lowrie’s daughters, the use of traditional Indian herbal medicine, participation in powwows, and the annual Lumbee homecoming ceremony. The Lumbee effort to gain federal recognition is active and ongoing. Like many other ethnic minorities around the world, the Lumbee continue to assert their unique heritage.

Luxembourgian Americans

Luxembourgian Americans are Americans, citizens or otherwise, who have Luxembourgian ancestry. Their exact numbers in the United States are unknown because most Luxembourgian Americans tend to identify either as Americans or with other European ethnic groups; the 2000 census data showed a Luxembourgian American population of around 45,000, but in truth that number is probably significantly higher.

Immigration

The total area of Luxembourg is 999 square miles; it is 55 miles long and 34 miles wide. The strongest influences on Luxembourgian immigration were poverty and increasing industrialization of their homeland; by the mid-19th century, more than 12 percent of Luxembourgians were destitute. Luxembourgian church and civil records show that most Luxembourgians farmed and lived in villages. They were not landowners generally. The United States appealed to Luxembourgians in its wide open, farmable spaces, and these immigrants mainly settled in the American midwest.

According to the Institut Grand Duchy of Luxembourg, there were three major waves of Luxembourgian immigration: from 1830 to 1845, from 1846 to 1860, and from 1860 to 1900. However, the immigration first began in 1630, when the first known Luxembourgian Americans came to New Amsterdam (later New York) with the Dutch.

From the 1830s through the mid-1840s, the first major wave of Luxembourgians immigrated to the United States. Luxembourgians had also immigrated to South America and Latin America in the 1820s, but settling in these areas proved much more challenging than settling in the United States. Points of entry to the United States during this period included Louisiana, New York, and Maryland. In the early 1840s, Luxembourgians also settled in Chicago.

In the 1840s, major waves of immigration from Europe to the United States began, thanks to the decline of the slave trade on one side and poverty and famine on the other. By 1849, Luxembourgian newspapers decried the huge numbers of people fleeing the country, and this

continued until the late 1850s. By 1858, however, immigration had slowed to a crawl, partly because of unrest in the United States that would lead to the Civil War and partly because living conditions improved in Luxembourg.

From 1860 to 1890, Luxembourgian immigration to the United States boomed once more, peaking in the 1880s. During this time, social life blossomed for Luxembourgian Americans. Various social clubs and community groups for Luxembourgian Americans popped up in all areas in which they were concentrated. Inexpensive farmland was the attraction for the second wave of Luxembourgian immigrants; arriving from mostly agrarian areas in Luxembourg, these immigrants sought out familiar terrain, and the 1862 Homestead Act made the attainment of farmland seem much more possible in the United States than in Luxembourg. It was not uncommon for the proceeds from the sale of lands in Luxembourg to provide immigrants with 10 times more buying power in the United States.

Luxembourgians also emigrated for other reasons. They hoped to avoid forced transcription into foreign armies, a common occurrence at the time. Sometimes emigrants had their own personal reasons for leaving, such as desiring to avoid punishment for a crime or to hide an illegitimate pregnancy. It has been estimated that 70,000 to 72,000 Luxembourgians immigrated to the New World between 1840 and 1900. Those who arrived in the United States between the 1870s and 1880s benefited from the expansion of the railroad and were able to settle farther west. In the 1870s and 1880s, prime years for Luxembourgian immigration, fewer than 10 percent of Luxembourgian Americans lived in urban areas, but their communities continued to thrive.

Luxembourgian Americans and the Culture of Luxembourg

Luxembourgians brought with them to America a strong sense of ethnic pride fostered by the culture of Luxembourg. A constitutional monarchy, Luxembourg also practices the separation of governmental powers; there is a judiciary and a legislature, as well as an executive branch. The independent state of mind of Luxembourgians is expressed in the national motto: *Mir wolle bleiwe wat mir sin* (We want to remain what we are).

Equally important for the Luxembourgian American sense of independence has been the survival of Letzebuergesch, the language of Luxembourg. For Luxembourgers, the language is a source of pride and identity. Even though today French and German are the official languages of Luxembourg, Letzebuergesch is in the hearts of the people.

The history of Luxembourgian Catholicism also plays a key role here. Historically, most Luxembourgers have been Catholic, and this is also true of Luxembourgian Americans. The Virgin Mary is the patroness of the country, and symbols of devotion are found throughout Luxembourg. Catholic community centers helped knit the fabric of Luxembourgian American life in the New World.

Notable Luxembourgian Americans

Luxembourgian Americans have contributed greatly to American culture. Actress Loretta Young, a descendant of Luxembourgian emigrants, won Emmy Awards for Best Actress in a Dramatic Series in 1954, 1956, and 1958. Photographer Edward Steichen directed U.S. Army and Navy aerial photography during both world wars. Steichen directed the Department of Photography at the Museum of Modern Art from 1947 to 1962. Chris Evert, who has Luxembourgian ancestry, was unanimously elected to the International Tennis Hall of Fame and is generally considered to be one of the top women tennis athletes of all time. Evert won six U.S. Opens, seven French Opens, three Wimbledons, and two Australian Opens. J. Dennis Hastert, former Speaker of the House, also has Luxembourgian heritage, as does Paul C. Lasuterbur, winner of the 2003 Nobel Prize in Physiology/Medicine.

Lynchings

The *Oxford English Dictionary* describes "lynch" as "to condemn and punish by lynch law. In early use, implying chiefly the infliction of punishment such as whipping, tarring and feathering, or the like; now only, to inflict sentence of death by lynch law." Today, "lynching" refers to the practice of killing people by extrajudicial mob action. Lynching differs from ordinary murder or assault because it is a killing that is committed outside the boundaries of due process by a mob that enacts revenge or punishment for a perceived offense. Lynching derives its name from Colonel Charles Lynch, an 18th-century judge and Virginia landowner who had a habit of holding illegal trials of local law-breakers in his front yard; Lynch would whip the accused while they were tied to a tree in his yard.

In American culture and history, lynching is recognized as a form of terror and, today, a hate crime. In the most literal sense, to lynch someone is to hang a body from a tree, and this symbol is still used as a form of threat, usually to African Americans. Still, it is the use of terror and threat as a form of hate that qualifies a mortally violent act as lynching. For example, the 1998 murder of Matthew Shepard, who was not hung from a tree is considered to have been a lynching because of the bigoted motives behind his murderers' actions.

Lynchings seem to have been an American invention, though the act is not limited to the United States. In 1905, James E. Cutler wrote in *Lynch Law* that lynching is a criminal practice peculiar to the United States. Its use as a tool of terror, especially and traditionally toward African Americans and immigrants, necessitates its inclusion in any text discussing multiculturalism, as lynching has always played an integral role in the shaping of multicultural identity.

History

Lynching has a terrible and violent history in the United States, particularly in the south. Mistreatment and abuse of the enslaved was commonplace to slavery, but lynching was its own separate form of terrorism and control. Lynching refers to vigilantism in which white citizens would assume the role of judge, jury, and executioner; these groups were very common in the last half of the 19th century and were fed by the popular notion that the existing laws were not tough enough to maintain social control. This belief was held in the southern as well as the western United States and was the norm rather than the exception. For example, many newspapers at the time printed editorials in support of this extrajudicial justice; the *New York Times* even ran a scathing critique of Ida B. Wells for her antilynching crusade.

The most well-documented era of lynching took place between 1880 and 1930, also known as the nadir of African American history. It was during this time that African American journalist and antilynching activist Ida B. Wells was forced to leave the south after receiving arson attacks on her office for her public condemnations of lynching in the south, especially her investigation and announcement that most rape accusations directed toward African American male victims of lynching were false.

A strong, leading motive for lynchings in the south was the enforcement of social conventions and the punishment for the perceived violation of customs, such as Jim Crow laws. Combined with maintaining the social and racial order was the reinforcement of political and economic control; for example, before and after the Civil War, many African Americans were lynched, and their property was then divided up among mob members (body parts would also be taken as souvenirs).

A sign commemorating Ida B. Wells stands on a corner in downtown Memphis, Tennessee. Ida was an African American journalist and newspaper editor who became a public figure in Memphis by writing about the race issue in the United States.

Most lynchings took place by hanging and/or shooting, but many involved burning at the stake, maiming, dismemberment, and castration.

There are three other major sources of lynching statistics, though none has captured the entire history in part because of how victims were categorized; for instance, many “white” victims were immigrants. Prior to 1882, no reliable statistics of lynchings were recorded. In that year, the *Chicago Tribune* began to take systematic account of lynchings. Shortly thereafter, in 1892, the Tuskegee Institute began to make a systematic collection and tabulation of lynching statistics.

Beginning in 1912, the National Association for the Advancement of Colored People (NAACP) kept an independent record of lynchings. These statistics were based primarily on newspaper reports, but because the south is large and the rural districts have not always been in close contact with city newspapers, many lynchings escaped publicity in the press. Therefore, there are errors and inaccuracies in the available lynching statistics.

The numbers of lynchings listed in each source vary slightly. The NAACP lynching statistics tend

to be slightly higher than the Tuskegee Institute figures, which some historians consider conservative. In 1914, the Tuskegee Institute reported 52 lynchings for the year, while the *Chicago Tribune* reported 54, and *The Crisis*, the official newspaper of the NAACP, gave the number as 74.

The discrepancy in these figures is the result in part to different conceptions of what actually constituted a lynching, as well as errors in the figures. According to the Tuskegee Institute figures, between the years 1882 and 1951, 4,730 people were lynched in the United States: 3,437 “Negro” and 1,293 white. The largest number of lynchings occurred in 1892. Of the 230 persons lynched that year, 161 were “Negroes” and 69 whites.

Response to Violence

Because of the level of violence, states’ action was not enough and many appealed to the federal government for aid in curbing lynching. In 1870, Congress passed the Force Acts, or the Ku Klux Klan Acts, in an effort to suppress Klan violence. This act allowed for federal prosecution of lynching, and grand juries were held.

This led the Klan to increase its underground activities, but by the 1870s, the Democrats had gained more control in Congress and the Ku Klux Klan returned to power, this time in order to suppress voting by African Americans and poor whites. After the Civil War, during Reconstruction, white mobs, and in particular the Ku Klux Klan, formed lynch mobs in order to terrorize freed African Americans and prevent their political and economic empowerment. Fear of lynching influenced the great migrations of southern African Americans to northern states such as Illinois and New York.

African Americans had always resisted lynching terrorism, usually in three major ways: retaliatory violence, northward migration, and organized nonviolent protest. Even though retaliation usually led to more violence and lynching, many African Americans armed themselves and fought back in self-defense.

In *The Crisis*, W. E. B. Du Bois encouraged African Americans to fight back. A. Philip Randolph of *The Messenger* magazine advocated physical resistance to white mobs, and the NAACP defended the legality of African Americans taking retaliatory self-defensive steps against white mobs.

Geography of Lynching

Contrary to popular belief, African Americans were not the only victims of lynching, nor did lynching only occur in the south, although most lynchings took place there. The frontier west was also an area for this terrorism, and whites and immigrants were its targets. Lynchings were not a regional crime and occurred throughout the entire United States. However, the great majority of lynchings took place in the southern and border states.

Lynchings occurred in the states of Maryland, West Virginia, Ohio, Indiana, Illinois, and Kansas. Mississippi, Georgia, Texas, Louisiana, and Alabama were, historically, the leading lynching states; these five states accounted for nearly half the total victims. Mississippi had the highest incidence of lynchings in the south as well as the highest for the nation, with Georgia and Texas taking second and third places, respectively.

Though some believe lynchings resulted from the “outlaw” nature of frontierism, real lynchings in the west shared many of the nativist and racist characteristics of the lynching culture of the south. Historian Michael J. Pfeifer writes, “Contrary to the popular understanding, early territorial lynching did not flow from an absence or distance of law enforcement but rather from the social instability of early communities and their contest for property, status, and the definition of social order.”

The San Francisco Vigilance Movement enforced its power with a heavy nativist tone, going after Irish immigrants and, later, Mexican and Chinese immigrants. Lynchings of Mexicans and Mexican Americans in the southwest have been traditionally overlooked. Most attention has been and continues to be focused on the south and African Americans. In addition, the Tuskegee Institute, which has kept the most complete records of lynchings, categorized the victims as either “Negro” or white and recorded Mexicans, Native Americans, and Chinese immigrants as “white.”

Present Day

Although not nearly as prevalent as in the late 19th century, lynchings and mob violence still occur in the 21st century. In 1998, in Jasper, Texas, African American James Byrd, Jr., was dragged to death behind a pickup truck driven by three white

men, two of whom belonged to a white supremacist group. That same year, Matthew Shepard, a student at the University of Wyoming, was tortured and murdered after two men found out he was gay. These two murders eventually resulted in the passage of the Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act in 2009. As recently as 2010 in South Carolina, African American Anthony Hill was dragged behind a pickup truck and shot to death; as of 2012, investigators were still examining whether this was a hate or bias crime.

M

Macedonian Americans

The Republic of Macedonia, formed in 1991, is located on the Balkan Peninsula in southeastern Europe and is bordered by Yugoslavia, Greece, Bulgaria, and Albania. Landlocked and mountainous, less than 5 percent of Macedonia can be farmed. Mineral deposits are a natural resource, and traditionally, Macedonians have worked as herders and miners. The Republic of Macedonia was formed after it achieved independence from Yugoslavia. In the 20th century, multiple nations attempted to assert claim over the area that is now Macedonia, ensuring that Macedonian life would be rife with conflict.

History and Immigration

Unsurprisingly, Macedonians began to immigrate to the United States in the early 20th century as poverty and political conflict increased. Most early Macedonian Americans actually considered themselves to be Bulgarians from Macedonia, and they were likely to list Bulgaria, Serbia, Albania, or Greece (better-known countries near to Macedonia) on immigration forms. Even so, a reliable estimate of the numbers of Macedonian Americans between 1903 and 1906 put their population at approximately 50,000. Early Macedonian immigrants were mostly peasants, with some craftsmen, industrial workers, and scholars as well.

After World War I, a large number of Macedonian Americans returned to Europe. Only approximately 20,000 Macedonian Americans remained in the United States. The passage of the Immigration Act of 1924 (the Johnson-Reed Act) further slowed Macedonian immigration by imposing quotas on various national groups based on their numbers in the United States as of 1920. Because so many Macedonian Americans had returned to their homeland after getting a late start in the immigration wave, the basis for Macedonian immigration was disproportionately low. Still, Macedonians came via Canada and in other ways, continuing the growth of the Macedonian American community.

With the post-World War II establishment of Yugoslavia, Macedonian immigration slowed again. Yugoslavia supported the Macedonian economy and invested in the country, making economic improvements and urging Macedonians to stay. Immigration picked up again significantly in the 1960s and 1970s as immigration policy was relaxed; many Macedonian immigrants settled in Canada, with U.S. and Australian cities as their next choices.

During the 1990s, Macedonian immigration increased once more. As in earlier times, the new Macedonian Americans settled in midwestern urban areas and pursued work. By 2006, there were more than 42,000 Macedonian Americans

in official counts, but others estimate the number to be closer to 200,000. Detroit is home to the largest Macedonian American community.

Religion and Culture

Although the vast majority of Macedonian immigrants were Eastern Orthodox, American Protestant churches also played a key role in Macedonian patterns of immigration. Methodist churches engaged in missionary work in the Balkans in the 1860s and 1870s, sending Bulgarians and Macedonians to the United States for education. When the students returned to Macedonia, they spoke highly of their American experience. The U.S. churches also established schools in Macedonia, and these schools functioned in part as distribution centers for pro-American ideas.

Even so, Macedonian Americans kept to their Eastern Orthodox beliefs, and their religious practice helped preserve Macedonian culture. Macedonian Americans in Indiana founded a distinct Macedonian Orthodox Church, and within 20 years' time, there were 11 of these churches in the United States; by the late 1990s, there were 19, and today there are 20 of them. Bulgarian refusal to recognize the Macedonian American church has contributed to a festering resentment between Macedonian and Bulgarian communities in America.

Macedonian Americans were largely endogamous throughout the 20th century, often returning to Macedonia to marry. Macedonian American families also tended to maintain close ties to each other and to keep business and social connections within the Macedonian American community. The community has many organized associations and festivities that nurture cultural identity.

Macedonian Americans were often relegated to unskilled, dangerous jobs based on their lack of education and marketable skills in their new country. Many Macedonian Americans worked on the railroads, which allowed them to escape the urban centers. They moved in groups to work on the railroad and, like other migrant workers, they often lived together in boxcars. By 1910, there were nearly 15,000 Bulgarian and Macedonian workers in Chicago's steel mills. These communities experienced a lifestyle as lowly as it was in the boxcars. Although they did not immediately advance into better jobs, Macedonian Americans did develop a reputation as dedicated, hard workers.

Their history of political struggle under the thumb of the Ottoman Empire in Macedonia readied Macedonian Americans for political activism in America. As with Slavs in general, Macedonian Americans supported leftist causes much more often than the general U.S. population. Many Macedonian Americans joined socialist and communist causes that tied into their work as laborers. Nevertheless, Macedonian Americans served in the U.S. military during World War II and also supported the war effort at home.

Because Macedonian Americans are generally Eastern Orthodox, Easter is the most significant holiday for them, even today. A Macedonian American Easter tradition is to dye eggs blood red, symbolizing the blood of Christ, and then tap a chosen egg against the eggs of those with whom a person is celebrating the holiday; the egg that stays unbroken is said to bring good luck to its possessor.

The Macedonian language is Slavic and is written with the Cyrillic alphabet. Dialects from throughout the country tend to reflect the linguistic influence of whichever country is the nearest neighbor. Macedonian is a completely phonetic language and is therefore very easy to learn.

Notable Macedonian Americans

Business leader Frank Popoff, former president and chief executive officer of Dow Chemical, is of Macedonian American descent. Businessman Mike Ilitch went from owning one pizza shop to owning the Little Caesar's Pizza franchise as well as the Detroit Redwings hockey team and the Detroit Tigers baseball team. There are also many well-known Macedonian American professional athletes, including Kevin Kouzmanoff of the San Diego Padres (baseball), Steven Stamkos of the Tampa Bay Lightning (hockey), and Pete Stoyanovich of the Miami Dolphins (football).

Macedonian Americans Today

Macedonian Americans still have a generous population in Detroit as well as New York and parts of Ohio. More recent Macedonian immigrants usually belong to the Macedonian Orthodox Church, of which there are 20 throughout the United States. At least three universities in the United States offer Macedonian language courses.

Macedonian Americans as a group continue to retain their cultural heritage.

Machismo

To provide a straightforward definition for the word *machismo* is to misunderstand its meaning in U.S. Hispanic culture. Imported from Mexico, the term within U.S. Hispanic studies remains unstable, a paradox of affect. It can, and frequently does, define detrimental deviant male behavior: an overbearing man, a brute, a lout, a proud and violent *hombre* (man), the type of man who wears tight trousers and struts publicly to boast his bulge. The term can also invoke positive connotations.

Machismo can be a source of strength, an energy for cultural resistance, and a set of values keeping U.S. Hispanic men working long hours to fulfill a set of obligations that define them as men. Machismo has often driven a man to speak out, to

remain loyal to family, and, as the famed folklorist Americo Paredes has written, inspired many a man to stand proud "with his pistol in his hand."

Nevertheless, before exploring the historical and sociological history of machismo, it is useful to provide a working definition of the word as used in the United States. One of the earliest definitions of the word came from psychoanalyst Aniceto Aramoni, who in 1965 defined machismo as "the expression of exaggerated masculine characteristics, ranging from male genital powers to towering pride and fearlessness. It is also a specific counter phobic attitude toward women."

Aramoni argues that *machismo* (male chauvinism) is essentially a cultural display of hypermasculinity by Mexican men and that it "is a uniquely Mexican answer—albeit a disturbed one—to the universal quest for individuation, dignity and relatedness." Furthermore, Aramoni claims that machismo is not an exclusively Mexican trait, but that numerous cultures around the world have grappled with masculinity and the meaning of manhood at different points in their history.

According to Mexican folklorist and ethnographer Vincent T. Mendoza, the word *macho* was not widely used in Mexico until the 1940s. Before then, hypermasculine behavior was described in terms of degree: a man was called *un verdadero hombre* (a real man) or *muy hombre* (very manly). The general Mexican public began to use the word "macho" after Manuel Avila Camacho became president of Mexico (1940–46). It was after the presidential elections that the word began to appear in *corridos* (folk ballads) in part because "macho" rhymed easily with Camacho, and because Mexico was still recovering from the Mexican Revolution (1910–20) and the songs championed a strong national leader.

Machismo and the Spanish Conquest

There are various competing explanations for the emergence of machismo, or hypermasculinity, in Mexico. All of these are negative narratives and follow the so-called cultural deficit model, a sociological phrase used to identify areas within a culture compensating for a specific "lack" or traumatic experience. There are three basic explanations for the emergence of machismo among Mexican males in particular and Latino men in general.

Pride of stereotypically masculine traits in Western cultures are often associated with machismo. The term was often used by Latina feminists to criticize the patriarchal structure of relationships in Latino communities.

The most prevalent and most negative explanation for machismo claims that it emerged as a direct result of the Spanish conquest, an event so traumatizing that the native *criollo* culture developed a “masculine protest” obsessed with myth, symbols, and assessment of male behavior. According to scholars such as Nobel Laureate Octavio Paz, a Mexican philosopher and writer, machismo emerged as a response to the spiritual rape and conquest of Mexico. It marks a military defeat so traumatic that it shattered the cultural traditions of the indigenous population. Under this explanation, Mexican men developed hyper-masculine behavior because they were unable to protect their women from the Spaniards’ ensuing plunder, pillage, and rape during the conquest.

This origin myth for machismo also explains why women become the focus of male angst and anger. Mexican folklore frequently identifies *la malinche* or Dona Maria, an Indian woman given to Hernán Cortés as a slave at the age of 14 who served as translator and concubine to Cortés, as the catalyst that helped bring the demise of the Aztec empire. La Malinche has erroneously come to represent the betrayal of the indigenous culture and the mother/whore of a bastard *mestizo* race. She is despised for helping Cortés with the

conquest (as translator), bearing his children and consequently emasculating native males.

This view is problematic for a number of reasons. For example, it pathologizes Mexican male behavior and assumes that Mexican masculinity originates from a sense of powerlessness and inferiority. Furthermore, as sociologist Alfredo Mirandé points out, “the characterization is clearly classist” since it locates national feelings of “powerlessness and inferiority” on the poor and working class. Additionally, Mexican machismo is contrasted to “normal” European male behavior, so that Mexican male behavior is nonaberrant only when it mimics acceptable European, or North American Anglo, male modes of conduct.

A second view, which also associates the origin of hypermasculine behavior with *la conquista*, proposes that machismo was imported into Mexico by the conquering Spanish soldiers. Patriarchy, masculinity, and manhood were thus imposed on the native population in the same way as language, Catholicism, and colonialism. This view propagates the notion that machismo is not a form of masculine protest emanating from feelings of inferiority but rather an outward male projection of Spanish masculine codes that were assimilated by the *mestizo* population.

Sociologist Marvin Goldwent, for example, has argued that the Spanish were the “first machos” as well as the prototype for the *machista* male behavior that later developed endemically within Mexican culture. A component of this perspective is that Cortés and his men, as members of the Spanish military, imported European military behavioral codes of masculinity. In this manner, male behavior was inextricably intertwined with duty, respect, tradition, and honor, as well as violence. Here again it proves useful to quote sociologist Alfredo Mirandé:

They were depicted as a handful of daring, robust, and valiant men of action who, after their ships had been destroyed, overcame numerous adversities to conquer a vast continent and millions of Indians, in the process committing numerous *chingaderas*.

Aztec Society and Machismo

A third perspective contends that machismo existed in Aztec society before the arrival of Europeans.

Aztecs lived in a patriarchal society, the men embraced a warrior ethos, and the culture had a history of conquering other tribes. Theirs was a culture in which the male and female spheres were separate and males dominated the public and private spaces of society. The Aztec man was primarily a warrior, and the Aztec woman prepared for a domestic role in which her status was determined by how well she fulfilled her feminine duties. According to Aramoni, Aztec boys are told from birth:

Para otra parte estás prometido, que es el campo donde se hacen las guerras, donde se tratan las batallas, para allí eres enviado, tu oficio y facultad es la guerra. . . . (translated as, for a different place you are promised, that is the space where wars are made, the place of battles, to that place you are sent, your job and your faculties are for war).

In his analysis of the Aztec *Florentine Codex*, Fray Bernardino de Sahagún writes of Aztec women, “Habeis de estar dentro de casa, como el corazón dentro del cuerpo, no habéis de tener costumbre de ir a ninguna parte; habéis de ser la ceniza con que se cubre el fuego del hogar” (“You should be home, like the heart in the body, do not grow accustomed to go anywhere; you are the ashes covering the flame of the home”). Aztec culture in fact seemed to provide in Tenochtitlan a counterpart to Spanish European patriarchy; the men were exhorted to prove manhood in the field of battle, while the women were encouraged to prove their femininity in the domestic sphere.

The true origin of machismo in Mexican culture (the one associated with U.S. Hispanic men) is difficult to decipher, but it is likely that the cult of machismo in its most extreme expression was a Spanish import into the Americas that was then integrated into pre-Columbian native traditions. As part of the conquest, the *conquistadores* modeled the most damaging forms of machismo—arrogance, dominance, insensitivity, rape, warring, and deception—since they committed atrocities in the name of a Christian God. However, all three of the aforementioned origins of machismo present a negatively defined masculinity that is ultimately destructive to males and those around them.

A More Positive Definition

In contrast to negative machismo, there are alternative understandings of machismo that can be positive and productive. For example, Chicana cultural theorist and author Gloria Anzaldúa writes,

The modern meaning of the word *machismo*, as well as the concept, is actually an Anglo invention. For men like my father, being “macho” meant being strong enough to protect and support my mother and us, yet being able to show love.

In this perspective, machismo is a productive and progressive masculine code of behavior integrating loyalty, honor, responsibility, and love.

Such an interpretation of machismo allows for positively structured male behavior to serve as a bedrock of support for civil rights struggles, as it did during the Chicano movement of the 1960s and 1970s. Although Chicana feminists are correct to interrogate the masculinist ethos of the Chicano movement, which sought to reinvigorate the community by reestablishing a strong Chicano male as the head of the family (Chicano Manifesto), the influence of a positive macho ethics did mobilize many young Mexican American and Latino males to dream of a better future.

Mafia

The term *Mafia* refers to a criminal organization that originated in Sicily in the mid-19th century. Although “Mafia” is sometimes considered a single entity, a more accurate view would identify the Mafia as a confederation of criminal groups with similar organizational structures, codes of conduct, and an interest in common crimes. In fact, the ability of Mafia groups to change according to circumstances enables the organizations to adapt to different cultural (national) and immediate (what is more profitable at the time) conditions. One chronicler, Raimondo Catanzaro, traces the origins of the Mafia to the orange groves of Conca D’Oro near Palermo, Sicily, in the early 1800s.

There, a loose confederation of rural bandits built a network that would exist for hundreds of years worldwide in one form or another. The network would not only oppose the authority of the Italian government in Sicily in the 1940s but would also eventually infiltrate it and take control of its agencies. Moreover, the Mafia would become the “law” over all of Sicily. Similar structures would be born in other countries and at other times, most likely because of the flexible structure of the Mafia.

Paradoxically, the inability of Mafia groups to institutionalize their power beyond a single person and his charismatic qualities became the foundation on which the strength of the Mafia power system rests, since it allows for adjustment to new situations, according to Catanzaro. The ability of organized crime to change according to conditions, culture, time, and individuals is what has made Mafia-like syndicates enduring and worldwide. However, there is another characteristic of organized crime that distinguishes it from other criminal activity. Organized crime differs from most street crime because the offenders will continue to associate with each other even when they are not committing crimes. It is the continued association that characterizes organized crime and Mafia-like organizations from other criminal forms.

Criminal Activities

Although a number of forms of gambling are now legal in the United States, illegal gambling is still popular. Just the income from sports betting is enormous. Nevada is the only state where sports

betting is legal, although that does not stop many gamblers from making bets. The Nevada Gaming Commission estimates that the annual National Collegiate Athletic Association (NCAA) basketball tournament involves revenues of at least \$90 million. That amount or more will be wagered illegally. Criminal syndicates generate more from all forms of illegal gambling. One estimate puts the income from illegal gambling as more than \$50 billion a year.

Racketeering involves programs of systematic extortion that demand money from individuals and organizations for forced purchases of services, loans, or “insurance.” A store owner, for example, might be told to give the syndicate money to “protect” the owner’s store from fire or theft. Failure of the owner to pay might lead to the theft or arson from which the owner turned down protection.

A loan shark is a person who loans money at usurious rates of interest, usually for short periods of time. Lending money far in excess of what the law allows to desperate borrowers, loan sharks are willing to make the loans, in spite of the borrowers’ lack of collateral. Nonpayment to the loan shark usually elicits both physical and financial penalties.

The distribution and sale of illegal drugs has been a traditional money-maker for organized criminal syndicates. Working in cooperation with syndicates located in other countries, organized criminals in the United States have been responsible for making many illegal substances available, including heroin and cocaine.

Organized crime groups have controlled prostitution and pornography for large profits. Although there is some evidence that organized criminal syndicates are moving out of this activity, with the legalization of pornography in many places and with the decentralization of prostitution and other sex work, the profits from illicit sex have historically been large.

Some syndicates have infiltrated legitimate businesses. Labor unions and cash-only businesses have been especially susceptible to such infiltration. Labor unions have been targeted to gain access to the members’ dues and retirement funds. Cash-only businesses have been attractive precisely because of the lack of records to account for the money. Today, however, such industries as vending machines, which generate a large amount

of cash each day, have become computerized, and there is greater accountability for both the items being sold in the machines and the cash that is generated by those sales.

Origins of the Mafia

Although there is consensus that criminal syndicates exist, there is disagreement regarding the origins of organized criminal syndicates in the United States. Some regard the origins of American syndicates as evolving from Sicilian and Italian syndicates, whereas others find the origins of American syndicates in unique conditions that Italian immigrants found when they arrived in America. Donald Cressey, for example, claims that the American Mafia (called the Cosa Nostra, meaning “our thing”) evolved directly from Italian counterparts. Cressey claimed that the Cosa Nostra was reflected in 24 tightly knit “families” that ran organized crime in the United States. Each family can be considered a bureaucracy, with similar organizational charts depicting a hierarchy of rank and responsibilities.

These families are linked with one another through a series of understandings and agreements. A nine-member commission, composed of members from those families, coordinates the activities of the 24 families. As such, the Cosa Nostra has centralized control and coordination. These families are interested in activities such as illegal gambling, extortion and racketeering, loan sharking, the distribution of illegal drugs, prostitution and pornography, and other scams. In each instance, however, the goal of the criminal activity is to make a profit. For this reason, some criminologists refer to organized or syndicated crime as illegitimate business enterprises.

Daniel Bell has a different view. Bell claims that the most remarkable feature of criminal syndicates revolves around the changing ethnic characteristic of American criminal syndicates. Although there were criminal syndicates before the late 1800s, Bell argues that the origins of the American Mafia had much more to do with economic conditions that were associated with a large wave of Italian immigration in the late 1800s. Employment was a serious problem, and many legitimate opportunities were closed off to Italians at the time. As such, syndicated crime came to be viewed, in Bell’s terms, as a “queer ladder of social mobility.”

More recent research supports Bell’s viewpoint. Italians are moving out of organized crime, only to be succeeded by African American, Hispanic, and Asian groups. In this view, organized crime is not the exclusive territory of any one ethnic group but will reflect unique social, cultural, and economic conditions. Italian groups may have dominated organized criminal activity in the United States until about the 1980s, but many of those criminals moved away from crime as other, legitimate opportunities were developed, according to Francis Ianni.

The Lupollo family had income from both legitimate and illegitimate sources, and over time, the family concentrated more on legal sources and moved away from illegal income. This paved the way for other ethnic groups to take their place, using criminal activities until more legitimate sources of income and status become available. In fact, the Irish controlled organized crime in the late 19th and early 20th centuries, only to be succeeded by Italian and Jewish groups. As such, organized crime was not simply imported to the United States from southern Italy; it is a by-product of the American nature of minority group stratification and the inability of such groups to take advantage of legitimate occupational opportunities.

Magazines

The ways in which minorities are represented in the media reflects how an ethnic group is viewed by mainstream society. Print media in the form of magazines is one of the most historically visible and pervasive institutions in American culture. Studies performed since the 1940s consistently show that portrayal of stereotypes can have harmful effects on ethnic or minority groups.

Because the media open windows to the outside world, advertising and other media representations can negatively influence the assimilation process of minorities. Moreover, persistent exposure to stereotypical representations often results in audience members accepting distorted views of minority groups, as well as in minority groups suffering harmful effects to their self-esteem. Underrepresentation or invisibilization, on the other hand, may also signal to ethnic group members a lack of acceptance by mainstream society. Studies have shown that underrepresentation exacerbates the tendency to side with the mainstream, minimizing exposure to a diversity of representations and opinions.

In the case of positive stereotypes, some studies suggest that undue pressure may be placed on individuals because of pervasive portrayals in magazine advertising that reinforce expectations associated with a minority group. Studies show that Asian Americans are often represented in advertisements printed in popular technology and business magazines but are underrepresented in women's and general interest publications. Such stereotypes may place undue stress on Asian Americans to succeed in specific fields and reflect that advertisers are not interested in representing Asian Americans in non-business or work-related settings, suggesting that they are not adept at social and recreational skills.

The Role of Magazines in the Coverage of Ethnic Issues

News magazines played a crucial role in the coverage of the civil rights movement and post-civil rights society. Through news reportage, feature articles, and photography that documented overt acts of discrimination against African Americans and the efforts of civil rights activists, print media played a pivotal role in advancing the civil rights movement in the 1950s and 1960s. Among others,

three national magazines—*Life*, *Newsweek*, and *Time*—played pivotal roles in the development of the civil rights movement and the public portrayal of African Americans. They also set the tone for ethnic news coverage at a time when most mainstream media largely ignored race issues.

Life, a photojournalist magazine published between 1936 and 2000, was at one point one of the most influential magazines in the nation. It published the photographs of Charles Moore, some of the first photographs to chronicle the struggles of the civil rights movement beginning in 1958. In the 1960s, Moore and other *Life* photographers documented acts of brutality against African American activists. The publication also opened doors for African American photographers by hiring Gordon Parks in 1948. Parks was assigned to document the civil rights movement and the activism of Malcolm X, by which he created a historical record of great value.

Newsweek, a news magazine published from 1933 to 2012, often covered stories neglected by other publications during the 1950s and 1960s. The coverage of the civil rights movement and race riots in the United States earned *Newsweek* a preeminent position in the coverage of social justice in America. In 1962, the magazine published “Mississippi: The Sound and the Fury,” a report on the violence and siege on the University of Mississippi as a result of the first enrollment of an African American student. In 1967, it published a 20-page cover story, “The Negro in America: What Must Be Done,” a chronicle of the devastating effects of poverty and discrimination in the United States, for which *Newsweek* won the National Magazine Award.

Time, which began publishing in 1923, was one of the first news magazines in the nation, becoming at one point the most popular nationwide. It is the one preeminent news magazine that remains in publication today. *Time* covered the Montgomery bus riots in the late 1950s and nominated Martin Luther King, Jr., as its “Man of the Year” for 1963, featuring his photograph on the cover. The publication had previously rendered tribute to poet and playwright James Baldwin and to Roy Wilkins from the National Association for the Advancement of Colored People (NAACP) in 1963 by featuring them on the magazine's cover on separate occasions.

Often at the risk of their own lives, journalists and photographers covered occurrences of discrimination and brutality against African Americans and civil rights activists such as tear gassing and police dogs set against peaceful protesters. By featuring prominent African Americans on their covers and providing race-issues journalism, these publications disseminated seldom-covered news and shaped the narrative that fueled social justice in the decades of the civil rights movement.

Ethnic Magazines

As a medium of mass communication, print media remain a powerful presence in American culture. As purveyors of content and images, they entertain, educate, and promote social norms. As such, print media are powerful creators of public opinion and replicate images disseminated through other media, as in mass advertising. This creates a compound effect that tends to reproduce a narrow array of opinions and images, and to reduce spaces for a diversity of voices and representations.

As an alternative to mainstream (or “white”) magazines, visionary individuals and publishing companies began to produce reading material that would cater to the experiences and interests of minority readers. By focusing on featuring news reportage, stories of successful entertainers and professionals, romantic and family relationships, and social and political views, ethnic magazines aim to inform and entertain in the same way as white-oriented magazines such as *Ladies’ Home Journal*, *Good Housekeeping*, *Cosmopolitan*, and the *Saturday Evening Post*. Nevertheless, they also incorporate specific topics pertaining to group identity that may be of interest to specific communities while remaining largely ignored, or even distorted, by mainstream media.

Ethnic media are expanding in the United States, building an increasingly larger readership, circulation, and advertising revenue. From their beginning as a niche market serving a small readership, they have expanded in the last decades to thousands of publications in media outlets across the country. Older publications aimed at traditional immigrants and western European ethnic groups are losing readership as these groups become assimilated into mainstream society. Meanwhile, Latino, African American, Asian, Russian, and other ethnic magazines targeting

newer and/or younger groups are gaining ground. Ethnic communities in the United States are growing and often prefer media written in their language or presented in a bilingual format as a way of retaining their culture. According to a 2007 Public Broadcasting Service (PBS) report, approximately 25 percent of the U.S. population regularly consumes ethnic media, and 13 percent of adults in the country actually prefer ethnic media. Out of the endeavors to serve that readership arose magazines such as *ColorLines*, *Ebony*, *Essence*, *Latina*, and *Lilith*.

ColorLines, founded in 1998, targets a multicultural and multiracial audience. The magazine, which is published in a joint partnership by the Applied Research Center and Center for Third World Organizing, moved from print to a fully online presence in 2010. From its inception, *ColorLines* has earned multiple awards for its investigative reports, essays, interviews, and cultural criticism, dealing with issues of race and politics in the United States.

Essence, designed in 1970 as a monthly publication by Essence Communications Inc. targeting African American women, has long been an outlet for African American women writers, essayists, and journalists. It lists a circulation of over 1.5 million readers, has engaged in cultural promotion such as the Essence Music Festival in New Orleans; Black Women in Hollywood awards, a yearly ceremony to honor African American women who have succeeded in Hollywood; and Essence Literary Awards, created to celebrate African American writers. *Essence* has also engaged in activism to promote dialogue that discusses the portrayal of women in hip hop.

Latina, founded in 1996, is currently published by Latina Media Ventures LLC. A monthly bilingual magazine catering to Hispanic women in the United States, *Latina* is a bicultural magazine, bridging mainstream American and Latin American cultures in the United States. It lists a readership of almost 3 million. *Lilith*, founded in 1976, is a quarterly magazine that targets a readership of progressive Jewish women. It explains its purpose as that which “charts Jewish women’s lives with exuberance, rigor, affection, subversion and style.” The magazine has published important award-winning reports, fiction, art, poetry, and cultural reviews.

Large-scope ethnic publications in the United States, such as *Native Peoples Magazine*, catering to all Native Americans; *Jade* and *Hyphen*, which cater to an Asian readership; and *Latin Trade*, which targets Latin Americans interested in international trade, are published in English. However, there are hundreds of thousands of smaller publications—regional or local—written in over 40 languages all over the United States. Whereas the former are publications with national reach and a readership often in the hundreds of thousands, other publications remain regional. In states such as California, where according to the U.S. census, in 2010 minorities composed over 50 percent of the population, there is a great demand for ethnic publications. For example, the demand for Chinese publications to serve small to medium-sized businesses, young professionals, and Asian immigrant communities has flourished.

Some print publications that target music fans can be considered ethnic magazines, based upon their main target readership. These include hip hop magazines such as *The Source*, *Vibe*, and *XXL*, which caters to followers of African American urban culture; as well as *Tejano Magazine*, which caters to fans of the Mexican American genre of Tejano music.

Advertising in Ethnic Magazines

A larger share of corporate advertising dollars now flows to local ethnic magazines than ever before, interested in capitalizing on identity-based consumer behavior. As immigrant and second-generation ethnic communities grow increasingly upwardly mobile, they become more attractive to corporate advertisers. Moreover, advertisers today recognize the importance of immigrant markets for telephone companies, transportation, and banking services. This has created some conflicting dynamics on the purpose of ethnic magazines, which is to cherish and uplift ethnic voices and representation, and the often generic and exclusive representations of large corporate advertising campaigns. Consequently, some large advertisers have changed their creative vision in order to accommodate the increasing diversity of their target market.

Ethnic magazines smaller in scope, such as regional and local publications, serve more specific ethnic communities such as Vietnamese, Koreans, Russians, Colombians, and Asian Indians located

in specific cities, towns, or even neighborhoods. These publications tend to be more reliant on classified and local advertising dollars, and use a more periodical format. Thus, many of these smaller publications have uneven rates of long-term success because they are heavily dependent upon the wax and wane of local minority demographics.

Moreover, because of increasing publication costs and lesser availability of advertising dollars for the general print media at large, many print publications today have moved to a solely online presence, while most large ethnic print publications have established a strong online presence alongside their print editions in order to increase their readership and capture more advertising dollars.

Mahjar

Mahjar is an Arabic concept broadly defined in reference to any place of intended immigration. Arabs migrating to the United States, for example, are said to live in “mahjar.” The term has gained particular popularity in the phrase *Adab Al Mahjar*, or *Mahjar literature*, mostly produced by a group of prominent Arab American literary figures during the 1910s to the 1930s. Their literature is circulated widely in the Arab world and is much appreciated for introducing modern techniques in an attempt to engage with the long-held

premises of the classic school in Arabic literature. The contribution of such Arab Americans goes beyond aesthetic literature to encapsulate various political, religious, and social concerns that they tend to engage with, thereby registering an early example of a transnational yearning, challenging the push to assimilate immigrants in the United States at the time.

The root Arabic word for mahjar is *hajara*, which means leaving one's home. As a space, mahjar is broad in scope to include all kinds of voluntary and involuntary migrating processes. With the rising sense of pan-Arabism or Arab nationalism, a narrative that promotes Arab unity despite national differences, the term *mahjar* has gained a political meaning that prescribes it as a space for Arabs in a non-Arab country. Arabs living in Europe, America, and Australia are said to live in mahjar. For Arabs who rather celebrate their particular national heritage, that is, Egyptians, Syrians, Lebanese, Iraqis, Yemenis, and so forth, mahjar refers to any place in which they live away from their country of origin, including other Arab countries. For example, Yemenis living in Saudi Arabia, Egypt, the United States, or Africa are said to live in mahjar.

The popularity of mahjar as a concept lies in its promoting for discussion identity-related issues such as nostalgia, belonging, allegiance, language, and tradition. For many who choose to use the term, mahjar establishes a dual identity for their families and for themselves. Transnational ties are maintained at varying scales. This is usually embraced through sending remittances to one's home country; following one's native country's public news; participating in electoral events; contributing to scholarship and literature; creating friendships with others migrating from the same country; celebrating one's festivals, rituals, and traditions; teaching younger generations one's native language and dialect; and arranging for short family visits.

Although the term *mahjar* varies in usage among the migrating Arab communities, Arab states circulate the usage of the term in an attempt to keep ties with their migrants. This is usually administered through government measures to facilitate remittances, investments, visits, property purchases, construction, and so on. Embassies are often assigned the role of the state in deepening

one's affiliation with the country of origin. In mainstream Arabic arts and pop culture, the term *mahjar* mostly circulates in relation to questions of identity formation. The narrative of nostalgia is strong and present, and the importance of serving one's home is highlighted. Even though many migrants might eventually choose to disconnect themselves from their native country, the rich presence and circulation of the term and its connotations make it necessarily challenging.

The word *mahjar* has been increasingly annexed with other nouns, as in mahjar children, mahjar youth, mahjar tales, and mahjar students. Perhaps the most popular annexation of all time is mahjar literature (often referred to as mahjar poetry). This refers to the literature produced by early Arab Americans, recognized as mahjar poets or mahjar men of letters, who migrated to the United States in the late 19th century, mostly from Lebanese and Syrian origins. In 1920, they formed the first Arab American literary association, Al-Rabitah Al-Qalamiyah, or The Pen League (also known as The Pen Bond), which sought to offer a platform for Arab American writers to engage with the U.S. and Arabic public spheres. The Pen League includes such high-profile figures as Khalil Gibran, Mikhail Naimy, Ameen Rihani, Elia Abu Madi, Nasib Arida, Abdul Massih Haddad, Raschid Ayoub, and others.

In Arabic literature, mahjar poetry is considered an iconic school of poetry, often cited as a precursor to the 20th-century Arabic poetry reinvigoration. The topics discussed in such poetry are generated out of the poets' particular migration experience. Their sense of homesickness, struggle to earn a living, fascination with nature's beauty, interest in philosophical and existential issues, and reflection on Western influence are some of the prominent issues. In addition to diversifying content, mahjar poets also offer a refreshing change in style. Their poetry offers an increased use of symbols, and their composing breaks away from classic Arabic poetry.

Mahjar men of letters were actively engaged in the public space. They published three Arabic journals: *As-Sayeh*, or "The Traveler"; *Mirat Al-Gharb*, or "Mirror of the West"; and *Al-Funun*, or "The Arts." They celebrated their common Arabic heritage and promoted a sense of pan-Arabism. They were severe critics of the Ottoman

despotic rule, which controlled most of the Arab world at that time. They exhibited a passion to influence Arabic culture and literature and were held as a model of how mahjar is capable of producing a huge impact on the native lands. This further inspired other mahjar schools, particularly in South America, to reclaim their identity and contribute to literature through mahjar. It is such a celebration of innovation, production, and success that ultimately maintains the popularity of the term *mahjar*.

Maltese Americans

Malta is a European archipelago in the Mediterranean Sea, south of Sicily and north of Libya. Because of its location, it has been controlled at one time or another by most of the major powers of the region, including the Greeks, Romans, Arabs, Spanish, French, and British. It was settled by the Secani, one of the indigenous tribes of Sicily. There are some who think that ancient Maltese culture inspired the legend of the cataclysm of Atlantis. The Maltese people are the overwhelming majority of the country's ethnic groups; among the minorities, the British (most of whom

are retirees who immigrated for their retirement) are the largest. English is one of Malta's two official languages, along with Maltese. The country has a strong Christian heritage and is believed to have been visited by the Apostle Paul. Catholicism is the state religion.

There are a small number of Maltese Americans: 35,103 as of the 2010 Census. Because it is such a small country, many Americans knew little to nothing about Malta when the first Maltese immigrants arrived, and the widespread misconception that it was part of Italy may have led to some immigrants being listed as Italian.

Immigration and Assimilation

The earliest Maltese immigrants came to Louisiana before the Louisiana Purchase of 1803; some of their tombstones still survive today. Maltese immigration was exceptionally sparse until the 20th century, however, usually less than a dozen arrivals per year. This changed after World War I. Malta was under British control at the time, and the European economy was ravaged by the war, while the American economy was about to enter one of its greatest periods of prosperity.

Thousands of Maltese immigrants came to the United States in 1920, taking factory jobs in industrial cities like Detroit, New York, Los Angeles, and San Francisco. In Detroit, Maltese immigrants were a significant part of the expanding automobile manufacturing industry. As with many immigrants, many of the arriving Maltese intended to return to Malta after they had earned enough money, but most of them wound up setting down roots instead.

Today, most Maltese Americans live in Detroit; there is a large community in Astoria, Queens, New York, and communities in San Francisco, Chicago, and Los Angeles. Most are active Catholics. Prominent Maltese Americans include Joseph Borg, the securities commissioner of Alabama, a son of Maltese immigrants; musician Ray Buttigieg; Kid Rock's hype man, rapper Joe C., from the Detroit area; fringe political personality Andy Martin, one of the formulators of the birther conspiracy theory; Faster Pussycat and L.A. Guns guitarist Brent Muscat; comics artist Joe Sacco, author of the *Safe Area Gorazde* graphic novel; pop star and reality television judge Britney Spears (who, despite being from

Louisiana, actually comes by her Maltese heritage through her Maltese British grandmother); and cult researcher John A. Saliba. When the Liberty Bell in Philadelphia cracked during testing, it was recast by Maltese American John Pass, who made it less brittle by the addition of copper.

The *Malta Messenger*, based in New York City, is a periodical for Maltese Americans. A number of Maltese American cultural and social organizations exist, including the Institute of Maltese American Affairs, the Friends of Malta Society, the Committee for Maltese Unity, the Sovereign Military Order of Malta, the Maltese American Association of Long Island, the Maltese American Benevolent Society, the Maltese American Club, the Maltese American Community Club, the Maltese American Foundation, the Maltese American League, the Maltese American Friendship Society, the Maltese American Social Club of San Francisco, Maltese International, the Maltese Social Club, the Maltese Union Club, and Sons of Malta Social Club. Because church attendance among Maltese Americans is high, their communities often have their own parishes, despite the small size of the overall population.

In Malta, the tradition of the wake is not observed. Typically, the deceased is not embalmed and is buried within a day; undertakers had one of the lowest social statuses in Malta. The Maltese American community has abandoned this practice, and their funeral customs are much the same as other American Catholics. Maltese American baptisms, too, are somewhat different from those in Malta. Both baptism ceremonies involve choosing a *parrina* and *parrinu* (godmother and godfather), but whereas in Malta the ceremony is followed by the sorts of foods Americans associate with birthday parties—cake, ice cream, and candy—in the Maltese American community a full meal is served. Food also features in the Maltese American wedding reception and especially the bridal shower, which is usually a large affair (most family and friends can be expected to be invited), often in a rented banquet room.

Manifest Destiny

Manifest destiny refers to an expansionist ideology, spearheaded by powerful political and cultural actors in the 19th century in the United States. The ideology attempted to rationalize western expansion efforts and initially advocated the broadening of American boundaries past the initial 13 colonies, west toward the Pacific Ocean. Manifest destiny provided the rationale and political motive for annexing western territories making up the modern-day U.S. states of Texas, Utah, Nevada, California, Oregon, and New Mexico, as well as much of the modern American midwest and northwest.

Manifest destiny was more than just the expansion of one culture; by definition, it involved the displacement, eradication, or assimilation of native cultures as well as the European settlements that predated American expansion, from the Russians in Alaska to the Mexicans in the southwest and in California. In the modern, postcolonial American era, manifest destiny is often referenced as an archetype of American colonialist attitudes. Although generally referred to as a representation of bygone cultural attitudes, some scholars suggest that the cultural tradition of manifest destiny continues to be relevant in American politics and international affairs.

Historically, colonialist political attitudes in the United States were employed by prominent politicians to rationalize the forcible taking or “annexing” of western territories. Many of these territories were inhabited by indigenous North American populations prior to the westward expansion, whereas others were Spanish or Mexican territories. Following the Mexican-American War, the United States took ownership of a large portion of the newly independent Mexican state

Journalist John L. O'Sullivan, sketched in 1874, was an influential columnist as a young man but is typically remembered for his use of the phrase Manifest Destiny. He wrote of a "divine destiny" for the United States based upon values such as equality and rights of conscience.

and subsequently granted citizenship to the Mexicans who chose to remain, adding significantly to the country's Hispanic population. The doctrine was similarly utilized to add legitimacy to the colonization of island territories such as Hawai'i and the Philippines.

The term *manifest destiny* was originally coined in 1845 by American journalist John O'Sullivan, an advocate of the imperialist philosophy that the expansion of U.S. boundaries to the Pacific and beyond was an inevitable and positive force for good. The nascent period of boundary expansion by the U.S. government actually preceded the coining of the term *manifest destiny*, and scholars have noted that the terminology exemplified and galvanized an already existent cultural mind-set.

O'Sullivan's terminology was intentionally suggestive of a divine "ordainment" to the end of U.S. boundary enlargement, although subsequent use of the term often focused more on the economic, cultural, and political benefits of westward expansion. A number of scholars have

noted that manifest destiny also incorporated notions of racial, religious, and cultural superiority—as well as economic incentives derived from increased land resources and natural resource acquisition—as validation of efforts to expand regional influence.

The doctrine was articulated at a time when the country was undergoing one of its religious Great Awakenings—a period of greater spiritual revival in which new religious movements were formed. The term *manifest destiny* invoked religious concepts of Americans as a chosen people, without aligning itself with any specific religious creed, allowing Americans of various faiths and denominations to adopt the ideology.

The Discovery Doctrine and Other Ideological Supports

Popularly held views of racial and cultural superiority supported the notion that lands inhabited by indigenous people had not been claimed or settled in the Western sense and were therefore available for the American government to legally annex. This ideology was supported by a string of decisions from the U.S. Supreme Court expounding the "discovery doctrine," which invalidated legal claims to land by indigenous peoples on the grounds that these aboriginal communities were not civilized in the Western sense and were therefore incapable of possessing these territories. The most famous case expounding the discovery doctrine was *Johnson v. M'Intosh* (1823).

Another contributing factor to the rise in popularity of the doctrine was the dramatic population surge occurring in the country during the 19th century and the accompanying desire to accumulate land and economic resources to support the growth. Both native-born Americans and recent immigrants were encouraged to settle the west, transforming and Americanizing the frontier lands. One of the major political actors during the nascent period of manifest destiny was President James Monroe, in office from 1817 to 1825.

His Monroe Doctrine formally denounced the prospect of the United States from being further subjected to colonization by European powers—some of whom were still inhabiting neighboring North American territories at the time—and advocated an active national effort to remove Spanish and French influence from North American

territories. This provided a political baseline and the impetus for efforts to broaden the American ambit of political control.

In the mid- and late 19th century, politicians utilized the concept of manifest destiny to legitimize efforts to expand American control beyond these newly acquired lands and the previously acquired Louisiana Territory (which had been acquired from France in 1803 in the Louisiana Purchase and encompassed much of the modern-day American midwest). President Andrew Jackson utilized the ideology and romanticized rhetoric of manifest destiny to legitimize the use of military force to acquire lands in the midwest that were inhabited by indigenous tribes.

Jackson was a former general in the U.S. Army, and as president, he initiated large-scale military actions aimed not only at acquiring lands in the southeast and west of the Mississippi River but also at exterminating entire tribal populations. The resulting forcible annexations were the subject of the legal challenges leading to the formulation of the “discovery doctrine” rationale by the U.S. Supreme Court.

Around this time, a number of American settlers began traveling west, especially into the Mexican province of Texas. In 1835, the settlers rebelled against the Mexican state, and in 1845, the U.S. government annexed the newly created state of Texas. The Mexican-American War ensued, and an American victory led to Mexico ceding a large part of its provincial territory, including territories encompassing the modern-day states of California, New Mexico, Arizona, and Texas, and parts of Colorado, Nevada, and Utah, in 1848. This is how, in less than 50 years, the United States expanded its territories all the way to the Pacific border of North America.

The end of the 19th century saw further U.S. expansion into and colonization of Caribbean provinces, as well as increased international meddling by U.S. military forces, particularly in South America, in the years leading up to World War I. This period saw a slight variation in the traditional ideological underpinnings of manifest destiny, wherein cultural and political philosophies encouraged political involvement outside the continental United States as a mediator in international or transcontinental affairs (putting the modern conception of manifest destiny somewhat

at odds with another deeply ingrained American political tradition: isolationism).

This heightened international role grew exponentially during the world wars and arguably continued through the Korean War, Vietnam War and modern era military interventions in Africa, the Middle East, and elsewhere. Some scholars have identified these interventions as the origins of a new American imperialism, whereby national military policies encourage interventionism and disproportionate international influence, but not necessarily the literal colonization of territories or sovereign states.

Conclusion

At the core of manifest destiny is American exceptionalism, the idea that the United States and its people possess unique characteristics that distinguish them from the rest of the world. This notion, which was embraced even by many who condemned the imperialism and Indian wars of the 19th century, impacts not only American foreign policy but also the country’s approach to immigration policy. Exceptionalism claims that there is something special about being an American; advocates on either side of the immigration debate argue over who is therefore entitled to become an American. What is noteworthy about American exceptionalism, in contrast with the nationalism of many other countries, is that this sentiment is not being expressed about a single culture or ethnic group, but rather about a multicultural, multiethnic, multifaith Americanness.

Manufacturing and Ethnic Diversity

Manufacturing in the United States has a long history of ethnic diversity. The boom of the Industrial Revolution depended on the influx of labor brought by waves of 19th-century immigration. The Industrial Revolution in the United States began with the textile mills of Lowell, Massachusetts, which dominated the textile industry for generations.

Early in the era, textile mill labor was provided by young Anglo-American women. Lowell's factories offered better working conditions and higher wages than those of Europe, but a need to increase production as the Industrial Revolution took off led to the need to hire cheaper labor, usually for longer hours than these young women—often still living with their parents—could work.

Irish immigrants filled these jobs in the 1840s, followed by a series of immigrants from other countries in successive waves: French Canadians in the 1860s and 1870s, and Greeks, Poles, Portuguese, and Jews in the 1890s through the turn of the century. In Lowell, as in much of the country, newly arrived immigrants in need of jobs and connections were often used as strikebreakers. Over and over again, one generation of strikebreakers became integrated into the manufacturing community, aged, unionized, went on strike, and had their strike broken by a new generation of strikebreakers.

Each wave of immigrants faced resistance, both from “native” Americans and from earlier generations of immigrants. Each group worried that further immigration would drag down the high standard of living in the United States and the relatively high wages paid for factory work. In many cases, they were forced to establish ethnic neighborhoods. The Irish who came to Lowell to work in its first canal lived in tents and hastily erected shacks in “paddy camps,” which became the neighborhood known as the Acre, a gateway neighborhood that took in later groups of immigrants working in Lowell's manufacturing sector.

Employers encouraged friction between immigrant groups and played them against each other during times of labor unrest in order to transform employer–employee hostilities into

employee–employee hostilities. While French Canadians were arriving in Lowell and taking manufacturing and construction work, Chinese were arriving in California to work in mines and on the railroads, and the way that employers used the cheap wages that immigrants would accept as leverage against established employees' demands for pay increases played a large role in inspiring the birth of the labor unions and the brief-lived wave of workingmen's political parties. These unions and parties, in turn, were responsible for a century of anti-immigration legislation.

In the late 19th and 20th centuries, immigrant groups played a major role in the development of the manufacturing sector in the United States, especially in the major manufacturing centers of the midwest such as Detroit and Flint, Michigan; Chicago, Illinois; Cleveland, Ohio; and Gary, Indiana. The industrializing economy attracted new waves of immigration, particularly Czechs, Poles, Russians, and Italians, who settled in large numbers in these cities from the 1890s to the 1930s, and eastern Europeans of various nationalities who arrived in the early 20th century. More eastern Europeans arrived in the middle of the century as they fled the ravages of World War II and the spread of Soviet communism.

Contemporary Manufacturing

The average age of a worker in the manufacturing sector is about 50, and the workforce is gradually getting older. Some of the factors that have been blamed for discouraging the entrance into the field of young workers may also dampen white participation, as the decline of traditional engineering degrees and the lack of a college major in process automation has been blamed for discouraging college students from entering manufacturing careers. Because college students are disproportionately white, reducing the interest of white college students could have the effect of increasing the proportion of minority workers in the workforce.

According to the most recent Bureau of Labor Statistics data, the manufacturing workforce in the United States consists of 254,520 helpers and production workers; 293,540 inspectors, testers, sorters, samplers, and weighers; 294,620 machinists; 93,150 purchasing agents; and 703,740 team assemblers. Average hourly wages are \$24.06, and the average worker works 40.6 hours a week.

Averages for production and nonsupervisory employees are \$19.23 an hour for 41.6 hours a week.

Today, the manufacturing workforce is extremely diverse and, along with agriculture, provides numerous skilled and unskilled jobs to recent immigrants who may lack the language fluency or transferrable credentials to find well-paying work in other sectors. Amid long-running complaints that the American manufacturing sector is not as dominant in the global economy as it once was, many industry voices—including the National Association of Manufacturers (NAM)—have called for immigration reform as a labor solution. They argue that an improvement to an employment-based green card system and simplified procedures for temporary workers could help direct the flow of immigration toward a sector badly in need of an amplified workforce. Even amid the country's overall job shortage, there is a critically low supply of skilled workers in the science, technology, engineering, and mathematics fields, and NAM has specifically petitioned for years for the H1-B visa system to be improved in order to fill those jobs.

March on Washington for Jobs and Freedom

By 1963, civil rights activists were inspired by previous efforts to create change in U.S. society. On August 28, 1963, civil rights participants gathered on the Washington Mall. The March on Washington was initially envisioned as a demonstration to demand full jobs, decent housing, an end to racial segregation in public accommodations and schools, and more effective civil rights laws. Following the Civil War and passage of the Thirteenth, Fourteenth, and Fifteenth Amendments, the call for racial equality was brought to the fore. However, with the *Plessy v. Ferguson* decision in 1896, the doctrine of "separate but equal" was instituted into federal law, allowing for government-sanctioned legal segregation of blacks and whites and the incorporation of black codes. These codes restricted various social, political, and economic opportunities for blacks in most cities and states while also relegating blacks to second-class citizenship and denying them equality before the law.

Black codes eventually paved the way for Jim Crow legislation, which allowed for continuing racial disparities, discrimination, and inequalities. This ideology created a national environment for black exploitation. In response to this, creative waves of social reform campaigns established opportunities for coalition politics, which ultimately led to increased demands for black freedom and equality. Civil rights activities were well under way at the turn of the 20th century, which included the formation of the National Association for the Advancement of Colored People (NAACP) in 1909 and the National Urban League in 1910 as the two premier civil rights organizations throughout the nation. At the same time, blacks and their allies developed journals, editorials, and other periodicals that could be used as another vehicle in the fight for black rights.

During this time period, blacks began to move in mass numbers throughout the nation in search of better social and economic conditions. Although the "separate but equal" doctrine was more prevalent in the south, blacks still experienced racism, discrimination, and prejudice in the north. This was especially true in major urban

centers such as Chicago, Cleveland, Detroit, and Philadelphia, and also in areas where the black population swelled in a short period of time. In these instances, a white backlash emerged that developed into race-based restrictions on housing, jobs, education, and various social services.

Within this multilayered environment, demands for black equality and freedom became increasingly pronounced. Blacks continuously sought improvement in their social, political, and economic realities and, in addition to creating civil rights organizations, they engaged in an intensive effort of institution building that included labor unions, political entities, religious institutions, and social and cultural organizations.

Groundwork for Mass Protest

A. Philip Randolph originally conceived the concept of a march on Washington in 1941. Randolph used the idea as a political maneuver in negotiation with President Franklin Roosevelt to improve employment opportunities for blacks. Randolph, Bayard Rustin, and A. J. Muste proposed a march on Washington to protest racial discrimination in defense work and the armed forces.

A major development during the World War II era was the Double V campaign, in which millions of African Americans sought victory over fascism overseas, coupled with victory over racism and discrimination in the United States. The idea of nobly serving one's country in war with hope of securing and gaining further rights was not new; African Americans had fought in every major American war, beginning with the American Revolution. The rhetoric of ending fascism abroad during World War II created a fertile ground for efforts to dismantle domestic inequalities and hypocrisies. The demands of returning soldiers helped build momentum for unprecedented challenges and changes in the next decade.

The legal campaigns of the NAACP during the 1950s continued to lay the groundwork for change, notably with the 1954 *Brown v. Board of Education* decision that dismantled the "separate but equal" doctrine and outlawed all forms of racial segregation in public schools. The 1950s were a period of galvanization for blacks who, throughout the north and south, engaged in various acts of civil disobedience that helped

build momentum in the fight for full citizenship and civil rights.

Bus boycotts were used to challenge racial segregation on public transportation, and these led to other forms of civil disobedience that included the sit-in movement of the early 1960s, the Freedom Rides, and voter registration drives like the ones coordinated throughout the Deep South by civil rights organizations such as the Student Non-Violent Coordinating Committee (SNCC).

White backlash and violence continued to develop in response to black nonviolent civil disobedience. These responses came in multiple forms, ranging from numerous arrests and detainments, open physical attacks on black demonstrators by many local residents, and the use of fire hoses, billy clubs, and dogs by police personnel. Additionally, the Ku Klux Klan and the White Citizens Council engaged in various terror campaigns against blacks that included destroying black property, harassment, and numerous lynchings and murders of blacks. Many southern blacks who participated in demonstrations or attempted to assert their citizenship rights faced severe economic reprisals, lost their land, were denied access to resources, and had their employment terminated.

In April 1963, led by the activities of Martin Luther King, Jr., and the Southern Christian Leadership Conference (SCLC), civil rights activists launched Project "C"—for "confrontation"—in Birmingham, Alabama. Birmingham was noted as one of the most segregated cities in the nation and earned the name of "Bombingham" for the many violent acts against black citizens. King was arrested and used his "Letter From a Birmingham Jail" to justify the SCLC's work in Birmingham, the nonviolent protests, and the need to fight for change in American society.

During the first five days of peaceful demonstration, more than 2,500 protesters, the majority of whom were children, were arrested. After 38 days, the city promised to desegregate public facilities and begin an employment program for blacks. In the days after, blacks faced even more physical violence; King's hotel was bombed, black bystanders were beaten by state police, and a riot erupted in the city. Later, in June 1963, NAACP field secretary and civil rights activist Medgar Evers was assassinated in his driveway.

These activities created the backdrop for the March on Washington Campaign in August 1963. In response to continued white backlash and violence, black protests continued to spread, which showed the limitations of nonviolent tactics. Repeatedly, peaceful protesters and civil rights workers were violated physically and harassed, and some were even killed, without intervention from the federal government.

The John F. Kennedy administration and the federal government were criticized heavily because they did little to ensure that black constitutional rights were observed or protected. Activists and demonstrators were arrested under the auspices of disturbing the peace, yet they received no assistance in ensuring their peace and safety.

As a result, racial tensions continued to mount as throngs of citizens questioned the diplomacy of U.S. democracy. In the windfall, several civil rights organizations were criticized for their overreliance on the federal government and the ineffectiveness of nonviolent methods.

March on Washington, August 1963

Civil rights activities continuously challenged various forms of segregation and discrimination and had garnered a wide range of national attention. These protests, sit-ins, boycotts, and other actions led to the March on Washington in 1963. The spirit behind the march was for an even larger peaceful protest that was hoped would achieve equal rights and economic justice for all Americans.

Media coverage at the March on Washington was extensive and gave organizers national exposure and the opportunity to offer their own commentary through speeches and music. Bob Dylan performed several songs, including "Only a Pawn in Their Game," which is about the racially inspired assassination of Medgar Evers. Joan Baez joined Dylan for several songs and had earlier led the crowd in several verses of "We Shall Overcome" and "Oh Freedom."

The March on Washington is considered the signature event of the civil rights movement; it brought nearly 250,000 people to Washington, D.C. The spirit of the march was to demand equal access and rights while calling for an increase to the minimum wage, bolstering workers in agriculture and domestic service, creating more job opportunities, and providing for improved working conditions.

The march was initiated by A. Phillip Randolph and the Negro American Labor Council (NALC), and it garnered support from local unions and civil rights organizations in black working-class communities. As the March on Washington Coalition developed, the NALC combined its efforts with the SCLC, SNCC, and NAACP. In addition, these national groups connected with other grassroots organizations to create a groundswell in demanding change. The March on Washington, in both its design and its intent, bolstered a combined agenda “for jobs and freedom.”

The main portion of the march culminated at the Lincoln Memorial and followed a program. Randolph delivered the program’s opening remarks. With significant emphasis, a tribute to “Negro Women Fighters for Freedom” was also included to highlight the trailblazing work of black women in the civil rights era. On the surface, it seemed that men might have led the civil rights movement (and the March on Washington), but women’s roles were just as definitive in their organizing efforts.

Among the 10 remarks made at the march, the two that are privileged among the others are comments by John Lewis (SNCC) and King (SCLC). Lewis’s remarks are noteworthy because he revised his speech and removed much of what might be considered militant or inflammatory language at the urgings of the architects of the march. King’s remarks, most often referred to as his “I Have a Dream” speech, have been hailed as one of the greatest speeches in U.S. history.

King highlighted economic inequalities and the plight of the civil rights struggle at the time in the first half of his speech, but it is the second half, where he focused attention on racial harmony and the possibilities of a U.S. society that lined up better with the ideals on which the country was founded, that garnered the most attention.

The March on Washington was scrutinized by both participants and outside observers. The main criticism was three-pronged: first, the march failed to bring together broad-based economic reform; second, the labor agenda narrowly focused on men and did not initially include women; and third, some opponents claimed that the march’s agenda was compromised in an effort to appease white liberals.

Legacy

Despite the prevailing fears by the Kennedy administration, Wilkins, and other liberal supporters leading up to the event, the impact of the March on Washington can still be felt today. The march can be viewed as a definitive highlight of the civil rights movement, but even more importantly, its success is amplified by recalling the collaborated effort that brought together a significant number of organizations, concerned citizens, activists, and elected officials. In addition to the coordinated efforts of the NALC, SCLC, SNCCP, and NAACP, other organizations that sponsored the event included the American Jewish Congress, the Congress on Racial Equality, the Industrial Union Department AFL-CIO, the National Conference of Catholics for Interracial Justice, and the National Urban League.

The March on Washington left a lasting imprint within the American social, political, and cultural fabric as the agenda from the March on Washington Coalition convinced Presidents John F. Kennedy and Lyndon B. Johnson to broaden their scope of national civil rights legislation to include equal employment, a stronger Civil Rights Act, and the Voting Rights Act.

Marianismo

Marianismo is the conceptualization of female Latin American expected gender roles that emerge from the cult of worship related to the Virgin Mary/La Virgen de Guadalupe. In 1973, Evelyn Stewart coined the phrase as a counterpart to the concept of machismo, the expected dominant, oppressive male gender roles of Latin American men. Although the concept of marianismo is rooted in the Catholic religious reverence for the Virgin Mary, Stewart argues the concept is actually secularly infused in Latin American cultures and thus continues to shape expectations regarding women's behavior.

The cult of the Virgin Mary involves women emulating the Virgin, essentially proclaiming woman as semi-divine and morally and spiritually superior to men because she is able to endure immense pain and sorrow. In the 1970s, many Chicana feminists wrote about and actively challenged the cult of the Virgin as particularly oppressive to Latinas' equality, and they did this by confronting the oppositional concepts of "*la mujer buena*" (the good woman) and "*la mujer mala*" (the bad woman) that emerge from Mexican archetypes (the symbolic understanding of women's role as opposed to one that is complex) of true womanhood. The use of this term tends to be linked specifically to Mexico because of the relevance of La

Virgen de Guadalupe; however, marianismo and machismo are concepts that have been found in other Latin American/Hispanic areas.

La Virgen de Guadalupe and La Malinche

Chicana feminists look to Spanish colonization as the site of the entrenching of patriarchal ideologies in Mexican society. Whereas the stereotype of the Latina is a nurturing woman, non-feminist historians often ignore the matriarchal roots of the Americas. This is not to say that pre-Columbian Mexico did not have oppression or suppression of women, but rather to illuminate how colonization and conquest shaped expectations about women's behavior and gender roles that came directly from Europe.

Scholars tend to ignore the great mother *Coatlique* who ruled Aztec society as a god. She is the mother goddess of the earth and also birthed the moon and stars. With the arrival of Hernán Cortés in Mexico and the dominance of Catholicism as a tool of conquest, La Virgen de Guadalupe became the figure women should aim to emulate, replacing Aztec reverence of stronger female deities. La Virgen's endless love for her children, the ideal qualities of self-sacrificing woman, chastity, and purity free from sexual carnality mark La Virgen as the ideal woman, or "*la mujer buena*." "*La mujer buena*" is ideal in the *macho's* patriarchal domination because she puts the needs of her father, brother, husband, and children before her own. The model of subservience, however, is limiting and dangerous in the ways that it is often proscribed uncritically onto Latin American cultures.

This representation of womanhood is held in stark contrast to "*la mujer mala*," who can be seen as La Malinche or Malintzín, the indigenous woman who aided Cortés's conquest of Mexico in the role of his interpreter. She is credited as the mother of the birth of Mexicans as she was indigenous and the child she bore with Cortés, who was Spanish, was the first *mestizo*. As the mother of modern Mexicans, she has been characterized as a traitor; to be called a Malinche is to be a traitor to one's people.

Her sexual relationship (which may have been coerced) is seen as how a true woman should not behave, thus marking her as "*la mujer mala*." Both of these archetypes can be seen as contributing

to the maintenance of the idea that women must fit into a particular set of gendered expectations and behaviors, which represent how marianismo extends beyond Catholicism and is rather apparent in the general gendered attitudes regarding men's and women's proper roles in Latin American cultures.

Chicana Feminism

Because these archetypal figures of “*la mujer mala*” and “*la mujer buena*” do not allow women to assert their rights or imagine their roles in society as different from their roles under the rule of the macho patriarch, Chicana feminists have worked hard to reimagine and reclaim these figures' lives and roles and have pushed back against the ways that they emerged out of a specific colonial context. Through linking the ways that the Spanish colonizers created a hierarchy of good versus bad women through the church and in reimagining La Virgen and La Malinche as positive feminist figures, Chicanas have challenged these narrow options for womanhood.

Chicana historians uncover and bring light to the ways women who emulated La Virgen, who were seen as good, were often the poor Spanish women brought to the New World to marry the Spaniard occupiers. Those who were seen as bad were Las Malinches, who were the contrasting native, Indian women. In this sense, Chicana feminists argue that in order to challenge these limiting gender roles for women, they need to advocate decolonization of this colonial gendered system that was imposed on both women and men of Mexican descent.

They are also critical of the ways that machismo, as a tool to define male behavior, dominance, and patriarchy, and marianismo, as a concept that represents the self-sacrificing woman above all else, are often applied to Latin American women uncritically. Ultimately, marianismo is a concept that has been contested but still holds relevance for dominant and patriarchal society.

Mariel Boatlift

The Mariel Boatlift occurred during the spring and summer of 1980, when Cuban dictator Fidel Castro opened his island nation's ports and allowed any dissidents to leave Cuba. Over a period of four months, approximately 125,000 Cubans entered the United States through Key West, Florida, as political refugees fleeing the Castro regime. They were known as “marielitos” because they set sail from the Port of Mariel in northwestern Cuba.

Although the large-scale influx of Cubans to the United States began 20 years earlier, the Mariel Boatlift marked a turning point in Cuban American history, as this event shifted public sympathy for U.S. refugee policy toward Cuba and evoked a pernicious anti-Cuban backlash. This backlash was particularly strong in southern Florida, the destination of most marielitos. Nearly two-thirds of Cubans who entered the United States during the Mariel Boatlift settled in Miami.

Background

On March 28, 1980, a bus carrying six Cubans crashed the gate of the Peruvian embassy in Havana, and the passengers requested political asylum, triggering a wave of several thousand other Cubans seeking asylum from the Peruvian

and Venezuelan embassies. Despite Castro's insistence that the embassy turn over the asylum seekers to Cuban authorities, the Peruvians refused to comply. The incident quickly became an international embarrassment for the Castro regime, and Castro retaliated by instructing all Cubans who were unhappy with his regime to go to the Peruvian embassy.

Castro also announced that he would open the port of Mariel in northern Cuba so all were free to leave the island, under the caveat that they could never return to Cuba. Castro notoriously declared of the marielitos in May 1980, "Those who have no revolutionary genes, those who have no revolutionary blood . . . we do not want them; we do not need them!"

Within days of Castro's proclamation, thousands of Cuban refugees already living in the United States sailed to Mariel to bring their relatives back with them, but Castro used the boatlift as an opportunity to expel prisoners, mental patients, homosexuals, and other "undesirables" from his island. The U.S. Immigration and Naturalization Service reported that Castro expelled approximately 23,000 "non-felonious criminals and political prisoners," along with an estimated 2,000 violent criminals, during the boatlift. The boats returning to the United States thus carried far more people, most of them strangers to one another, than their captains originally intended. Many of these vessels were either makeshift floating devices or overcrowded boats filled well beyond capacity; some capsized at sea, resulting in drownings or in rescues by the U.S. Coast Guard.

Aftermath and Legacy

More than any other event, the Mariel Boatlift turned public opinion of the Cuban American community decidedly negative. Sensationalized television news footage of rickety boats, overflowing with dark-complexioned, Spanish-speaking passengers, traversing the harsh waters of the Florida straits en route to Miami, alarmed many Americans and evoked nativist sentiments that the country was "under siege." Even Miami's leading newspaper, the *Miami Herald*, took a decidedly negative tone in its coverage of the Mariel Boatlift.

Others pointed out the U.S. government's contradictory treatment regarding Cuban and

Haitian exiles. Although both Caribbean nations suffered tyranny at the hands of brutal dictators, the United States granted political asylum to Cubans essentially on demand while routinely denying refugee status to Haitians, who were customarily returned to Haiti or placed in detention centers if the Coast Guard apprehended them. This duality in treatment took on an apparent dimension of favoritism and racism, and it infuriated immigrants' rights advocates and African Americans alike.

The Mariel Boatlift also produced rifts within the Cuban American population itself. Whereas earlier waves of Cuban refugees during the 1960s and early 1970s were primarily lighter-complexioned and of a higher socioeconomic class, large numbers of those who entered during 1980 were darker-complexioned and came from the lower classes of Cuban society. Noting the strong backlash against the boatlift within the larger American society, many established Cuban Americans attempted to differentiate themselves from the newcomers. In fact, the term *marielito* came to function as a somewhat derogatory label used by older Cuban refugees for those who entered in 1980.

The influx of more than 80,000 refugees into Miami within a period of a few months placed an initial strain on public services, housing, and employment within the city, as well as impacting the cultural life of Miami. The Miami-Dade County Board of Supervisors, which had officially adopted a resolution declaring its jurisdiction both "bilingual and bicultural" in 1978, now witnessed a large population of non-English-speaking residents settling within its community. Language quickly emerged as a contentious issue in southern Florida, leading to the rise of a grassroots organization known as Citizens of Dade United that sponsored a November 1980 referendum that rescinded the previous bilingual/bicultural decree and established English as the official language of Miami-Dade County.

This referendum became influential, sparking similar legislation in other areas of the country and inspiring the English as the Official Language movement over the next few decades. The state of Florida declared English its official language in 1988. The Mariel Boatlift also serves as the backstory of Brian De Palma's 1983 film *Scarface*,

which stars Al Pacino as a *marielito* who brutally rises to the top of Miami's criminal empire.

Martial Arts

The martial arts consist of a variety of armed and unarmed forms of violent physical combat, each of which features a distinct fighting style and unique offensive and defensive techniques. The name *martial arts* stems from Mars, the Roman god of war. Practiced for centuries, various martial arts forms have emerged throughout the Far East, the Pacific Rim, the Indian subcontinent, Europe, Africa, and the Americas. Martial arts may be used either for purposes of self-defense or for sport. Highly diversified, martial arts styles can be characterized as strike-based, grapple-based, or weapons-based.

The martial arts gained tremendous popularity in the United States during the post-World War II era, stemming from American military personnel's exposure to martial arts while stationed in Asian societies, the cultural significance of Bruce Lee, and the growing visibility of martial arts within U.S. popular culture. The best-known types of martial arts in the United States today include karate, kung fu, and tae kwon do, and over the past two decades, Ultimate Fighting Championship (UFC) has emerged as a highly popular mixed martial arts professional sports promotion that features

athletes from a variety of nationalities and ethnic backgrounds. An estimated 6.9 million Americans practiced some form of martial arts in 2004.

Martial Arts Around the World

Although the martial arts are not exclusive to Asian societies, martial arts are most often associated with the Far East in the American public imagination. Historical evidence suggests that increased trade and contact between Chinese and Indian societies approximately 2,600 years ago led to a blending of military fighting styles that laid the foundation for modern Asian martial arts. As these early combat systems diffused to new areas throughout eastern Asia, they evolved into modified, newer fighting styles. Distinct varieties of martial arts are associated with specific nations, such as kung fu and tai chi ch'uan with China, karate and judo with Japan, tae kwon do with Korea, and *muay thai* with Thailand.

Although combat arts in the Western world date to the ancient Egyptians and Greeks, the rise of firearms as weapons in Europe during the 15th and 16th centuries led to a substantial decline in martial arts across the continent. Today, *savate*, a form of French kickboxing, and *systema*, a Russian fighting style dating to the 10th century, represent two of the most influential European martial arts. Various indigenous cultural groups throughout North and South America had their respective forms of wrestling and combat styles, centered on mastery of weapons such as the bow and arrow, knives, spears, clubs, and tomahawks. Historians identify 17 distinct fighting styles utilized by Native Americans. *Capoeira*, an Afro-Brazilian martial art that blends dance elements and acrobatic maneuvers with a variety of kicks, leg sweeps, and knife-wielding techniques, dates to the 16th century, when it first developed among the Portuguese colony's slave population.

Asian martial arts made their way to the United States with the settlement of Chinese and Japanese immigrants on the west coast and the Hawai'ian territory during the mid- and late 19th century, respectively. Jigoro Kano, a Japanese teacher and martial artist, developed judo during the 1880s, and this grappling art quickly spread to Japanese American communities in Hawai'i and California. President Theodore Roosevelt studied judo under Kano's student

Martial arts have crossed over into sports as various forms of sparring become competitive. Today, the Summer Olympics include categories for both judo and tae kwon do.

Yoshiaki Yamashita, whom he later appointed to teach judo at the U.S. Naval Academy.

Judo gained widespread popularity among American and European elites in the early 20th century and became an Olympic sport in 1964. The internment of Japanese Americans during World War II actually facilitated the creation of a national judo organization in 1952 by bringing together large numbers of Japanese American judo practitioners who had previously lacked contact with one another, albeit under oppressive conditions. The U.S. government viewed Japanese American instructors of judo and *kendo* (a Japanese art of sword fighting) as particularly dangerous and subversive during the war, designating such martial arts experts as “category A” security threats during the relocation phase.

Bruce Lee’s Legacy

Although U.S. servicemen stationed in east Asia during the postwar occupation of Japan and throughout the Korean War gained exposure to

martial arts, no one has influenced the exploding popularity of Eastern martial arts in Western societies more than Bruce Lee. Born Lee Jun Fan in San Francisco’s Chinatown on November 27, 1940, Lee remains the most culturally significant martial arts icon in North America and western Europe more than 40 years after his untimely death at age 32.

Lee’s father was a Hong Kong opera singer who relocated to the United States in 1939. In 1941, his family returned to Hong Kong, where Lee began to study the *wing chun* style of kung fu at the age of 13. Additionally, Lee became a child actor and appeared in 20 films by the age of 18.

Lee returned to the United States in 1959 and enrolled at the University of Washington, where he studied philosophy, met his wife, Linda, and opened a kung fu academy in Seattle. He later opened martial arts schools in Oakland and Los Angeles, and in 1966 he landed a starring role as Kato in the television series *The Green Hornet*, which enabled him to demonstrate his fighting skills to a large American audience. Lee developed a martial arts system, *jeet kune do*, by combining physical techniques with personal philosophical principles. Furthermore, he created the premise for the 1970s television series *Kung Fu* but was unfortunately denied a starring role in the program because of racial concerns in Hollywood that an Asian American lead actor would not appeal to a white audience.

Afterward, Lee returned to Hong Kong and pursued his motion picture career, starring in *Fists of Fury* (1971) and *The Chinese Connection* (1972) and directing *Way of the Dragon* (1972). In 1973, Lee starred in the joint Hong Kong–American film *Enter the Dragon*, which was critically acclaimed and generated more than \$200 million in worldwide revenue. Tragically, Lee died unexpectedly from an allergic reaction to a painkiller on July 20, 1973, in Hong Kong, one month before the premiere of *Enter the Dragon*.

Lee not only exposed millions of Americans to martial arts but also shattered long-standing discrimination against Asian Americans in Hollywood. Prior to Lee’s rise to stardom, white actors impersonating Asians (rather than Asian actors) often played the roles of Asian characters in films. Lee’s immense popularity paved the way for future Asian American martial arts stars

like Jackie Chan and Jet Li to establish successful careers within Hollywood.

Pop Culture Explosion

Capitalizing on the Bruce Lee craze of the 1970s, a series of martial arts motion pictures hit the silver screen during the 1980s and 1990s. *The Karate Kid* (1984) stars Ralph Macchio as Daniel LaRusso, a working-class Italian American teenager from New Jersey who relocates to the Los Angeles area with his single mother. A group of bullies continually attack LaRusso until he begins to study karate under the tutelage of Mr. Miyagi (Noriyuki “Pat” Morita), a middle-aged Japanese American and World War II veteran. Miyagi becomes a father figure to Daniel, teaching him self-confidence and valuable life lessons in addition to self-defense. Morita earned an Academy Award nomination for his performance, and the film inspired two sequels, a cartoon series, a video game, and a set of action figures throughout the 1980s.

Following *The Karate Kid*'s success, Motown executive Berry Gordy produced *The Last Dragon* (1985). Combining elements of romance, action, drama, and comedy, *The Last Dragon* pays tribute to Bruce Lee in overt and subtle ways. The film's protagonist, Leroy Green (Taimak), a young African American kung fu instructor, is affectionately called “Bruce Leroy” by his friends and brother. Posters of Bruce Lee adorn the walls of Leroy's gym, and the film showcases a musical montage of action scenes from Lee's films. *The Last Dragon*'s comedic elements stem from its shuffling of racial/ethnic stereotypes to different groups; the film features a trio of jive talking, craps-shooting Chinese men, while Leroy regularly dresses in a traditional Chinese shirt and straw hat and speaks in Confucian-style proverbs. A rival black martial arts expert, Sho'nuff (Julius J. Carry III), is known as the “Shogun of Harlem” and likewise dresses in feudal Japanese regalia.

The rise of video games during this time period also increased martial arts' exposure. A string of popular fighting-based games, including *Karate Champ* (1984), *Kung-Fu Master* (1984), *Renegade* (1986), *Yie-Ar Kung-Fu* (1985), *Double Dragon* (1987), *Street Fighter* (1987), *Double Dragon II: The Revenge* (1988), *The Final Fight* (1989), *Street Fighter II: The World Warrior* (1991), and *Mortal Kombat* (1992) targeted

teenagers and coincided with an expansion of martial arts academies nationwide.

These video games featured a multiethnic cast of characters, reflecting the popular association of martial arts with the Far East among Americans and the shift toward a pluralistic, multicultural society during the late 20th century. By the mid-1990s, the martial arts craze in American society had produced a new generation of adult-oriented action stars such as Chan, Steven Segal, Don “The Dragon” Wilson, Jean-Claude Van Damme, and Cynthia Rothrock.

Mixed martial arts (MMA) competition entered the ranks of mainstream professional athletics during this time. The first Ultimate Fighting Championship (UFC) event was held in Denver, Colorado, in November 1993 as a tournament featuring combatants from boxing, kickboxing, wrestling, karate, and jiu-jitsu styles. Dana White has served as president of UFC since 2002. During White's tenure, mixed martial arts has surged in popularity nationwide, and purchases of UFC pay-per-view events today greatly exceed those of boxing and professional wrestling.

Martin Luther King, Jr. Day

President Ronald Reagan signed Martin Luther King, Jr. Day, the third Monday in January, into

effect in 1983. The passage of this holiday was widely debated for a decade and a half before its passage. Opponents cited King's alleged communist ties and extramarital indiscretions as evidence against naming a holiday for him. Additionally, some members of Congress opposed the holiday because offering an additional day of paid vacation to government employees would be expensive and King never held public office.

Congressman John Conyers (D-MI) first suggested a holiday commemorating King in 1968, the year of King's assassination. In 1970, Congress received 6 million signatures supporting the declaration of the holiday. Although President Jimmy Carter supported the holiday, it never reached fruition during his term in office.

In 1980, Stevie Wonder released the song "Happy Birthday" to promote the Martin Luther King, Jr. Day campaign. President Reagan initially opposed the holiday, but the flurry of pro-King rhetoric and journalism in 1983, the 20th anniversary of his 1963 March on Washington, sanitized King's rhetoric into an altar call for classic American virtue.

Forms of Commemoration

Among King's supporters, debate ensued over the most appropriate way to commemorate his legacy. Coretta Scott King, his widow, wanted to emphasize establishment of the King Center, a research center for scholars of the movement and an educational center for the philosophy of nonviolence, in addition to a national holiday on January 15, King's birthday, to commemorate King's legacy. Leaders of the Southern Christian Leadership Conference wanted increased social and political activism as well as a national holiday on April 4, the anniversary of King's assassination. The King Center began an annual celebration of Martin Luther King, Jr. Day in January 1969.

Celebrations of Martin Luther King, Jr. Day provide an opportunity to remember the effects of racism in American history and the legacy of the civil rights movement in combating racial segregation and social injustice. Universities often host lectures on King's legacy and the movement in general, facilitating conversation and reflection about injustice and inequality then and now.

Despite King's later radicalism, particularly his harsh criticism of the U.S. government and

the Vietnam War, the American memory of King is mostly positive. King is remembered as non-violent, peaceful, brave, courageous, honorable, and inspiring. Though he was all of those things, he also espoused radical politics in his later life, particularly in objection to U.S. foreign policy and economic disparity. King's 1963 "I Have a Dream" speech is his best-known address and dominates the way most Americans remember King, more so than some of his other highly influential works such as the "Letter From Birmingham Jail," his Riverside Address, and his "I've Been to the Mountaintop" speech.

There is also some debate within African American communities concerning the extent to which civil rights leaders should be memorialized commercially. Many other civil rights leaders, in addition to King, deserve historical emphasis, such as Fred Shuttlesworth, Medgar Evers, Ella Baker, and Fannie Lou Hamer. Though many Americans believe that the civil rights movement is limited to King's work, the movement was much larger than one man. King played a significant role in the movement, but he alone did not make the movement, nor was he its only martyr.

Though Martin Luther King, Jr. Day is recognized at the state and federal levels, some white Americans consider the day a holiday for black people, and only about one-third of private-sector businesses observe Martin Luther King, Jr. Day as an employee holiday. In 2000, South Carolina became the last state to recognize Martin Luther King, Jr. Day, 17 years after Reagan signed the holiday into law. Some communities use Presidents Day and Martin Luther King, Jr. Day as floating holidays. Local chapters of African American organizations within a community sometimes have conflicts over which should hold primary responsibility for hosting Martin Luther King, Jr. Day events. A few communities have celebrated Martin Luther King, Jr. Day under alternate titles. For example, Virginia combined Martin Luther King, Jr. Day with Lee-Jackson Day, named for Confederate army generals Robert E. Lee and Stonewall Jackson. In 2000, Lee-Jackson Day was moved to the Friday before Martin Luther King, Jr. Day so that Martin Luther King, Jr. Day could be celebrated independently.

Mississippi observes Martin Luther King, Jr. Day and the celebration of Robert E. Lee's

birthday together, even as of 2013. Utah celebrated Human Rights Day until 2000, when the name was changed to Martin Luther King, Jr. Day. Arizona and New Hampshire celebrate Martin Luther King, Jr./Civil Rights Day.

Congressmen John Lewis and Harris Wofford suggested celebrating Martin Luther King, Jr. Day as a day of service. President Bill Clinton signed this change into effect in 1994. Many universities and communities celebrate Martin Luther King, Jr. Day of Service with volunteer service projects because of this change.

Outside the United States, a select number of communities also celebrate Martin Luther King, Jr. Day: Hiroshima, Japan; Toronto, Canada; and Jerusalem, Israel.

Mascots, Native American (Sports)

The use of Native American imagery in sports began to proliferate in the early 20th century. Over 3,000 schools have used Indian mascots or Indian-themed names, some for over a century. Currently, somewhere between 1,000 and 2,000 schools still have mascots such as the Braves, Indians, Warriors, Chiefs, Redskins, and

Savages, and tribal names including Chocktaws (*sic*), Apache, and Seminoles. In 2000, the United Methodist General Conference convention in Cleveland, Ohio, protested the name and mascot of the Cleveland Indians baseball team as offensive to Native Americans, and the delegates in 2004 approved a measure asking for a boycott of cities that used offensive Native American names and mascots. The 2012 convention relocated from Richmond, Virginia, home of the Richmond Braves, to Tampa, Florida.

College and Professional Sports Mascots

In 1970, the University of Oklahoma was first to successfully eliminate use of an Indian caricature, Little Red. In 1971, Sammy Sioux was retired, although the University of North Dakota retained the Fighting Sioux nickname. Stanford's Indians became the Cardinal in 1972 (named for the color, not the person or bird), and in 1973, Eastern Washington converted from Savages to Eagles. Name changes continued to occur into the 1990s at Marquette, St. John's, St Bonaventure, and many more. In 2001, the General Commission on Religion and Race of the United Methodist Church contributed \$10,000 to an Illinois community organization attempting to convince the University of Illinois to retire Chief Illiniwek. In 2007, the university finally retired the mascot, but only because the National Collegiate Athletic Association (NCAA) banned participation in post-season competition of teams with Native American mascots. These tournaments bring great sums of money to universities.

In February 2012, fans of the University of North Dakota “Fighting Sioux” filed petitions that called for an election to imbed the nickname in the state constitution and the state repealed the 2011 law that authorized the school to abandon the name. The NCAA reiterated that the school would be barred from hosting NCAA championships, and all athletes, cheerleaders, and band members would be barred from using the name or image in any NCAA-sponsored event. The NCAA mandated in 2005 that schools must end Native American mascots and logos unless the tribe affected gave permission, which the Standing Rock Sioux did not, despite the dominance of the Fighting Sioux in ice hockey. In May 2012, the university agreed to discontinue the

mascot; in June, the state's voters approved the dropping of the mascot; and in September, the NCAA agreed that logos could remain in place inside the university sports arenas.

Exempt from the NCAA ban, professional teams and public school teams down to the junior high level continue to distort Indian tradition, reflecting the Hollywood style of face paint and buckskins and drumming, dancing, and chanting. Some have the consent of local tribal authorities, but most mascots are used in spite of the Indian community's protest. Some are slurs: "Red Devil" dates to Indian war calls for extermination of "red devils," and *squaw* is a degrading term for Indian women. Even teams that do not specifically have Indian names use caricatured Indians as their mascot or logo. Live mascots generally are whites in Plains Indian-like outfits.

Arguments in Defense of Mascots

As Barbara Munson explains, advocates claim that they do not understand why Indians do not feel honored, and Indians retort that there is no honor in mockery of sacred eagle feathers, drums, face paint, and traditional dress. Those items are sacred to Native Americans, and Munson notes that taking them from their proper context and using them for play is not an honor. It doesn't matter if the depiction is attractive, rather than a caricature; it is still a stereotype that denies the present-day existence of Native Americans, silences the Native American voice, and marginalizes the Indian.

Another claim noted by Munson is that the mascots are helping preserve Indian culture. Some think that it is acceptable to substitute powwows and sacred songs for cartoons. Critics say that this use of elements out of context is not appreciation but parody. Those who seek to retain the mascots contend that they are seeking to honor Native Americans. Most Native Americans see the mascots and symbols as reinforcement of negative stereotypes, sometimes even incentive to hostility and intimidation toward Native Americans, including students at the schools with Native American mascots. Schools that eliminate their mascots face backlash, ranging from student walkouts and protests to violence and campaigns to restore the mascot.

Arguments Against Mascots

The American Psychological Association (APA) in 2005 called for the immediate end to the use of American Indian mascots, images, symbols, and characters by all schools and teams. The APA rested its demand on increasing social science literature outlining the harmful effects of inaccurate portrayals and stereotyping, particularly the harmful impact of sports mascots on the development of social identity by young Native Americans. Studies such as one performed by Northeastern University in 2007 find that Indian team names, mascots, and logos perpetuate stereotypes and encourage children, native and non-native alike, to accept racism and stereotypes. Most communities are proud of their high school teams, but mascots are just youngsters, usually white, playing "Indian." Mascots are a form of prejudice that diminishes the ability of Native Americans to uphold their religious, cultural, and traditional values.

Mascots and stereotypes rewrite history, ignore present abuses, and promote physical and psychological violence and abuse of native culture and customs. The abuses sometimes generate high-profile cases, but the most damaging impact is in day-to-day casual racism, as in the unthinking reference to an Indian as "chief," the expectations that Indians of all ages and preferences will model Hollywood Indianness, and the putdown of Indians who decline to so stereotype themselves. Media reports at the time indicated that when American forces killed Osama bin Laden in Pakistan, the notification phrase used to signal his death was "Geronimo EKIA," or enemy killed in action. Shortly thereafter, Suzan Shown Harjo, president of the Morning Star Institute, testified before the Senate that it was shocking to equate a role model for Indian children with a terrorist. Furthermore, white Americans had again thoughtlessly stolen an Indian name, an identity.

Conclusion

Signs of thoughtless disrespect are common in American society. Hollywood and television carelessly costume members of different tribes in Plains Indian garb and define Indian behaviors and customs in stereotypical terms. Also, in the YMCA's Indian Guides and Indian Princesses, whites organize in "tribes," dress in pseudo

Indian attire, elect chiefs, and parody native American rituals, all without acknowledgment or request for permission. Mark Hyman, in *The American Spectator*, dismisses the controversy as political correctness gone overboard. There are also renewed claims that mascots honor Indians, commonly citing a 2002 *Sports Illustrated* poll that seems to suggest that 81 percent of Native American respondents saw no reason to discontinue using Indian names and 75 percent were not offended by the name “redskins.”

However, as reported by Bluecorncomics.com, the poll was an anomaly, and in more methodologically sound polls, Indians overwhelmingly object to the stereotypical mascots. Another defense is the holding of public meetings and voting on whether or not to keep the mascot—allowing white votes and statements equal weight with Indian statements and votes, although there is no true stake for the whites. Non-Indians continue to debate whether or not the mascots are offensive, but Native Americans have settled the matter. By an overwhelming majority, Indian governments and organizations reject the continuing use of mascots.

Mason-Dixon Line

The Mason-Dixon Line is a place, a symbol, and a culture of its own. Most notably, it symbolizes the division between the north and the south in American culture. From its historic, antecedents as a means of determining the boundary between Maryland and Pennsylvania in the 1760s and the Civil War designation of the southern slave states from the free north, the Mason-Dixon Line has come to represent the demarcation of southern culture, as much myth as reality.

Charles Mason and Jeremiah Dixon

The line, now extending from the Atlantic Ocean to the Ohio River in West Virginia, gets its name from English astronomers and surveyors Charles Mason and Jeremiah Dixon. They were hired in 1763 to settle a 100-year-long dispute deriving from conflicting boundaries between Maryland and Pennsylvania and Delaware and Maryland. The Calvert family, the founding family of Maryland, and William Penn’s family of Pennsylvania each had claims to territory north of the Potomac and near the 40th degree North latitude, stemming from royal land charters in 1632 and 1681, respectively. Mason and Dixon began their survey in 1763 at the Delaware River and finished 233 miles later in 1767 near Mount Morris, Pennsylvania. They placed markers with the Calvert and Penn family crests every five miles along most of the line, many of which remain. The line was extended to the Ohio along the 39° 43' 19.521" north latitude.

Historically, the line has symbolized the separation of the north from the southern slave states of the Civil War. South of the Mason-Dixon Line, the culture included the heritage of British and French settlers as well as that of the slaves of African descent. The new reality is that 16 percent of the population is now Hispanic and 15 percent is African American.

Symbols of the Mason-Dixon Line abound, from the Confederate flag to magnolia blossoms, from plantations to tobacco farms, from sweet tea and grits to NASCAR racing and college football, from southern gospel to the Grand Ole Opry. A look at these and other aspects of life south of the Mason-Dixon Line demonstrates the persistence and cultural power of this image, despite changes in demographics and economic realities.

The Mason-Dixon Line's most prominent symbolism is that of a border between free and slave states and the Civil War. Those 11 states south of the Mason-Dixon Line included the seven original states of the Confederacy: South Carolina, Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas; then the additional four that came after the April 1860 battle of Fort Sumter: North Carolina, Virginia, Tennessee, and Arkansas. Strong cultural ties also are held by portions of Kentucky, Maryland, Missouri, and Oklahoma.

For demographic purposes, the area "south of the Mason-Dixon Line" is the southern census area: Alabama, Arkansas, Delaware, the District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

Culture south of the Mason-Dixon Line historically has the most ties to British, French, and African cultures, reflecting the historical immigration patterns and the influx of African slaves. Although new cultural influences are being introduced with the rapid increase in the Hispanic population in the United States and in the south, the mythic concept of the Mason-Dixon line still persists.

The geography south of the Mason-Dixon Line provides part of the appeal and sense of regionalism. The Appalachian and Blue Ridge Mountains, coastal waterways along the Atlantic Ocean and the Gulf of Mexico, the red clay of Georgia, and the lush farmlands, swamps, and bayous each produce their own cuisine and culture.

The Mason-Dixon Line connotes an agrarian society, one of large plantations of rice, cotton, sugar, and tobacco. The growth of plantations prior to the Civil War depended on the work of slaves, who composed one-third of the population. Values, culture, and laws developed that supported the ideology and lifestyles of the aristocratic plantation owners: paternalism, day laws, segregation of social and cultural institutions, and white treatment of African Americans.

With the mechanization of farming and growth of agribusiness in the south today, the workforce has changed, most dramatically with the influx of Mexicans and other persons of Latino descent, some documented and some undocumented.

The Mason-Dixon Line also connotes a memorable cuisine memorialized in countless church

A Mason-Dixon Monument in Delaware, Maryland, houses one of the boundary markers that were originally placed at every fifth mile along the line, oriented with family coats of arms facing the state that they represented.

and Junior League cookbooks. The core of the menus includes tomato aspic, fried chicken, fried catfish, country ham, fried okra, cheese grits, cornbread, collard greens, sweet Vidalia onions, fried apples, and coconut cake, all washed down with sweetened iced tea. Coca-Cola, Pepsi, and RC Cola originated south of the Mason-Dixon Line, as did Moon Pies. It is no wonder that the rates of obesity, type II diabetes, and heart disease are the among the highest in the United States: Almost 30 percent of the people south of the Mason-Dixon Line are obese.

Music and the Mason-Dixon Line mean hill-billy banjo picking, steel guitars, and country music as well as the blues. Names such as the Carter family, Merle Haggard, Tammy Wynette, George Jones, Jerry Lee Lewis, Elvis Presley, and Johnny Cash stand along the more contemporary Garth Brooks, Alan Jackson, Billy Ray Cyrus, Mary Chapin Carpenter, and Reba McEntire. The Grand Ole Opry in Nashville, Tennessee, stands as an icon for southern music. It has been showcasing performers since 1925, when it was founded by radio broadcaster George D. Hay. Early performers like Roy Acuff (1938) and Minnie Pearl

(1940) put the Grand Ole Opry on the map with their homespun humor and corny sketches. Nashville now hosts the Country Music Hall of Fame and a thriving music industry.

Writers have contributed to the mythic images of the Mason-Dixon Line, and these images have not always been flattering. In their works, they have captured the deep contrasts between rich and privileged whites versus the disenfranchised slaves and—after slavery—poor African Americans, as well as the stereotype of the “redneck” versus the “city slicker.” Genres also reflect deeply held religious beliefs—especially Baptist and evangelicalism, the legacy of the Civil War and defeat, racism, and the impact of the terrain. Mention the Mason-Dixon Line and books like *Gone With the Wind*, *To Kill a Mockingbird*, *All the King’s Men*, *As I Lay Dying*, *Cold Mountain*, *Their Eyes Were Watching God*, *Roots*, *I Know Why the Caged Bird Sings*, *Beloved*, and *The Help* come to mind. Authors who have shaped the popular conception of the Mason-Dixon Line include James Agee, Harper Lee, William Faulkner, Flannery O’Connor, Robert Penn Warren, Thomas Wolfe, Toni Morrison, Zora Neal Hurston, Walker Percy, Alice Walker, Eudora Welty, and Richard Wright.

Movies made the Mason-Dixon Line part of the cultural fabric of the United States. Iconic images have depicted the wide range of plantation life in *The Little Colonel* (1935) and *Gone With the Wind* (1939), rednecks and rural living in *Deliverance*, *Smokey and the Bandit*, *My Cousin Vinny*, and *Sweet Home Alabama*; racism in *To Kill a Mockingbird*, *The Color Purple*, *Driving Miss Daisy*, and *The Help*; the legacy of the Civil War in *Cold Mountain*; and southern women in *Fried Green Tomatoes*, *Steel Magnolias*, *Sweet Home Alabama*, and *Divine Secrets of the Ya-Ya Sisterhood*, and *O Brother Where Art Thou?*

The Mason-Dixon Line marks a region in which college football and NASCAR racing reign supreme. Stadiums filled with thousands of fans wearing team colors and participating in elaborate traditions of tailgating amid a sea of recreational vehicles are not uncommon sights. Southern Conference (SEC) football generates almost \$300 million in revenues from televised games, championships, and bowls.

For persons of color, the Mason-Dixon Line may have negative and frightening connotations.

From the heritage of slavery to the inception of the Ku Klux Klan, legal and informal discrimination against persons of color has been part of the story of the Mason-Dixon Line. Before the Civil War, 30 percent of the population in the south was slaves. After the Civil War and until the Civil Rights Act of 1964 and the various civil rights protests of the late 1960s, separate and unequal education, transportation, dining, and religious and leisure institutions prevailed. The rise in nationalistic and Aryan-supremacy groups since the September 11, 2001, attacks is nowhere more evident than south of the Mason-Dixon Line, with over a third of hate groups in the United States found in that area.

The Mason-Dixon Line continues to signify a place with its origins in a centuries-old boundary dispute and a place in the myth, mystique, and marketing of the dividing line between the north and the south.

McLaurin v. Oklahoma State Regents (1950)

One of two segregation cases heard by the U.S. Supreme Court in 1950, *McLaurin v. Oklahoma State Regents* helped establish early desegregation precedent in higher education and professional schools, precedent that proved essential to overturning *Plessy v. Ferguson* (1896) in *Brown v. Board of Education of Topeka* (1954). However, the University of Oklahoma's recalcitrance to enforce the desegregation ruling also portended the post-*Brown* response by like-minded segregationist communities, institutions, and states.

Origins of the Case and the Decision

Beginning in the 1920s, Charles Hamilton Houston turned the National Association for the Advancement of Colored People's (NAACP) focus toward slowly and systematically dismantling the precedent of "separate but equal" set forth in *Plessy v. Ferguson*. Through the development of the Howard University Law School and the NAACP's Legal Defense and Educational Fund, Hamilton and his young protégé Thurgood Marshall began filing lawsuits in education, public accommodation, and transportation cases.

Following World War II, Houston and Marshall turned their attentions to desegregating professional schools at state universities. Their strategy was to show that even when states attempted to fund an equal law, education, or medical school for its in-state African American students, not only did these schools fall short of equality, but it also was impossible for them to replicate intangibles, such as having prestigious alumni and long-standing reputations.

McLaurin, along with the University of Texas case *Sweatt v. Painter* (1950), built on the success of *Sipuel v. Board of Regents of University of Oklahoma* (1948), a case that opened up the only state law school to African Americans through the equal protection clause of the Fourteenth Amendment. The NAACP would build and argue the *McLaurin* and *Sweatt* cases almost simultaneously during 1950, resulting in the desegregation of professional schools and setting the stage for large-scale litigation against segregation at the undergraduate and public school levels.

Encouraged by the Court's ruling in *Sipuel*, eight African American students applied to professional schools at the University of Oklahoma. However, the university refused admission to all eight students on the basis of race. Of the eight, Marshall believed that George McLaurin would make the most sympathetic plaintiff and the strongest case to pursue. McLaurin was a 68-year-old teacher who had a master's degree and wanted to pursue a doctoral degree in education.

With the financial backing of the NAACP Legal Defense and Educational Fund, Marshall filed suit in the U.S. District Court for the western district of Oklahoma because he believed that the state of Oklahoma and the University of Oklahoma had so blatantly violated the Supreme Court's ruling by failing to offer McLaurin either admission or a comparable in-state education. The court ruled in McLaurin's favor, stating that until the University of Oklahoma established a graduate school for African Americans equal to that for white students, the university had to admit qualified black applicants to its graduate education program.

The university responded by admitting McLaurin and then isolating him from the white students, forcing him to sit in a desk outside the classroom in order to preserve segregation. In addition, the university required him to eat in a back section of the cafeteria at separate hours from white students and in a designated section behind the newspapers in the library.

Marshall returned to U.S. District Court in 1949. In his arguments before the court, Marshall emphasized the humiliation and isolation that McLaurin's treatment created. After the court ruled against McLaurin, Marshall appealed directly to the U.S. Supreme Court. The Supreme Court decided to hear arguments for both *McLaurin* and *Sweatt* on the same day.

Supreme Court Arguments and Ruling

In his arguments before the Supreme Court, Marshall used a similar strategy in both cases and the familiar argument that emphasized the inherent impossibility of creating separate but equal educational experiences. Lawyers for the University of Oklahoma pointed out that Marshall's briefs failed to cite a single precedential case that held that separate but equal education violated the

Constitution. Even with *Sipuel*, Marshall knew that the court would have to overrule *Plessy* in order to rule in favor of either *McLaurin* or *Sweatt*. Thus, Marshall constructed his arguments accordingly. He agreed that in the segregated arrangement, *McLaurin* heard his professors' lectures, took the same exams, and enrolled in the courses he wanted. But because *McLaurin* was separated from his fellow classmates, solely on the basis of race, he could not participate in class discussions and interplay among classmates and professors, and thus, his education simply could not be equal.

In June 1950, the unanimous Supreme Court ordered the University of Oklahoma to end its systematic separation, segregation, and humiliation of George *McLaurin*. In his opinion, Chief Justice Fred M. Vinson stated that subjecting a student to sequestration "handicapped [him] in his pursuit of effective graduate instruction." The court disappointed Marshall and the NAACP's legal defense team, however, by not agreeing that the matter presented in *McLaurin* warranted a re-examination of *Plessy*.

Nonetheless, *McLaurin* and its partner case, *Sweatt*, did succeed in placing segregation at war with itself and placed the conversation of "separate but equal" on the table again for debate. In the months and years following *McLaurin*, Marshall and the legal defense team used the Supreme Court's 1950 decisions as the foundation on which to build the large multistate case, *Brown v. Board of Education*, that in 1954 did finally overturn *Plessy* and desegregate public schools in the United States.

Media, Ethnic

Ethnic media in the United States number close to 3,000 organizations, serving a wide range of ethnic communities throughout the nation. Ethnic media provide vital cultural, political, and social resources for the audiences they serve. They also constitute a significant form of economic competition for mainstream media. Ethnic media have played a vital role in U.S. social history. Ethnic media reflecting the changing fabric of the population of the United States are quickly evolving.

Historical Role of Ethnic Media in the United States

Ethnic media have played many roles for each immigrant and ethnic group since colonial times. Ethnic media have always permitted their readers, listeners, and viewers a way to stay in touch with home countries, learn about the communities in which they live, and connect with different cultures, both in the United States and around the world. They have provided a voice for social and religious concerns, effective liaisons and connectors for their constituents, and vital channels for politicians, educators, religious leaders, and health-care entities that seek to interact with their target audiences. A look at selected groups of immigrants and their early media illustrates the social and religious roles played by ethnic media, even from the 1700s.

Ethnic media most likely began in the American colonies with German-language books and newspapers. German immigrants seeking freedom from religious persecution flocked to the colonies, especially to the area around Philadelphia, in the 1700s. Bibles, catechisms, and newspapers printed in German served them. Andrew Bradford and Benjamin Franklin published a German newspaper in 1732, but it folded after two issues. In 1732, the German-language newspaper *Philadelphische Zeitung* was founded. The next year, the German indentured servant John Peter Zenger founded the *New York Journal*. Zenger made history two years later for his landmark case involving seditious libel and freedom of press. In 1739, Christopher Sauer published the first German almanac in the United States, a genre that remained very popular with the large immigrant group.

African American media started with the founding in 1828 of *Freedom's Journal* by John Russwurm and Samuel Cornish. Russwurm, the first African American to graduate from a university in the United States (Bowdoin in Maine) and Cornish, a militant Presbyterian minister in New York, stated their objectives prophetically for ethnic media: "We wish to plead our own cause. Too long have others spoken for us. Too long has the public been deceived by misrepresentation in things which concern us dearly." Although this publication folded by 1830, others appeared, including the *North Star* by abolitionist Frederick Douglass in 1847 and the *Anglo American Magazine* in 1857. Many black newspapers arose after the Civil War and during Reconstruction, growing from 12 black newspapers in 1866 to 575 in 1890. The Great Migration of southern blacks to the north, especially Chicago and New York, were reflected in the *Chicago Defender* and the *New York Age*. The fiery journalist Ida Wells became the first African American editor of a newspaper in 1889, the *Free Speech* in Memphis, but was forced to move to New York to continue her antilynching journalism in the face of southern racism.

Black newspapers in the 20th century continued to expose racial injustice and raise the awareness of civil rights issues. The Nation of Islam's *Muhammad Speaks* had a circulation of 600,000 in the 1960s. In addition to newspapers, magazines that targeted black audiences began publication.

These included *Jet* and *Ebony*, founded in the 1950s by John L. Johnson; the women's *Essence*, founded in 1970, and *Black Enterprise*, aimed at black businesses. Black-owned broadcasting media have a much shorter history, beginning in 1949 with WERD in Atlanta, Georgia.

Another major immigrant group, the Irish, have also had a long history of newspapers in the United States. In 1822, Bishop of Charleston John England founded the *United States Catholic Miscellany* as the first official Catholic newspaper in the United States. Nativism, which sought to restrict the rights of immigrants, and discrimination against Irish Catholics in the south led him to create the publication; it lasted 40 years. New York's first Irish American newspaper began in 1825 as *The Truth Teller*; it was founded by William Andrews, a convert to Catholicism.

Jewish American newspapers and magazines also have a long history. The 19th-century *The Israelite* newspaper has had a major impact on American Jews. Founded in 1854, it is still published today as *The American Israelite*. Yiddish newspapers were numerous and helped Jewish immigrants with the process of Americanization. Jewish newspapers played a role in union and labor movements, including *Der Yunvon arbayer* (The Union Worker, 1925–27) and *Di Fraye arbeter shtime* (The Free Voice of Labor). Magazines aimed at Jewish women also developed in the early 20th century, such as the National Council of Jewish Women's *The Jewish Woman*. Regional and community newspapers continue to appeal to Jewish communities in the United States.

Spanish-language newspapers have played a vital role in education, assimilation, awareness, and political change. The first Spanish-language newspaper in the United States began in 1808, *El Misisipi*, founded in New Orleans. From coast to coast, Spanish-language newspapers were published. These included *Traducción Prensa* (1888–95, Tampa); *Revista Católica* (1888–95, Las Vegas, New Mexico); *El Nuevo Mexicano* (1890–1908, New Mexico); the voice for social change in the American Southwest, *Regeneracion: Semanal revolucionario* (1910–17, Los Angeles); and *Pueblos Hispanos* (1913–59, Puerto Rican, New York).

In the mid-19th century, San Francisco became a center for newspaper publishing. At that time,

Chinese were coming to the United States and providing inexpensive labor for gold mining, the railroad industry, and other growing businesses. The first newspaper aimed at the Chinese was the bilingual *Golden Hills' News*, founded in 1854. In the 1840s, only 36 Chinese were recorded as immigrating through San Francisco; during the next decade, over 41,000 entered the area. Chinese journalism expanded in 1858 with the founding of the *Chinese Daily News* in Sacramento. The East Coast's first Chinese newspaper began in New York in 1883. Early Chinese-language newspapers provided news of home, exposed labor and social abuses, and also provided education and awareness about the United States. Numerous publications also mirrored political turbulence and partisanship from the late 19th century through the end of World War II. For example, in 1899, the Chinese Empire Reform Association (Zhonguo Wei Xin Hui) took control of *Mon Hing Bo*, a Chinese weekly in San Francisco, changing its name to *Sai Gai Yat Po World Journal*.

Other Asian newspapers have developed to reflect immigration patterns. In particular, Japanese journalism began with publications in Hawai'i and San Francisco, including *Shinonome* (Dawn, 1886), *Shin Nippon* (New Japan, Oakland, 1887), and *Soko Shimibun* (San Francisco daily, 1892).

Native American journalism has provided a steady voice. The first Native American newspaper, the *Cherokee Phoenix* began publication in Georgia in 1828 with Elias Boudinot, a Cherokee born Galagian Oowatie, as editor. Published in both Cherokee and English, it narrated the tragedy of the forcible removal of the Cherokee. Renamed in 1829 to the *Indians' Advocate*, it lasted until 1834. Boudinot broadened the scope of the paper to cover Indian removal, Supreme Court decisions related to Indian issues, and other issues; he was removed as editor in 1832 by the Cherokee tribal council.

Penetration

Ethnic media provide significant sources of news and information to their constituents. The reach, penetration, and effectiveness of ethnic media are considerable. However, until the last decade, this penetration was not measured, and mainstream media were reluctant to value ethnic media as viable sources for collaboration. The first attempt

to quantify the penetration and usage of ethnic media was a seminal 2002 survey by New California Media (now New America Media) of 2,000 California residents—a portion of the 17 million minorities in California at that time. Conducted in Chinese, Korean, Cantonese Chinese, Laotian, Hindi, Cambodian, Mandarin Chinese, Spanish, Vietnamese, and Tagalog, the survey reported that 84 percent of Asian American, Hispanic, and African American respondents reported receiving information through ethnic television, radio, and publications. Sixty-eight percent said they preferred watching news on ethnic-language channels than on English-language channels. Approximately 40 percent of respondents reported paying more attention to ethnic-language ads than to ads in English media.

Ethnic television serves as the major source of news for its viewers. The largest audience penetration is from Spanish-language media, at 89 percent. African American media reach 79 percent of their audience, and Asian American media reach 75 percent. Asian Americans report that 34 percent use ethnic newspapers and 53 percent use the Internet. African Americans report that 36 percent use the Internet, and 26 percent of Hispanics use the Internet. Ethnic and minority media are therefore vital channels for information, persuasion, entertainment, and marketing. As the various ethnic communities become more aware of their political, marketing, and social capital, ethnic media have the chance to collaborate and compete with mainstream media.

Functions

Ethnic media provide key means of transmitting cultural heritage, maintaining and strengthening cultural identity, and socializing individuals into the culture, as well as assisting in the assimilation and acculturation process, communicating within the ethnic community, providing a form of vigilance about controversial issues affecting the ethnic community, educating members of the ethnic group about issues relevant to their well-being (such as health or education), providing information about the culture of origin, providing a measure of social control within the community, celebrating the successes of members of the community, or providing news that mainstream media would not offer.

Whether ethnic media use English or the language of the ethnic group, the value of ethnic media to transmit, maintain, and strengthen ethnic identity is vital. Ethnic identity is a social construction, or a means by which individuals develop an identity of themselves as members of an ethnic group. The media can transmit and reinforce the history, language, ethics, religion, values, and traditions that give people identity. Ethnic identity changes for people throughout their life span; media can provide a sense of continuity and pride, and help them to remember their culture of origin.

Ethnic media transmit education to immigrants and refugees about their new country, direct them to resources, and share unspoken norms of the new society. Ethnic media play vital roles in public health campaigns, providing information about health issues such as immunizations, well-baby clinics, cancer screenings, hypertension, and diabetes. Ethnic media are increasingly key players in public policy and political debates. Their flexibility enables them to rally support quickly about proposed changes in immigration laws, voter identification requirements, and workplace issues. They can also be voices for advocacy and action in terms of coexisting with other ethnic groups or the majority culture.

Opportunities

Ethnic media provide opportunities to reach and affect people in powerful ways. Ethnic media can be more agile than mainstream media because of ownership, having smaller numbers in a community, and editorial policies, as opposed to the demands for large circulation or broadcast penetration of larger media groups. Large conglomerates of print or broadcast media may not have the flexibility, economic goals, or personnel resources to find news and provide content that will draw ethnic viewers, readers, or listeners.

Ethnic media provide a rich market for advertisers and marketers, in particular Hispanic media. Hispanic spending power was estimated at \$1 trillion in 2010. The increase in Asian spending power between 1990 and 2010 was expected to be 434 percent larger. With social media, niche programming brings language- and ethnic-group-specific news, advice, and content to ethnic groups and bicultural groups in a way

that is not possible through traditional media. Ethnic media offer political campaigns access to vital constituencies. Cross-cultural media advocacy has provided a voice for issues such as immigration reform. In April and June 2010, Native American, Asian, Muslim, and Hispanic media printed a joint editorial, calling for immigration reform. The editorial ran in English, Spanish, and nine other languages.

Ethnic media played a significant role in the 2012 presidential election. The campaigns of both Republican candidate Mitt Romney and incumbent President Barack Obama targeted advertising dollars in Hispanic media, particularly in the swing states of Nevada, Colorado, and Florida. The U.S. Hispanic Chamber of Commerce reported that 6.2 percent of political spending in the presidential campaign, or \$22.8 million, was spent on Spanish-language advertisements. President Obama's campaign spent more money targeting Latinos—\$12.4 million compared to \$9.7 million by Republicans. More Hispanics voted for Obama, with the DREAM Act and immigration policies affecting the vote.

Hispanic radio and television are growing in numbers. Univision is the largest Spanish-language TV network and the fifth-largest TV network in the United States, competing head to head with ABC, CBS, and NBC. Univision and the smaller network Telemundo were estimated to bring in \$1.5 billion in the 2010–11 season.

The 832 Spanish-language newspapers in the United States saw an increase in circulation in 2010, while English-language U.S. dailies saw a significant decline. Spanish- and English-language newspapers targeting the Hispanic population saw close to \$800 million in revenues, according to the Latino Print Network in 2010. Convergence among print, online, mobile, and television platforms may be seen in partnerships between the oldest continuous daily Hispanic newspaper in the United States is *El Diario La Prensa*, in New York City. A larger and younger Hispanic media company, ImpreMedia, has nine print publications and multiple Web sites. It exchanges content with the digital arm of Univision. ImpreMedia's *La Opinion* provides headlines for Univision Interactive Media's national Noticias site. It also partners with an online video creation and distribution company, Critical Media's Syndicaster,

as well as with McClatchy. Digital media aimed at Spanish-language and bilingual viewers include Univision Communications, Yahoo en Espanol, Terra-Telefonica, and MSA Latino. The Hispanic-Latino audience for all media is growing; it is a player for advertising dollars, political campaigns, and news and entertainment content.

Ethnic media have a vital role in the social history of the United States from colonial times to the present. Ethnic media have provided a voice for new Americans, a source of education about American values, an eye to political and social issues and abuses, and a forum for the creative. As the population of the United States becomes a minority majority culture, all forms of ethnic media will continue to evolve and have an impact with the increasing diversity in the population of the United States.

Media, Ethnic Participation in

In 1978, the American Society of News Editors (ASNE) surveyed newsrooms across America to assess how representative newsrooms were of the U.S. population. ASNE found that there were only 1,700 minority journalists among 43,000 across the country, or 3.95 percent of the total newsroom workforce. The survey also revealed that there were more than 1,700 daily newspapers in the United States. ASNE adopted the promotion of diversity and increase of minorities working in American newsrooms as a primary mission, so that news organizations more accurately reflect their communities. The original goal of the survey, which became an annual practice, was to ensure that by 2000, newsrooms would reflect the ethnicities of their communities.

Employment

In the late 1980s, Fairness and Accuracy in Reporting (FAIR) recorded the number of media experts of different ethnicities. Overwhelmingly, experts in the media were white—more than 90 percent in many cases—and nonwhite commentators were often "ghettoized" into commenting on minority issues. These kinds of findings continued to validate the need for the ASNE surveys. By 1998, though, ASNE's goal was realized, and it extended the deadline to 2025. In 1999, racial minorities made up 27.3 percent of the American population, but only 11.6 percent of America's news staff. Continuing at that rate, the 2025 deadline would also prove unreachable. In 1999, television news staffs were slightly more diverse than their newsroom counterparts, while magazine staffs were even less diverse. There were few high-level executives or decision makers of color.

By 2011, ASNE reported that racial and ethnic minorities still held less than 13 percent of all newsroom jobs. Minorities owned only 3 percent of television stations and 7 percent of radio stations. This is disproportionate to the 36 percent of American society that is made up of ethnic and racial minorities. Furthermore, 2011 was the third year in a row that minority representation in mainstream media actually dropped. In addition, 441 newspapers reported not even one minority

staff member in 2011, and this number of all-white news staffs had been growing since 2006.

Another part of the problem is that recent journalism and communications graduates face different prospects for employment, based in part on their race. The 2009 to 2010 Annual Survey of Journalism and Mass Communication Graduates reported that only 48.6 percent of minorities graduating in these fields found full-time employment, compared to 63.9 percent of white graduates in the same fields. According to the survey, this was the widest gap since 1987. Additionally, African American editors and other newsroom professionals have been moving steadily into ethnic media positions, especially since the 2000s. While this is a positive move in many ways, it leaves the mainstream media with even less diversity.

Ownership

One measure that was adopted for a short while in the late 1970s was a “tax certificate” program. This program was designed to increase minority ownership of media outlets by offering tax breaks to owners of broadcast or cable outlets who sold their media outlet to minority buyers. It also gave the tax credit to anyone who invested in a minority-owned outlet. Unfortunately, the program was cut because of alleged misuse. Ownership and participation continued to lag behind.

In 1987, Kirk Johnson released a study in the *Columbia Journalism Review* that analyzed various media accounts of events in two Boston neighborhoods with large African American populations over the course of 30 days. The study found that the mainstream news outlets reported overwhelmingly on stories involving violence, drugs, crime, or something similar. About 85 percent of these mainstream reports portrayed African Americans negatively. In comparison, coverage during the same time period in the same neighborhoods that originated with African American-owned news organizations was more ethnically varied and accurate.

In 2011, the U.S. Court of Appeals for the Third Circuit decided that the Federal Communications Commission (FCC) was not appropriately dealing with the advancement of minority ownership of broadcast outlets. FCC policies in the 2000s led to more and more consolidation of media outlets, which in turn hurt minority ownership numbers.

Coverage

In 1999, FAIR discussed the consequences of this kind of imbalance using the *Time* magazine O. J. Simpson cover as an example. When *Time* made the decision to darken Simpson’s face for the cover, only one person objected: this person was the only minority present in the room. Racial minorities are frequently pigeonholed in the news and portrayed stereotypically. The National Association of Hispanic Journalists found in the 1990s that around 1 percent of 12,000 news stories aired during a calendar year on the three major network news programs focused on Latinos or Latino issues. Of that 1 percent, approximately 80 percent portrayed Latinos negatively, connected to drug issues, crime, and illegal immigrants.

As the FCC continues to attempt to solve these diversity problems in American media, some commentators have suggested that a program similar to the 1970s tax break be reinstated, but this time with attention to minority recruitment and educational opportunities. This way, the change would not stop at the top level of ownership but would take a more holistic approach to solving the problem.

Media, Foreign Language

Technological advancements, along with the multiplicity of television channels and ever-increasing usage of the Internet, have made it easier for news organizations to target a multicultural society. The days with limited access to media in a foreign language in the United States are long gone. Statistics indicate a growing presence of ethnic media. For example, the Spanish-language media market has fared much better than the mainstream media, according to recent reports. It expanded, with more than 340 television stations listed in 2006, up from about 200 two years prior.

CNN launched *CNN Radio Noticias* on March 30, 1993, to accommodate the Hispanic audience. Additionally, a similar dynamism appears with Asian media. In nearly 15 years, the circulation of Chinese dailies in the United States boomed from 170,000 publications to more than 500,000. Moreover, a Chicago-based company that tracks media recorded 883 radio stations offering programs in more than 30 different languages.

Ethnic media, the most commonly adopted terminology, encompass several distinct media. Depending on the producers and the target audience, the language used may only be the language dominant in the home country of the linguistic minority targeted, English, or both. Such media organizations traditionally focus their content on the linguistic group, its cultural identity, and ties to the country of origin. Ethnic media contrast with mainstream media, which target the ethnic majority in a society. In a multicultural and ethnically diverse country such as the United States, the discussion of ethnic media is particularly relevant, especially because a recent poll found a 16 percent increase in ethnic media penetration in the last four years.

Historical Roots

Historians marked the beginning of ethnic media in the United States at the turn of the 19th century with media targeting the three dominant minorities at the time: Native Americans, Hispanics, and Asian Americans. Archives reveal that newspapers existed for Native American tribes such as

the Cherokee. *The Cherokee Phoenix* represented a bilingual publication offered in English and in a language relying on an 86-character alphabet developed in 1812. Documents also indicate that the first Hispanic publication, *El Misisipi*, was founded in New Orleans in 1808 and was offered in English and Spanish for Hispanic immigrants. The first Chinese-language newspaper, *The Oriental*, was first printed in San Francisco in 1855.

Beyond a press created for dominant ethnic groups, the 19th century constitutes the determining moment for foreign-language media. By the late 19th century, few settled immigrants failed to have the opportunity to read about their respective countries. The emergence of such publications, primarily available in larger metropolitan areas, coincided with respective immigration waves.

For instance, the flagship *Courrier des Etats-Unis*, first published in 1828 out of New York, served the French-speaking population during the 19th century. Moreover, several local French papers appeared in U.S. states neighboring Canada. German immigrants in New York browsed the pages of *Staats-Zeitung* (1834) and *New Yorker Volkszeitung* (1878), while those living in Chicago read *Arbeiter-Zeitung* (1877). Italian expatriates discovered *Il Progresso Italo-Americano* (1879), a publication later replaced by *America Oggi* at the beginning of the 20th century. Throughout the midwest, from Minneapolis to Detroit, St. Louis, and the east coast, historians identified several papers devoted to Norwegian immigrants, Dutch settlers, the Polish, and Russians.

The U.S. involvement in world conflicts later impacted the development of ethnic media, particularly German-language news media that were banned during World War I and the Japanese press, which was suspended by the U.S. government following the attack on Pearl Harbor in 1941. More recently, the presence and growth of the Al-Jazeera network in the United States sparked multiple discussions, particularly in light of anti-Arab sentiments following September 11, 2001. The development of ethnic media closely coincides with U.S. history, from the earliest waves of Western and European immigrants in the 19th century to the latest influence of geopolitical dynamics in the Middle East.

Role of Ethnic Media

In contrast with the mainstream media, ethnic media usually place a stronger emphasis on issues linked to the cultural identity of the group. It is quite common to find more coverage of international affairs and less news coverage of U.S. politics. Such media can act as forums to mobilize force for a community. Several studies explain how Hispanics used Spanish-language media to debate the 2006 rallies that took place across the country when the U.S. Congress intended to modify immigration policies. Ethnic media have also been seen as cultural educational tools favoring bilingualism and reinforcement of home country languages for second-generation children, and as teachers of ethnic identities.

Numerous polls and reports have shown the increase of ethnic media in the United States in recent years. In fact, the New America Media poll reported a 30 percent increase for Asian TV's audience from 2001 to 2005. The most illustrative example comes from Hispanic media. Nielsen Monitor-Plus showed that in 2005, Spanish-language TV's ad sales grew by nearly 17 percent to become the second-largest ad market behind the Internet. The prospect of accessing such a growing audience led many media companies to invest in Spanish-language outlets. For instance, ESPN developed a Spanish edition of its trademark magazine. Spanish-language television networks equally benefit from the context. Univision reported its highest ratings ever in 2005, with nearly a 45 percent increase in ad revenues. In fact, during the 2010–11 season, the Spanish-language network was the only network in the United States, all languages included, to record an increase in its audience of prime-time programming (an increase of 8 percent) for the 18–49-year-old target group. Moreover, already the largest Spanish-language network in the United States, Univision announced in 2011 its ambition to launch a 24-hour Spanish-language news station. Telemundo followed a similar positive trend with record-breaking ratings in 2011.

Today's dynamic media market has created numerous opportunities for producers to offer specific content to multiple linguistic groups present in the multicultural United States. As the rapid increase of popularity of such media is shown, several questions remain: (1) considering that some

ethnic groups have a limited access to the Internet, do new technology represent a risk to the development of such media? (2) What is the role of ethnic media in cultural integration? and (3) As the mainstream media continue to struggle financially, will ethnic media also face difficult times?

Media Treatment of Ethnicity and Race

The citizens who framed the Constitution envisioned the press as a free marketplace of ideas for the public. Subsequent media formats delivered news, entertainment, and information to the widest possible audience, supported by advertisers who introduced an economic element. To gain popularity and attract the masses, media developed content that reflected the prevailing practices of society that, unfortunately, often included unfair attitudes toward racial and ethnic minorities. Media relied on images and symbols as a shorthand system to communicate complex messages within space and time limitations, and audiences became accustomed to learning about minorities through these mediated depictions. Beyond mirroring reality, the ubiquity and repetitiveness of racial and ethnic representations in media have influenced public norms since their inception.

Mass media operate as forums for the social construction of reality, influencing values and attitudes. Whether considering the books, newspapers, or magazines of early America or current recordings, radio, motion pictures, television, video games, the Internet, and interactive digital formats, mass media have been a significant cultural force throughout history. Specific media influence regarding responses to negative racial portrayals, as evidenced by myriad empirical, theoretical, and projective studies, is complex.

One consistent factor is that the message, sender, and receiver must each be considered in analysis. George Gerbner's cultivation theory asserts that media viewers cumulatively internalize messages that cultivate perceptions of reality. Consistent negative racial portrayals become one's "truth" or worldview. Alfred Bandura's social cognitive theory addresses the potential for individuals to hold erroneous perceptions of reality based on media but contends that the dynamic interplay of personal, behavioral, and environmental factors must be considered. For example, for people with limited direct contact with other ethnic groups, media images become tools to form subsequent stereotypical opinions.

The significance of audience reception of the mediated message was demonstrated when *All in the Family*, a 1970s television series, became the subject of numerous empirical studies. Whereas the producers' goal was to critique racial prejudice through creation of a bigoted, absurd lead character, many viewers found him likable and related to him. This selective perception hypothesis demonstrates the complexity of mediated portrayals. Media images provide continuous opportunities for audiences to construct or reinforce ideological frames about people of particular races. They influence opinion, but in varying degrees, while mirroring the mores of society.

Race in Early Media and Entertainment

Social relationships in the early United States included prejudice and discrimination against people of color. Therefore, the repertoire of representations of minorities that media offered paralleled the established ideology in newspapers and books of the 18th century and the predominant entertainment medium of the 19th century, the theater. Buffalo Bill Cody's popular Wild West

shows played to packed houses as they boldly demonstrated the necessary taming of "savage" Indians, while minstrel shows, the most popular form of American entertainment for 80 years, delighted audiences with comical stereotypes of bumbling Negroes enacted by white actors in blackface. Each became popular content in subsequent radio programs and films.

The introduction of motion pictures at the turn of the 20th century began with imagery of cowboys annihilating "wild Injuns," "greaser" films portraying reckless Mexican bandits, and Asians as the diabolically evil "yellow menace." These characterizations were congruent with whites' beliefs during this era. D. W. Griffith's 1915 film *The Birth of a Nation* established the stereotypical prototype of blacks as morally inferior, unintelligent, and potentially dangerous, which endured for decades. This coincided with the nation's common temperament regarding blacks during slavery, Reconstruction, the segregationist period, and the early 20th century, when the lynching of blacks finally ended.

The mid-20th century featured somewhat less obvious stereotypes in Hollywood, radio, and early television. Native Americans continued to be "generalized" in films and were still found attacking white settlers, unless cast as faithful companions to strong white cowboys as in *The Lone Ranger* with Tonto. Blacks were also congenial sidekicks, appearing as waiters, porters, and domestic workers throughout early television programs. Hollywood's epic *Gone With the Wind* speciously epitomized their happy, faithful relationship with whites, and representative films showcased black entertainers singing and dancing, reinforcing their submissive status in society. *Amos 'n Andy* made its television debut in 1951, the first program with an all-black cast, but its characterizations were controversial, and very few programs included blacks in lead roles during the following two decades.

During this period, political and economic matters between Latin America and the United States resulted in fewer pejorative representations of Latinos onscreen, with the exception of the quintessential hot-blooded males and tempestuous women. In the positively regarded *I Love Lucy* of early television, Cuban American Desi's explosion of Spanish malapropisms when confronted with Lucy's foibles sustained the stereotypical image

A large group of Native Americans on horseback during a 1901 Wild West show in Buffalo, New York. Live events predominated in the 19th century, and Wild West shows reinforced the belief that Native Americans were "savages" that needed to be tamed.

of the quick-tempered Latino. Asian stereotypes were pervasive, but of differing qualities following World War II, when overt racism against Japanese suffused media, from Hollywood films to cartoons, with explicit scenes of Japanese soldiers delighting in applying torture techniques. Radio programs and movies featuring corrupt or diabolical Chinese villains like Fu Manchu later replaced these depictions.

Equally detrimental was the absence of many ethnic groups on television, termed symbolic annihilation, which extended inequality through lack of representation. A major quantitative study of race on television in prime-time from 1955 to 1964 identified only one character in 10 as anything other than white American, only one character in 50 as Hispanic, and less than one in 100 as Asian. Dominance of white characters rendered minorities invisible. Television, like film, was given a mandate to improve culturally.

Media Parallels Society

A new wave of studies on media treatment of race proliferated after 1965. Concurrently, societal attitudes regarding blacks improved after the civil rights era; whites became more aware of the past and current plight of American Indians; negative attitudes lessened toward Asian immigrants,

except for residual Vietnam War tensions; and progress resulted from greater contact with Latinos as their numbers grew. Despite improvements, neither the media nor the country could declare equitable treatment of racial/ethnic minorities.

Media scholars and sociologists continued research in the 1970s to determine the public's perceptions of race and potential correlations with media representations. During a two-decade period studied using trait measurement research, whites were usually portrayed as friendly, intelligent, and at times egotistical, with males seen as upper class and females as mostly attractive. Research also found whites to have the highest scores for wealth, work ethic, intelligence, and patriotism. Traits attributed to blacks in the same years studied included inferiority, laziness, dishonesty, and insolence.

Predominant stereotypes attributed to Asian Americans were intelligence and being soft-spoken and highly educated, while Latino/Hispanic Americans were thought of as having limited access to education and employment, being attractive, excitable, and friendly. Terms describing American Indians were alcoholic, lazy, on welfare, or on reservations. Another ethnic category receiving negative media portrayals became Arabs, commonly associated with terrorism and traits of being radical, barbaric, and anti-Western.

Current Status

Economic concerns, media literacy education, and political empowerment of people of color have led to a greater variety of portrayals of non-whites in 21st-century media. However, despite contemporary media's endeavors to avoid stereotypes, genre conventions such as the necessity of character shorthand in situation comedies, deadlines and time constraints of news programs, and commercial media industries placing profits over story development nullify complete stereotype eradication.

Progress is evident in films starring black actors and directors like Spike Lee, who paint accurate portrayals of African American life, in addition to greater representation on radio and in print, although blacks remain underrepresented in leading roles. More sensitive representations of Asians began with *The Last Emperor* and *The Joy Luck Club*, revealing cultural nuances of Chinese

and Chinese Americans not previously evident in films, and one of the most popular recent television shows, *Hawaii Five-O*, features positive Asian characters. Native Americans remain somewhat invisible, although the Disney animation *Pocahontas* was among the highest-grossing films of the 1990s.

Latino organizations contend that insufficient representation in mainstream media has instead led a majority of them to Spanish-language broadcast outlets like Telemundo and Univision. A recent poll found that ethnic media regularly reach 87 percent of Hispanic respondents, with a large number predominantly watching Latino programs. A 2005 study showed that 74 percent of Arab Americans and 70 percent of Asian Americans prefer to tune in to ethnic media.

Although interactive Internet and video games are relatively new, in addition to cable and satellite technologies, they warrant consideration. According to the Electronic Software Association, more than two-thirds of heads of households play video games, and sales in the billions of dollars are increasing exponentially. A study by Children Now found that racial stereotyping is strongly evident in video games, with 87 percent of game heroes being white, and blacks and Latinos shown as particularly aggressive, or predominantly in sports-oriented games.

The participatory media of the Internet like YouTube, or massively multiplayer online role playing games (MMOs) such as *World of Warcraft*, which boast more users than television and film combined, have also been problematic regarding stereotyping at a time when “professional” media have demonstrated greater cultural awareness. User-generated participatory media perpetuate countless racial stereotypes, in large part because the consumers are also the creators and distributors in this format. Millions of videos are uploaded to Web media sites, produced predominantly by amateurs and entrepreneurs with little or no ethical training and with no oversight. Since incalculable examples exhibit racist messages, improvement in the quality of participatory interactive media is the next challenge.

Media treatment of race and ethnicity is of importance because mass media can create reality as media imagery encodes and normalizes specific ideologies. Limited or incorrect representations

can have negative consequences by sustaining false ideas as well as undermining endeavors toward multicultural equity in America. Significant progress is possible when both producers and audiences recognize the power of the media.

Medicine and Ethnic Diversity

As the 2010 census shows, the United States is becoming increasingly diverse. The shifting demographics have a strong impact on the practice of medicine in various ways, particularly because patients belonging to a minority ethnic group such as African American, Hispanic American, American Indian, Alaska Native, Asian American, Native Hawai‘ian, and Pacific Islander tend

to have worse health outcomes than their Caucasian peers. According to the Office of Minority Health, patients from these groups are at a higher risk of illness and death from heart disease, stroke, diabetes, HIV/AIDS, asthma, hepatitis B, obesity, and certain cancers. Additionally, the Institute of Medicine found that minorities are less likely to receive certain types of treatment such as dialysis and transplants, and particular cardiac procedures like bypass surgery.

Ethnic and racial minorities are more likely to receive more drastic procedures, such as amputations, as a result of diabetes. In order to best provide quality health care for a diverse patient population and overcome increasingly pronounced health disparities, medicine must take ethnicity and related factors such as religion, language, and health care beliefs, as well as social determinants of health, into consideration in medical practice, research, and education.

History of Mistreatment

Ethnic and racial minorities have not always been treated well within the medical field, which has resulted in mistrust of the medical system within some ethnic communities. Before the civil rights movement demanded equal treatment, ethnic and racial groups were often separated from Caucasian patients in hospitals, clinics, and other health care services. Often, these segregated areas for patients of minority racial and ethnic backgrounds were less equipped than medical institutions that catered to the Caucasian population. Ethnic and racial minority patients were at risk for being refused treatment, discriminated against, and not given adequate care, and were often blamed for their condition.

Therefore, taking into account ethnic diversity in the practice of medicine is vital to the diverse population in the United States. One cannot have the discussion of ethnic diversity and the practice of medicine without approaching the essential presence of cultural competency for those who practice or are involved in the process of medical care. Cultural competency is not just the simple knowledge of facts about each culture, it is also an acquired set of positive beliefs, attitudes, and values that allows for positive and effective interactions with individuals and groups of people who are culturally different from one's own

group. Cultural competency is a multifaceted set of knowledge and actionable skills that is essential for application in every interaction, including relationships from the casual setting to the professional setting. Specifically, cultural competency in the practice of medicine is a topic of discussion that is now, more than ever, an essential and currently ongoing discussion as a result of the cultural, racial, and ethnic diversity of individuals in our communities and workplaces.

For every stakeholder in medicine, from the patient to the doctors and staff who provide care, culture touches every aspect of health care: patient treatment plans, medication, medical procedures, and the working relationship of the doctors and staff who deliver these services to benefit the patient. In effect, there are numerous cultures working together, including the patient, in an effort to provide the best health care and treatment. Therefore, such an enormous amount of cultural variety calls for knowledge and actionable skills that address the intersection of many different cultures working together and understand cross-cultural dynamics in medicine.

The practice of medicine involves a number of culturally sensitive components. Specifically, treatment plans that involve doctor-prescribed medications and health behaviors must be communicated and articulated in ways that result in patient ability, understanding, and willingness to follow the prescribed medications and health behaviors. Therefore, effectively weaving ethnic diversity into the practice of medicine must involve treatment, treatment plans, and communication that are amenable to patients of all cultural backgrounds.

A few factors that can play into effective medical treatment of ethnically diverse patients include environmental racism; access to and affordability of treatment; access to and ability to live in healthy environments; access to and ability to practice a healthy diet; the culture of the individual and the family; family roles in decision making; views of leaders and authority figures; religious practices; and culturally specific behavioral factors such as dietary restrictions, use of home remedies, cultural communication styles, and mistrust or misconceptions about the health care system. In addition, the approach to medications might vary by culture, ethnicity, and race. An individual's or group's decision on when to seek care, levels of pain tolerance,

and genetic differences in medication metabolism and response might also be factors to consider in terms of medical treatment and culturally related medicines. Therefore, application of diversity to the practice of medicine while following ethical protocols in treatment is key.

Historically, ethical protocols were not consistently followed when ethnically diverse patients underwent medical treatment, including the lack of prior consent for medical research. One of the most well-known instances was the Tuskegee Study of Untreated Syphilis in the Negro Male. From 1932 to 1972, the U.S. Public Health Service conducted a longitudinal study on syphilis in poor, rural African American sharecroppers, who were given the impression that they were being provided with free health care when in fact they had not given informed consent and were denied treatment, even though penicillin had become the standard treatment for syphilis as early as the late 1940s. As a result of the undisclosed information concerning diagnosis and possible treatment for the disease, many participants died of syphilis or spread it. When the story about the unethical study broke, public outcry led to the establishment of the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research and federal laws and regulations that further protect participants in medical research. Additional efforts related to the development, revision, and enforcement of ethical standards in biomedical research continue today.

Another well-known example of the mistreatment of minorities in medical research is the case of Henrietta Lacks, who had cervix cells removed, without her explicit permission or knowledge, while undergoing treatment for cervical cancer. Her cells were then multiplied in the lab, sold, and used extensively in research, with no financial recompense to Henrietta Lacks (who passed away from the disease) or her family. As a result of Henrietta Lacks's case, the ethical issue of informed consent became standard protocol within the medical system. These two infamous cases, as well as countless other instances of discriminatory medical practices based on stereotypes, prejudice, and ignorance, widened the power gap between the medical community of mostly Caucasian male doctors and the ethnically and racially diverse patient populations that they served.

Ethnic and racial minorities were also barred from entering medical school, with the first African American doctor graduating from an American medical school in 1847. However, it was not until much later that medical schools were desegregated. Continued discrimination, lower access to quality education and mentoring, and socio-economic factors still create barriers that prevent ethnic and racial minorities from applying to and entering medical school.

Contemporary Medicine

As U.S. demographics have diversified and the struggle for equal rights has reshaped American society, the practice and teaching of medicine have changed. Since the 1960s and 1970s, medical schools across the nation have focused efforts on programs designed to increase and diversify the physician workforce so that doctors will better reflect and serve the diverse demographic populations that make up American society. Efforts include continued work on pipeline and baccalaureate programs that help prepare underserved, underprivileged, and ethnic and racial minority students to become competitive applicants for medical school through academic counseling, standardized test and interview preparation, and rigorous biomedical courses.

However, certain ethnic populations are still under-represented in medicine, and more work needs to be done earlier to encourage young students to dream about and prepare for a career in medicine and to help them graduate from college. The Supreme Court will rule on whether or not race can be considered as one of many factors in the admissions process, and the Association of American Medical Colleges (AAMC) has filed an amicus brief in support of race as an important component to consider in the holistic admissions process, as a way to help diversify the student body to the benefit of all students and future patients. Expanding the definition of diversity to also include students from rural backgrounds, those who are financially disadvantaged, first-generation college graduates, members of single-parent households, and nontraditional students will also help ensure that the physician workforce better mirrors society at large.

Related to diversifying the physician workforce is a focus on primary care and serving the

underserved. Despite having one of the highest rates of spending on health care per individual, the United States lags behind other nations on health outcomes. Part of the reason for this is that there are many populations in the United States that have restricted access to care, lower education and awareness of positive health behaviors, and a lack of health insurance and access to nutritious food and preventative care.

More attention also needs to be placed on raising the awareness and skills of physicians for understanding and addressing social determinants of health. Knowledge of the external factors that impact the health of patients is an important factor in designing relevant health care plans. Further understanding of how medical treatment and prescriptions may differ for patients of various ethnicities also needs to increase through targeted recruitment efforts for medical research and trials, as well as research topics that consider the social determinants of health in prevention and treatment procedures.

Funding for this type of research also needs to be provided and encouraged on all levels. Grants with a public health focus can contribute to a knowledge base and medical innovations that can help the most at-risk populations while benefiting the health care system as a whole by decreasing health care costs and improving patient health outcomes. Established in 1986, the Office of Minority Health focuses on the development of programs and policies targeting racial and ethnic minority populations, with the goal of improving health and eradicating health disparities. Continued work needs to be done on how inequities in medicine perpetuate health disparities, and how to better address social determinants of health and health outcomes through changes in the medical system, a shift from a focus on treatment to prevention, and an increase in access to quality care.

Great strides have also been made in raising the general level of awareness and acceptance of the importance of culturally competent health care that engages diverse patients. An additional focus on patient- and family-centered care that takes into consideration each unique individual's situation, environment, health beliefs, and practices, has recently become ingrained into the medical school curriculum and general policies of hospitals throughout the country.

These changes in medical practice, which allow patients to have a voice in their treatment, enhances the delivery and effectiveness of health care through the creation of relevant health care plans that are tailored to the individual. Additionally, curriculum in medical schools and professional development training for physicians needs to include elements related to diversity and inclusion, health disparities, social determinants of health, and how these factors influence medical care, treatment, and patient outcomes.

Topics focusing on the development of cultural competence skills, such as communication, addressing language barriers by working with an interpreter, knowing and addressing religious barriers, and ethnic health beliefs and practices, are just a few of the skills that physicians need in order to accurately treat a diverse patient population. Additionally, ethnically diverse faculty members are at higher risk for being unsatisfied in their positions, for experiencing a longer period before and between promotions, and for leaving medical education more quickly than their Caucasian peers. More work needs to be done to improve the medical education and working environments to create a more inclusive and welcoming environment for diverse faculty. Improving the retention rates of diverse faculty in academic medical centers and teaching hospitals will help provide students from under-represented ethnic backgrounds with mentors and role models who may have had similar experiences and barriers that they overcame.

Technological advances in medical care may help improve the health of all patients and allow for focused attention to be placed on addressing health disparities. The move toward electronic medical records allows for better communication and access to medical information between health care professionals and the people they serve. The practice of medicine continues to expand its recent focus on interprofessional and interdisciplinary teams, which increase the chances of relevant care and adequate followup and improves the information flow between health care professionals in various settings that serve the same patients.

Interprofessional and interdisciplinary teams also help address certain challenges in treating ethnically diverse patients, such as potential language barriers and religious beliefs. Culturally and Linguistically Appropriate Services developed

standards for working with patients who have diverse cultures and languages in order to provide equal opportunity for representation and access to health care services in a manner that will ensure that the best and most appropriate care will be provided to the patient. Related is health literacy, or the ability to obtain and understand health care information. Even when a patient's mother tongue is English, he or she may still have a low health literacy that affects medical care by preventing him or her from taking medication properly, understanding where best to seek care for particular ailments (such as a primary care facility versus the emergency room), communicating with the physician, or understanding health care costs and reimbursements.

Addressing the linguistic barriers of language and health literacy, alongside the possession of awareness and understanding of the social determinants of health, disparities, and historical reasons for mistrust within ethnic and racial minority communities are important factors in the provision of quality, culturally competent medical care for all patients. With culturally competent care, medicine can eradicate health disparities.

Melting Pot

The metaphor of America as a "melting pot" remains as salient in the first decade of the 21st century as it did in the early 20th century, when the phrase was used in the title of Israel Zangwill's 1905 play, which extolled the United States as an unparalleled haven for immigrants. America as a "melting pot" is deeply and uncritically entrenched in the popular imagination; its place among social commentators and scholars, on the other hand, is that of a site from which different and oppositional versions of the nation and its people are argued. Few scholars in the present day would assert that the United States is simply a melting pot, a single blend of races, ethnicities, or cultures from any and all parts of the globe. Rather, the image of a salad, or a kaleidoscope, or a symphony orchestra might be more current because of the increasing complexity with which we use concepts of assimilation, acculturation, multiculturalism, pluralism, or multiethnicity to describe the United States. The "melting pot" image, however, is implicitly or explicitly always part of analyses of American ethnic identity.

The idea of America being a country comprising many different cultures and peoples can be found in the writings of the earliest European settlers; they saw the New World as a "crucible" and the New Canaan. Then, most notably, St. John de Crevecoeur, in *Letters From an American Farmer* (1782), described this "new man" as being descended from the mixing of Scots, French, English, and so on. To de Crevecoeur, the American is not only a new ethnicity, he has willingly left behind, in Europe, hereditary titles and other "prejudices" in order to craft a new social and cultural identity.

The next major contribution to imagining the nation came from Frederick Jackson Turner's 1893 "Frontier Hypothesis," which located the American "crucible" on the western frontier. The frontier built the essential national characteristics (echoing Emerson's descriptions) of self-reliance, strength, individualism, and so on. Turner also wrote that Americans are a mixed race (European) and not merely English.

The popular idea of America as a melting pot is commonly traced to Israel Zangwill's play *The Melting Pot*. Set in the seething, urban cauldron of

New York, the play celebrates an America that is able to unite David and Vera, a Russian Jew and the daughter of the officer responsible for killing David's family in a pogrom. Indeed, both David and Vera leave their Old World identities behind when they leave Russia; their union symbolizes the New World as a melting pot. The historical period of the play was that of American cities in the late 19th century rapidly filling up with eastern and southern Europeans, and already established Americans expressing doubt about the ability of these new immigrants to assimilate. Zangwill's play portrays a nation that could absorb and assimilate even the most disparate cultures and individual pasts.

Since then, the melting pot concept has become a touchstone for various social commentators,

... melting pot of liberty-loving people from all corners of the earth. People of different origins, faiths, cultures—all cemented together into one great nation by their passion for freedom. They have made America great—they have made America the hope of the world ★ *This is Your America*

...Keep it Free!

A U.S. World War II-era poster titled "This Is America . . . Melting Pot of Liberty-Loving People From All Corners of the Earth." Melting pot is a metaphor for a heterogeneous society melting together into a harmonious whole with one common culture.

creative writers, policy analysts, and sociologists to describe and analyze the meaning of "America." Most notably, the Chicago school of sociologists in the first half of the 20th century began to examine the process that immigrants undergo to become Americanized. Led by Robert Park and Everett Stonequist, these sociologists coined such terms as "culture clash," the "marginal man," and "assimilation." At that time, assimilation was thought to be inevitable and a linear process, going from a marginalized existence and alien identity to one of complete assimilation, indistinguishable from other Americans. The Chicago school's focus on the urban transformation of American cities through the influx of Jews, Poles, and other eastern European ethnicities set the course for several academic disciplines, including sociology, political science, and ethnic and literary studies.

However, it soon became apparent that Americanization was a more complicated and unpredictable process than the metaphor of the melting pot would suggest. This is especially true if one takes into consideration the problem of racialism in the construction of the American identity. Furthermore, scholars also began to note that different immigrant groups assimilate at different rates and in different spheres of their daily lives, depending on their reception, their levels of education and skills, and the legislative and extra-judicial barriers that discouraged assimilation. The civil rights movement, as well as the counterculture and ethnic rights movements of the mid-20th century, also complicated the image of America as a melting pot. Horace Kallen's notion of cultural pluralism from as early as 1915 gained popularity: the United States was said to be a nation in which cultures from all parts of the world are tolerated and coexist. Assimilation was neither an accurate description of American identity nor desirable.

The notion of multiculturalism or, as some scholars have suggested, post-ethnicity began to take hold in the late 1980s and 1990s. Generation Xers tended to see themselves as both American and as products of global cultural mixes. This trend is likely to continue as increasing numbers of Americans identify themselves on the census as being mixed race (more than two and not simply biracial). Authors in *Reinventing the Melting Pot: The New Immigrants and What It Means to Be*

American, published in 2004, seem to agree that the definitions of “America” and “assimilation” are changing drastically: assimilation is not to a WASP (White Anglo-Saxon Protestant) ideal but to a multicultural and multiethnic American culture; ethnic identification may be limited to cuisine or artistic expression; class is a more crucial factor in individual perceptions of assimilation than loyalty to ethnic cultural heritage; and what it means to be an American is becoming more fluid, expansive, and inclusive than it has ever been in the history of this nation.

Mendez v. Westminster (1946)

In an era of segregated schools, *Mendez v. Westminster School District* (1946) challenged the constitutionality of the “separate but equal” doctrine and spurred the integration of California’s Mexican American students into schools reserved for white students. The *Mendez v. Westminster* federal court case served as an important example for the *Brown v. Board of Education* (1954) Supreme Court case, which ended de jure segregation at the national level and began the integration of all public institutions.

At the end of the Mexican-American War in 1848, the residents living in the former territory of Mexico were offered U.S. citizenship. Citizenship did not confer equality, however, and Mexican Americans were relegated to second-class status in a segregated society, much like African Americans, Native Americans, and Asian Americans in other parts of the United States. Racial segregation, in addition to being a common practice, became de jure, or written, law as a result of the 1896 Supreme Court decision in *Plessy v. Ferguson*, which stated that public facilities could be established that were “separate but equal.” Restaurants, theaters, and parks could have a “whites only” policy or admit people of color with certain restrictions, such as the public swimming pool on the day before it was drained and cleaned. In schools, minority students were either tracked into segregated classes or attended an entirely separate school.

Local Schools Versus “Mexican” Schools

Like many Latinos who were attracted to Orange County, California, in the 1920s and 1930s, Gonzalo Méndez and his wife, Felicitas, came to work in the booming citrus belt. They saved enough money to buy a restaurant in Santa Ana and then, during World War II, moved to nearby Westminster to lease a 60-acre farm owned by an interned Japanese American family.

It was the fall of 1943 when Gonzalo Méndez’s sister, Soledad Vidaurri, took the three Méndez children and her two daughters to enroll in the closest school: 17th Street Elementary. An administrator determined that the

Vidaurri children, who were half-Mexican but light-skinned and with a French surname, could attend; however, the darker-skinned Méndez children would have to go to the “Mexican” school, Hoover Elementary.

Not only was Hoover 10 blocks farther away, but it also shared features common for Mexican schools of the era: run-down facilities, outdated materials, and a curriculum that focused on labor and domestic skills rather than scholastic achievement. The Méndezes went to the superintendent to protest the policy and wrote a letter to the Westminster School Board demanding that it integrate the schools. An eventual offer for the Méndez children to attend the white school was rejected because the school board’s integration policy would not be changed for the rest of the Hoover students.

Together with four other Mexican American families (Estrada, Guzman, Palomino, and Ramirez) who were fighting the same battle in nearby towns, the Méndezes filed suit against the Westminster, Santa Ana, Garden Grove, and El Modena School Districts on behalf of over 5,000 children. David Marcus, a Los Angeles attorney who had recently won a desegregation case against a neighboring city, was contracted to represent the plaintiffs. Marcus needed to carefully craft his arguments because other cases had unsuccessfully tried to strike down the “separate but equal” clause.

When the case went to trial in 1945, defense attorney Joel Ogle argued not only that segregation was supported by the *Plessy v. Ferguson* decision but also that it had social and educational advantages. Mexican schools gave special instruction in “Americanization” programs that emphasized values, work habits, sanitation practices, and language instruction for those who didn’t speak English. The overt racism of these programs became apparent when the defense called James Kent, superintendent of the Garden Grove School District, to the stand. He declared under oath that the Mexican students were inferior and had poor moral habits, and as such were unqualified to attend white schools.

In turn, Marcus—for the plaintiffs—pointed out that no language proficiency tests were given to the three Méndez children, all of whom demonstrated their English fluency when they testified

in court. Instead of focusing on the inferiority of resources, as previous cases had, Marcus argued that the school districts were segregating on the basis of nationality, which violated the equal protection clause of the Fourteenth Amendment. On February 18, 1946, Judge Paul McCormick ruled in favor of Méndez and his co-plaintiffs that segregated education was socially, psychologically, and academically damaging to Mexican American children.

The defense attracted national attention when it announced it would appeal the decision, which was filed on December 10, 1946. Several leading civil liberties and multiracial organizations supported the plaintiffs. The League of United Latin American Citizens (LULAC) provided funds for legal fees, and the National Lawyers Guild, American Jewish Congress, and Japanese American Citizens League submitted “friend of the court” briefs. Two of the amicus briefs written by the American Civil Liberties Union (ACLU) and the National Association for the Advancement of Colored People (NAACP) specifically called for a challenge to the U.S. Supreme Court’s “separate but equal” interpretation.

On April 14, 1947, the seven justices of the Ninth Circuit Court of Appeals unanimously upheld Judge McCormick’s decision in *Mendez v. Westminster*. Although the appeals court did not challenge de jure segregation in the rest of the country, the case had significant regional and state impact by affirming that it was unlawful to segregate Mexican children on the basis of national origin. Mexican Americans won representation on school boards, and other towns voluntarily opened integrated schools.

Earl Warren, who was then governor of California, signed a law to repeal the school segregation statutes in the California Education Code (sections 8003 and 8004 of the California Education Code). Seven years later, Warren was chief justice of the U.S. Supreme Court and presided over the *Brown v. Board of Education* case. In addition, Thurgood Marshall, who had cowritten the aforementioned NAACP amicus curiae brief, represented the plaintiffs.

Although this case is not as well known as *Brown v. Board of Education* (1954), it was important in the process of fostering an integrated and multicultural society. *Mendez v. Westminster*

illuminated both the discrimination embedded in racist structures and the important role that Mexican Americans—in collaboration with other marginalized groups—played in the struggle for equity and civil rights.

Mestizo

The Spanish word *mestizo* derives from the Latin words *miscere* and *mixticus*, which mean to "mix" or "mixed." The term *mestizo* has historically been used to describe people of mixed heritage and descent in Latin America, particularly in Mexico. Originating as a racial category in New Spain's caste system, *mestizo* was used to describe people who had one Spanish-born (or European-born) parent and one parent of the indigenous American population.

The term later came to be used as the basis of a cultural Mexican nationalism that embraced a hybrid racial identity. Chicana/o activists later used the term as the basis for a politicized Mexican American ethnic identity that celebrated American-born people of Mexican descent.

Mestizo also remains in use in various Latin American countries as a legacy of Spanish colonialism and the caste system, though it has not gained the political and national importance it did in Mexico. It is most commonly used in countries

in which a large indigenous population retained its cultural traditions, such as Peru and Guatemala.

As in Mexico, the term is used in Central and South American countries to describe those of mixed Spanish and indigenous descent. *Mestizo* has come to mean neither fully Spanish nor fully indigenous, but rather a cultural mixture and racial descent that makes up the majority of Latin America's population.

Caste System

Caste categories began to take form in New Spain during the mid-16th century and were officially institutionalized in the 17th century. As Spain's new colonies were settled, a system of two republics was established—the Republic of Indians and the Republic of Spaniards—granting different rights and statuses to people based on lineage. This separation had roots in 15th-century Iberia, where people understood themselves and their relationship to the polity based on language, clan, religion, and purity of blood. In New Spain, both Spanish and Indians made claims to blood purity and lineage in order to claim status as elites within their separate republics.

The separation of Indians and Spanish did not prevent people from miscegenation and various other relationships. With the importation of African slaves, increased miscegenation, and the contestation of elite titles, the lines between Africans, Indians, and Spanish were diminished, threatening the internal stability of the colonies.

In response, the Spanish Crown imposed a caste system with five initial categories: Spanish, Indian, black, mulatto, and *mestizo*. This naming and categorizing of differences was intended to assuage elite anxieties about the profusion of difference and impose social order. Rights and privileges became based on one's caste. *Mestizos* had fewer rights than the Spanish but more than Indians and Afro-descendants.

Martín Cortés, the illegitimate child of the Spanish conqueror Hernán Cortés and his Nahua interpreter, Malintzin (more commonly known as La Malinche), is symbolically considered to be the first *mestizo* of the New World. By the end of the colonial period, *mestizos* represented the majority in most Latin American countries and gained greater political and economic power in the years following independence from Spain.

Mexican Nationalism

Prior to the Mexican Revolution (1910–20), Mexico was a regionally and culturally fragmented country. Although the Mexican state had gained power during the years under Porfirio Díaz's rule (1876–1910), a Mexican nation, with a unifying identity and traditions, had not formed. Post-revolutionary governments, with the assistance of Mexican intellectuals such as José Vasconcelos and Manuel Gamio, incorporated a mestizo identity as the basis of a new national identity. In fact, Article Two of the 1917 Constitution recognized Mexico as a multicultural state, of which mestizos were the majority.

Mexico's national identity was based on cultural syncretism and emphasized the influence of both Spanish and Indian people as sources of pride. Postrevolutionary nationalism highlighted the history of the Mayan and Aztec empires, and it incorporated Indian traditions such as regional crafts as proud symbols of an authentic Mexican national identity. However, one of the critiques of this new mestizo national identity was its erasure of Afro-Mexicans and their cultural contributions.

Another critique of postrevolutionary nationalism was its paternalistic attitude toward Indians. Unlike earlier policies implemented by Díaz that looked at Mexico's Indians as part of the nation's pre-Columbian past but ignored their contemporary importance, postrevolutionary reformers celebrated living indigenous heritage as the foundation of Mexico's authentic national identity. Nevertheless, government reforms aimed to address the nation's "Indian problem" by assimilating Indians into a mestizo Mexican culture.

Although the goal was to create a modern nation-state with a compelling national identity that had mestizos at its core, the consequences of these reforms included further homogenization of indigenous groups. These policies simultaneously proved destructive to Indian communities and traditions while creating a modern Mexican nation in which all of its citizens shared a common mestizo culture.

It was perhaps the Mexican philosopher and Secretary of Public Education José Vasconcelos, and his influential essay *La Raza Cosmica* (The Cosmic Race), that most affirmed the centrality of a mestizo identity to Mexico's nationalism.

According to Vasconcelos, mestizos, or the "bronze people," constituted a new cosmic race that combined the virtues of all races, especially those of Indians and Europeans. He argued that Latin America's history of racial mixture made it unique and would make it powerful in the future.

Vasconcelos's theory encountered various critiques from his contemporaries and later generations. Through attributing inevitable characteristics to various races, Vasconcelos engaged in stereotyping. In the 1980s, anthropologist Guillermo Bonfil Batalla criticized Vasconcelos and the centrality of the mestizo to Mexican nationalism, arguing for cultural pluralism rather than a mestizaje that "de-Indianized" Mexico's rural populations. Consequently, mestizo is no longer listed as a category in the Mexican census, though it is still commonly used in academic studies.

Chicano Movement

During the Chicano movement of the 1960s, Mexican American activists embraced and gave new meaning to a mestizo identity. Although Chicano was primarily deployed as a politicized ethnic identity rather than as a racial one, it drew from theories on mestizaje such as those of Vasconcelos. Chicanos created a new mestizo identity that acknowledged the importance of indigenous people and cultural traditions as part of their heritage. It reframed mestizo as part of an experience that was both Mexican and American. Under the slogan that described a sense of displacement, "*Ni de aquí, ni de allá*" (Not from here, nor from there), Chicanos articulated that they were neither fully Mexican nor treated as fully American, a paradox they traced back to the 1848 Treaty of Guadalupe Hidalgo. Chicanos were the new mestizos, embracing a new form of cultural hybridity.

Mestizos and the Census

The Treaty of Guadalupe Hidalgo, signed at the end of the Mexican-American War in 1848, granted citizenship, and thereby a legal designation of "white," to all Mexicans residing on the lands acquired by the United States. However, these new Mexican American citizens simultaneously gained a social position as nonwhite in American society. The United States, particularly the Census Bureau, has attempted to categorize

the paradoxical and often ambiguous racial status of Mexican Americans since then. Until 1930, Mexicans remained legally categorized as white.

The 1930 U.S. Census attempted to refine notions of race and included Mexican American as a separate racial category. This drew criticism from the Mexican government since it was a violation of the Treaty of Guadalupe Hidalgo. In addition, the new categorization excluded Latinos who were not of Mexican descent.

Consequently, future census documents refrained from using Mexican as a racial category and returned to legally recognizing Mexican Americans as white. However, the increased visibility of Latinos in the United States led the Census Bureau to attempt different ways to collect data on them. In the 1950s, questions about “Spanish heritage” as well as “Spanish surname” were added to the census. By the 1980s, the census contained a new category of Hispanic by which groups could identify with subheadings to recognize variations within the population. Although mestizo was a category listed in the Mexican census for many years, the U.S. Census has not listed it as a racial category.

Question number eight of the 2010 U.S. Census asks if a person is of Hispanic, Latino, or Spanish origin, followed by question number nine, which addresses race. The primary racial categories are white, black/African American, American Indian/Alaska Native, various Asian and Pacific Islander options, and “some other race,” in which an individual can specify what other race they identify with. Mestizo remains absent from the U.S. census, but possibilities for defining one’s race as mixed or mestizo are indeed emerging.

Métis

The Métis (French for “mixed”) are a distinct indigenous group living in the northern United States and Canada. Pockets of Métis in the United States are concentrated in Michigan, Wisconsin, Minnesota, and North Dakota. Approximately 400,000 identify as Métis in Canada, where the group enjoys government-to-government rights.

Written with a lower-case “m,” métis conveys the group’s French or Anglo (usually English or Scots) and First Nations, American Indian, and/or Alaska Native heritage. Written with a capital “M,” Métis additionally implies a particular sociocultural heritage. Other terms historically used for the Métis have included Creole, Bois-Brûlés, mixed-bloods, half-breeds, Bungi, Black Scots, and Jackatars. The Anglo-Métis have also been referred to as countryborn. Generations of Métis followed the North American fur trade’s primary competitors across the continent—the French-allied North West Company and the English-backed Hudson’s Bay Company.

First Nations groups often used alliances with Europeans and other tribes to form enduring and reciprocal bonds of all sorts. The French government actively encouraged its citizens to marry First Nations women during the latter half of the 17th century. This stance did not obtain the assimilative results in the direction the French anticipated, with many men choosing to live in the manner of their indigenous relatives.

The Hudson’s Bay Company also tried to regulate marriage, hoping to minimize the likelihood

that its employees would return to Europe, abandoning their wives and Métis children—outcomes that would have both practically and politically negative implications. Unions were most often formed *à la façon du pays* (according to indigenous customs) rather than according to the customs of the largely Catholic French and Scots or the Protestant Anglos.

The Scots and the French peasantry were already quite acquainted with the concept of “civil union” and readily took to the practice of “country marriage.” As a result, marriages, births, and deaths within the Catholic system frequently recorded their First Nations and Métis constituents using Francophone or Anglicized names.

The Embodiment of Biculturalism

Proficient in French and/or English and various First Nations languages, the Métis embodied biculturalism. Métis served as translators, mediators, negotiators, fur trade voyageurs, and business owners, and in other roles essential to the maintenance of multinational trade and politics. Métis individuals formed their own communities over time—often marrying Métis to Métis. They developed unique cultural practices, foods, clothing, spiritual practices, and languages. Michif emerged as a complex language spoken by many Métis, and this French and Cree hybrid language further set them apart.

Politically, the Métis have played a prominent role in the formation of the United States and Canada. Many Métis fought for the United States in the Revolutionary War and the War of 1812. Their extensive familial ties and multilingual, multicultural skills were at times great assets to the United States and Canada but were also often perceived to be a threat to the fledgling nations as they moved to solidify national boundaries and governance.

Throughout the Great Lakes region in the 19th century, Métis became increasingly marginalized and were forced to make choices for survival. Their fur trade and other businesses were being foreclosed, and their Indigenous relatives were relegated to increasingly smaller swaths of land that made sustenance nearly impossible. Those with close ties to their Indigenous communities often assumed American Indian identities and

became enrolled or were recorded on tribal-treaty half-blood lists, entering trust relationships with the United States.

Others fled north to Canada or farther west in the United States to avoid the encroaching Americans. Some remained and became increasingly marginalized; others integrated into the American ethnic mix. Nearly all Métis lost their political and legal status as Indigenous peoples in the United States, with the exception of the Métis members of the federally recognized Turtle Mountain Band of Chippewa.

As the Canadian government signed treaties with First Nations groups exchanging land for commodities and services, it conspicuously excluded the Métis. This served as a catalyst for the French and Anglo Métis to unite in an effort to retain rights as a distinct aboriginal group. Louis Riel took the lead in asserting Métis rights in Canada in 1869. The resulting conflict became known as the Red River Rebellion of 1869.

The rebellion and ensuing conflicts had mixed results. The Métis saw the establishment of the Manitoba Act, which brought the predominantly Métis region into the Canadian Confederation; however, their leadership was decimated in the wake of a series of conflicts. Louis Riel and the Métis provisional government’s Pierre Parenteau (president) and Gabriel Dumont (adjutant-general), along with Cree chiefs Mistahi-maskwa (Big Bear) and Pitikwahanapiwiwin (Poundmaker), were harshly sanctioned. Riel and the Cree chiefs were exiled to the United States and imprisoned for treason, with Riel ultimately tried for high treason and hanged in 1886.

The results of this political frenzy have significant and continuing implications for Métis today, with border mobility now a prominent point of contention for legal Métis recognition in both the United States and Canada. Métis identity in the United States remains largely cultural and non-recognized federally. In Canada, the legal definition of who is Métis has been acknowledged in S. 35 of the Constitution Act of 1982. Case law *R. v. Powley* (2003) further extended the definition of Métis to address hunting rights, indicating that a holder of Métis rights should self-identify as a Métis individual, have ancestral connection to a historical Métis community, and be accepted by a Métis community.

A critical outcome of Métis marginalization has been the invisibility of the essential role played by aboriginal and Métis women whose skills traders relied on to survive, and whose First Nations relatives they relied on to act as intermediaries. Many women also were shrewd business owners and raised their Métis children to become bi-functional in many aspects.

Today, the Métis are in the midst of a cultural and political resurgence. Symbols of their culture and independence include the red (Hudson's Bay Anglo) and blue (French North West Company) infinity flags as well as the Métis fingerweave belts (or *ceinture fléchée*), which were essential regalia and practical tools for the Métis. The Métis National Council formed in 1983, made up of five provincial organizations in British Columbia, Saskatchewan, Manitoba, and Ontario. Métis in the United States have formed several cultural affinity groups, and the Métis Nation of Canada was founded in 2009 to advocate for Métis peoples and their rights.

Metrics of Diversity (Business)

There are many definitions of diversity from a social justice perspective. A common one is centered on organizations desiring to increase their

employment of people from traditionally underrepresented groups or protected classes, such as those defined by race, national origin, sex, disability, LGBT (lesbian, gay, bisexual, transgender) status, and age. One use of metrics is in an employment context.

The metrics discussed are most pertinent to the United States but can be adapted to other countries. Metrics can cover both quantity and quality, but the best are quantified ones. It is important to recognize what diversity metrics are not. They are not quotas or preferences. However, they can be used for goals and to evaluate compliance with court-ordered or voluntary settlement agreements.

Measurements are necessary to determine what needs doing, how to plan initiatives, and their success. Diversity metrics are typically collected, analyzed, evaluated, and promulgated by human resources or diversity departments. Much of the data can be obtained through employee databases.

Collecting the data can present challenges, particularly if the organization has not previously done so. Federal contractors and companies required to report by the federal Equal Employment Opportunity Commission will find that they already have much of the data. However, because of self-reporting, anonymity, and fears of disclosure, there may be challenges in ensuring accurate reporting and counts of employees with disabilities and of LGBT status.

An employer should know the demographics of its employees and of its service area. The latter can be found through many different sources. It is unlikely that the employer will have to create new data. For its own employees, baseline data must be established. This, and all diversity data, should be disaggregated by the categories listed and by any other categories the employer wants to use, for example, type of job, pay range, division or office, and geographical location. Data should also be disaggregated by major employment milestones such as job applicants, new hires, training opportunities, evaluations, and promotions.

Diversity in the United States is increasing. This is especially true for groups like Hispanics and Asian Americans. Efforts to improve the representation of groups should show a growth rate higher than the natural demographic increase. If an organization only improves its diversity at the

same or a lower rate than natural demographic increase, then its diversity program has failed.

Ratio measures and measures over time should be used whenever possible to provide means for comparison and to demonstrate continuity of effort. Diversity metrics are sometimes considered a scorecard.

Measuring the Benefits of Diversity

Benefits of diversity ought to be measurable. Such measures can include better relationships among diverse staff, fewer grievances and complaints, improved labor relations, reduction of graffiti and hate incidents, and more diverse hiring. Employee climate surveys can be used. Other metrics can include improvements in productivity, more innovation and creativity, job satisfaction, career development over time, retention, decrease in pay disparities, performance on exit interviews, ranking of the organization as a desirable place to work, and becoming an employer of choice.

Traditional or foundational metrics include numbers related to success in workforce representation, dollars spent with female- and minority-owned businesses, and the documentation of diversity activities and training. Diversity programs should be able to show real statistical increases in absolute numbers and percentage of recruitment, applications, hiring, retention, training, and promotion of people from traditionally discriminated and underrepresented groups.

In terms of qualitative measures, employee climate surveys can include questions about perceptions of diversity, equity, welcomeness, trust, fairness, transparency, and accountability, and should show improvement over a baseline. Employee focus groups should show similar improvement. On a psychological level, social distancing scales should show decreased distance and prejudiced thinking. Measurements of performance should include social equity and opportunity, quantity, quality, timeliness, cost, effectiveness, efficiency, return on investment, and customer service.

It is possible to measure the savings in recruitment costs from higher retention rates for diverse employees through building a more inclusive culture. Another measure is the reduction in absenteeism for underrepresented affinity groups when an inclusive culture is created. The engagement ratings for employees from different affinity

groups can be measured in annual engagement surveys.

Employment-related metrics include (1) the percentage of minorities or equal employment opportunity targets, (2) an increase in minority representation at various levels, (3) the use of targeted outreach and recruitment toward underrepresented groups, (4) the use of mentoring programs, (5) more diverse hiring practices, (6) the number of reasonable accommodations provided to employees with disabilities and of different religious beliefs, (6) the use of bridge and developmental positions for lower-level employees to transition to professional positions, and (7) efforts toward higher retention.

Business-oriented metrics include (1) an evaluation of return on investment for diversity initiatives, (2) improvements in productivity, and (3) the use of more innovation and creativity, which includes various metrics such as patents granted per capita.

Corporate social responsibility metrics involve (1) participation in community benefits, local hiring, job training, and apprenticeship agreements; (2) the inclusion of diversity in corporate social responsibility efforts; and (3) community voluntarism by employees.

Organizational culture metrics for businesses include (1) employee satisfaction, climate, and engagement surveys; (2) the achievement of better relationships among diverse staff members; (3) improved labor relations; (4) improved job satisfaction; (5) career development; (6) more positive responses from exit interviews; (7) higher ranking of the organization as a “best place to work;” and (8) becoming an employer of choice.

Evaluation and accountability metrics include (1) diversity program participation requirements in management and executive performance agreements and (2) the independence and professionalism of the diversity officer.

Compliance metrics may include achieving (1) fewer discrimination grievances and complaints, (2) fewer findings of discrimination by government agencies, (3) a reduction of graffiti or hate crime incidents, and (4) a decrease in pay disparities.

Supplier diversity metrics involve the dollar amounts spent on diverse suppliers and using small and minority-owned businesses. Veterans

hiring metrics can include the degree of participation in veterans hiring programs, and reputation metrics may involve receiving awards from special interest and advocacy groups.

Mexican American Legal Defense and Education Fund

The Mexican American Legal Defense and Education Fund (MALDEF) is the product of improved educational opportunities for Chicanas/os and an emerging professional class in the late 1960s but also is an important part of the Chicano civil rights movement. MALDEF specializes in Supreme Court test cases and funding and training Mexican American attorneys to focus on civil rights.

MALDEF was modeled on the Legal Defense and Educational Fund of the National Association for the Advancement of Colored People (NAACP) and has a counterpart in the Puerto Rican Legal Defense and Education Fund (PRLDEF). All three organizations focus on litigation in areas of education, housing, employment, criminal justice/police brutality, immigration, and voting rights and redistricting.

MALDEF also engages in extensive public education campaigns, such as that surrounding the

2012 Deferred Action Program allowing undocumented youth, brought by their parents to the United States to obtain work visas and avoid deportation based on good behavior. Chartered in 1967, MALDEF was created the following year in San Antonio, Texas, with a \$2.2 million grant from the Ford Foundation. Pete Tijerina served as the first executive director of the organization, and former LULAC (League of United Latin American Citizens) state director Mario Obledo served as its first general counsel. Though initially not all attorneys for MALDEF were Mexican American, over time it has recruited and produced a number of notable Chicana/o attorneys.

A History of Civil Rights Organizations

MALDEF descended from a long history of civil rights organizations in Texas such as LULAC (1929), the American G.I. Forum (1948), the Mexican American Youth Organization (1967), and La Raza Unida Party (1970). Mexicans in the area had legally challenged U.S. law since Texas's independence in 1836 and annexation to the United States nine years later, in 1845.

In 1954, prior to his work cofounding MALDEF, attorney James De Anda worked with Gus Garcia on the case *Hernández v. Texas*. In 1950, Pete Hernández was found guilty of murder by an all-white jury, not one of his peers. The Texas Court of Criminal Appeals rejected Hernández's challenge, which ultimately went before the U.S. Supreme Court. The court, under Chief Justice Earl Warren, found that Hernández's rights were violated through the systematic exclusion of jurors of his class and that mere chance could not have produced this outcome.

His case was remanded to the state to be retried by a jury selected without regard to race or class under the equal protection clause of the Fourteenth Amendment. De Anda also worked on several prominent educational discrimination cases in Texas prior to the creation of MALDEF. In 1970, De Anda established Texas Rural Legal Aid after MALDEF. In 1979, he was appointed to the U.S. District Court, Southern District of Texas, by President Jimmy Carter. This made him only the second Mexican American appointed to the federal bench.

In addition to De Anda, MALDEF trained and hired many prominent attorneys over the years and

changed the face of jurisprudence in the United States. Many women attorneys came through the ranks of MALDEF, including Vilma Martinez, Norma Cantu, Antonia Hernandez, Nina Perales, and Guadalupe T. Luna.

In 1974, MALDEF established a Chicana Rights Project to challenge gender discrimination, with offices in both San Antonio, Texas, and San Francisco, California; this project lasted for about a decade before losing its grant funding. Throughout the 1980s, MALDEF trained over 1,000 people in its leadership program, over 50 percent of whom were appointed to local, state, and national boards, significantly impacting public policy and Latinas/os.

U.S. Supreme Court Cases

MALDEF has participated in and won a number of important U.S. Supreme Court cases, including *White v. Regester* (1973), which challenged the “at large” voting system used in Texas; *Edgewood Independent School District v. Kirby* (1989), which challenged Texas’s school funding based on local property taxes; and *Plyler v. Doe* (1982), which challenged Texas’s exclusion of undocumented youths’ rights to a public education in the country.

Though it did not prevail in *LULAC et al. v. Richards et al.* (1987), charging the state with unequal funding of campuses in the University of Texas system such that the predominantly white campus in Austin received more money than all the other campuses combined, the embarrassment of another racial discrimination charge in education by MALDEF provoked some remediation. The Texas state legislature adopted a number of measures to increase funding for rural campuses of predominantly Mexican and black students, such as Brownsville and San Antonio, but the funding preference for the Austin campus remains.

In 2005, MALDEF once again teamed with LULAC to challenge Texas voting law in *GI Forum v. Perry*. MALDEF successfully challenged redistricting as a violation of the 1965 Voting Rights Act, which it helped renew and extend in 1975 to include Spanish-surnamed voters in the Southwest. *GI Forum v. Perry* resulted in the 23rd Congressional District being redrawn, polls opening early as the result of another MALDEF case, and Mexican Americans having an opportunity to vote for a fairly eligible candidate.

Outside Texas, MALDEF worked with other organizations, such as the American Civil Liberties Union (ACLU), to file suits against Los Angeles County and the Los Angeles Unified School District in the 1980s and 1990s in regard to voter redistricting and unequal school funding, much as it had in Texas. MALDEF has also filed a number of amicus briefs with district and state supreme courts, such as the amicus brief filed in 2012 in *In re Garcia on Admission* to the California State Bar, in support of petitioner Sergio C. Garcia, an undocumented attorney who had waited 17 years for a work visa because the state bar has no requirement of citizenship for admission to be licensed and practice before the state bar.

MALDEF inspired the creation of a Mexican American Bar Association in Texas in 1972, followed more recently by the 2010 creation of a Dream Bar Association, a national bar association for undocumented attorneys and law students.

Mexican American Political Association

The Mexican American Political Association (MAPA) was established on March 29, 1960, in Fresno, California, by Mexican American political activists dedicated to the election to U.S. public office of political candidates committed to the concerns and needs of Mexican Americans in the United States. It was spearheaded by John Acevedo, a board member of the California Youth Authority and close supporter of the politically prominent Edward Roybal.

Acevedo garnered Roybal's support, as well as that of Julio Castelan, Fred Castro, Herman Gallegos, Ignacio Lopez, Hortencia Solis, and Mary Soto (all influential Mexican American political activists in their own right) to launch this association out of their shared frustration with the U.S. electoral process. Unwilling to continue compromising the interests of Mexican American voters to gain minimal notice from the Democratic Party, these women and men agreed to found and organize this association to more effectively—and exclusively—support political candidates who advanced the interests of Mexican Americans.

Seasoned in their political activism, leaders of MAPA recruited Mexican American women and men who were eligible to vote in U.S. elections to take public stands in support of improving the education, health care, housing, and public safety of Mexican Americans, and to undertake voter registration drives, educational programming designed to raise political awareness, and increased activity in labor unions, church groups, and other organizations that would attract already politically active Mexican Americans into its ranks. It did not pursue acting as a third political party or a militancy that would draw negative public attention to its membership or the association. Rather, MAPA became most determined to recruit Mexican American voters to actively pursue the election of political candidates who had expressed serving them as a top priority.

In 1960, it was MAPA's enthusiastic investment in the election of rigorously vetted Mexican American political candidates that paved the way for the creation of the Political Association

Officers of the Mexican American Political Association-Greater Bay Area are sworn in. The group was organized by 150 volunteer delegates in Fresno, California, in 1960. MAPA works toward political empowerment, self-determination, and sustainability of the Latino community's future.

of Spanish-Speaking Organizations (PASSO). This offshoot organization was formed to concentrate its membership's energy on the election of John F. Kennedy as president. Weary of being reduced to an insignificant association in what was shaping up to be a dynamic election, MAPA opted to assert its currency and importance by supporting Kennedy and several other political candidates in local and national elections simultaneously.

Although, MAPA was heartened by its contributions to the successful election of Kennedy, this association became dissatisfied and fragile after realizing that this candidate's election to the presidency had not resulted in the appointment of Mexican Americans to influential political offices or the marked improvement of the livelihood of Mexican Americans nationwide. It refused to take comfort in Kennedy's appointment of University of Texas professor George I. Sánchez to the National Advisory Council for the Peace Corps and the committee on New Frontier Policy in the Americas, and instead tirelessly pursued achieving cityhood for East Los Angeles. Nonetheless, its inability to counter public anxiety concerning the higher taxes that came with cityhood derailed the efforts to reshape the political inner

workings of this predominantly Mexican American neighborhood.

Throughout the 1960s, MAPA's failed attempt to elect Richard Tafoya to replace Roybal upon his retirement from Congress—Roybal served 30 years, the first Mexican American elected to the U.S. Congress from the state of California since 1879—as well as its election of Eduardo Quevedo (1964) led to a plight in its popularity among Mexican Americans. Quevedo and the majority of MAPA's membership's refusal to resist the U.S. Department of Labor's undermining of the labor activism of César Chávez, Dolores Huerta, and the United Farm Workers of America (UFWA) in support of U.S. farmworkers, coupled with their silence concerning the devastating implications and consequences of the Watts riots of 1965, damaged its public reputation and political currency among Mexican American political activists and voters.

It was not until the early 1980s that MAPA began to regain political momentum by expanding its recruitment efforts to include Mexican Americans and Spanish-speaking populations dedicated to actively participating in the electoral process. By reaffirming its commitment to registering voters and expanding its efforts to protect the rights of U.S. citizens and other populations through its opposition of Proposition 187 (1994), it resurfaced as a viable political association among Mexican American women and men invested in a more inclusive approach to electoral politics. Beyond electing political candidates responsive to the concerns and needs of Mexican Americans, MAPA made it a priority to serve as a source of education for new voters and those interested in the U.S. electoral process.

In its current configuration, MAPA is composed of members who work for election of political candidates who are supportive of Chicano, Latino, Mexican, and other populations of Meso-Native American heritage in the United States. It boasts an enduring investment in grassroots political action toward achieving political empowerment and the sustainability of healthy Latino communities to welcome members into its association.

Proclaiming itself a nonpartisan organization for the social, economic, and civic engagement of the widest Spanish-speaking population possible,

MAPA remains most energetic in encouraging voter activity in Democratic and Republican central committees, labor unions, and other groups invested in political action on behalf of this population, and in serving as a launching pad for talented members interested in pursuing elective or appointive public office. It is this diversity of goals that has invaluable influenced its longevity and legacy in the United States.

Mexican American Youth Organization

The Mexican American Youth Organization was founded in 1967 in San Antonio, Texas, as part of a broader Chicana/o student civil rights movement that sparked walkouts, protests, and conferences that began fundamental changes to educational institutions across the southwestern United States.

Parallel to other Chicano movement organizations such as MEChA (Movimiento Estudiantil Chicano de Aztlán) and the Brown Berets, MAYO focused on issues of segregation, discrimination, and denial of equality of access and opportunity for Mexican American youth. MAYO also served as an important organizing

stepping-stone for La Raza Unida Party (RUP) in Texas in 1970.

MAYO stressed Chicano cultural nationalism and preferred direct political confrontation and mass demonstrations to accomplish its goals. It also spread to high schools and colleges throughout Texas for the next three years, indicating the power of its message surrounding educational issues that would later become incorporated into the Plan de Santa Barbara and the founding of MEChA in 1969 in California. The driving issues for MAYO included unequal discipline for Mexican American students; lack of Mexican American teachers and staff; unequal opportunities for advancement through tracking and discrimination; lack of Mexican American experiences in the curriculum; and more basic daily issues, such as the inability to speak Spanish in school or find Mexican American food in the cafeteria, despite being the majority population in many districts in Texas because of residential and educational segregation.

The founders of MAYO—Jose Angel Gutierrez, Mario Compean, Willie Velasquez, Ignacio Perez, and Juan Patlan, later joined by Ernesto Chavez—engaged in self-education through the reading of primary documents of other civil rights organizations and civil rights leaders, including not only the Alianza Federal de Mercedes (Federal Alliance of Land Grants) in New Mexico but also the Student Non-Violent Coordinating Committee (SNCC).

They examined the works of leading black nationalists of the era such as Stokely Carmichael, Eldridge Cleaver, and Malcolm X. After reading such works, several members of MAYO went to meet in person with Reies Lopez Tijerina, founder of the Alianza, as well as Stokely Carmichael and colleagues of Martin Luther King, Jr. As with other Chicano civil rights organizations, such as the Community Service Organization (CSO) and the United Farm Workers of America (UFW), MAYO drew on the strategies of Saul Alinsky and the Industrial Areas Foundation (IAF), which focused on mobilizing the poor and working classes who had previously been seen as powerless and unable to organize.

Several MAYO leaders, including Gutierrez and Compean, went on to found and lead a third Chicana/o political party that challenged

the traditional hegemony of the Democratic and Republican parties: La Raza Unida Party (RUP). The link between MAYO and RUP was natural. MAYO, in an effort to achieve its educational objectives, registered voters and mounted traditional electoral challenges to all-white school boards, in addition to the more directly confrontational school walkouts.

Incorporation Into La Raza Unida

Unlike other youth organizations, like MEChA and the Brown Berets, which waxed and waned over the next four decades, MAYO became incorporated into La Raza Unida as a youth auxiliary, and when La Raza Unida declined in influence and success by the end of the 1970s, MAYO did as well. However, many of the leaders of MAYO led other successful civil rights, labor, and educational organizations and movements.

Velasquez founded the Southwest Voter Registration Education Project (SVREP) in 1974, which continues until the present as the largest and oldest non-partisan Latino voter organization in the country. Velasquez's commitment to the fundamentals of the democratic process have been less overtly nationalistic than that of either MAYO or RUP, but a significant legacy of his early work lies in these organizations. After MAYO and La Raza Unida, Jose Angel Gutierrez continued his education, receiving both a Ph.D. and a J.D., teaching and organizing in both Oregon and Texas.

His position as a tenured professor at the University of Texas at Arlington and founder of its Center for Mexican American Studies put him in contact with thousands of students who have been shaped by his classes, advising, and scholarship, such as his books *The Making of a Chicano Militant* (1998) and *A Chicano Manual on How to Handle Gringos* (2003). Mario Compean ran for political office several times for La Raza Unida Party and, like Gutierrez, went on to organizing in labor and eventually to teaching in Wisconsin, Oregon, and Washington.

MAYO demonstrated the importance of education and school sites as foci for civil rights organizing. It demonstrated the power of minors in political processes in which they could not officially vote, but in which they had a strong stake. The lessons of MAYO carried forward not only in

the subsequent work of its leaders and members but also as models for new generations of student walkouts over immigrant rights, the DREAM Act, and a César Chávez holiday.
