while others prefer more specific regional identities as Hispano/a, Chicano/a, or Tejano/a. Such discrepancies in self-identification result from the initial incorporation of Mexicans into American society in the middle of the 19th century, followed by successive waves of migration from Mexico to different locales within the United States ever since, along with differences in social experiences and political ideologies that have produced an array of ethnic-cultural identities.

Migration, Social History, and Key Events

The United States annexed much of the present-day southwest in 1848, following the Treaty of Guadalupe Hidalgo, which officially ended the Mexican-American War. These lands composed more than half of Mexico's territory, including the present-day states of New Mexico, Arizona, California, Nevada, and Utah; parts of Wyoming and Colorado; and the Rio Grande boundary of Texas. Mexican nationals living in this region at the time of annexation thus became the first Mexican Americans.

Immigration from Mexico remained low over the next 50 years but began to increase sharply in the early decades of the 20th century as the result of a combination of factors, including the social and political upheaval stemming from the Mexican Revolution (1910–20); the construction of new rail lines connecting the two nations; the opportunity for Mexicans to earn higher wages north of the border; an ever-growing demand for migrant Mexican workers in the burgeoning southwest's mining, agricultural, and railroad industries; and an acute need for additional workers to alleviate labor shortages in the aftermath of the United States' entry into World War I in 1917.

Immigration from Mexico remained virtually unrestricted until the early 1930s. Even the stringent Immigration Act of 1924, which severely limited the influx of immigrants from Asia and southern and eastern Europe by implementing national origins quotas on immigrant-sending societies, did not establish a quota for Mexican immigrants. Conditions changed dramatically during the Great Depression, however, when Mexican migrants and Mexican Americans alike found themselves as undesired competitors with whites/Anglos for scarce jobs and public relief programs. An estimated 300,000 to 500,000

Mexican Americans

Mexican Americans are the largest Latino ancestral population and one of the fastest-growing ethnic groups in the United States. The 2010 Census counted approximately 32 million Americans of Mexican heritage, representing 63 percent of the nation's total Latino population. The size of the Mexican American population increased 54 percent from the 2000 Census. Although Mexican Americans reside in all 50 states, the largest and most historically significant communities are found in the southwest. Over the past two decades, the Mexican population of the south, particularly Georgia and the Carolinas, has increased significantly as a result of new immigration into the region.

The individuals who constitute the Mexican-origin population of the United States do not share a uniform consensus on how they refer to themselves, with some choosing to self-identify as Mexican American and others as Hispanic and/or Latino/a. Many identify simply as American,

ethnic Mexicans (including undocumented aliens, legal immigrants, and U.S. citizens) were repatriated to Mexico during the 1930s.

However, the United States once again began actively recruiting migrant Mexican workers under the Bracero program, a guest worker program enacted in 1941 to meet wartime production demands in agriculture and manufacturing. Most *braceros* found employment in the southwestern border states. Historians note that the Bracero program ultimately gave rise to the high rate of illegal immigration from Mexico in the late 20th and early 21st centuries, as employers often found it more profitable to hire unauthorized migrants, for whom they did not feel compelled to pay minimum wages or ensure standard labor practices, than legal guest workers. By the official termination of the Bracero program in 1964, the social and economic dynamics of illegal immigration had been well established.

The decades following World War II witnessed greater social activism on the part of Mexican Americans who confronted anti-Mexican prejudice, discrimination, and class inequalities in American society. Many within the younger generation began to self-identify as Chicanos, once an ethnic slur, and staged public protests in opposition to the Vietnam War, police mistreatment, anti-Mexican bigotry, and substandard public schools in Mexican American neighborhoods.

One of the most prominent Chicano protests occurred in March 1968, when students at five East Los Angeles high schools staged a series of walkouts to demand various school reforms and to protest anti-Mexican bias within the Los Angeles Unified School District. César Chávez and Dolores Huerta founded the United Farm Workers of America labor union in the 1960s to organize agricultural workers and improve their labor conditions. Chávez organized a highly effective nationwide boycott of grapes between 1966 and 1970 that earned the support of Democratic presidential candidate Robert F. Kennedy, as well as much of the American public, and ultimately resulted in a union contract between California grape growers and their workers.

Culture, Customs, and Celebrations

Mexican Americans do not share an identical cultural framework, because of the wide range

of differences pertaining to when, where, and how the ancestors of today's Mexican Americans entered the United States, combined with the socializing influences of one's peer groups, generation, social class, education level, and geographic locale. Although Mexicans currently represent the largest nationality of both legal immigrants and undocumented aliens to the United States, millions of other Mexican Americans are the children, grandchildren, and/or great-grandchildren of immigrants from Mexico who have little to no Spanish linguistic ability or personal connection to, or identification with, Mexico.

Among the Mexican-origin population, one finds significant numbers of both monolingual English speakers and monolingual Spanish speakers, along with large numbers of individuals who demonstrate varying degrees of bilingual proficiency. Anthropologist James Diego Vigil refers to this continuum of Mexican American cultural and linguistic orientation, which often can be seen within a single Mexican American household, as *chicanozaje*.

Nevertheless, certain traditional Mexican customs continue to be practiced in the United States and have become well known to Americans of other backgrounds. One set relates to Cinco de Mayo (May 5), which commemorates a Mexican military victory over France during the Battle of Puebla in 1862. Cinco de Mayo is actually a more significant holiday in the United States than in Mexico. In the United States, the day serves as a symbolic celebration of Mexican American pride and heritage in a similar vein as St. Patrick's Day to Irish Americans.

Another key holiday is Día de los Muertos, celebrated November 1 and 2; individuals pay tribute to their deceased loved ones. Known for its elaborate constructed altars to the departed and its colorful displays of *calaveras* (skulls) and face paintings, Día de los Muertos is a very popular event in Los Angeles, San Antonio, Phoenix, and other cities with large Mexican American communities.

Mexican Independence Day, September 16, is celebrated with public offerings of music, dancing, and food in cities such as Los Angeles and San Antonio. Professional boxing matches featuring Mexican or Mexican American boxers are often held the weekends of Cinco de Mayo and

Mexican Independence Day, as Mexican Americans compose a key segment of boxing's loyal fan base in the United States.

Notable Mexican Americans

As the Mexican American population has grown rapidly over the past few decades, numerous Americans of Mexican heritage have emerged as key political figures, popular entertainers, and high-profile athletes. Antonio Villaraigosa was elected mayor of Los Angeles in 2005, becoming the city's first Latino mayor in more than a century. Bill Richardson served as secretary of energy and U.S. ambassador to the United Nations during the Bill Clinton administration before serving two terms as governor of New Mexico. Hilda Solis, of Mexican and Nicaraguan parentage, served six years in the U.S. House of Representatives prior to being named secretary of labor under President Barack Obama. Prominent Republican officeholders of Mexican heritage include Governors Brian Sandoval of Nevada and Susana Martinez of New Mexico.

Numerous Mexican American celebrities have made an impact on pop culture. One of the earliest was Ritchie Valens, a pioneer of 1950s rock and roll whose life and legacy are chronicled in the movie *La Bamba*. Mexican immigrant Carlos Santana, a guitarist and songwriter, founded the legendary rock band Santana, whose music was part of the soundtrack of the counterculture of the late 1960s and early 1970s. Singer Linda Ronstadt made her first recordings in the mid-1960s and went on to enjoy a long and successful career, in which she performed Mexican folk songs as well as music from numerous other genres. Other more recent Mexican American recording artists include Selena Quintanilla, Selena Gomez, Demi Lovato, and the band Los Lobos. George López, Richard "Cheech" Marin, and Paul Rodriguez remain popular comedians, and actors Anthony Quinn and Edward James Olmos have attained lengthy, critically acclaimed careers on the silver screen. Eva Longoria and Salma Hayek are the two most popular Mexican American actresses, known for both their acting talent and their social activism.

Onlookers flank the streets and wave Mexican flags during the Mexican Independence Day parade in 2010 in Chicago. Mexican independence from Spain is celebrated beginning on September 15, the eve of Independence Day, and continues on the following day. The holiday is a major celebration day in Mexico and among Mexican Americans, with traditions similar to the U.S. holiday of July 4.

Mexican Americans have also had a considerable impact on collegiate and professional sports in the United States. Rookie pitcher Fernando Valenzuela led the Los Angeles Dodgers to victory over the New York Yankees in the 1981 World Series, winning the admiration of millions of his coethnics that the sports media dubbed “Fernandomania.” Oscar De La Hoya, a native of East Los Angeles, won the gold medal in boxing at the 1992 Summer Olympics and captured world titles in six weight divisions as a professional boxer. In the National Football League, quarterback Jim Plunkett led the Oakland/Los Angeles Raiders to championship glory in Super Bowls XV and XVIII. Plunkett, who also won the Heisman Trophy as a senior at Stanford University in 1970, was named Most Valuable Player (MVP) of Super Bowl XV. Offensive tackle Anthony Muñoz was inducted into the Pro Football Hall of Fame in 1998 after an illustrious career with the Cincinnati Bengals. Quarterback Mark Sanchez captured MVP honors for leading the University of Southern California to victory over Penn State in the 2009 Rose Bowl and went on to play for the New York Jets.

Contemporary Issues

The Mexican American population is growing rapidly as a result of immigration, a higher birthrate than the national average, and a younger median age than the national average. According to the 2010 Census, Mexican Americans compose 10 percent of the total U.S. population and are now the third-largest ancestral heritage in the nation, behind Germans and Irish. Mexican Americans will surpass Irish Americans in population within a few years.

This demographic change has evoked fears and hostilities among some other Americans over the presumed negative impacts that the growth of this ethnic population will have on the United States. The proliferation of grassroots organizations and talk radio hosts advocating increased immigration controls has accelerated over the past decade, and some of these organizations and individuals have incorporated explicitly anti-Mexican rhetoric as part of their message.

During the swine flu scare of 2009, for example, one Boston talk radio host blamed Mexican immigrants for bringing the flu into the United States and declared Mexicans to be “the world’s

lowest primitives.” Such rhetoric has also translated into anti-Mexican violence, as illustrated by the fatal beating of an undocumented Mexican by four white teenagers in Shenandoah, Pennsylvania, in August 2008.

Although anti-Mexican nativism persists, scholars point out that Mexican Americans demonstrate acculturation patterns not unlike those of other ethnic groups. A 2006 study revealed that only one-third of second-generation Mexican Americans (that is, the U.S.-born children of immigrants) maintained fluency in Spanish, indicating a rapid generational transition toward English. Mexican Americans, as well as Latinos as a whole, also intermarry at a significantly higher rate than the national average, with 32 percent of second-generation Latinos and 57 percent of third-generation Latinos marrying non-Latino spouses.

Mexican Revolution

The Mexican Revolution was the first major revolution of the 20th century, beginning in 1910. The endpoint of the revolution is a matter of debate, with fighting having continued through the 1920s, but the adoption of the 1917 Mexican Constitution and the U.S. recognition of an interim Mexican president mark a watershed moment. The revolution had a significant impact on the United States and on Mexican Americans. It led to the first major wave of Mexican migration to the United States, with some of their descendants influential in the 1960s Chicano movement. The 1994 Zapatista uprising in response to the North American Free Trade Agreement (NAFTA) was itself an echo of the revolution, motivated by NAFTA's abrogation of Article 27 of the Mexican Constitution.

Dissatisfaction with the 34-year rule of President Porfirio Díaz (1876–1911), referred to as the *Porfiriato*, was the immediate cause of the Mexican Revolution. All segments of Mexican society rebelled against one aspect or another of the Porfiriato: rural *campesinos* (agricultural workers), urban workers, miners, wealthy *hacendados* (large landholders), residents in the north, U.S. exiles, and land reformers in the south. Díaz's motto was *Pan o Palo* ("bread or the club"), emphasizing the philosophy that one could accept what one was given or accept the consequences.

Even the wealthier classes were unhappy by 1910 because they were not benefiting from the Porfirian largesse. A total of 95 percent of the land, including subsoil rights, was owned by less than 5 percent of the population, the majority of them foreigners.

The revolution began in 1910 with a popular uprising against Díaz. Many factions emerged, some supporting Díaz and others supporting Francisco Madero or other leaders. Millions died during the war and subsequent insurgency. In the rebuilding of the nation during the 1920s, the Partido Revolucionario Institucional (Institutionalized Revolutionary Party, or PRI) was established, controlling Mexico's presidency until the 2000 election of Vicente Fox from a rival party.

Roughly 10 percent of Mexico's population, particularly those in the northern states, fled to the United States, many vowing to return upon a firm peace. The majority of those migrants did

not return, however, because of the duration of the conflict. They settled down permanently in the United States, usually in communities with an established Hispanic presence. Almost a million legal migrants, and untold undocumented others, came between 1910 and 1920, four years before the establishment of a border patrol between the nations. This was the first time that Mexicans migrated en masse to the United States, which caused concern for immigration detractors who had already limited migration from China, Japan, and various European countries.

The discovery in 1915 of the Plan de San Diego, an attempt by the Venustiano Carranza government to encourage a Mexican American insurgency in Texas, New Mexico, Arizona, and California, led to the death of 100 Mexican Americans by vigilante posses. It also deepened American concerns about the long-term loyalty and "Americanness" of Mexican Americans, concerns that were further inflamed by the interception of the Zimmermann telegram in 1917. The telegram was a communication from Germany to Mexico, promising the return of formerly Mexican territories in the American southwest in return for Mexico's support in World War I. These sentiments fed into the immigration legislation of the 1920s and the repatriation program of the 1930s.

Revolution in the United States

Pancho Villa's 1916 raid on Columbus, New Mexico, was the best-known case of the Mexican Revolution crossing the border into the United States. Villa was a populist leader of the rural poor in northern Mexico who sought American support during the revolution. When the United States instead recognized his rival, Venustiano Carranza, as de facto president of Mexico in 1915, Villa stopped seeking an American alliance. On March 9, 1916, Villa and approximately 500 troops entered Columbus, New Mexico, before dawn, taking supplies and burning buildings. President Carranza allowed U.S. troops under Major General John J. Pershing into Mexico to hunt for Villa. Pershing's men tracked Villa until early 1917, when they returned to the United States without him; he assassinated in Parral, Chihuahua, Mexico, in 1923.

A possible cause for the Columbus raid was President Woodrow Wilson allowing armed

Mexican troops to move through Texas and New Mexico on their way to a battle against Villa in November 1915. The Carranzistas beat Villia's forces because of this maneuver through the United States. In Texas, the revolution was so close to the United States that journalists, filmmakers, and photographers joined local residents on top of local buildings and hotels in El Paso and watched the battles for sport. Also watching and making music about these events were local *corridistas*, balladeers who sang about important battles and leaders.

Throughout the revolution, Mexicans and Mexican Americans in the United States followed the battles daily, worried about their hometowns and family still in the country. The Flores Magon brothers, Ricardo, Enrique, and Jesus, were exiled to the United States from Mexico in 1904 for their radical, anarchist writings and agitation.

Ricardo Flores Magon, an attorney and one of many intellectuals active in the revolution, worked with the International Workers of the World (IWW) to organize workers, and with Emma Goldman and other international anarchists to advance El Partido Liberal Mexicano (PLM), the Mexican Liberal Party, to oppose another re-election of Porfirio Diaz, the same year as the Cananea strike (1906). He wrote the newspaper *Regeneracion* ("Regeneration") to spread his opposition to Diaz. Authorities arrested Ricardo Flores Magon several times in the United States for violation of its neutrality laws. He was arrested in 1918 in the Palmer Raids, along with other known radicals, and was sentenced to 20 years in federal prison in Leavenworth, Kansas, where he died four years later under contested circumstances. The PLM fell apart after Ricardo Flores Magon's death.

Enrique Flores Magon was a journalist and politician who supported the work of the PLM and his brother Ricardo. They were separated often, and Enrique changed names and addresses to continue his work. He supported *Regeneracion* by organizing distribution networks for the paper but eventually split from the PLM in 1917. He returned to Mexico in 1923 after his brother's death in prison. Brother Jesus, the middle and most moderate of the three brothers, was an attorney, journalist, and politician. Jesus also supported the writing of *Regeneracion*, but he did not share his brothers' increasingly anarchist leanings.

After fleeing to the United States with his brothers, Jesus returned after the fall of Diaz and was appointed to the Mexican cabinet by Francisco I. Madero, serving as both undersecretary of justice and secretary of development. He fled and returned to Mexico on several occasions over the course of the revolution, with shifts in leadership.

La Raza Cosmica and Rebuilding

Author and Minister of Education (1921–24) Jose Vasconcelos was active both before and after the revolution. Vasconcelos, like the Flores Magon brothers, advocated against the re-election of Porfirio Diaz in the early 1900s. He actively supported Francisco I. Madero. As minister of education after the revolution, he reformed rural schools and increased literacy among Indians. He supported libraries, the affordable publication and distribution of literature, and public arts. In particular, he supported the work of *Los Tres Grandes*, the three most prominent Mexican muralists of the day: Diego Rivera, Jose Clemente Orozco, and David Alfaro Siquieros. Vasconcelos furthered the conversation about a post-revolutionary national identity in a variety of venues and format.

Chicana/o muralists, involved in creating an American artistic renaissance as part of the Chicano civil rights movement, drew extensively on the mural work of Rivera, Siquieros, and Orozco, patterning narratives and images on the Mexican masters. This legacy of influence can still be seen in Mexican American communities throughout the United States, in addition to the works *Los Tres Grandes* did in California, Connecticut, New York, and Michigan.

Vasconcelos also authored the well-known and controversial text *La Raza Cosmica* ("The Cosmic Race") in 1925. In it, he argued that Mexico was a mixed-race, or *mestizo* nation, and this was superior to the Anglo-Saxonism of the United States, over which it would eventually triumph. Mexican Americans, heirs to many backgrounds, frequently use Vasconcelos's work, such as in the creation of *El Plan de Santa Barbara* (1969), giving rise to Chicana/o studies and MEChA (Movimiento Estudiantil Chicano de Aztlán).

Zapatismo 1994

One branch of the Mexican Revolution was resurrected at the end of the 20th century. One of the

most important features of the 1917 Constitution that brings some stability to Mexico is Article 27, which prevented the foreign ownership of land, a fundamental concern emerging from the Porfiriato. The land-grant struggle emerged during the revolution in Morelos under Emiliano Zapata, one of the most prominent figures of the civil war. Although Article 27 was never implemented as fully over the next seven decades as opponents of the PRI would have liked, the altering of it by President Carlos Salinas de Gortari in 1994 to bring Mexico's property laws into alignment with the United States and Canada under NAFTA sparked armed revolution. Salinas de Gortari amended Article 27 to allow for the privatization of communal landholdings, the same policy adopted by Porfirio Diaz over a century earlier.

The result was the same as it was a century earlier: armed uprising. On January 1, 1994, the Ejército Zapatista de Liberación Nacional (EZLN), the National Zapatista Liberation Army, declared a defensive war on the Mexican government through its symbolic leader Subcomandante Marcos. Adopting Emiliano Zapata's rhetoric and history of agrarian land reform, the Zapatistas mounted an initial physical resistance to the Mexican Army but were unable to persist because of their military strength. Since 1994, Zapatistas have instead fought land seizures and the poverty created in the region of Chiapas through a sophisticated media and Internet campaign designed to garner international public support for their movement among those opposed to globalization and neoliberal economic policies.

Mexican-American War

The Mexican-American War (1846–48) and the subsequent Treaty of Guadalupe Hidalgo not only shaped the geography and demographics of the United States in important ways but also left a permanent imprint on Mexico-U.S. relations. Foreshadowed by Mexico's loss of Texas in 1836, the war was part of a larger trend of American expansionism justified by the doctrine of manifest destiny. Although often overshadowed by the Civil War, the Mexican-American War had a similarly significant impact and provided early military experience to future Civil War leaders.

Manifest Destiny

Manifest destiny rationalized U.S. expansion westward that began in the 1820s. It was a religious and racial ideology that expressed the supremacy of particular forms of Christianity and democratic capitalism as manifestations of God's divine providence. Although some writers and politicians supported the notion that the United States was destined to expand across the continent, there were others in the United States, namely northern abolitionists, who expressed their reservations about entering into a war with Mexico and whether the United States was acting righteously in relation to a newly formed neighbor, or seeking to expand the number of slave states in the union. Others questioned the possible outcomes of including so many new people into the nation so quickly who were nonwhite and non-Christian.

This was one of the key dilemmas of manifest destiny: The doctrine called for American expansion into the west, and some even envisioned a United States that encompassed the whole of the continent; however, it was vague about the fate of the non-Americans already living in those lands. This ambivalence, with some policies favoring

An 1851 painting by Carl Nebel shows the American occupation of Mexico City during the final days of the Mexican-American War. Combat operations lasted a year and a half, with American forces quickly occupying New Mexico and California. Several garrisons on the Pacific Coast further south in Baja, California, were taken while another army captured Mexico City, and the war ended in U.S. victory.

assimilation and others annihilation, was characteristic of the 19th century.

The Battle for Texas Independence at the Alamo, Goliad, and San Jacinto reflected a fundamental dispute over land ownership, manifest destiny, and immigrant rights in Mexico between its independence from Spain in 1821 and the loss of the territory in 1836. The Mexican-American War has its roots in Texas. Encouraging Anglo-Americans to settle in the area starting in 1822, the Mexican government required settlers to support Mexico and Catholicism in exchange for 5,000-acre grants of land. Anglo-American settlers bristled against Mexican laws and culture from the beginning, showing outright resistance to Mexico's abolition of slavery in 1829. The call to arms given by settler Stephen Austin in 1835 ultimately ended in Mexico's loss of Texas in April 1836.

Texas remained an independent republic, centered in the heart of the Mexican nation, until 1845, at which point it was annexed by the United States through a joint resolution of Congress; it was eventually admitted as the 28th state of the union. In 1846, U.S. and Mexican troops fought on a strip of disputed land between the two nations located between the Nueces River and the Rio Grande. President James K. Polk declared war in

May 1846, asserting that it was the only recourse. Often forgotten were the initial conditions upon which Americans agreed to settle in the territory.

The Bear Flag revolt occurred in June 1846, when Anglo-American settlers in the San Francisco Bay area arrested Mexican General Mariano Vallejo and raised a flag with a bear on it, declaring an independent republic. Many Anglo-American settlers in California had entered without permission and followed the lead of John C. Frémont, a U.S. Army topographical engineer who encouraged the formation of an independent republic in California. Although war had been declared upon Mexico in May 1846, word of it did not reach California until after the Bear Flag revolt began. Upon entering the bay in July 1846, the U.S. Navy quickly absorbed the bear flaggers and replaced their flag with that of the United States. Questions remain about whether bear flaggers acted with support from the U.S. government through Frémont, or if they acted independently and were joined by the United States afterward.

The American press provided the public with a steady stream of battlefront accounts as American forces took California (beginning with northern California) and New Mexico, as General Zachary Taylor invaded northern Mexico, and as

General Winfield Scott led the Mexico City campaign, resulting in the capture of the city. Popular support for and interest in the war was high, while desertion was increasingly a problem for the Mexican forces.

San Patricio Battalion

A sizable portion of U.S. troops during the war were Irish and German immigrants of Catholic faith. The Mexican government and citizens made clear that the destruction of Catholicism was a fundamental cause and possible outcome of the war. In November 1846, General Antonio López de Santa Anna organized a group of American deserters and Mexican soldiers into the San Patricio Battalion (St. Patrick's Brigade). The battalion fought major battles against the United States at Buena Vista and Churubusco, where they were defeated and captured. A total of 72 U.S. soldiers of the San Patricio Battalion faced courts martial, and 70 were found guilty.

The Child Heroes of Chapultepec Castle (Los Niños Heroes) are fondly mythologized in Mexican American history as defending the cause of Mexican sovereignty while mere military cadets. Approximately 100 cadets fought General Winfield Scott and the U.S. Army that marched westward from Veracruz in September 1847, with many taken as prisoners of war upon losing the battle. At least six young cadets wrapped themselves in the Mexican flag and jumped from a castle wall to prevent being captured.

On the 100th anniversary of Chapultepec, Harry S. Truman became the first U.S. president to visit Mexico City. He laid a wreath at the Chapultepec monument honoring the bravery of the young men, and he reflected on the broader U.S.-Mexico relations that had resulted from the war and the way in which it was fought. Truman's symbolic gesture was a small healing moment for Mexicans on both sides of the border.

Signed in February 1848, the Treaty of Guadalupe Hidalgo did little to protect the rights of Mexicans in the newly ceded territory north of the Rio Grande. Subsequent revisions under the Protocol of Queretaro and Gadsden Purchase Treaty added further injury to the wounded Mexican nation at the end of the war.

The Mexican-American War is remembered and interpreted differently in the United States

and Mexico. Mexican American scholars who draw their ancestry from one country but have resided for generations in the other have tended to sympathize with the Mexican nation and peoples, reflecting extensively on U.S. imperialism, manifest destiny, and the mistreatment of Mexicans in the United States after the treaty. At times, this puts them at odds with hegemonic American scholars who view the same sets of events and present a more favored dominant narrative in U.S. textbooks and curriculum.

Microaggressions/ Microinequities

Because of the pressure of social justice movements, legislation such as the Civil Rights Act in 1964, Title IX of the Education Amendments Act in 1972, and the Americans with Disabilities Act in 1990 have banned discrimination in the workplace, in educational settings, and in other parts of society. Shifting demographics of society, the United States becoming more racially diverse, and various legislative acts have led to changing social norms. These changes posit that overt discrimination against women and minorities is less socially acceptable than in the past. Scholars have noted

that although overt discrimination may have decreased, subtle forms of discrimination have actually increased. These elusive events, acts, and comments that are often difficult to explain have been called microaggressions and/or microinequities. Microaggressions and microinequities are interrelated concepts founded in the idea that individuals perpetuate various forms of discrimination like racism and sexism through subtle, sometimes unintentional acts.

Many have attributed the origin of microaggressions to the work of Dr. Chester Pierce, who investigated racism in television commercials and its impact on audiences. Originally conceived in terms of subtle actions that belittle people of color, recent scholarship has expanded the concept of microaggressions to encompass behaviors or acts that demonstrate biases pertaining to gender, sexual orientation, and disability. Microaggressions have been described by D. W. Sue as “brief everyday exchanges, that send denigrating messages to individuals because of their group membership.” Some examples of microaggressions include a white woman crossing the street or holding her purse tighter as she sees a black man approaching on the sidewalk and a female employee’s idea being dismissed while the same idea offered by a male employee is lauded.

Identifying microaggressions is complicated for both the sender and receiver because of their relatively subtle nature. Further complicating the matter is that although these scenarios often go unnoticed by the perpetrator, they have a lasting impact on the individual on the receiving end of the microaggression. This is especially true if the receiver consistently encounters demeaning comments or situations over his or her lifetime. For example, research indicates that people on the receiving end of microaggressions have faced both psychological and institutional barriers, including lowered self esteem and lack of access to education and health care.

Similarly, the concept of microinequities can be traced back to articles written in the 1970s by Mary Rowe, an economist. She based it on research conducted by Jean-Paul Sartre and Dr. Pierce. Similar to microaggressions, microinequities occur when people are perceived to be different. Scholars have argued that, regardless of whether racist or sexist comments are intentional or not, they have a

cumulative negative effect on women and minorities. Microinequities, in particular, encompass two areas: how demeaning comments or events impact the effectiveness of individuals in the workplace, and how microinequities can perpetuate a glass ceiling for women and people of color. These acts are so subtle that it is very difficult to bring legal action against them.

Rowe has claimed that microinequities in the workplace can have a Pygmalion effect, meaning that employees will live up to the expectations placed on them by managers. Therefore, if managers set low expectations for some employees, but not others, those expectations could have numerous negative effects, including lowering of the self-esteem of the employees, causing feelings of alienation/marginalization, inhibiting creativity and productivity of individuals, and reinforcing stereotypes among management. Whether intentional or not, microinequities end up further marginalizing individuals already perceived to be different.

Since microaggressions and microinequities are primarily subtle and unintended, several problems arise when trying to challenge the behavior of the individual who committed the acts. In light of the subtlety, microaggressions/microinequities are also difficult to identify. In turn, this often makes it hard to prove that a microaggression occurred in the first place. If an individual can actually prove that another person committed a microaggression or microinequity, he or she often is faced with having to defend him/herself for addressing the behavior because many people do not perceive themselves capable of committing racist, sexist, or heteronormative acts. Furthermore, since microaggressions and microinequities are so subtle, they are often viewed as innocuous. As a result, they are easily dismissed as harmless. Studies have illustrated that microaggressions cause individuals to feel frustrated, isolated, and invisible to the majority group. They can have lasting effects that are both psychological and institutional.

The seeming invisibility of microaggressions and microinequities corresponds to the way in which explicit racist or sexist acts have been deemed socially unacceptable. In spite of societal movement toward equality, individuals continue to commit microaggressions or microinequities, oftentimes through unconscious acts that were

not necessarily intended to insult or demean. Yet, microaggressions and microinequities have negative psychological effects for the individuals who receive the messages. These subtle messages also marginalize groups that are perceived to be outside the norm, whether because of their race, gender, sexual orientation, or disability.

Marginalization because of microaggressions and microinequities can also contribute to systemic forms of discrimination, including lack of access to job opportunities, health care, and education. Acts and/or comments that might be perceived as harmless by the perpetrator have lasting psychological and institutional effects. Consequently, it is important to recognize the negative impact of microaggressions and to educate people on their impact so that their occurrence can be minimized or erased altogether.

Middle Passage

Over 33,000 slave ships embarked on the Middle Passage journey to the Americas during the more than 350 years of the transatlantic slave trade. The Middle Passage commonly refers to this intermediate phase of the slave trade in which slaving vessels loaded with shackled, enslaved Africans crossed the Atlantic Ocean and arrived at various trade ports in the New World. The transatlantic

voyage followed the first stage of the slave trade: the forcible removal of Africans, considered less than human, from the African continent, where they were sold, kidnapped, or lured into captivity. The Middle Passage and the slave ships provided the vehicle for the involuntary transportation of 12.5 million captive Africans to the New World from the 16th to the 19th centuries.

The slave trade is often referred to as the triangular trade to illustrate the movement of people, raw materials, and money from Europe to Africa to the Americas and back to Europe. Although the triangular trade simplifies the complexities of the multiple slave routes traveled, it provides a useful visual tool for understanding the large-scale distribution of African captives.

According to this geometric analogy, the Middle Passage forms the base of the "triangle," bridging Africa and the Americas. Once delivered to the Americas, enslaved Africans were traded and sold as chattel for goods and raw materials. Depending on their final destination, these African captives toiled in deplorable conditions, cultivating sugar, coffee, tobacco, cotton, and other crops. Others were forced to work in domestic settings. Many formed maroon communities, or separate, independent settlements like the powerful Palmares *quilombo* (maroon settlement) in 17th-century Brazil. It was in the Americas where Europeans, Africans, and indigenous peoples collided, clashed, fought, and reproduced, forming the foundations of the multicultural Americas.

The Economics of the Middle Passage

The financial stakes were exceedingly high for the transoceanic commerce of enslaved Africans. The Spanish, Portuguese, Dutch, English, Danish, and French empires engaged in the slave trade in varying degrees, many through the formation of slave-trading companies. Brazil and the United States eventually participated directly in the slave trade.

Driving the lucrative slave trade, the forced transatlantic migration via the Middle Passage journey was the primary cause of the so-called African diaspora, or dispersal of Africans across the globe. Africans were primarily captured from the west coast of Africa (Gold Coast, Upper Guinea, Senegambia, Bight of Benin, Bight of

Biafra, Windward Coast) and exported to outposts in the Americas, including Brazil, the United States, and the Caribbean, while other enslaved Africans originated from other regions (west-central and southeastern Africa) in smaller numbers. To facilitate these ambitious economic ventures, several European powers formed companies such as the Dutch West India Company and the British Royal African Company to manage trafficking activities and eliminate competition at African trading posts.

Measuring the Mortality

Historians estimate that over 12.5 million enslaved Africans embarked, but only 10.7 million reached the shores of the New World. Approximately 2 million Africans perished during the Middle Passage journey, which averaged 60.2 days at sea. Scholars attribute these deaths at sea to a number of factors, including starvation, the outbreak and spread of infectious diseases (e.g., scurvy, smallpox, dysentery) on the slave ships resulting from the horrendous packing and stacking of enslaved Africans, and the terrible or nonexistent hygiene. Suicide by drowning by jumping overboard or by refusing to eat—considered the main form of African resistance aboard the slave ships—was another contributing factor.

For the African captives who managed to survive their enslavement on African shores and the waiting period before embarkation in the barracoons, or cramped holding pens, the brutal Middle Passage posed the next deadliest challenge to their survival. Those who remained alive at the end of Middle Passage faced varying degrees of brutality in the Americas as enslaved laborers. In Brazil, for example, scholars argue that a more virulent form of enslavement existed, as the mortality rate was high and the labor forces considered easily replaceable with the seemingly endless “inventory” of newly imported African captives. The perpetual Middle Passage voyages enabled the further devaluation of African life in the Americas.

Abolition of the Slave Trade

Although the British abolished the slave trade in 1807 with the Parliamentary Slave Trade Act and formally ended slavery in their colonies in 1833, the international slave trade did not

end immediately. Illegal slave ships continued to export enslaved Africans until the mid-19th century. Records indicate that the last slave ship arrived in Cuba in 1867.

The British Royal Navy patrolled the Atlantic Ocean near the coast of Africa, searching for illegal slave traders and confiscating slave ships. Though this activity enforced the illegality of the trade, it may have also offered financial incentives for the cruisers. The British dominated the slave trade in the 18th century, but by the 1780s, their antislavery movement gained tremendous momentum.

The complete eradication of the slave trade unfolded gradually. As noted, the British empire abolished the slave trade in May 1807, the United States in January 1808, the French empire in 1818, the Spanish colonies in 1820, and Brazil in 1830. One of the major challenges to upholding these laws and treaties was the fact that, though the trafficking of enslaved Africans was illegal, slavery within the Americas was still permissible and often thriving.

The tide was slowly changing, however. A notable example is the infamous African rebellion aboard the slave ship *La Amistad* in 1839, which resulted in the liberation of the Africans after a lengthy court case. The court ruled that the African captives had been illegally transported and therefore were entitled to their freedom; they were returned to Africa.

Imagining the Middle Passage

A number of artists have produced imaginative works around the theme of the Middle Passage. Many of these portrayals emphasize the stench, filth, and torturous conditions of slave ships; the inability of African captives purchased from various regions with different languages to communicate with one another; and the impossibility for bodily movement within the confines of the shackles and chains. These artistic renditions include evocative paintings, poems, and first-person narrative accounts.

An early first-person account, Olaudah Equiano's autobiography, *The Interesting Narrative of the Life of Olaudah Equiano* (1789), documents his journey from his Igbo family in present-day Nigeria to his enslavement in the Americas, with an emphasis on Christian conversion. A text

widely used for abolitionist purposes, *The Interesting Narrative* details Equiano's memory of his capture as a young boy along with his sister, the horrors of the Middle Passage voyage from the moment he sees the terrifying slave ship to his arrival in Barbados, his later transfer to Virginia, and finally his journey to England, where he managed to purchase his freedom.

Equiano's narrative exists as an early example of the literary tradition of the slave narrative that would include, in the 19th century, Frederick Douglass's influential *Narrative of the Life of Frederick Douglass* (1845). What makes Equiano's narrative so striking in comparison to those that followed is that his life represents a transatlantic journey from freedom in Africa through enslavement in the New World to his ultimate freedom in England.

Just as the abolitionists relied on Equiano's text, so too did members of the British abolitionist movement, beginning in the late 18th century, produce some of the most poignant antislavery imagery focusing on the Middle Passage. J. M. W. Turner's romantic painting *Slavers Throwing Overboard the Dead and the Dying—Typhoon Coming On* (1840) championed the antislavery cause by exhibiting the atrocities that frequently occurred during the Middle Passage voyages. By depicting black bodies strewn about the sea, Turner's painting makes a claim for the humanity of the enslaved Africans by emphasizing the consequences of the callous disregard for human life.

Another stirring image is the sketch of the cross-section of the *Brookes* slave ship (1789), used to promote antislavery efforts. This image depicts the overcrowding of many slave ships and the ways African bodies were piled and stacked to maximize profit in New World trade. The slave castles in many coastal towns along the west African coast retain many relics of the Middle Passage, such as the "Door of No Return" in Elmina Castle. Other compelling works that reimagine the Middle Passage include Herman Melville's "Benito Cereno" (1855), Robert Hayden's poem "Middle Passage," Ayi Kwei Armah's *Two Thousand Seasons* (1973), Suzan-Lori Parks's *Imperceptible Mutabilities in the Third Kingdom* (1995), Charles R. Johnson's novel *Middle Passage* (1990), and Kara Walker's "Middle Passages" (2004).

The Middle Passage exposes the suffering, torture, displacement, dispossession, and dehumanization of Africans in modern racial slavery. It also highlights, like the artistic production that thematizes the transatlantic voyages, the human casualties of the inexorable economic demands for production in the New World, and the painful contradictions that formed the foundation of the multicultural Americas in which Africans, Europeans, and indigenous populations converged under the weight of this abhorrent maritime phenomenon and the larger institution of slavery it supported.

Migrant Workers

Migrant workers have been coming to the United States in pursuit of employment since the early 1800s. They have helped to shape the demographics and national economy of U.S. culture. Their nomadic nature, related to seasonal crops and weather conditions, makes it difficult to obtain accurate census data. It is estimated that 3 to 5 million people leave their homes annually in pursuit of crop production. Their low-wage labor is crucial to the stability and growth of the nation's agricultural production and economy.

The identity of the migrant worker has changed throughout history. Today, migrant workers include Hispanics and Latinos, African Americans, Jamaicans, Haitians, and Thais. Most migrant workers are men because of the labor-intensive

nature of the work; historically, however, many women and children have been subject to the harsh conditions of the migrant workers' daily routines because many migrant workers travel with their families, who also work on farms for small wages. Migrant workers have historically endured discrimination and exploitation.

Historical Development

After the emancipation of slaves and indentured servants in the United States, the agricultural and industrial economy was left wounded, and the labor void needed to be quickly filled. Foreign workers began to be imported or lured to fill the gaping demand for cheap labor. The abundance of cheap labor being brought to the United States extended across the globe.

Workers from China and other Asian countries began to fill the cheap-labor market. Slowly, after the beginning of the 20th century, workers from Mexico and the Philippines were also employed, with dismal wages, as the bulk of the agricultural migrant worker force. These foreign workers were usually imported or brought to the United States by white farm owners. Many European migrant workers were recruited under the guise of someday owning their own land, which at that time, for any foreigner, was an impossible feat because of the extremely low wages being paid for their labor. These European workers included Irish, British, German, Italian, Russian, and Hungarian individuals who existed in a truly multicultural migrant workforce.

As the American agricultural and industrial economy began to grow, so did the demand for cheap labor; by 1890, an estimated 55,000 Mexican workers immigrated to the United States in search of work, only to receive unequal treatment by farm owners. Unlike their European and Asian counterparts, Mexican workers were able to move freely across the border to temporary jobs in ranching, farming, and other industries, and then in most cases they returned back home, making up the largest group of migrant workers and the one most desired by landowners.

Workers from Catholic countries such as Ireland and Germany faced unequal treatment and were subject to prejudice because of the overwhelmingly Protestant population in the United States at that time. Chinese, Japanese, and Filipino

workers faced their own animosity because of the end of the gold rush, when the American economy became less vibrant and white Americans began to feel threatened by foreign populations.

The Great Depression marked a decline in the agricultural economy as the Dust Bowl ruined most of the crops in the midwest. As a result, many Anglo-Americans migrated to the west coast to find work.

Because times were tough, Mexican and other foreign migrant workers were seen as job competitors. Anglo-Americans began to pressure their white counterparts in lawmaking positions to come up with a solution to eradicate job competition. As a result, local and national authorities repatriated more than 500,000 Mexican Americans, many of whom were U.S. citizens.

Even after slavery ended in the United States, maltreatment of black and African American workers remained well into the 1960s. This was highlighted by Edward R. Murrow's *Harvest of Shame*, which aired the day after Thanksgiving in 1960. The documentary depicted the plight and dismal living conditions of the black migrant agricultural worker. Murrow sought to give voice and bring consciousness and awareness to a population that for so long had been forced into silence.

As a result of Murrow's film, the increasing awareness of the American population, and a growing unity and passion within the migrant worker population, the United States was forced to create health and government organizations that began to implement measures designed to protect the rights of migrant workers. Today, multiple organizations advocate for migrant workers. Many migrant workers still follow crop production in search of wages in an effort to support their families. They continue to be an integral part of the American agricultural economy.

Migrant workers have contributed to the increasingly diverse American demographics represented in U.S. census data. They have also influenced economic and agricultural production and have been central to political discussions and debates related to immigration, education, and health care reform. It is estimated that more than 75 percent of the migrant workers in the United States are Hispanic and that five out of six farm workers are native Spanish speakers.

A migrant worker, circa 1935, travels along a dusty road looking for work in California. In the United States, migrant workers are often undocumented immigrants who do not have valid work visas, who come from varied places of origin, and who have been exposed to often difficult work and living environments.

Major Influences

Many individuals assisted in reforms for migrant workers' overall quality of life. One of the most influential individuals in migrant worker history is César Chávez. In 1962, Chávez founded the National Farmworkers Association, which later became the United Farm Workers union, and advocated strongly for migrant workers' rights. Chávez worked to bring justice and pride to migrant workers, who had frequently been exploited. Chávez's work gained attention, and soon nonmigrant workers were also fighting for his cause, which stretched beyond the migrant worker battle. He befriended politicians, which

paved the way for Mexican American voters to have a voice in national elections. Chávez remains a beloved symbol of activism and hope among Mexican Americans to this day.

In September 1962, President John F. Kennedy signed the Migrant Health Act. This bill focused on the healthcare needs of migrant farm workers. Migrant worker health care had finally become a national issue, and organizations began to provide much-needed medical care for migrant workers and their families. In the 1970s, the National Advisory Council on Migrant Health was created to monitor the availability and quality of health care and to make ongoing recommendations for improvements. This council remains active in the United States.

Contemporary Scene

Today, the estimated total population of migrant workers and their families is 1.3 million. Migrant workers play a crucial, yet invisible role in the American economy, as their contributions extend far beyond agricultural productivity. They undertake the jobs that most native citizens reject, in many ways sustaining the country's way of life. At the same time, they stimulate the economy by purchasing goods. Migrant workers are nomadic in their pursuit of work. Family life remains "on the move."

Multiple relocations impact the quality of education received by the children of migrant workers. Educational opportunities for their children are low because of the nomadic nature of their jobs. However, many of the organizations implemented to improve migrant workers' quality of life have put forth measures to improve educational opportunities for these children and have exponentially improved the health care available to them.

Migrant workers have preserved the culture and history of the farm worker lifestyle. The diversity of the American people is a reflection of the many migrant workers who have come to the United States throughout history and from all parts of the globe. Migrant workers are an integral part of shaping and progressing in the American way of life.

Milliken v. Bradley (1974)

Milliken v. Bradley (418 U.S. 717 [1974]) is one of a long line of judicial decisions that grew out of the 1954 *Brown v. Board of Education* decisions (*Brown I* and *Brown II*), which mandated that public schools be desegregated. *Milliken* addressed the issue of whether a neighboring school district could be forced into a desegregation plan to remedy its neighbor's desegregation violations.

The *Milliken* case required an examination of whether the state could impose mandatory desegregation plans in areas not engaged in de jure segregation. The *Milliken* decision put limitations on the U.S. Supreme Court's first ruling on forced desegregation, *Swann v. Charlotte-Mecklenburg Board of Education* (402 U.S. 1 [1971]).

In *Swann*, the court ruled that mandatory busing was an acceptable remedy, even to address de facto segregation (segregation resulting from geographic settling of people). *Milliken* is widely regarded as the case that brought to an end the Supreme Court's historically strong support for meaningful desegregation in U.S. public schools.

The central question in this case is whether states have a right to redraw the boundaries of school districts and to impose busing across those lines to achieve racial integration.

Facts of the Case

As "white flight" to the suburbs increased in the 1950s and 1960s, many urban schools found themselves virtually all black or all Hispanic, even though there was not mandated (de jure) segregation. This de facto segregation led to steep racial differences between urban and suburban schools.

Michigan's then-governor William Milliken was named as the defendant in a suit claiming that Detroit public schools were not sufficiently desegregated and that the district remained segregated specifically because of school district policies and practices. Such policies and practices would, if found to be true, establish that the district was engaging in de jure segregation. Although "white flight" certainly contributed to the de facto segregation of the Detroit urban area, the district court ruled that the Detroit Board of Education had, indeed, implemented policies that specifically impeded desegregation.

Consequently, the district court ordered that 85 school districts composing the Detroit metropolitan area would have their boundaries redrawn to force students into different schools via busing, thus achieving desegregation. Ultimately, 53 of the 85 school districts made up the "designated desegregation area" and would be subject to mandatory busing.

To accomplish this logistical challenge, the Detroit School District would have to acquire at least 295 school buses (later estimated to be nearly 1,000) to accomplish the desegregation. Such reorganization posed complicated administrative, financial, and human resource challenges to all of the districts involved, including districts that were not in violation of *Brown v. Board of Education*.

The U.S. Court of Appeals for the 6th District upheld the desegregation and busing plan imposed by the district court. However, the appeals court ruled that outlying school districts affected by this decision should have a right to be heard regarding the "scope and implementation" of the district court's remedy and that the

mandatory bus acquisition be postponed until a later time.

Supreme Court Decision

The Supreme Court's 5–4 decision illustrates the legal complexity of desegregation questions. A pressing question was whether a school district not engaging in illegal desegregation could, in effect, be punished along with its culpable, neighboring district. Writing for the majority, Chief Justice Warren Burger said that

To approve the remedy ordered by the court would impose on the outlying districts, not shown to have committed any constitutional violation, a wholly impermissible remedy based on a standard not hinted at in *Brown I* and *Brown II* or any holding of this court. (418 U. S. 745, as cited in LaMorte).

Four justices dissented: Thurgood Marshall, William Douglas, William Brennan, and Byron White. In his written dissent, Justice Marshall argued that the court's reversal of the busing remedy in *Milliken* sends desegregation backward:

In *Brown v. Board of Education*, 347 U.S. 483 (1954), this court held that segregation of children in public schools on the basis of race deprives minority group children of equal educational opportunities and therefore denies them the equal protection of the laws under the Fourteenth Amendment. . . . After 20 years of small, often difficult steps toward that great end, the court today takes a giant step backwards . . . the rights at issue in this case are too fundamental to be abridged on grounds as superficial as those relied on by the majority today. We deal here with the right of all of our children, whatever their race, to an equal start in life and to an equal opportunity to reach their full potential as citizens. . . . Our Nation, I fear, will be ill served by the court's refusal to remedy separate and unequal education. . . . (418 U.S. 782)

The impact of *Milliken* cannot be overstated. By limiting desegregation remedies to individual districts, rather than regions (as in *Swann*), the ability of states to remedy unequal education is

severely limited. Even in northern districts like Detroit, where de facto segregation was compounded by de jure segregation, a remedy is rendered nearly impossible. The Connecticut Supreme Court in 1996 made a decision that requires the state to desegregate Hartford schools (*Sheff. v. O'Neill*, 238 Conn. 1, 678 A.2d 1267). This decision, however, has yet to meaningfully affect the federal position on desegregation and school equity reflected in the *Milliken* decision.

Million Man March

Held in 1995, the Million Man March was one of the most significant events in African American civil rights activism. Invoking the image of the protest march and the March on Washington, the Million Man March was a one-day event held on the National Mall in Washington, D.C., on October 16, 1995, and consisted of an all-day program of speeches from prominent civil rights leaders.

The exact in-person attendance is a matter of controversy, though it is generally agreed to have fallen short of or barely reached the “million man” goal. The National Park Service issued an official estimate of 400,000 after initial claims

of attendance as high as 2 million, prompting threat of a lawsuit by activist and speaker Louis Farrakhan. Three days after the event, the director of the Center for Remote Sensing at Boston University issued a figure that has been more widely accepted: 837,000 attendees with a margin of error of 25 percent, yielding a range from 669,600 to 1,004,400 attendees. Following the Million Man March, the next appropriations bill for the U.S. Department of the Interior provided no funding for crowd-counting activities for federal properties in Washington, D.C., the Park Service having elected to cease crowd counting.

The earliest protest march on Washington was that of Coxey's Army in 1894, protesting job losses during the Long Depression. Significant marches in the first half of the 20th century were held in support of women's suffrage, against the Holocaust, and against the Ku Klux Klan. In the 1950s and 1960s, protest marches became associated, first, with the civil rights movement and, later, with the antiwar movement. The 1958 Prayer Pilgrimage for Freedom was the first large-scale Washington, D.C., civil rights demonstration, held in front of the Lincoln Memorial and supported by the National Association for the Advancement of Colored People (NAACP). The last speaker at the Prayer Pilgrimage was Martin Luther King, Jr., addressing a national audience for the first time (the "Give Us the Ballot" speech).

The Great March on Washington, 1963

Five years after the Prayer Pilgrimage, the March on Washington for Jobs and Freedom, or the Great March on Washington, attracted about a third of a million people in support of African American civil rights. Held on August 28, 1963, it was one of the largest political rallies in American history and was instrumental in the passage of the 1964 Civil Rights Act (though Student Non-Violent Coordinating Committee chairman John Lewis's speech pointed out the flaws and insufficient measures in the bill) and the 1965 Voting Rights Act (challenges to which eventually made it to the Supreme Court in 2013). The Great March on Washington is best remembered for Dr. King, who again spoke last, delivering his "I Have a Dream" speech.

The Great March on Washington had no women speakers, and the Million Man March explicitly

positioned itself as a male event. Although the relative lack of involvement of women in the early 1960s might be chalked up to the times and to the tendency of men to be more accepted in leadership positions, in the 1990s, the exclusion of women was a more clearly conscious choice. Organizers Louis Farrakhan of the Nation of Islam and former NAACP executive secretary Benjamin Chavis conceived of the Million Man March as an event specifically focused on the plight of the African American man.

The election to the White House of Bill Clinton—who would soon be called "our first black president" by African American author Toni Morrison—made civil rights a White House concern for the first time since the Ronald Reagan administration had tasked John Roberts and other government lawyers with the construction of an argument to limit enforcement of the Voting Rights Act. The Los Angeles Riots and the beating of Rodney King, however, were vivid in recent memory. For several years, black political leaders had worked to raise political awareness, to register voters and get them involved, and to petition the state, local, and federal governments on behalf of the African American community.

The Million Man Marchers were largely middle class and middle aged, and in general were better educated than the average African American. Many were old enough to remember the March on Washington or later protest marches, if not to have participated directly. The Million Man March succeeded in raising political awareness and involvement: in the following year, 1.5 million black American men registered to vote. Although the black vote may have been instrumental in Clinton's reelection in 1996, it was even more important in 2000, when fluke occurrences and a tight race without an incumbent resulted in a lengthy recount process, as the winner of the election came down to the votes in Florida. Voting irregularities complicated the recount, many of which continue to be controversial, including the disenfranchisement of thousands of black voters erroneously listed as ex-felons.

Farrakhan delivered the keynote address at the Million Man March, and his leadership was controversial, though Chavis actually served as the march's national director. Farrakhan had revived the Nation of Islam, the African American

Muslim movement, in 1981, some years after the Nation had been disbanded following the death of its longtime leader Elijah Muhammad. Many of Farrakhan's views have been criticized as anti-Semitic, homophobic, and sexist. Farrakhan's frankness in his views on race also led some to characterize him as a black supremacist and caused some to fear that he would alienate possible allies and supporters.

The primary purpose was to put black civil rights back on the national political agenda, a purpose Farrakhan's notoriety did not subvert. The Republican Party, invigorated by a caucus of neoconservatives, had retaken the House of Representatives in the 1994 midterm elections, and the Republican Party continued to be pushed further to the right on social issues, a trend that had begun around the time of Watergate and accelerated under Reagan. The Contract with America, as the party's platform was branded, made it clear that black concerns were not a priority. What was a priority was slashing the budgets of social

programs at a time when the African American community faced a 40 percent poverty rate and twice the unemployment of white Americans. The law-and-order concerns of many Republicans further hurt blacks, who were disproportionately impacted by three-strikes laws and vastly disproportionately represented among long-term prisoners. Then-recent headlines surrounding the trial of O. J. Simpson and the assaults committed by Mike Tyson incited the fear that the media image of the black man was more negative than it had been since before the civil rights era.

The Million Man March's program began at 6 A.M. with morning prayers, African dancers, and speeches from black leaders, proceeding through talks on the themes of "affirmation/responsibility" and "atonement and reconciliation," before ending as scheduled at 4 P.M. Speakers included religious leaders; Congressman Donald Payne of the Congressional Black Caucus, Washington, D.C.; mayor Marion Barry; Baltimore mayor Kurt Schmoke; Dr. Cornel West; and others.

Attendees of the Million Man March in Washington, D.C., on May 5, 1995, numbered around 800,000, although there was some debate about the actual figure, some claiming it may have reached 2 million. Activist Louis Farrakhan was the keynote speaker, and many prominent African American political and religious leaders spoke during the one-day event on the National Mall.

In parallel with the event, female leaders in the black community organized the National Day of Absence, a day for blacks to stay home from work and school, either spending the day in self-reflection, attending places of worship, or holding teach-ins at home. This was insufficient for many black women, and in 1997 the Million Man March was followed by the Million Woman March, in Philadelphia. Attendance was roughly half a million—nearly as large as the Million Man March—and speakers included Congresswoman Maxine Waters, daughters of Malcolm X, Winnie Mandela, Sista Souljah, and actress Jada Pinkett. It is considered an important event in modern black feminism. Black feminism looks at events like the Million Man March and sees racism, sexism, and classism inextricably bound together: the Million Man March organizers marginalizing the role of women even while complaining about their own marginalization by white politicians. The interrelationships of these forms of oppression, and the obstacles they cause within activism movements that focus on only one form of oppression without acknowledging the interrelationships, is called intersectionality, one of the key concepts in modern civil rights and social justice activism.

Black feminists had plenty to object to in the Million Man March. The Day of Absence did not enhance their role so much as underscore its difference from the prescribed male role: the men would assemble, speak, and act; the women were told to stay home, either in silence or to pray and teach. Encouraging them to stay home, regardless of the purpose, further rendered them invisible on the very day that black men were the subject of the major news story. Black women had faced much the same problem in the feminist movement, in which the contributions of black women like Ida Wells and Sojourner Truth were so often overlooked. The fact that the Million Man March was a deliberate echo of the March on Washington—which neglected women but did not so explicitly and consciously exclude them—exacerbated its problematic nature, essentially co-opting the civil rights movement on behalf of men. Those women who raised objections were often encouraged, not only by men but also by some other women, to be silent in the name of black unity at a critical time for the community. Others argued that black women should support the Million Man March

because addressing the needs of black men would, in the end, improve the lot of women as well. Given the effect on black women of the very issues raised at the Million Man March—the number of black female heads of household, the share of those dealing with poverty or underemployment, the effect on black women of the short lives of black men, and the percentage of black men in prison—many of these women refused to silence themselves.

Though the Million Man March was itself named for the March on Washington, it has inspired numerous activist groups and events with similar names, including the gun control group Million Mom March, the annual drug reform rally Million Marijuana March, the Nation of Islam–sponsored Million Family March in 2000, the Million Fax on Washington by unidentified flying object (UFO) activists in 2008, and the Rally to Restore Sanity and/or Fear, an event hosted by Jon Stewart and Stephen Colbert and frequently called the Million Moderate March.

The Million Man March left another legacy, which is the furthering of the men's movement in general. Though it was not explicitly part of the men's movement, nor does the men's movement enjoy the same sort of centralized or easily identifiable leadership, it was in the late 1980s and early 1990s that this culture of male victimhood and male vulnerability arose, producing reams of mythopoeic literature. The Million Man March served, even for white men, as a watershed moment in the men's movement, one in a sense celebrating the idea of the man as victim—despite his social, political, and economic advantages over the other sex.

Minority Business Development Agency

The Minority Business Development Agency (MBDA) leads the public sector in strengthening the U.S. economy through the economic expansion of minority-owned businesses with the creation of new jobs. As the United States moves closer toward a majority-minority population, its economy must include a strong minority-owned business sector. This agency operates through local Business Centers that are funded by the U.S. Department of Commerce. Local MBDA Business Centers develop alliances with local, state, and federal government agencies, major corporations, banks, financial resources, and the minority business community to create larger, more strategic minority entrepreneurs. They work as liaisons to financial institutions on behalf of Minority Business Enterprises (MBEs) seeking financial assistance, and they provide loan packaging and placement assistance for purchases, refinancing, lines of credit, factoring, and Small Business Administration lending.

MBDA conducts workshops for business owners who want to move to the next level. Networking opportunities are provided, and MBDA coordinates bids and outreach conferences for construction projects and organizes industry-specific roundtables to promote the MBE marketplace. Some of the economic and social benefits of MBEs include providing employment opportunities for people of all races, providing a way for ethnic minorities to integrate into the majority economy, and providing positive role models for entrepreneurs of color. Finally, they also establish the infrastructure necessary for community development. For example, research suggests that minority-owned businesses donate more money to charitable organizations than non-minority-owned firms.

In 1969, the Office of Minority Business Enterprise was established within the U.S. Department of Commerce with the mission of funding a wide variety of local programs for one-on-one and group assistance to minority businesspersons. The U.S. Small Business Administration (SBA) also targeted minority businesses with direct and guaranteed loan programs and federal contract set-aside programs around this same time. In

recent years, these programs have been severely criticized and have also received some accolades. Although these programs created opportunities for minority businesses to create jobs, critics suggested that these programs were a form of reverse discrimination.

During the 1990s, minority businesses continued to grow in quantity but not in sales and receipts. Despite the U.S. economic boom of the 1990s, minority businesses lost economic ground. This effect was called “growth without growth” because although the number of firms increased, their share of total sales and receipts declined. This occurred because minority businesses are often concentrated in two industries: services and retail catering. Some suggest that efforts by federal, state, and local governments have had minimal impact on minority business development.

The formal definition of “minority ownership” has also been scrutinized. Historically, this was defined as a minimum of 51 percent direct ownership by members of a minority group (or a “socially disadvantaged” group.) Traditionally, these groups included African Americans, Hispanic Americans, Native Americans, and Asian Pacific Americans. The limitations of this definition are hotly debated by both proponents and critics, and a more flexible definition was recently proposed.

The growth and success of MBEs is inextricably linked to American social and economic policy. Research suggests that the number of MBEs is currently about 2 million—a number that has been growing at double the percentage rate of all firms. MBEs generate sales in excess of \$500 billion, which constitutes an impressive chunk of the U.S. economy. Additionally, the health of the minority business sector is linked to the production of a variety of economic and social benefits such as employment, economic development, community development, and especially access to role models for people among entrepreneurs. MBEs generate \$1 trillion in economic output to the U.S. economy and support 5.8 million jobs. However, parity for minority businesses has not been achieved. Parity is defined as reaching proportionality between the adult minority population and business development measures, such as numbers of firms, gross receipts, and employees of classifiable firms.

According to the U.S. Census Bureau's Survey of Business Owners (SBO), the number of black-owned businesses increased by 60.5 percent to 1.9 million from 2002 to 2007, which was more than triple the national rate of 18 percent. Of the 1.9 million black-owned businesses in 2007, 106,824 had paid employees, an increase of 13 percent from 2002. These businesses employed 921,032 people, an increase of 22.2 percent; their payrolls totaled \$23.9 billion, an increase of 36.3 percent.

According to the Census Bureau's 2007 SBO, Hispanics owned 2.3 million nonfarm U.S. businesses operating in the 50 states and the District of Columbia in 2007, an increase of 43.7 percent from 2002. These Hispanic-owned firms accounted for 8.3 percent of all nonfarm businesses in the United States, 1.6 percent of total employment, and 1.1 percent of total receipts. Total income generated by Hispanic-owned businesses in 2007 was \$350.7 billion, which is up 58 percent from 2002. Hispanic-owned U.S. firms accounted for 10.4 percent of all U.S. businesses in these sectors. Some of the challenges faced by these businesses include lack of capital, clients, experience, and skills, and an over-reliance on government contracts. MBEs have precarious existence because of dependence on a low-income customer base.

Minority Group/Majority

The terms *majority* and *minority* have both statistical and sociological meanings, and debate over usage has generally been driven by the conflation of the two. Statistically, a minority group is smaller than an extant majority group. Sociologically, it is a group singled out because of non-quantitative traits and is subject, whether by law or circumstance, to unequal treatment and access to power. Majority and minority have particular resonance in the United States because of the relevance of the terms to democratic governance; throughout the 19th century, anti-immigration activists invoked both racist and democratic thinking when warning that a "dilution" of the American population through the introduction of large numbers of immigrants would change the American character.

The worry is not merely concerned with the presence of people unlike oneself, but with the prospect of people like oneself—one's ethnic or cultural group—being literally or figuratively outvoted and losing control of the direction of the country. These fears continue to be invoked today in discussions of immigration, gay marriage, religious freedom, and the spread or perceived spread of Islam.

The term *minority group* retains elements of a meaning that has become less and less accurate if considered literally. The United States was originally founded by a group of white settlers, almost entirely British, French, and Dutch, with small numbers of Hispanics in or adjacent to lands obtained from Spain, and a number of blacks, mostly enslaved. This group was not only overwhelmingly Christian but also predominantly Protestant, though important Catholic and Jewish populations existed.

While the Protestant population's majority decreased over the course of the 19th century, as sustained large-scale immigration from Catholic countries began, the century's major religious movements were or grew out of Protestantism, or in the case of Reform Judaism, was an explicit reaction to and even surrender to American Protestant culture. This had the effect of further underscoring the unofficial place of preeminence of Protestantism in the American character, and by implication, of northern European whites.

Minority Becomes a Majority

Minority groups were first widely discussed by their advocates because the 20th century was a watershed time for civil rights activism, which succeeded in restoring voting rights to disenfranchised groups, removing many of the racist and xenophobic elements of immigration law and affirming as unconstitutional racist laws, ranging from those of segregation to laws against interracial marriages. The term referred literally to the fact that nonwhite ethnic groups were a minority in the United States, but the more important aspect of the term is its implications about power. At the time, the groups that were most numerous in positions of social power were also the groups that constituted the majority of the American population. This is no longer as true—whites in the 2010 census constituted about 72 percent of the population, still a clear majority, but whites experienced low enough population growth that they can no longer expect to retain that majority. In 2011, for the first time, the majority of American babies were nonwhite, but the term *minority group* still refers to essentially the same population groups that it did before.

In the social sciences, what is more important than the raw share of a population represented by a group is its amount of social power and social mobility. Whites continue to overwhelmingly occupy the majority of governorships, congressional and senatorial seats, cabinet positions, university presidencies and department chairs within those universities, corporate head positions, and memberships in the New York Stock Exchange. More television shows are about white leading characters than nonwhite characters, by a wide margin. Most lead acting awards go to white actors. Even Black History Month is often acknowledged by television networks with white-made entertainment like *Glory* or *The Help* (movies that also emphasize the role of heroic white people in the fight for black civil rights). During the apartheid era of South Africa, blacks outnumbered whites, but their disenfranchisement and inferior social power were codified in law, and referring to South African blacks as “the majority” without qualification would have been immensely misleading.

For this reason, when differentiating between minority and majority, for the difference to be

useful, requires data beyond merely population distribution. Consider Protestantism in the United States. Not a denomination, but rather a class of denominations, Protestants make up the majority of American Christians and, at slightly more than half of the adult population, constitute a majority of the population. But no single denomination within that classification is nearly as large as the Catholic population—the largest, the southern Baptists, are about one-quarter the size of the Catholic population. Even denominations considered very mainstream, very middle American, are simply dwarfed by the size of the American Catholic population. Depending on the conversation and the speaker, either of these sets of facts may be more relevant—the fact that Protestant groups collectively are twice the size of the Catholic population, or that any one Protestant denomination is tiny compared to that same population.

The consideration of whether Protestants or Catholics hold more power is not much easier. Although Catholics have long held considerable power in public positions in the northeastern cities—in political office, as political appointees, in bodies like police forces, and through the influence of church officials—they have produced only one president and surprisingly few major party nominees for president. The religious demographics of Congress closely follow those of the United States as a whole; only Presbyterians, Anglicans, and non-denominational Protestants were noticeably underrepresented in the 112th Congress, the last of which perhaps is because of political pressure on candidates to commit to a specific denomination. Catholics and Jews are slightly overrepresented.

Raw population numbers also fail to tell the story that could be revealed by additional context. New Hampshire is, by percentage of population, the most French state in the union; about 25 percent of the population has French ancestry. Louisiana, by contrast, is only about 16 percent French. The numbers conceal the very different stories behind these populations: Louisiana was settled by two distinct French groups (the French settlers who came directly from France and the Acadian French who settled in the area after they were displaced from Canada) who were instrumental in establishing the local culture. New

Hampshire was settled by colonial Americans of predominantly British ancestry and became home to a large part of the Quebecois diaspora, as French Canadians left Canada and settled in northern New England.

Although the French populations in both states have become largely assimilated, Louisiana has always celebrated its French heritage, and elements of French and French American culture have been adopted by the non-French of the state, whereas New Hampshire once restricted voting rights based on language fluency, an attempt to disenfranchise unassimilated Quebecois that ended in the 1960s with the Voting Rights Act.

Social Power

The social power aspect of the definition of minority and majority is important precisely because power is not distributed equally throughout populations, and the largest group within those populations is not necessarily the group with the most power. The term *minority* is sometimes challenged for various reasons: It is perceived as less accurate, given the change in population demographics; it is a quantitative term, rather than describing some other trait; and it may be perceived as a dismissive term. Even those who understand the sociological definition may challenge the use of the term because of its tendency to confuse and obfuscate.

The term *people of color* was adopted by justice system reform activists in the 1970s and gained wide circulation by the 1990s. There are various benefits to the term. Like the term *non-whites*, it groups together minorities who have a relevant trait in common and who are subject to certain treatments by society as a result of that trait: there are white people who are paradoxically not defined by race or ethnicity, and there is everyone else in the United States, defined by that ethnicity.

Although the usefulness of this term has been challenged, U.S. newspaper articles claim that by such and such a year, the majority of the American population will no longer be white, a cumbersome construction required when no single non-white group will become the majority, but rather white Americans will become a plurality, the largest group in a cluster of groups, no single one of which is a majority. “The majority will no longer

be white” means the same thing as “the majority will be people of color.”

Further, perhaps the best argument in favor of discontinuing the use of the term *minority* in non-statistical contexts is that so long as the word refers both to statistical minorities and to minorities in the sociological sense of the less empowered, readers will parse hypothetical ideas like “whites will no longer be a majority” in a very different way. Although it is easy to show that, statistically, whites will fall from a majority to a plurality in the near future, the possibility that whites will no longer possess the most power and social mobility in the United States within that same time frame is much less likely.

Miscegenation

The term *miscegenation* first appeared during the American presidential election of 1864, although the concept of *mestizaje* existed in Latin America long before. The word appeared in a pamphlet written by two New York journalists who wanted to portray the incumbent president and Republican candidate Abraham Lincoln as an advocate of what was then known as “amalgamation.” Opponents of interracial sex found the term *amalgamation* inadequate because it had been borrowed from something else (metallurgy—the mixing of metals).

Tiger Woods refers to his ethnic makeup as “Cablinasian.” His racial mixture is Caucasian, African American, Native American, and Asian. His father was African American, and his mother was Thai. Today, miscegenation has become increasingly accepted.

Insisting that it was important to have an independent term, one that referred to the “mixture of two or more races” and nothing else, journalists David Goodman Croly, managing editor of the *New York World*, a Democratic Party paper, and George Wakeman, a *World* reporter, combined *miscere* (mix) and *genus* (race) to form the new, more scientific-sounding “miscegenation.” The pamphlet was titled *Miscegenation: The Theory of the Blending of the Races, Applied to the American White Man and Negro*. The term *miscegenation* caught on quickly, providing, according to Peggy Pascoe, “the rhetorical means of channeling the belief that interracial marriage was unnatural into the foundation of post-Civil War white supremacy . . . the taken-for-granted basis of American laws and policy, the legal embodiment of the nearly unanimous White opposition to intermarriage.”

This opposition was fueled by the idea that race purity could and should be protected, and that racial mixture should be avoided at all costs. Scientists, anthropologists, ethnologists, and naturalists insisted that the races needed to be protected from intermixture, which was deemed

a catastrophic mistake. The popular notion was that race existed as a quantifiable entity, something easily measured through blood standards and preserved through choice coupling.

Lawmakers reflected this belief in thwarting racial mixing, while preserving white supremacy, when they passed laws to define race, usually by blood quantum standards. Blood quantum measured race by a mathematical fraction of racial blood, the “blood-quantum standard.” In the south, it became known as the “one-drop rule,” meaning that a single drop of “black blood” makes a person a black; it was also referred to as the law of hypo-descent. One drop of black blood trumped seven drops of white blood, meaning that racially mixed persons were assigned the status of the subordinate group. This definition emerged from the American south to become the nation’s definition. Offspring of interracial unions, oftentimes the result of planters raping their slaves in the antebellum era, were called mulattoes; although the root meaning of mulatto, in Spanish, is “hybrid,” mulatto came to include the children of unions between whites and “mixed Negroes.”

Anti-miscegenation laws were written to prohibit whites from marrying blacks, Asian Americans, and Indians, but not to prohibit blacks from marrying Asian Americans, or Asian Americans from marrying Indians. The essence of anti-miscegenation legislation was to preserve white racial purity above all else. This marriage of scientific and political rhetoric would reach its pinnacle in the writings of eugenicists and the tightening of miscegenation laws during the 1920s, most evident in the Virginia Racial Integrity Act of 1924.

This act, developed by Dr. Walter Plecker, was a series of legislative efforts designed to protect “whiteness” against what many Virginians perceived to be the effects of immigration and race mixing. These laws defined how people should be classified during the nadir of American lynching and the resurrection of the Ku Klux Klan. America’s fears of miscegenation—specifically the threat of newly emancipated and enfranchised black men raping white women—found dramatization in D. W. Griffith’s film *The Birth of a Nation* (1915), the first film screened in the White House under President Woodrow Wilson, a Virginia native.

From the 1860s to the 1960s, the American legal system moved the issue well beyond the south. Miscegenation was only ever conceived of as a state issue, not a federal issue; nonetheless, interracial marriage as unnatural and immoral quickly became the law of the land. The first laws banning interracial marriage were introduced in the slaveholding colonies of the Chesapeake. The first such law, designed to prevent marriages between “freeborne English women” and “Negro Slaues [sic],” was passed in Maryland in 1664. As part of the act connected slavery to the condition of the mother. Other laws followed in the British colonies and French Louisiana. When the term *miscegenation* was invented in 1864, laws prohibiting interracial marriage were in effect in the northeast and west, but never in the southern states.

The history of miscegenation law reaches well beyond the categories of black and white, however. American Indian nations also banned marriage to blacks. For example, in 1824 and 1839, the Cherokee National Committee and Council passed laws that banned “inter-marriages” with “negro slaves” and “between a free male or female citizen with any person of color.”

Social and political backlash against the laws was minimal until the modern civil rights movement. Through the work of the National Association for the Advancement of Colored People’s Legal Defense and Educational Fund and the American Civil Liberties Union, between 1951 and 1963, 11 western states repealed their miscegenation laws.

The U.S. Supreme Court’s 1967 unanimous ruling in *Loving v. Virginia* declared Virginia’s ban on interracial marriage unconstitutional, but most southern states were reluctant to endorse the *Loving* ruling. The decision rendered state bans on interracial marriage inoperable, so to show their discontent, states refused to immediately remove the now defunct language from their books. For example, Georgia did not immediately remove anti-miscegenation statutes until five years after the 1967 decision; Virginia had done so in 1968, and West Virginia, Texas, Florida, Oklahoma, and Missouri in 1969. Alabama removed the inoperable language in 2000. Despite decades-long inconsistencies of the ruling, the U.S. Census Bureau showed that interracial or interethnic opposite-sex married couple households grew by

28 percent over the decade, from 7 percent in 2000 to 10 percent in 2010.

Missouri Compromise (1820)

The Missouri Compromise was an agreement reached in 1820 to address concerns about whether a state would be a slave state or a free state after it was admitted to the Union. Prior to 1820, Missouri was part of the Louisiana Purchase, the territory acquired from France in 1803, and was the first such territory to apply for statehood other than Louisiana. In 1818, Missouri became a state, but there were concerns from states in the north who did not want another slave state to join the Union. The Missouri Territory became a rhetorical battleground for political differences about the role slavery should play in the course of American history. Prior to Missouri’s admittance into the Union, there was a balance between the number of states that allowed or prohibited slavery. On one hand, the United States wanted to incorporate nearby adjacent territories as seamlessly as possible; on the other hand, very few wanted to disturb the delicate balance between states that were for and against slavery.

Origins and Enactment of the Compromise

At the time Missouri petitioned to enter into the Union, the country had grown to 22 states.

There were 11 free states and 11 slave states, which meant that each position on slavery had equal representation in the U.S. Senate, which gave each faction power to prevent legislation that was not in the best interest of its states. At the same time, the House of Representatives was controlled by the free states because they had larger populations.

On January 13, 1820, a heated debate began in Congress that highlighted impassioned arguments for and against slavery. Not only was black slavery the foundation of the south's economy, but it was also integral to 200 years of southern life and culture. For many in the north who were against slavery, the issue was simple—refuse to allow any more states that supported the abhorrent practice of slavery. In the south, many also thought the issue was simple—Missouri must be allowed to be a slave state not only to maintain its settlers' rights to own slaves but also to resist any further control imposed on them from the north.

Important questions were raised in the course of this debate: What control did a state have in deciding for itself its own rule of law, even if that law conflicted with laws in other states? If Congress, not the states, controlled the rule of law, would new states have less autonomy than earlier states? Congressman John Taylor of New York articulated this debate in the following:

Those whom we shall authorize to set in motion the machine of free government beyond the Mississippi will, in many respects, decide the destiny of millions . . . our votes this day will determine whether the high destiny of this region, and of these generations, shall be fulfilled, or whether we shall defeat them by permitting slavery, with all its baleful consequences, to inherit the land.

The debate would continue in public discourse until February 17, 1820, when Illinois Senator Jesse B. Thomas offered the Missouri Compromise. In this agreement, Missouri would be allowed to enter the Union as a slave state, but slavery was prohibited from the remaining Louisiana Purchase lands located north of 36 degrees, 30 minutes north latitude.

Before the statehood bill was signed, there were a number of amendments proposed to address

the issue of whether or not Missouri would be a slave state. For example, New York Congressman James Talmadge sought to stop slaves from being brought into Missouri after it became a state, and to allow children of slaves to be set free at the age of 25. Approved by the House, this effort to curtail Missouri's right to own slaves was struck down by the Senate. Southern senators used Maine's petition for statehood as a bargaining chip, arguing that if the amendment was passed, they would not allow Maine to enter into the Union. After much bitter debate, there was an agreement to combine the petitions of Maine and Missouri. After this stalemate, the Missouri Compromise bill passed and was sent to President James Monroe to sign into law.

Monroe's Dilemma

President Monroe was conflicted because, as a Virginia slave owner himself, he disliked slavery as an institution but was also economically reliant on his slaves; additionally, he was worried about the upcoming presidential election in 1820. At this point, Monroe expressed concern about whether such a bill was constitutional. Monroe also seemed to be persuaded by the southern congressmen's appeal to fairness when he wrote in a letter to his son, "My own decided opinion is that new states cannot be admitted into the union, on other conditions than the old: that their incorporation must place them on precisely the same footing, as to rights granted, and retained." After being reassured by his advisors that the compromise did not create a new state admission process, Monroe signed the bill into law.

At the time of its passage, the compromise was seen as a way to appease the south until it abolished slavery. The compromise reflected a cognitive dissonance within the United States: the desire both for states' rights and for individual rights, even when those rights conflicted. Former president Thomas Jefferson was concerned that such a compromise would be dangerous for the country, warning, "This momentous question, like a fireball in the night, awakened and filled me with terror. I considered it at once as the knell of the Union."

Others, such as Congressman Henry Clay, believed the compromise was the only way to maintain the nation's unity. However, the

compromise did not stop other territorial disputes, such as those regarding Texas, Mexico, and California. Further, the Missouri Compromise did not solve the differences between northern and southern states, such as the issue of tariffs imposed by the federal government that would help the north but hurt the south. However, the Missouri Compromise may have delayed the Civil War.

Repeal

For more than 30 years after its enactment, the Missouri Compromise established a clear “line in the sand,” north of which slavery would be prohibited by law. However, the compromise was repealed by the Kansas-Nebraska Act of 1854. Three years later, the U.S. Supreme Court ruled in *Dred Scott v. Sandford* that the Missouri Compromise was unconstitutional. The ruling opened up all new states to slavery, and proved that President Monroe was right to be concerned about the constitutionality of the Missouri Compromise.

This Missouri Compromise created an imaginary Mason-Dixon Line that would become a crucial dividing point between the north and the south during the Civil War. The compromise also reflected the belief of “popular sovereignty,” that people living in a territory should be free from federal interference, which would continue to be an argument made for states’ rights long after the mid-19th century.

Mixed-Race Americans

Some scholars of mixed race have argued that a unique element of American understandings and constructions of mixed race is that there is an implicit assumption of racial purity, against which mixed race contrasts. At worst, “mixed” has been said to corrupt or compromise the purity of whiteness (thus rendering mixed-race people “nonwhite,” despite any white ancestry that they may have). At best, “mixed” can be constructed as a positive duality or “cultural bridge in human form” that reflects more than one background. Within this spectrum, the tacit presumption of singular racial groups exists, whether constructed biologically, socially, or somewhere in between. “Mixed race,” then, is often viewed as the result of these singular, discrete, mutually exclusive groups commingling and reproducing.

Especially in the last decade, some critical mixed-race scholars have begun to explore the sources for this trajectory of mixed-race construction, how it has influenced the ways that mixed-race Americans have been identified over history, and how they have identified themselves. One of the most important influences on racial understanding in the United States has been the U.S. census. By exploring the race and ethnicity elements of the census as they pertain to mixed-race Americans, the unique identities and experiences of mixed-race Americans throughout this aspect of American history help contextualize the present.

Enumerating Mixed-Race Americans Through History

Mixed-race Americans have undergone shifts in acknowledgment, acceptability, and understanding since the first U.S. census was conducted in 1790. The U.S. census has always been tied to issues of race and ethnicity in the United States. While the primary purpose of the census was originally to count the national population in order to allocate representation, race was designated as a measure of “how much” an individual would count in the total population numbers. Continuing through history, the census has been used to map the different races and ethnicities in the United States, and to measure how each group is doing on the whole in terms of education, employment, income, and health.

The census helps shape racial identity as well as illuminate trends along defined racial and ethnic lines. The social constructive notion of mixed race by the U.S. Census Bureau can be described as a “combination” of two or more of these racial groups. Additionally, the census not only describes the population but also shapes categorization and identity, so the implications of the racial and ethnic choices on mixed race in the United States are significant.

The United States has the longest continuous history of dividing its population into mutually exclusive racial categories based on pseudo-scientific racial theories. Racial categorization began, in part, to distinguish between whites and nonwhites, because whites were reluctant to enfranchise nonwhite groups and allow them equal rights and legal protection. The installation of the “one-drop rule” by enumerators, which stipulated that a person was considered “black” if he or she had any black ancestry, worked to reinforce notions of hypodescent and personal identities that assume that any nonwhite ancestry means that the person is nonwhite. This distinction effectively discouraged individuals with mixed-race backgrounds to identify—if even acknowledge—their white ancestry, since it was denied by the larger society. Identifying with other nonblack ancestry would not have been socially or legally accepted at the time.

Every census taken in the United States has had questions about race; however, the specific questions and categories used for tabulating the responses have changed every 10 years. The first census had only two racial categories: “white” and “black” (Negro). The black category was further divided into “free” or “slave.” For the purposes of black categorization, the enumerators used the one-drop rule to distinguish mixed-race individuals as nonwhite. Native Americans (referred to by the U.S. Census Bureau as “American Indians”) who lived on reservations and were therefore untaxed were not counted in the national census. There were few individuals who were neither white nor black during early census taking.

An overview of the changes in the census’ race question since 1790 shows the changing focus of government officials from census to census. From 1850 to 1870, 1890, 1910, and 1920, enumerators were instructed to identify “mulattoes,” or persons of white and black ancestries, among the

black population. Although it was illegal at that time in U.S. history, there were white-black sexual unions, and an extensive mulatto population was reported in these censuses. In 1890, enumerators further had to identify “quadroons” (persons with a quarter of black ancestry) and “octoroons” (persons with an eighth of black ancestry) as subcategories of mulatto. The 1860 census saw the addition of a category for American Indians, who were counted if they did not live on a reservation and paid taxes.

Additionally, in California only, a category for “Chinese” was added to count the Chinese immigrants who were settling in that state in high numbers. In 1890, a “Japanese” category was added to count individuals of Japanese ancestry, separate from those of Chinese ancestry. Another major change in the 1890 census was that for the first time, all American Indians were counted in the census. Nevertheless, the American Indians living on reservations were only reported in total numbers and were still omitted from the general count, which only included those not living on a reservation. Beginning in 1910, the Census Bureau began using additional categories for Asians and Pacific Islanders: Filipino, Hindu, and Korean, reflecting the rise in immigration rates from those countries around the turn of the 20th century.

Through 1940, the census asked questions for explicit descriptions of race, without a category for “other race.” In 1930 only, a “Mexican” category was added in order to classify Mexican-born residents and children of Mexican-born parents. This category was eliminated in the 1940 census, and data from 1930 was revised for official reports to include the Mexican population as “white.” Perhaps building on the intention of the Mexican category used in the 1930 census, the Census Bureau added a category for “White population of Spanish mother tongue” for the first time in 1940. At this time, there was only a small population of nonwhites of Spanish mother tongue, so the enumeration of this population served as a low rough estimate of the Hispanic population.

Beginning in 1950, there was an attempt to identify mixed American Indian, black, and white ancestry of those living in some of the eastern portions of the country. For the enumeration of the Asian and Pacific Islander population, the specific

categories used for this census were Chinese, Japanese, and Filipino. Other Asians and Pacific Islanders, and mixed American Indians, blacks, and whites were grouped together as “other race.” This was the first time that the category was used in the census questionnaire. Less than 0.1 percent were counted in the “other race” category that year and the subsequent census in 1960, indicating the small proportion of people identified outside the commonly accepted racial categories used in the United States. This was still before self-enumeration began in 1970 and may reflect social attitudes that largely regarded race as a discrete category that is clearly identifiable by others.

Beginning in the 1970 census, there has been a question specifically asking about Hispanic origin, separate from racial categorization. The Hispanic community in the United States campaigned

Benjamin Jealous, president of the National Association for the Advancement of Colored People (NAACP); his wife, Lia; and their daughter, Morgan. Jealous is the son of a mixed-race couple—Ann Todd Jealous, an African American psychotherapist, and Fred Jealous, a white education administrator.

for separate categorization for civil rights protection, and the result was the insertion of a question that asked about Hispanic ethnicity, regardless of racial identity. They argued that this more accurately reflects the diverse nature of Hispanic and Latino origin, rather than regarding it as a singular race, as people with Hispanic or Latino origin can be racially classified as white, black, or Native American/American Indian. However, in contrast, Asian immigrants were not categorized in ethnic terms but as a separate race. They were designated as “aliens ineligible for citizenship,” and were classified as Chinese and Japanese in the race question starting in the late 1800s.

Mixed Race and “Mark One or More”

The 2000 census demonstrated the shifting racial and ethnic identity in the United States with a significant change in the race question. For the first time in census history, respondents were allowed to mark more than one race, reflecting a new way of measuring racial identification. By this allowance, the census began to challenge the previously taken-for-granted constructions and definitions of race in American society. Furthermore, mixed racial statuses began to be acknowledged on both governmental and popular levels by this change in policy.

The change in the race question came about through much campaigning by community and other advocacy groups that were connected to multiracial/multiethnic communities across the United States. Between 1990 and 2000, groups such as Project RACE (Reclassify All Children Equally), Association for Multi Ethnic Americans (AMEA), A Place for Us (APFU), Brick by Brick Church, the Interracial Family Alliance, and the Interracial Lifestyle Connection challenged the census classifications that allowed only one racial group to be selected by each enumerated individual. The organizations gained momentum and support because of the changing demographics in the United States; between 1990 and 2000, the number of multiracial households increased from 2.4 to 3 million interracial couples (4.5 to 5.4 percent). During the beginning of the campaign, the groups were primarily asking for a category labeled “multiracial” or “multiethnic” on official forms. Despite their specific request, the Office of Management and Budget (OMB) decided to allow

respondents to select all the racial categories that applied for each household individual.

The new race counts have far-reaching effects on the tabulating and analysis of census data. The data will provide new challenges for the quantification of racial demographics in the United States, as those that marked two or more categories will not have a clear and discrete racial category. The changes will have effects on civil rights legislation and education and health statistics, which have been based in the past on the official categories and will have to be modified to accommodate the new multiracial classifications. Additionally, the new allowances raise challenges for the Census Bureau race projections and social research that analyzes the experiences of racial and ethnic groups in the United States. The blurring of “official” racial boundaries with the new race question for 2000 makes the future creation and enforcement of such legal and social matters uncertain. Furthermore, the change in the census question will continue to have long-term and unpredictable outcomes for race-based social policy, as interracial and interethnic marriage becomes more common, and the U.S. population continues to become more racially mixed.

Some preliminary guidelines were put in place by the OMB in order to code and analyze the data from the new race question. For the purposes of the 2000 census, the OMB ruled that all individuals who identified themselves as more than one race are to be considered part of the minority (nonwhite) race category, for purposes of civil rights legislation. In this way, despite the allowance of multiple racial categories, there are still remnants of the ideas that mixed-race Americans are nonwhite by virtue of the fact that they are not “fully” white. Despite the change in the race question in the 2000 census, there have been criticisms raised that question how effective the change was in addressing previous concerns relating to racial categorization. One of the main arguments expresses dissatisfaction in the way the race question reflects racial identity, arguing that adding the option to select more than one racial category still does not adequately account for the fluid nature of racial identity for many individuals. Though the response options have changed, the question still uses the same approach to classify racial identity.

Two or More Races Population: 2000 and 2010

The data from the 2000 census showed that 6.83 million of the 281.42 million enumerated Americans marked two or more responses for racial identity classification, according to the official coding methodology employed by the Census Bureau. That translates to approximately 1 out of every 40 Americans identifying as two races, and approximately 1 out of 1,000 identifying as three or more races. Fewer than 1,000 identified themselves by selecting all six racial categories—the major five categories plus the “some other race” category.

For the first time in history, the 2010 data allowed major data point comparisons among the two or more races populations from it and the 2000 census. During this decade, the population grew from 6.83 to 9.01 million, or approximately 1 out of every 37 Americans identifying as two races, and one 1 of every 500 identifying as three or more races. The numbers dropped slightly for individuals selecting five or six races between 2000 and 2010.

Mixed-race Americans have been grouped, not based upon notions of shared phenotypes or genotypes or national/regional origins, but because they share the mixed-race condition of being from more than one of the officially recognized racial groups in the United States. For this reason, mixed-race Americans are not easily generalizable.

The collected data would be sufficient if the census obtained the most relevant multiracial population, but how relevant the population is depends on the questions and goals of the research. Therefore, the census and all other surveys that use a single measure of race would better be seen as a measure of a multiracial population, instead of the multiracial population, as is still commonly accepted. Despite this, the census is a great tool for examining mixed-race Americans for demographic information, as well as for beginning to understand the history of the social construction that allows “mixed race” to be a viable and meaningful category today for millions of Americans.

Mohawk

The Mohawk called themselves Kanien'kehá:ka, or "People of the Place of Flint." They are one of the five original nations forming the Iroquois Confederacy. They are also known as the "Keepers of the Eastern Door" because they provided protection for the Confederacy from invasion in that direction. The Mohawk are an Iroquoian-speaking people, originally from the Mohawk Valley in upstate New York.

Today, members of the Mohawk tribe live throughout upstate New York and southeastern Ontario and Quebec, Canada. The St. Regis Mohawk reservation, also known as Akwesasne, is located in Franklin County, New York, and is adjacent to the Akwesasne reserve in Ontario and Quebec. Although they straddle the United States and Canada, the St. Regis and Akwesasne Mohawk view themselves as one community. Ganienkeh is a Mohawk community founded in 1973 near Altona, New York, and Kanatsiohareke

is a Mohawk community re-established in 1993 on ancient homeland west of Fonda, New York. There are five Mohawk reserves in Canada (Akwesasne, Kanesatake/Oka, Kahnawake, Tyendinaga, and Wahta/Gibson) and another Iroquois reserve (Six Nations of the Grand River), which has a considerable Mohawk population. According to the 2010 census report, there are 81,002 people of Iroquois descent in the United States. This doesn't accurately convey the population of Mohawk people in the United States. However, there are approximately 25,000 Mohawk people registered with the St. Regis, Akwesasne, and Six Nations communities.

First contact between the Mohawk and the Dutch occurred when the latter established a trading post at Fort Nassau, New Netherland, in 1614 (near present-day Albany, New York). The Mohawks established a monopoly in the fur trade with the Dutch, ultimately becoming their allies in fighting the French. In the aftermath of the 1666 to 1667 French attack (to avenge the killing of Jesuit priests), Jesuit missionaries converted many Mohawk to Christianity and established two Catholic missions near Montreal (later known as Kahnawake). During this time, a young Mohawk woman, Kateri Tekakwitha, converted. She is the first Native American to be declared blessed (beatified in Rome by Pope John Paul II in 1980). Throughout the 1690s, the Mohawk continued to convert to Christianity under Protestant missionaries.

During the American Revolutionary War, a majority of Mohawk fought against the United States because of treaty obligations with the British and conflicts with settlers; some Mohawk sided with the Americans, while others remained neutral. After the war, American retaliatory raids upon the Mohawk forced them west to Fort Niagara or into Canada. The well-known Mohawk Joseph Brandt established the Six Nations Reserve in Ontario at this time. In November 1794, the Haudenosaunee (Iroquois) signed the Treaty of Canandaigua with the United States, calling for peace, non-interference between the United States and tribal nations, and annuity payments.

The Iroquois League, governing the ceremonial and cultural institutions of the Haudenosaunee, consisted of 50 sachems, or chiefs, from each of the original five tribes or nations. The Haudenosaunee

were matrilineal societies; hereditary leadership was passed down through female family lines. Consequently, although usually men, sachem were appointed by women. Mohawk society comprises three clans (Wolf, Bear, and Turtle), composed of matrilineal lineages. Three Mohawk sachem from each clan participated in the Iroquois Great Council, the meetings of the 50 sachem of the league. Today, many Mohawk communities have hereditary and elected chiefs; the latter are recognized by Canadian and U.S. governments.

Extended Mohawk families traditionally lived together in longhouses, 50- to 100-foot long wood-framed, bark-covered structures that contained shared communal rooms and spaces, individual family compartments, fire pits, and smoke holes. A three-part surrounding wall made of wooden stakes provided protection for villages, containing up to 600 people. Villages were moved about every 15 years, when nearby resources were diminished. In modern times, the longhouse is used as a gathering place for social and ceremonial events. The term *longhouse religion* is also used in the United States to describe Haudenosaunee who follow the Handsome Lake code.

Known for their raised beadwork style created in the late 18th century, Mohawk women from the St. Regis, Akwesasne, and Kahnawake reserves made significant quantities of beaded items for a European-American commercial market and Mohawk use. Beadwork was also used to mark significant events before then, as is the case with wampum (tubular shaped beads made of white and purple Quahog clamshells). The unification of the original five nations of the Iroquois Confederacy is represented in the Hiawatha wampum belt, which contains four squares (representing the Seneca, Cayuga, Oneida, and Mohawk) and a central tree shape, the Tree of Peace (signifying the central council fire and the Onondaga). A white line connecting all five motifs, known as the path of peace, symbolizes their unity. These symbols are used in the Haudenosaunee flag today.

In the early 20th century, Mohawk ironworkers (many from the Kahnawake and Akwesasne reserves near Montreal) continued their family legacies as high steel workers by moving to Brooklyn, New York. There, they preserved their Mohawk cultural heritage in tightly knit communities, and they are known for having worked on almost every

skyscraper and bridge built in New York City, including the World Trade Center. After decades of forced assimilation through education, various educational initiatives helped revitalize Mohawk culture, like the Akwesasne Freedom School created in 1979 at the St. Regis Reservation.

Montana v. United States (1981)

In 1981, a conflict arose between the Crow Tribe of Montana, the state of Montana, and the United States. In question was the legitimacy and authority of any of these three entities to prevent nonmembers of the Crow Tribe from fishing and hunting on the Crow reservation.

The land at the center of the controversy was the bed of the Big Horn River, which the courts ruled clearly belonged to the state of Montana originally, and not the Crow Tribe. The Crow Tribe believed that the land was given to them as laid out in the First Treaty of Fort Laramie (1851) and the Second Treaty of Fort Laramie of (1868), yet the state of Montana continued to assert its

control over the land. The federal government maintained that true authority over land is designated by possession of title. The contention of the Crow was that they still possessed “inherent sovereignty” because the land was conveyed to them twice, and the state of Montana should discontinue its attempts to maintain jurisdiction over hunting and fishing on Crow lands.

According to an initial court ruling, the title for the bed of the Big Horn River was not conveyed to the Crow Tribe because as a general principle, the federal government holds lands under navigable waters in trust for future states when they enter into the union. Further, this reservation land was owned in fee simple (capable of being inherited) by nonmembers and therefore was not subject to Crow Tribe regulations, even though the Big Horn River bed was within the boundaries of the Crow reservation.

With the parties still not happy with the outcome, the case was appealed to the District Court of Montana. In this appeal, the control over fishing and hunting on the reservation by nonmembers was argued to still belong to the United States. This ruling held that the land had neither been explicitly nor formally designated as falling under the sole care of the Crow Tribe. The district court explicitly cited the 457 F. Supp., 609 decision that, “Indian tribes do not have the power, nor do they have the authority, to regulate non-Indians unless so granted by an act of Congress.” The court went so far as to say that if the Crow wanted to control fishing and hunting on the reservation by nonmembers, the Crow would have to pass and enact legislation designed to prohibit trespassing on or owning tribal or Indian land.

Although there was some dissent between justices regarding the opinion on the case, it was upheld that the bed of the Big Horn River did not belong to the Crow. As a result, non-Indians on this fee simple property were not obliged to adhere to the Crow regulations against fishing and hunting, even though it was within the boundaries of Crow land. Again, the court upheld the right of the United States (and not the Crow) to regulate hunting and fishing on the reservation by both Indians and non-Indians on non-Indian-owned property.

Later, in the court of appeals, the district court’s findings were overturned—the United

States held the banks of the Big Horn River in trust for the Crow Tribe, the United States and the Crow did have the authority to prohibit the hunting and fishing of nonmembers on the fee simple (non-Indian) lands within the boundaries of the reservation, and the Crow could not impose criminal actions against nonmembers for hunting and fishing on the reservation. The fishers and hunters on the Crow reservation would still be held accountable to Montana’s criminal and fish and game laws.

In the final ruling by the U.S. Supreme Court, Justice Potter Stewart held that the Crow have the right to regulate hunting and fishing by nonmembers on the reservation as long as the land is sovereign and controlled by the tribe. Because some of the Crow reservation land was held by nonmembers, the land was not sovereign and thus could not be controlled by the Crow.

This case has been cited many times in rulings against the power of Indian tribes, as the ruling states that Indians only have the sovereign rights to protect their own self-governance and internal interests, predominantly in civil manners.

Montgomery Bus Boycott

A strong case can be made that this protest action, which started in the Deep South state of Alabama, is the best-known and most influential consumer boycott in America’s history. This boycott

initiated the modern civil rights movement in the United States and introduced to the world the man who became the movement's leader, the Reverend Martin Luther King, Jr. The Montgomery bus boycott was triggered on December 1, 1955, by the refusal of Rosa Parks to give up her seat on a city bus to a white man.

Despite the many books and articles written about this boycott, some misunderstandings persist. To illustrate, Rosa Parks is sometimes portrayed as a retiring apolitical woman who, because of fatigue from a long day's work, finally decided that she had had enough and stepped out of character to defy the local authorities. In fact, Parks was anything but retiring and apolitical; she had long been involved in local and state black political activities, having served, for example, as secretary for the local National Association for the Advancement of Colored People (NAACP) chapter from 1943 to 1955. Moreover, she had refused several times in the 1940s to comply with the bus segregation laws and in the early 1940s was once ejected by a bus driver for her refusal to comply.

A second common misunderstanding concerns the organization of the boycott plan and its initial implementation. The leadership for this mammoth effort is often wrongly ascribed to King, but he asked to take charge only after the boycott began. The early planners and initiators were two longtime Montgomery residents with a history of leadership in the black community. One was E. D. Nixon, a local leader in union matters and black political pursuits. Known by many as a local militant, he was the man to whom local blacks would go if they experienced trouble with whites and needed help. The second principal was Jo Ann Robinson, a professor of English at the local black college, Alabama State College. Robinson headed the Women's Political Council, a group of local, middle-class black women considered to be one of the most active and assertive black civic organizations in Montgomery.

Plan for a Bus Boycott Emerges

After the arrest of Parks, Robinson and her colleagues conferred with Nixon about launching a local bus boycott. Although Nixon had been reluctant to agree to a boycott when other blacks

had been arrested for violating the segregated bus rules (in each of these instances, he had thought either the time was not right or the person arrested did not present a strong enough platform to support a massive attack on local practices), this time he thought that he had an ideal test case. Parks was a quiet, dignified middle-aged woman, active not only in black political and community activities but also in a local church. On the night of Parks's arrest (Thursday, December 1), Robinson, after conferring with other local black leaders, decided to organize a bus boycott for the following Monday (December 5).

With two trusted student aides, she worked through the night at her college's duplicating room to produce 50,000 copies of a bus boycott message for distribution to the black community. The next day, Robinson and the two students, along with other members of the Women's Political Council, distributed the announcements throughout Montgomery's black community.

Finding a Permanent Leader

The Monday boycott was a dramatic success for its participants in that fewer than 10 percent of Montgomery's blacks rode the city buses. Since 75 to 80 percent of the passengers who normally rode the bus were black, the boycott resulted in a huge loss in revenues for the bus company. Moreover, Robinson claimed that white ridership was also down on that day, so many buses were empty (or nearly empty) for the length of their routes. By Monday afternoon, local black leaders were well aware of the success of the boycott and began looking for someone to lead its continuation. Although E. D. Nixon had been asked to assume the role, he decided that a black minister would be a better choice. Nixon had been impressed with the young Reverend King, a 26-year-old newcomer to Montgomery with a doctoral degree from Boston University and an impressive gift for oratory.

At an afternoon meeting of local black leaders on Monday, it was decided that a new local organization would be formed to continue the boycott and that it would be called the Montgomery Improvement Association. King was elected by the group as its leader. That evening, his gifts as a speaker were made dramatically evident at a mass meeting of 6,000 blacks who came together

at a local black church to discuss the bus boycott and its future.

After King made his speech, the response of the thousands gathered inside and outside the church was pandemonium. The audience apparently felt that Montgomery blacks had found not only a way to combat the daily humiliations of segregated buses but also an inspiring young minister to lift their spirits while mobilizing their energies to confront the white power structure of the city. Little did they know at the time how long they would need this leadership to sustain them. The boycott lasted a total of 382 days, from December 5, 1955 to December 21, 1956, far longer than any of its leaders could have foreseen.

To the surprise of many observers, the bus boycott after its first day was also very successfully executed. The more than 90 percent of black riders who stayed off the buses on December 5 continued to stay off throughout the boycott period. The abstinence from city bus services was made possible by the creation of an alternative transportation system by the Montgomery Improvement Association.

The system, which started as a crude voluntary effort, soon evolved into something far more sophisticated and reliable, as the Montgomery Improvement Association secured the necessary funds to buy vehicles, hire drivers, and develop routes—in short, to establish a very effective city bus system.

Developing a Strong Sense of Community

The Montgomery Improvement Association took steps to develop a sense of community among its members. It published a newsletter edited by Jo Ann Robinson and held weekly mass meetings that cut across class lines. The strong sense of community was a major factor in the financing of the Montgomery Improvement Association, and especially its extensive and expensive alternate transportation system. Those attending the weekly church meetings gave generously, but unlike earlier black boycotts in the south (e.g., one in Baton Rouge), this boycott drew large contributions from the outside, and especially from the north. Northern blacks donated large sums as NAACP units and black churches across the nation organized a fund-raising campaign. Also, labor unions such as the United Automobile Workers provided

large amounts, as did peace organizations like the War Resisters League.

A curious aspect of the boycott campaign concerns the demands made by the boycotters and how these demands changed over its duration. At the outset, the Montgomery Improvement Association did not seek to overturn the state's segregation laws or to challenge the legitimacy of *de jure* segregation. Instead, it was within the constraints of a segregated system that the boycotters, as fare-paying consumers, sought to have their rights to equitable treatment honored. This meant more courtesy from the bus drivers and the right for blacks to sit from the rear to the front on a first-come, first-served basis. This right was not inconsistent with the state's segregation laws; a seating plan of this type was already in place in other southern cities (e.g., in Mobile, Alabama).

However, instead of considering the boycotters' demands for change within the existing segregation laws, the bus company rejected them summarily. The company believed that compromise was unwise because it might fuel more black defiance. Ironically, the bus company's rigid reaction helped radicalize the Montgomery Improvement Association's leadership as well as its goals. From a position of working within the existing bus segregation laws, the boycotters moved to one of fighting to overturn them.

After the first few weeks of boycott success, signs of serious strain began to appear in the city of Montgomery. Late in January 1956, drivers in the Montgomery Improvement Association's car-pool reported being harassed by the police. On January 30, King's house was bombed. A month later, a grand jury returned indictments for 90 of the leaders and supporters of the association. These individuals were charged with conspiring to carry out an illegal boycott.

Landmark U.S. Supreme Court Decision

The boycotters were defended by the NAACP, which took the case to federal court. When it appeared that the courts would rule against segregated busing, the local bus company attempted to put an end to the practice, only to find that the city of Montgomery threatened company drivers with arrest if they permitted desegregated seating. Finally, the federal court in Montgomery acted

with a 2-to-1 ruling on June 5, 1956, that bus segregation was illegal.

The ruling was upheld by the U.S. Supreme Court on November 13, 1956, and a month later, Montgomery officials were served with copies of the ruling by federal marshals. The following day, December 21, 1956, the boycott ended, and blacks, for the first time in more than a year, returned to the buses.

In light of the landmark federal boycott decisions and their influence on the boycott's outcome, it is difficult to say what effect, if any, the yearlong protest had on ending bus segregation in Montgomery. On one hand, some observers claimed that successful litigation, not the boycott, desegregated the buses. According to Fred Powledge, NAACP officials of the time, annoyed that

the Montgomery boycott had been undertaken without their direction, did not hesitate to point to their successful role in the federal courts in winning the boycott objectives.

On the other hand, since federal court decisions do not take place in a social vacuum, other observers claimed that the dramatic and heroic actions of Montgomery blacks during the many months of the boycott, actions that received nationwide publicity in the various news media, may have influenced the judges' thinking. But even if this influence was minimal, some people see the consequences of the boycott painted on a far larger canvas, one not dreamed of by its local leaders when their campaign began in late 1955. The boycott, more than any other single action, brought the civil rights movement to the attention

The Montgomery Bus Boycott lasted from December 1, 1955, when Rosa Parks was arrested for not giving up her seat on the bus to a white person, until December 30, 1956, when a federal ruling took effect that led to a Supreme Court decision declaring Alabama's laws unconstitutional. The National City Lines bus on which Rosa Parks was riding when she was arrested is now a museum exhibit at the Henry Ford Museum.

of the nation. As Domenic Capeci has observed, the boycott offered a leader (King), a philosophy (nonviolence), a tactic (direct action), and a tangible triumph.

Particularly important to Powledge was that Montgomery blacks fought their yearlong fight using a tactic that was difficult to sustain: the consumer boycott. The blacks maintained it during the cold months of winter and the heat and humidity of a southern, Alabama summer. The boycott sparked similar actions in other southern cities.

Moonstruck

Moonstruck (1987), directed by Norman Jewison, is a warm-hearted romantic comedy that scored well both critically and at the box office. It was the fifth-highest-grossing film in America in 1987 and was nominated for six Academy Awards, earning the award for Best Screenplay, Best Actress (Cher) and Best Supporting Actress (Olympia Dukakis).

Although its success shows its wide appeal, the film is set in the New York Italian American community, using its trials and tribulations to speak universally of the human condition. Its veteran director had previously addressed issues of race

and ethnicity in films such as *In the Heat of the Night* (1967) and *Fiddler on the Roof* (1971).

Moonstruck centers on complex affairs of the heart. Loretta Castorini (Cher) has recently become engaged to Johnny Cammareri (Danny Aiello), but when Johnny goes to Sicily to see his dying mother, Loretta falls passionately in love with his younger brother, Ronny (Nicholas Cage). While she is at the opera with Ronny, her infidelity is matched by their encounter with her father, Cosmo (Vincent Gardenia), and his mistress, Mona (Anita Gillette). However, all is resolved the following morning. Cosmo promises his wife (Olympia Dukakis) that he will stop seeing Mona, and when Johnny returns unexpectedly from Sicily because his mother has made a miraculous recovery that he believes means that he must sacrifice his marriage plans, Loretta is able to accept Ronny's proposal. These romantic complexities are matched by relationships between time and place, past and present, New York and Italy, all of which are underscored by the film's plot as well as its use of casting, *mise en scene*, and soundtrack.

Moonstruck opens with an establishing shot of the Brooklyn Bridge but soon moves to Manhattan, where the New York Metropolitan Opera is preparing for a production of Puccini's *La Bohème*. Against this visual backdrop, the soundtrack plays Dean Martin's 1953 hit "That's Amore." These few minutes capture and anticipate the film's multicultural themes. Crossing the Brooklyn Bridge has long been a symbol of aspiration to the Brooklyn-based Italian community, while the Met, with its logo of the American flag, is dependent upon international, including Italian, operas. "That's Amore" mingles its lyrics and title with Italian and English vocabulary. *Moonstruck* is set in both America and Italy, but it is neither Italian nor American, it is Italian American, as are its characters; they bring out the best of both countries to achieve something new, and it is implied that others may learn from that example. Moreover, both *La Bohème* and the moon, mentioned in "That's Amore" ("When the moon hits your eye like a big pizza pie, that's amore"), are connective threads and motifs throughout.

Moonstruck is a true celebration of the Italian American experience and of its people's

achievements in the modern day. It is a strikingly positive portrayal; although some scenes are set in Sicily, there is no hint of the Mafia associations that so often stereotype Hollywood movies, and although Cosmo is a sharp and very successful businessman, there is no trace of criminality in any of the characters. Moreover, viewers see through the generations how adaptation has been made to American ways. Loretta's grandfather (Feodor Chaliapin, Jr.) still mainly speaks Italian with his elderly friends. Second-generation Cosmo has been able to build a lucrative plumbing business, while Rose is proud to have remained a traditional housewife. As a third-generation Italian American woman, Loretta has a professional career as an accountant and a feisty spirit; she is told by Ronny, "Playing safe is the most dangerous thing a woman like you can do."

Italian American Portrayals

It is clear that Italian Americans are thriving because, along with their adaptation, they have retained their traditions. Loretta and Rose both wear crosses and visit church for solace and guidance. The three generations still live together, and Rose expects Loretta to stay in the family home with her new husband and, she hopes, have children. Family is their bedrock. *Moonstruck* ends with the toast to Ronnie and Loretta's engagement: "To family" (including Johnny, who will still become family through his brother's marriage) and a series of close-ups of family photographs, the camera finally resting upon a sepia-toned picture of the cast as a family group.

However, Italian Americans are not portrayed as standoffish; they enrich their experiences with treats from other cultures. Loretta asks Ronny for a glass of whiskey, and Rose cooks oatmeal from a Quaker Oats box. This multicultural blending is reflected in the casting that sees Cher (who has a mixed ethnic background, including Armenian and Cherokee) and Greek American Olympia Dukakis seamlessly fit with a cast of veteran (Vincent Gardenia) and rising (Nicholas Cage) Italian American actors.

It is this sense that, in America, everyone connects that gives *Moonstruck* its charm and vitality. Although Loretta and Ronny's romance is central, the film unusually finds tender and erotic moments for elderly couples, and the whole extended cast

is linked by the full moon, which casts its rays across the city and into their bedrooms, making them literally "moonstruck."

Mormons

The Church of Jesus Christ of Latter-day Saints (Mormon or LDS) began during the Second Great Awakening. During this era, a movement in America known as Restorationism or Christian Primitivism sought a return to "the ancient order of things," the simple faith and practice of 1st century Christianity. The two most successful Restorationist movements were the Disciples of Christ (later the Church of Christ, or the Christian Church), led by Alexander Campbell, and the Latter-day Saints, led by Joseph Smith.

Joseph Smith reported that in the spring of 1820, he went into a grove of trees in Palmyra, New York, to ask of God which, of all the existing churches in his area (specifically Presbyterian, Methodist, and Baptist), was right, and which he should join. He explained that in response to his simple prayer, he saw a heavenly vision in which God and Jesus Christ appeared, instructed him not to join any of the churches (for they believed in incorrect doctrines), but encouraged him to be patient and await the long-promised restoration

Joseph Smith's successor, Brigham Young, was the president of the Church of Jesus Christ of Latter-day Saints (LDS) from 1847 until his death in 1877. He founded Salt Lake City and served as the first governor of the Utah Territory.

of all things. He was told that he would be an instrument in the hands of God in bringing to pass this restoration.

In many ways, Mormonism represented a counterculture, and Mormons are considered by many even today to be religious outsiders. In speaking of the extant Christian traditions, God had declared to the young prophet that “all their creeds were an abomination in [God’s] sight” and that the religious leaders in his area “were all corrupt.” Thus, from very early on, the wedge was driven between traditional or Orthodox Christians and LDS. The Mormons were not Catholic, nor did they identify with any of the Protestant faiths. They spoke of themselves as heirs of the New Testament church but were not a part of the historic Christian tradition. Rather, they defined themselves as “restored” Christianity, a faith community that rejoiced in the restoration of divine priesthood power, spiritual gifts, and plain and precious doctrinal truths that had been either lost or corrupted through the centuries.

Yet, Mormonism did seem to have a connection with existing churches. Its doctrine, especially that presented in the Book of Mormon,

sounded very Protestant. On the other hand, like the Catholics, the LDS believed in apostolic power and succession, and it established a church with a priesthood structure, a line of authority from the newest convert to the prophet or president of the church.

For the most part, the Mormons proved to be a peaceful people, but they were also an insular and somewhat independent group. As early as 1831, Joseph Smith announced an economic system that came to be known as the Consecration and Stewardship of properties. Under this order, individual members consecrated or surrendered all that they possessed to the Church through local church leaders; that is, properties or funds were legally deeded over to the church. Individuals or families then received, also by legal deed, a stewardship or inheritance to manage.

Though the stewardships were generally land or property, on occasion, individuals were assigned to oversee the publication and distribution of either educational materials or sacred scripture. Any and all surplus (either surplus consecration or surplus production) went into the local storehouse, the center of economic interests in the community, to be used for the poor and needy. The success of Consecration and Stewardship was dependent largely upon the goodness and integrity of the participants, the extent to which the members acknowledged that they actually had a surplus to convey to the church. This system worked for a time among a small percentage of the Mormons but was eventually discontinued. This order tended to heighten the insularity of Joseph Smith’s followers and to further distance them from the general populace.

Zion

As early as the coming of the Book of Mormon in 1830, the LDS people were charged to build up and establish Zion—the city of God, the holy commonwealth, the gathering place of God’s people. They were encouraged to have the spirit of Zion in their hearts, to labor to achieve a society in which there were no poor among them, where the municipalities were of one heart and one mind, where Christ would feel comfortable to visit and abide.

When Mormon missionaries traveled throughout the country, taught the restored gospel, and made converts, those converts were charged

to “gather to Zion,” to move themselves to the Church’s headquarters, which over time was Kirtland, Ohio; Independence and Far West, Missouri; Nauvoo, Illinois; and the Great Basin of Salt Lake City.

When the LDS were driven from their homes and expelled from Missouri, the rallying cry was to establish Zion anew. Although for a season of LDS history, the word *Zion* connoted specific geographical sites, gradually the LDS began to speak of Zion as “the pure in heart” and wherever such people chose to dwell. Zion became the banner, the ensign, the standard around which a misunderstood and beleaguered people could rally. It has been crucial in establishing Mormon identity.

The move of the LDS from Nauvoo, Illinois, to the Salt Lake Valley was as much ideological as it was geographical. From their perspective, the LDS had finally escaped the tentacles and clutches of Babylon, and had removed themselves from an apostate Christendom. There, Smith’s successor, Brigham Young, directed and oversaw an endeavor that can only be described as remarkable—the leading of thousands across the plains; the taming of the desert; the colonization of Mormon settlements throughout Utah, Idaho, Arizona, and even California; and the establishment of a theocratic society. In the years that followed their entrance into the Salt Lake Valley in July 1847, Joseph’s people enjoyed sweet isolation for a decade, until federal officials began to invade LDS territory.

The institution of polygamy or plural marriage, begun by Joseph Smith but finally made public and official in Salt Lake City in 1852, alarmed and alienated much of the country. Some spoke of slavery and polygamy as the “twin relics of barbarism.” The Mormons resisted federal law until 1878, when the U.S. Supreme Court declared plural marriage illegal and ordered its cessation. In 1890, church president Wilford Woodruff, in compliance with the decision of the highest court in the land, issued *The Manifesto* and charged LDS to cease and desist polygamous practices. Utah achieved statehood in 1896, and a major cultural shift within Mormonism was under way.

Martyrdom of Joseph Smith

At the time of the martyrdom of Joseph Smith, there was considerable question in the minds of many LDS as to who should succeed him. The

leaders of the church, under the direction of Brigham Young, declared that before his death, Smith had given strict instructions that the president of the church should come from among those who had received apostolic authority.

Others contended that succession should be patriarchal and that the successor should be Joseph Smith III, who at the time was 12 years old. Those who followed the Quorum of the Twelve Apostles went west, while the latter group stayed in Nauvoo. In 1860, the Reorganized Church of Jesus Christ of Latter Day Saints was established, with Joseph Smith III as president. Today, this group is known more popularly as the Community of Christ, with headquarters in Independence, Missouri. The Community of Christ chose to reject some of the more controversial teachings of the Mormons, and today might be characterized as a kind of mainline Protestant group.

Movement into the 20th century was eventful but challenging for the Mormons, as the LDS sought to assimilate culturally into American society while holding tenaciously to the distinctive tenets and practices of their faith. The 1950s and 1960s in America was a golden age for the Mormons, as they enjoyed relative social acceptance and unparalleled church growth. By the 1980s and 1990s, prominent Mormons were surfacing in entertainment, athletics, education, and government. As the 21st century dawned, more Mormons were located outside the United States than within, with congregations located in such countries as Mexico, Brazil, the Philippines, the Polynesian islands, Japan, Russia, Mongolia, and Africa.

By 2010, the LDS presence in America was highlighted by the rise of a Mormon Republican candidate for president, Mitt Romney, former governor of Massachusetts. During the 2012 election, Romney’s faith became an object of suspicion and criticism, particularly among evangelical Christians. Assuming a position much like that of Roman Catholic candidate John F. Kennedy in 1960, Romney reminded the American people that they were electing a president, not a pastor, and that his suitability to hold the highest office in the land should be evaluated on the basis of his background, experience, and business acumen to accomplish a turnaround in the nation’s economy. The Romney candidacy brought into focus a mind-set that had lain dormant for some

time, namely, the LDS as “religious outsiders” in a largely Catholic/Protestant nation.

Mormonism as a faith and a culture continues to be one of the fastest-growing religious bodies in the world, yet the LDS would be quick to point out that living in Christian America has not come about without stress and strain, that current coexistence among persons of more dominant faiths produces a dynamic tension that will probably continue to exist as long as the followers of Joseph Smith hold to the history, doctrines, and lifestyle that drove the original wedge between themselves and the “religious insiders” in 1820.

Motion Picture Production Code

The Motion Picture Production Code was a series of regulations that governed the content of films produced and screened in the United States from 1930 until its replacement by the ratings system in 1968. During the 1920s silent era, the

Hollywood community gained a reputation for unlicensed decadence. Rocked by scandals such as the death of starlet Virginia Rappe, for which actor/director Roscoe “Fatty” Arbuckle was charged with manslaughter, the Motion Picture Producers and Distributors of America (MPPDA) sought to rehabilitate Hollywood’s reputation, and under the aegis of MPPDA President Will H. Hays, it instituted the first code.

Hays’s reputation as a strict conservative—he had served as President Warren G. Harding’s post master general—was useful for garnering public faith in his ability to clean up Hollywood, but the code was in fact drawn up by the editor of the trade paper the *Motion Picture Herald*, lay Catholic Martin Quigley, and Jesuit priest Father Daniel A. Lord. The studios agreed to adhere to the code, which, under the guiding principle of demarcating good from evil, first put forward a set of “general principles” and then gave a detailed list of what could and could not be shown and said within a film. Although there were expected restrictions on content, such as sex and violence, the code was most concerned with preventing the representation of issues that would undermine the image of a conservative, affluent, and harmonious America, untroubled by social conflict or abuses.

The period from 1930 to 1934 is often referred to as “pre-code” because its strictures were not tightly enforced. During these early years of sound pictures, there was a spate of highly violent gangster films and pictures with risqué sexual content. Miscegenation, or sexual relations between those of different racial groups, was number six on the Code’s list of things that “shall not appear in pictures produced by members of this Association, irrespective of the manner in which they are treated.” Nonetheless, *The Bitter Tea of General Yen* (Frank Capra, 1933) has a highly erotic sequence in which an American girl in China, Megan Davies (Barbara Stanwick), dreams about her warlord captor, General Yen (Nils Asther).

The Letter and the Spirit of the Code

Amid public outcry at the immoral tenor of movies, especially their negative influence on children and young people, and to avoid the imposition of government censorship, the Production Code Administration (PCA), headed by devout lay Roman Catholic Joseph I. Breen and often referred

to as the Breen office, was inception in 1934. From this point on, all Hollywood scripts had to be submitted to the PCA for approval before production, and the completed film required a code seal of approval before release. The code was now applied with full rigor, although its details would be amended as time went on and the studios would find ways to stay within the letter of the code while undermining its spirit.

This latter point may be illustrated with reference to the multicultural issue of anti-Semitism. Two Code strictures coalesced to make it very difficult to address racial or religious prejudice. The first was number 11 of the absolutely forbidden things: "Wilful offense to any nation, race, or creed." In addition, the Code had a supplementary list deeming "That special care be exercised in the manner in which the following subjects are treated." Number two of this category was "international relations [which included] avoiding picturing in an unfavorable light another country's religion." The ban on the word *Jew* in dialogue on the grounds of avoiding offense was, in practice, taken by the Breen office as an excuse to preclude films from addressing the morally troubling issue of anti-Semitism in the United States or the rising problem of Jewish persecution in Germany. *The Life of Emile Zola* (William Dieterle, 1937), a parable for contemporary European events made by the socially conscious Warner Bros., looked at Zola's quest to clear the name of the Jew, Dreyfus, wrongly convicted of espionage by the 19th century French military. When looking for a scapegoat on whom to pin the treason, officers are seen looking at Dreyfus's records and tracing down his particulars, pausing at the printed word "Jew" while saying "I wonder how someone like him rose up our ranks."

As time progressed and society's conventions changed, the code was refined with regard to allowing representations of narcotics addiction (*The Man With the Golden Arm*, 1955), homosexuality (*Advise and Consent*, 1962), and heterosexual activities, from the comedy of manners, *The Moon Is Blue* (1953) to rape and its revenge in *Anatomy of a Murder* (1959). In each instance, director Otto Preminger was prepared to release his films without a code seal of approval, forcing the Code to accommodate liberal revisions, although the activities presented had to retain

negative connotations, for example, the suicide of a politician whose homosexual past catches up with him in *Advise and Consent*.

By the mid-1960s, partly because of an influx of challenging and realistic British and European films, and partly because of the developing cultural revolution in America, the Code was forced to recognize that the frank depiction of adult subject matter was not necessarily lewd or threatening to the social fabric. For the first time, bare breasts were permitted on screen in a scene from *The Pawnbroker* (Sidney Lumet, 1964), in which an Auschwitz survivor is haunted by his wife's rape by Nazi guards. By 1968, it was no longer possible to restrict cinematic subject matter, and instead theatergoers would be restricted with the ratings system, which continues with revisions into the present day.

Motion Pictures

Actors, directors, producers, and other people from diverse heritages have contributed to America's film industry. Hollywood films have always been a sort of a mirror of the United States—although often a controversial and simplified one—and have always dealt with the representation of American society, of which multiculturalism is a key element.

Most of the classical Hollywood studios were founded by Jewish émigrés from Europe, and after World War I, when Hollywood became the world's top movie producer, practitioners and artists from all over the globe moved to California. Among the first-rate cinematographers of Hollywood's Golden Age were Warner Bros.' Sol Polito, MGM's James Wong Howe, and Universal's Karl Freund, respectively a Sicilian, a Cantonese, and a Bohemian.

However, when Hollywood portrayed American society, it tended to show the different groups as assimilated to the dominant white Anglo-Saxon Protestant (WASP) culture and values, or to promote such assimilation more or less explicitly. For example, although Jewish, studio moguls were reluctant to portray overtly Jewish themes. In *The Life of Emile Zola* (1937), references to Captain Alfred Dreyfus's Jewish heritage were carefully omitted.

Comedian Danny Kaye (born Kaminsky) was even encouraged to undergo surgery to correct his "Semitic" nose. Similarly, Italian-born director Frank Capra never mentioned his roots in his films but instead became one of the foremost promoters of American values.

Hollywood believed society had to be cohesive under the American WASP values. In the early musical *King of Jazz* (1930), the final "melting pot" number shows immigrants from various countries entering a giant pot, from which they eventually emerge as Americans. Minorities marked by traits or customs that were too divergent from the mainstream model became the targets of stereotypical portrayals; that is, they were featured in films as minor characters with an either comic/ridiculous or negative nature.

Silent-Era Stereotypes

Ethnic/racial stereotypes, which to some extent still exist today, were disseminated during the silent film era in a particularly deriding and often insulting way; the film *Fight of Nations* (1907) is such an anthology. Italians were shown as either mobsters or boxers, both being irrationally passionate and overly gesticulating; *The Black Hand* (1906) was an early Mafia silent film, and *The Italian* (1915) featured the "hot-blooded" stereotype.

In the 1920s, Rudolph Valentino embodied the archetype of the Italian seducer and gave further

strength to this stereotype. Europeans in general were seen as decadent, slightly amoral people, more inclined to sinful and turbid romances than Americans—think of Marlene Dietrich's film characters.

Irishmen were depicted as quick-tempered troublemakers and heavy drinkers, when not directly compared to pigs, as in *Casey's Twins* (1903) and *Smiling Irish Eyes* (1929). Irish men were policemen, firefighters, or boxers, while Irish women were generally servants and washerwomen. Chinese people were depicted as mysteriously entranced in closed groups and devoted to underworld trades. In the best cases, they were just exotic attractions, as in the case of American-born Chinese actress Anna May Wong, who, although talented, was given only Madame Butterfly-like or "dragon lady" roles, for example, in *Daughter of the Dragon* (1931). Jews were seen as greedy "penny pinchers," as depicted in *Levinsky's Holiday* (1913). During World War I, for propaganda reasons, Germans were portrayed as insensitive Huns capable of any atrocious crime.

The African American community was the favorite target. Following the vaudeville tradition of blackface minstrels, African American artists were typically featured as spectacular dancers and musicians; one of the earliest American films is *Negro Dancers* (1895). They were displayed in—and confined to—musical numbers that temporarily stopped the storytelling to leave room for sheer spectacle, while the leading roles and the narrative were carried out by white actors. Moreover, these separate numbers could be conveniently cut out in the copies distributed in the southern states, so as not to annoy the local white audience. The most disparaging characterization—the Coon—represented the supposedly uncivilized nature of African Americans in terms of either buffoonish silliness or dangerous instinctual drives. An infamous example is *The Birth of a Nation* (1915), in which the heroic Ku Klux Klan knights fight against sexually rampant African Americans, played by blackfaced white actors, menacing the peaceful people of the "Old South."

A less detrimental African American stereotype was the Tom, named after the main character of the popular novel *Uncle Tom's Cabin* (1825). The Tom was reliable and amiable, part of the community and perfectly content with being subjected to the white masters. The Tom character—and

his female counterpart, the Mammy—can be typically found in the plantation genre films. In these period motion pictures, the slavery issue was eschewed by showing African Americans as happy members of Old South families, not as slaves; a famous example of this genre is *Gone With the Wind* (1939). Another cliché was the Tragic Mulatto, the offspring of an interracial couple. The mulatto was “tragic” because he or she was the “unnatural” product of so-called miscegenation—prohibited by the law—and, as such, was rejected not only by the whites but also by his or her own people.

The Sound Era

During the 1930s, when silent motion pictures had been replaced by films with sound tracks, more respectful portrayals were advocated by the new Motion Picture Production Code and by the New Deal, which found in Hollywood a strong ally in its social policies. In a country plagued by an economic crisis, filmmakers were now asked to show the image of a cohesive society and encourage people to cooperate for the common good. In many “urban comedies,” all social classes were portrayed sympathetically, and thus the Toms outnumbered the Coons.

This was carried on in the next decade by war films, which showed soldiers from every class and ethnicity united to fight the enemies of freedom; the documentary *The Negro Soldier* (1944) illustrated the contribution of African Americans to the war. In turn, the enemies of freedom were the decade’s villains. In Pacific war films, Japanese were depicted as treacherous, sadistically cruel, and speaking with squeaks or grunt-like sounds. The Germans were not so much the protagonists of war films as those of spy stories with enemies trying to infiltrate into the American soil—a prominent example is *Confessions of a Nazi Spy* (1939). As the Cold War started, the Nazi spy became the Communist spy. The theme was disguised in metaphoric tales such as *The Return of Dracula* (1958), in which the vampire comes from eastern Europe, settles in a small town posing as a distant relative of a local family, and infects the blood of young American girls.

Since African Americans had progressively become a more active part of American society, Hollywood decided to release films aimed at

the African American audience as well. MGM launched its “bronze Venus,” Lena Horne, and the studios produced all-black films like *Cabin in the Sky* (1943) and *Stormy Weather* (1943), or African American versions of classic stories, such as *Carmen Jones* (1954). Nevertheless, these films were shot by Caucasian directors from a white perspective, and not surprisingly, most of them were musicals exploiting the clichéd innate “musical instinct” of African Americans.

More challenging films dealing with racial/social issues came at the end of the 1940s. *Christ in the Concrete* (1949) denounces, in a realistic and nonstereotyped way, the harsh conditions of Italian workers at a New York construction site. *Gentleman’s Agreement* (1947) is about anti-Semitism, while the Holocaust would be dealt with much later in *The Pawnbroker* (1964). *No Way Out* (1950) is the story of a black doctor who has to treat two white racists, while *Pinky* (1949) is about “passing,” that is, the attempt of mulattoes to conceal their black heritage. Miscegenation had been a taboo topic, and films mentioning it, such as *The Bitter Tea of General Yen* (1933), ended tragically, so as to imply that there could be no happiness from such interracial relationships.

Miscegenation was faced openly and in a positive way in *Guess Who’s Coming to Dinner* (1967), the story of the happy engagement between a blonde WASP woman and an African American man. The film featured African American actor Sidney Poitier, who had already starred in *In the Heat of the Night* (1967), about a black detective investigating a murder in a southern racist community. Poitier’s characters were nevertheless seen by part of the black community as updated Toms, well accepted because they had conformed to the dominant white values.

Independent Black Cinema and “Blaxploitation”

Independent, authentically black cinema, dealing with African American topics viewed from an African American perspective, had existed since cinema’s earliest years. In 1910, the Foster Photoplay Company was founded by African American filmmakers, and *The Railroad Porter* (1912) can be considered the first black film. Oscar Micheaux, producer of the first African American

feature-length film, *The Homesteader* (1920), was the most active African American filmmaker of the time. After the coming of sound, occasional black films striving to take a political stance on the social conditions of African Americans were produced, such as *The Cry of Jazz* (1959), but they were not distributed widely enough to contrast Hollywood's view.

In 1971, Melvin Van Peebles's independent black film *Sweet Sweetback's Baadasssss Song* had an unexpected box office success. It was not the reassuring story of a well-assimilated Tom, but a "bad-nigga narrative," a violent ghetto-centric tale about a streetwise man who strives to survive in a racist society. The reception for this film was so good that the model was taken up by Hollywood. MGM produced the black action thriller *Shaft* (1971), and the so-called blaxploitation trend was launched.

The Rise of Ethnic Diversity

Hollywood realized that ethnic diversity was good for business, so in the 1970s, another ethnic group which had always been active and widely present in the movie industry but had so far refrained from overtly dealing with its heritage moved to the limelight: the Jews. Prominent Jewish artists like Mel Brooks, Woody Allen, and Barbra Streisand based their success on the flaunting of their heritage. If, some decades before Jewish actor Danny Kaye had to change his name and nose to be accepted in Hollywood, now in *Funny Girl* (1968), Streisand sang the praises of her Semitic profile. Italian American actors and directors—Robert De Niro, Al Pacino, Martin Scorsese, Francis Ford Coppola—were among the most promising newcomers of the decade. They were no longer reluctant to display their heritage, overturning the old prejudices—in *Serpico* (1973), the Italian protagonist is an upright cop, not a mobster—and even discussing the Mafia tradition in Coppola's *The Godfather* (1972).

After the success of Bruce Lee's Hong Kong films (*Enter the Dragon* [1973] was coproduced by Warner Bros.), Asian culture and martial arts also found a respected place in Hollywood. The culture of Native Americans—perhaps one of the most marginalized groups—was also given a new reading, after decades in which they had

been simply portrayed as vicious, faceless enemies attacking innocent caravans and homesteads. Although occasional pro-Native American films can be traced back to 1925 (*The Vanishing American*), and films casting a different light on the "good white versus evil Indian" cliché had been released throughout the decades, such as *Apache* (1954) and *Cheyenne Autumn* (1964), truly revisionist westerns blossomed only in the 1970s, with *Soldier Blue* (1970), *Little Big Man* (1970), and *A Man Called Horse* (1970).

In the 1980s and 1990s, the commercially successful assimilation continued with the Hollywood career of African American Spike Lee, formerly an independent director. Some of the most prominent manifestations were the partnerships of blacks and whites featured in the so-called buddy movies of the *Beverly Hills Cop* (1984–94) and *Lethal Weapon* (1987–98) series. As for the old ethnic clichés and stereotypes, they were now featured in comedies, in a tongue-in-cheek, inoffensive manner, mostly reduced to parodies of the old racist usage. Stereotypes were even self-ironically paraded by members of the very ethnic groups they depicted. Mel Brooks's and Woody Allen's films abound in caricatured Jewish stereotypes. The Italian American as a Mafia man or as an overly passionate lover is similarly exaggerated, as in *Prizzi's Honor* (1985). Eddie Murphy frequently tells self-racist jokes and provocatively poses as an African American stereotype in the *Beverly Hills Cops* films.

Hollywood has always had an international distribution network and employed actors and filmmakers from numerous heritages. Today, Hollywood's personnel is more varied than ever before, and the entire world is Hollywood's market; more than half of Hollywood's income comes from abroad. Therefore, multiculturalism is now a requisite for motion pictures, not so much to promote egalitarian beliefs as to have products that do not offend anyone and are able to satisfy an audience as large and varied as possible.

Motown

Motown was the most successful independent record company in America and one of the most successful African American-owned businesses in history. Founded in 1959 in Detroit, Michigan, by songwriter Berry Gordy, Jr., Motown is often romanticized in popular culture as a “rags to riches” story, with Gordy borrowing \$800 from his family to start the company. However, the Gordys were atypical of Detroit’s African American families who had migrated from the south during that era. The Gordy family had been prominent landowners in Sanderson, Georgia, before migrating to Detroit in the 1920s. By the time Motown was founded, the Gordys had already accumulated social capital and resources to support the initial growth of the company.

The family was well known among Detroit’s African American elites. Gordy’s parents, Berry Sr., and Bertha, each had their own businesses, and some of his siblings were established entrepreneurs in the African American community. The family’s socioeconomic status, along with Gordy’s reputation as a successful songwriter for vocalist Jackie Wilson and the production sensibilities he developed while an assembly line employee at the Ford Motor Company, is what provided the business foundation for Motown’s success.

The Motown Sound

Berry Gordy has often been quoted as describing the Motown Sound as “rats, roaches, and love.” What makes Motown a distinct form of music beyond Gordy’s description, however, is the aesthetic presence of Africanisms in its instrumentation. This includes the heavy use of stringed instruments (guitar and bass); percussion such as drums and tambourine; other items that are struck or shaken, including chains, wood blocks, and hardwood floors in the recording studio; and the use of the hands for clapping and feet for stomping. Other African-based aesthetic characteristics of the Motown Sound include the use of melisma, vibrato, and call-and-response delivery in vocal performances.

Motown became famous for infusing blues-, jazz-, and gospel-inflected rhythms and vocal stylings, all of which are rooted in an African cultural aesthetic, into a popular music framework. To articulate and produce the Motown Sound, Motown’s roster of artists, songwriters, and executives was predominantly African American but also included whites. This reflected Gordy’s ambition for Motown to cross over and appeal not just to African Americans but also to young whites as well. As such, Gordy nicknamed Motown “The Sound of Young America.”

Berry Gordy, Jr., founded Motown Records. In 1959, he purchased a piece of property at 2648 West Grand Boulevard in Detroit that would become Motown’s Hitsville U.S.A. Studio. It became the Motown Historical Museum in 1985.

Most of Motown's musicians and vocalists were originally from the southern United States and migrated to Detroit. They received their training in the music programs of Detroit's public schools. Collectively, the musicians were known as the Funk Brothers. Several of them had initially honed their craft as jazz musicians in house bands in local Detroit nightclubs and applied their jazz sensibilities to studio recordings and live performances. Motown's vocalists were largely influenced by other popular recording artists of the day including Nat King Cole, Della Reese, Sarah Vaughn, Etta James, and the Shirelles. Gordy himself was profoundly influenced by pop vocalists, having named Motown's first subsidiary label Tamla for Debbie Reynolds's 1957 hit record "Tammy." Moreover, Gordy wrote his first song with the intention of it being recorded by singer/actress Doris Day.

A staff of in-house songwriters and producers who competed against each other for access to vocalists to record their songs was also part of Motown's company structure. Robert Bateman, William "Mickey" Stevenson, Ivy Joe Hunter, Sylvia Moy, Ashford & Simpson, Norman Whitfield, William "Smokey" Robinson, and the songwriting team of Holland-Dozier-Holland (Lamont Dozier and brothers Brian and Eddie Holland) all competed with each other to have the opportunity to record a hit record with artists such as the Temptations, the Four Tops, Stevie Wonder, Marvin Gaye, Mary Wells, the Marvelettes, Martha & the Vandellas, and the Supremes. These songwriters and artists created a catalog of music representing multiple genres of music including rock, jazz, blues, gospel, soul, country, pop, rock, and disco. No matter which genre, the Motown Sound is at the core essence of the recording.

Motown Artists

Motown's most popular singers and songwriters were African American. However, since its founding in 1959, white vocalists had been contracted to the label; white administrators were part of the company's management team; and white musicians and arrangers were on staff. For example, during Motown's early years, the Valadiers had modest chart success. Rare Earth and Teena Marie would become the most prolific of all the white artists signed to the label. Al Abrams was Motown's first white employee.

Hired in 1959, he was Motown's publicist for many years. Mike McLean was Motown's chief engineer and responsible for the unique modernization of Studio A with an eight-track recorder. The original Funk Brothers included white guitarist Joe Messina; their story has been documented in the critically acclaimed documentary *Standing in the Shadows of Motown*.

Motown also became legendary for its artists' live performances. Vocalists were trained to perform in high-end supper clubs and concert halls throughout the world, and on television variety shows including the *Ed Sullivan Show*, *Hollywood Palace*, *Shindig*, and *Hullabaloo*. To accomplish this, Motown created an artist development division to assist artists in developing their unique styles. Veteran dancer Cholly Atkins taught slick choreography tailored for individual songs, as well as movement, posture, and stage banter that were projected on stage during the Motown Revues that traveled throughout the United States and Europe. Veteran bandleader Maurice King provided vocal coaching, and former model Maxine Powell provided finishing instruction and fashion consultation to the artists. Unlike other independent record companies at the time, Motown also functioned as a booking and management company, investing in its artists long-term careers.

By 1972, Motown had moved to Los Angeles, leaving its "golden era" behind. Of the label's stars from that era, only Diana Ross, Marvin Gaye, the Temptations, Gladys Knight & the Pips, and Stevie Wonder remained with the label. They were joined by artists such as the Jackson 5, Rick James, and the Commodores to continue making hit records.

The relocation to Los Angeles also positioned Motown to enter the film industry. Gordy produced *Lady Sings the Blues* (1972), a movie that focused on the life of jazz legend Billie Holiday. The movie would go on to receive five Oscar nominations, including Best Actress for Diana Ross's portrayal of Holiday. Other Motown film productions include *Mahogany* (1975) and *The Wiz* (1978), both of which also starred Diana Ross; *The Last Dragon* (1985); and *The Bingo Long Traveling All-Stars & Motor Kings* (1976).

By the mid-1980s, Motown was no longer profitable for Gordy. He sold the company to

MCA Records and Boston Ventures in 1988 for \$61 million while retaining ownership of Jobete, the music publishing arm of the company. After subsequent corporate takeovers, Motown merged with Universal Records and was known as Universal Motown until 2011, when it was acquired by the Island Def Jam Music Group.

Motown's Legacy

Today, Motown is mostly known for its golden Detroit era, the period from 1959 to 1972. It is the songs from this era that can be heard in motion pictures including *Cooley High*, *The Big Chill*, and *Dirty Dancing*. Motown songs are also frequently featured in TV shows and commercials. In 2012, retailer JCPenney used Motown as part of its national TV advertising campaign. Songs from the Motown catalog are often covered by artists from multiple genres throughout the world, making Motown one of the most influential record companies in history.

Songs from its catalog that have been frequently covered or sampled by other artists include "Money (That's What I Want)," "Please Mr. Postman," "You Can't Hurry Love," "I Heard It Through The Grapevine," "For Once In My Life," and "You've Made Me So Very Happy." These and many other Motown songs are considered standards in American popular music.

Stevie Wonder, a prolific songwriter as well as a vocalist, is the only artist from the golden era still with the label. The popular television show *American Idol* has had contestants perform his songs, as well as other classics in the Motown catalog, as a regular part of its competition. Motown celebrated its 50th anniversary in 2009. President Barack Obama and First Lady Michelle Obama celebrated its legacy in 2011 at the White House with the PBS musical special *The Motown Sound: In Performance at the White House*. In 2012, Berry Gordy announced his intention to bring Motown to the Broadway stage in 2013 in an autobiographical musical production titled *Motown*.

Movimiento Estudiantil Chicano de Aztlán

One of the most enduring legacies of the Chicano civil rights movement has been the student organization Movimiento Estudiantil Chicano de Aztlán (MEChA), the Chicano Student Movement of Aztlán. MEChA is both a political and educational organization that promotes equality and access, self-determination, empowerment, and pride. MEChA was created in 1969 in Santa Barbara, California, as part of a blueprint for education and political action called El Plan de Santa Barbara. MEChA chapters can be found at high school and university campuses around the country, not just in Aztlán, or the five states of the southwestern United States. Each campus MEChA is attached to a community center, which is part of the regional, statewide, and national organization.

Students from across the country converged on Denver, Colorado, in March 1969 for the First National Chicano Youth Liberation Conference. Under the leadership of Crusade for Justice founder Rodolfo "Corky" Gonzales, participants adopted El Plan Espiritual de Aztlán, a nationalist manifesto to shape the emerging Chicana/o identity. Later in 1969, a collective of students, faculty, staff, and community leaders known

as the Chicano Council on Higher Education (CCHE) met at the University of California at Santa Barbara and drew up a comprehensive plan of action for implementing the Plan Espiritual de Aztlán: El Plan de Santa Barbara. This plan created MEChA as the student group responsible for ensuring adherence to the goals of both plans; it united many existing local student groups into one movement.

MEChA expressed the frustration of decades of Chicana/o exclusion from the democratic rhetorical promises of the United States and the historic inequalities that persisted despite the protections for those of Mexican ancestry under the 1848 Treaty of Guadalupe Hidalgo. Students expressed hope, but also militancy, as their means to address lifetimes of injustice, in spite of previous attempts at inclusion in the United States through mutual aid societies and civic and political organizations.

Education was seen in the community as a primary avenue for achieving personal success and community improvement; thus its denial was fought in Lemon Grove and Orange County, California, in the 1930s and 1940s. MEChA addressed persistent discrimination by calling on those in higher education to provide mentoring and leadership to increase the accessibility and responsiveness of colleges and universities to the broader community, and to increase the numbers of educated and active Chicanas/os in these institutions.

El Plan also called for a Chicano curriculum because mere physical presence was not sufficient; it was also necessary to have a content change that reflected the empirical world and the more diverse histories and experiences of ethnic American groups. MEChAs across the country used El Plan to lobby for the creation of Chicana/o studies departments and programs in colleges, universities, and high schools. MEChAs actively promoted the hiring and retention of Chicana/o faculty and staff, both inside and outside the classroom.

The organization went beyond education, addressing leadership gaps in communities that tied back to the schools, which needed to work for them, not the other way around. Students in MEChA were to serve as conduits between organizations, creating a network of leadership

and resources. Political awareness and participation was essential to achieving these goals, as expressed in the plan, and MEChA supported the work of the third Chicana/o political party, La Raza Unida Party (RUP), as a development of the previous student organization, MAYO (Mexican American Youth Organization). MEChA achieved the many goals of the plan through tactics such as self-education, walkouts, sit-ins, community meetings, and voter registration. MEChA trained many young leaders and organizers, who returned to their communities as professionals after graduation from high school and college.

MEChA was part of a broader youth movement in ethnic communities throughout the nation in the 1960s and 1970s. Much like the Student Non-Violent Coordinating Committee (SNCC), MEChA challenged racism through self-education, direct action, sit-ins, protests, and work with community-based social and political agencies. It formed strategic alliances and supported the work of other Chicano movement organizations like the Brown Berets and the United Farm Workers. In multiethnic urban centers like Chicago and Oakland, California, MEChA worked with other organizations like the Congress of Racial Equality (CORE) and the Black Panthers.

In the 1990s, MEChA rebounded after waning in the 1970s and 1980s, reinvigorated by events like the Zapatista uprising in Mexico, the death of United Farm Workers' founder César Chávez, and anti-immigrant and civil rights ballot propositions in California. In response, conservative political pundits like presidential candidate Pat Buchanan defamed MEChA as a hate group, leading an attack demographically and culturally on white America. The 2003 California gubernatorial recall election made Lieutenant Governor Cruz Bustamante's college membership in MEChA a constant campaign issue. Much misinformed campaign rhetoric surrounding MEChA's Aztec eagle symbol and emphasis on ethnic nationalism through the use of the term *raza* continues to travel the Internet and bears scant resemblance to the organizational whole, its historic work, or the blueprint of El Plan de Santa Barbara.

During the second annual National MEChA conference in 1995, the National MEChA constitution was adopted. It has been amended several times, most recently in 2010. In its current form

it identifies four goals for MEChA: the empowerment of Chicanos; the preservation of Chicano identity and culture; higher education as a force of social good for Chicanos; and the implementation of plans of action concerning Chicanos. In addition, the 1999 national conference introduced a document called “The Philosophy of MEChA,” which defines Chicano identity as a philosophy rather than a nationality. At the 2010 national conference, the organization changed its name to Movimiento Estudiantil Chicano@ de Aztlán. It has recently been involved in the opposition to Arizona’s Senate Bill 1070 and has expressed its solidarity with the people of Palestine in their struggle with the Israeli government.

Mulatto

In an American context, the term *mulatto* is used to describe a person with one white parent and one black parent. More generally, the word can indicate that a person is of some sort of mixed ancestry. During the colonial period, individuals of Native and African ancestry also were known as mulattoes in North and South America. In addition, the term also was used to refer to those with Native and white parentage during the 17th and 18th centuries in the United States. The related terms *mulatta* and *mulattress* were used when referring to women of black and white ancestry.

The Etymology of the Term *Mulatto*

Many contemporary scholars assert that the word *mulatto* is a derivation of *mulato*, which is both the Portuguese and Spanish word used to describe the offspring of a horse and a donkey. It is a cognate of the English word *mule*. There are others in the scholarly community who argue that “mulatto” came to the English language by way of the Arabic term *muwallad*, which connotes a person who lives in an Arabic community but is of partial-Arabic descent. In some Arabic-speaking countries, the term is still used to refer to the children of Arabic men sired with non-Arabic women. Nevertheless, other evidence suggests that *mulato* has been in use in Spain since the 15th century, while *muwallad* does not appear to have been in usage prior to the 19th century.

On a related note, the modern Portuguese word *mestiço* has a similar connotation to “mulatto” in Lusophone Africa; it is used as an official designation to describe people of mixed African and European ancestry.

Hypodescent and U.S. Law

Because of policies based on hypodescent, whereby children born of mixed unions are assigned to the subordinate ethnic group, mulattoes of African American and European lineage were considered to be black. Henning’s Statutes of Virginia of 1705 codified the use of the term *mulatto* to describe individuals with African American and white ancestry or Native and white ancestry. In antebellum America, mulattoes of black and white ancestry were considered black and thus were subject to existing slave laws. Similarly, Jim Crow laws regulated the rights of mulattoes, along with black Americans. Even for those without African ancestry who were labeled mulattoes (including those of Native American and Caucasian descent), the categorization meant that they could be sold into slavery legally in the United States.

In the 1910s, 1920s, and 1930s, several southern states, including Virginia, Texas, Arkansas, Tennessee, Oklahoma, and Georgia, codified laws that defined Americans with any African ancestry, irrespective of the percentage, as black. Other states, including North Dakota, Utah, Florida, Missouri, Nebraska, and Maryland, established the threshold for identification as

African American to be one great-great-grandparent (one out of 16 ascendants is black) or one great-great-great-grandparent (one out of 32 ascendants is black).

Until 1930, mulatto was an official racial designation on the U.S. census. Even without the official category, 6,171 Americans self-identified as mulatto on the 2000 census.

Racial Passing

During slavery and well into the 20th century, many light-complexioned mulattoes enjoyed privileges that most African Americans did not, especially those who were closer in phenotype to white Americans. Some inherited property from their white parents; a very small number owned slaves themselves. In addition, the phenomenon of racial passing, which occurs when a person of one ethnic background presents himself or herself as a member of a different ethnic group, may have been commonplace among multiethnic Americans in the 18th, 19th, and early 20th centuries. Some with lighter complexions and phenotypes atypical of most individuals of African descent posed as white (oftentimes Mediterranean), Native American, Arab, or Asian to avoid the discrimination African Americans faced.

The Tragic Mulatta

The social tribulations faced by mixed-race people—especially when they resulted in racial passing—was a common trope in 19th- and early 20th-century American literature. The trope of the “tragic mulatta” was a regular part of American literature for over a century beginning in the 1840s. These stories often featured a biracial heroine who is light-complexioned enough to pass as a white woman, but the revelation of her full racial background brings about her downfall.

The three most common story lines found in this genre are as follow: (1) the very-light-complexioned heroine is unaware that she is biracial and leads a life relatively free of racial prejudice until her true ethnicity is discovered and she is barred from white society, including everything and everyone she has known; (2) the heroine passes for white and enjoys all of the rights and privileges conferred on upper-class white womanhood until her racial status is made public and she is forced into slavery; and (3) the heroine abjures her African American family

members, passes for white, marries a white man, and gains social status, but once her ethnic background is revealed, she loses her comfortable station in society and is reduced to bankruptcy, sexual victimization, slavery, and/or death.

In all variants, she struggles because she is unable to find full acceptance with African American or white communities. This dual rejection always leads to tragedy. In such literature, tragic mulattas were portrayed as wanton libertines, while male biracial characters were depicted as effeminate. These representations underscored the commonly held belief that individuals born of interracial unions were somehow pathological because of their mixed parentage. As such, the adverse fates of these characters were shown to be the result of the dangers of racial admixture, which was considered unnatural, rather than racism, which largely was accepted at the time.

These plays and novels were aimed at white women readers; their aim was to warn audiences of the dangers of racism by way of identification with a character who shared their social standing, lifestyle, and phenotype. The melodrama and sensationalism of the works made them among the most popular forms of entertainment in the late 19th century.

Tragic mulatta characters appeared in a range of literary and cinematic works, including “The Quadroons” (1842) and “Slavery’s Pleasant Homes” (1843) by Lydia Maria Child, *Iola Leroy* (1892) by Frances Ellen Watkins Harper, *The Clansman* (1905) by Thomas Dixon, Jr. (as well as its 1915 motion picture adaptation, *The Birth of a Nation*), “The Mulatto” (1925) by Claude McKay, *Show Boat* (1926) by Edna Ferber (and the musical stage adaptation by Oscar Hammerstein II and Jerome Kern), *The White Girl* (1929) by Vara Caspary, *Passing* (1930) by Nella Larsen, *Dark Luster* (1932) by Geoffrey Barnes, *Imitation of Life* (1933) by Fannie Hurst, *Their Eyes Were Watching God* (1937) by Zora Neale Hurston, *Quality* (1946) by Cid Ricketts Sumner (which was adapted as the 1949 film *Pinky*), *To Kill a Mockingbird* (1960) by Harper Lee, and *A Soldier’s Play* (1981) by Charles Fuller.

At the turn of the 20th century, Charles W. Chesnutt, a stenographer-cum-author with a great interest in interracial relations in the postbellum south, wrote a number of novellas and longer

works that dealt with the social consequences of multiracial identification. Among his best-known works are *The Wife of His Youth and Other Stories of the Color-Line* (1899), *The House Behind the Cedars* (1900), *The Marrow of Tradition* (1901), and *The Colonel's Dream* (1905). Chesnut himself was of mixed heritage.

Nobel Prize laureate William Faulkner, inspired by the interracial relationship between his great-grandfather, Colonel William Clark Faulkner, and his slave, Emeline, frequently wrote about biracial characters and their struggles for social acceptance. His novels *Light in August* (1930), *Absalom, Absalom!* (1936), and *Go Down, Moses and Other Stories* (1942) all feature variations on the tragic mulatto/a stock character.

Mulatto: A Play of the Deep South, a popular play by Langston Hughes, premiered on October 24, 1935, at Broadway's Vanderbilt Theatre and ran for 373 performances over the course of nearly one year. Hughes wrote the play for Rose McClendon, one of the era's preeminent African American actors. In addition to McClendon, Morris McKenney, Hurst Amyx, and Connie Gilchrist were also in the cast. Hughes, who was of mixed African American and white ancestry, also composed a series of poems, short stories, and an opera about mulattoes, including "Cross" in 1925, "Mulatto" in 1927, "Father and Son" in 1934, and, with German American composer Jan Meyerowitz, *The Barrier* in 1950.

Mulattoes in Contemporary Fiction

More recently, novels such as Danzy Senna's *Caucasia* (1998), Eric Jerome Dickey's *Milk in My Coffee* (1999), and Philip Roth's *The Human Stain* (2000); motion pictures, including *Illusions* (1982), *Devil in a Blue Dress* (1995), *A House Divided* (2000), and *I'm Through With White Girls (The Inevitable Undoing of Jay Brooks)* (2007) and television programs such as *Alex Haley's Queen* (1993), *Law & Order* (1990), *Girlfriends* (2000), and *Cold Case* (2003) have featured characters and issues related to biracial identity.

In something of a twist on the conventions of the tragic mulatta trope, the eponymous heroine of *Margaret Garner*, the 2005 opera by Toni Morrison and composer Richard Danielpour, is depicted as a biracial slave woman who asserts her own agency and fights against sexual

victimization and racism. In steely defiance of her abusive owner, who likely has sired Margaret Garner's children, she flees from her plantation and later kills her kids and herself rather than continue facing the indignities of slavery. In this instance, the so-called tragic mulatta commits suicide and filicide not out of devastation born of white society's rejection but rather as a means of affirming her own sense of self-determination. The opera is based on an actual 1856 event, which also provided the inspiration for Morrison's Pulitzer Prize-winning 1987 novel *Beloved*.

Contemporary Usage

According to the 2010 census, there are approximately 1.8 million Americans with black and white ancestry. Since the 1960s, people of multiracial parentage more commonly have self-identified as biracial, multiracial, multiethnic, or mixed-race. In many settings today, "mulatto" is considered an antiquated, and even offensive, word. Similar colonial-era terms, including quadroon, octroon, quintroon, and hexadecaroon, also describe individuals partially of African descent and have fallen out of fashion. These expressions currently are used when discussing racial identification in a historical context.

Multicultural Education

Multicultural education is an instructional and pedagogical paradigm that integrates the history, cultural traditions, social norms, life experiences, and learned contributions that members of nondominant groups have made to all aspects of society, especially those aspects that are typically codified in prekindergarten through 12th-grade (Pre-K–12) and higher education courses of study. Multicultural education scholar Sonia Nieto defines multicultural education as a process of comprehensive school reform and basic education for all students that challenges and rejects racism and other forms of discrimination in schools and society, and accepts and affirms the pluralism (ethnic, linguistic, religious, economic, and gender, among others) that students, their communities, and teachers represent.

According to Nieto, while multicultural education permeates the curriculum and instructional strategies used in schools, it must also pervade the interactions among teachers, students, and parents and the very way that schools conceptualize the nature of teaching and learning. Because it uses critical pedagogy as its underlying philosophy and focuses on knowledge, reflection, and action (praxis) as the basis for social change, Nieto contends that multicultural education promotes the democratic principles of social justice.

Multicultural education is predated by two primary diversity-related educational movements, generally referred to as ethnic studies and intercultural education. Though the early strands of both ethnic studies and intercultural education precede and are relevant to multicultural education, multicultural education's intellectual and political roots are grounded in the ethnic studies tradition.

Since its inception, multicultural education has been conceptualized in a number of different ways,

all of which share common key elements. Despite ongoing debates among multicultural educators about which elements should be emphasized and in what ways, and despite various manifestations of resistance to the field as a whole, multicultural education theory and practice traverse a more than 40-year history.

From Ethnic Studies to Multicultural Education

Beginning in the late 1800s and continuing through the mid-1900s, activist scholars George Washington Williams, W. E. B. Du Bois, and Carter G. Woodson formally chronicled black history and promoted knowledge of this history as foundational to the educational, political, social, and economic advancement of black people. Collectively, their work established the academic foundation upon which the ethnic studies tradition is built.

In the mid-1900s, World War II-related manufacturing demands led to increasing workforce diversity. Because there had been little or no prior contact between members of the different ethnic and racial groups that composed this labor force, significant conflicts erupted. These conflicts gave rise to a reduction in prejudice and to intercultural understanding education efforts in order to facilitate worker productivity and promote community accord.

Three key parameters differentiate ethnic studies and intercultural education. Ethnic studies was pioneered by people of color and focuses on the study of a single group, whereas intercultural education was forged largely by white people and prioritizes intergroup learning. Ethnic studies is also more sociopolitically located, or concerned with issues of access and power at the institutional level in society for historically marginalized groups. In contrast, intercultural education is located in the psychosocial realm, emphasizing the roles of individual reflection and self-understanding in building harmonious relationships with people from cultural groups of which one is not a member.

Ethnic studies and intercultural education progressed from these beginnings to the 1960s, when the ethnic studies movement coalesced and interculturalism waned. For the next 20 years, the ethnic studies tradition promoted greater

minority leadership in Pre-K–12 schools and districts, increased minority representation in higher education faculties, and discreetly added minority group histories to school and college curricula.

According to pioneering multicultural education scholar James A. Banks, beginning in the 1970s, multicultural education came into its own via a four-stage process. In the first stage, ethnic studies, the contributions of African Americans to all aspects of U.S. history and culture, was documented. The second stage, multiethnic education, similarly substantiated the influence of Mexicans, American Indians, Puerto Ricans, and Asians on and in American society. Stage three, other groups, chronicled the roles that especially women and people with disabilities have played in the development of the United States. Theory, research, and practice that detailed the intersections of especially race, class, and gender in American life characterized stage four.

In the 1980s, ethnic studies and emerging multicultural education activists began to advocate for the integration of minority group contributions across the mainstream curriculum. This advocacy led to academic “culture wars,” in which traditional scholars began to aggressively push back against efforts to infuse diversity content into their disciplines, arguing that the most important bodies of knowledge were those already in place in the Western educational canon.

In the 1990s, intergroup dialogue and deliberative democracy efforts resurrected and revitalized intercultural education. Now influenced by the proliferation of ethnic studies and the advent of multicultural education, as well as the evolutionary and ongoing leadership roles that people of color play in intergroup dialogue and deliberative democracy work, intercultural education developed a sociopolitical consciousness.

Multicultural Education: Moving From If to How

Since the inception of multicultural education, the demographic picture of the United States as increasingly diverse is frequently referenced as a reason for promoting greater attention to multiculturalism in mainstream education and education policy circles. The 2010 Census reports that non-Hispanic white Americans now compose only 63 percent of the U.S. population. So while it is

true that the United States has become more and more multicultural, Nieto contends that multicultural education is not something that has import only for ethnic and racial minority students, or only when these students are in the classroom. On the contrary, not only is multicultural education important for all students, but a large part of the disproportional educational success that white students have historically enjoyed also can be attributed to the positive influence of the Eurocentric canon in their schooling. For this reason, the early ethnic studies tradition focused on ethnic empowerment through a similarly Eurocentric education for students from racial and ethnic minority groups.

By the mid-1990s, although resistance to multicultural education persisted, the weight of discussion about it shifted from whether it had merit and for whom, to how it should be undertaken. Although many conceptualizations of multicultural education have since been delineated, most share, albeit in varied measures, the common key elements demarcated by the early strands of ethnic studies and intercultural education: teaching ethnic studies, school reform and educational equity, and prejudice reduction.

In 1976, multicultural education scholar Margaret Gibson wove these common key elements into her five approaches to, or purposes of, multicultural education. These approaches are education of the culturally different, education about cultural differences, education for cultural pluralism, bicultural education, and multicultural education as the normal human condition. The purpose of education of the culturally different approach to multicultural education, also referred to as “benevolent multiculturalism,” is to bring about educational equity for racial and ethnic minority students. The education about cultural differences or cultural understanding approach to multicultural education seeks to teach all students to value cultural diversity. In taking the education for cultural pluralism approach, the goal is to protect existing, and promote greater, cultural pluralism in American society. The bicultural education approach promotes the development of literacy and interaction competence in two cultural, and often also linguistic, contexts. Whereas these first four approaches are culled from the literature on multicultural education, the fifth approach,

multicultural education as the normal human experience, draws from anthropology. This final approach is designed to respond to the weaknesses Gibson identifies in the first four in promoting the establishment of educational environments that facilitate developmental literacy and competence in multiple cultures.

A 1987 review of multicultural education literature from the previous 10 years, jointly undertaken by multicultural education scholars Carl A. Grant and Christine Sleeter, codified the common key elements into five largely different approaches for teaching multicultural education to “the exceptional and culturally different,” through a human-relations or prejudice-reduction lens, using ethnic or single-group studies, in accordance with specific goals of multicultural education itself, and by blending multicultural education with “social reconstructionist” or social justice education.

In 1992, Nieto also interlaced the common key elements in her seven characteristics of multicultural education. Building her definition of multicultural education around these characteristics, Nieto articulated that multicultural education is antiracist as well as opposed to all other forms of oppression and discrimination. Multicultural education is also basic or foundational, as opposed to frills-added. Multicultural education is important for all students, not just students of color, and includes white students. Multicultural education is pervasive as opposed to compartmentalized in a discrete area of the curriculum or student cocurricular experience. Multicultural education promotes social justice in and through the curriculum, as well as in broader school and societal contexts. Multicultural education is a perpetually dynamic process, not a single or static result. Finally, multicultural education is critical pedagogy, or engendered through a teaching and learning process during which students learn to think critically about their education, as well as their place in the world, and are then inspired to take action against local injustices to bring about the liberation of all people.

Banks reframed the common key elements in 1991 into what he called the five dimensions of multicultural education, which he characterized as concerned with content integration, knowledge construction processes, prejudice reduction,

equity pedagogy, and the development of an empowering school cultural and social structure. In 1999, Banks delineated four main approaches for undertaking the content integration dimension of multicultural education. These approaches are described as contributions-oriented, additive in nature, focused on transformation, and designed to bring about social action. The contributions approach emphasizes discrete contributions that members of traditionally underrepresented groups have made to various aspects of American history and culture.

The additive approach builds from the contributions approach in extending attention to these groups’ contributions to specific subject areas, but only to the extent that this can be done without substantively changing the core curriculum. Going further, the transformation approach not only engages the contributions of marginalized groups across the curriculum but also incorporates these groups’ perspectives on and in the curriculum, and it does so in ways that intentionally change the core curriculum. Finally, the social action approach seeks to change the core curriculum in ways that promote student engagement in teaching and learning as a reciprocally democratic process.

Between 1975 and 2009, through all eight editions of his foundational text *Teaching Strategies for Ethnic Studies*, Banks distilled the common key elements into what he terms an “interdisciplinary-conceptual” approach to multicultural education. This approach is content- and pedagogy-focused. It constructs knowledge from Eurocentric, ethnic minority-centric, multiethnic, and multinational content that it teaches through an equity pedagogy derived from the selection of concepts from various groups’ perspectives across the curriculum.

Multicultural educators remain resolute in their stated commitments to the common key elements: To document and teach all of U.S. racial and ethnic history, and to work to bring about the attitudinal and structural changes in society that will enable racial and ethnic minorities to become full participants in American democracy. Yet, the addition of other aspects of diversity to the multicultural educational paradigm, especially gender and sexual orientation, makes actualizing those commitments increasingly difficult. Beyond mere

instructional time, curricular space, and educational resource constraints, even revolutionary multicultural educators are not immune to bias, whether the bias is intended to be progressive or is consciously or unconsciously regressive.

In extending multicultural education beyond issues typically deemed of immediate educational value to students of color, some scholars maintain that multicultural education's foundational goal of achieving educational equity for students of color is becoming marginalized. These scholars argue that when given, or pushed to have to make, a choice about what should be given multicultural curricular attention, a predominantly white female teacher education faculty and Pre-K-12 teaching force will, for example, focus on issues of gender, not race, because gender is both less politically controversial and more interpersonally comfortable in attending to their experiences of discrimination as women, rather than prompting acknowledgment of their privilege as white people.

However, other scholars maintain that the crucial educational needs of students of color cannot be adequately addressed through only raced, ethnic, linguistic, nationalistic, classed, or even religious lenses, as these students are also male and female as well as, for example, gay, lesbian, bisexual, and heterosexual. These scholars promote adoption of an "intersectional" posture in multicultural education, in which the educational needs of students of color are engaged at the constantly shifting point of convergence of their multiple dimensions of identity in which race can be prioritized, without excluding other important identity facets.

The substantive nature of this debate might suggest that multicultural education is proliferating meaningfully regardless of which side of the debate a multicultural educator embraces. But multicultural education scholar Geneva Gay has long avowed that the distance between theory and practice in multicultural education remains wide. Concerns about the superficial application of multicultural education philosophy are revealed in critiques of some applications as "tourist" and/or "neoliberal" in nature, as opposed to "activist," "social justice," "sociopolitical," and/or "critically conscious." Nieto suggests evaluating these applications relative to four ostensibly

developmental levels of multicultural education: tolerance; acceptance; respect; and affirmation, solidarity, and critique. In this way, understanding of multicultural education, especially by those new to the field, can be effectively constructed in order to bring about more consistent, comprehensive, and sophisticated implementation.

Multicultural Education in the Future

Although the curricular culture wars have gone lukewarm if not completely cold, and most educational communities eagerly espouse "commitments" to diversity, Pre-K-12 and higher education instructional and administrative staff remain largely white, and a chiefly Eurocentric curriculum endures. Sleeter asserts that curriculum standardization initiatives, like No Child Left Behind and Common Core, coupled with crippling cuts to education budgets at the state and national levels, make overt resistance to multicultural education largely superfluous. With instructional staffing and resources starkly limited, and instructional time, content, and practices strictly regulated, even steadfast and skilled multicultural educators struggle to meaningfully enact multicultural education in their classrooms.

Despite these threats, multicultural education continues to progress, largely through professional education associations and scholarly publications. In documenting this progression, Banks notes that most of the attention given to multicultural education in these venues emphasizes the conceptualizations of it that characterize the third and fourth stages of its evolution: a focus on "other groups" and on the "intersections of race, class, and gender." Although this may suggest progression in the field, it may also suggest whitening in the field, thereby reminding multicultural educators of the need to remain constantly vigilant in prioritizing race in seeking to realize educational equity and equality for students from historically underrepresented racial and ethnic groups.

Multiculturalism

Multiculturalism is a concept found most often in the educational context in the United States. It does not have a single uncontested meaning. Various practitioners and academics use the term in various ways. There is considerable miscommunication when this term is used, partially because it has so many meanings and has acquired political overtones.

There are commonalities in most visions of multiculturalism. These include the recognition and acknowledgment of racial, ethnic, and cultural diversity within a society; the acceptance of the right of groups within a nation to maintain their different cultures and identities, provided they adhere to the society's basic tenets and do not conflict with the society's laws; the support of greater equity between groups (including more equitable inclusion) for people of different self-identities; the belief that each individual/cultural group matters to the whole; the provision of voice to groups that may not previously have been heard by the dominant society; and the conviction that differences associated with social identities should be valued and not feared.

Multiculturalism can also include legal and political accommodation of ethnic diversity. It often means that many different cultures exist side by side in any given area, where each group makes an effort to understand and accommodate the needs of the others without resorting to conflict or violence to resolve their differences. This greater understanding is regarded as a major advantage of multiculturalism. It is based on the emergence of individual group consciousness and the rejection of labels and categorization of smaller groups by the dominant groups in society.

Ideological perspectives on multiculturalism include the idea that it contradicts assimilation, or the "melting pot" theory of societies, and acculturation. The tension among such concepts does not mean that they are incompatible. Such perspectives have resulted in positions taken by public officials for and against multiculturalism. Some opponents of multiculturalism believe that it contributes to splintering of the body politic. There are sometimes irrational fears of multiculturalism, based on people's different dress, accent,

and language. The opposite extreme of multiculturalism may be xenophobia.

Multiculturalism and diversity both emerged in the 1960s in the United States. The term has been used retrospectively to describe developments that occurred prior to its advent. For example, it superseded the term *multiethnic*, which was popular in certain circles in the 1970s. “Multicultural” took on a larger meaning than “multiethnic” by including such categories as gender, sexual orientation, religion, and disability. This may be because the concept of culture is a very broad one.

Multiculturalism has had an important effect on education in the United States. This impact is discussed in detail elsewhere in this encyclopedia. The impact and acceptance in other countries and parts of countries varies. For example, most Quebec leaders oppose the Canadian national government’s adoption of official multiculturalism as a nation-building public philosophy on the grounds that it undermines the special status of the French language and culture. In the Netherlands, an anti-immigrant backlash has caused a rejection of multiculturalism policies promulgated in the 1980s. In Germany, the idea of *Parallelgesellschaften* (self-separating, “parallel societies”) has existed since the 1990s as a backlash against multiculturalism. France is a primary exponent of an official national culture and has legally rejected female Islamic dress.

Multiculturalism also touches on politics, medicine, geography, sociology, infrastructure planning, marketing, and media. In fields such as marketing, multiculturalism is a tool for reaching consumers. Multiculturalism in schools can take the form of enlarging the literary canon and a broader view of ethnic history. Some early advocates of multiculturalism (even before the word existed) criticized a school and university literature and history curriculum that left out the achievements and contributions of non-European groups.

Multiculturalism has received renewed attention because of demographic changes in the United States, including how people self-identify on the census. Greater numbers of people are identifying as biracial, multiracial, and multicultural.

Some potentially fruitful areas of research are the relationship between constitutional democracy and a politics that recognizes diverse and

collective cultural identities, the ideal of individual authenticity, and the survival of cultures. What, if any, are the limits to the legitimate accommodation of cultures? What are the core values of a society or a nation to which traditional cultural values should be surrendered?

Multiple Intelligences

The theory of multiple intelligences is compatible with the underlying principles of multicultural education. People differ cognitively, emotionally,

morally, and physically as well as culturally. The fact that human beings learn in different ways has been supported by Swiss psychologist Jean Piaget's stages of cognitive development, J. P. Guilford's structure of the intellect, Robert Sternberg's triarchic theory of intelligence, Daniel Goleman's theory of emotional intelligence, and Howard Gardner's theory of multiple intelligences. In addition, stimulus response theory, cognitive field theory, perceptual field theory, concepts from the social theory, and Sigmund Freud's theory have all contributed to what is known about an individual's ability to learn and understand. All of these theories and ideas lend credence to the idea that intelligence is multidimensional, can be manifested in multiple ways, and has a home within the framework of multicultural education.

Multimodal View Versus Traditional View of Intelligence

Intelligence and the measurement of intelligence historically have been issues that have been narrowly applied in schools and had a negative impact on culturally diverse populations. Intelligence tests have been used to identify learners for special and gifted education programs. The overidentification of African American learners for special education and underidentification of African American learners for gifted education classrooms have led some educators to question the accuracy of intelligence tests. This phenomenon has often led to the resegregation of the school population, with classrooms segregated along racial and socioeconomic lines.

The pluralistic nature of culture conflicts with the classic, unitary view of intelligence. Traditional views of intelligence as represented by a single numerical score have led to accusations of cultural bias. Testing measures that have provided for the use of skills and abilities that supersede expository skills have resulted in expanded opportunities for culturally different learners to showcase their skills and abilities. Testing measures based on the unitary theory of intelligence provided a limited number of ways for the culturally different to manifest high intelligence and emerge as scholars.

The multiple intelligences theory of Howard Gardner has made perhaps the strongest and most contemporary case regarding the multimodal

view of intelligence. Gardner's intelligences include verbal/linguistic, logical-mathematical, visual/spatial, musical, bodily/kinesthetic, interpersonal (the ability to know and understand others), intrapersonal (knowing and understanding oneself), and naturalist. The concept of multiple intelligences has been embraced by classroom teachers and administrators who believe that all children can learn and that children should, therefore, be taught in multiple ways.

It also follows that if multiple ways of instruction are employed, multiple assessment strategies also should be used. Culturally diverse populations have benefited from the application of this pluralistic philosophy of learning and intelligence. Public and private elementary schools, middle schools, high schools, colleges, and other institutions characterized by racial, socioeconomic, and linguistic diversity have shown positive outcomes when the theory of multiple intelligences has been employed.

Applications in Multicultural Education

The use of the multiple intelligences concept in multicultural education involves employing differentiated instruction to teach learners, using a differentiated curriculum, and measuring learning outcomes by using dynamic assessment techniques. Researchers Maria Dolores Calero and Sara Mata found that immigrant preschool children from culturally and linguistically diverse backgrounds benefited from dynamic assessment following a format characterized by pretesting, followed by a teaching intervention and ending with a post-test. In the researchers' study of 176 preschool immigrant children who spoke Spanish, the focus was on the individual and the process rather than normative criteria, as in traditional assessment. As revealed in the literature, Calero and Mata found that the multiple intelligence of dynamic assessment is compatible with principles of multicultural education and efforts to teach culturally diverse learners; the personhood of the learner is taken into account, and the learner benefits from the interaction with the assessor.

The multiple intelligences theory also has found applicability in the urban inclusive high school English classroom. David Connor, Sarah Bickens, and Fran Bittman described a multiple intelligences approach used in teaching a

multicultural curriculum to students with disabilities along with nondisabled classmates in an urban high school. In this environment, 11th-grade American literature teachers were successful in creatively using traditional and modern classic texts to prepare students for college and for performance on a state-mandated exam. The students were involved in reading *The Great Gatsby* and *Native Son* while using all eight of Howard Gardner's intelligences as they engaged in small-group essay writing, creating a character analysis reflected in a bio poem, creating visuals of scenes, and performing parallel scenes. An analysis of course evaluations revealed that the students reported confidence in writing a four-paragraph essay; they felt prepared for the state-mandated exam as well as for college.

University faculty have experienced success in implementing multiple intelligences in teaching culturally diverse college students and preparing college graduates to work with culturally diverse populations. In a graduate class of 21 students, 12 of whom were Caucasian, Janis Strasser and Holly Seplocha explored the use of Gardner's interpersonal and intrapersonal domains in helping college students explore their own cultural awareness and learn successful ways of working with multicultural populations. The authors described 11 different interpersonal and intrapersonal domain strategies and assignments that they found effective in implementing multicultural education principles. Strategies and assignments involved the students in sharing their values, dreams, and prejudices; evaluating children's books for cultural bias; developing concept maps; and discussing cultural "fences" in their lives. The authors concluded that it is possible to help college students in understanding themselves and others. The strategies and assignments provided an effective forum for exploring sensitive issues related to culture.

Barbara Green and Martha Stortz looked collaboratively at redesigning their college syllabi to reflect the culture and learning styles of their students. In essence, the syllabus was used to change the culture of their courses. Embedded within the courses were multiple intelligences principles and concepts of cultural diversity, which allowed students to naturally encounter diversity in a classroom of culturally diverse students. The courses

consisted of the use of images that appealed to the learner whose intelligence was visualization. Students were able to see themselves through the content studied and learned about themselves and others by taking on roles of characters studied. Students were asked to evaluate the effectiveness of teaching methodologies and share their personal reflections and comparisons of content studied. Green and Stortz learned that their task was not to try to match the multiple intelligences to their students; they created an instrument based on attributes of their students. Students were then asked to choose attributes from this instrument, which included their strengths as well as attributes that they lacked. The students then learned how to look to other students as sources to offset their deficits. The course itself became the vessel for navigating diversity.

Multiple intelligences has also been integrated into college athletic education programs. Matthew Kutz described course activities that were designed for students from culturally diverse backgrounds. He took an inclusive view of multiple intelligences and addressed both contextual intelligence and Robert Sternberg's Triarchic theory of intelligence.

Multiracial Movement

The multiracial movement emerged from a collective grassroots effort by local and national organizations. The main goal of the movement is to educate the U.S. population about multiracial identity and discrimination. Activists and researchers have referred to the movement and various waves within the movement as the mixed race movement, multiracial hapa movement, and the multiracial social movement. Since the 1970s, the first wave of the multiracial movement has promoted awareness about multiracial identity and interracial relationships on local and national levels. During the second wave of the multiracial movement, some members wanted to dismantle racial categorizations in the United States.

The 32 percent increase of multiracial individuals, those who identify with two or more

racess since 2000 is an indicator that the multiracial population is present and growing within the United States. This increase in multiracial classification does not mean that society is inclusive and supportive of multiracial individuals. Multiracial organizations are still present in the hope of monitoring the use of race by local and governmental platforms and to promote the inclusion of the multiracial community in future discussions of race.

The racial categories used in the U.S. census have changed multiple times since the first U.S. census in 1790. Originally, there were five categories used to identify a person: "free white male over the age of 16," "free white male under the age of 16," "free white women," "all other free persons," and "slaves." In 1820, the census added the designation "colored person." The census would label anyone thought to possess a racially mixed heritage as "colored." About 20 years later, U.S. Census marshals would begin using a letter "B" if a person was black and a letter "M" if a person was mulatto. "Mulatto" was the first term used by the U.S. census to designate a mixed racial heritage.

In 1890, the U.S. census used additional categories to identify the percentage of one's mixed heritage. The census used the category "mulatto" to identify a person as half black. "Quadroon" designated a person as a quarter black, and "octoroon" noted a person as one-eighth black. In 1930, the U.S. census removed the mixed race categories and reported all mixed-race individuals by their nonwhite ancestry. For example, the U.S. census would identify a person as Chinese if he or she was born from a Chinese and white interracial union.

The 2000 U.S. Census gave multiracial individuals the ability to choose and identify with a particular multiracial categorization. There were 57 possible racial combinations on the census. However, the 2010 U.S. Census included 15 separate response categories and three areas for respondents to write in answers. Approximately 91 percent of those who chose more than one race identified as biracial. The remaining 9 percent identified with three or more racial groups.

Foundation of the Multiracial Movement

There is much debate as to when and why the multiracial movement started. However, most agree that the anti-miscegenation and blood quantum

laws in the United States showcase early attempts to remove multiracialism from society. Since the time of slavery, interracial relationships have been present, and such unions have created multiracial offspring. *Loving v. Virginia* (1967) was the first court case to highlight interracial unions but was not the first or last time that the U.S. court system highlighted multiracialism. Roberto Avant-Mier and Marouf Hasian, Jr.'s theorizations of whiteness spotlighted two additional multiracial court cases: *Desarzant v. P. LeBlanc and E. Desmaziliere* in 1858, and *Susie Phipps, and family, v. the State of Louisiana* in 1982.

Anastasié Desarzant filed suit against LeBlanc and Desmaziliere for spreading rumors that Desarzant was a woman of color. Desarzant considered herself a white woman because she lived a white lifestyle and married a white man. The courts ruled in favor of LeBlanc and Desmaziliere because of evidence showcasing Desarzant's mother as a person of color, thus providing support that Desarzant was a person of color.

Loving v. Virginia was the first case to communicate acceptance of interracial unions. Richard and Mildred Loving were married, then later convicted of violating Virginia's Racial Integrity Act. The State of Virginia sentenced the couple to one year in jail, or the State of Virginia would ban the couple for 25 years. The couple left Virginia, choosing banishment, and moved to Washington, D.C. While living in Washington, D.C., the couple challenged the constitutionality of Virginia's ban on interracial unions. In 1967, the U.S. Supreme court voted in favor of the couple, rendering state-held anti-miscegenation laws inoperable.

Almost a decade later, Susie Phipps's whiteness was in question when she tried to obtain a U.S. passport. She requested a copy of her birth certificate from Louisiana. To her surprise, the State of Louisiana and her birth certificate noted her racial background as "Colored" because the state identified her parents as "Colored" on her birth certificate. Phipps and her siblings fought to change the racial categorization on their birth certificates because they were raised white, attended white schools, and married whites. Phipps lost her case because of the state's "one-drop rule." Phipps had more than 1/32 black blood, thus giving her a "Colored" designation within the State of Louisiana.

First and Second Waves of the Multiracial Movement

From the 1960s, the first wave of the multiracial movement communicated multiple agendas simultaneously because of the varying racial mixtures of as did the differing contents in which multiracial individual faced racial discrimination. It was not until the 1990s that Cynthia Nakashima outlined and separated the variety of agendas set forth by individuals and organizations within the first wave of the multiracial movement. The first agenda focused on inclusion into ethnic/racial communities as a full member, rather than a group partially accepting someone because of his or her mixed-race background. Many multiracial individuals had to "pass" and chose one ethnic/racial background in order for a group to accept them as full authentic members.

The second agenda supported a shared multiracial identity and the creation of a singular multiracial community. There are two types of organizational structures where such sharing and support can take place. The first organizational structure to allow for a shared multiracial identity was housed within specific ethnic/racial communities. Organizations such as the Hapa Issues Forum and various Asian communities have allowed groups of multiracial Asians to connect and share their multiracial experiences. The second organizational structure extends over multiple ethnic/racial communities to allow a larger pan-multiracial community to emerge. Organizations and magazines, such as the Association of Multi-Ethnic Americans (AMEA) and *Biracial* magazine, have united multiracial individuals to discuss and support larger issues of multiracialism that are not specific to one ethnic/racial community or multiracial ancestry.

The third agenda moved toward dismantling racial ideologies in society. Multiracial individuals following the third agenda used their multiracial identity to be neither race, while possessing both or all of their racial ancestries, to resist and tear down ethnic/racial categories in society. Some multiracial individuals have used their mixture of ethnic/racial backgrounds to encourage various ethnic/racial groups to discuss and promote ways to counter common forms of discrimination.

In 2001, Stephen Small proposed that an educated and economically privileged group of

individuals start and shape the movement. However, an increase in ethnic and economic diversity had spawned new factions and organizations in support of the multiracial movement. For example, multiracial individuals possessing Asian ancestry formed the Hapa movement and the Hapa Issues Forum in support of Asian multiracial individuals' rights within California and other states housing large numbers of Asian communities.

The Hapa movement is an Asian heritage multiracial grouping that challenged previous black and white binaries associated with multiracial identity. Before the Hapa movement, the multiracial movement was composed mostly of black and white multiracial individuals, or individuals who were in black and white interracial unions. The main agendas of the Hapa movement focused primarily on racial categorization and equality for all multiracial individuals. As part of their discussion of identity and social movements, Mary Bernstein and Marcie De La Cruz highlight the Hapa movement's goal in bringing forth racial justice for people with multiple ethnic identities while challenging the categorization of race and racial binaries.

The second wave of the multiracial movement is still ongoing. Many multiracial organizations scrutinized how and why government and national organizations would tally and use the "check all that apply" racial categorization in the future. Since the release of the 2000 U.S. Census data, the movement and affiliated organizations have moved beyond their previous agendas to include such topics as transracial and transnational adoption. With more than 9 million people (about 3 percent of the U.S. population) choosing two or more races, future generations of multiracial individuals are still looking for support and recognition. Organizations such as MAVIN and Swirl have helped bring the multiracial discussion to the next generation.

Organizations of the Multiracial Movement

iPride, also known as Interracial and Intercultural Pride, was established in 1979 by a group of interracial families in northern California. After 2005, iPride collaborated with the Multiethnic Education Program and the FUSION organization in the effort to revitalize and update the mission of iPride. The Association of Multi-Ethnic Americans (AMEA) was founded in 1988. AMEA advocated

for and helped establish the "check all that apply" racial designation in the 2000 U.S. Census. Currently, AMEA helps maintain federal guidelines on racial reporting for many U.S.-based organizations.

Project RACE, founded by Susan Graham and Chris Ashe in 1991, represents the multiracial community at various federal government meetings. The organization helps promote and advocate for a multiracial category for mixed-raced children across the nation. RACE is used by the organization as an acronym for Reclassify All Children Equally. Hapa Issues Forum (HIF) began in 1992 to encourage the inclusion of multiracial Asian Pacific Islanders as full "authentic" members of the various ethnic Asian Pacific Islander communities. After the creation of HIF, seven major chapters were created across California, but the organization was disbanded in 2007. The organization collaborated with MAVIN, Swirl, iPride, and AMEA on various local, state, and national projects. The University of California, Berkeley Ethnic Studies Library houses the HIF archives in the Asian American Studies Collection.

The MAVIN Foundation, founded by Matt Kelley in 1998, and turned into a nonprofit organization in 2000, is a volunteer-run organization that helps create and maintain multiracial and transracial adoption events around the nation (i.e., Loving Day and the first Critical Mixed Race Studies Conference). In 2000, Jen Chau founded Swirl, Inc. Swirl is a nationally recognized multi-ethnic organization that uses community building, education, and action to promote multiculturalism and multiracialism. The organization is composed of various local chapters from around the nation that help challenge popular notions of race and combat racism within the multiracial community.

Muscogee (Muskogee)

The term *Muscogee*, or *Muskogee*, has multiple definitions. Muscogee means "Creek" and refers to the Creek Indian Nation of the southeast. Muscogee also refers to counties in the states of Georgia and Oklahoma that are named for the Muscogee Indians. The county in Georgia represents the origins of the Creek Nation, and Oklahoma represents where Native Americans lost their right to have a voice.

In 1969, Merle Haggard wrote the song "Okie From Muskogee," which again popularized the term. A few years after the song was released, researchers began discussing the 20-year follow-up study on tuberculosis collected in Muscogee County, Georgia. Although the definitions are quite different, they all share a history with the Creek Indian Nation that underscores the racial bias against Native Americans.

Creek Indians

Muscogee is another word for Creek. The Muscogee are descendants of the Creek Indian Nation that inhabited most of the southeastern United States prior to 1500. The Creek Nation did not belong to a single tribe but rather to a union of several tribes. Early ancestors of the Muscogee were known for their earthen mounds, which resembled pyramids. These mounds are believed to be parts of larger ceremonial structures.

Descendants of the Muscogee would later build towns within the same region, now known as

Alabama, Georgia, Florida, and South Carolina. During the "historic period," the Creek Nation became one of the largest political organizations north of Mexico. The Muscogee dominated and expanded their territories until the colonization of America.

In the early 1800s, as the United States began its expansion westward, the U.S. government focused on policies to remove the Muscogee from their tribal lands to areas beyond the Mississippi. The removal treaty of 1832 required the Muscogee leaders to trade their remaining lands for territory in what is now Oklahoma. More recently, the Muscogee have worked together to protect their heritage. In 1971, the Muscogee tribes freely elected their first principal chief without presidential approval since the partial dismantling of their government. Today, the Muscogee people are in the process of reclaiming and asserting their rights and responsibilities as a sovereign nation.

Muscogee Counties in Georgia and Oklahoma

Muscogee County in the state of Georgia was named for the original inhabitants called the Muscogee or Creek Indian Nation; it came into existence in 1827. Muscogee County, Georgia, was the site of a 20-year-long tuberculosis study. This study began in 1950 and ended in 1970; the study population included over 60,000 participants aged 5 and older.

This study was conducted prior to the practice of institutional review and was notable in that the control group did not receive inoculation against tuberculosis. Twenty years later, researchers discussed the logic of using varying strains of inoculation against tuberculosis to determine if the vaccine worked and at what level it was needed. As the study was implemented, participants had to take it on faith that they were inoculated against tuberculosis.

Today, Muscogee County, Georgia, has approximately 190,000 inhabitants. Interestingly, the 2010 census data report that less than 1 percent of the county inhabitants self-describe as Native American, compared with about 48 percent who self-identify as white and 46 percent who self-identify as black.

Muscogee County, Oklahoma, like Muscogee County in the state of Georgia, is named for the Creek Indian Nation. In 1824, federal officials

Merle Haggard is an American song writer, singer, and musician. He popularized the term Muskogee in his hit "Okie From Muskogee." Reportedly, he wrote the song after being released from jail, so he knew what it was like to lose his freedom and was feeling anger regarding the protesters against the Vietnam War.

established Fort Gibson, located on the Grand River near Three Forks. Fort Gibson is the oldest established fort in the United States. This fort became the final destination established for "the removal" of the Indians, which later became known as the Trail of Tears. Today, Muskogee County, Oklahoma, has approximately 71,000 inhabitants. According to the 2010 U.S. census, Muskogee County residents self-identify as approximately 62 percent white, 11 percent black, and 18 percent Native American. Clearly, many of the descendants of the survivors of the Trail of Tears have remained in Oklahoma.

"Okie From Muskogee"

The song "Okie From Muskogee," written by Merle Haggard and Roy Edgar Burris, was recorded by Haggard and released in September 1969. By November, the song had reached

number one on the country music charts. The lyrics from the song that spoke to the American public both then and now are "We don't smoke marijuana in Muskogee; We don't take no trips on LSD/We don't burn no draft cards down on Main Street/We like livin' right and bein' free/I'm proud to be an Okie from Muskogee . . ."

It has been reported that Haggard found the protests against the Vietnam War disheartening, and the intent of the song was to support the troops. The song grew out of "one-liners" traded between the writers, reportedly as they were driving through Oklahoma.

The song is an interesting representation of a time in the United States when the nation was polarized about the Vietnam War: the conservatives for continued fighting, and a growing liberal group, then called "hippies," protesting in growing numbers. However, although the song was representative of late 1960s and early 1970s politics, its title gives it an interesting parallel to both the past and the present.

Though it is not apparent whether Haggard knew much about the meaning of the word *Muscogee*, by using this term he managed to draw a parallel to the plight of the Muskogee people and their history, when the Native American populations were stripped of their lands for the purposes of continued expansion.

Museum of Tolerance

The Museum of Tolerance (MOT) is a high-tech and interactive exploration into aspects of hate and bigotry that have taken place throughout the world, as well as an institution that strives to prompt visitors to see the positive change that individuals have created and can be created by them. There are many permanent exhibits as well as temporary special exhibits. It provides many resources and serves to remind visitors of human atrocities throughout the world, both historical and contemporary, and to empower individuals to create a socially just world.

The MOT was opened in 1993 as the educational sector of the Simon Wiesenthal Center in Los Angeles, California. Simon Wiesenthal was a concentration camp survivor and subsequently a Nazi hunter, and the center was originally established as a Jewish human rights organization. The museum's development was prompted by the growing denial of the Holocaust's existence and a desire to combat ignorance about the Holocaust. Its initial aim was to provide a reminder of the atrocities of the Holocaust, genocide, and anti-Semitism. It has expanded its focus to include tolerance, multiculturalism, racism, and civil and human rights for all, with an ultimate goal to promote tolerance and understanding.

The core of the museum is its three main exhibits. These three permanent exhibits are the Holocaust section, the Tolerancenter, and Finding Our Families, Finding Ourselves. The Holocaust exhibit takes the museum visitor through the experience of Nazi Germany in the 1920s to 1945 via a sound-and-light guided tour. This is done in several ways, such as the visitor receiving a passport of a child who was in Nazi Germany and following that child's story while proceeding through the exhibit. At the end of the exhibit, the visitor learns the fate of the child. The visitor also overhears conversations at a café in Germany and then finds out the fate of the café patrons. This section of the museum includes actual accounts from those who lived through this time.

The Tolerancenter consists of many sections that are designed to explore intolerances throughout the world that people experience in daily life. Using interactive technology, the visitor explores personal responsibility related to bullying, hate

speech, and drunk driving. The exhibit takes a historical look at human rights abuses, such as the exploitation of women and children and the lives of political prisoners and refugees.

What starts these and what people can do to end them are examined. Civil rights violations in the United States, Rwanda, and Bosnia are visited, as well as hate that exists and spreads on the Internet.

The third permanent exhibit is Finding Our Families, Finding Ourselves. In this exhibit, the visitor explores the diversity of notable Americans. This exhibit is designed to connect people with shared experiences and leads visitors to reflect on their own history and important figures in their lives. The museum also features special exhibitions that rotate throughout the year. There are presentation theaters and meeting facilities available for activities that complement the mission of the MOT.

There are many avenues beyond the exhibits that the MOT uses to promote tolerance, personal responsibility, and social justice. The MOT arranges for relevant speakers to come and share their experiences. These have included Holocaust survivors, hate crime perpetrators and victims, a former white supremacist, and people involved in slavery and human trafficking. The MOT also arranges programs for a wide variety of audiences.

School tours are available for class field trips. Youth programs include anti-bullying workshops and myriad options for different grade levels. Elementary students can take part in after-school programs and classroom programs. Middle and high school students can participate in full-day experiences at the museum, video conferences that connect them to people around the world, and civic engagement opportunities that connect them to the Los Angeles community. A teen court program provides juror training related to hate crimes. Adult learners can take part in professional development programs.

The MOT also offers diversity training programs for corporate groups, educators, and those in criminal justice fields. Teacher resources are available in many formats and include materials such as lesson plans, vocabulary lists, and bibliographies. The library and archives have a plethora of material about the Holocaust and other related topics. The MOT offers a lending library, reference

staff and media, special collections, genealogy resources, and an opportunity to ask survivors questions and receive firsthand responses. Each year, it honors a children's book that promotes diversity, social justice, and understanding with the Once Upon a World Children's Book Award.

Since its inception in 1993, the MOT has welcomed over 5 million visitors, many of them schoolchildren. The MOT is a recipient of the Global Peace and Tolerance Award from the Friends of the United Nations. It has expanded to include an associated museum and training center in New York City, the New York Tolerance Center, and there are plans to develop the Center for Human Dignity in Jerusalem. This latest center has met with some resistance, in part due to the proposed site the grounds of a former Muslim cemetery. There are also plans to develop a virtual museum.

Music and Ethnic Diversity

Music in the United States can be regarded as an emotional and spiritual expression of ethnic diversity, an image of emancipation, a source of ethnic fragmentation, and a powerful unifying force. Virtually all ethnic groups in the United States have represented themselves in some musical form or style. This ethnic identification

with specific musical practices, as complicated, socially constructed, and dynamic as it is, makes the study of music the very partial tracing of a history of ethnicity in America. Musicians and composers, audiences, and critics aesthetically represent and embody the American way of life in its many forms. Musical expression provides a forum for different ethnicities to exchange ideas, knowledge, and identity.

Practice and Culture of Early Native American Musical Performance

Evidence for pre-Columbian music practices in America was gathered by early European travelers, whose ethnographies documented Native American social and ceremonial music practices associated with indigenous theologies and religious practices. Musicologist Olivia Bloechl argues that despite being damned as mere savage superstition by European Protestant colonists, Native American music influenced European music and constituted an ontology of sacred song, a way of understanding songs as an expression of being, or what is in the world or beyond it. Native American song was thus understood as a culturally embedded fabric of social reality, a distillation of natural and theological worldviews.

European explorers and settlers described practices of ceremonial chanting, rattling, drumming, and shouting. Shouting was taken as a musical manifestation of fear and trembling at the power of the divine, and a renunciation, as a vocal cleansing or purgation of the soul and spirit. However, Native American music should not be taken merely as metaphysics in a Western sense of transcendence of nature. Music, by its aesthetic nature, already integrates physical movements and affects with higher formal categories of understanding in beauty and powerful ideas of reason in the sublime. Native American animism or natural spirituality crosses the boundaries between metaphysical transcendence of nature and physical reality, for nature is animated by spirits in many Native American religions.

Music and African American History

Music has been integral to African American experience for 350 years. African slaves brought with them to America the amazingly complex musical culture of West Africa, which included

not only the elements of most contemporary popular music, from blues and jazz to rock and roll, but also a system of drum-based communication that remained the world's swiftest form of long-distance communication prior to the telegraph. African American music historian Burton Perretti has documented that as early as 1740, in a period of slave revolts, South Carolina legislative officials banned musical instruments among African American slaves in fear of rebellion. In the first Great Awakening, a precursor to the American Revolution, many African American slaves were converted to Christianity, and formal hymns emerged in the south by 1761. In 1801, a former slave, Richard Allen, later the founder of the African Methodist Episcopal Church, published a book of spirituals and hymns.

Forms of African American performance culture began to emerge some 20 years later, when African Americans started to perform in venues in New York City and elsewhere. The publication of African American songs followed soon after, concentrating at first on the songs of sorrow and despair of African American slaves. The cultural significance of these songs is found in their depictions by Frederick Douglass in 1845 and by W. E. B. Du Bois in *The Souls of Black Folk* in 1903. One sorrow song, quoted by Du Bois, reads as follows:

I walk through the churchyard
 To lay this body down
 I know moon-rise, I know star-rise
 I walk in the moonlight
 I walk in the starlight
 I'll lie in the grave and stretch out my arms
 I'll go to judgment in the evening of the day
 And my soul and thy soul shall meet that day
 When I lay this body down.

By 1859, African American pianist Thomas Wiggins ("Blind Tom" Bethune) had performed at the White House. In 1867, the first publication of African American compositions appeared as *Slave Songs of the United States*. Jubilee Singers gathered at an early African American institution, Fisk University, in Nashville, Tennessee, in 1871, and from 1871 to 1878, they were among the first touring groups of African American musicians.

Emerging technologies soon transformed American music from a performance culture to a recording industry. In 1890, vocalist George W. Johnson made the first phonograph recording by an African American musician. The following year, African American ragtime pianists began an artistic exchange of musical themes initiated at the Chicago Columbian Exposition. Leading ragtime pianist Scott Joplin published the song "Maple Leaf Rag" in 1899, and the opera *Treemonisha* in 1911. Eight years later, the first African American record label, Broome Records, was founded in Boston. In 1920, African American Mamie Smith made the first blues recording, "Crazy Blues." Some five years later, trumpeter Louis Armstrong recorded and released some of the first pieces of the new jazz music in the United States with his Hot 5 and Hot 7 small band combos. Jazz was initially racially segregated. When African American jazz vibraphonist Lionel Hampton and pianist Teddy Wilson joined Benny Goodman's small combo and his big band orchestra in 1935 and 1936, this made them part of the first racially integrated jazz bands in the United States.

Although its origin story is complicated, hip-hop is said to have begun in the South Bronx in New York City in the 1970s, with Jamaican-born disc jockey Clive Campbell (Kool Herc). However, it reflected and gave voice to the everyday lives and dreams of younger, inner-city African Americans in New York, Los Angeles, Detroit, and many other cities, if sometimes in caricatured or exaggerated fashion. Whether an empowering source of resistant culture, as Theresa Martinez argues, or a fount of violence and misogyny, as often claimed (yet, as Edward G. Armstrong found, this was true of only 22 percent of gangsta rap lyrics), hip-hop gave birth to a wide range of distinct, regionally specific (such as east/west coast) musical forms, including rap, crunk, and reggaeton. In the 1980s, hip-hop began to spread beyond urban African American communities. Today, hip-hop belongs to the many African American forms of music performed by virtually all ethnicities in the United States.

Irish Americans and the Musical Representation of Everyday Life

Romantic Irish immigrant songs first emerged in antebellum America. Early Irish American

compositions often reflected a peasant identity and included east coast urban parlor songs, popular post-Civil War theater, and Tin Pan Alley songs in New York City. The first publishers of Irish music in the United States often included illustrations of Irish Americans over the actual sheet music. Irish Americans played up their ancestry, as did their early audiences, as they began to reach a wider popular audience. Such a commercial philosophy of music, one that aimed to unite performer and spectator through ethnic imagery, aesthetically displayed a version of everyday life in America.

Irish American singer George M. Cohan marked the assimilation of Irish Americans into the mainstream of American culture in the 20th century in songs such as “Over There” that reflected a distinctly Irish American identity, yet expressed patriotic fervor for the United States, placing “the symbols of American life into American music,” as New York City Mayor Fiorello La Guardia stated in his eulogy.

Jewish Americans and the Changing Makeup of Musical Identity in the United States

Between 1880 and 1914, two million European Jews immigrated to the United States, many arriving at Ellis Island in New York and settling in crowded tenements on the Lower East Side of Manhattan, not far from Little Italy. The Old World ghetto songs of newly identified Jewish Americans grew from Yiddish lyrics and melodies popular in close-knit 19th-century central and eastern European Jewish ghettos.

Many notable 20th-century American songwriters were second-generation Jewish Americans. Historian Edward Pessen estimates that 75 percent of American popular music lyricists and 50 percent of popular composers during this period were Jewish, as were 60 percent of “respected” songwriters, responsible for 70 percent of the country’s hit songs. Influential songwriters Irving Berlin, Richard Rodgers and Lorenz Hart, George and Ira Gershwin, and Jerome Kern were all Jewish. Harold Arlen inspired a generation with his songs. Influential conductor Leonard Bernstein composed the groundbreaking music for *West Side Story*, assisted by lyricist Stephen Sondheim. Today, Jewish American reggae and alternative rock singer Matisyahu has collaborated with Muslim beatboxer Kenny Muhammad. Jewish

American composer and saxophonist John Zorn formed an ethnic-inspired Bar Kokhba sextet with members of his Diaspora-infused Masada jazz quartet, joined by Brazilian American percussionist Cyro Baptista.

Musical Genesis of Central European Ethnic Communities in Middle America

Polish American musicians and composers thrived in cities such as Chicago, New York, Detroit, Milwaukee, and Cleveland. Polish American polka, flourishing by the turn of the century, derived from the dance-based art form popular in 1840s Poland but differed in its use of folk melodies and an inchoate form of jazz. Polish American polka in Chicago had a bluesy style, whereas in Detroit, its style was infused by jazz and folk, serving to unite its ethnic blue-collar listenership.

Czech American polka music was common in urban areas in Wisconsin. It also reflected the everyday life of working-class ethnic communities. It had its origins in the 1850s, at the beginning of an influx of immigration from central Europe’s Bohemia geographic region. Through their music, performed in ballrooms and neighborhood festivals, tight-knit communities of recent immigrants expressed themselves and preserved cultural heritage in an America increasingly marked by change.

The most notable of the other Central European immigrant polka traditions were German American, which incorporated elements of folk, religious, art, and popular music in choral traditions. German American culture was rich in songs about the tribulations of immigrants. These narratives in ballads and hymn books were distributed locally, helping preserve German language motifs and tropes in German American communities in the United States. American music from the 20th century is replete with contributions by Americans with German ancestry, including Les Paul, Eddy Vedder, Kurt Cobain, and Elvis Presley.

Varied Music of Italian Americans

Italian American music similarly expressed and reflected the social reality of immigrant life in the United States. At a time when opera houses such as the Metropolitan Opera House in New York City ostentatiously displayed the exclusive prizes of wealth and class, early Italian American opera

represented a democratization of culture. Originally marked by a dynamic aesthetics, 19th-century opera in the United States constituted a commentary and forum for the exchanging of ideas, knowledge, and identities from the newly formed ethnic group and its communities.

In stark contrast was the 20th-century Italian American musicians' performance of songs to a much wider popular audience. Italian American singers such as Tony Martin, Dean Martin, Tony Bennett, and Frank Sinatra popularized music in the United States and became cultural icons. Today, prominent American musicians with some Italian ancestry include Bruce Springsteen, Alicia Keys, Chris Isaak, Natalie Merchant, Jon Bon Jovi, and Trey Anastasio of Phish.

Asian and Mediterranean Influences

Asian American music has emerged today as a patchwork of pan-Asian artistic thought and ideas. Asian regionalism is intergenerational. Chinese American saxophonist and composer Fred

Ho has gained recognition in avant-garde and experimental jazz settings with free-form improvisation and atonal composition. Vietnamese American trumpeter Cuong Vu has received both critical and commercial success performing with jazz guitarist Pat Metheny's Grammy Award-winning ensemble. Japanese American pianist Toshiko Akiyoshi has received critical acclaim as a jazz composer and arranger. Early in her career, she collaborated with her former husband, the late Italian American saxophonist Charlie Mariano. Miya Masaoko is a highly respected Japanese American composer of experimental and avant-garde music. She performs on her native Japanese koto zither, which gives her new American music a striking cultural difference.

Israeli American violinist Miri Ben-Ari has collaborated with major African American hip-hop artists such as Twista and Kanye West. A new wave of Israeli American jazz artists, centered in New York and Boston, includes saxophonists Assif Tsahar and Ori Kaplan, who first attained

The group Native Trails performs at the Scottsdale Civic Center in Arizona. Drums are of great importance to Native American music. Traditionally, American Indian drums are played communally by groups who sit around them in a circle. Vocalization and percussion are the two most important aspects of Native American music, and percussion, especially drums and rattles, is used to keep rhythm for the singers and dancers. Traditional music usually begins with slow and steady beats and gradually becomes faster and more emphatic.

critical acclaim in the 1990s, continuing to work in ethnically diverse musical settings with Kaplan's Balkan beatbox group and Tsahar's duets with Chicago-based African American drummer and percussionist Hamid Drake. Saxophonist and clarinetist Anat Cohen topped *Down Beat* magazine's seminal Critics Poll in 2012. Her brother, trumpeter Avishai Cohen, has also received praise from the jazz press.

Palestinian American urban music producer DJ Khaled resides in south Florida and collaborates with leading African American hip-hop recording artists. New York-based Armenian American jazz pianist Armen Donelian has taught jazz across ethnic divisions in American conservatories and in foreign residencies, including a "Jazz in Armenia" project in 1999. American experimental vocalist Diamanda Galás emphasizes her Anatolian or Turkish heritage. Including her Greek ancestry, the singer's dynamic ethnic background informs her original music composition and performance.

Dynamic Life of Latino Music in the United States

Mexican American guitarist Carlos Santana achieved immediate and lasting success in rock in the 1960s and 1970s. Raised in a Puerto Rican section of Harlem, percussionist Tito Puente performed Latin jazz for American audiences for some 50 years, gaining recognition for the album *Salsa Meets Jazz*. Haitian American rapper Wyclef Jean was a vocal member of the Haitian community in the United States, organizing aid to Haiti after its devastating 2010 earthquake. Born into a Jewish American family in New Jersey, guitarist Marc Ribot has performed and recorded Cuban-inspired contemporary music with his band Marc Ribot y Los Cubanitos (translated as the "Prosthetic Cubans"). African American trumpeter Roy Hargrove won a Grammy in the 1990s for his Afro-Cuban album *Habana*, which brought together African American and Cuban jazz musicians.

Mexican American influences in the west include a generation of musicians gathering in urban Los Angeles to create a new idiom that dated in its trajectory from the Great Depression to the Vietnam War. This Mexican American music was part of the greater wartime culture of entertainment in the region and then evolved to become an element of the postwar counterculture. The

resulting Chicano and Chicana cultural expressions intersected with the broader political age of the 1930s, 1940s, and 1950s. A well-known Mexican American musical genre of the time period in Los Angeles and throughout the west was *Mojo*, which highlighted a greater trend of regionalism in the history of 20th-century Latino music in the United States.

Among the southwest's Chicano community of Mexican American musical composers, lyricists, and recording artists emerged the traditional Spanish ballads of New Mexico. Other Mexican American musical genres and styles of artistic expression included corridos and Tex-Mex music. Within the greater southwest, corridos represented songs of Mexican American resistance and cultural pride. Corridos were fast-paced ballads that told culturally significant stories. They recounted epic events and retold the story of the cultural conflicts between Anglos and Mexican Americans. Corridos not only documented (through their music composition, performance, and recording) the injustices that Mexican Americans suffered, but also celebrated outlaws from earlier time periods who stood up to defend the honor of the Mexican American community.

Tejano music, most commonly referred to as Tex-Mex music, gained popularity among Mexican American communities in central and southwestern Texas. With roots in the early 20th-century Mexican American experience, the music had emerged by the 1980s and 1990s to form part of the larger consciousness of popular music in the United States. From its early to its mature forms, Tejano represented more than just music; it also referred to the Tex-Mex border culture between Texas and Mexico.

Tejano is considered a meld of Texan and Mexican languages and traditions, with its music notably performed in the border region along the Rio Grande separating Texas from Mexico. Tex-Mex music flourished even during periodic unrest and violence, generating an exuberant artistic expression that would come to embody a rock and roll heart for a larger portion of music listeners throughout the United States.

Musical Theater and Ethnic Diversity

Historically, performers of color have been relegated to roles specifically as ethnic characters in the script, in specialty numbers that exist outside the main action, or in barely featured chorus roles. Opportunities for actors of color are limited by a general paucity of roles, and when parts are available, they are often mired in decades-old noxious stereotypes, or otherwise lacking in substance. However, an increasing acceptance of nontraditional and color-blind casting, as well as more producers, writers, directors, and audience members of color, have resulted in more visibility for ethnic actors and more balanced depictions of the African American, Asian American, and Latin American experience.

A review of the history of the American musical theater reveals that people of color have influenced its development profoundly. One of the earliest black characters performed on stage in America was Mungo, a drunken trickster who was introduced in Charles Dibdin's operetta *The*

Padlock, first played in blackface by Lewis Hallam, Jr., in 1769. His aria, "Dear Heart! What a Terrible Life I Am Led," is the first known theater song that was modeled on African American music and performed by a white actor. Mungo often articulated a comic bitterness about his difficult lot as a black man. The character influenced the negative onstage portrayal of African Americans for decades. Throughout the 19th century, most African American roles, irrespective of gender, were essayed by white male actors.

Thomas Dartmouth Rice, a blackface performer, composer, and playwright, popularized the minstrel show in the United States and England, beginning in the 1820s. His performance of his signature character, the crafty but supine Jim Crow, lent its name to America's codified segregation laws. His work was considered progressive at the time, as he willingly performed for both black and white audiences. Later in his career, he played the title role in the Broadway adaptation of *Uncle Tom's Cabin*.

As the first African American to tour the world as part of a traveling minstrel group, the Ethiopian Serenaders, Henry William Lane, who performed as Master Juba, introduced black dance to white audiences in the 1840s. It was not until after the Civil War that African American minstrel troupes began writing and performing musicals for black audiences.

Beginning with *Clorindy; or The Origin of the Cake Walk*, which opened on Broadway in 1898, musicals written by and starring African Americans, especially those featuring ragtime music, became popular among white theatergoers. *In Dahomey* in 1903, *Abyssinia* in 1906, and *Bandanna Land* in 1908 were among the most popular early black musical comedies. *In Dahomey*, in particular, was groundbreaking in that it combined elements of vaudeville, opera, and musical theater. Black playwrights and composers like Will Marion Cook, Paul Laurence Dunbar, and brothers J. Rosamond and James Weldon Johnson gained fame creating black musical comedies for white audiences.

Off-Broadway, Harlem theaters featured productions created by and starring black artists for black audiences. Bert Williams and George Walker, black comedians who performed in blackface, were among the most successful actors

of their generation; they produced shows in the United States and England, and they even founded the Negro's Society, an African American actors' union. In 1910, Williams became the first African American to receive equal billing with white performers in *Ziegfeld Follies* on Broadway. African American theater critic Lester Walton formed the Lafayette Theater Stock Players at the Lafayette Theater in Harlem in 1912. Its goal was to provide alternatives to the stereotypical roles available to black singers, dancers, and comedians. In 1915, the Lincoln Theater Troupe of Harlem's Lincoln Theater presented a reading of Scott Joplin's African American opera, *Treemonisha*.

Later in the decade, black musicals had fallen out of fashion; African Americans were not seen consistently on stage again for another decade, until Eubie Blake and Noble Sissle's hugely successful *Shuffle Along* premiered in 1921. Revues, which featured musical numbers and dances without plots, were especially popular during this period. Throughout the 1920s, a number of musicals attempted realistic portrayals of African American life; by far the most successful of these was Jerome Kern and Oscar Hammerstein's *Show Boat* in 1927. Few complete scores of black musicals before the 1920s are extant. A lack of commercial demand meant that these scores were never recorded or published.

By the 1930s, African American actors appeared regularly in all-black musicals, or sang and danced specialty numbers, which were not germane to the storyline, in all-white shows. A few operas and operettas were refashioned for performance by all-black casts, including *Carmen Jones*, adapted from George Bizet's *Carmen*, and *The Swing Mikado* and *The Hot Mikado*, both based on W. S. Gilbert and Arthur Sullivan's *The Mikado*.

In addition, the Federal Theater Project, a Works Progress Administration program that ran from 1935 to 1939, created four New York performance units that employed black musical theater performers: the Vaudeville Unit, the Federal Negro Theater, the Negro Youth Theater, and the African Dance Unit.

Musical Theater's Immigrant Roots

Irish American performers were featured regularly in antebellum minstrelsy. Even prior to the popular rise of minstrel, stock Irish characters—ranging

from well-mannered gentlemen to raucous hired hands—were a mainstay of American theater. Subsequently, with an increase in Irish emigration to America came a proliferation of anti-Irish and anti-Catholic characters. Still, many performers, directors, and writers found great success in American musical comedies. George M. Cohan wrote and starred in many of the great musicals of the early 20th century, even penning the classic "Give My Regards to Broadway." Edward Harrigan starred in a number of vaudeville productions that focused on the lives of Irish immigrants. Victor Herbert is considered America's first great composer of operettas, including *Babes in Toyland*. Throughout the 1920s, a number of rags-to-riches stories about Irish immigrants were created for the musical stage.

Shortly thereafter, Jewish Americans replaced Irish Americans as the dominant voices in the musical theater. In trying to develop a means to integrate fully into a Christian country, Jewish writers created characters and scenarios for the stage that expressed their history and present. In particular, many of these productions concerned shifting identities, assimilation, and overcoming obstacles in the face of ethnic prejudice. In instances where they did not feel that it was appropriate to articulate Jewish themes overtly, they used non-Jewish characters as stand-ins, including in *Oklahoma!* and *South Pacific*.

Beginning with the arrival of the first troupe from Romania in the 1880s, the Yiddish theater was a popular alternative to the English-language productions that played on Broadway and in vaudeville. These shows addressed Jewish issues with Jewish actors and writers for a predominantly Yiddish-speaking audience of Jewish emigrants from eastern Europe. After a few decades, once the audience base was mostly English speaking, the structure and content continued to contour the development of musicals. Subsequently, Jewish performers and writers helped develop and popularize vaudeville shows, which were direct predecessors to modern musicals.

Further, the vast majority of 20th-century American theater's great songwriters were Jewish: Stephen Sondheim, Richard Rodgers, George Gershwin, Harold Arlen, Leonard Bernstein, Jerome Kern, Stephen Schwartz, and Frank Loesser. In creating a musical vocabulary for the

theater, they drew upon Jewish and western European music, as well as African American musical idioms, especially jazz, spirituals, and ragtime. In fact, nearly two-thirds of the Tony Awards for Best Original Score have been awarded to Jewish composers. Many of the most successful performers also were Jewish, including Barbra Streisand, Ethel Merman, Zero Mostel, and Al Jolson, and more recently Idina Menzel, Lea Michele, Mandy Patinkin, and Harvey Fierstein.

New Opportunities for Performers of Color in Postwar America

By the 1940s, musicals had become more sophisticated in terms of form and content. Correspondingly, hot-button issues like racial intolerance were addressed in some musicals, including *Bloomer Girl* in 1944, *Finian's Rainbow* in 1947, and *South Pacific* and *Lost in the Stars* in 1949. Companies like the Negro Ensemble Company and AMAS Musical Theater ensured that works that showcased the efforts of artists of color were produced.

Choreographer-cum-anthropologist Katherine Dunham directed and choreographed on Broadway a number of times, beginning with *Tropical Revue* at the Martin Beck Theater in 1943. Some white composers, including Leonard Bernstein, Oscar Hammerstein, Richard Rodgers, Harold Arlen, Gary Geld, Judd Woldin, Peter Udell, Garry Sherman, and Henry Krieger, routinely tackled issues of race and ethnicity in their work.

Chita Rivera broke barriers in the 1950s by being cast in non-Latina roles in *Guys and Dolls*, *Can-Can*, and *Call Me Madam*. Argentine Fernando Lamas and Mexican Ricardo Montalban were other early musical theater stars of Latin American descent in the 1950s. Juanita Hall, an African American, won the first ever Tony Award for Best Featured Actress in a Musical for the original production of *South Pacific* in 1950, and Miyoshi Umeki, the first Asian American to win an Academy Award for acting, became the first to be nominated for the Tony Award for Best Actress for *Flower Drum Song* in 1959.

Beginning in the 1960s, musicals with interracial casts, including *No Strings* (1962), *Hair* (1967), and *Jesus Christ Superstar* (1969), became more common. *Jericho-Jim Crow*, which played off-Broadway in 1964, and *Black Nativity*, which

opened on Broadway in 1971, both written by Langston Hughes, were pioneering musicals with religious content and gospel music scores. In the 1970s and 1980s, gospel musicals regularly toured the United States, playing the urban theater circuit.

Accompanying the proliferation of African American-penned plays, beginning in the late 1960s and 1970s, were a number of musicals with African American content. Several successful musicals, including *Hello, Dolly!*, *I Love My Wife*, *Timbuktu!* (from *Kismet*), and *I Love My Wife*, were refashioned with all-black casts. Many new musicals were written by African Americans, most notably Charlie Smalls (*The Wiz* in 1975) and Micki Grant (*Don't Bother Me, I Can't Cope* in 1972 and *Your Arms Too Short to Box With God* in 1976). Others were written by whites but adapted from African American works, such as *Purlie*, *Amen Corner*, and *Raisin*.

Between 1971 and 1982, African American novelist, performer, and filmmaker Melvin Van Peebles had four shows on Broadway, two of which he also produced. The most noteworthy of them were *Ain't Supposed to Die a Natural Death*, a social commentary on inner-city life, and *Don't Play Us Cheap*, a lighthearted fantasia on contemporary black identity. Finally, fictionalized accounts of black historical figures, including Jackie Robinson (*The First*) and Diana Ross and the Supremes (*Dreamgirls*), launched the careers of a number of successful African American performers, including David Alan Grier, Loretta Devine, Sheryl Lee Ralph, Jennifer Holliday, Janet Hubert-Whitten, and Phylicia Rashad.

In the 1990s and 2000s, unprecedented levels of racial sensitivity were achieved on Broadway. *Once on This Island* (1990), based on Trinidadian author Rosa Guy's novel *My Love, My Love: The Peasant Guy*, featured an all-black cast and explored the history of intra-racial relations in Haiti. *Rent*, which ran for 12 years on Broadway, beginning in 1996, and again off-Broadway beginning in 2011, utilized both color-blind casting and a multiracial ensemble of actors. With Paul Simon and Derek Walcott's 1998 musical, *The Capeman*, based on the story of Salvador Agrón, critics and audiences, as well as performers associated with the show, drew attention to what they considered to be inauthentic depictions of Latin Americans.

Several other productions, including *4 Guys Named José y Una Mujer Named Maria*, *Juan Darién: A Carnival Mass*, *Kiss of the Spider Woman*, and *Tango Argentino*, showcased Latino casts and culture. Because of concerns that the scene was demeaning to indigenous peoples, the song “I’m an Indian, Too,” written for the original 1946 production of *Annie Get Your Gun*, was excised from the 1999 Broadway revival. The Bollywood-inspired *Bombay Dreams* (2004), by A. R. Rahman, Meera Syal, Thomas Meehan, and Don Black, explored south Asian culture for the first time in a Broadway musical. *In the Heights*, which won the Tony Award for Best Musical in 2009 and was a finalist for the Pulitzer that same year, tells a story of immigrant dreams and generational conflict, albeit with a score composed of salsa, merengue, bachata, and hip-hop choreography.

Authenticity in Musical Theater

Asian and Latino characters have been featured in American musicals since at least the 1930s. Although it has been considered impolitic to cast non-black performers in African American roles since at least the 1950s, the practice still is common for Latino and Asian roles. In *West Side Story*, for instance, a number of non-Latino actors have been cast as the Puerto Rican Sharks and their girlfriends, including Allyn Ann McLerie, Anna Maria Albertghetti, Harolyn Blackwell, and Debbie Allen.

Although the argument can be made that these performers read to audiences as Latino, the convention of casting non-Asian actors in Asian roles does not require the same phenotypic similarity. Yul Brynner, Juanita Hall, Larry Blyden, and Muriel Smith are non-Asian actors who have essayed Asian roles in mainstream productions. Groups like the Oriental Actors of America have objected publicly to the practice.

Miss Saigon, Claude-Michel Schönberg, Alain Boublil, and Richard Maltby, Jr.’s 1991 resetting of Giacomo Puccini’s *Madama Butterfly* to the end of the Vietnam War, was an international success but also attracted its share of racial controversy. In the original West End production, white actors Jonathan Pryce and Keith Burns, wearing heavy makeup and prosthetic eyepieces, played to two leading Asian male roles, attracting an outcry from members of the Actors Equity Association.

Similarly, a number of anti-defamation groups and prominent Asian American theater practitioners, including actor B. D. Wong and Henry David Hwang, the first Asian American to win a Tony Award for Best Play, protested what they viewed as deleterious portrayals of Asians as sex workers and criminals in the musical. Hwang recounts the controversy in his 2009 play, *Yellow Face*.

Additionally, most Asian American musicals bear little resemblance to traditional forms of Asian performance genres, including Peking opera, Noh, and kabuki. A conspicuous exception is Stephen Sondheim’s *Pacific Overtures* (1976), which depicts the Westernization of Japan by way of kabuki and pentatonic music. Groups like the East West Players, formed by a group of Asian American actors that include Academy Award nominee Mako, and playwright Frank Chin’s Asian American Theater Workshop have worked to ameliorate the manner in which Asian Americans are represented on stage by augmenting the number of Asian American–penned plays. Similarly, for the 2008 Broadway revival of *West Side Story*, Lin-Manuel Miranda, composer of Latin-themed *In the Heights*, contributed new Spanish lyrics and dialogue to address concerns that the musical endorsed stereotypes of Latinos as criminals, and privileged American assimilation over cultural retention.

Muslim Americans

Muslim Americans are U.S. citizens and residents who adhere to the religion of Islam. They comprise diverse communities that embrace African Americans, converts, and immigrants from every part of the world but mostly from the Middle East and south Asia. Islam is based on the Five Pillars that must be observed by ordinary Muslims regardless of their sect, ethnicity, country, occupation, education, or exegeses of religious scholars.

These pillars include believing in two testimonies—that of the oneness of Allah and that Muhammad is His Prophet, praying five times daily, almsgiving, fasting during the month of Ramadan, and performing the pilgrimage (*hajj*) to Mecca. The religious identity of Muslim Americans is viewed as part of a wide arc of global Muslim identity, or community (*ummah*), encompassing differing ethnic groups from various parts of the world. Despite the fact that the global Muslim community goes beyond the concept of citizenship or national affiliation, Muslim Americans affiliate themselves with the American society or community within which they willingly prefer to live.

As a land of great opportunities, the United States with its multicultural environment attracts Muslims from all around the world. Before the rise of the Atlantic slave trade, Muslims began arriving in the New World at the end of the 16th century when European explorers and colonists crossed the Atlantic in search of new trading routes. The number of Muslims gradually increased over the 18th, 19th, and 20th centuries.

In 1920, Muslim immigrants in Detroit initiated the Detroit Chapter of the Red Crescent and purchased plots for Muslim burials. They also founded a mosque in the Highland Park area of metropolitan Detroit in 1921. Adherents were not restricted geographically, and another mosque was established in Cedar Rapids, Iowa, in 1934. Presently, the Red Crescent movement is closely associated with the Red Cross movement, and together they form a large global humanitarian network.

In 1930, Fard Muhammad (Wallace or W. D. Fard), an African American religious leader, went to Detroit, where his teaching of Islam led to the establishment of the Nation of Islam. Within the context of African Americans' experience, in the

period between World Wars I and II, Islam was a means to deflect the stigma associated with the black race. Fard's mission was to restore black Americans to their original divine nature, language, and culture through Islam. For most black Americans, Islam was viewed as a religion of liberation.

Under Elijah Muhammad's leadership, and with the help of Malcolm X, the Nation of Islam in the 1950s and 1960s grew to become the most successful Black Nationalist movement in the United States. During this period, influential organizations such as the International Muslim Society (later renamed the Federation of Islamic Associations of the United States and Canada), the Uniting Islamic Society of America, the Islamic Mission of America, and the Islamic Center of New York Foundation were established. During the past four decades, Muslim immigrants from Africa, Asia, and the Middle East have come to America in large numbers. Since the 1960s and 1980s, the United States has been a haven for Muslim immigrants from Africa, Asia, and the Middle East seeking freedom and better economic and educational opportunities.

The exact number of Muslim Americans in the United States has been an issue of debate for several years. The U.S. census does not include information on religion, as it is forbidden by law to ask questions about religious beliefs and affiliations. However, in the 2010 census there was a section titled "Self-Described Religious Identification of Adult Population: 1990, 2001, and 2008." This section points out that the adult Muslim population in 1990 was 527,000, and it reached 1,104,000 in 2001 and 1,349,000 in 2008. Muslim immigration to the United States has steadily increased since the 1990s, and the Muslim population has doubled. Yet, there was a small drop due to the tragic events of September 11, 2001. In another count, the Pew Research Center estimated the total population of Muslims in the United States to be slightly higher, at 2.35 million.

According to the Pew Forum on Religion and Public Life, the population of Muslim Americans in 2010 was 2.6 million (and rose to 2.75 million in 2011), or 0.8 percent of the overall U.S. population. However, a more recent study attempted to estimate Muslim population based on number of people attending major collective prayers.

According to this study, the number of Muslims who attended Eid prayer—holiday prayers after Ramadan and pilgrimage or *hajj*—increased from about 2 million in 2000 to about 2.6 million in 2011. Although the total Muslim population cannot be determined by this figure, it questions the low estimates of the Muslim population in the United States. The study concludes that if there are 2.6 million Muslims praying the Eid prayer, the total Muslim population should be closer to the estimates of 7 million. President Barack Obama, in his address to the Muslim world from Cairo, Egypt, on June 5, 2009, stated there are “nearly 7 million American Muslims in our country today who, by the way, enjoy incomes and educational levels that are higher than the American average.”

Several Muslim countries are the source of significant numbers of immigrants coming to the United States. About two-thirds of the Muslims in the United States today (64.5 percent) came as foreign-born immigrants, and more than a third (35.5 percent) are citizens born in the United

States. This represents a racially diverse group identified as white (30 percent), African American (23 percent), Asian (21 percent), Hispanic (6 percent), and other races (19 percent). Moreover, one out of five American Muslims is a convert. A recent poll proposes that because of immigration and high levels of fertility among Muslims, the population of Muslim Americans will more than double over the next two decades, rising from 2.6 million (0.8 percent) in 2010 to 6.2 million (1.7 percent) in 2030. Muslim Americans live in all U.S. states but have higher concentrations in New York, California, Maryland, Michigan, Virginia, New Jersey, Pennsylvania, and Texas.

Many immigrants are professionals who are economically in America’s middle class. Twenty percent of Muslim Americans, compared to 17 percent of other Americans, are self-employed or own a small business. Overall, Muslim Americans are satisfied with their personal financial situations. Fourteen percent of Muslims, compared to 16 percent of the overall U.S. population, have household

The Islamic Center of America is located in Dearborn, Michigan. Opened in 2005, it is the largest mosque in North America and the oldest Shia mosque in the United States. Dearborn is often called the “heart of Shiism” in the United States because of its large Shia Arab population, which consists mainly of Iraqis and Lebanese.

incomes of \$100,000 or more. Forty-six percent, compared to 38 percent of the overall public, say they are in good or excellent shape financially.

Educationally, 26 percent of Muslim Americans are as likely as the general public (28 percent) to have graduated from college. Twenty-six percent of Muslim Americans (who are younger than the general public) are currently enrolled in a college or university class, compared to 13 percent of the general U.S. population. Moreover, Muslim American women are one of the most highly educated female religious groups in the United States.

The multicultural and pluralistic nature of American society reflects and accommodates Muslim diversity. Sunni Muslims compose the majority of Muslims in the United States, as they do worldwide. The Shia are the second-largest denomination of Islam and include those whose forebears supported 'Ali Ibn Abi Talib, cousin and son-in-law of the Prophet Muhammad. Shiite Muslims are divided into various divisions, of which the Twelvers is most dominant.

Local mosques reflect the diversity of the American Muslim population. The overall number of mosques rose from 1,209 in 2000 to 2,106 in 2010, increasing 74 percent in a decade. Mosques are normally Sunni or Shia (approximately 7 percent). Despite being outnumbered by Sunni mosques, Shiite mosques are growing in number. Over 44 percent of all Shia mosques were established in the 1990s.

During the Gulf wars and after 9/11, Islam was portrayed as an antidemocratic and violent religion. More specifically, since the events of 9/11, Muslim Americans have been depicted as being terrorists. Muslim Americans have disapproved and condemned violent actions taken by politically oriented religious groups, whether they were Muslim or non-Muslim. In response to the tragic events of 9/11, Muslim Americans have expressed their patriotism and full Americanness in tangible ways, including the display of American flags on clothes, cars, homes, storefront windows, and places of worship. Hate crimes have spawned interfaith relationships that the Muslim community wants to invigorate.

After 9/11 and the subsequent decision by the George W. Bush administration to invade Muslim countries such as Afghanistan and Iraq, the majority of Muslims engaged in a massive political shift

away from the Republican Party. Between 2001 and 2004, the percentage of American Muslims who were dissatisfied with the country's direction increased from 38 percent to 63 percent. The shift toward the Democratic Party was further sustained when the Muslim community voted overwhelmingly for Barack Obama in 2008.

Most Muslim Americans, contrary to public opinion, do not see a conflict between their faith and being American or living in a modern society. Muslims maintain that Islamic values are compatible with American values. Many of them aspire to or have achieved prosperity in business, academia, engineering, and other fields. Muslim Americans participate actively in U.S. politics, and 95 percent state that the Muslim community should participate in the political process. Muslim Americans, especially youths, are positively and aggressively involved in the American mainstream, with strong attitudes of cooperation rather than confrontation. Moreover, young people and women show high political engagement, according to state-level data in Michigan.

Muslims' increased participation in politics and integration in American society have helped further diversify the public image of Islam in America. Muslim Americans, especially immigrants, keep an eye on what is happening inside their new homeland and another eye on what is happening in their old homeland. They are interested in knowing new ideas or interpretations of Islam offered by Muslim intellectuals both inside and outside America.

Muslims have been negotiating their own understanding of the relationship between Islam and America through the establishment of Muslim nongovernmental organizations and Islamic cultural-social centers as well as through their political activities. Muslims tend to organize themselves through public places such as mosques and religious-social centers in which they perform rituals and congregate for communal occasions and purposes. In such places in the community and through their everyday lives and practices, they substantiate their political views.

A recent report shows that Muslims who are engaged in their mosques are 53 percent more involved in civic activities, such as charity organizations and school and/or youth programs, than those who are not connected or involved with a

mosque. Also, the report suggests that higher levels of religiosity and mosque attendance lead to higher levels of political participation. This can be seen in mosque participants' higher levels of voting, correspondence with their state and federal representatives, and peaceful engagement in political protests and other processes.

Muslim Americans have established culturally and politically active organizations such as the Arab American Anti-Discrimination Committee (ADA), the American Moslem Society (AMS), the Islamic Center of America (ICA), the Islamic Center of Detroit (ICD), the Islamic Society of North America (ISNA), the Muslim Unity Center (MUC), the Muslim Public Affairs Council (MPAC), and the Islamic Cultural Institute (ICI), among others. One of the most influential American Muslim political organizations to emerge to negotiate relations between Islamists and the United States is the Council on American-Islamic Relations (CAIR).

Muslim Americans have become interested in establishing interfaith dialogue, engaging with Christians and Jews through Islamic centers, mosques, and Web sites. Most Friday sermons address social, ethical, and interfaith-related issues with focus on Abrahamic sacred traditions. Such interfaith dialogues have a significant impact on people's social and cultural domains. In Dearborn, Michigan, for example, both Muslim and non-Muslim Americans publicly and candidly share Muslim international conferences and festivals, among other cultural, social, and religious activities.

Also, during religious occasions, such as the month of Ramadan, and celebratory feasts (*Eid*), non-Muslims are invited to participate in Ramadan *Iftar* (breakfast) and share food and beverages. However, Muslims continue to observe certain food and drink prohibitions or taboos and are aware of permitted food. In addition, some of these centers have recreational facilities to attract youths and prevent them from acquiring and developing negative patterns of behavior.

Interfaith relationships play an important part in intercultural marriage. For instance, although marriage between Muslims and Christians as well as between Sunni and Shia Muslims is rare in the Muslim homeland, marriages between Sunni and Shia Muslims and between Muslim

men and Christian women have occurred in the United States. People have maintained, however, that Muslim women cannot marry Christian men unless they adopt Islam as their religion, which they do in many cases.

The pluralistic feature of American society of advocating egalitarianism has attracted Muslim Americans who seek to fill the gap between Western worldviews, secular and egalitarian in nature, and Islamic worldviews, holistic and religious in nature. Diversity does not hinder communication among individuals adhering to different religions or religious sects. Despite the differences in worldviews, American Muslims are interwoven into the fabric of the American multicultural society. Put differently, though Arabs, south Asians, and African Americans are the largest ethnic groups representing Islam in the United States, there is a sort of unity among them. Muslim identity is not entirely to be understood as "either-or" but as "both-and" in the sense that an individual can be Pakistani or Arab and Muslim and American at once.

Muslim Students Association

The Muslim Students Association (MSA) is dedicated to serving Muslim students on college campuses in North America. The main focus is to serve Muslim students who practice Islam as a way of life while balancing their academic responsibilities. Since 1955, the Harvard Islamic Society (HIS) has been serving the spiritual needs of Muslim students at Harvard University while providing resources and education to the college community about Islam.

MSA National is a religious organization that was established in January 1963 on the campus of the University of Illinois at Urbana-Champaign by 75 Muslim students representing 10 colleges across the United States and Canada. Since then, over 600 MSA chapters in higher education institutions in North America have been providing

support, resources, and coordination among affiliated MSA chapters. Not all Muslim student organizations are necessarily affiliated with MSA National, and some Muslim student organizations are called by the name "Islamic Society" or "Islamic Center." Local chapters may choose to adopt the guidelines of the National MSA office, but there is no fixed structure between MSA National and local organizations.

Initially, Muslim Students Associations, Student Unions, or Islamic Societies in North America consisted of a few foreign graduate students, but they later grew to encompass both undergraduate and graduate students in private and public academic institutions in the United States and Canada. Estimates of the population of Muslim students in North American colleges vary from 75,000 to 1 million. Their numbers grew after 1950, and the demand for MSA organizations increased. Muslim students can be immigrants or the children of immigrants, native-born Muslims, and American or Canadian converts to Islam.

In Europe, there are also Muslim student organizations, such as the Forum of European Muslim Youth and Student Organisation (FEMYSO), which was established in 1995. In North America, MSA organizations can also be found in high schools to provide social and religious support for students and guidance in both academic and religious issues. It is important that such organizations exist to support Muslims students because, particularly in primary and secondary schools, Muslim students may experience "deficit model" treatment that is directed to most minority students, such as low teacher expectations and peer pressure in coed classroom settings to represent their religion and culture, as well as receiving ESL class placements even if they are native speakers, and being scheduled to lower-level course choices by school counselors. MSA organizations around the world fulfill the need to support Muslim students, who require delicate negotiations about their religious and cultural practices in school settings.

While pursuing higher education, Muslim students reconcile their religious requirements, such as praying five times a day or fasting during the month of Ramadan. Student organizations at higher education institutions seek certain accommodations to balance the demands of their

academic requirements and religious responsibilities. The response to the needs of Muslim students depends on the university's secular orientation, its commitment to diversity, its interpretation of "equality" and "equity," and its interpretation of the policies and procedures that are in place. Some institutions acknowledge the religious holidays in their academic calendar, provide space for prayer, accommodate meal requests, and/or welcome Muslim chaplains to their campuses, whereas others may see the MSA campus organizations as problematic or unfairly offering privileges to one group of students.

Depending on the needs of the local MSA, students may petition for certain rights to participate in their religious requirements. Because all Islamic holidays are based on a lunar calendar, changing year to year, it may be challenging for Muslim students to celebrate Muslim holidays such as Eid Al-Fitr and Eid Al-Adha on college campuses. Beyond securing quiet and clean spaces for praying and requesting an academic schedule that meets the demands of praying times and religious holidays, female students may request that the swimming pool be reserved for females (along with females of other faiths) for certain times of the week, or request halal food options in the cafeteria at served certain times of the day during the month of Ramadan.

MSA organizations may have a faculty advisor and work with the school administration to create a safe and productive environment for Muslim students, especially if they are the minority in the classroom and wearing a hijab—a veil that covers the hair and neck. Community service has also been a central component of most MSA organizations, by providing spaces for prayer; suggesting meal options for dietary restrictions of Muslim students (e.g., meals without pork products and alcohol); inviting speakers to campus; organizing trips, lectures, and panels for the campus community; holding Islam Awareness Week (IAW); providing Arabic classes to read the Qur'an; and participating in food drives to organizing interfaith service projects, such as sponsoring Fastathon events during the month of Ramadan. Fastathon events invite members of the campus community to try fasting for a day and joining with other Muslim students. Proceeds from these events are donated to shelters, soup kitchens, or other good causes.

As college campuses become more diverse and students of the Muslim faith increase in numbers, the role of student organizations such as MSA becomes significant for fostering multicultural education among higher education communities. MSA brings new challenges as well as educational opportunities for the campus community, provides a platform for interfaith dialogue and community projects for its members, and prepares students for the globally interconnected world.

Mutual Aid Societies

Mutual aid societies, also known as mutual benefit societies, fraternal orders, lodges, friendly societies, and benevolent societies, are voluntary organizations that provide funds or services in kind to members in cases of loss of income, illness, or death. Mutual aid societies were the forerunner to welfare and social services in the United States and peaked from the mid-19th century to the first half of the 20th century. Societies are an

amalgam of social clubs and financial institutions that provide coverage and protection while promoting values of self-reliance, benevolence, and moral character.

Closely related institutions include mutual savings banks and savings and loan associations, and the simplest mutual aid societies are simply burial societies, pooling funds in order to pay for the funerals and death expenses of deceased members. Where mutual aid societies have distinguished themselves, though, is in the aid and fraternity they have provided to specific ethnic groups and recent immigrants.

The first American mutual aid society was the Free African Society, founded in 1787 by Richard Allen and Absalom Jones, two Philadelphia ministers. American church beneficial societies were some of the earliest institutions that provided relief for sickness and burial, and they operated as the first insurance-type program, which was non-actuarial and truly mutual aid in nature. Monies were collected during meetings and social occasions, were held in reserve for emergencies, and were available to any member.

In cases of emergency, members were offered money as presents or services in kind. Later, mutual aid societies were established without regard to religious affiliation, but were still moral in nature, and emphasized living an orderly and sober lifestyle. In addition, mutual aid societies were identified with political affiliations, trades, new immigrants, and ethnic and racial minorities.

The risks of loss of income were real and commonplace, and included loss of income from lay-off and illness, retirement because of injury or old age, and death of the breadwinner in the family. If a husband died and he was the sole source of income for the family, his widow and children were left with nothing. Workplace injuries were also common at factories and mills, leaving workers permanently disabled or disfigured, and no longer able to work. Also, the elderly were still expected to pay bills, despite having no pensions, and were unable to continue working. There were no regulations, agencies, or programs like unemployment, social security, or worker's compensation. The only avenue open to employees was litigation against an employer, which always resulted in automatic termination. Mutual benefit self-help institutions filled these needs.

The golden age of mutual aid societies was from the 1880s to the 1920s, which was not only a time when membership in fraternal organizations increased significantly but was also an age when immigration had accelerated and large numbers of first- and second-generation Americans of many ethnic origins could be found in most cities. Mutual aid societies became the vehicles of identity formation for communities transitioning from agrarian to urban life. Societies sprang up in cities all over the United States, embracing displaced farmers, new immigrants, and minority populations. They promoted kinship among members to take care of one another, like a new, extended family. Like many immigrant and ethnic groups—Asian benevolent societies, for example—propagated their community values of filial piety and familism, which further reinforced that people from the same place or clan are morally obligated to help one another, and mutual support was viewed as a privilege rather than a burden.

The Jewish and Irish mutual benefit institutions shaped their community's occupational and commercial activities. Black lodges were some of the oldest and strongest black organizations that emerged from slavery. Membership of black working males in lodges outnumbered those of whites. Women also enjoyed the benefits with dedicated orders and auxiliaries.

Although some societies were formed along fairly broad criteria, like Irishness or Jewishness, others were far more specific. For instance, the Kalushiner Benevolent Association was for Jewish immigrants from Kalushin, whereas the Sant'Agata Workers' Society was for Italian immigrants from Sant'Agata. Even among organizations where old regional boundaries were ignored, religious affiliation could be important. For instance, over 11 years, four different national Slovak mutual aid societies formed in the United States. The National Slovak Society (1890) was secular but formed the same year as the First Catholic Slovak Union and was followed shortly by the Slovak Evangelical Union (Lutheran, 1893) and the Slovak Calvinist Union (1901).

Hispanic Americans formed mutual aid societies called mutualistas beginning in the late 19th century, sometimes with support from the Mexican government. The Alianza Hispano-Americana was founded in Tucson, Arizona, in 1894

and by the end of World War I operated 88 chapters, mostly in the former Mexican territories of the southwest.

Many of the mutual aid societies that formed, such as the Ancient Order of Hibernians (AOH, for Irish Catholic Americans) and La Liga Protectora Latina (for Hispanic Americans), were politically active as well. The introduction of political involvement into mutual aid societies may have contributed to their eventual decline by creating controversy among the membership, especially as ethnic communities grew large and less homogeneous. Members of the AOH, for instance, frequently disagreed over the role of the organization in Irish politics, dividing the group into two organizations for decades. Hispanic mutualistas became involved both in the desegregation movement and the later Chicano movement.

Varied Roles

The role of mutual aid societies was not exclusively economic. Most of them maintained a steady social calendar of formal and informal events, gatherings, and cultural festivals, which helped preserve cultural practices from the home country. In the 19th century, when immigrant parents generally encouraged their children to marry within their ethnic group, these social aspects were particularly important and provided a motivation to participate, even for members who were financially self-supporting. Mutual aid societies could also provide social and cultural support of a less tangible nature. For example, the Knights of Columbus, while not limited to a specific ethnic group, was founded in 1882 when Catholic immigrants of various ethnicities had to deal with living in a country filled with many people who still considered Catholicism to be intrinsically anti-American. While providing for the needs of poor Catholic immigrants, the Knights just as importantly created a dialogue in the American Catholic community and were instrumental in forming American Catholic identity.

Societies grew larger and became regional and national in scope, with some owning and operating orphanages, hospitals, schools, and retirement homes. The senses of fraternity, mutualism, and family were highly valued and taught members self-determination, thrift, and economy. Mutual aid societies enabled the poor and working class to

afford services on the principles of reciprocity and fellowship, and promoted self-reliance over the stigma of charity. These institutions made a clear and strong distinction between mutual aid and charity. Mutual aid was considered progressive in serving brothers and sisters of a group, rather than being charity that made a person dependent on the government or wealthy benefactors.

This collective response to the conditions of urban life also led to the collective economic development of immigrants and ethnic and racial minorities. These self-help institutions led to economic capital and the development of immigrant banks and credit unions, small businesses, cooperatives, and collectively owned commercial enterprises and agricultural operations.

Mutual aid societies declined because of several factors, including the rise of the welfare state and social services implemented by the New Deal from 1933 to 1936. Further, as the suburbanization of the country began, ethnic populations became more spread out and intermarriage between ethnic groups became more and more common, leading to generations who might no longer identify strongly enough with their ethnic label to join a benefit society for that ethnicity. Some societies converted to other types of organizations. Two prominent African American mutual aid societies, for instance, became insurance companies: The Mutual Aid Association became the Atlanta Life Insurance Company, and the Pilgrim Benevolent Society became Pilgrim Health and Life Insurance. The process was gradual, and as late as 1915, mutual aid societies and fraternal organizations still provided the majority of African American insurance.

Membership also dwindled during the Great Depression and after World War I, when immigrant quotas were limited. Competing forms of entertainment and recreation, such as television, radio, and travel, contributed to the decline. With new government insurance regulations, many opted for commercial insurance actuarial contracts for insuring children and groups that were not covered by mutual aid societies, depleting their reserve. The economic success of immigrants, coupled with assimilating into middle-class America, also siphoned membership. The establishment of service organizations like Rotary International, Kiwanis International, and Lions International,

which all catered to professionals and businessmen, emphasized service and altruism over mutualism and reciprocity with peers.

However, even as the growth of mutual aid societies and their prominence in American life diminished in the main, the 20th century was a growth period for mutual aid societies for some specific ethnic groups. Middle Easterners, for instance, began to arrive later than European groups had, and Arab mutual aid societies and other groups grew as they did so. Though Jewish immigration had been ongoing for generations, a new wave of immigration propelled by the rise of the Nazi Party in Germany contributed to the founding of the Immigrants Mutual Aid Society in Boston in 1938, for German-speaking Jewish immigrants. It continued to provide assistance until 1980.

The Japanese Mutual Aid Society of Chicago formed in 1934, when Japanese Americans faced an increase in discrimination and a growing need for mutual support. Other Japanese American mutual aid societies, often founded by first-generation immigrants, were founded throughout the United States and provided valuable networking, financial assistance, and hostel accommodations to Japanese Americans released from internment camps during World War II.

While European immigrants brought mutual aid societies and their underlying concepts with them from Europe, Korean immigrants imported the *kye*, a type of rotating savings and credit association (ROCSA), which originated in rural communities. In a ROCSA, members contribute equal amounts of money at each meeting and take turns keeping the resulting sum. Originally, no money or assets are held by the ROCSA, which makes it an ideal system in low-literacy communities; today, the ROCSA may also collect a fee to cover overhead expenses. ROCSAs also represent a form of savings that bypasses the banking system and formal financial system and is less subject to their risks in less stable economies. *Kyes* operated by Korean immigrants were introduced in the early 20th century, mainly on the west coast and in Hawai'i, later spreading to east coast cities like New York.

Similar associations had provided services for Chinese and Japanese immigrants in the 1930s; in New York, the Chinese ROCSA called the Hui

continues to be used by Taiwanese Americans. More prosperous Korean Americans who had the money to spare would often join multiple *kyes*, staggering their payout periods throughout the year. This was a useful means of raising money for educational expenses, for instance. In the 1980s, *kyes* with especially large pools—in the hundreds of thousands or even millions of dollars—were formed for Korean American entrepreneurs as a means of raising capital to start or expand small businesses, principally in Los Angeles and New York. Many entrepreneurs make use of the *nakch'al kye*, in which members offer business loans to one another at various rates of interest instead of contributing equal sums.

Today, some of the more recently founded mutual aid societies are those concerned with assistance for refugees; they may receive funding from outside sources or established members of the community. The Iraqi Mutual Aid Society (IMAS), for instance, was founded in 2009 for refugees from Iraq, who constitute 25 percent of refugees to the United States. IMAS provides employment assistance, English and Arabic language instruction, social networking, and workshops every other month on acclimating to life in the United States.

Mutualista

Mutual aid societies in the Chicana/o community were one of many forms of resistance demonstrated by those of Mexican ancestry after the Treaty of Guadalupe Hidalgo (1848), ending the Mexican-American War (1846–48). By 1900, within a half-century of the signing of the treaty, the majority of Mexican Americans had lost their land and become wage workers for others. In order to protect not only their cultural and linguistic practices but also their economic well-being, they formed mutualistas for self-preservation.

Discrimination and exclusion from other ethnic and mainstream organizations and trade unions accelerated the growth and importance of mutualistas. These groups functioned on the notion of mutualism: the practice of mutual dependence for economic and sociocultural security. Previous gifting and sponsorship practices dating back to the Spanish colonial era, such as *compadrazgo* (godparenting), predated mutualistas and continued long after their decline.

Large mutualistas such as the Alianza Hispano-Americana (AHA) in Tucson, Arizona, contributed to the organizing experiences of its members and gave rise to the more militant Chicano civil rights organizations of the 1960s and 1970s. Mutualistas also paralleled the self-defense and patriotic organizations of other ethnic and immigrant American groups, such as black mutual aid societies founded in the late 1700s in cities like Philadelphia, almost a full century before mutualistas. At times, groups worked across ethnic lines, such as in the 1950s, when the AHA worked with the National Association for the Advancement of Colored People (NAACP) to address common problems with segregation.

Mutualistas had existed in both Mexico and Latin America prior to their adoption in what would become the southwestern United States. In the United States, mutualistas were formed based on geographic areas or along trade or religious lines. They maintained close ties to other organizations in the community, pooling and targeting scarce resources and serving as networks and conduits for information. They demonstrated resilience and the type of ingenuity and resourcefulness often touted in the American popular lore of rugged individualism and self-determination.

Mutualistas were particularly important for recent immigrants trying to establish ties in a new community.

Sociedades mutualistas (mutual aid societies) charged small monthly dues in exchange for economic, social, and educational benefits to members such as unemployment benefits; health, disability, and burial insurance; credit unions; legal aid; translation services; newsletters; support for religious or folkloric celebrations; and programs for women and youth. They often conducted meetings in Spanish, had the names of important Mexican or Latin American heroes, and reinforced cultural, religious, and linguistic traditions in the face of extreme xenophobia and assimilationist pressures in the early 20th century.

Prior to the New Deal and creation of many social safety-net programs, mutualistas were often the only resource for Mexican Americans in their communities. The Great Depression, also known as *La Crisis*, devastated many mutualistas with massive unemployment and the repatriation program; more people were collecting at the same time that fewer people were paying. Mutual aid societies continued after *La Crisis*, however, because of ongoing discrimination within trade unions, which often provided similar member benefits, and with the implementation of New Deal programs.

The *Club Reciproco* (Reciprocal Club) of Corpus Christi, Texas, founded in 1873, was one of the earliest examples of mutualism among Latinas/os in the United States. One of the largest and most successful mutualistas was Tucson, Arizona's Alianza Hispano-Americana (Hispanic American Alliance) founded in 1894. The Alianza expanded to over 200 chapters across the United States and Mexico, held national conventions, and lasted well into the 20th century.

Though mutualistas sometimes offered separate auxiliaries for women, some were founded and run by women, bearing the name of important female historical figures. Some mutualistas banned women from belonging altogether, viewing "fraternity" in the most literal meaning of the word. The Club Feminino Orquidea (Women's Orchid Club) in San Antonio, Texas, was free-standing and supported the work of other organizations like LULAC (the League of United Latin American Citizens). In Laredo, Texas, women belonged

to an organization bearing the name of the criolla *corregidora* involved in the Mexican independence movement, Sociedad Josefa Ortiz de Dominguez.

Mutualistas also bridged the U.S.-Mexico border, and organizations with chapters on both sides of the border saw members move freely between the two. Prior to the Mexican Revolution (1910–20) and the rule of Porfirio Diaz (1876–11), which outlawed many mutualistas, they thrived in Mexico, threatening foreign economic interests with their solidarity and size and their forays in politics. Mutualista members who fled the revolution in Mexico reestablished their organizations in the United States.

The tradition of mutualistas declined with the Chicano civil rights movement, New Society programs, and the War on Poverty in the 1960s, when the traditional benefits of membership became available from a variety of agencies and organizations. For example, the United Farm Workers of America provides the Robert F. Kennedy Farm

Workers Medical Plan and the Juan de la Cruz Pension Plan, including death and survivor benefits.

N

N_____ Word, The

The word *nigger* is considered the most toxic, explosive, troubling, and offensive racial epithet to black Americans. There is a long, distinctly American history of racial contempt, suffering, and intimidation still associated with this word, underscoring the American history of divisive black/white relations. Originally a word that marked the difference between black Africans and white Spanish and Portuguese colonialists, *nigger* did not begin as a derogative. By 1555, the word *Negro* (of prior Spanish origin) referenced slaves brought to Britain, and by 1619, those brought to North America.

Whether by association, spelling, or pronunciation, the word *Negro* morphed into “*nigger*” and was negative, disparaging black people as subhuman, animal, savage—as “other.” Although American slave narratives detail how slaves were considered and treated like animals and chattel, the words *slave* and *nigger* are not synonymous.

The word *nigger* is most often associated with violence, race, and gender, in ways that link America’s past through slavery to America’s present. In 1992, two African American youngsters in the Bronx, New York, were assaulted by a white gang that spray-painted their faces white and repeated the word *nigger* throughout the attack. Witnesses at the Medgar Evers trial recall that the shooter

bragged about killing a “*nigger*.” In June 2011, James Craig Anderson, an African American in Jackson, Mississippi, was beaten and run down by teen white supremacists. Reports of the murder detail the leader Deryl Dedmon as setting out to “get a *nigger*.” After the murder, Dedmon allegedly bragged to friends, “I ran that *nigger* over.”

Among Blacks

Many American blacks and whites admit that the word *nigger* has remained an imprint on black bodies soaked in blood, literally and metaphorically, in American history. Although some blacks believe that they have reclaimed this word, given to them by white oppressors, there is no consensus on its use among African Americans. The word *nigger* still registers raw discomfort among many African Americans and retains its power to injure, intimidate, threaten, and degrade, despite the National Association for the Advancement of Colored People’s (NAACP) 2007 mock funeral, the organization’s efforts to remove the word from dictionaries, and the many social media campaigns to abolish the word’s use.

Grassroots efforts by some African Americans changed *Webster’s* definition of the word *nigger* as synonymous with “a black person” in 2007. Many debate the appropriateness of euphemizing the word *nigger* with the more politically correct “n-word” reference.

Even as Americans are physically more integrated than ever in the workplace, in school, and in some neighborhoods, critical discussions of the word *nigger* and its social and political implications are uncommon. The word *nigger* is not disconnected from prevalent and blatantly racist behaviors, attitudes, and visual imagery, such as the animalization of black people by likening them to coons, chimpanzees, monkeys, or gorillas; 19th-century American minstrelsy and past and present blackface costuming; lynching; the 1955 murder of Emmett Till in Money, Mississippi; the 1987 Ku Klux Klan murder of Michael Donald in Mobile, Alabama; and the 1998 murder of James Byrd, Jr., in Jasper, Texas. These and other examples evidence an American history of stressed race relations between blacks and whites.

Although all groups have words considered taboo that insult and attack—some referring specifically to sexual identity or orientation, some to economic class, religion, gender identity, or intellectual capacity—the word *nigger* transcends such categories in its ability to embody all the negativity that can be mustered by whites to demean any black person.

Furthermore, a “nigger cake” in Sweden created in 2012 to offer social commentary on female genital mutilation and a hip-hop clothing store called Nigger in Malawi underscore the fact that use of this word extends beyond U.S. borders, partly because of the globalization of hip-hop music that saturates the airwaves with this word in one form or another.

Black/White Race Relations

Whites allege confusion when blacks use the word *nigger* or *nigga* among themselves, but whites cannot use it without social consequences. Some blacks claim the appropriation of this word as intergroup endearment or solidarity. Some whites are offended when other whites use the word among themselves in referencing blacks. Although no one owns words and no one can dictate what people can and cannot say, the rules for whites’ use of the word in the presence of blacks—no matter the relation—creates tension and divisiveness. Although some whites and some blacks argue that pronunciation of the word signals its impact and intent as either endearment/solidarity

or insult—*nigger*, *niggah*, *nigga*—others argue that coming from any white person, the word is consistently problematic and stirs emotions that cannot be rationally explained.

Efforts to change the spelling and pronunciation of this word acknowledge the problem with the word itself. The words *nigga*, *niggahs*, and *niggars* punctuate many popular 19th-century American minstrel songs by whites mocking blacks. Hence, no revisions to the word *nigger*—either its modified spelling or pronunciation—can ignore or neutralize its original and lingering derogatory meaning and intent.

Among some African Americans, the word *nigga* is allegedly an intergroup social linguistic ritual, a mark of community. This belief is not unanimously shared by blacks old and young. Def Jam Comedy spoken word poet Julian Curry’s “Niggers, Niggas, and Niggaz” tells a predominantly black audience that no matter the pronunciation and spelling, the word *nigger* is derogatory and insulting to black people, and that blacks’ use of it does not reclaim it or give it new meaning.

Many contend that when blacks use the word, it is less about their power to take it back about than their disconnection with the American history of white oppression and violence against blacks. Black comedians Richard Pryor and Paul Mooney once over-saturated their acts with the word *nigger* but stopped using the word, even among their primarily black audiences, because they saw their use of it as perpetuating negative perceptions of and disrespect for themselves and other African Americans.

Practically no social, historical, and political situations give whites permission to use the word *nigger*, especially in interracial settings. Considerable media fallout accompanies whites’ public use of the word: family and relationship radio host Dr. Laura Schlessinger’s 2010 rant with a black caller (her claim that since black rappers use the words, she should be able to do so as well), reality show cast member Dog the Bounty Hunter’s 2007 recorded phone message to his son about the son dating a black woman, and a Florida white middle school teacher’s writing on a classroom chalkboard to his students that then-Senator Barack Obama’s 2008 CHANGE mantra stood for “Come Help a Nigger Get Elected.” Common among anti-Obama

2012 re-election slogans on decals and T-shirts was “2012—Don’t Re-Nig.”

Whether the word *nigger* is spoken out loud, written on a middle school classroom chalkboard, or sent through e-mail, the problem is the same: its use intends to demean and to disparage. When the word *nigger* is interrogated, white and black people, young and old, know that this word carries with it a long and painful living history that disparages black people.

Double Standard

Whites know that the word is off limits, even within their closed, segregated circles. Just because whites are exposed to hip-hop culture where the word is used with great frequency does not give them the right to use the word *nigger* without consequence. White rappers immersed in hip-hop culture do not routinely use the word *nigger* because they know, understand, and respect its history and associated inherent racially specific violence and oppression. White rappers and comedians understand and accept the fact that no degree of poetic license allows this word’s use, under any circumstance. This same rule about consequential use applies to non-blacks—Latinos, Native Americans, and Asian Americans.

In the 1960s, black authors and artists used the word *nigger* prolifically in their performances and social protests: Dick Gregory’s autobiography *Nigger*; Ed Bullins’s play *The Electronic Nigger*; and poems by LeRoi Jones, Amiri Baraka, Sonia Sanchez, Nikki Giovanni, and the Last Poets. In these instances, the word *nigger* was not a term of endearment; the word separated African Americans fighting for revolution to change their racially oppressed state from those who were content, passive, and committed to American assimilation and the status quo. The anger in 1960s artistic expression sought to exorcise African Americans’ negative thinking about themselves as black Americans.

The power of the word *nigger*—and any word that sounds like it, such as *niggardly*, which bears no direct connection to *nigger*—to sting, stun, attack, and resurrect America’s history of racial abuse, intimidation, and violence, reflects the present and past racial divide—cultural, historical, social, and political—between blacks and whites. Consistent media attention and public outcry supports the perception that when the word is connected with

whites referencing blacks directly, indirectly, or generally, the word’s effect is to attack, intimidate, or otherwise disparage.

Even when black and white youths participate in a more integrated and seemingly less racial 21st-century America, white youths express discomfort when they hear the word *nigger* spoken by their white peers in the absence of black people, and blacks feel uncomfortable and even angry when their white friends assume this linguistic privilege in their presence.

Comments from over 200 high school Mississippians responding to a 2010 survey by *Clarion Ledger* investigative reporter Jerry Mitchell reveal youths’ perceptions of and responses to this word’s use among blacks and whites. Taken together, these responses indicate that anti-black sentiments continue among blacks and whites, and can be summoned and summarized in one word—nigger.

NAACP Legal Defense and Educational Fund

The Legal Defense and Educational Fund (LDF) grew out of the efforts of the National Association for the Advancement of Colored People (NAACP) to work toward a society free of racial discrimination in all areas of life in the United

States: education, housing, employment, civil liberties, transportation, and property ownership. The LDF was the visible component of the strategy of the NAACP to use the courts to redress the outcomes of racial discrimination and to hold society to the ideals of the U.S. Constitution. Its mission has not changed since its establishment in 1940, and it provides a training ground for attorneys who are interested in specializing in civil rights.

The NAACP is an interracial organization created in 1909 to work for the abolition of racial segregation and discrimination in housing, education, employment, voting, and transportation; to oppose racism; and to ensure African Americans their constitutional rights. The founders of the organization included black intellectual and sociologist W. E. B. Du Bois (1868–1963), journalist and newspaper editor Ida Bell Wells-Barnett (1862–1931), socialist and descendant of abolitionists Mary White Ovington (1865–1951), and others who were concerned with the place of African Americans in American society.

The LDF was formed in 1940 under the leadership of Thurgood Marshall (1908–93), who became the first African American named to the U.S. Supreme Court. It reflected a strategy on the part of African Americans to use the court system to combat widespread, state-sponsored racial inequality. As the legal arm of the NAACP, it has provided legal advocacy and representation to local NAACP branches and state conferences. In its first two decades, it formulated a legal challenge to public school segregation.

Challenging School Segregation

The NAACP began its campaign against school segregation at the level of graduate and professional education. Such cases included *Missouri ex rel v. Canada*, *Sipuel v. Board of Regents*, *Sweatt v. Painter*, and *McLaurin v. Oklahoma State Regents*. The education offered by most historically black institutions of higher education was generally limited to undergraduate instruction.

Graduate and professional education is more expensive to provide, requiring specialized faculty, extensive libraries, and scientific laboratories. As a result, blacks who desired to pursue graduate or professional training had to attend northern institutions, which meant separation

from loved ones, the expenses of moving and traveling, and the adjustment to unfamiliar surroundings.

In *Missouri ex rel. Gaines v. Canada*, Lloyd Gaines, an African American, was denied admission to the School of Law at the University of Missouri. African American Charles Hamilton Houston was the lawyer who represented Gaines on behalf of the NAACP. In 1938, the U.S. Supreme Court ruled that states could not use the practice of out-of-state tuition scholarships to make up for the fact that blacks could not attend graduate and professional schools at white institutions, if no black schools in the state offered such training.

When Gaines disappeared, the NAACP did not oppose the motion on behalf of the University of Missouri to dismiss the case. Nevertheless, states were on notice that they had to provide graduate education for black residents within the state. In reality, the practice of using out-of-state tuition scholarships to circumvent the ruling continued into the 1960s.

In the case of *Sipuel v. Board of Regents of University of Oklahoma* in 1948, Ada Lois Sipuel had applied to the law school at the University of Oklahoma, the only taxpayer-funded law school in the state of Oklahoma at the time (1946). In 1948, the U.S. Supreme Court ruled that the “petitioner is entitled to secure legal education afforded by a state institution.” In this case, Sipuel was represented by Charles Hamilton Houston’s protégé, Thurgood Marshall. In response, the state created the Langston School of Law, which was considered inferior to the University of Oklahoma law school. Sipuel finally entered the school in 1949.

Thurgood Marshall

Born in Baltimore, Maryland, Marshall graduated from historically black Lincoln University (Pennsylvania). In 1930, he applied to the University of Maryland Law School but was denied admission because of his race. He subsequently went to Howard University Law School, where he met Charles Hamilton Houston, the dean of the school, who was determined to overturn the 1896 ruling in *Plessy v. Ferguson*. Marshall’s first major court case came in 1933, when he successfully sued the University of Maryland to admit a young African American Amherst University

graduate named Donald Gaines Murray. Marshall followed Houston to New York and later became assistant special counsel for the NAACP in 1936.

The NAACP's litigation activity was in no small way pushed by a series of World War II race riots. In 1943, racial tension over the disparity in job opportunities and wages for blacks versus whites, the limited supply of affordable housing, and the realization that black participation in the war effort did not erode discrimination fomented widespread violence in Detroit. The city was devastated by the riot, despite the presence of more than 6,000 federal troops. A total of 25 African Americans and nine whites died, and at least 700 were injured.

The LDF's most significant victory of the war years was the U.S. Supreme Court's ruling in *Smith v. Allwright* (1944), in which the court ruled that racially exclusive white primary voting contests in Texas and elsewhere violated the Fifteenth Amendment of the U.S. Constitution. During these years, activist Anna Pauline (Pauli) Murray (1910–85) floated the idea at a Howard University civil rights seminar that the NAACP should directly challenge *Plessy v. Ferguson*. A decade later, the LDF would take up that challenge.

In *Sweatt v. Painter*, Heman Marion Sweatt was refused admission to the University of Texas School of Law, on the grounds that the Texas State Constitution prohibited integrated education. In *McLaurin v. Oklahoma State Regents* (1950), George McLaurin was denied admission, based on race, to the University of Oklahoma to pursue a doctor of education degree. When the case was brought before the U.S. District Court of the Western District of Oklahoma, the court found that the university had not provided separate facilities, but it did not issue any injunctive relief.

McLaurin was admitted but was forced to sit at a special table in the cafeteria, a designated desk in the library, and a desk just outside the classroom doorway. The LDF appealed to the U.S. Supreme Court, which determined that the segregated restrictions were unconstitutional. The court's decision was rendered on the same day as *Sweatt v. Painter*, which struck a blow to the separate but equal doctrine of *Plessy v. Ferguson* in regards to graduate and professional education.

The NAACP Legal Defense and Educational Fund, the legal arm of the NAACP, was established in 1940 under the leadership of Thurgood Marshall. This 1956 photo shows (from left) NAACP leaders Henry Moon, Roy Wilkins, Herbert Hill, and Marshall.

Desegregation of Public K–12 Education

Finally, in a culminating victory within the realm of education, the LDF secured the landmark U.S. Supreme Court decision in 1954 known as *Brown v. Board of Education of Topeka*. In that decision, the court unanimously overturned the policy of “separate but equal,” legally sanctioned discrimination established by the Supreme Court in *Plessy v. Ferguson* in 1896. However, communities did not move with “all deliberate speed” to dismantle racial segregation.

As a result, the LDF sued hundreds of school districts across the country. In victories in cases such as *Cooper v. Aaron* (1958), *Green v. County School Board* (1968), and *Swann v. Charlotte-Mecklenburg* (1971), the Supreme Court upheld the original decision to eliminate racial segregation. More recently, the LDF has been on the forefront of the struggle to ensure an equitable opportunity to a high-quality education for all students. In *Grutter v. Bollinger*, the LDF served as lead counsel to African American and Latino students who intervened in litigation leading up to that case, which affirmed race-conscious university admissions policies for the purpose of attaining a diverse student body.

The LDF has not only been concerned with education. As a result of the LDF's efforts, the

U.S. Supreme Court overturned state-sanctioned segregation of public buildings, parks and recreation facilities, hospitals, and restaurants. It represented civil rights movement leaders such as Martin Luther King, Jr. (1929–68) and other activists who were arrested for participating in freedom rides, demonstrations, and marches to protest racial discrimination.

In *Hamm v. City of Rock Hill* (1964), the LDF persuaded the U.S. Supreme Court to dismiss all prosecutions of demonstrators who had participated in civil rights sit-ins at lunch counters in retail establishments in Rock Hill, South Carolina.

Right to Vote and Housing Discrimination

In 1943, Thurgood Marshall persuaded the U.S. Supreme Court to rule that the state of Texas' refusal to allow African Americans to vote in the Democratic primary election violated the Fifteenth Amendment of the U.S. Constitution. In 1965, the LDF litigated to ensure against disruptions of the voting rights march led by King from Selma to Montgomery, Alabama, shortly after the notorious "Bloody Sunday," when marchers were beaten by policemen as they tried to cross the Edmund Pettis Bridge. These events galvanized passage of the Voting Rights Act of 1965.

More recently, the LDF has been involved in challenging the voter identification laws of several states, particularly those that require photo identification. It is argued that such laws disproportionately disenfranchise poor and minority voters.

One of the important triumphs of the LDF was the 1971 U.S. Supreme Court's unanimous decision in *Griggs v. Duke Power Company*. In this precedent-setting case, Duke Power's Dan River plant added the requirement of a high school diploma for its higher-paid jobs and added an IQ test after the passage of the Civil Rights Act. African Americans were less likely to hold a high school diploma and averaged lower scores on the tests because of the lack of education.

Since the IQ tests and high school diplomas were not directly related to the jobs performed, the court found Duke Power in violation of Title VII of the Civil Rights Act, which prohibits employment tests that are not a reasonable measure of job performance. The *Griggs* case, therefore, helped eradicate arbitrary and artificial

barriers to equal employment opportunity for all individuals, regardless of race.

In housing discrimination, beginning with *Shelley v. Kraemer* (1948), the LDF won an important challenge when the U.S. Supreme Court barred enforcement of racially discriminatory restrictions on real estate transfers. In 1945, a black family purchased a house in St. Louis, Missouri. The Shelleys were unaware that a restrictive covenant barred blacks from occupying the property. The U.S. Supreme Court held that racially based restrictive covenants are invalid under the Fourteenth Amendment. The case was consolidated with *McGhee v. Sipes* from Detroit, Michigan. Orsel and Minnie McGhee wanted to purchase a house in an all-white neighborhood with a similar restrictive covenant. The attorneys who argued the case were Thurgood Marshall and Loren Miller.

Challenging Incarceration

The criminal justice system today is a primary example of the role of the LDF as a civil rights organization. It has challenged inadequate legal representation, discriminatory jury selection, capital punishment, criminal statutes, and harsh sentencing that disproportionately impact African Americans and lead to the incarceration of a large number of blacks in the prison industrial complex. The LDF has been on the forefront of an effort to abolish the death penalty.

In a 1972 case, *Furman v. Georgia*, the LDF won a nationwide halt to executions, but it was a short-lived reprieve. More recently, it has remained involved in successful campaigns that convinced the U.S. Supreme Court to narrow the death penalty's scope by eliminating capital punishment for juveniles and for crimes other than murder.

In 2000, the LDF took the case of Kemba Smith, a young African American Hampton University student who received a mandatory minimum sentence of 24.5 years in prison, even though she was a first-time offender. Her abusive drug-dealer boyfriend led her to play a peripheral role in a cocaine conspiracy. After she had served 6.5 years, her sentence was commuted by President William J. Clinton.

Over the decades, the LDF has employed its expertise and has worked to ensure that major civil rights laws, including the Elementary and Secondary Education Act, the Fair Housing Act,

the Voting Rights Act, and the Civil Rights Act of 1964 remain reauthorized. It also advocates for more diversity in the federal judiciary. Well-known lawyers such as Thurgood Marshall, Jack Greenberg, Julius Chambers, Elaine Jones, Ted Shaw, and John Payton have served the organization as director-counsel. Each director-counsel is recognized as a leading civil rights advocate. It is the pre-eminent constitutional training ground for lawyers committed to racial justice and equal opportunity.

Through its scholarship and fellowship programs, LDF has helped over 4,000 exceptional students attend colleges, universities, and law schools. Although initially the LDF grew out of the NAACP, it has been an entirely independent organization, with its own board of directors, since 1957. Through its network of legal assistance, it offers advice and counsel to NAACP branch presidents and state conference presidents throughout the nation. The LDF is a nonprofit organization located in New York City. It also has an office in Washington, D.C., that is the center of its advocacy work, monitoring legislation related to civil rights.

Narragansett

At the height of their power in the late 17th century, the Narragansett, a Native American tribe of the Algonquian linguistic stock, occupied most of present-day Rhode Island, from Narragansett Bay on the east to the Pawcatuck River on the west, as well as parts of western Connecticut and eastern Massachusetts. Their precipitous decline and gradual recovery typify the experience of indigenous tribes after the arrival of Europeans.

Cultural anthropologists, using archeological data and written archives of ancient oral histories, believe that the Narragansett were among the oldest organized tribes in North America, dating back 30,000 years before the first contact with European explorers in the early 1500s. Like most New England tribes, the Narragansett were primarily agricultural, but given the wooded wilderness and the readily available ocean stock, they also hunted and fished (most notably clams).

Their communities were organized around a sachem, who, in consultation with advisors, guided the settlement's development, saw to its economic stability, and maintained its security. The Narragansett were known for military acumen; several smaller tribes sought them in protective alliances. That influential position was strengthened when a wave of epidemics (most likely Weil's syndrome, introduced by itinerant French trappers) swept southern New England between 1615 and 1617, decimating other tribes but leaving the Narragansett largely untouched.

During the first decades of the 17th century, the Narragansett looked with concern at the growing influence of English settlers in neighboring Massachusetts. To maintain peace, the Narragansett, under the powerful sachem Canonicus, structured a land deal with the outspoken Protestant theologian Roger Williams and his followers in 1636, giving those settlers much of what is present-day Providence.

The Narragansett originally sided with the Puritan settlers in their war against the militant Pequots, until evidence of the brutalities of the English convinced the tribe to pursue a more aggressive stand against the English incursion into Massachusetts. By 1643, however, with much of the scattered resistance defeated and the English threatening to invade their lands in Rhode Island,

Detail from a participant's headgear at an August 2008 powwow of the Narragansett tribe in Charlestown, Rhode Island. The 2010 U.S. Census recorded 2,000 members of the tribe living in Rhode Island.

the Narragansett agreed to a treaty that would ensure peace for nearly 30 years.

That neutrality, however, ended when the Narragansett, then numbering close to 5,000, joined a cabal of tribes, most prominently the Wampanoag, to oust the English occupation entirely in a bloody year-long uprising known as King Philip's War (1675–76), named for the Wampanoag sachem (the English saw the sachem, incorrectly, as a monarchical figure). When an English expeditionary force attacked a Narragansett fortress and killed hundreds of unarmed men, women, and children (the Great Swamp Massacre) in December 1675, the Narragansett retreated into the heavy woods and swamps in southern Rhode Island. The English pursued. Over the next decade, those Narragansett who refused to accept occupation either headed west to New York State and beyond or were subjected to harsh treatment, most often sold into slavery to work on Caribbean plantations.

After the American Revolution, with the expansion of the white presence and the diminishing available land, the Narragansett were restricted to a government-run reservation (roughly 15,000 acres) near Charlestown, Rhode Island, where, over several decades, many of their traditional

social and political structures were systematically outlawed. However, despite dwindling numbers (estimates put the number at 80 in 1832), the increasing reality of tribal members marrying outside the tribe's bloodlines, and other members relocating to follow economic opportunities, the Narragansett maintained a slim reservation presence until in 1880 the state assembly "detrified" them, citing intermarriage and the loss of authentic bloodlines. No longer recognized as a functioning tribe, the Narragansett were removed from state financial support and their lands were no longer protected. In quick order, the state put much of the reservation lands up for public sale.

Although tribal representatives petitioned the state to reconsider and to restore tribal land, for a half-century the remaining Narragansett (estimates put the number around 300) continued to maintain what they could of their tribal identity, customs, and social structures (their language had long passed into extinction). For years, the tribe's members gathered annually in a specially built longhouse near Charlestown on three acres of original reservation land. That gathering alone ensured the continuity of the Narragansett Nation.

It would not be until the 1970s, during the era of the advocacy of Native American civil rights and the widespread movement among Native Americans to reclaim tribal identity and assert cultural pride, that the remaining Narragansett tribe would file a land claim suit against the state of Rhode Island to reclaim ownership of more than 3,000 acres of lost reservation lands. An out-of-court settlement returned half. To establish wider claims to land and to establish itself as a viable tribe, the tribe needed to receive federal recognition from the Bureau of Indian Affairs. Following the submission of a 15-volume application that traced the genealogy of more than three centuries of the tribe's history, the tribe received its official designation in April 1983.

Over the next 20 years, the tribe realigned its community organization and implemented significant policies to pursue legal avenues that would put its former lands into a trust, thus removing state government control. To date, the attempt has not been successful. An ambitious program has been initiated to re-create the lost Narragansett language. In addition, the tribe has pursued controversial plans to open casinos on tribal land.

The tribe now occupies a reservation of roughly 1,800 acres. The 2010 census put its population at a little over 2,000, making it the largest Native American population segment in Rhode Island.

Nation of Islam

The Nation of Islam (NOI) was founded by a man calling himself Wallace D. Fard, or W. D. Fard, on July 4, 1930. Fard worked as a peddler and his ethnic origins are somewhat of a mystery. He told his early disciples, “I am W. D. Fard and I came from the Holy City of Mecca. More about myself I will not tell you yet, for the time has not yet come. I am your brother. You have not seen me yet in my royal robes.” He was, regardless of his ethnic origins, a Muslim. Fard’s proselytizing appealed to disenfranchised urban blacks during the era of Jim Crow and those affected by the lack of real opportunities promised by northern cities during the Great Migration (1915–30).

He utilized messianic iconography and relied upon the Bible, rather than the Qur’an, to relate better to urban Christian blacks. He wanted to replace the “white Christianity” that had been imposed upon blacks with a religion that elevated blacks. Fard’s mission also offered sensible advice for racial uplift. The NOI promised a steady

income, good jobs, and liberation from social and economic depression, if followers accepted Islam. Fard encouraged his followers to fast by only eating one meal a day, emphasized thrift and family, and banned alcohol and smoking. In 1934, Fard disappeared from Detroit as mysteriously as he had arrived, and his most enthusiastic disciple, a man named Elijah Poole, became Fard’s successor. Every February 26 is observed as “Savior’s Day” in the NOI, in honor of the organization’s founder.

Elijah (Poole) Muhammad was W. D. Fard’s successor. He met Fard at a meeting of the NOI in Detroit during August 1931, where he supposedly told Fard, “I know who you are, you’re God himself.” Fard replied that this was true, and Elijah Muhammad became one of Fard’s most enthusiastic and devoted disciples. After Fard’s mysterious departure, Elijah Muhammad, the son of a Baptist preacher from Georgia, became the leader of the NOI. During his 41 years as head of the NOI, he transformed the NOI into a powerful religious organization for black Muslims, espousing racial separatism and the supremacy of the black man. At the time of his death in 1975, the NOI claimed a membership of more than 25,000.

Beliefs

The fundamental belief of the NOI is that blacks are superior to whites. Members of the NOI believe that the white man evolved from the black man, thus making the latter racially superior. The NOI uses evidence gleaned from the study of evolution and contemporary genetics to affirm this belief. Potential members of the NOI must accept these tenets, be literate, and demonstrate an active commitment to promoting Islam, black agency, rights, and separatism. Membership in the NOI requires a letter of application submitted to the chief minister. Under the leadership of Elijah Muhammad, new members were also required to replace their last, or “slave name,” with “X” to signify unknown African ancestry and symbolically reject their ancestors’ white masters.

According to the NOI, blacks are the descendants of the Tribe of Shabazz, Afro-Asiatic in origin. A black scientist called Yakub, exiled by the tribe from his home in Mecca on the Arabian Peninsula, decided to take revenge on his fellow countrymen by creating an entire race of people diametrically opposed to the black race.

Through the careful blending of recessive genes, Yakub created a new race called Caucasians. The story goes on to say that this white race was to rule the black race for a period of 6,000 years, and that they would be taught how to “divide and conquer, and break the unity of the darker people, put one brother against another, and then as mediators to rule both sides.” Slavery, according to the NOI, erased the historical and cultural memory of the descendants of the Tribe of Shabazz.

Another important aspect of NOI belief is the concept of the Mother Plane, or Wheel. The concept of the Mother Plane is derived from a passage in the Book of Ezekiel (1:15-18), which describes a wheel “like the gleaming of beryl.” In NOI belief, the Mother Plane not only is the same one that is described in Ezekiel, but that it was built in Japan, is made up of gold and steel, and was essential to the creation of mountains on Earth. Inside the plane are 1,500 smaller planes that each carries a bomb. These bombs, according to the NOI, created the mountains that in turn help balance the Earth.

Race, Racism, and Civil Rights

As a result of the NOI’s radical views on race, the organization is often categorized as racist. However, it is not a racist organization; it is an organization that advocates for racial separatism. Central to the NOI’s doctrinal belief is the perpetuation of the binary between black and white and the emphasis on racial superiority. In NOI discourse, blacks are regularly described as “elevated and divine,” while whites are described as “blue-eyed devils.”

The 1960s were the pinnacle of the Nation of Islam’s national presence, thanks to the civil rights movement and the NOI’s spokesman, Malcolm X. For whites, the NOI represented black racism and militancy, and members of the NOI were subsumed under the banner of black nationalism and radicalism. Late in the 20th century, the NOI began to shift its priorities toward community-building and outreach, realizing that its longevity relied upon a more inclusive approach to other blacks. By the 1990s and into the early 2000s, the organization began inviting other faiths, whites, and members of the lesbian, gay, bisexual, transsexual, queer, questioning,

and intersex (LGBTQQI) community to build cooperative relationships. The NOI supports community development and often contributes to HIV/AIDS prevention and education. In urban neighborhoods, the NOI offers security patrols known as the Fruit of Islam.

The NOI emphasizes traditional gender roles for its members and that women members are elevated above others. In order to achieve and maintain the essential racial integrity of the NOI, there is a ban on interracial dating; there is a dress code for women that includes veiling and no tight or revealing clothes, and the use of cosmetics is prohibited. Women are allowed to work outside the home, but they are expected to raise the children and perform domestic duties.

In the 2000s, the NOI began to promote women to more prominent positions within the organization, including the appointment of Ava Muhammad to chief minister, a position formerly held by Malcolm X. In addition, Dora Muhammad is now the first female editor on the staff of the NOI’s newspaper, *The Final Call*.

Schism

Twelve years after joining the NOI, Malcolm X abandoned the organization, claiming that he had discovered true Islam. He founded an alternative to the NOI called the Muslim Mosque Incorporated (MMI) and the Organization of Afro American Unity. In 1964, Malcolm X was invited by the government of Saudi Arabia to go on the annual *hajj*, or pilgrimage to Mecca, the supposed birthplace of the Tribe of Shabazz. In Mecca on *hajj*, Malcolm X converted to Sunni Islam. His conversion from the NOI publicly signaled a weakening within the NOI that would end in schism in 1975. On September 21, 1965, Malcolm X was murdered at the Audobon Ballroom. Speculation remains as to the exact reasons for his assassination and whether his assassins were from inside the NOI or another organization.

In 1967, Elijah Muhammad’s son, Warith Deen (W. D.) Muhammad, made the pilgrimage to Mecca and converted to Sunni Islam from the NOI. When his father died in 1975, W. D. Muhammad began to publicly change the image of the NOI and reform the group, so that it was more in sync with Orthodox or Sunni Islam. Together with current NOI leader Louis Farrakhan, W. D.

Muhammad rejected the NOI in favor of Sunni Islam. This process of Islamization of the NOI was an important step for African American Islam. Blacks rejected the NOI in favor of a true cultural authenticity that was congruent with the black arts movement of the 1970s. After a brief conversion to Sunni Islam after Elijah Muhammad's death, Farrakhan, W. D. Muhammad's appointed successor before his death, left Sunni Islam and re-embraced the NOI in 1978. Farrakhan remains the leader of the contemporary NOI.

Although the NOI uses "Islam" in its official title, it bears no resemblance to Orthodox Sunni Islam. The cosmology of the Nation of Islam shares only some superficial attributes with Sunni Islam: it claims its origins in Mecca, Allah as their sole deity, Arabic as a sacred language, and prohibition of alcohol. The crescent moon serves an important signifier of the NOI and is present on the various material accouterments of the NOI's leadership and publicity.

Worship in the NOI takes place in a series of buildings called temples, the most famous of which is perhaps Harlem's Temple No. 7, where Malcolm X performed much of his ministry in the 1950s and early 1960s. The similarities between the NOI and Sunni Islam are superficial. The NOI adopted signifiers of Sunni Islam, including the crescent, the mosque structure, and veiling, but its theology and lack of pluralism make it distinct from Sunni Islam.

National Association for Bilingual Education

As the education of bilingual students has grown in both interest and importance, the National Association for Bilingual Education (NABE) was formed to advocate for bilingual and English language learners and their families. NABE also serves teachers and administrators interested in bilingual education by serving as a resource for research and materials supporting best practices in the field. Since proponents of structured English immersion began advocating for that method of instruction, NABE has emerged as one of the major opponents to it. NABE is often opposed to the positions of rival organization Teachers of English to Speakers of Other Languages (TESOL), a group that places more emphasis on English acquisition and less on maintenance of the primary or home language.

In the aftermath of World War II, interest in language acquisition grew dramatically in the United States. This interest in language acquisition was spurred partly by experiences of servicemen and women who were posted overseas, and partly by the United States' increased involvement in international affairs after the war. American public schools began to offer more foreign language classes, and a surge in immigration resulted in a variety of English language learners in the United States.

How best to educate the children of these immigrants, who often spoke a language other than English at home, became a topic of controversy. Some wanted the focus of schooling to be on the acquisition of English, whereas others felt that honoring and maintaining the language used at home was of equal importance. Disagreements about how best to deal with English language learners, and how to promote bilingual education among native English speakers, have continued.

In 1966, TESOL was formed to promote quality language education in the schools and elsewhere. From its founding, TESOL has officially expressed a desire to foster both English and the learner's home language. Despite this, some perceived the organization as having little concern in providing non-English resources to teachers or in studying which immigrant populations

maintained, or failed to maintain, their primary language. As the first organization focused on the teaching of English to English language learners (ELL), TESOL grew quickly in membership and influence.

During the 1970s, the number of immigrants arriving in the United States rose dramatically, then continued at high levels for nearly four decades. Immigrants who came to the United States during this period were often poorer and less educated than before. The United States saw an especially large influx of immigrants from countries where Arabic, Chinese, Korean, Russian, and Spanish were spoken. Advocates affiliated with TESOL were seen by some proponents of bilingual education as undermining the concept of dual language acquisition.

The structure of most language departments at the K–12 and college and university levels during the 1970s focused almost exclusively on teaching a single language, be it English to non-English speakers, or another language to English speakers. This meant that the advocates of bilingual education were at a disadvantage when attempting to encourage language acquisition programs that favored both English and another language. As a result of the perceived need for a group to promote the interests of bilingual learners and the needs of bilingual teachers, leaders in the field began planning for a new national organization. NABE was founded to push for these outcomes.

Founding and Growth

NABE was founded in 1972 in an effort to further the needs of America's ELLs and their families, and to provide professionals who serve these groups a place to network and share promising practices and instructional strategies. In particular, NABE has looked to promote policies, practices, and programs that support the organization's four primary goals. These four primary goals include allowing ELLs to achieve academic success, appreciate their primary or home language, attain proficiency in English, and acquire a respect for cultural and linguistic diversity. NABE sees these four goals as essential to the well-being of ELLs and their families. This sort of agenda also is preferred as more likely to assist in cultivating a multilingual and multicultural society

than one that focuses solely upon the acquisition of English.

NABE is composed of members from around the United States and abroad. Members include classroom teachers, school administrators, bilingual coordinators, college and university professors, and others interested in bilingual education. The NABE membership has long been perceived as more committed to social justice and multiculturalism than members of TESOL. Long an advocate of language policy that encourages all students to learn two or more languages, NABE has also taken positions opposing the No Child Left Behind (NCLB) legislation and has, with 60 other education and civil rights organizations, advocated for changes to the "test and punish" culture present in many schools.

To that end, NABE joined the Alliance for Fair and Effective Accountability (AFEFA), a coalition of organizations that advocate for changes in how schools deal with students, especially those from multicultural backgrounds. Specifically, AFEFA asks that departments of education and schools focus on assessments that measure each learner's progress, rather than making comparisons with others; build capacity of schools and school districts through continued professional development based on research; eliminate sanctions that penalize low-performing schools; and increase funding so that all low-income students receive the education to which they are entitled.

To further its members' interest in children's education, NABE works to develop and influence research, policy, programs, and pedagogical practices that support the use of second and primary languages in everyday life. NABE sees an increasingly diverse world, making it necessary for all individuals to be both bilingual and bi-literate. The increasingly global society has made NABE one of the chief advocates for learning more than two languages and cultures. To that end, NABE has been consistent in indicating its preference for programs that permit students to maintain their primary language as well as learn English.

Although a variety of approaches to working with language minority students exist in the United States, the most common are structured English immersion, transitional bilingual education, two-way/dual language immersion, and late-exit/developmental bilingual education.

Structured English immersion entails immersing learners in the target language while providing content support through a variety of instructional methods. Transitional bilingual education involves education in the student's primary language for no more than three years, with the goal of transitioning to English-only instruction at the end of that period.

Two-way/dual language immersion is designed to help both native and non-native speakers of English to become bilingual and bi-literate, through extended and consistent exposure to two languages in school. Late-exit/developmental bilingual education provides instruction in the student's primary language for an extended period of time, often six or more years, with maintenance of the home language a major goal of the program.

NABE has consistently opposed structured English immersion programs, and it favors two-way/dual language immersion or late-exit/developmental bilingual education. Because certain states, such as Arizona, California, and Massachusetts, have passed legislation mandating structured English immersion programs for non-English-speaking students, NABE has seen its influence decline in those areas.

Services to Members

For the past 40 years, NABE has sponsored an annual conference that permits members to share research findings, learn about effective instructional strategies that promote bilingualism and bi-literacy, advocate for policies and legislation that assist and support ELLs, and network with other like-minded professionals. In addition to its annual conference, NABE also sponsors a variety of smaller meetings throughout the year that address specific issues of interest to certain groups, such as indigenous language instruction, using bilingual dyads, and successes. NABE also holds occasional teleconferences, when members can dial in to a national conversation regarding issues of topical interest.

NABE sponsors a variety of publications to help its membership keep abreast of developments in the field of bilingual education. Cognizant of its audience, some of these are intended for scholars, while others focus on the general public. These include the *NABE Journal for Research*

and *Practice* and the *Bilingual Research Journal*, which focus on the dissemination of the results of studies concerning language acquisition and ELL teaching and learning. NABE also publishes *NABE News*, formerly *Language News*, which contains information regarding instructional strategies, success stories, and developments in law and policy—it is a slick-paper magazine intended for parents and teachers. In addition to its Web site and blog, NABE also maintains a career center to help match job seekers with employers.

In addition to membership in the parent organization, NABE members may join special interest groups (SIGs) devoted to special topics. With its national office located in Silver Spring, Maryland, NABE's leadership has easy access to lawmakers in nearby Washington, D.C. NABE currently serves over 5,000 members and has 20 state affiliates working to further the prospects for bilingual learners and their families.

National Association for Multicultural Education

The National Association for Multicultural Education (NAME) is a nonprofit educational organization that advances and advocates for equity and social justice through multicultural education. NAME members include teacher educators, higher education faculty, and graduate students from across a broad array of academic disciplines and research interests; pre- and in-service Pre-K–12 schoolteachers; Pre-K–12 and higher education administrators; college, school, and community-based psychologists, social workers, and mental health counselors; librarians, other scholars, professionals, and activists; and the parents of Pre-K–12 school students, high school students, and unaffiliated individuals.

NAME was informally established in 1990 in Las Vegas, Nevada, then formally founded in 1991 in New Orleans, Louisiana, and formally headquartered in 1995 in the District of Columbia. Over the course of its 22-year history, NAME has been almost entirely a volunteer organization, funded through membership fees from its 800 to 1,500 active members, as well as revenues from an annual international conference and periodic educational offerings. NAME was first informally organized and run by a core group of volunteers, including its 20 founders, and was later governed by a formally appointed and/or elected 24-member volunteer board of directors, operating in accordance with instituted bylaws. In 1995, NAME established a national office with a part-time paid staff that has included an executive director and formal (secretarial and technical) and/or informal (high school and college student) administrative support personnel.

NAME promotes respect and appreciation for cultural diversity, understanding of unique cultural and ethnic heritage, and development of culturally responsible and responsive curricula. NAME seeks to facilitate human acquisition of the attitudes, skills, and knowledge necessary to function effectively in various cultures; eliminate racism and discrimination in society; and bring about social, political, economic, and educational equity. NAME affirms that it is consciously and proactively inclusive of all areas of diversity, including

race, ethnicity, color, national origin, ancestry, gender, sexual orientation, gender identity, religion, age, socioeconomic status, marital status, language, disability, and immigration status.

Beliefs

According to NAME, multicultural education is a philosophical concept built on the ideals of freedom, justice, equality, equity, and human dignity as acknowledged in various documents, such as the U.S. Declaration of Independence, the constitutions of the United States and South Africa, and the Universal Declaration of Human Rights adopted by the United Nations.

Building on the definitions of multicultural education articulated by several leading scholars in the field, NAME describes multicultural education as a process of comprehensive school reform that permeates all aspects of school community and organization, and pervades school practices and policies in order to ensure the highest levels of academic achievement for all students. In recognizing that equality and equity are not the same thing, NAME maintains that multicultural education attempts to offer all students an equitable educational opportunity while encouraging them to critique society in the interest of social justice.

NAME contends that multicultural education affirms the need to prepare all students for the responsibilities of an interdependent world; recognizes the role that schools can play in developing attitudes and ideals necessary for democratic society; values cultural differences and the pluralism that students, their communities, and teachers reflect; enables all students to develop positive self-concepts by providing them knowledge about the histories, cultures, and contributions of diverse groups to U.S. society and the world as a whole; prepares all students with the knowledge, dispositions, and skills necessary to bring about structural equality through the redistribution of power and income among diverse groups in all aspects of social organization and governance; and challenges all forms of discrimination in schools and society through the promotion of the democratic principles of social justice.

NAME asserts that multicultural education requires that school curricula directly address issues of racism, sexism, classism, linguisticism,

ableism, ageism, heterosexism, religious intolerance, and xenophobia; that students and their life histories and experiences be placed at the center of teaching and learning processes; that pedagogy occur in a context that is familiar to students and addresses their multiple ways of thinking; that teachers and students critically analyze oppression and corresponding relations of power in their schools, communities, society, and world; that school staff be at least culturally competent, ideally multiculturally literate, and to the greatest extent possible racially, culturally, and linguistically diverse; and that schools proactively embrace students' families and the broader communities in which they are situated in order to become environments that support multiple experiences and perspectives and, ultimately, realize democracy.

Roots and Wings

NAME envisioned an organization that would bring together individuals and groups with an interest in multicultural education from all levels of education, different academic disciplines, and diverse educational institutions and occupations. During the 1990 annual conference of the Association of Teacher Educators (ATE), Rose Duhon-Sells invited members of ATE's Multicultural Special Interest Group (SIG) to discuss founding a new educational organization solely dedicated to multicultural education.

Concerned about the lack of meaningful attention given to issues of diversity in teacher training, the 19 people who accepted that invitation became known as NAME's founders, with Duhon-Sells as its first president. One year later, NAME held its first national conference; 500 people attended.

NAME has hosted an annual conference in a different city in the United States every year since 1991. NAME established its formal board of directors and organizational bylaws in 1995. The board consists of a five-member executive committee, 10 regional directors, three at-large members, and five founders. Regional directors help organize new chapters and to coordinate the work of existing chapters in their region's states. NAME has established more than 25 active state chapters.

When invited to do so, NAME works to bring national attention to many local, state, regional, and international multicultural educational issues of concern to aid in their resolution. For example,

in 1999, NAME spotlighted the predicament of Patsy and Nadine Cordova, sisters who were fired from their long-standing teaching positions in Vaughn, New Mexico, for using multicultural educational approaches. Both sisters filed and eventually won civil rights lawsuits. In 2008, NAME focused attention on the lack of recovery resources allocated to New Orleans, Louisiana's Ninth Ward following Hurricane Katrina, including resources necessary to reopen the ward's schools.

In addition to the executive committee, NAME has 10 standing committees organized around key areas of NAME's operations, and five ad hoc committees that focus on advancing multicultural learning, raising public consciousness, promoting political action, and building international connections. Also in 1995, NAME established its national Washington, D.C., national office in order to build a national profile for the organization's work among national education policy decision makers, along with strategic partnerships with other progressive organizations.

NAME honors excellence in multicultural education by bestowing 11 different awards: the G. Pritchey Smith Multicultural Educator of the Year Award, the Carl C. Grant Research Award, the Donna M. Gollnick and Willard Loftis Fellowship for Research in Multicultural Education, the Phillip C. Chinn Multicultural Book Award, the Rose Duhon-Sells Multicultural Program Award, the Carter Godwin Woodson Award, the Presidential Chapter Award, the Multicultural Children's Publication Award, the Multicultural Media Award, the Social Justice Advocacy Award, and the Agency/Institution Equity Award.

In 1993, NAME established an official organizational journal, originally titled *Multicultural Education* and later called *Multicultural Perspectives*. NAME also publishes the periodic newsletter *NAME News* and hosts a listserv and a blog site. NAME also helped develop and distributes the five-piece Multicultural Education DVD Series to promote the work of multicultural education scholars Sonia Nieto, Leonard Baca, Geneva Gay, Beth Harry, and Phillip C. Chinn.

In 1998, NAME began to formally develop, publish, and archive organizational press releases, resolutions, position papers, and criteria documents. In 2012, NAME held its inaugural traveling Summer Institute, dedicated to helping schools, school

districts, colleges of teacher education, and other educational organizations to diversify the ranks of pre- and in-service Pre-K–12 teachers locally, regionally, and nationally. According to the 2010 census, a diverse staff was the best staff for measuring America; according to NAME, a diverse staff is also the best staff for teaching America. Also in 2012, NAME developed a Media Tool Kit to assist the general public in using the media to effectively speak out and push back against arbitrary teacher-evaluation reform efforts, communicating the damage that these efforts can do to schools and school students, and providing ideas for more just and effective alternatives.

Walking the Talk

In the early 1990s, NAME adopted its “red triangle” logo to claim its place in a long history of social action. Between 1933 and 1945, under the Nazi genocide, many different groups of people were required to wear visual markers delineating one or more reasons for their persecution. Although it is more commonly known that Jews were forced to wear yellow stars and gay people were forced to wear pink triangles, the marker system also imposed black triangles on Romani people, purple triangles on Jehovah’s Witnesses, and red triangles on political or religious dissidents, people who spoke out against the Nazis’ actions.

People marked by red triangles were considered by the Nazis to be “wrong thinkers.” Accordingly, NAME embraces the red triangle as its logo to affirm its commitment to speak out and act against injustice, to speak for those who cannot speak themselves, to advocate for the powerless, and to be allies to all who work for justice.

In the late 1990s, NAME adopted the Sankofa bird symbol as an organizational icon. The Sankofa is one of many Adinkra or visual symbols created by the Akan people of Ghana and the Gyaman people from the Côte d’Ivoire (Ivory Coast) of Africa. The literal meaning of the symbol is often articulated as “go back to fetch it,” and the symbol is understood to mean that the past must not be forgotten in moving toward the future.

For NAME, the Sankofa icon represents the need to remember the relationship between its individual members’ identities, the identities of the varied groups that it represents, and its collective organizational identity in its ongoing

redefinition and enactment of organizational vision and mission.

Back to the Future

At NAME’s eighth annual conference in St. Louis, Missouri, Smith gave a keynote address titled “Sing a Song of Faith, Sing a Song of Hope: The Status of NAME and Its Future in 1998.” In speaking about NAME’s future, Smith stated, “If NAME is to be a real voice for its members, it must become political. We have no choice. NAME does not believe in neutrality. NAME knows what it stands for. It stands for social justice. NAME’s unified voices for justice must be heard across the nation.”

In looking forward from 2012, NAME seeks to proactively reframe public debate and impact current and emerging policies to advance social, political, economic, and educational equity. To accomplish this goal, NAME is working to build its Web site into a preeminent digital clearinghouse for resources about educational equity and social justice.

National Association for the Advancement of Colored People

The National Association for the Advancement of Colored People (NAACP) was formed in 1909. A civil rights advocacy group, the NAACP has been instrumental in the major civil rights battles of the 20th and 21st centuries, from the fight against Jim Crow laws to desegregation, the Voting Rights Act, and the continuing battle to end discrimination and institutionalized racism.

History

The NAACP partially grew out of, and partially shared ancestry with, the more radical Niagara Movement, a brief-lived civil rights organization active from 1905 to 1910. The catalyst for the formation of the Niagara Movement was the black community's growing dissatisfaction with the Jim Crow-era South, as laws were enacted to restrict voter registration and political participation in a concerted effort, transpiring in numerous state legislatures, to disenfranchise black men. Nor were problems in this period, since called the nadir of American race relations, limited to the south. Lynching was epidemic, segregation was the norm in much of the north, restricted clubs and other establishments were common, and migrating blacks leaving the south often faced resentment and differently manifested forms of racism in their new northern and midwestern homes. The first meeting of the Niagara Movement took place in Fort Erie, Ontario, on the Canadian side of the Niagara River, because American hotels were segregated.

Harvard-educated sociologist W. E. B. Du Bois, the first African American to earn a doctorate degree, was the leader of the Niagara Movement. The group began as 32 black activists and soon attracted a number of white members, notably social worker Mary White Ovington. The dominant figure in the African American community

at the time was Booker T. Washington, head of the Tuskegee machine, whose 1895 Atlanta compromise was passionately opposed by the Niagara Movement. This so-called compromise called for southern blacks to submit to the authority of southern whites—to accept that they would not have the right to vote, that their access to education would be limited, and that segregation and other formalized discrimination would continue—in return for guarantees of basic education and due process. The Niagara Movement was the first significant group to buck this accommodationism and call for a renewed fight for civil rights.

Not all Niagara Movement members were part of the NAACP, nor did all join it after the Niagara Movement disintegrated. Du Bois and Ovington were among the NAACP's founders, along with Ida Wells, Archibald Grimke, Henry Moskowitz, Oswald Garrison Villard, William English Walling, Florence Kelley, and Charles Edward Russell. The formation of the NAACP is typically dated to January 1909, when Walling (a journalist and activist, and the youngest son of former slaveholders), Ovington, and Moskowitz invited a number of prominent Americans to a meeting in commemoration of the 100th birthday of Abraham Lincoln.

Two major incidents inspired the creation and growth of the NAACP, the first of which was the 1908 race riot in Springfield, Illinois, Abraham Lincoln's hometown. Springfield had by this time become a large industrial center with a relatively large black population (6.5 percent in the 1900 census) for Illinois. Racial tensions sometimes centered on the use of black laborers as strikebreakers. When two black prisoners—one of whom had been accused of raping a white woman, the other of robbing and killing a white man in his home, neither of whom had been tried—were transferred from the jail, a mob of white men and women demanded they be released to be lynched. When a local restaurant owner helped the sheriff with the transfer, the mob wrecked and looted his restaurant. The incident soon turned into a riot, aimed at destroying local black-owned businesses and burning black homes. The National Guard arrived the next day, along with tourists who simply wanted to watch. In the aftermath, 40 homes and 24 businesses were ruined, seven people were killed, and only one person was convicted, for

A participant in the August 28, 1963, March on Washington for Jobs and Freedom wearing a National Association for the Advancement of Colored People hat.

stealing a saber from a guardsman. The woman who had accused George Richardson of rape recanted her accusation; the other prisoner was found guilty and hanged.

A meeting of the Niagara Movement in New York City led to the formation of the National Negro Committee, over which Du Bois presided. The committee was intended to be a national conference on African American civil rights but led to the formation of the NAACP, incorporated in 1911, when it was clear that a permanent organization was needed to continue to address the many problems at hand. The charter defined the organization's mission: "To promote equality of rights and to eradicate caste or race prejudice among the citizens of the United States; to advance the interest of colored citizens; to secure for them impartial suffrage; and to increase their opportunities for securing justice in the courts, education for the children, employment according to their ability and complete equality before law."

Officers and Membership

The first officers were elected in 1910. Du Bois served as director of publicity and research,

Walling served as chairman of the executive committee, and Moorfield Storey served as the first national president. In the subsequent century plus, the organization has retained the use in its name of the now-deprecated term *colored people*. Whereas the Niagara Movement was predominantly black, the NAACP's initial leadership was mainly white and Jewish, with Du Bois the only African American in a leadership role. Though several executive directors in the ensuing years were black, the first black president of the NAACP was not elected until 1975. Jewish civil rights leaders were key figures in the organization's early years and fund-raising efforts, and Jewish newspapers drew frequent comparisons between the Israelites' exodus from Egypt and the flight of blacks from the south, when exhorting their readership to support the civil rights movement. Parallels were also drawn between the segregation and other limits on black freedom in the United States and the treatment of Jews in Europe.

The second incident that increased the NAACP's membership was the lynching of teenage African American farm worker Jesse Washington in Waco, Texas, in 1916. Accused of raping and murdering the wife of his white employer, Washington entered a guilty plea under duress and was dragged out of the court by attendees of the trial. Police and city officials looked on amid a crowd of more than 10,000 as he was lynched in front of City Hall—not merely hanged, but castrated, tortured, his fingers cut off, and his body hung over a fire for two hours. Pieces of his scorched corpse were sold as souvenirs, and a professional photographer took photos of the torture, which were sold as postcards. Some of these photos were published in *The Crisis*, a report by Du Bois that was instrumental in changing public opinion on lynching. No longer seen as an efficient form of publicly mandated justice, it was revealed for the savage barbarism it was.

Top Priorities

Segregation and Jim Crow laws, as well as combating the phenomenon of lynching, were the NAACP's first priorities. With President Woodrow Wilson's introduction of segregation into federal offices and hiring practices in 1913 and the release of D. W. Griffith's Klan-glorifying film *The Birth of a Nation* in 1915—inspiring the formation of

a new Klan—the battle did not always seem winnable. In that same year, Oklahoma’s grandfather clause restricting voting rights almost entirely to whites was challenged in *Guinn v. United States*, and in 1917 the NAACP was instrumental in the Supreme Court’s decision in *Buchanan v. Warley* that state and local governments cannot segregate residential districts. It also impacted the court’s decision in *Moore v. Dempsey* in 1923, which has had far-reaching positive consequences in expanding the federal government’s oversight of state-level criminal justice systems. Attempts at federal anti-lynching legislation were less successful, with southern opposition sufficient to block it. For many years, the New York offices of the NAACP flew a black flag with the words “A Man Was Lynched Yesterday” in the aftermath of every lynching.

The NAACP and its NAACP Legal Defense Fund (which in 1957 became a legally separate entity, though it has usually acted according to NAACP policy despite some well-publicized disputes) made legal cases against civil rights violations and unjust laws such as segregation more feasible for African Americans. When the Supreme Court unanimously ruled that segregation of state-run schools was unconstitutional in *Brown v. Board of Education* (1954), it was after a ceaseless decades-long campaign by the NAACP. The NAACP proceeded to push for desegregation throughout the south.

The NAACP’s role in the civil rights movement of the 1950s and 1960s was significant but not dominant. The organization frequently clashed with civil rights leaders, notably Martin Luther King, Jr., over strategy. For some years in the 1950s, it was also barred from operating in Alabama for refusing to reveal its membership list. Younger civil rights groups such as the Student Non-Violent Coordinating Committee favored direct action, paving the way for the protest movements of the 1960s and 1970s, over the NAACP’s by then long-held strategy of legislation and litigation. However, the NAACP supported two of the biggest victories for the civil rights movement in the 1960s: the passage of the Civil Rights Act in 1964 and the Voting Rights Act in 1965.

The Organization Today

Today, the NAACP continues to advocate for African American rights and was vocal in the 2000

election, when many black voters were wrongly disqualified. The NAACP annually awards the Spingarn Medal for outstanding achievement by African Americans, recipients of which have included Harry Belafonte, civil rights attorney Frankie Muse Freeman, and Cicely Tyson. It also presents the NAACP Image Awards in various entertainment categories.

In 2004, the Internal Revenue Service (IRS) launched an investigation into the NAACP’s tax-exempt status because of then-chairman Julian Bond’s speech condemning President George W. Bush at the 2004 NAACP Convention. Tax-exempt status is generally disallowed to organizations that campaign on behalf of or in opposition to political candidates. A two-year investigation concluded that the organization had not violated its tax-exempt status, but the launch of the investigation received considerable media attention.

National Association of Latino Elected and Appointed Officials

The National Association of Latino Elected and Appointed Officials (NALEO) is a professional and political organization of Latino leaders. NALEO's ultimate goal is to promote full participation of Latino immigrants and citizens in American society and to advocate for Latinos in American politics. The NALEO Educational Fund is the preeminent nonprofit organization seeking full status and participation for Latinos in the U.S. political process.

The Educational Fund is a major source of support for Latino elected and appointed officials, providing networking, educational programs, and resources including research reports and press releases. There are more than 6,000 Latinos in office, and it seems likely that this number will continue to grow.

“Empowering Latinos from citizenship to public service,” the slogan on NALEO's Web site, describes the group's mission and belief that full participation in the U.S. political process is the only way to effectively advocate for the Latino community as a whole. To that end, NALEO focuses its efforts on several program tracks within the organization and on its support role for public and appointed officials, particularly as a source of solid research on key issues.

History and Leadership

NALEO was founded in 1976 by a core group that was responding to a need on the part of Latino officeholders. The founders were themselves officeholders: U.S. Representatives Edward R. Roybal and Robert Garcia were among this group. Roybal served NALEO as president and

later president emeritus, with his term in office stretching from 1976 to 1991. Originally NALEO was called the National Association of Latino Democratic Officials, but the current name was ratified in 1978, showing the commitment of the group to a nonpartisan approach.

More recently, in 2009, Sylvia R. Garcia became NALEO's seventh president of NALEO. Garcia is a commissioner from Harris County, Texas, and a former NALEO board member (1999-2004). Commissioner Garcia has nearly 1 million constituents, making her county the third-most-populous in America. An attorney, Garcia was also the city controller in Houston and the chief judge of the Municipal Courts of Houston. Commissioner Garcia is assisted by NALEO Executive Director Arturo Vargas and a board of influential and experienced officials.

Smaller Programs

NALEO tailors its programs carefully to meet the needs of its mission, focusing on several key areas. The association targets health issues unique to Latino communities as expressed in data sources such as the U.S. Census. NALEO's Healthy Communities Initiative (NHCI) attempts to assist Latino policymakers in effectively advocating for Latino communities. Good nutrition and the elimination of childhood obesity are target areas for this initiative; given that in 2010, 38.2 percent of Hispanic children ages 2 to 19 were overweight or obese, the wisdom of this focus area is obvious. Similarly, the NALEO California Health Leadership Program (NCHLP) recruits Latino policymakers in leadership roles and equips them to take an active role in the promotion of Latino health by implementing healthy community policies.

The NALEO Policy Institutes on Sustainable Communities provide guidance and support for Latino officials with regard to economic matters including housing, urban renewal, and local development. The NALEO Annual Conference, known as the “Latino political convention,” is arguably the single most influential Latino political event in the United States. President Barack Obama was a featured speaker at the 2012 conference.

Civic Engagement and Participation

NALEO's Harry P. Pachon Civic Engagement Department moves toward a cultural ideal of

maximum civic participation by creating and maintaining a national framework designed to elicit buy-in from the Latino community. The department aids potential citizens with the naturalization process and informs the community as a whole about naturalization issues.

This section of NALEO also helps both new and established citizens become voters, and it helps ensure that as many members of the Latino community as possible stand up and be counted by the U.S. Census Bureau. Finally, the Civic Engagement Department forges relationships and engages in strategic coalition-building with local, state, and national partners.

Part of the group's Civil Engagement and Participation initiative is the groundbreaking *Ya Es Hora* (It Is Time) campaign. This is a nonpartisan effort to make use of the momentum generated by the massive immigrant mobilizations of 2006. This campaign is the broadest, most inclusive attempt to engage Latinos nationwide as equally participating partners in the political process.

Ya Es Hora is not limited to naturalization or voter drives, which sets it apart from predecessor programs. Rather, this initiative takes a multi-tiered, expansive set of tactics that includes both approaches. *Ya Es Hora* includes full participation in the census under its directive and was active before the 2010 Census was conducted. The program makes full use of the Spanish-language media to further its objectives, as well as employing other tools to deliver its message.

The main objective of the *Ya Es Hora* census effort, called *Ya Es Hora Hágase Contar* (It Is Time, Make Yourself Count), is to raise the rate of mail responses from Latino households by proactively educating the community over the long term. The existing infrastructure of the *Ya Es Hora* campaign ensures that the census-related materials in need of dissemination are readily delivered to the community while making use of established messaging.

Services for Latino Elected and Appointed Officials

NALEO's Constituency Services Department is the source of professional development and leadership training in a broad variety of areas. The NALEO Policy Institutes provide educational

programming and technical advice about the range of important issues facing Latino populations and their representatives.

Elected and appointed officials nationwide liaise in order to take on subjects that matter to their constituents, including health issues, economic issues such as affordable housing and public finance, professional and workplace development, criminal justice and public safety, and environmental concerns.

NALEO's "boot camp" gives newly elected officials a dynamic yet safe setting in which they can both learn and teach each other and hone the skills they will require as they move forward on their public service paths. Boot camp participants benefit by gaining the knowledge of more experienced elected officers and acquire insights into their shared constituencies. Media management, fund-raising, and budgeting are all serious topics in boot camp.

The NALEO Educational Fund guides public discourse surrounding important topics for Latinos. By connecting officeholders and providing leadership at the national level, the Educational Fund shapes the course of policy discussions on immigration and naturalization, voting and election reform, and the drive to elect more Latino officials. Through its civic research and publications office, NALEO helps ensure that political actors at all levels of government are better able to incorporate the concerns of the Latino community into their policies.

The Latino Vote

Latinos are the second-largest population group in the United States and are also the fastest-growing group. A record 9.7 million Latino voters cast their ballots in the 2008 presidential election, and NALEO predicted the number would rise to more than 12 million in 2012, an increase of 26 percent. The NALEO Educational Fund also predicted that in 2012, California, Florida, and Illinois would experience the greatest percentage increase in turnout for the year's election cycle. In at least three states—California, New Mexico, and Texas—at least 20 percent of the voters were expected to be Latino; in New Mexico, that percentage was anticipated to reach 35 percent. Latinos were behind Obama, casting their ballots for him in key battleground states.

Immigration and Naturalization

The NALEO Educational Fund has a history of working to secure a fair and accessible naturalization process for Latino Americans. The fund has consistently provided high-quality information and research to policymakers and presidential administrations about the impact of immigration laws on Latinos. NALEO has rallied against rising fees for immigration-related government services (e.g., application fees) and in support of a transparent process.

NALEO advocates for a national immigration policy that is not only fair and just for immigrants but also sensitive to the realities of national security concerns. NALEO promulgates the notion that a national immigration system that restores the public's faith in justice and human rights is not in conflict with a national immigration system that restores confidence in public safety.

As part of this push for a balanced immigration policy, NALEO took a position against Arizona's Senate Bill 1070 (the Arizona Support Our Law Enforcement and Safe Neighborhoods Act), which included some of the most sweeping anti-illegal-immigration provisions when it was enacted in 2010.

The NALEO Educational Fund maintained the measure was both unconstitutional and fiscally wasteful, made discrimination a matter of policy, and did nothing to help the immigration system and everything to overburden local governments. NALEO also argued that the measure raised Fourteenth Amendment issues and threatened basic civil rights.

National Civil Rights Museum

The National Civil Rights Museum, located in Memphis, Tennessee, opened in 1991 as a tribute to the civil rights movement, its activists, and one of the greatest leaders of American civil rights, Dr. Martin Luther King, Jr. The museum complex is built around the historic Lorraine Motel on 450 Mulberry Street, where King was assassinated on April 4, 1968. The museum's centerpiece is the preservation of the Lorraine Motel's façade and balcony, where King was shot down by James Earl Ray. The transformation from motel to museum represents the politics of place and the decades-long struggle of moving forward to shape a new community identity. This is done by rebuilding and healing the city of Memphis' historical, economic, and African American identity.

The National Civil Rights Museum is closely connected to its past identity as the Lorraine Motel, purchased in 1945 by Walter Bailey, a black businessman and named after his wife, Loree, and a song titled "Sweet Lorraine." The Lorraine was one of the few hotels in Memphis that accommodated African American travelers during the segregation era, until the late 1960s in America. After two major additions and drive-up access, the hotel was converted to a motel. Many musicians working with the Stax Record Company were frequent guests, such as Ray Charles, Aretha Franklin, and Otis Redding. Dr. King and his colleagues were also regular guests at the Lorraine Motel when they traveled to Memphis. King was in Memphis during his final stay to support the striking sanitation workers of

the American Federation of State, County, and Municipal Employees (AFSCME) in 1968.

Shortly after the assassination, Bailey maintained and preserved rooms 306 and 307 of the Lorraine Motel as a shrine to Dr. King and in memory of his wife, Loree, who suffered a stroke only hours after King's assassination and passed away five days later. In addition to the rooms, the Southern Christian Leadership Conference (SCLC), founded by King, erected a granite plaque, encased the two rooms, and commemorated the event with wreaths. The Lorraine Motel and Memphis became identified as the places where King and the civil rights movement had died. Bailey's impulse to memorialize King and sanctify the site marked the beginning of a long transformation in the motel's and Memphis' identity in a post-King era.

Although the sacred site drew visitors from all over the world, the Lorraine and its surrounding areas were impoverished, and the downward economic spiral continued after King's death. Poor residents rented rooms at the Lorraine, businesses closed, and the neighborhood was unsafe. Bankrupt and facing foreclosure, Bailey reached out to the community to help preserve the motel as a civil rights shrine in the 1970s.

Preservation Efforts

Bailey enlisted the help of Charles Scruggs, program director at WDIA-AM 1070, the first black radio station in Memphis, and started the Save the Lorraine campaign. Scruggs also secured a \$10,000 personal loan from Jesse Turner, CEO of black-owned Tri-State Bank and president of the Memphis National Association for the Advancement of Colored People (NAACP) chapter. A radio fundraising campaign appealed to black Memphis citizens to preserve part of their history. Judge D'Army Bailey (no relation to the motel's owner), an African American lawyer and civil rights activist, led the group of prominent Memphians to form the Martin Luther King, Jr. Memphis Memorial Foundation, which was later renamed the Lorraine Civil Rights Museum Foundation in 1984.

Major contributors included AFSCME, which donated \$25,000. Turner's Tri-State Bank contributed an additional \$50,000 loan at auction. On December 13, 1982, the foundation purchased the Lorraine for \$144,000, most of which came from personal contributions of Memphis citizens.

The next task for the foundation was to finance the museum. After much lobbying, funding included \$4.4 million from the Tennessee General Assembly, \$2.2 million each from the Memphis City Council and Shelby County Commission, and an additional \$150,000 when costs exceeded estimates. The foundation also courted white business leaders such as J. R. "Pitt" Hyde III, founder of AutoZone, who personally donated \$400,000, and gained corporate sponsorships with Federal Express, Browning Ferris Industries, First Tennessee Bank, and Holiday Inn to raise an additional \$925,000. The total cost of the museum was \$9.25 million.

Exhibits

The museum was dedicated on July 4, 1989, and opened to the public on September 28, 1991. In 2002, the museum opened "Exploring the Legacy,"

The National Civil Rights Museum in Memphis, Tennessee, is built around the historic Lorraine Motel, where Martin Luther King, Jr. was assassinated on April 4, 1968. The museum opened to the public on September 28, 1991.

an \$11 million expansion that included the board-
inghouse across the street. The centerpiece of the
museum and most powerful part of the visitor
experience is the old Lorraine Motel's façade and
balcony, which take visitors back to April 1968
and where visitors imagine Dr. King and his col-
leagues gathering on the balcony in front of rooms
306 and 307. This is where time has stood still and
visitors reflect on King's legacy and the museum's
message. The museum is a memorial to ordinary
people and their commitment to the civil rights
and social justice movement.

Exhibits have included the 1954 Supreme
Court decision in *Brown v. Board of Education of
Topeka* documents and artifacts, as well as interac-
tive exhibits such as the Montgomery Bus Boycott,
which simulates the discrimination that a black
bus rider would have experienced. Visitors can
inspect a burned-out Greyhound bus and observe
the dangers that the Freedom Riders encountered,
as well as sit at a life-size lunch counter to experi-
ence student sit-ins during the 1960s.

The museum has been the subject of contro-
versy because of its location in the Lorraine Motel.
Remodeling the motel necessitated evicting its
residents, one of whom—housekeeper Jacqueline
Smith—had to be forcibly removed after she had
barricaded herself in her room. Low-income hous-
ing surrounding the motel has been demolished,
the neighborhood has gentrified as higher-priced
apartments, and condominiums have been con-
structed. Smith has continued to protest the trans-
formation of the neighborhood and eviction of
motel residents by maintaining a daily vigil across
the street for over 20 years.

The National Civil Rights Museum campaign
demonstrated a grassroots, black community–ini-
tiated museum and fund-raising. The community
asserted stewardship of history and a rebirth for
Memphis by reaffirming African American iden-
tity and rebuilding the Lorraine while revitalizing
its surrounding area. Its leaders engaged the black
community in shaping the form and choosing
whose story was told at this public site of com-
memoration. This process of memory making and
the development of the museum echoes the trans-
formation in the black community and Mem-
phians' identity formation. The site is a memo-
rial landscape focused on engagement of critical
issues, interaction of visitors, and authenticity,

with the promise of an authentic experience over
mere tourist appeal. Memphis is not where civil
rights died; it is where they continues live, and
holds a mirror to those who visit, reflecting that
social justice continues in those who visit the
museum.

National Conference for Community and Justice

The National Conference for Community and
Justice (NCCJ) is a U.S.-based nonprofit organi-
zation that aims to promote understanding and
respect among people of all cultures, races, and
religions. Its mission is to fight bias, bigotry, and
racism, and its work is done through advocacy,
education, and dialogue.

The NCCJ was founded in 1927 as the National
Conference of Christians and Jews. Its found-
ers included U.S. Supreme Court Justice Charles
Evans Hughes, businessman Roger W. Strauss,
and Rev. Everett Clinchy, an educator. Over the
next decades, the NCCJ expanded its mission
to include social justice issues such as race, gen-
der, class, sexuality, and ability. In the 1990s, the
name was changed to the National Conference
for Community and Justice to more accurately
reflect its broader mission and the diversity of the
communities in which it worked.

History

The NCCJ's origins can be traced to 1924, when the Convention for the Federal Council of Churches of Christ formed a committee on goodwill between Christians and Jews in reaction to the Klu Klux Klan. During this time, the nation saw anti-Catholic sentiment, as Al Smith unsuccessfully sought the Democratic presidential nomination in 1924 and ran for president four years later; there also were anti-Jewish sentiments from Henry Ford's *Dearborn Independent* newspaper, which ran anti-Semitic articles until it closed in 1927.

From this small committee, the National Conference of Christians and Jews was founded in 1927. Community leaders of different faiths, including Jane Addams, Rebekah Kohut, and Charles Evans Hughes, were dedicated to more than a superficial tolerance of those who differed from themselves. This group had long-range educational goals and recognized that individuals' understanding and goodwill for others allowed the best leaders to be cultivated because of differences, not in spite of them. The organization wanted to bring people of different faiths and cultures together to dialogue around interfaith divisions and racial, class, and gender barriers. In 1928, the first NCCJ seminar was hosted by Columbia University. At that time, three cochairmen for the organization were named: Carlton J. H. Hayes as the Catholic cochairman, Newton D. Baker as the Protestant cochairman, and Roger W. Strauss as the Jewish cochairman.

The NCCJ quickly became a large and active movement as it strived to facilitate cooperation between people of different religions on civic and social justice issues. One of its most famous educational programs was the Tolerance Trios. These trios comprised Protestant, Catholic, and Jewish clergy who traveled together to spread a message of tolerance. By World War II, the NCCJ trios provided spiritual guidance to the armed forces. Part of this guidance included a tri-faith prayer card that was issued to every soldier, with prayers from each faith printed on it.

By the 1950s, the NCCJ had broadened its agenda to include race and started its Anytown camps to encourage respect among youth of different cultures, races, and religions. These camps, which still operate today, combined dialogue around identity, stereotyping, and prejudice with

experiential exercises to facilitate community-building that offers space to discuss topics of race, class, gender, sexuality, and ability. In addition to Anytown, the NCCJ offers other youth and adult programs that focus on community conversations, diversity in schools and workplaces, and interreligious dialogues. The NCCJ has been recognized and commended by presidents, including John F. Kennedy and Lyndon B. Johnson. The NCCJ's work in the 1970s to educate about the Holocaust led Congress to establish the National Holocaust Remembrance Week. In 1994, the NCCJ released its nationwide survey, called *Taking America's Pulse*, on attitudes of intergroup relations. *Taking America's Pulse II* appeared in 2000, and *Taking America's Pulse III* in 2006. These reports measure attitudes about race relations, interracial group contact, experiences of discrimination, and Americans' perceived satisfaction regarding racial, religious, and ethnic tensions.

Organizational Evolution

Briefly, in the early 1990s, the NCCJ was known as the National Conference. In 1999, as a response to the increased diversity of people involved with the NCCJ and the communities in which it worked, the organization's name changed to the National Conference for Community and Justice. This name change was a recognition that people other than those who identified as Christians and Jews were participating in the NCCJ's work. The change to the National Conference for Community and Justice helps more completely create inclusive, respectful, and just communities and more fully satisfies the mission of fighting bias, bigotry, and racism in America. In 2005, the NCCJ decentralized from a regional structure and chapters became independent nonprofit organizations.

Programming

The NCCJ has youth and adult programming designed to help students, teachers, clergy, and community leaders understand and talk about race, culture, and gender relations and interreligious discourses. Many NCCJ chapters develop workshops and leadership training and consult on projects that relate to their mission of fighting bias, bigotry, and racism. Since 1957, Anytown, with similar programs such as Metrotown and Unitown, has been the NCCJ's main project. Anytown works to

educate and activate high school–aged students to build community and become progressive leaders in their local and global communities. During an Anytown session, students, counselors, and advisors learn about “isms” in the world, including racism, sexism, heterosexism, classism, and ableism. With workshops and exercises, students learn to identify and talk about prejudice and discrimination. Anytown students are equipped with communication skills and knowledge to make a difference in their schools and communities.

National Congress of American Indians

In November 1944, American Indian delegates from across the United States met in Denver, Colorado, for the purpose of establishing a new organization. Based on planning meetings held in May 1944, the gathering intended to support a view that only through a collective voice could American Indians successfully mount a stand against federal threats to tribal sovereignty and treaty-based rights. At the four-day convention held at the Cosmopolitan Hotel, the delegates voted to accept the constitution and bylaws of the new organization: the National Congress of American Indians (NCAI). The NCAI became the first national organization controlled by American Indians and today represents the oldest and largest American Indian organization working on behalf of all American Indians.

The establishment of the NCAI came during a period when the U.S. government moved to assimilate American Indians through the termination of tribal legal status. Efforts were under way in Congress to repeal the Wheeler-Howard Act of 1934, which had restored tribal self-governance and other rights. With growing federal pressures to end all legal obligations to tribes, American Indians came together to present a unified front against the federal government’s threats to tribal recognition and sovereignty.

The NCAI’s broad focus of defending the treaty rights and legal recognition of all tribes garnered widespread support. Whereas tribes once fought against such policies independently of one another, they now presented a collective and stronger national position through the NCAI.

Within one year, the membership of the NCAI grew from its first 80 delegates to over 300.

One of the first victories for the NCAI was the creation of the Indian Claims Commission. Through its legal department, the NCAI proposed a preliminary draft of a claims commission bill in 1945 that eventually led to new legislation. In an era that presented serious obstacles to American Indian rights, the NCAI's campaign to pass the Claims Commission Act of 1946 proved that the organization could affect the direction of Indian affairs. With the new commission, a legal body assessed tribal grievances based on treaty violations and awarded monetary compensation when warranted.

In addition to establishment of the Indian Claims Commission, the NCAI won other victories for American Indians. In 1948, the NCAI fought for American Indian voting rights in New Mexico and Arizona. Both states' constitutions excluded American Indians from voting. The NCAI led legal challenges to the restriction of voting rights and ultimately won its cases. In its first four years, the NCAI could claim major gains in the areas of tribal and American Indian civil rights.

The threat of terminating tribal recognition that began in the mid-1940s continued to build. By the 1950s, termination as a federal policy gained ground, and proposals to dissolve the Bureau of Indian Affairs, which managed educational, medical, and economic programs, were common. Along with a termination policy, a federal program was begun to relocate American Indians from reservations to urban centers in an effort to end their federal-trust status. The federal government pushed for the abolishment of all its treaty-based responsibilities by 1952.

During this tumultuous period, struggles within the NCAI's leadership occurred frequently, as members had various positions on termination policy and how it should be confronted. In 1953, the NCAI presented a united stand against termination policy just prior to the onslaught of termination bills presented in Congress. Six termination bills became law in 1954. The NCAI struggled to slow the push for termination. Hundreds of tribal delegates led by the NCAI arrived in Washington, D.C., to voice their opposition to termination legislation in 1954. In the mid-1950s, the NCAI witnessed success as

This photo from the National Congress of American Indians shows representatives from federally recognized tribes, including Navajo code talkers and other veterans, at a December 2012 White House Tribal Nations Conference at the Department of the Interior. The organization has been in operation since Native Americans from around the country gathered in Denver, Colorado, in November 1944.

termination policy was more closely scrutinized and eventually halted.

By the early 1960s, the NCAI could applaud its role in bringing about a transition from the termination of tribes to tribal self-determination. The NCAI had become an adept political organization that effectively conveyed its central positions to legislators and to a broad American public.

In the 1960s, the NCAI emphasized the importance of American Indians controlling and directing their own affairs. In what came to be known as the self-determination movement, the direction of Indian policy moved toward empowering tribal communities by shifting funds and resources away from the control of the Bureau of Indian Affairs to tribes. In line with the original mission of the organization, fighting for sovereignty rights permeated the NCAI's work in the 1960s. In 1961, the NCAI was influential in organizing the American Indian Chicago Conference and contributing to the "Declaration of Indian Purpose," an intertribal statement that resulted from the conference's deliberations and that called for greater American Indian control of affairs affecting tribes and those living off reservations.

Considered part of an established power structure by new organizations such as the National Indian Youth Council in the 1960s, the NCAI struggled to maintain support from various factions that claimed the NCAI did not act aggressively enough for the interests of American Indians. At one time plagued by financial problems and political infighting, the NCAI regained a sense of purpose and stability under the leadership of Vine Deloria, Jr. (Standing Rock Sioux) in 1964.

Over the years, the NCAI has served as a staunch advocate for self-determination, sovereignty rights, and the preservation of American Indian cultures. As the oldest and largest American Indian organization, the NCAI remains a powerful force in the direction of Indian affairs and an advocate for the legal and cultural rights of tribes and American Indians.

National Congress of Black Women

The National Congress of Black Women has championed equal rights, college preparedness, affordable health care, and other pertinent issues that uplift all women, but specifically black women and girls. Its relevance today is equally as great as it was when it was founded in 1984. By expanding its borders to include 24 states, the National Congress of Black Women has been able to influence local, state, and federal governmental agencies in promoting women's issues.

In 1984, the year the National Congress of Black Women was established, "Reaganomics" was not having much of an impact upon minority families. Rev. Jesse Jackson had successfully negotiated the release of an African American soldier from Syria. International crises ravaged Europe and the Middle East. American students were not achieving at the same rate as their international counterparts. The first female airline pilot took to the skies, and the first African American woman was crowned Miss America, only to relinquish her title weeks later. It was also the year in which a woman became a vice presidential candidate for the first time in American history. Spurred by the political acceptance of Geraldine Ferraro as the Democratic nominee for vice president and the appointment of Sandra Day O'Connor as the first woman to serve on the U.S. Supreme Court, Congresswoman Shirley Chisholm, the first African American woman to run for president, gathered a collection of the brightest African American women in order to forge a new platform that would highlight issues of importance to African American women and families.

Many of the founding members of the National Congress of Black Women represented the fields

of religion, law, communications, medicine, and civil rights. Notable founders included Eleanor Holmes Norton, Dorothy Height, Jewel Jackson McCabe, Cardiss Collins, Alexis Herman, Coretta Scott King, Charlene Drew Jarvis, and Mary Frances Berry.

The organization soon found its voice in the African American community. With Herman, Norton, Berry, and other governmental leaders, the group promoted the enactment of legislation aimed at expanding economic, employment, and workforce opportunities for African Americans. Jarvis and Height collaborated to tackle the issues of education and other societal ills experienced by black children. C. Delores Tucker battled the music industry through her call for rap music to censor its degradation of women in lyrics and music videos.

Influence of the National Congress of Black Women

As of 2012, the National Congress of Black Women had chapters in New York, Michigan, New Jersey, California, Georgia, Florida, Nevada, Tennessee, Alabama, Illinois, Virginia, Delaware, North Carolina, South Carolina, Maryland, Arkansas, Mississippi, Ohio, Pennsylvania, Texas, Connecticut, Indiana, Louisiana, and Texas. There were also youth chapters in Florida, Michigan, and California, and chapter comprising the District of Columbia and Virginia. Two annual events, the Annual Awards Brunch and the Leadership Conference, require chapters to send representatives to learn about the organization's various new initiatives. At the organization's biennial conference, members vote on leadership and develop their platform signature programs and initiatives.

Each of the organization's initiatives stresses the importance of education, economics, and political activism. These programs also reflect the importance of education and leadership development. For example, the College for Kids, College for Teens, and Leadership Training programs focus on leadership skills, educational preparation of students in high school and college, and active service in the community. The group has an economic and political agenda as well.

Through its programs such as Workforce Housing, Voter Education/Registration, and Commission for the Presidential Appointment of

African American Women, the National Congress of Black Women is able to mobilize throughout the country to assist the African American community with issues regarding fair housing, political advocacy, and ensuring that African American women have a voice in the legislative process.

Additionally, the organization has its pulse on cultural, economic, and health issues through its Commission on Entertainment, Adopt-a-Child, Domestic Violence, and Green Team projects. These programs aim to enhance communities by promoting the adoption of African American children by African American families, while looking out for these children's health and environmental health.

As an additional resource to the community, the National Congress of Black Women provides information to the public through its radio program, *Celebrating Truth*. This program not only highlights current events related to the organization's mission and targeted national initiatives, but also features guest speakers and discussion of international issues that impact the lives of African Americans and the African diaspora. For example, after the catastrophic Haitian earthquake in 2010, the program featured a discussion of the plight of Haitian women, children's health and education, and post-earthquake relief efforts.

On April 28, 2009, the National Congress of Black Women commissioned and donated a bust of Sojourner Truth to the U.S. Capitol Visitor's Center. The statue was the first bust of an African American woman to be displayed in the Rotunda.

National Council of Jewish Women

The National Council of Jewish Women (NCJW) was founded in 1893 by Hannah G. Solomon at the Chicago World's Fair. Solomon accepted an invitation to organize a women's committee at the Jewish Men's Congress with the condition that women would have a significant role in the proceedings. Despite this agreement, women were not adequately included or recognized, and in protest, Solomon insisted that the women's committee be excluded from mention in the formal records. Responding in part to the affront from the Jewish Men's Congress, Solomon and the other founders of the NCJW conceived the establishment of a substantial, nationwide Jewish women's association, with a mission to address the needs of women, men, and families in the Jewish community.

Parallel to other immigrant organizations of the time period, one of the initial goals of the NCJW was to help in the assimilation process of Jewish women and their families, thus assisting them in Americanizing the largely eastern European population in their new homes. Additional goals included improving working conditions, providing education and hot lunches for the children of working mothers, developing shelters for young girls and women who were on their own and in danger of sexual mistreatment, and advancing new legislation for the purpose of promoting adequate housing arrangements for Jewish families crowded into major American cities.

There were four central goals of the NCJW: to study Judaism, to provide Sabbath schools for the poor, to undertake philanthropic work, and to act as a forum for the exchange of ideas among Jewish women. The contemporary NCJW continues on from its original mission, also providing support for a variety of initiatives that

spread from local to national and international concerns.

From its inception, the NCJW worked within and outside the Jewish community on social welfare problems. Consonant with counterparts in the Christian and secular communities, the council supported voting rights for women. To a large extent, the NCJW embraced a fairly popular conceptualization of feminism, sometimes referred to as "domestic feminism," in which women's roles as mothers were central to their identity both in and outside the Jewish home. Jewish women used motherhood as a platform to connect issues in the public and private spheres, arguing that women had a moral obligation to protect their children and their families; expanding women's roles into the public sector through voting and public leadership allowed them to follow through on their obligations.

B'nai B'rith

Serving a complementary role to the NCJW, B'nai B'rith, a social brotherhood organization for Jewish men, reinforced the emphasis on family, reflecting cooperation between husband and wife that provided the backdrop for the constitution of Jewish family life. Members of both groups highlighted assimilation into the American mainstream while preserving an active Jewish identity. Council leaders were dynamic community members whose volunteerism served a social purpose but who were also part of a larger social reform movement among Jewish immigrants. Parallel to Christian social groups of the time, the role of women in promoting religion in the home was perceived as a vital part of the function of wives and mothers. In particular, since Jews were a minority that was often marginalized and at odds with mainstream religious groups, the NCJW voiced concerns that the very existence of Judaism was potentially in danger but presented mothers and wives as protectors and rescuers of the Jewish religion.

Although the NCJW has historically located women's main interests in the realm of wife and mother roles, the council has also played a leading role in influencing the development of Jewish feminism by advocating for women's roles and needs in the larger Jewish community. As early as the 1890s, the NCJW was involved in the national suffrage campaign, campaigned for religious

equality and the right to vote in the synagogue, and encouraged women in Reform synagogues to play more active roles in giving sermons, administering Sunday School programs, and participating on synagogue boards. More contemporary NCJW programs offer support for divorced and single women and caregivers of elderly parents, and for day care programs. In 1988, the NCJW began the National Family Day Care Project (NFDCP).

The NCJW awards numerous grants to organizations that support projects in Israel. Recent grant recipients include the Adva Center (promoting equality for citizens of Israel), the Dafna Fund (Women Collaborating for Change), and Woman to Woman, the Jerusalem Shelter for Battered Women. A wide range of causes and initiatives are supported by the NCJW.

The NCJW continues to have an active presence in the Jewish and secular communities in the United States. In May 2012, NCJW leaders were invited to a summit with the presidential administration to discuss filling the vacant seats in America's federal courts. According to the NCJW Web site, its mission is to serve as a "grass roots organization of volunteers and advocates who turn progressive ideas into action. Inspired by Jewish values, the NCJW strives for social justice by improving the quality of life for women, children and families, and by safeguarding individual rights and freedoms." Among the principles listed on its Web site, the NCJW emphasizes support of "individual liberties and rights" and separation of religion and state as expressed in the Constitution, as well as a commitment to diversity for all people regardless of "race, gender, national origin, ethnicity, religion, age, disability, marital status, sexual orientation, or gender identity."

National Council of La Raza

Established in 1968 with a \$630,000 grant from the Ford Foundation, the National Council of La Raza (NCLR) is the largest national nonprofit, tax-exempt Latino advocacy and civil rights organization in the United States. The NCLR is headquartered in Washington, D.C., and maintains regional offices in Chicago; Long Beach, California; Los Angeles; New York; Phoenix; and San Antonio, Texas. The organization's Web site defines its mission statement as "work[ing] to improve opportunities for Hispanic Americans."

The NCLR's agenda consists of 10 major focus areas of interest for Hispanics/Latinos, including advocacy and empowerment, the census, children and youth, civil rights, workforce issues, education, health and nutrition, immigration, research, and economic empowerment. The organization also serves as a clearinghouse for information on a variety of issues pertaining to the Latino community through its regular publication of fact sheets, press releases, issue briefs, and research reports.

The NCLR is governed by an elected, 21-member board of directors and also holds a biennial conference with its corporate board of advisors, which consists of liaisons and senior executives from 25 major corporations, including AT&T, Shell, Time Warner, and Verizon. The NCLR also maintains working relationships with approximately 300 locally-based community organizations in 41 states and Puerto Rico. In 2012, Janet Murguía served as the organization's president and chief executive officer, and Charles Kamasaki served as its executive vice president. The NCLR employs a total staff of 120 individuals.

History and Activism

The success of the African American civil rights movement during the 1960s raised awareness of lingering inequalities and social grievances that affected other communities of color in the United States, including Latinos. The NCLR's origins date to the early 1960s, when a group of Mexican American activists known as the National Organization for Mexican American Services (NOMAS) realized that the Mexican American community lacked the type of local and political infrastructure and leadership that marked the struggle for African American civil rights. NOMAS submitted a funding proposal to the Ford Foundation, which resulted in Ford financing the first national study of Mexican Americans conducted by academics from the University of California, Los Angeles.

A portion of this grant was used to hire three Mexican American activists—Ernesto Galarza, Herman Gallegos, and Julian Samora—to study the social experiences of Mexican American communities throughout the southwest. The results of this study indicated that poverty constituted the greatest social barrier for Mexican Americans and that Mexican Americans needed a national civil rights lobbyist organization similar to the National Association for the Advancement of Colored People (NAACP) or the National Urban League.

From this study emerged the Southwest Council of La Raza (SWCLR) in February 1968, the predecessor of the NCLR. The SWCLR established its headquarters in Phoenix, Arizona, and devoted much of its early attention to establishing and maintaining partnerships with local grassroots Mexican American organizations, increasing voter registration and political participation among Mexican Americans, and promoting housing and economic empowerment initiatives within the Mexican American community. The organization expanded its focus considerably in 1972, when it relocated its headquarters to Washington, D.C., and changed its name to the National Council of La Raza.

The NCLR revised its rules in 1973 to require relatively equal representation of men and women on its board of directors. In 1974, civil rights activist Raúl Yzaguirre became the organization's executive director. Under Yzaguirre's leadership, NCLR transitioned from a Mexican American-based advocacy organization to a national civil

rights organization for Latinos as a whole. Yzaguirre's emphasis on Latino pan-ethnicity necessitated the cultivation of social and political relationships with Puerto Ricans, Cubans, and members of other Latino backgrounds, and the NCLR took steps to ensure that its board of directors included representation from each of the major Latino ethnic populations of the United States.

Annual Conference and Awards

The NCLR hosts a national, four-day conference each summer, consisting of workshops, town hall discussions, an awards gala, and keynote speakers. The conference brings together the national leadership with that of regional field offices, partners, and affiliates, and participants discuss important Latino policy issues of the day, as well as setting the organization's agenda for the following fiscal year. The size and scope of the conference have grown extensively over the years, mirroring the growth of the Latino population of the United States.

Previous keynote speakers include Vice President Joe Biden (2012), President Barack Obama (2011), and Senator John McCain (2004). The NCLR also presents a series of awards during the conference, including the Graciela Olivares La Raza Award (for significant contributions in promoting Latino issues), the Maclovio Barraza Leadership Award (for leadership in the Latino community), the Ruben Salazar Award for Communications (for accurate and positive portrayals of Latinos), and the Roberto Clemente Award for Sports Excellence (for an outstanding Latino athlete who has contributed to the advancement of the Latino community).

In addition, the NCLR hosts an annual ALMA Awards ceremony. Established in 1995, the ALMA Awards recognize outstanding Latino contributions toward American pop culture in television, film, and music. The NCLR sees the ALMA Awards ceremony as central to its larger mission of countering stereotypes of Latinos in American society and promoting diversity and the inclusion of Latinos within the entertainment industry.

Actress and activist Eva Longoria and comedian George Lopez hosted the 2012 ALMA Awards, with Mexican American Diego Boneta winning the "Favorite Movie Actor" award for his role in *Rock of Ages*, and Puerto Rican-Dominican American Zoe Saldana capturing the "Favorite

Movie Actress” award for her role in *Colombiana*. Cuban American hip-hop star Pitbull earned the ALMA Award for “Favorite Male Music Artist,” with Puerto Rican singer/actress Naya Rivera winning “Favorite Female Music Artist.” Chicano Comedian Richard “Cheech” Marin captured the ALMA for “Outstanding Career Achievement—Writing.” In effect, the ALMA Awards serve as a Latino Oscar and Emmy Awards ceremony.

Conservative Criticism

In recent years, several conservative figures have attempted to discredit the NCLR and its activities on the basis of the organization’s name. Specifically, the incorporation of the phrase *la raza* has drawn the wrath of those on the right, because of a misunderstanding over the meaning of this phrase. In Mexican dialects of Spanish, *la raza* is popular slang for “the people” or “the community,” but critics of the NCLR and anti-immigrant activists have used the term’s literal meaning (“the race”) to suggest that the organization harbors an antiwhite agenda.

Anti-immigrant organizations have accused the NCLR of allegedly promoting illegal immigration and supporting the conspiracy theory of a “Mexican *reconquista*” whereby Mexican migrants settle in the southwestern United States in order to one day return the territory to Mexico. The NCLR has never advocated such a position. Nevertheless, the late Georgia congressman Charles Norwood expressed opposition to federal earmarking of funds for NCLR activities in 2005, prompting the organization to issue Norwood a statement explaining its programming.

Former Colorado congressman Tom Tancredo, a conservative Republican and outspoken critic of illegal immigration, accused the NCLR of being a hate group during a May 2009 interview with CNN, in which Tancredo suggested that Sonia Sotomayor, a Puerto Rican and the first Latina nominated as a U.S. Supreme Court justice, was unsuitable to serve because of her affiliation with NCLR. Specifically, Tancredo accused NCLR of being “a Latino KKK [Ku Klux Klan] without the hoods or the nooses.” Former CNN anchor Lou Dobbs, who routinely spoke against illegal immigration on his nightly program *Lou Dobbs Tonight*, has referred to the NCLR and other Latino civil rights organizations as “ethnocentric.”

On October 1, 2008, the Federal Bureau of Investigation and Department of Justice prosecuted a North Carolina man, Christopher Szaz, for civil rights violations directed toward the NCLR. Szaz pleaded guilty to e-mailing an explicit death threat to the organization’s staff members in which he referred to Latinos using a racial epithet. His e-mail also threatened to kill NCLR staffers. Szaz was sentenced to 45 days in federal prison and required to perform 100 hours of community service. Janet Murguía described this incident as part of a larger national trend of increased hate speech and hate against Latinos as an outgrowth of extremist rhetoric invoked in debates on immigration policy.

Legacy

The NCLR’s lasting contribution to U.S. multiculturalism is its milestone as the first national Latino civil rights and advocacy organization. Its advocacy work has ensured that Latino communities throughout the United States have a voice within policy debates at the federal level. The NCLR’s focus on nonpartisanship has enabled it to consult with Democratic and Republican presidential administrations on issues of concern to many Latinos across the United States.

The creation of the ALMA Awards as an effort to promote positive images of Latinos in the entertainment industry is socially significant, given that the NCLR has sharply criticized commonplace media depictions of Latinos throughout the years.

National Council of Negro Women

Although the period from the 1880s through the Great Depression has been called the Progressive Era, for many African Americans it represented a nadir—a steep decline in African Americans’ overall political agency and economic mobility in the southern United States. Despite these challenges, the urban African American elite actively pursued civic reform projects meant to intervene against the deleterious effects of racism. Progressive reform movements also emerged as the primary means through which African American women gained access to both an emerging black political sphere and the public sphere more broadly.

One of the most visible black women’s reform organizations was the National Council of Negro Women (NCNW), which perhaps best exemplifies the spirit and impact of black women’s reform activism. The NCNW was founded in 1935 in Washington, D.C., under the direction of Mary McCloud Bethune, with the express purpose of “directing Negro women to greater economic, social, educational and cultural development on the national and international levels.”

Mary McLeod Bethune

One of the nation’s most prominent education reform advocates, Bethune had been a leading figure in black women’s reform activism in the early decades of the 20th century. Before founding the NCNW, Bethune in 1924 became the president of the National Association of Colored Women (NACW). The NACW and the many black women’s clubs linked to it represented a reform ethos that emphasized moral and spiritual uplift of working-class, poor, and undereducated African Americans. As a result, black reform efforts were built upon the tenuous financing that African Americans could raise from the small cadre of black elites and the smaller set of sympathetic whites.

While at the NACW, Bethune recognized that black civic groups needed to align themselves with the federal government’s antipoverty efforts in order to ensure a more secure line of funding and to place social problems facing black people, and black women in particular, on the national

Mary McLeod Bethune at Bethune-Cookman College in Daytona Beach, Florida, in 1943. Bethune founded the college as well as the National Council of Negro Women.

agenda. This spirit animated Bethune’s decision to relocate the NACW to Washington, D.C., and in 1935 to start the National Council of Negro Women in the same city.

The NCNW became an essential clearinghouse for dozens of black women’s club organizations from around the nation and the first lobbying group devoted to promoting the interest of black women in the nation’s capital. In the mid-1930s, the NCNW began to fund and publish a series of quantitative studies that documented how racism and sexism collaborated to limit the potential for black women to escape poverty. With a particular emphasis on education, health care, labor conditions, and housing, NCNW studies were among the only federally recognized research on the black women’s experience that was generated by African American, rather than white, investigators.

Throughout the 1940s and 1950s, the NCNW formed important coalitions with interracial Christian women’s service groups, in particular the Young Women’s Christian Association (YWCA). The collaboration between interracial service groups offered a generation of black women activist leaders the opportunities to

launch activist and political careers. The NCNW also worked diligently to promote black community engagement throughout the nation. Under Bethune's leadership, the NCNW opened up a number of health, education, and social service centers specifically targeted toward black women.

Dorothy Height

In 1957, Dorothy Height, who had been personally mentored by Bethune, was elected president of the NCNW. Height's election pushed the conservative NCNW's reformist approach to civil rights into active engagement with the emerging southern struggle against Jim Crow laws. Height's close personal relationship to Dr. Martin Luther King, Jr., afforded her a leadership position within the Southern Christian Leadership Conference (SCLC) and, in turn, she deployed the resources of the NCNW in service to SCLC initiatives. In 1964, NCNW representatives traveled to Mississippi after the passage of the 1964 Civil Rights Act in order to help black women understand their new rights and privileges, particularly in regard to public assistance and education.

The relationship between the NCNW and presidential administrations at times produced inadvertent collusions with problematic federal programs and initiatives. For example, the NCNW's testimony and research were an important component of the evidence used to back up Daniel Patrick Moynihan's controversial report on the Negro family, which emphasized black cultural pathology rather than structural racism as the source of instability within black family relations.

Despite the NCNW's continued appeal to the national political parties as representatives of "black women," the radicalization of the black freedom movement and black women's mounting interest in black feminist and feminist ideology from the mid-1960s into the 1970s reframed the NCNW as a moderate, "respectable" black institution. At times, the NCNW's continued emphasis on Progressive Era-style moral reform seemed out of step with the scale of urban problems facing African American inner-city residents in the 1980s. Under Height's firm leadership, the NCNW reorganized itself in the 1990s, specializing in health issues, particularly human immunodeficiency virus and acquired immune deficiency syndrome (HIV/AIDS). The organization

celebrated its 75th anniversary in 2010 and continued to be a powerful voice for black women's issues at the dawn of the 21st century.

National Hispanic Media Coalition

The National Hispanic Media Coalition (NHMC) is a nonprofit civil rights organization aimed at creating program equity throughout the Hispanic entertainment industry. The NHMC advocates telecommunication policies that benefit Hispanics and other people of color. According to the 2010 U.S. census, "Hispanic refers to a person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race."

More than half of the increase in the total population of the United States between 2000 and 2010 was the result of the increase in the Hispanic population, and this important community is still largely invisible in the media. Today, Hispanic Americans are the largest ethnic populations in the United States. The NHMC believes that in order for the media to advance Latino employment and program equity in the Hispanic

community, Hispanics must be employed at all levels of the media industry, with special emphasis on programming and policy-making positions.

In 2012, the NHMC released a national poll providing data that showed that media portrayals of Hispanic Americans are producing negative stereotypes among the general population that are diminishing perceptions of the Latino population throughout the United States.

History

The NHMC was established in Los Angeles in 1986 in an effort to increase the Latino representation in local news. At this time, KCBS-TV did not include any Latinos, despite the fact that 32 percent of the local population was estimated to be Hispanic. Today, the NHMC's headquarters is located in Pasadena, California, with a second office in Washington, D.C. The NHMC is a national organization with smaller chapters located across the nation. In 1990, it challenged the license renewals of 24 Texas radio stations.

The complaints resulted in the launching of one of the most widespread reviews of broadcast hiring practices by the Federal Communications Commission (FCC). The FCC reports that the NHMC has filed over 50 petitions to deny television and radio stations licenses across the nation in instances where Hispanic Latinos were inadequately represented and FCC rules and laws were violated.

After several years of working with several organizations toward a Local Community Radio Act, the bill was successfully passed in December 2010. This was one of the biggest accomplishments for the NHMC in that it was the first time that the media reform movement had succeeded in passing a bill in Congress. A year later, in 2011, the NHMC celebrated its 25th anniversary.

The NHMC reported, in addition, the following accomplishments in 2011: fighting hate speech in media; promoting positive stories of Latinos in media; giving voice to Latinos on media policy issues in Washington, D.C.; promoting media ownership diversity; opening doors for the next generation of Latinos; empowering local communities; and recognizing talent and champions.

Issues

The NHMC continues to focus on a number of issues across the country in an effort to expand

the future of the Hispanic community in the media. The Hispanic population comprises over 16 percent of the U.S. population but owns only 1.1 percent of television stations and 2 percent of radio stations. The NHMC continues to fight hate speech in the media: it defines hate speech as speech that creates a climate of hate or prejudice, which may in turn foster the commission of hate crimes.

According to the National Crime Victimization Survey (NCVS), an annual average of 195,000 hate crime victimizations occur each year to persons above the age of 12 years in the United States. Hate speech in the media can have a negative impact on the Latin community. The NHMC's purpose is focused on decreasing violent verbal and visual rhetoric.

In the 1920s, commercial radio began to serve the public as a way to inform and entertain. This is still true today, as 93 percent of Americans are reached each week by information and entertainment on the radio. As numbers continue to increase, news talk radio is now the predominant radio format in the United States. The United States continues to focus on the impact this has on the American public.

The NHMC reports that hate groups and hate crimes have spiked, and hate radio's popularity continues to rise. Moreover, the NHMC highlights the dangers of American hate radio on the Latino community in the United States.

In 2011, the NHMC produced a study that examined hate speech in the media, including comments on the future of media and information needs of communities in a digital age. The findings in the study reported 148 instances of speech targeting a vulnerable group, 42 unsubstantiated claims, 13 instances of divisive language, and 101 terms related to political nativism. The report concluded that the recent rise in hate crimes could be an effect of highly volatile media.

The reality is that the United States no longer has a fairness doctrine that requires broadcasters in the media to provide equal air time to different perspectives. In an effort to diversify the media in terms of leadership and employment, the NHMS monitors and reports on diversity efforts of several television and radio stations in the United States. Furthermore, the NHMC continues to educate individuals and organizations

on how to include more diverse voices in their media.

National Indian Youth Council

The National Indian Youth Council (NIYC) was formed in 1961. Upon its founding, its membership consisted of a new generation of American Indian college students and recent college graduates determined to change the course of American Indian affairs. As a youth movement, the NIYC represented a voice of dissent. It challenged elected tribal officials and organizations such as the National Congress of American Indians (NCAI), believing that the established voices of the period did not recognize the depth and breadth of the challenges that faced American Indians.

The NIYC focused on taking a strong stand on issues relating to the continuance of tribalism and American Indian sovereignty. During the civil rights movement, the NIYC shared commonalities

in its style of activism with other youth movements, but its purpose remained largely centered on treaty-based rights and issues of tribal sovereignty. Through its protests such as the "fish-ins" in the Pacific northwest in the early to mid-1960s and its powerful campaigns, the NIYC became a new force in the fight for the rights of American Indians across the nation.

Many of the NIYC's founding members first joined together in the late 1950s and early 1960s through the Southwest Indian Youth Council and the Workshop on American Indian Affairs. At institutions such as the University of New Mexico and the University of Colorado, hundreds of American Indian students and graduates came together at annual meetings and workshops designed to address the current state of Indian affairs. These meetings enabled participants to share their disillusionment with the lack of progress made toward self-determination. Their criticism focused on the slow pace at which American Indians were taking control of their own affairs through their current leaders. For this young group of activists coming of age, the American Indian Chicago Conference of 1961 strengthened their resolve to push forward with an agenda that called for taking control of all aspects of Indian affairs. At this conference, a core group of young American Indians formed the Chicago Conference Youth Council that quickly became the NIYC.

In 1961, the Workshop on American Indian Affairs at the University of Colorado–Boulder reconvened those who attended the American Indian Chicago Conference and gathered new members. Mel Thom (Paiute), Clyde Warrior (Ponca), Herbert Blatchford (Navajo), Joan Noble (Ute), and Shirley Hill Witt (Mohawk) were among the early core group of American Indians who composed the NIYC's leadership. The NIYC pressed for a radical shift from what it viewed as a passive approach to enacting change. For the NIYC, the issues of American Indian sovereignty, treaty rights, and self-determination could no longer be left to legal action and pressing politicians for reform. Direct action in the form of protests and demonstrations would be the NIYC's course. In taking such a direction, the NIYC broke from what tribal officials and established American Indian organizations considered acceptable means for addressing grievances.

The “fish-ins” of the mid-1960s represented the type of protest-confrontation activism that the NIYC organized and supported to call attention to its concerns. Based on the name of the “sit-in” protests in which African Americans civilly disobeyed segregation diners and challenged other injustices, the fish-in protests highlighted the violation of treaty-based fishing rights.

Many historians view the fish-ins as the beginning of the Red Power movement whereby American Indians engaged in direct action for the sake of their cause. American Indians fished in coastal waters, rivers, and lakes of the Pacific northwest in violation of federal and state laws because they claimed that treaties guaranteed their rights to fish such waters.

The NIYC’s demonstrations and protests, in collaboration with other organizations such as the Survival of American Indians Association, led to arrests that attracted attention in the media. Through this method, the NIYC helped bring an awareness of the plight of American Indians and the legacy of broken treaties to a national audience in newspapers of record such as the *New York Times*. In some instances, the restoration of treaty rights brought about a successful outcome for the protesters. As membership in the NIYC continued to grow throughout this period, the organization united a young generation of American Indians from around the country.

The NIYC gained a more significant national presence by the mid-1960s. In 1964, NIYC leaders attended the American Indian Capitol Conference on Poverty and challenged what they considered to be paternalistic antipoverty programs that failed to give American Indians the power to make decisions for their own communities. Through its efforts, the NIYC brought a focus to the poverty of American Indians and the necessity of American Indian control of community programs, resources, and monies under the Lyndon Johnson administration’s War on Poverty initiatives. The poverty of American Indians across the country presented the NIYC with a steadfast mission to direct policy toward empowering American Indian communities.

For the NIYC, antipoverty initiatives lacked the direction and involvement of American Indians, and the call for self-determination was made. The NIYC joined the Poor People’s Campaign

in 1968 to bring about even more awareness of American Indian poverty and the need for community-directed programs. The development of community action programs directed by American Indians for schools, job training, and economic development came as a result of the NIYC’s activism. Moreover, the NIYC gave momentum to a new era of American Indian activism and laid the foundation for future organizations such as the American Indian Movement to continue the fight for sovereignty rights and self-determination.

The NIYC continues as an organization in Albuquerque, New Mexico. It celebrated its 50th anniversary in 2011. As the second-oldest continuing American Indian organization, the NIYC works at the local and national levels, striving to protect the legal rights of all American Indians and to provide economic development opportunities to local areas.

National Museum of the American Indian

The National Museum of the American Indian (NMAI), a division of the Smithsonian Institution, is the first national museum devoted to the American Indian. Designed in consultation with and run by indigenous peoples, the NMAI

promotes knowledge and understanding of contemporary and historical Native cultures in the Western Hemisphere. The NMAI's collection represents over 1,200 indigenous groups and spans 12,000 years. The NMAI recognizes that Native American tribal groups have a vested interest in the interpretation and management of the objects in the collection.

The NMAI operates under the concept of stewardship, rather than ownership, in which the NMAI cares for objects that belong to others. Native American leaders play a pivotal role in the management, display, and interpretation of the museum's collections. With over 800,000 objects, the NMAI has one of the largest collections of Native American art and artifacts in the world.

In 1989, the U.S. Congress passed the National Museum of the American Indian Act (Public Law 101-185). The law established the National Museum of the American Indian and required the Smithsonian Institution to consider repatriating human remains and burial objects in the institution's museum collections. The law was enacted as the result of a Senate Select Committee on Indian Affairs investigation into museum

collections of Native American human remains at the Smithsonian in 1986.

It was revealed that over 40 percent of the Smithsonian's anthropological holdings were skeletal remains of American Indians. The announcement caused public outcry and led Native American groups to push for repatriation of the remains and associated objects. Another suggestion was to rebury the remains in Washington, D.C., with an accompanying memorial on the National Mall.

Because the remaining space on the National Mall was reserved for the Smithsonian Institution, the idea to build a museum devoted to the American Indian was born. Since its founding, the NMAI has had only two directors: W. Richard West, Jr., a member of the Southern Cheyenne, served as founding director from 1990 to 2007, and Kevin Gover, of the Pawnee Nation, was named director in 2007.

The NMAI was preceded by the Museum of the American Indian, founded in 1922 by George Gustav Heye (1874–1957) in New York City to house his personal collection of indigenous objects from North and South America. Over a

The National Museum of the American Indian is a division of the Smithsonian Institution and has three locations. Its collection represents more than 1,200 indigenous groups and spans 12,000 years. This 2010 view of the museum grounds shows tepees and other examples of Native American shelters in the foreground, with the dome of the U.S. Capitol in the background.

50-year period, Heye amassed a collection of over 800,000 objects.

Heye served as director of the Museum of the American Indian until 1956. In 1989, after decades of financial troubles that dated back to the Great Depression and decreasing attendance, the Heye collection was transferred to the Smithsonian, where it became part of the NMAI collection. The NMAI has three physical outposts—a museum on the National Mall in Washington, D.C. (opened September 2004), and two satellite locations—the Gustav Heye Center (GHC) in New York City (opened 1994) and the Cultural Resources Center (CRC) in Suitland, Maryland (opened 1999). The NMAI utilizes its Web site, the quarterly journal *American Indian*, traveling exhibitions, and community outreach programs as a “fourth museum.”

Objects from all tribes located in the United States, the majority of Canadian tribes, and a large number of South and Central American tribal groups can be found in the museum’s collection, which includes art and artifacts, a large photographic archive, a media archive of film and other audiovisual materials, and a paper archive with records documenting the history of the NMAI and its predecessor, the Museum of the American Indian. The NMAI organizes museum and traveling exhibitions of the collection on historical and contemporary themes for display at the National Mall location and the GHC in New York.

Cultivating Cultural Understanding

By exposing viewers to the breadth of Native American cultural production throughout history, the exhibits are designed to cultivate cultural understanding and appreciation. The ongoing exhibits at the Washington location—“Our Lives: Contemporary Life and Identity,” “Our Peoples: Giving Voice to Our Histories,” and “Our Universes: Traditional Knowledge Shapes Our World”—illustrate the NMAI’s commitment to giving voice to the Native American communities. In addition to its exhibition program, the NMAI organizes a biennial Native American Film + Video Festival, hosts regular musical and dance performances, and presents lectures that are open to the public.

Objects not on display are housed at the CRC in Maryland, where they are organized by tribal origin rather than by object type. This offers

tribal researchers easy access to the collections and ensures that they are able to work with the collections without coming upon sensitive materials. Whereas the NMAI on the National Mall and the GHC are used for exhibitions and other programming, the CRC is home to the NMAI library and conservation, research, repatriation, and curatorial facilities, in addition to the photo and paper archives. The CRC is home to the NMAI’s community and educational outreach programs.

Both the National Mall museum and the CRC were built in consultation with Native American designers to reflect cultural values and aesthetics. Both buildings illustrate the Native American approach to architecture, which stresses the relationship between the built and the natural environments and includes celestial referents.

The five-story museum on the National Mall is covered in sand-colored limestone chosen to simulate natural rock formations. The surrounding landscaping is designed to emulate wetlands. Following tradition, the building faces east, toward the rising sun, and the dome is open to the sky. Even the museum’s cafeteria is engineered to further understanding and appreciation of Native American cultures. The café serves traditional and contemporary indigenous cuisine from throughout the Western Hemisphere. Through all its architecture, activities, exhibitions, and research, the NMAI illustrates the breadth and diversity of Native American culture in the Western Hemisphere.

National Negro Business League

Booker T. Washington (1856–1915) and a small group of men and women founded the National Negro Business League (NNBL) in 1900 in Boston, Massachusetts. The NNBL was formally incorporated in 1901 in New York City. Washington served as the NNBL president while concurrently serving as the first principal of the Tuskegee Normal and Industrial Institute in Alabama from 1888 until his death in 1915. The NNBL is the nation's oldest business and trade association, as it preceded the U.S. Chamber of Commerce by 12 years. The impetus behind the founding of the league was Washington's belief that the African American community could rise above racism only through successful business ownership and economic self-sufficiency, and this had to be done through a coordinated effort. As a result, hundreds of NNBL chapters were formed across the United States to encourage economic prosperity and commercial success among their members.

To qualify for membership in the NNBL, a man or woman only needed to be a good and upstanding citizen within his or her own community. Members of the league included successful African American businessmen and businesswomen, attorneys, craftspeople, doctors, farmers, other professionals, and those interested in starting their own businesses. This was an opportunity to grow the middle class. National Negro Business League chapters were formed at state and local levels and were primarily located in the south, though they were also located throughout the midwest, northeast, and far west. With a nationwide constituency, creating and maintaining business directories for all major U.S. cities was an important part of the league's goal of fostering commercial growth and development. The directories inventoried all businesses and included African American contacts in a variety of business sectors.

The mission of the NNBL was to encourage entrepreneurial endeavors while supporting existing African American-owned businesses. Agriculture, education, finance, industry, and other commercial and professional ventures were the focus of the league. It was well known that Washington believed that African Americans should pay more

attention to entrepreneurship and business success and spend less time on the direct pursuit of civil rights. Washington theorized that the business and financial success found by members of the league would translate into acceptance by whites and segue into political and economic power.

Ironically, the NNBL received financial support from prominent white businessmen such as Andrew Carnegie, self-made steel tycoon and philanthropist; Julius Rosenwald of Sears Roebuck and Company; and Postmaster General John Wanamaker, also a department store magnate and banker. However, including whites was part of Washington's overall vision for interracial business partnerships; these men and others not only provided economic support and mentoring but also participated in the NNBL's annual business meetings.

Library of Congress topics related to prosperity and thrift indicate that the league joined with other established promoters of business development, such as the Association of National Advertisers and the J. Walter Thompson & Company advertising agency in New York. The league also maintained an informal connection with the prestigious Associated Advertising Clubs of the World; its manager, Carl Hunt, served as a contact person for the NNBL. Supportive advertising organizations instructed African American businesspeople in the new and effective advertising techniques that could be used to publicize black businesses to African Americans as well as to the larger American society.

Women in Business

Madame C. J. Walker served as a role model for African American women and men as an entrepreneur and highly successful businesswoman of the time. Madame Walker achieved the status of being the first African American female millionaire in the United States. Walker was a speaker at an NNBL annual conference and stated her commitment to providing jobs and supporting the education of women so they could empower themselves in creating their own businesses. Roles during this time were limited, but Walker, who did not have a formal education, felt that through self-help and hard work, success could be achieved.

The roles for African American women, excluding those of fieldworker or sharecropper during

this period, were specific, as noted by the curriculum outlined for them at the Tuskegee Normal and Industrial Institute. Education in home economics, dressmaking, weaving, and other handcrafts were the areas in which women were expected to train. While enrolled at the institute, women were encouraged to use these very skills to create their own businesses and were instructed in the ways of business formation.

Washington's support of women in leadership roles is also indicated by the appointment of two of his wives in leadership roles at the Tuskegee Institute. Olivia America Davidson (1854–89), Washington's second wife, was a Hampton graduate whom he married in 1885. Davidson actually assisted with the establishment of the Tuskegee Normal and Industrial Institute with Washington and served as assistant principal. In 1892, after Davidson's death, he married Margaret James Murray (1865–1925), who served as lady principal. Murray also ran a separate business.

New Leadership

After Washington's death, the NNBL was presided over by Robert R. Moton (1867–1940), who was also named principal of the Tuskegee Institute in Alabama. During the 1920s, the league's leaders also included Albon L. Holsey, executive secretary; John L. Webb, treasurer; and C. C. Spaulding, chairman of the executive committee.

Though the influence of the National Negro Business League has declined since its heyday in the early half of the 20th century, the organization still exists today. The NNBL was reincorporated in Washington, D.C., in 1966 and renamed the National Business League (NBL). It is headquartered in Atlanta, Georgia, with a second office in Washington, D.C. In continuing the work of Washington, the National Business League established the Booker T. Washington Foundation in 1967 as a public, nonprivate operating foundation to serve as the research and development arm of the organization.

Members of the executive committee of the National Negro Business League, including Booker T. Washington (front, second from left), in an undated photograph from the early 20th century. The league, which is older than the U.S. Chamber of Commerce, continues to promote economic enterprise and financial literacy for African Americans today.

In 1974, the NBL established the National Student Business League as its collegiate division. The National Business League continues to promote economic enterprise and financial literacy for African Americans throughout the United States and abroad through international trade with Africa and the African diaspora.

The best source for information related to the National Business League is the Library of Congress Manuscript Division's Coolidge Consumerism Division's section on African Americans and the Consumer Economy and Lexis Nexis Black Studies Research Sources. The papers of both Booker T. Washington and Robert R. Moton can be found there.

and disparity as they pertained to the Puerto Rican community. When it was first established, the NPRF demonstrated a clear departure from previous Puerto Rican organizations that served primarily to promote political and cultural links to the island. The forum innovated in terms of ethnicity-oriented organizations by promoting an agenda aimed at eliminating problems associated with urban poverty and establishing a focus on the future of the Puerto Rican community.

Background

Puerto Ricans are the second-largest Latino group in the United States and make up 9 percent of the country's total Latino population. New York City is the home of the largest Puerto Rican community in the United States, with Chicago as the second-largest Puerto Rican population center. According to the 2010 U.S. Census, there were 3,725,789 individuals on the island of Puerto Rico.

The largest migration of Puerto Ricans to the mainland United States occurred following World War II. During this period, almost 2 million people emigrated from Puerto Rico. This immigration is thought to have been caused primarily by the abundance of well-paying jobs on the mainland and a lack of such jobs on the island.

Within a decade of establishing themselves in their new homes, Puerto Rican immigrants began to organize social welfare and other activist associations with the purpose of improving their community. Since a significant number of individuals in the community had decided to live permanently on the mainland and make the best of their situation, a desire developed to improve existing neighborhoods and move to better neighborhoods; this would be the salvation of the Puerto Rican communities in New York and Chicago. Issues of concern to those first individuals interested in advancing the Puerto Rican community included increasing emphasis on education and eliminating housing discrimination, overcrowding, and police brutality.

Interethnic hostility and issues surrounding economic disparity were also major factors in the founding of these organizations. Economic suffering was not universal among Puerto Rican immigrants; in fact, some economically well-off individuals did come from the island, and a degree of

National Puerto Rican Forum

The National Puerto Rican Forum (NPRF) was an organization that advocated for Puerto Ricans and other members of the Latino community, primarily in New York and Chicago. The forum was founded in 1957 and designed and implemented programs in job training and teaching English as a second language. The organization also researched poverty, crime, settling patterns,

social mobility did exist. However, the majority of immigrants were in the working class or poor. Interethnic tensions were caused in large part by Puerto Rican families moving into neighborhoods that were already populated by other ethnic groups, primarily Italian Americans and Irish Americans. Much of this hostility was expressed in the streets by youth gangs, and these conflicts were the basis for the musical *West Side Story*. However, the stories that played out in the streets of New York were not quite as lighthearted.

Founding and Activities of the National Puerto Rican Forum

The National Puerto Rican Forum, originally the Hispanic American Youth Association (HAYA), was founded in 1957. The organization was based in New York City and has served the Puerto Rican and Latino communities in a wide scope of areas, with a primary focus on education. The organization committed to improving the socioeconomic conditions of Latinos and other minorities through career counseling, employment training, job placement, adult basic education, technology training, and medical advocacy.

At its peak, the NPRF served as an incubator for organizations and programs promoting economic self-sufficiency in the Puerto Rican and larger Latino communities. The forum additionally served the Latino community by advocating for meaningful employment that paid a living wage and led to self-sufficiency and dignity. Furthermore, the forum was an approved provider of education services in the state of New York, offering tutoring during the school year.

To a student of social services, the NPRF may not look like a unique organization. However, it was among the first to enact a future-focused vision for the Puerto Rican community. When it started its education programs, the forum filled a critical hole at a time when most organizations were only concerned with the preservation of traditional culture. The National Puerto Rican Forum was concerned with bettering the lives of Puerto Ricans living in the United States.

Key to the organization's founding was Antonia Pantoja, an educator, social worker, feminist, and civil rights leader. In 1957, she served as one of the key members in transitioning the Hispanic American Youth Association into the National

Puerto Rican Forum. She would move on in 1961 to found ASPIRA.

Inheritors of the Forum's Legacy

By 2012, the National Puerto Rican Forum was not as active as it once was, and it primarily served in an educational training capacity. Most of the forum's legacy is currently being sustained by an organization it helped create called ASPIRA (Spanish for aspire). ASPIRA's stated mission is "to empower the Puerto Rican and Latino community through advocacy and the education and leadership development of its youth." To further its goal of promoting education, ASPIRA regularly seeks public and private funds. Although it was once focused primarily in New York and Chicago, today ASPIRA serves Puerto Ricans wherever they live in large numbers.

ASPIRA seeks to promote education, self-esteem, cultural awareness, and leadership abilities in the Puerto Rican community. The organization provides educational opportunities for youth, including programs in math, science, driving safety, reading, and AIDS awareness. It also provides adult education programs, including those that promote professional development and provide information on college resources, as well as other activities that increase career awareness.

In addition to education, ASPIRA advocates for Puerto Ricans in political issues (including gang and youth violence, health, education, voting rights, and media issues) and legislative issues (including education, crime prevention, and economic empowerment).

National Rainbow Coalition/PUSH

The roots of the National Rainbow Coalition/PUSH can be traced to Operation Breadbasket, the organization launched by the Southern Christian Leadership Conference (SCLC) in Atlanta, Georgia, in 1962. Its purpose was to harness collective purchasing power to create economic opportunities in African American communities.

Operation Breadbasket expanded to Chicago in 1966, with Jesse Jackson at its head. Jackson became national director of the group a year later. When tension developed between Jackson and Ralph Abernathy, who had moved into the leadership position at the SCLC, Jackson resigned and founded People United to Save Humanity (PUSH), a separate economic empowerment organization, in 1971.

After Jackson's first presidential campaign in 1984, he launched the National Rainbow Coalition to unite African Americans and other disadvantaged groups to work for political equity and opportunity. In 1996, the National Rainbow Coalition and Operation PUSH, which had undergone a name change to People United to Serve Humanity, merged to form the Rainbow PUSH Coalition with international headquarters in Chicago.

When Jackson left the SCLC and founded PUSH, he initially continued to use the same strategies to advance economic opportunity that he had used in directing Operation Breadbasket, but he later developed strategies that were particular to PUSH. Control, reciprocity, and parity were the concepts undergirding Jackson's plans. He felt that African Americans could control their own economic destiny if they understood how to use the resources they already possessed.

Gaining that control required reciprocity, which Jackson defined as a mutually beneficial

relationship with American corporations and financial institutions. Parity required that the African American community receive an equitable return on their investments. To achieve these objectives, Jackson devised a "Marshall Plan for African Americans." The plan could succeed only if Jackson could convince major corporations to finance it. His strategy called for selecting companies that sold products that African Americans were known to consume in substantial numbers.

If requests for contracts, deposits, and employment opportunities went unmet, Operation PUSH would organize a boycott. He intended the plan to benefit not only African American businesses but also African American bankers, lawyers, publishers, janitors, and garbage collectors. Jackson targeted not just individual corporations but also international chains and even entire industries.

By 1974, Operation PUSH had agreements with General Foods, Avon Products, the Joseph Schlitz Company, Quaker Oats, and Miller Brewing, in addition to an African American-Hispanic agreement with the Southland Corporation. A "Don't Choke on Coke" boycott against Coca-Cola led to a \$34 million agreement between PUSH and the Atlanta-based company that the Jackson camp called historic. Coke also agreed to appoint 32 African American wholesalers within the year, to lend \$1.5 million to African American entrepreneurs entering the beverage industry, and to name an African American to its board of directors. The first African American board member, Donald F. McHenry, was named in 1981.

In addition to economic initiatives, PUSH directed its energies toward social and political development using direct action campaigns, a weekly radio broadcast, and awards that honored prominent blacks in the United States and abroad. PUSH also developed reading programs for children and created PUSH Excel, a program that emphasized keeping inner-city youth in school while helping them to find jobs.

PUSH weakened in the 1980s as Jackson's attention was diverted to his political career. A boycott of Nike in protest against what PUSH leaders perceived to be illegal child labor practices proved unsuccessful when African

American celebrities and superstar athletes such as Spike Lee, Michael Jordan, and Bo Jackson, all of whom had financial links to Nike, failed to support the boycott.

Although the National Rainbow Coalition was not formally organized until after Jackson's first presidential campaign in 1984, the term and the policies were much in evidence in the campaign. In speeches, Jackson routinely called for a "rainbow coalition" of the disadvantaged from diverse racial and ethnic backgrounds to work together to protect voting rights and affirmative action and to advocate social policies that had been largely dismissed during the Ronald Reagan years.

In his speech at the 1984 Democratic national convention in San Francisco, California, Jackson again used the rainbow coalition theme, urging the party to embrace Arab Americans, Asian Americans, and Native Americans as well as "small farmers, lesbians, gays, and disabled veterans." In 1986, at the National Rainbow Coalition's first annual convention in Washington, D.C., Jackson urged that teachers and labor unions unite with the multiethnic group. The Rainbow Coalition gave structure to his second bid for the presidency, in which he proved that his politics of inclusion and pluralism had appeal across color lines.

In 1996, Jackson moved to merge the two organizations he had founded. The emphases of Operation PUSH on economic advancement, education, jobs, and self-sufficiency was a logical fit with the Rainbow Coalition's agenda of political empowerment for the groups most affected by the social changes Operation PUSH was working to achieve. Pooling resources would increase the efficiency and effectiveness of both organizations.

Under the Rainbow/PUSH Coalition, general programs focus on education, voter registration, and public policy issues. Restricting access to guns and opposing voter identification laws received strong emphasis in 2012. Economic programs are the work of the organization's International Trade Bureau and the Wall Street Project.

The International Trade Bureau is primarily concerned with providing opportunities for minority businesses. The Wall Street Project is concerned with the integration of African Americans and other minorities more fully into

executive-level positions in U.S. corporations and with the commitment of financial institutions to create opportunities to assist inner-city and rural communities in generating jobs and income. The group was instrumental in convincing Freddie Mac to designate more than \$1 billion in loans for minority home buyers in 2000. The Wall Street Project has been credited with increasing the number of minorities and women on corporate boards.

As of 2012, the organization, headquartered in Chicago, has offices in Washington, D.C., Atlanta, Detroit, Houston, Los Angeles, New York, and Oakland. Jesse Jackson has survived scandals, financial and moral, and continues to lead the organization he founded.

National Urban League

The National Urban League began as an interracial organization that focused on employment and socioeconomic issues in urban communities. Ruth Baldwin and George Edmund Hayes founded the National Urban League (NUL) with

the merger of two organizations on September 29, 1910, in New York. Baldwin was the widow of William H. Baldwin, Jr., a philanthropist from the railroad industry. Haynes was an alumnus of Fisk University and Columbia University. The consolidation of two grassroots organizations, the Committee for Improving the Industrial Conditions of Negroes and the National League for the Protection of Colored Women, led to the creation of NUL. Both of these earlier groups were established in 1906.

Since this group of social activists and philanthropists established themselves, the world has experienced significant societal change. In the early 20th century, especially from 1910 to 1930, over 1 million African Americans migrated from rural southern communities to find work and freedom in both midwestern and northern cities. In the early days, NUL worked with the African Americans who came north. This group battled both the segregated labor unions and rampant discrimination from slumlords in cities such as New York and Chicago. Over time, census records indicate that about 6 million people participated in the first and second waves of the Great Migration. The Urban League provided counseling and services that helped people get better jobs, housing, and education.

For 100 years, the Urban League has helped blacks and other minorities meet the demand for employment and lift their families out of the cycle of poverty. In 1910, the organization represented millions of blacks who fled the brutal Jim Crow system of racism in the southern states and ultimately found themselves dealing with a more subtle form of discrimination after relocating to the north. The league advocated for integration as well as economic and social justice for black Americans. The league also negotiated for better education and employment options for its constituents. For example, during the Great Depression, they lobbied for blacks to be included in federal relief programs, boycotted businesses that denied employment to blacks, and led the effort to desegregate labor unions.

In 1976, Vernon E. Jordan, Jr., addressed the Annual Urban League Conference in a keynote speech proposing “a new bill of rights” for all Americans. Rights of blacks and other minority groups were broadly emphasized. He considered

the issues of the rights of all citizens to education, economic security, health, family stability, political representation, and safe communities.

Contemporary Issues

Today, the Urban League serves 2 million people annually. According to Marc Morial, the league’s president, record numbers of people seek help from the 98 affiliates that are spread across 38 states and the District of Columbia. Despite signs of an economic recovery in 2013, African Americans families continued to suffer from the recession of the early 2000s. Therefore, the Urban League remains focused on providing inner-city residents with better jobs, better housing, and better schools. The Urban League is known for its annual “State of Black America” report. Recently, its accompanying Equality Index has expanded to include Latinos for the first time in analysis of racial disparities.

Another important issue for the NUL leadership is how to remain relevant in the midst of a national perception of a “post-racial America.” The reality is that many believe that the current disparities in society are a function of class differences rather than racial differences, and this ideology has led to new strategies and initiatives within the organization. Although it still works to understand the most difficult issues that caused the deterioration of American inner cities, there are also new social and political issues to tackle as well. For example, a significant portion of the league’s current financial support comes from federal and corporate grants that focus on job training. The failure of the inner-city public school system has created a need to strengthen its focus on job training and education programs as an important safety net for millions of people living in communities with limited educational opportunities.

New Organizational Leadership

Morial, a former New Orleans mayor, began his leadership of the organization in 2005. His most important strategy was to recruit a younger generation of leaders from outside the organization to stay relevant. About 70 percent of the Urban League’s roughly 100-member national staff came aboard after Morial’s arrival, and half of the executives leading local affiliates have been in place less than five years. The organization

focused on its national image in order to clarify its role to the public. As the Urban League streamlined programs, its size and dues revenue have grown by 23 percent in the past five years. In 2010, the group's headquarters raised \$25 million in cash and garnered another \$14 million in free advertising. During this same period, the Urban League provides critical services to over 10 million people.

The centennial campaign included a national public-service campaign using social media networks to solicit millions of Americans to pledge their involvement in the fight for jobs, education, housing, and health care. The Urban League has also broadened its reach to serve Latinos as well as African Americans.

Native American Church

The Native American Church (NAC) evolved from the Peyote religion, one of the most important religious developments in the post-contact history of North American Indians. For thousands of years, natives of northern Mexico have ingested

the peyote cactus, which grows wild in specific desert locales, for its medical and visionary properties. Consisting of two alkaloids—strychnine (producing short-term nausea, hunger cramps, and anxiety) and morphine (producing euphoria, colorful fantasies, and meditative relaxation for several hours)—peyote has long appealed to its consumers as a powerful source of religious experiences, and thus cultic activity grew around its use. Huichol Indians, for example, made regular pilgrimages to peyote-rich lands, engaging in dreamy ceremonials under peyote's influence.

In the 1800s, peyote use spread northward to Indian Territory (now Oklahoma) and coalesced into a religious complex with identifiable mythology, theology, ritual, leadership, paraphernalia, ethics, and organization. Espousing the unity of American Indian peoples, it featured the sacramental eating of peyote, often in combination with Christian aspects, including cross imagery, biblical references, devotion to Jesus, and moralistic concern for sinfulness.

The Peyote religion's myths of origin depicted peyote's power to save the lost, strengthen the sick, rejoin separated relatives, and promote peace. Its cosmology envisioned a spiritual world that pitied Indians and delivered supernatural aid through the peyote plant. Peyote thus provided the means of sustaining life, gaining grace, attaining insight, and establishing meaning. Peyotists viewed peyote as a compassionate, redemptive agent, bringing Indians into communion with their ultimate sources of existence.

Peyotism featured a comforting ritual, giving Indians opportunity to experience the holy directly by partaking of the divine cactus. During the all-night rituals, peyotists reinforced their sense of commonality as a people, exhorting each other to moral reformation and sharing Earth's plentitude. Ideally, the ceremonies took place in a tepee, surrounding an altar symbolizing the Peyote Road in the form of a crescent or cross, with a Chief Peyote button set in place and a fire in the center. The participants sat all night in a circle, swallowing peyote and contemplating their condition in reverential fervor. Toward morning, they ate a communal meal and shared their tales of peyote's benefits.

Peyotists attested to the thrilling sense of personal significance under peyote's effect. By

A Cheyenne peyote leader photographed in 1927 by Edward S. Curtis. The Native American Church and Peyote religion have survived decades of legal challenges. As of 2013, the church had as many as 300,000 followers in North America.

means of ordeal and exhilaration, peyote triggered a mystical experience, a perceived contact with awe-inspiring holiness that had the power to transform the peyotists through direct revelation. For them, peyote was a medicine, a food, and a spiritual sustenance that aided clairvoyance and overcame evil, leading to ethical regeneration. Peyotists testified to its enduring effects in everyday life, strengthening familial, tribal, and American Indian identities.

Peyotists exhibited evangelical zeal for their newly developed faith. As the Peyote religion spread across the western United States to more than 70 tribes, Christian and government agencies sought to stem its tide, terming peyote a dangerous drug and its use an incitement to immorality. Although no scientific evidence has been produced to demonstrate harmful or addictive effects of peyote, bureaucrats overseeing Indian reservations in the late 1800s and early 1900s prohibited

its use. Unable to convince the U.S. Congress to outlaw peyote traffic, more than a dozen states created anti-peyote legislation beginning in 1917.

To defend their religious rights, peyotists created church organizations with state charters. The most common name for these various institutions was Native American Church, such as one incorporated in Oklahoma in 1918. Before long, the NAC became the organizational nomenclature for all peyotism in the United States. The NAC became (and continues to be) the racial faith of American Indian nationhood.

Throughout the 20th century, state legislatures, Congress, courts, law enforcement officials, and NAC leaders jockeyed over peyotists' rights. By the time of the passage of the American Indian Religious Freedom Act (AIRFA) in 1978, the use of peyote in the NAC was permitted almost everywhere in the United States. In 1990, however, the U.S. Supreme Court ruled in *Employment Division v. Smith* that the state of Oregon could interfere with peyotists' freedom of religion, even without proving a compelling state interest. NAC representatives, such as the Winnebago Reuben Snake, organized a coalition of Indian and non-Indian religionists to counter the Court's ruling, leading to several federal acts in the 1990s that strengthened peyotism's legal standing.

The Peyote religion has continued to grow, and today the NAC of North America (including Canada) has approximately 300,000 Indian adherents. Peyotism is embedded in Native American culture. It fosters pan-Indian bonds and ecumenical relations while expressing indigenous forms of spirituality. Peyotists regard its ethos as a guide amid social and economic distress, and they herald its repute in curing alcoholism.

Contemporary NAC members remain concerned about the threat of legal impingements. They also worry over future supplies of peyote, abundant in Mexico but illegal there. Peyoteros harvest nearly 2 million peyote buttons each year near Laredo, Texas, and ship them nationwide to NAC members, some of whom make pilgrimages to the peyote gardens, thus reaffirming their faith and replenishing their stock of the sacred substance.

Native American Languages Acts

In 1990, 1992, and 2006, the United States created legislation that collectively reversed a national policy of actively discriminating against Native American languages by ending such practices and by providing some financial resources for Native American communities to maintain and revitalize their indigenous heritage languages. This legislation was achieved through the unprecedented collaboration of political leaders, language activists, speakers of Native American languages, and professional linguists, and it is rightly viewed as an abandonment of a national goal of complete linguistic assimilation to standard English.

By recognizing the positive roles Native American languages provide, this legislation promotes a multicultural adaptation that encourages the maintenance and revitalization of Native American languages. Proponents of the legislation hail the explicit rejection of educational policies that deprecated and neglected Native American languages (as in educational institutions affecting the language socialization of generations of Native American children).

But its critics say that it is “too little, too late.” By the last decade of the 20th century, one-third of the more than 300 precontact Native American languages had already died. For the remaining 200

or so languages, only about 20 still have speakers in every generation, including the youngest generation. Because so many Native American languages are endangered, the comparatively small amount of funding this legislation provides may be viewed as more of a symbolic statement than a realistic allocation of resources designed to undo the harm of past policies.

As the first of this series of legislative acts, the Native American Languages Act of 1990, the title for Public Law 101-477, represents the most important historical repudiation of national policies that sought to eradicate Native American languages and replace them with English. This legislation called for a new policy that would “preserve, protect, and promote” Native American languages. This act called for educational reforms and practices that would promote the educational use of Native American languages as media of instruction. The act rationalizes the change in policy in several ways that clearly demonstrate a transformation of an assimilationist national policy into one that embraces a multicultural adaptation. For example, Native American languages and cultures are described as unique and critical to the production of the cultural identities of its speakers.

The act also repudiates past policies that deprecated Native American languages as useless anachronisms and recognized the foundational role Native American languages have played as “the basic medium for the transmission, and thus, survival, of Native American cultures, literatures, histories, religions, political institutions, and values.” The act goes on to state that past policies of linguistic suppression and extermination are “in conflict with the United States policy of self-determination for Native Americans.”

The need for this legislation emerged from a conservative backlash in the 1980s that attempted to reverse gains in the promotion of linguistic diversity and in the support of bilingual education that were accomplished in the more liberal climate of the 1960s and 1970s. Though the 1974 U.S. Supreme Court decision in *Lau v. Nichols* created an important precedent for bilingual education and for a renewed emphasis on heritage languages rather than on linguistic assimilation, early successes were countered by the rise of the Official English and English Only movements and

their attempts to restore exclusive emphasis on Standard English.

These movements challenged any promotion of linguistic diversity as inappropriate. The motto of the Official English movement was “One Flag, One Language,” suggesting the way its supporters viewed multilingualism as a form of disloyalty. Already experiencing cuts in bilingual education that affected the funding of Native American language programs, a coalition of Native and non-Native language activists met during a 1988 conference to produce the first draft of a resolution that was sent to the Senate Committee on Indian Affairs, chaired by Senator Daniel Inouye.

Though the 1990 act represented a landmark reversal of U.S. policy and provided critical legal support for Native American languages, it did not contain any funding provisions. This lack necessitated the Native American Languages Acts of 1992 and 2006. The 1992 act called for an allocation of \$2 million to be distributed in the form of competitive grants. The 2006 act, also known as the Esther Martinez Native American Languages Preservation Act, is very similar to the 1992 act and extends its funding provisions through 2012. (The 2006 act is named for an important Tewa language activist from Ohkay Owingeh [San Juan Pueblo] who devoted much of her life to documenting, preserving, and teaching her heritage language.)

Collectively, these Native American Language Acts have provided critical legal support and significant economic resources for language maintenance efforts and linguistic revitalization activities for Native American languages.

Almost all Native American communities support programs of language renewal; the Native American languages acts empower each community to develop a program that is appropriate to the distinctive needs of its people, thereby combining a multicultural emphasis with one that respects the self-determination of tribal sovereignty.

Native Americans

Christopher Columbus did not find a sparsely populated Hispaniola (the Caribbean island that is today home to Haiti and the Dominican Republic) when he landed there in 1492. Instead, he found an estimated 250,000 Tainos, a group of indigenous Arawaks. Massacres and diseases rapidly decimated the population, and by 1517, only approximately 14,000 Arawaks remained. Estimates vary tremendously as to how many indigenous peoples resided in what is now the United States in the pre-Columbus era, with some as low as 1 million and others as high as 18 million. These numbers include American Indians as well as Alaska Natives.

Centuries of war, oppression, and disease have resulted in far fewer native peoples today. Mainstream history is filled with many myths about indigenous peoples, often depicting them as spiritual and stoic, while also describing them as horrific savages. These images remain today, in history books and in popular culture. Yet, native peoples are tremendously diverse, and their ethnic identity today is tied to their cultural heritage, the history of their interactions with non-native peoples, and the social, economic, and political conditions in which they live.

According to the Bureau of Indian Affairs (BIA), there are 566 federally recognized American

Indian tribes. It is challenging, however, to find an accurate estimate of how many people are members of a particular tribe or nation. Governmental agencies use different methods of determining membership than the Indian nations. The BIA, which is an entity of the federal government, defines anyone with one-fourth or more blood quantum, or anyone who is an enrolled or registered member, as an American Indian. Some tribes set blood quantum requirements lower, while some set them slightly higher than one-fourth.

The U.S. Census Bureau uses a different method of counting Native Americans. It uses self-identification, which typically leads to higher numbers. The American Community Survey of 2011 identified 5.1 million persons that are either American Indian or Alaskan Native only, or are mixed with other races. It is estimated that Native Americans constitute 1.6 percent of the U.S. population today, and that proportion is projected to be 2 percent, or 8.6 million people, in 2050.

There are 324 Indian reservations on U.S. land, what is collectively known as Indian Country. The 46 million acres is a dramatic decrease from the 1.9 billion acres that Native Americans held before Columbus, yet more than 70 percent of Native Americans live in urban areas today.

Far from primitive, as they are often described, native peoples developed rich cultures with extensive agricultural and technological developments. They built cities, had sophisticated trade patterns, domesticated animals, established religious traditions, and developed political systems. At least 2,000 distinct languages were spoken in the Americas in 1492. Cultural differences were marked. Some Indian peoples belonged to small bands of hunters and gatherers, and some practiced sophisticated irrigated agriculture.

In addition to forcing natives to serve as slaves and introducing deadly diseases, Spanish and then American conquistadors destroyed many traditional native rituals. Slave masters beat and abused the natives. Some have called this genocide, if not in actual murder of the population, then in terms of destruction of native cultures.

U.S.–Native Relations

The history of relations between the U.S. government and native peoples has largely been one of tension, conflict, and distrust. Between 1778 and

1868, the U.S. Senate ratified some 370 treaties with Indian tribes. These treaties gave nearly 1 billion acres of land to the federal government, following the philosophy of manifest destiny. Manifest destiny is the belief that the United States had the God-given right and responsibility to expand westward and to “civilize” those who occupied the land. In turn, the government pledged to protect the remaining Indian lands and resources. By most definitions, the government has failed in its duty to protect native peoples, having reneged on all its treaty obligations.

From the colonial period until the 1920s, the U.S. government engaged in a series of violent conflicts with tribes across the country. Referred to generally as the Indian Wars, these conflicts resulted from colonists seeking to take native peoples’ land and from native peoples’ attacks on colonial settlements, which have come to be called “Indian raids.” The government often relied on scare tactics and falsehoods to exaggerate the number of Indian raids, however.

These wars resulted in massive losses for both sides, but in particular for tribes. The Second Seminole War, from 1835 to 1842, was the longest and costliest of the Indian Wars. Some 1,600 military members and civilians were killed, albeit many by disease. There are no known estimates of the number of Seminoles lost in the war. The Sand Creek Massacre and the Wounded Knee Massacres are some of the more infamous incidents in which government forces attacked and killed hundreds of Indians.

Supreme Court decisions have resulted in a complex status for Indian tribes. In *Cherokee Nation v. Georgia* (1831), the Court ruled that Indian tribes were domestic dependent nations. Chief Justice John Marshall described the relationship as that of ward and guardian. One year later, in *Worcester v. Georgia*, the Court held that states were prohibited from enforcing their laws on Indian lands and against Indian tribes or nations, thus implying that tribes were sovereign. At the same time, President Andrew Jackson, a known hater of Indians, wanted to clear them from the south. He ignored these rulings and other treaty obligations, and he had authorized the removal of Indians from their homelands with the Indian Removal Act of 1830.

In 1831, the Choctaw were removed from lands in the deep south, followed by the Seminole

in 1832, Creek in 1834, Chickasaw in 1837, and Cherokee in 1838, in the Trail of Tears. More than 15,000 Indians were forced to travel, largely by foot, to the Oklahoma Territory. Approximately one-quarter died en route, and their former lands, some 25,000 acres, were appropriated by white settlers.

This pattern was repeated several decades later when Congress enacted the General Allotment Act, also known as the Dawes Act after sponsor Henry Dawes (R-Massachusetts), gave the president authority to divide up communally held reservation land that had been delegated via treaties and parcel it into allotments for individual Indians, with the remainder opened up to white homesteaders. This policy was not only in violation of existing treaty agreements but was also in contrast to the way of life of most tribes, who did not believe in private ownership of land. Further, most of the allotments were not suitable for farming, and thus Indians found it difficult to survive. Many ended up leasing their land to white ranchers.

The Dawes Act also increased the influence of the BIA. The BIA was originally housed in the War Department when it was started in 1824, but in 1849, it was transferred to the Interior Department. The BIA's philosophy during the 1800s and 1900s was that natives needed to assimilate to white society. By the start of the 20th century, it was clear that allotment was not working. Indians were suffering from poverty and hunger, and the BIA was worried that its influence was waning.

In 1934, Congress enacted the Indian Reorganization Act, which prohibited allotments in the future and returned surplus lands to Indians, allegedly to be governed by the tribes. A growing "termination" movement emerged, led by the Dwight Eisenhower administration, that advocated a change in the relationship between Indians and the government. Many wanted the federal government out of Indian affairs completely. Although some native peoples liked the idea, others were concerned that because the previous policies had disempowered and impoverished Indians, they would become a permanent underclass.

Throughout the 19th century and into the 20th, the U.S. government forced or coerced native families to send their children to boarding schools to "civilize" them. Christian missionaries founded some of these schools, and the BIA

initiated others. An estimated 60,000 native students attended boarding schools in the peak year of 1973. Authorities cut the traditionally long hair of the native children, gave them new European American names, and taught them English. They were encouraged to abandon their cultural traditions. The result furthered the dissolution of native cultural traditions and identity.

Another harmful policy was the forced sterilization of native women. Beginning in the 19th and early 20th centuries, many states enacted legislation based on the eugenics movement, which sought to maintain racial purity and believed that nonwhite persons were more prone to criminality and thus should be prevented from reproducing. It is estimated that 25 to 40 percent of native families were affected by these policies, which were still in effect as late as 1976.

In the 1960s and 1970s, Indians who were inspired by civil rights activists and frustrated with the government began to organize. The Red Power movement led a series of demonstrations against the government. In the fall of 1972, activists organized the Trail of Broken Treaties; a caravan of some 1,000 Indians traveled to Washington, D.C., to demand that the government affirm its treaty obligations. Some activists formed the American Indian Movement (AIM), a militant group that occupied the BIA office at Wounded Knee, South Dakota, in 1973. An estimated 200 Indians and AIM members controlled the town for 73 days. The U.S. government sent in the U.S. Marshals, the Federal Bureau of Investigation (FBI), and other law enforcement personnel, resulting in a violent standoff in which two FBI agents were killed.

AIM activist Leonard Peltier is serving a life sentence for killing agents Ron Williams and Jack Coler. AIM members and allies consider the many Native Americans who were killed or hurt during and before the incident and refer to the trial of Peltier as a sham. It was, they assert, part of the government's continued repression of native organizing and activism. Documents show that the FBI had engaged in efforts to constrain AIM, including use of informants and surveillance, as part of what is collectively referred to as COINTELPRO. Federal officials, however, point to the violent tactics used by some AIM members and assert that Peltier is rightly incarcerated for the murder of the two FBI agents.

In 1970, President Richard Nixon reorganized the BIA, giving Native Americans high-level positions and restoring and expanding federal funding for Indian programs. Under Nixon's administration, Congress passed the Indian Self-Determination and Education Assistance Act of 1974, which put tribes in charge of some existing federal programs on tribal lands. Additional legislation provides grants and loans to native peoples. President Ronald Reagan continued the policy of encouraging economic development and sought to further open Indian lands to private coal, oil, gas, and uranium industries. Reagan also cut federal assistance, slashing more than one-third from the federal monies devoted to reservation programs.

As they did in decades earlier, critics noted that the emphasis on private enterprise was antithetical to the cultural values of native peoples. Further, corruption and lack of experience among native leaders made it difficult to enact the needed programs on reservation land. Corruption among BIA officials was a major problem as well, and a Senate investigations committee recommended that the agency be dismantled in 1989. Instead, tribes would receive the same share of the federal Indian budget as block grants. This did not occur; native peoples noted that Congress had previously cited federal agencies for mismanaging Indian programs 42 times.

Since taking office in January 2009, President Barack Obama has worked to engage tribal leaders. The White House has hosted tribal leaders conferences and has worked through numerous governmental agencies, not just the BIA, to ensure that tribal needs are considered. The Affordable Care Act permanently authorized the Indian Health Care Improvement Act, and the Tribal Law and Order Act is meant to fight crime in Indian Country. In 2011, Obama issued an executive order to help expand educational opportunities and to strengthen tribal colleges and universities. The White House has also promoted health and wellness initiatives on reservations.

Current Issues

Today, Native Americans suffer from poverty, health problems, and other negative social issues at disproportionate rates. However, this is not true for all tribes. Some have thrived, in particular

those that have been able to build and run casinos on their land.

Poverty rates are very high among Native Americans. According to the 2011 American Community Survey, the median income rate among American Indians is \$35,192, which is more than \$15,000 less than the median income of the nation as a whole. According to the 2010 U.S. Census, Pine Ridge Reservation in North Dakota, a tract of land approximately the size of Connecticut, has the lowest per capita income in the United States. It has repeatedly been considered among the poorest places in the country. Some attribute the poverty among Native Americans to substance abuse, high school dropout rates, the legacy of colonialism, and corruption, while others maintain it is the result of communal ownership of the land and the concomitant difficulty in starting businesses.

Unemployment rates among Native Americans are also typically higher than those of the general population. The unemployment rate on Pine Ridge is estimated at around 70 percent, and the only real work available is employment by the government or by the Oglala Sioux tribe. Poverty and unemployment result in serious health issues for native peoples as well. Half the Pine Ridge population over the age of 40 has diabetes, and rates of tuberculosis are eight times the national average. It is estimated that two-thirds of the population may suffer from alcoholism, and one-quarter of all babies are born with fetal alcohol syndrome.

The life expectancy is in the upper 40s, far less than the national life expectancy of 78 and more akin to that of sub-Saharan Africa. Less than 10 percent of youths graduate from high school. There is a desperate shortage of housing—on average, more than 15 people live in each home, and others get by in cars and trailers. More than one-third of homes lack running water or electricity, and infant mortality rates are three times the U.S. national average.

Violent crime rates are higher among Native Americans than the general population. In some counties, murder rates are 10 times higher than the national average. Native women experience domestic violence and sexual assault at rates two to three times higher than the national average. Additionally, the size of some reservations makes it difficult to ensure that police, emergency technicians, fire fighters, and other first responders

can provide help in a timely fashion. Sometimes, what might have been an injury ends up a fatality because of the length of time between the incident and the response. Depictions of Native peoples tend to reinforce stereotypes. Mascots for sports teams often utilize demeaning images of Native Americans and depict warrior-like men or silly caricatures. Names like “Redskins” are still used. Groups like the American Psychological Association (APA) have denounced all native mascots and have called for their discontinuance.

Clothing companies sometimes use the same static and stereotypical imagery to sell their products. In November 2012, Victoria’s Secret was chastised for allowing model Karlie Kloss to dress in a suede vest and skirt, feather headdress, and turquoise jewelry. Just six days earlier, the band No Doubt apologized and pulled the “Cowboys Versus Indians” themed video for their song “Looking Hot.” Clothing companies Urban Outfitters and the Gap have settled with native groups for similar issues.

Many Native Americans denounce Columbus Day celebrations as akin to celebrating genocide. Other native peoples denounce Thanksgiving, instead referring to it as a Day of Mourning. Groups like the United American Indians of New England resist the Eurocentric portrayal of Thanksgiving and instead point out the many ways that the colonists hurt the Wampanoag. Other Native Americans continue to celebrate Thanksgiving, seeing it as a day to celebrate the survival of indigenous peoples.

On the other hand, some tribes have done quite well financially. The U.S. government has allowed the most successful tribes to build and run casinos on their tribal lands. According to the National Indian Gaming Commission (the federal body that oversees gaming on tribal lands), 240 tribes coordinated 460 gaming operations in 28 states in 2011. Net revenues from gaming operations must be used to fund tribal operations or programs, support the general welfare of the tribe and its members, and promote tribal economic growth. Approximately one-third of gaming tribes make individual payments to members. The benefit of gaming operations is that they are Indian-run and used to help the tribe. On the other hand, critics note that casinos may further distance Native Americans from their tribal

traditions and may only result in certain members becoming wealthy, rather than the tribe as a whole.

Resources to Promote Understanding of Native Cultures

Efforts to eradicate the social problems that native peoples endure have not always been tremendously successful, but the most promising involve emphasizing traditional native culture. Research is clear that a strong cultural connection serves as a protective factor for various social ills. In particular, a strong sense of culture and community is important for the psychological well-being of Native American youth and helps prevent alcohol and substance abuse. Many Native Americans are reviving cultural traditions that emphasize their autonomy and spirituality. Beginning in the 1970s, culturally specific substance abuse prevention and intervention programs on tribal lands began to invite elders to reveal their holistic approach that involved ceremonies like the sweat lodge, dancing, and sewing quilts.

To help promote understanding of Native American culture and identity, many universities offer ethnic studies or Native American studies programs. The Aspen Institute’s Center for Native American Youth helps identify prevention programs and resources regarding services and cultural information. Since the history and contributions of Native Americans are often minimized in history texts, groups like the National Education Association have offered grants for educators to become more familiar with the history of Native peoples. The National Museums of the American Indian in Washington, D.C., and New York have helped preserve the heritage of native peoples. Since 1990, November has been recognized as American Indian and Alaska Native Heritage Month. Nativeweb.org helps native peoples connect and disseminates important information about indigenous cultures around the world. PBS has an informative documentary series called *We Shall Remain* that helps explain the history and culture of native peoples. Similarly, Reel Native provides an opportunity for native peoples to share their stories.

Native Son

Native Son is a novel written by the African American writer Richard Wright. Harper and Brothers published the novel in 1940. The novel sold 250,000 copies in the first three weeks of its release and soon became a Book-of-the-Month Club selection. It is the saga of a black teen from Chicago's South Side, named Bigger Thomas, who in the midst of gaining an opportunity to escape the poverty and racism of his life in the Chicago slums accidentally murders a young white girl named Mary Dalton, for whom he works as a chauffeur. The story reflects Wright's experiences as a young black man in the United States, born into poverty, racial oppression, and suffering from self-hatred.

Richard Wright was born in 1908 in Natchez, Mississippi, on a plantation. The area where he grew up was one of the poorest areas in Mississippi and was very strict in maintaining racial segregation between whites and blacks. The Wright

family moved to Memphis, Tennessee, when Wright was young, but when Wright's father, Nathan Wright, deserted the family for another woman, Wright, his brother, and his now invalid mother, Ella, moved to Jackson, Mississippi. Wright was a direct witness to the oppression and violence of the era of racial segregation in the American south. His uncle, Silas, was murdered in Arkansas by whites. These same whites also threatened to kill Wright's entire family.

In 1927, he moved to Chicago, Illinois. His mother and brother migrated to Chicago a short time later. Wright worked nights as a postal clerk and soon became engrossed in reading many of the well-known writers in history, including Edgar Allan Poe, T. S. Eliot, Andre Gide, Thomas Mann, and Nickolai Gogol. He began writing and publishing poetry, short fiction, and literary reviews at this time, mostly for communist publications. His collection of short stories, *Uncle Tom's Children*, published in 1937, focuses upon life in the racially segregated south. *Native Son* was published on March 1, 1940. The book is written in three parts: "Fear," "Flight," and "Fate." "Fear" details the series of events that leads to the murder, "Flight" is Bigger's attempt to escape his actions, and "Fate" is the resolution of the story, Bigger's trial for murder, and his acceptance of the fate that racial oppression and poverty in the United States presented to young African American men at the time of the novel.

Native Son was a major publication in American literature in 1940. The tragedy and horror of racial oppression had never been presented in such stark terms and with such brutal honesty. Most of the major newspapers at the time reviewed the book, and its violence and overt protest message against racism remains a part of its historical legacy. *Time* and *Newsweek* gave the book great attention. *Time* magazine's review was especially controversial because the title of the review in March 1940 was "Bad Nigger."

In reviewing the book, the *Chicago Defender* described *Native Son* as a "penetrating, realistic clinical examination of a raw open wound which is yet bleeding." It added that the publication, unlike any other book until then, had plumbed "blacker depths of human experience than American literature has yet had . . ." Poet and English professor Sterling Brown, Wright's friend, called

the book a “literary phenomenon.” Book critic Irving Howe wrote that “the day *Native Son* appeared, American culture changed forever.”

The book and the power and controversy over the book’s story made Richard Wright a major figure in American letters and a spokesperson on racial issues internationally for the remainder of his life. The book proved so powerful at the time that the National Association for the Advancement of Colored People (NAACP) awarded Wright and the book the Joel Spingarn Gold Medal Award in 1940. In awarding Wright the award, the NAACP said that Wright had “given to Americans who have eyes to see, a picture which must be faced if Democracy is to survive.”

The book also benefited from the time when it was published. It arrived when the southern states in the United States continued to maintain racial apartheid in every aspect of civic life. In the north, racial segregation was not legal, but it was perpetuated through customs, racial covenants in housing, and the denial of opportunity through societal arrangements. Black lawyers had begun filing the lawsuits that would legally dismantle the racial caste system.

Following its initial success as a novel, *Native Son* soon was produced as a play on Broadway in 1942, directed by Orson Welles. The acclaimed stage actor Canada Lee played the lead role of Bigger, and Wright adapted his book to the stage with acclaimed writer Paul Green. This would only be the beginning of the cultural expansion of the work. In 1950, Wright moved to Argentina for 10 months and completed a film version of the book, in which he starred in the lead role as Bigger Thomas. Another film version was produced in 1987, starring television mogul Oprah Winfrey as Bigger’s mother. Although reviews were mixed, the *Washington Post* acknowledged the legacy of Wright’s book when it described the film as an “agonizing story” and a “punishment of segregation and racism.” The U.S. Library of Congress later listed it as one of the 100 books that made America.

Nativism

The United States is often described as a “nation of immigrants”; however, a long tradition of viewing immigrants with suspicion, contempt, and/or hostility by U.S.-born American citizens has characterized nearly every major wave of immigrations throughout the nation’s history. In both past and present times, immigration has been one of the most emotional and contentious social and political topics in American society.

The term *nativism* refers to passionate feelings of fear and dislike of foreign-born persons, typically driven by the perception among the native-born population that particular immigrant groups pose an alleged threat to the United States. These perceived threats may be linguistic, cultural, social, economic, or militaristic in nature. Nativist sentiments are driven by visceral beliefs that members of a particular immigrant group are incompatible with, or antithetical to, American society.

Nativism in the United States dates to the colonial era, when Benjamin Franklin first expressed alarm at the German population of Pennsylvania. Since that time, numerous immigrant groups, including Irish Catholics, southern Italians, eastern European Jews, Asians, Mexicans, Middle Easterners, and others have evoked nativist reactions among some segments of the American populace at different times in the nation’s history. It should be noted, however, that “nativist” (much like the term *racist*) is almost never a self-description, but instead is a term used by others rather than oneself.

Persons who espouse negative views of immigrants or foreigners typically see themselves

as “patriots” who love their country and who want to protect the nation from “foreign influences.” Such sentiments overlook the fact that the United States has always been a pluralistic society comprising different religions, languages, and ethnic heritages, just as they overlook the important point that all immigrant groups have gone through a transition period of adjustment to American society.

Causes of Nativism

Sociologists, anthropologists, and historians attribute nativist sentiments to a variety of factors, including economic issues; national security concerns; wartime hostilities; fears regarding racial/ethnic, cultural, or linguistic differences; and other social concerns. These factors may stand alone or converge with one another to evoke an anti-immigrant mood within society. It is imperative to keep in mind that these factors typically result from emotionally driven popular discourses on immigrants, which may not accurately reflect qualitative or ethnographic data on the specific immigrant group(s) targeted by the nativist rhetoric.

Perhaps the most common argument invoked against both legal and undocumented immigrants throughout the nation’s history is the allegation that migrants take jobs from American citizens and/or drive down wages for U.S. workers through their willingness to accept lower pay. Such arguments date back to the early years of the nation and have been directed at many different immigrant groups in various regions of the country over the course of American history, such as the Irish and Italians in northeastern cities during the 19th and early 20th centuries, the Chinese in California during the mid- to late 19th century, and Mexican immigrants today.

Other common anti-immigrant discourses assert that immigrants allegedly do not pay taxes or that immigrants supposedly come to the United States to receive welfare and “freeload” off the system. Not coincidentally, periods of intense nativism have often corresponded with economic downturns throughout American history.

Nativists typically present the complexities of immigration and economics in one-sided, simplistic fashion and fail to point out, for example, that federal law bars legal immigrants from receiving food stamps and welfare for the first five years

following their migration to the United States, and illegal aliens are automatically ineligible to receive welfare, food stamps, and college financial aid.

Legal immigrants are issued work permits that enable them to lawfully work in the United States, taxes are deducted from their wages, and they pay taxes on properties they own. Though undocumented aliens who are paid “off the books” do not have taxes withheld from their pay, those who work with fraudulent Social Security numbers do, in fact, pay into the system. Furthermore, all illegal immigrants pay sales taxes.

Importantly, opposition to immigration on economic grounds is not directed solely at unskilled, low-wage, or blue-collar workers; some critics have expressed opposition to the relatively high concentration of highly educated east and south Asian immigrants in the medical, engineering, and information technology fields. Additionally, the relatively high enrollment of Asian American and Asian exchange students on many college and university campuses, particularly on the west coast, evoked a degree of anti-Asian sentiments throughout the 1980s and 1990s. One manifestation of this anti-Asian nativism has been the popular utterance of mock acronyms, using real acronyms, to describe colleges and universities with large Asian student populations. MIT, for example, has been referred to as “Made in Taiwan,” and UCI (University of California, Irvine) has similarly been mocked as the “University of Chinese Immigrants.”

Nativist backlashes frequently arise during times of warfare amid heightened concerns over national security. Prominent examples include the rise of anti-German sentiments during World War I, whereby German Americans found their patriotism and loyalty to American democracy questioned, as well as the internment of Japanese Americans in relocation camps during World War II. Anti-Arab and anti-Islamic nativism and bigotry toward “Middle Eastern-looking” persons and Muslims increased dramatically following the terrorist attacks of September 11, 2001. Although terrorism remains a pressing concern, nativist discourses against Arabs and Muslims typically neglect to consider that Islam is not a unified, singular religious system with a singular political focus or agenda, or that the majority of Arab Americans are not Muslim.

Nativism Throughout American History

Nativist sentiments date to the colonial era and early years of the republic, when religion and ethno-national heritage were the driving forces of anti-foreign sentiments. More than 75 percent of the free white population of the American colonies were Protestant and of British (English, Scottish, or Welsh) descent by the dawn of the American Revolution, although the religious and ethnic composition of certain colonies contrasted sharply with this demographic profile.

Pennsylvania, approximately one-third German, sparked concern for Benjamin Franklin, who infamously wrote in 1751, “Why should Pennsylvania, founded by the English, become a Colony of Aliens, who will shortly be so numerous as to Germanize us instead of our Anglifying them, and will never adopt our Language or Customs, any more than they can acquire our Complexion.”

Another Founding Father, John Adams, also regarded the profound German influence on Pennsylvania troubling. During the 1777 session of the Continental Congress in York, Adams declared, “The people are chiefly Germans, who have Schools in their own Language, as well as Prayers, Psalms, and Sermons so that Multitudes are born, grow up and die here, without learning the English [language].”

Driven from their homeland by the devastation of the potato famine a desire to escape British persecution, and lured by greater economic opportunities in the United States, a sizable influx of Irish Catholics entered the nation in the middle of the 19th century. As the first group of non-Protestant Europeans to settle on American shores in large numbers, these sons and daughters of Eire encountered the wrath of an Anglo-Protestant majority. During the 1844 “Bible riots” in Philadelphia, for example, angry Anglo-Protestant mobs burned down the city’s two largest Catholic churches and ruthlessly beat Irish Catholics in the city’s streets. The Irish also found themselves targets of the first organized nativist movement in the nation’s history.

The Native American Party (popularly known as the Know-Nothings) gained national prominence during the 1850s on an ardent anti-immigrant and anti-Catholic agenda. Consisting primarily of blue-collar Protestants, the

Know-Nothings ran candidates for political office and advocated restrictions on immigration and immigrants’ rights to naturalize. Even during his successful 1960 presidential campaign, John F. Kennedy (to date, the nation’s only Irish Catholic president) faced relentless rumors that his Catholic religious background would direct his loyalties to the Vatican rather than to the United States. Anti-Irish and anti-Catholic nativism served as the theme of Martin Scorsese’s Academy Award-nominated motion picture *Gangs of New York* (2002).

More than 300,000 Chinese immigrants entered the nation between the 1850s and early 1880s. Settling primarily in California and other western states, the Chinese were physically, culturally, linguistically, and religiously distinct from American-born whites, some of whom interpreted these differences as outward markers of the Chinese as inherently “un-American.” Racial concerns and competition over jobs led to outbreaks of anti-Chinese violence in San Francisco, Los Angeles, Seattle, and other west coast locales throughout the 1870s. In 1882, Congress enacted the Chinese Exclusion Act, the first-ever law that explicitly banned an entire nationality from migrating to the United States. Not until 1942 was the act repealed, when an annual quota of 100 Chinese immigrants per year was established.

In the early years of the 20th century, southern Italians and eastern European Jews composed the largest waves of immigrants. During the heyday of “scientific racism,” nativists of the era considered southern Italians and eastern European Jews to be members of the allegedly inferior “Mediterranean” and “Hebrew” races, respectively. Anti-immigrant advocates, such as anthropologist Madison Grant and Massachusetts senator Henry Cabot Lodge, ominously warned of the long-term consequences of these allegedly racially and religiously “inferior” groups on Anglo-Protestant society, and during this time, the Ku Klux Klan expanded its reach into the northeast and midwest after adopting a firm anti-immigrant agenda.

Popular racial discourses of the early 20th century—generated by social workers, sociologists, and the media—associated southern Italians with an alleged innate propensity for crime and

violence, along with racist theories of intellectual inferiority. Anti-Semites, including industrialist Henry Ford and aviator Charles Lindbergh, advanced conspiracy theories of Jews plotting to “destroy Christianity” and “establish worldwide communist rule.” Such sentiments propelled passage of the Immigration Act of 1924, which eliminated virtually all immigration from Asia and severely limited immigration from southern and eastern Europe. These restrictions were not overturned until passage of the Immigration Act of 1965, which diversified U.S. immigration.

Recent Nativist Discourses: Latinos

Recently, nativist discourses have focused on Latinos (particularly Mexicans) and Middle Easterners. Although Mexicans also are the largest group of legal immigrants, political debates over illegal immigration have evoked pernicious anti-Mexican/Latino discourses, some of which utilize explicitly racist rhetoric.

In 2009, for example, talk radio host Jay Severn referred to Mexicans as “the world’s lowest primitives,” and various grassroots anti-immigrant organizations have accused Mexican migrants of being part of an alleged plot, implemented by the Mexican government, to “reconquer” the southwest and return the land to Mexico. Such discourses are modern-day manifestations of the nativist anti-Catholic and anti-Jewish conspiracy theories of the 19th and 20th centuries.

Naturalization

The naturalization process forms the basis for the full incorporation of immigrants in a destination country and is often the stepping-off point for active political participation among foreign-born populations. Naturalization is the process by which a noncitizen in a country is granted citizenship and the full set of rights association with citizenship. In most instances, an individual wishing to naturalize must fulfill certain requirements in order to become a naturalized citizen. This process varies by country, with some countries having more stringent naturalization requirements than others.

The Right of the Land: Naturalization in U.S. History

In the United States, the first laws to outline a path to citizenship were passed in the late 1700s. An act passed on March 26, 1790, allowed the possibility for many foreign-born residents to become citizens if they were free, white, and residents of the United States for at least two years. Over time, the naturalization law changed with the norms and attitudes of the American public. In 1870, for example, African Americans were made eligible for naturalization, after the end of the Civil War, thus altering the “free” and “white” requirements set forth previously.

In the 1920s, the Supreme Court made a number of decisions that restricted eligibility for naturalization based on race and ethnicity. In particular, nonwhite groups were intentionally excluded from the possibility for naturalization. Three such cases stand out as exemplars. The case of *Takao Ozawa v. United States* (1922) excluded people of Japanese descent, *United States v. Thind* (1923) excluded Hindus, and *Toyota v. United States* (1925) excluded Filipinos. Such race-based exclusions were finally done away with in 1952, with the Immigration and Nationality Act.

Prior to 1922, women were also sometimes excluded from naturalization processes, as they took the citizenship of their spouses. Today, naturalization law largely prohibits discrimination, and there are a number of paths that foreign-born residents can take to U.S. citizenship. Broadly speaking, these paths to citizenship are categorized under two different headings: citizenship

acquired at birth and citizenship acquired at a point in time after birth.

The dominance of birthright citizenship in the United States is rooted in a more central sociolegal concept known as *jus soli*, or “right of the land.” In many countries, the principle of *jus soli* confers citizenship on individuals who are born within the nation’s territory. This contrasts with the principle of *jus sanguinis*, or “right of blood,” which confers citizenship based on descent, as when a child takes on the citizenship of one or more parents, regardless of where the child is born. The United States, Canada, and many countries in the Americas confer birthright citizenship, whereas many European countries and Japan confer citizenship based largely on descent.

For individuals who are not citizens at birth, citizenship must come in the form of naturalization. The naturalization process requires an individual to meet certain substantive requirements in order to become a citizen. In the United States, these requirements involve a length of legal residency in the United States of at least five years, basic character and age requirements, knowledge of the English language, a basic understanding of American civics, and allegiance to the U.S. Constitution as demonstrated through the Oath of Allegiance.

Certain classes of people are exempt from some of these requirements, most notably spouses and children of U.S. citizens (many have a residency requirement of only three years), individuals who are born abroad to U.S. parents, and some individuals who have served in the U.S. military. In comparison to other countries, the United States has a somewhat average length of residency requirement. For example, countries such as Belgium require as little as three years, whereas other countries such as Switzerland require up to 12 years of permanent legal residence.

Naturalized persons in the United States gain the full set of rights associated with American citizenship. This includes the right to vote, priority in bringing family members to the United States, eligibility for certain government jobs, and the right to run for elected office. In 2011, nearly 700,000 people were naturalized in the United States. The leading countries of birth for these new citizens were Mexico, India, the Philippines, and China.

Naturalization in the United States has steadily increased since the postwar period, with a sharp

increase in the mid-1990s. In terms of country of origin, newly naturalized citizens have increasingly come from Asian countries since the 1970s. Before this period, most new citizens of the United States were from European countries.

In a limited number of cases, citizenship can be revoked. When a citizen loses citizenship, all rights and privileges associated with citizenship are also lost, making this procedure a weighty matter that is not often used. In the United States, American citizenship can be lost in two ways: revocation of naturalization (denaturalization) and expatriation. Denaturalization can only happen to those who have gained citizenship through naturalization.

Most cases of denaturalization occur when a naturalization order is illegally procured or is procured by concealment of fact or misrepresentation. In these cases, the government has an obligation to show, through clear and unequivocal evidence, that the naturalization process was fraudulent. In contrast, expatriation can apply to both naturalized citizens and American-born citizens. Expatriation involves the voluntary renunciation of American citizenship as, for example, when an individual chooses to become a citizen of another country. In such cases, the individual can give up American citizenship as part of his or her constitutional rights.

Naturalization Acts

The history of United States goes in hand in hand with the history of immigration and naturalization. The United States is one of the few countries that grants citizenship based on the principles of *jus sanguinis* (“right of blood”) and *jus soli* (“right of the soil”), and any individual may become a U.S. citizen through the naturalization process, even if the individual was not born to American parents, nor was born on American soil, but meets certain criteria.

These criteria have been changed and updated since the first federal Naturalization Act of 1790. A review of naturalization history before the 1960s reveals significant ambiguity as to what U.S. citizenship meant to legislators of the U.S. Constitution. Wealth, race, and gender were determinate factors in one’s ability to obtain membership in colonial America, as well as who could become a citizen through the naturalization process.

Naturalization Act of 1790

The Naturalization Act of 1790 was passed by Congress on March 26 in order to grant the right to become a naturalized citizen to “free white persons” of “good moral character,” excluding indentured servants, slaves, and all nonwhite populations such as Native Americans, free African Americans, and Asians. The 1790 naturalization law remained active for 162 years.

Until the Immigration and Nationality Act of 1952, which allowed individuals of all background to be eligible for naturalization, the 1790 legislation limited immigration on the basis of the race and background of the individual. The 1790 law also required the individual to reside for two years in the United States. The later residence requirements were extended to five years by the Naturalization Act of 1795.

Upon completion of two years, any free white individual could file a Petition for Naturalization to a “common law court of record.” Based on the court’s approval of one’s “good moral character,” the court could administer the Oath of Allegiance and keep a record of the proceedings so that the immigrant would be considered a citizen of the United States. Citizenship was passed exclusively through the father, even though free white women were allowed to be U.S. citizens. The children of

the citizens of the United States, under the age of 21, and born outside American soil were also recognized as natural-born citizens, without the need for naturalization.

Following the Civil War, during the Reconstruction Era, the Thirteenth, Fourteenth, and Fifteenth Amendments to the U.S. Constitution were adopted between 1865 and 1870. The Thirteenth Amendment abolished slavery; the Fourteenth Amendment expanded the definition of citizenship, including African descents; and the Fifteenth Amendment granted voting rights regardless of “race, color, or previous condition of servitude.”

Naturalization Acts of 1870 and 1906

This led to the 1870 Naturalization Act, which was signed into law by President Ulysses S. Grant on July 14, 1870, providing citizenship rights to “aliens of African nativity and to persons of African descent,” barring other nonwhites such as Asians from U.S. citizenship.

The Naturalization Act of 1906 was a revision of the Naturalization Act of 1870. Until the 20th century, naturalization to Asians remained restricted. After the *United States v. Wong Kim Ark* case in 1898, the Supreme Court granted citizenship to an American-born child whose parents were from China.

The 1906 Naturalization Act was signed into law by President Theodore Roosevelt. It passed through Congress on June 29, 1906, and took effect September 27. At the end of the Reconstruction Era reforms and the beginning of 20th century, the United States received a massive flow of immigrants (nearly 9 million) and economic difficulties increased the demand for immigration restrictions.

Congress passed the 1906 legislation to organize all existing naturalization laws into a comprehensive statute and strengthen the structure of the immigration application, giving the immigration administration commissioner greater control over the naturalization process. With the Naturalization Act of 1906, naturalization procedures were standardized, knowledge of the English language became a citizenship requirement, and the Bureau of Immigration and Naturalization was established to oversee U.S. immigration policy.

Naturalization Language Requirements

Historically, the modern nation and its national language(s) have been tightly coupled through processes of nation-building and nationalism. Nowhere is this more apparent in modern societies than when foreign-born populations speaking a different language arrive to become incorporated into the social, economic, and political fabric of a destination country. The governments of destination countries often address the challenge of incorporating immigrant populations by forging policies that appeal to the national language as both a symbolic and an instrumental means of incorporation.

As a result, naturalization, or the process of becoming a new citizen in a country, often requires proof that an individual can speak the host language fluently. Most developed countries in the world that host immigrant populations have a language requirement of some kind, although the stringency and purpose of such a requirement may vary. In the United States, an immigrant wishing to become an American citizen must demonstrate a basic working knowledge of the English language.

During the 18th and 19th centuries, societies across Europe were engaged in attempts to

make the nation and the state coincide both geographically and politically. One of the ways that the modern state created a modern nation was by uniting the population through a common language. Oftentimes forcibly, European states actively pursued language standardization and the widespread use of a common language in public life and in modern, mainstream education systems. The United States was no exception to this dominant model of nation-building.

The United States is unique, however, in that there is no official, legally defined state language at the federal level. Nevertheless, there are 31 individual states that have passed English-only policies, either by legislation or through voter initiative. Many of these successful attempts to define English as the official language are linked to broader social movements or organizations. The English-only movement, for example, seeks to make English the sole official language of the United States. With the growth of non-English-speaking populations in the United States, the English-only movement has gained momentum as of late.

Aside from the legal status given to English, the English language is also strongly linked to notions of what is American and is currently the dominant language of public life in most parts of the country. Given the current sociopolitical context of the United States, naturalization policy requires that immigrants show a basic level of proficiency in English to gain citizenship.

American law states that no person shall be naturalized who cannot demonstrate a basic understanding of the English language, including the ability to read, write, and speak words in ordinary English. In addition, such a demonstration of language ability need not be made under “extraordinary or unreasonable conditions.” The requirement that immigrants be able to speak English was added to naturalization law in 1906, some time after the formulation of other naturalization requirements. Prior to 1906, immigrants who wanted to naturalize only had to show that they were residents with good moral character who were devoted to the ideals of the Constitution. English language requirements were made more stringent in a 1950 amendment that required an ability to read and write, in addition to speaking English. More recent changes were instituted

in 1978 and 1990, when exceptions to the English language requirement were outlined.

In practice, an immigration officer tests the applicant's speaking and understanding of English at the time of the naturalization interview. During the naturalization interview, the immigration officer asks the applicant questions about the information and documents that the applicant provided when first applying for naturalization. The immigration officer may also ask questions about recent trips taken outside the United States, whether the applicant has a criminal history, and memberships in any organizations. While asking these questions, the immigration officer assesses whether the applicant can understand and answer these questions using proficient English.

The applicant's ability to read and write in English is tested in a separate paper-based test. For the reading portion, the immigration officer gives the applicant three sentences to read. The applicant must read at least one of the three sentences correctly in order to demonstrate an ability to read in English. For the writing portion, the applicant has three chances to correctly write a sentence in English that the immigration officer dictates. After the paper-based tests, the immigration officer informs the applicant whether she has met the language requirements for naturalization.

Although this is the standard procedure for demonstrating English language ability during the naturalization process, there are certain exceptions. There are three classes of people who may be exempt from the English language requirement for naturalization based on their age and length of permanent residency in the United States. If an applicant is over 50 years old and has lived in the United States as a permanent resident for periods totaling at least 20 years, an English language test is not required. Likewise, an English test is not required for applicants who are over 55 years old and have lived in the United States as a permanent resident for periods totaling at least 15 years. For applicants who are over 65 years old who have lived in the United States as permanent residents for periods totaling at least 20 years, an English language test is not required, and designated questions are pre-selected for the civics test. For all three classes of

exemptions, time as a permanent resident does not have to be continuous.

Navajo

The Navajo are among the most robust native peoples of North America. Of the 372,000 persons in the 2010 U.S. census who speak a native language as their primary language, over 169,000 speak Navajo. Today, most Navajo reside in the Four Corners area of the U.S. southwest, on a reservation west of *Dinetah*—their homeland when the Spanish arrived in 1626. Today's Navajo Nation includes 300,000 enrolled members, of whom some 112,000 reside on the reservation, which covers 16 million acres (27,000 square miles)—the largest Native reservation.

Many today say that the Navajo "call themselves *Diné*," meaning "the people." The term *Diné* actually designates all categories of persons. The mythical "Holy People" (*Diyin Dine'é*, who emerged from world-systems below our "Fifth World") contrast with the peoples created on the earth's surface (*nihokáá dine'é*), both non-Navajos and the 60 main clans of "the Navajo" proper

(*diné*). The Spanish coined the term *Apaches de Navajó*, “the Strangers of the [cultivated] fields.”

Language, Culture, and Society

From one perspective, Navajo success seems explainable by fortuities of geography: before modern irrigation and air conditioning, few Spaniards, Mexicans, or Americans desired to settle in areas like Dinetah—far from water or cost-effective farming conditions. Before 20th-century discoveries of oil and uranium, Americans saw little there to attract them, sparing southwestern peoples the annihilation Native peoples in more hospitable regions sometimes suffered.

The enduring successes of the Navajo clearly owe immensely to the courage of the Navajo themselves and the resilience of their cultural traditions. Lacking the secrecy requirements of Pueblo peoples (like the Hopi), the Navajo generally welcomed anthropologists and scholars, so outsiders obtained comprehensive descriptions of Navajo culture, including their renowned “chantways” (*óji*)—both the healing chantways that utilize sand paintings and the more fundamental “Blessingway” (*hózhóóji*), which demonstrates women’s centrality in Navajo life. The Navajo are matrilinear, and women hold legal primacy.

“Singers” (*hatalii*)—religious authorities who preserve the chants that empower individuals’ lives within the community—preside at the most sacred Blessingway ritual, the *kinaaldá*, whereby each Navajo girl at adolescence becomes identified with “Changing Woman” (the source of Earth’s life). Such features of Navajo life endured to become photographed, filmed, and detailed in many publications, while those of many other Native Americans were lost long ago.

Scholarly research also explains what the Navajo share with their Pueblo neighbors as well as what makes them unique. The Pueblo peoples speak several unrelated languages. The Navajo, like the nearby Apache, speak an Athabaskan language, a family otherwise represented by languages in Alaska and western Canada. Unlike the Apache, who speak seven distinct languages and maintain distinct cultures, the Navajo people are linguistically and culturally homogenous.

Scholars are convinced that less than a millennium ago, the Navajo and Apache (for reasons unclear) migrated from the far north and

ultimately settled in the southwest not long before the Spanish arrived. However, there is little archaeological record of that migration, nor any mention in Navajo oral history. Navajo culture shares much more with the Pueblo peoples than with most Apache, especially a complex religious culture focused on the sources of life, including the myth of emergence from worlds below, and ceremonial celebration of the primary food source, corn (maize). Unlike the Hopi, the Navajo never formed specialized religious societies with separate social and ritual roles. Navajo houses (*hogan*) were also distinct from Pueblos’ stone/brick dwellings, and most chantway ceremonies were conducted in the family home. Also, the Navajo did not adapt Pueblo ceremonials featuring masked dancers, as some Apache did.

Some notable elements of Navajo life were learned from contact with the Spanish, including rug weaving, sheepherding, and silversmithing. But the Navajo, already sedentary agriculturalists when the Spaniards arrived, were the converse of Native peoples in other regions, whom Euro-Americans

Sandra Begay-Campbell, a Navajo scientist working with the U.S. Department of Energy’s Sandia Labs, holds a portable solar panel intended to bring electricity to isolated Native American homes. Out of an estimated 112,000 Navajo Nation residents, 18,000 were living without electricity in 2010.

strained to convert from hunter-gatherers to farmers. The vitality of Navajo religion, which explains and justifies the cultural and economic bases of life, deterred conversion to Christianity by the Spanish. Today, Navajo individuals draw freely upon both native traditions and modern phenomena, including Western medicine, Christianity, and the peyote-focused Native American Church.

History

Before the 19th century, the Navajo never functioned as a unified political group: apart from suffering raids by neighboring peoples, they lived peaceful lives. After the Mexican-American War (1846–48), the United States entered Navajo territory, setting up forts. Then, in 1861, the U.S. military, led by Kit Carson, invaded Navajo lands and herded some 9,000 Navajo men, women, and children 300 miles to Ft. Sumner at Bosque Redondo.

Today's Navajo consider this "Long Walk" (1864) the pivotal moment in their people's formation. The treaty of 1868 permitted return to their native land, but Americans continued to encroach on it. Navajo children (like those of other Native peoples) were abducted and placed in boarding schools to force them to become English speakers and practitioners of American lifeways.

The U.S. government periodically gave Navajo land to others for mining, railroads, and grazing livestock. In the 1940s, uranium was discovered in Navajo territory, and Americans mined it with little concern for health effects, leading Navajos and others to report increased cancer deaths. Yet during World War II, hundreds of Navajo (like Comanche and others) served the U.S. Army and Marines as code talkers, following Choctaw code talkers in World War I. Navajo code talkers played key roles in victories such as Iwo Jima, and the Navajo have built a Veterans' Memorial to honor all Navajo who have served in the U.S. military.

The Navajo Nation Today

In 1923, stimulated by the discovery of oil and the need for unified response, the Navajo established a tribal council, renamed the Navajo Nation (<http://www.navajo-nsn.gov>) in 1969. In 1991, it was reorganized into three branches: legislative, executive, and judicial. The legislature hosts 88 delegates representing 110 local chapters and

conducts some business in the Navajo language. The Navajo Nation Police enforce laws in their territory, including tribally enacted laws such as prohibition of alcohol sales. The Navajo also operate their own college (www.dinecollege.edu), school system, and English-language newspaper (www.navajotimes.com), and perform other public functions. Visitors may tour the circular council chambers and the nation's museum at Window Rock, Arizona.

Navajo-Hopi Land Dispute

The Navajo-Hopi land dispute traces its origins to the 1882 executive order of President Chester A. Arthur granting a 2.5 million-acre reservation to the Hopi as well as "such other Indians" as the secretary of the interior may house there. The Navajo inhabitants of the region included in the 1882 reservation believed they were entitled to remain on the land as "such other Indians." The Hopi have disputed this claim and asserted the right to the entire area of the 1882 reservation. The federal government set aside a portion of the original 1882 reservation as a joint use area for both tribes in the 1930s. Subsequent legal conflicts resulted in the Congressional Navajo-Hopi

Land Settlement Act of 1974, but disputes related to partitioning of the land have continued.

Traditional and Spiritual Claims

Both the Navajo and the Hopi have strong traditional and spiritual connections to the 1882 reservation land in dispute. The Hopi also claim that large portions of their ancestral homelands now lie within the federally recognized Navajo reservation, which had been expanded under presidential executive orders in the late 1800s. The federal government sought to resolve the conflict in 1891 by granting over 500,000 acres within the 1882 reservation for the exclusive use of the Hopi. This area was enlarged in subsequent decades. Navajo families residing on the now exclusively Hopi land were forced to relocate. Legal disputes between the Hopi Council and Navajo Tribe followed, and Hopi rights to the expanded area were upheld.

The Hopi sought legal return of the disputed portion of the 1882 reservation granted to the Navajo in 1934, but the Navajo living on the land refused to leave. The federal Bureau of Indian Affairs (BIA) set aside a portion of the 1882 reservation as the Navajo-Hopi Joint Use Area (JUA) in 1936. Resident Navajo had received squatters' rights to the disputed JUA as a result of the court's determination based on their non-eviction by the Hopi over the years. In 1958, the U.S. Congress authorized the Hopi and the Navajo to bring lawsuits to settle the question of ownership of the 1882 reservation lands under Public Law 85-54. The Hopi Council subsequently sued the Navajo Tribe in the Arizona District Court in the 1962 case *Healing v. Jones* for full rights to the original 1882 reservation lands. The court ruling declared that the joint use area (JUA) would remain accessible to both tribes with the exception of a small portion, known as District 6, granted for exclusive Hopi use.

Various state and federal rulings have followed the establishment of the JUA as disputes over its fair use have arisen. Resulting decisions have called for Navajo livestock herd reduction in the JUA and bans on construction or development in the JUA. Ongoing issues have centered on ancestral and spiritual ties to the land, claims of Navajo livestock grazing on Hopi land, Navajo refusal to reduce livestock herds, refusal by resident Navajo families to relocate from Hopi land, and difficulties arising

from a federal freeze on construction and development in the disputed territory.

The Congressional Navajo-Hopi Land Settlement Act of 1974 sought to equally partition the JUA lands lying within the boundaries of the 1882 reservation. The act called for federal mediation between the tribes. Failed mediation would result in an Arizona District Court decision. Money would be provided for relocation, livestock reduction, boundary fencing, and relocation incentives. Land partitioning would provide for open access to spiritual sites as well as equal rights to oil, gas, coal, and other valuable minerals.

Subsequent amendments to the 1974 act and Arizona District Court decisions have periodically changed the partition boundaries. The Navajo-Hopi land dispute has resulted in both sides making accusations of unfairness against the other as well as against the federal government. Some scholars have marked the conflict as an example of progressive versus traditionalist tribal factions, while others have concentrated on the role of the federal government and its recognized tribal governments. Economic development issues have also played a central role. Peabody Coal operates the Black Mesa Mine on land leased from the Navajo and Hopi and employs a number of Navajo workers. Other mining operations and the construction of power plants on sacred land are also controversial.

The Hopi Council claims that the tribe has lost approximately 1 million acres from its original 1882 federal reservation allotment. It has also claimed financial losses resulting from overgrazing by Navajo livestock herds. The Navajo claim loss of ancestral and valuable grazing land and that relocation affects many more Navajo than Hopi families. The Navajo Tribe established the Navajo-Hopi Land Commission to aid the approximately 10,000 to 11,000 Navajo who have relocated. Approximately 100 Hopi families have relocated.

One of the most critical results of the JUA settlements has been the relocation of families belonging to one tribe who found themselves residing in JUA territory apportioned to the other tribe. Approximately 250 Navajo families who have resided in the Big Mountain area for over 100 years have refused to leave, despite the area's designation as Hopi land. The Hopi Tribe offered 75-year leases to these families in 1996, but

conflict arose over the issue of Navajo families not wishing to live under Hopi legal jurisdiction.

Negro Baseball Leagues

From the turn of the century to the mid-1950s, baseball grew from a game played among local teams with disparate rules into leagues with governing bodies, eventually becoming America's "national pastime." The Negro Leagues, in particular, were formed in response to discrimination that prevented African Americans from playing in Major League Baseball (MLB), operating under the "separate but equal" doctrine. Despite the turbulence of leagues emerging and folding, as well as raiding each other for players, black baseball became a source of pride for the African American community. The integration of MLB, however, led to the demise of the Negro Leagues as black newspapers and fans devoted themselves to following Jackie Robinson in what was deemed the "noble experiment."

The history of African American men participating in competitive baseball dates back to 1860. By 1865, black baseball teams had proliferated in northeastern states such as New York, New Jersey, and Pennsylvania. In fact, by 1880, some black players, including Moses Fleetwood Walker, played on predominantly white teams. Integrated teams were relatively short-lived, as

legislation, the Compromise of 1887, and *Plessy v. Ferguson* in 1896 ended the Reconstruction Era in the United States, subsequently reintroducing segregation and Jim Crow laws.

Furthermore, a "gentlemen's agreement," established in 1887 among white owners fueled by Chicago White Stockings player/manager Cap Anson, pushed black players out of the major leagues into the minor leagues, then finally out of MLB altogether until Jackie Robinson's debut in 1947. During this time, there was an attempt to create one of the first Negro Leagues, the National Colored League, in 1887. Despite the league's folding after a few months, the seed was planted regarding the establishment of a formal league where black players had an opportunity to compete.

Black baseball played a crucial role in bringing people of varying social status together. African Americans as team owners were often prominent members of their communities. For example, Effa Manley, who owned the Newark Eagles, served as treasurer of the New Jersey chapter of the National Association for the Advancement of Colored People (NAACP). The relationship between teams and businesses was often reciprocal, as businesses supported teams through advertisements and ball clubs gave back to their communities by participating in games that benefited local charities. Sensing the importance of baseball, local politicians utilized games to increase their visibility and relevance in the community. Baseball games served as important social events, with community members, celebrities, and politicians coming out in droves for Sunday games.

During the formative years of Negro League baseball a continual debate existed about the role that whites should play in the management of the leagues and teams. Some people in the African American community resented that white booking agents and team owners profited off African American players. With the exception of the Philadelphia-based Hilldale Daisies, few black team owners also owned the ballparks in which the teams played. This resulted in African American teams leasing or renting ballparks from white owners through white booking agents, as blacks were excluded from those positions. At first glance, the major league facilities seemed to be an upgrade; however, African American players were rarely allowed to use the locker rooms, and stadium

seating often remained segregated. These facilities rarely employed blacks, which further undermined the financial viability of African American communities. The facilities owned by Negro League teams such as Hilldale Park were often subpar in terms of playing surfaces, amenities such as working bathrooms, and location, often being far from the African American populace. In sum, leasing facilities from white owners cut directly into the economic development of the African American communities that supported Negro League teams.

Creating a financially viable league from within the African American community was of the utmost importance, yet whites had more financial capital than many African Americans and, as a result, Negro League franchises themselves were often owned in part or entirely by white businessmen. Even former standout African American player Rube Foster co-owned the Chicago American Giants with a white man named John Schorling. The financial backing of whites enabled Foster to found the Negro National League (NNL) in 1920, which consisted of eight teams located in the midwest.

Two years later, in 1922, Ed Bolden, a black owner of the Hilldale Daisies, led the formation of the Eastern Colored League (ECL), with teams situated in major cities on the east coast under similar ownership circumstances. Though J. L. Wilkinson, a white owner of the Kansas City Monarchs, was well respected for giving back to the African American community, other owners were viewed more negatively for failing to provide adequate financial support for teams. The debate over the role that white entrepreneurs

should have in black baseball continued throughout the existence of Negro League baseball.

Because white fans rarely attended games that pitted black teams against each other, the Negro Leagues depended on black fans to support the enterprise. As mentioned above, the more games that teams played, the greater the revenue they generated. Complicating this matter was the lack of time and spending power of African American fans during that time period. Because many African Americans worked six days per week, games were often played once a week, on Sundays. As the popularity of baseball increased, teams began to rent MLB facilities. Scheduling games around MLB teams proved troublesome because of inclement weather or discrimination (discussed above). This contributed to a haphazard game schedule that inhibited financial growth for many teams, which in turn led to barnstorming.

Barnstorming was important for both economic stability and visibility of African American baseball players. As white fans rarely watched black teams play each other, their minimal exposure to black baseball was through barnstorming tours, which occurred both before and during the existence of Negro Leagues. Almost all revenue generated came from gate receipts, so games against white teams created an additional source of profits for black teams. As a result, a number of teams—including the Kansas City Monarchs, Homestead Grays, and Havana Red Sox—barnstormed around the United States, primarily playing and beating white teams. For these teams, barnstorming tours provided crucial financial resources to which they would not otherwise have access. The

Detail from a photograph of teams lined up before the October 11, 1924, opening game of the "Colored World Series," held in Kansas City, Missouri. The Kansas City Monarchs played against the Hilldale Club, winning 5 to 4, with one game tied. When black teams played each other, white fans rarely attended, and the leagues depended on revenue from black fans.

barnstorming tours also demonstrated to whites that black ball clubs could play at a high level.

In spite of these circumstances, visionary owners tried to eliminate barriers that restricted financial viability. In the 1930s, Wilkinson, the owner of the Kansas City Monarchs, attempted to capitalize on the growing popularity of baseball by playing midweek night games. At that time, games could be played only during the day, when many people worked and therefore couldn't attend. Wilkinson employed a portable lighting system so they could play games after the workday ended. In an additional forward-thinking move, these lights could be transported from game to game. Playing night games proved profitable by attracting thousands of fans to midweek events. As a result, many other teams, both black and white, installed lights at their home fields. Despite the innovation by Wilkinson, the increased popularity of baseball, and the talent of the players, the NNL and ECL could not weather several factors: teams raiding each other for players, inconsistent game schedules, and increased financial instability of the black community resulting from the Great Depression. These circumstances forced both leagues to fold by 1932.

Shortly after those leagues folded, the Negro National League was resurrected by Gus Greenlee, owner of the Pittsburgh Crawfords, and existed from 1933 to 1948. Many of the owners in the new NNL, including the Cuban Stars and New York Cubans owner Alex Pompey as well as Everett Wilson of the Detroit Stars, were African American men who ran highly successful gambling operations that funded their baseball teams. Regardless of their financial success, the NNL still had to work with white booking agents in order to secure games and stadiums. The lone exception to this was Greenlee's Pittsburgh Crawfords, who built their own stadium in 1932.

In spite of this barrier, the NNL became successful through its emphasis on black ownership, high quality of play, and linking the league to an important right being denied African Americans at that time—the right to vote. While sportswriters voted on MLB All-Stars, Greenlee opted to have fans vote for the East-West Classic, as it was called, with ballots that were placed in major black newspapers. The symbolic gesture spawned a major event that brought together African American fans

from different cities. The high profile of the game eventually attracted white sportswriters and front office personnel to see future Hall of Fame players, including Josh Gibson and Cool Papa Bell. During this period, the NNL faced increased competition from the Negro American League, which was founded in 1937. The champions of the two leagues competed against each other from 1942 to 1948. Although the NNL disbanded after the 1948 season, the Negro American League subsumed several Negro National League teams and continued to exist until the 1960s.

Because mainstream media ignored black baseball, an important relationship between Negro League baseball and black newspapers emerged. Through their on-field success against white teams, black baseball teams became a source of pride for African Americans. Black newspapers such as the *Pittsburgh Courier* and the *Chicago Defender* played a large role in publicizing the exploits of African American players and teams. This helped foster a sense of community, as fans were able to not only follow their local teams but also follow teams that played in other regions of the country.

Black newspapers also led the charge to integrate MLB. Wendell Smith, a sportswriter from the *Pittsburgh Courier*, as well as other black sportswriters wrote editorials and lobbied for the integration of baseball. The continual pressure that black, and eventually white, sportswriters put on MLB has been cited as an important factor that led to Jackie Robinson's integrating baseball.

Jackie Robinson's signing with the Brooklyn Dodgers in 1945 and his subsequent debut in MLB in 1947 signified the beginning of the end of the Negro Leagues for several reasons. First, as African American fans flocked to MLB to follow Robinson's progress, their economic support of Negro League teams diminished. An additional factor was that black newspapers and media outlets, which had for many years been crucial in supporting and covering Negro Leagues, turned their focus to Robinson. MLB began to sign players such as Roy Campanella from the Baltimore Elite Giants without providing compensation to the team or league. Losing major stars with little to no compensation in return proved difficult to overcome.

New Netherland

By the early 1600s, competition between European powers to establish colonies in the New World had already resulted in large claims made on behalf of Spain, England, and France. The Dutch joined the race for colonial riches in 1609, when Henry Hudson, an Englishman employed by the Dutch East India Company, explored the coast of North America, roughly from Chesapeake Bay to the Gulf of St. Lawrence. His reports led the States General, the legislature of the Republic of the Seven United Netherlands, to issue an exclusive patent to a private company for the exploration and colonization of “Nieuw-Nederland” in March 1614.

Dutch traders quickly arrived to settle in the area of modern Manhattan Island, and in 1615 they founded Fort Nassau on Castle Island in the Hudson River near modern Albany in an attempt to further control the fur trade. Although Dutch land claims ranged from the Delaware River to the Connecticut River, it is estimated that only about 270 Dutch lived in the vicinity of New Amsterdam (modern New York), and another 30 lived at Fort Nassau, renamed Fort Orange, by 1630.

In 1621, the States General gave a trading monopoly in North America to the Dutch West India Company in an attempt to make the colony more productive. Pieter Munuit, who arrived as director of the colony in 1626, quickly organized the area, purchased more land from indigenous peoples, and constructed a fort to guard the settlement. In 1619, the Dutch began offering large

tracts of land to anyone who could bring at least 50 families to the colony to make it productive. Given the title of “patroon,” these large landholders resembled the planters of the south in wealth and land holdings, but the labor was contracted with free people working as tenant farmers.

The patroon was given a number of rights and privileges, including the appointment of local civil officials and creation of local courts. This approach bore fruit with a rapid rise in population and productivity. By the 1640s, it was estimated that some 18 different languages were spoken in New Amsterdam, and the guarantee of freedom of religion approved in the Dutch Republic in 1597 led to a religious diversity that included, aside from the Dutch Reformed Church, Catholics, Quakers, Anabaptists, and both Ashkenazi and Sephardic Jews.

The most profitable commercial enterprise continued to be the fur trade. Cordial relations with the Mohawks, a member of the Iroquois Confederacy that controlled the area around the Dutch outpost at Fort Orange, allowed the Dutch to divert a considerable amount of the fur trade away from the French in Canada and into the coffers of the Dutch West India Company. Eventually, declining profits and an ill-advised attack on local indigenous villages brought changes in the colonial administration. Pieter Stuyvesant arrived in 1647 with the title of director-general and a charge of increasing profits. He quickly sent a small army to defeat a group of Swedes who had settled in the vicinity of modern Philadelphia on land claimed by the Netherlands, then incorporated both the land and people into the Dutch colony.

Although he was opposed by many of the colonists because of his strict methods, under Stuyvesant’s leadership, the colony grew steadily in number and economic activity. New Amsterdam became the largest commercial city in North America, and a truly multicultural colony. Although slavery was introduced as early as 1625, the slaves were usually kept together as family units, enjoyed some basic rights, and could be admitted to membership in the Dutch Reformed Church, where they could have their marriages recognized and enjoy other religious benefits. Slaves had legal status, which allowed them to sign documents, testify in court, and bring legal actions (including against Europeans). When the colony eventually

fell to the English, the Dutch West India Company freed all of the slaves, forming the basis for a free African community in New York.

By 1664, New Netherland had grown to a population of about 9,000, including the village of New Haarlem that had been established on northwestern Manhattan Island in 1658. This later became the cultural Mecca for the Harlem Renaissance some 250 years later. But New Netherland would not remain Dutch. The English had long claimed the area of New Netherland based on the explorations of John Cabot. When Charles II ascended the English throne, he determined to enforce those claims. On August 27, 1664, four English warships arrived off New Amsterdam and demanded its surrender under threat of bombardment. Unprepared for resistance, Stuyvesant had no real choice but to surrender. Although briefly recaptured in 1673, New Amsterdam became New York.

Surviving Dutch Influence

Although New Netherland did not survive, Dutch influence did. The concept of the stock market originated with the Dutch. Three presidents of the United States were descended from the van Roosevelt and van Buren families, who originally settled in the Dutch colony. Washington Irving used the Dutch culture of New York for the background of his popular literary tales, including “Rip Van Winkle” and “The Legend of Sleepy Hollow.” Dutch names abound in and around New York, for example, Amsterdam and Rotterdam. Dutch words also appear among commonly used English vocabulary: Yankee (*Janke*), yacht (*jaght*), buoy (*boei*), and cookie (*koekje*).

New Zealand Americans

New Zealand is an island nation in the Pacific Ocean, settled by Polynesians before being colonized and conquered by the British in the 19th century. Both New Zealand and the United States are former colonies of Britain (though the United States no longer has a predominantly British demographic, and most of its land was never under British control). English is the language of both nations, and both countries are occupied by a predominance of European descendants who coexist with an indigenous population. The cultures are similar, and the nations have generally found themselves on the same side of most global issues, whether military, trade, or other; the notable exception is New Zealand’s antinuclear stance. They also share military intelligence with one another under the British–U.S. agreement that binds the major former British colonies.

Both countries are very involved in the World Trade Organization, as well as in the development of the Asia-Pacific Economic Cooperation (APEC) region. On the other hand, New Zealand remains thoroughly British when compared to the United States; whereas Americans mostly play and watch sports of American design, New Zealand is a Commonwealth country that plays rugby, cricket, and netball. British television shows are mainstream entertainment in New Zealand, rather than being relegated to a cable channel or public television, and the cuisine is certainly closer to British food than is American cuisine.

Though they share a common heritage, culture, and language, few New Zealanders have immigrated to the United States. Most likely this is the result of a combination of the great expense of the trip—a number of other countries are much closer—and the fact that both are first-world industrialized democracies, whereas a significant amount of the immigration to the United States from such far-off places has been undertaken by citizens of countries that are poorer, less industrialized, or less

democratic than the United States. There has been some tangible benefit, in other words, to offset the expense of relocating to the other side of the globe (from which a visit home to one's family can cost thousands of dollars even today, to say nothing of the expense that would have been faced anytime before the very recent past).

The 2010 census revealed 19,961 New Zealand Americans, one of the 10 smallest ethnic groups in the United States; among native English speakers, only U.S. Virgin Islanders and Bermudan Americans, both of whom originate in much smaller countries, are fewer in number. It is possible that some New Zealand Americans self-identify their ethnicity as that of their ancestors who first came to New Zealand and so count themselves as British Americans, English Americans, Scottish, Welsh, or Irish Americans. Maori Americans are counted by the census as Pacific Islanders.

A significant number of New Zealand immigrants arrived as wives of American servicemen after World War II. U.S. Marine Corps and Army units were stationed in New Zealand, while others took their R&R there, and many of these servicemen married local girls who joined them in the United States when the war ended. More than 400,000 personnel were stationed in New Zealand, in addition to those stationed in Australia—the sudden presence of so many Americans in a relatively small country is sometimes jokingly remembered as “the U.S. invasion.”

U.S. Navy personnel continued to be stationed there long after the war, and New Zealand remained an important ally, fighting on the American side in the Korean War, the Vietnam War, the Gulf War, and the war in Afghanistan—though New Zealand's ban on nuclear warships in its waters suspended American treaty obligations thereto. Military brides continued to be one source, albeit small, of New Zealand American immigration.

Prominent New Zealand Americans include journalist Peter Arnett, who covered the Vietnam and Gulf Wars for CNN; artist Len Lye; National Aeronautics and Space Administration (NASA) scientist William Hayward Pickering; Peter George Snell, a New Zealander Olympian who retired to Texas; born-again Christian evangelist Ray Comfort, author of *The Way of the Master*; *Life* photojournalist George Silk; screenwriter Andrew Niccol, who won an Oscar for

The Truman Show; former California lieutenant governor Leo McCarthy; Sean Marks, the first New Zealander to play professional basketball in the United States; Nobel Prize-winning chemist Alan MacDiarmid; computer scientist David Epstein; Stephen Parke, senior scientist at the Fermi National Accelerator Laboratory; play theorist Brian Sutton-Smith, author of *The Ambiguity of Play*; former Anchorage mayor Anton Anderson; and baseball player Scott Campbell. New Zealand-born actors Alan Dale (*Lost* and *The O.C.*) and Melanie Lynskey (*Heavenly Creatures*, *Win Win*, *Up in the Air*) also reside in the United States, as do Jemaine Clement and Bret McKenzie of the comedy music duo Flight of the Conchords.

Newspapers

From the earliest colonial days of the United States, newspapers have been central in influencing the image of multicultural America. All media forms are transmitters of culture and spread information over space that can articulate identity and community identification, values, practices, and beliefs, both positive and negative. However, many ethnic groups have fought for adequate representation in the mainstream press, particularly in terms of race and civil rights, which has led to the formation of a number of ethnic newspapers that provide agency over ethnic groups' media representation. Yet, with the rise of digital technologies, there have been questions about the

A young newsboy holds copies of the prominent African American newspaper the *Chicago Defender* in 1942. A survey by the American Society of News Editors found that the newsrooms of large metropolitan dailies remained 80 percent white in 2011.

efficacy of the form and content of print newspapers, particularly the press, which has long been a communication source for marginalized populations and a formative practice in the development of multicultural America.

As American culture became increasingly literate throughout the 19th and 20th centuries, the role, coverage, and quantity of newspapers dramatically increased in the United States because of a number of factors, notably immigration, globalization, and an increasing demarginalization of ethnic minorities. Throughout this period, print newspapers articulated a number of seminal events in the development of multicultural America, including the maintenance and abolition of slavery; the civil rights movement; the growth of Latino, Asian American, Native American, and Middle Eastern populations; and lesbian, gay, bisexual, and transsexual (LGBT) struggles for equality. Many of these cultural groups established their own newspapers during this era, written and published by and for their respective interests to inform and deliberate over specific issues relating to their cultural identities, beliefs, and practices.

However, there have been significant struggles for recognition of the interests of marginalized populations in mainstream newspapers. In the 20th century, many questions arose over the nature of the form and content for those who owned and produced the news in representing multicultural ideals, particularly the way in which marginalized cultures have been represented in newspaper content as well as in the newsroom itself. The question of newsroom diversity—race, gender, nationality, sexual orientation, and culture—has long been a critique of many media, but of newspapers in particular. Reporters, editors, publishers, and other journalistic staff have historically been white, American, heterosexual, English-speaking, and, until relatively recently, male, leading to questions over the handling of issues relating to diverse audiences. Many have argued that the prevalence of these identity traits in newsrooms has reproduced hegemonic norms and power structures through the reinforcement of dominant ideologies, as well as the absence of coverage relating to other identity traits. The articulation of American multiculturalism has long been influenced by those who decide what is news.

The issue of racial civil rights in particular was marked by a notable absence of newspaper coverage of the struggle for equality by African Americans. During the 1950s and 1960s, many American newspapers regularly ignored the struggle of the civil rights movement in their coverage of news and opinion, particularly in southern states. Stories on racial violence and oppression, sit-ins, and demonstrations were routinely either not covered or presented as one-sided narratives of civil unrest and criminal activity. Several newspapers, southern and otherwise, have since issued apologies or corrections for the one-sided coverage during this period, most notably the 2004 front-page correction of Kentucky's *Lexington Herald-Leader* for its coverage of the civil rights movement.

Aside from coverage of civil rights struggles, diversity in newspaper staff and ownership has been historically problematic for the development of a multicultural American voice in mainstream newspapers. The *New York Times*, for example, did not have a female African American reporter in its newsroom until Nancy Hicks Maynard, in 1968, and there would not be an African

American-owned major metropolitan city paper until 1983, with the *Oakland Tribune*.

Similarly, women in the newsroom would face challenges throughout the 20th century. Newsrooms were notably male and were resistant to many female reporters working in the newsroom alongside male counterparts. It was not until the 1960s that most newspapers hired their first female reporter.

Although strides have been made in the past several decades, these issues still trouble print newspaper newsrooms. As of 2011, the American Society of News Editors found that the newsrooms of large metropolitan dailies were still 80 percent white. Furthermore, newsrooms are 37 percent female, almost unchanged over the past decade. As one gets higher up in the stature of major metropolitan newspapers' newsroom positions, the percentage of minorities and females drops off precipitously, particularly at the top, with publishers overwhelmingly being white males.

Diversity in the newsroom is a struggle that newspapers have been slow to move on for decades, but many have critiqued the lack of diversity in staff and ownership as a stumbling block toward more cultural acceptance of minority communities and a more balanced narrative in serving these populations.

African American Newspapers

In response to the long struggle for print newspaper representation of a more diverse perspective, several ethnic groups have established newspapers that address their distinct needs and interests. African American newspapers are particularly notable for the role they served in fighting against slavery and for civil rights equality among this historically marginalized population.

Among the first was the 1827 *Freedom's Journal*, a weekly New York-based publication that was circulated in 11 states by Peter Williams, Jr., an African American anti-slavery activist, and among the first ordained black ministers in the nation. The paper was founded in order to counter the white-owned and often racist newspapers, as well as to provide African Americans a community of interest through news and opinion specifically targeted toward this demographic.

Though the paper was only published for two years before evolving into several other

newspapers and publications, it was among the first instances where African Americans were provided a communication medium to foster community as an audience. It also established the tradition of African American and white abolitionist communities using the press as an activist tool, later to include Frederick Douglass's *The North Star* and William Lloyd Garrison's *The Liberator*. These and other abolitionist press papers were widely banned in southern states.

Developing alongside the technological and transportation advances of the Industrial Revolution, the African American press began to expand greatly in the late 19th and early 20th centuries. This was particularly true in the south, where newly freed slaves still faced cultural, political, and economic segregation, and newspapers emerged in order to both provide a community voice for African American news, as well as to advocate for political issues of racial equality.

The trend of using the black press for these purposes would continue through the 20th century, particularly during the apex of the civil rights struggle of the 1950s and 1960s. Most local and national media, including newspapers, neglected the post-segregation story for years, and there were few African Americans working in newsrooms, leading to the lack of perspective for this community's needs and news. As Ira B. Harkey, Jr., publisher of the Mississippi-based *Pascagoula Chronicle*, stated during the 1950s, "[T]he only time a black man ever got in the paper was if he were in trouble." Several publications became particularly prominent during this era, such as the *Atlanta Daily World*, the *Chicago Defender*, the *Los Angeles Sentinel*, and the *Washington Sun*, all still publishing today.

Like most aspects of the newspaper industry, the future of the African American press in print is uncertain. The rise of digital and online media has led some to question the sustainability of print newspapers with a relatively narrow demographic, particularly papers that have a regional audience, rather than a national appeal.

Other Multicultural Newspapers

Much like the case of the African American press, other ethnicities, races, and marginalized groups have developed newspapers in order to communicate on issues that either are of concern to specific

communities or have not been addressed by larger publications. *La Opinion*, for example, is a Spanish-language newspaper published in Los Angeles, founded in 1926, that addresses news, opinion, entertainment, and sports in the Spanish-speaking communities of North America. Given southern California's large Mexican and Central American population, it has the second-largest readership in Los Angeles, after the *Los Angeles Times*, with a daily circulation of 121,000.

Other newspapers, such as the Boston-based *Irish Emigrant* and New York's *Home and Away* serve news of relevance to the Irish American community, covering stories and opinion on Ireland and issues related to this ethnic group, as well as serving as a community information source. Founded in 1999, the *Muslim Observer*, published in Michigan, is distributed for free in many mosques and has a circulation of 20,000.

Similarly, the *Jewish Press* began publication in 1960, alongside a number of other national and regional newspapers speaking to the Jewish community; and the *Catholic Times*, published in Wisconsin by the diocese, reaches over 35,000 people weekly. The *Rainbow Times*, a monthly publication, speaks to the lesbian, gay, bisexual, and transsexual (LGBT) population in New England. Furthermore, many free alternative newspapers (alt-weeklies) and the dissident press, published primarily in metropolitan areas, tend to lean toward a more progressive perspective and often cover issues of marginalized populations through investigative reporting, a long tradition in the mainstream emergence of these papers from their roots in the underground press of the 1960s.

These newspapers have contributed to the establishment of American multicultural identity, not only in providing a voice for often-marginalized populations but also allowing differing perspectives to have a presence in ongoing discourse in the public sphere. The rise of the multicultural, ethnic, and alternative press has created a space where individuals and groups could exhibit their identity by deciding what is news for themselves, rather than having others make the decision for them, which often led to a silencing of multicultural perspectives. However, the establishment of these presses solidified communities, and among other unifying practices, allowed for a more

diverse newsroom and more diverse readership, which in turn creates a more diverse set of stories that are included for diverse communities.

Today, the traditional notion of "dead tree" newspapers is changing with the rise of digital technology, and there is a corresponding question for the future of cultural diversity, in both newspaper editorial staff and audiences, as well as the future of the ethnic press.

Although the rise of digital media has allowed more citizens to produce and consume journalism-style media than in any previous era, the economic and technological disruption caused by this shift has rendered the traditional business model of newspapers obsolete, leading to a number of troubling questions about the future of newspaper journalism, particularly for small publications with a narrow readership. Many ethnic press newspapers are in a particularly precarious situation. *El Dia*, for example, a Houston-based Spanish-language newspaper, closed its doors in 2009.

However, the current trend of online news sources also shows promise, as online journalism allows for a more localized, targeted meeting of the needs of different cultural communities. The participation of citizens in journalism within their own community can mean a more hyper-localized, community-based meeting of needs. If print newspapers can adapt with a sustainable business model that serves both community and democratic needs, the current social and cultural roles of newspapers will sustain the newspapers' four-century legacy of influencing the development of multicultural America.

Nez Perce

The Nez Perce are a Native American tribe of the Pacific Northwest. Like most American Indian tribes, their name for themselves, *Nimiipuu*, simply means “The People.” The name *Nez Perce*, or Pierced Nose, derives from a misnomer. When the Meriwether Lewis and William Clark expedition first encountered them, their translator misunderstood the Indians’ reference to a tribe farther down the Columbia River who practiced nose piercing. The name nevertheless took hold and has survived into modern times. With a population of approximately 6,000, the Nez Perce were once the largest of the Columbian River Plateau tribes. However, by the early 19th century, war and infectious diseases introduced by Europeans decimated their numbers, as they had done to so many other tribes throughout the Americas. For food, they survived primarily by fishing in the Columbia River and its tributaries. Digging and roasting or boiling the bulbs of the quamash plant were, and remain, a primary food source.

With the introduction of horses by the Spanish, the Nez Perce became renowned among other tribes for their skill at both using and breeding them. Hunting on horseback greatly expanded their range, and they were able to join other Plains tribes in making the buffalo their primary food source. Extensive trade relations existed with many other Indian tribes. Initially, encounters with Europeans were peaceful and trade flourished. However, the never-ceasing westward movement of Americans ultimately led to a clash of cultures. The Americans violated treaties made with all of the Plains tribes, including the Nez Perce. The tribe divided over the white men’s insistence that the Indians must live on reservations. Rather than succumb, Chief Joseph attempted to lead his band to Canada, but in spite of incredibly courageous and effective resistance on the part of a few hundred warriors, the far superior U.S. Army doggedly pursued and captured them.

Chief Joseph and the Nez Perce War

The Nez Perce War is one of the most heroic yet heartbreaking chapters in the history of the American west. In 1855, the U.S. government signed a treaty with the Nez Perce, guaranteeing the tribe possession of much of their traditional territory. With the discovery of gold on tribal lands and floods of settlers coming from the east, the Americans wanted a new treaty. In the treaty of 1863, the Nez Perce reservation shrank from nearly 8 million acres to 780,000 acres. In exchange for their land, the Indians received medical care and a hospital, schools, supplies, and financial compensation.

The Nez Perce divided into two groups: those who agreed with the treaty and those who did not. One of the areas lost by the treaty was the Wallowa Valley, home to the band of Chief Joseph

An 1897 portrait of Chief Joseph of the Nez Perce tribe. Chief Joseph the Younger led a protest of the treaty of 1863, which had taken millions of acres for the United States, shrinking the Nez Perce reservation from nearly 8 million to 780,000 acres.

the Elder. He refused to leave, saying, "Inside this boundary all our people were born. It circles the graves of our fathers, and we will never give up these graves to any man."

When Joseph the Elder died in 1871, his son Joseph (March 3, 1840–September 21, 1904), also known as Young Joseph, succeeded him with the promise that "A man who would not defend his father's grave is worse than a wild beast." When the army began pressuring Joseph to join those living on the reservation, he refused. Joseph negotiated skillfully and made multiple concessions, and in 1873 he signed an agreement whereby he and his band could remain in their beloved Wallowa Valley. However, in 1877, U.S. Army general Oliver O. Howard told Joseph he and his band would have to join the Nez Perce on reservations and that not doing so would lead to war.

Fully aware that American authorities had the means and the will to force him and his followers onto the reservation, he and over 800 Nez Perce decided to flee. What followed was an epic journey of nearly 1,200 miles. Constantly fighting the U.S. Army in rear-guard actions, the warriors achieved fame for their courage and determination. When the Crow Indians refused to give his band sanctuary, Joseph turned northward. His hope was to reach Sitting Bull's camp across the Canadian border.

After all their travails that included over 100 deaths, many of them women and children, the Battle of Bear Paw Mountains stopped the band only 40 miles from the border. Joseph and most of his followers surrendered to the inevitable and agreed to rejoin their kindred and share their reservation. Instead, they traveled in freezing weather aboard unheated trains to live in the Indian Territory (now Oklahoma). Thanks partly to Chief Joseph's continuous lobbying on their behalf, after several years the remnants of the band returned to the northwest, to the Colville Indian Reservation in the state of Washington.

The Nez Perce Today

The Nez Perce National Historic Trail follows the route taken by Chief Joseph and his band. According to the 2010 census, over 3,500 Native Americans identify themselves as Nez Perce, and most live on reservations. Fishing and collecting quamash remain primary food sources, and many

of the tribe's rituals and language are kept alive by every generation. Traditionally well-known horse breeders, tribe members have resurrected that tradition by breeding the Nez Perce horse, a cross between Asian and Appaloosa breeds.

Nicaraguan Americans

The largest Central American country, Nicaragua was colonized by the Spanish before becoming independent in 1821. Most of its history has been marked by unrest, and relations with the United States have been complicated. For a time, an economic embargo was imposed against Nicaragua as punishment for the socialist Sandinistas coming to power in 1979; this was followed by secret government support, in contravention of Congress, of the Contra rebels seeking to overthrow the Sandinistas, which was funded by an arms-for-hostages deal with Iran.

Shortly after this came to public light, a non-Sandinista conservative president was elected

in Nicaragua, economic sanctions were lifted, and two years later, the officials involved in the cover-up were pardoned. Demographically, the country is predominantly mestizo (68 percent), with a large white minority that is mainly Spanish or German. Indigenous ethnic groups (Amerindians) and West Indian blacks make up the remainder.

There were 348,202 Nicaraguan Americans as of the 2010 U.S. Census. The United States has the second-largest number of Nicaraguans outside Nicaragua, after Costa Rica. Early Nicaraguan immigration was not accurately tracked because all Central American immigrants were grouped together. Immigration of Central Americans in general increased steeply from 1890 to 1920 as demand for labor in the United States rose. This was especially true during World War I, and twice as many Central Americans (17,000) immigrated in the 1910s as in the previous decade.

Ebb and Flow of Immigration

That increase was halted by the quota-based immigration restrictions adopted in 1924, although immigration still stayed higher than it had been in the 19th century. For Nicaraguans, as for other Central Americans, the United States was a prosperous promised land, full of economic opportunities.

Many Central Americans supported families back home through remittances, money that they earned in the United States and sent back. For this reason, Nicaraguan immigrants in the 1960s were in the unusual statistical position of being predominantly female—about two women for every man. Many of the women worked as maids, housekeepers, cooks, and other domestic servants, sending money back to Nicaragua for their families. Most mid- to late-20th-century Nicaraguan immigrants settled in California, principally Los Angeles or San Francisco.

A larger wave of Nicaraguan immigration came in the wake of the 1979 revolution that brought the Sandinistas to power. This was the first time when undocumented immigration of Nicaraguans increased to a substantial number, and documented immigration nearly tripled compared to the previous decade. Just as wealthy conservative Cubans had fled Fidel Castro's regime for Florida, so did the wealthy right-wing supporters of the

fallen regime in Nicaragua, and 20,000 Nicaraguans settled in the Miami area.

Some of them repatriated later, especially when the Sandinistas left office, but many remained and put down roots. Those who did were often well-connected politically—many fleeing the Sandinista regime had worked for the previous government and had friends and connections in the American government. Central Intelligence Agency support of the Contras, working to overthrow the Sandinistas, developed from these relationships.

The largest wave of Nicaraguan immigration came during the Sandinista rule, as the Nicaraguan economy was thrown into turmoil. A special order was issued by the attorney general to except Nicaraguans living in the United States from the restrictions of the 1986 Immigration Reform and Control Act. Further, about 80 percent of Nicaraguans seeking asylum in the United States were granted it—the highest percentage of any non-European group.

This wave was less prosperous and less political than the earlier wave, and much larger: over 10 percent of Nicaragua's population left the country, settling in Costa Rica, the United States, Honduras, and Guatemala. Most who settled in the United States were mestizos, though a small number of Amerindians from the Garifuna people settled in Houston.

Many of the Nicaraguans who enter the country illegally do so from the Mexican border, hiring "coyotes," the Mexican Spanish term for facilitators who transport people to the United States. This can be an expensive process—border controls have increased steadily, which was true even before 9/11 and the paranoia about illegal immigration—and is dangerous because it means being vulnerable to an admitted criminal, without any means of appealing to an authority. This can mean being cheated, at best; at worst, many would-be immigrants have been robbed, raped, abused, and sold into prostitution.

There are entire communities of Nicaraguans who are predominantly undocumented, especially in Texas border towns (where they are likely the minority in a Mexican American community). The Miami area remains the Nicaraguan American capital, however, and the suburb of Sweetwater has been nicknamed Little Managua. In other parts of the country, Nicaraguan communities

have formed in existing Hispanic American enclaves, especially in Los Angeles and San Francisco, and to a lesser extent in New York, Washington, D.C., and New Orleans.

Nicaraguans have a low intermarriage rate with other groups, and an even lower intermarriage rate with non-Hispanics. Nicaraguan American families tend to be larger than average, strictly Catholic, and predominantly Spanish speaking. The many undocumented workers have found employment through local networking of family and friends, and so cities with large Nicaraguan populations often find them disproportionately represented in lines of work where those networks exist. Although this often means jobs where credentials are not necessary (which can be difficult to produce for undocumented workers who have fled their country), such as factory work or janitorial work, over one-third of Nicaraguan Americans work in white-collar jobs because of their high education levels compared to other Latin American immigrant groups.

Nigerian Americans

Inhabitants of Nigeria (Niger area) in western Africa or sub-Saharan Africa have been part of the American story from its beginning. As soon as the first immigrants began to arrive from Europe, there was a need for manual labor to build the new world. The need for slave labor touched every

ethnic group in the continent of Africa, especially those not far removed from the Atlantic Ocean. According to C. Reef, the first Africans arrived in Jamestown, Virginia, in 1619. A case example detailing the description of a runaway enslaved person of Ibo origin was reported twice in the *Virginia Gazette* of March 21 and June 20, 1766.

However, the term *Nigerian American* refers to present-day immigrants from colonized Nigeria, after independence in 1960. Prior to independence, individuals of Nigerian extraction made it to the United States as stowaways on travel ships. Among the prominent stowaways from Nigeria was Nnamdi Azikiwe, who was in the United States from 1925 to 1934.

During this period, and several decades later, Nigerians who traveled to the United States did so as students to further their education, with plans of going back to settle and work in Nigeria. Most of the Nigerians who traveled to the United States pre-independence, and in the decade after independence, eventually went back to settle and work in Nigeria.

Because of the political instability that started a few years after independence and eventually led to the civil war of 1966 to 1971, most Nigerians began to see life outside Nigeria, especially in the United States, as desirable. Following increased educational awareness and better perception of standards of living, Nigerians began to see immigration to the United States as a goal.

As established in the Nigerian constitution, after independence, a Nigerian could hold only one citizenship, not dual citizenship, as was customary for all citizens of the British Commonwealth. This constitutional requirement made it difficult for Nigerians who traveled to the United States after the civil war to truly make America their home. However, this changed in 1991, when Head of State General Ibrahim Babangida made it legal for Nigerians to hold dual citizenship.

This policy paved the way for Nigerians in the United States to become naturalized American citizens and remain Nigerian citizens, making it possible for their children, who were born in the United States, to also become Nigerian citizens. This policy development helped increase the immigration of Nigerians to the United States, as they proudly showed renewed dignity and love for both their country of birth and their country

of adoption. This particular issue was revisited as Nigeria adopted a new constitution in 1999; it was aggressively debated and was finally allowed to remain because it has given immense gains to Nigerians.

The term *Nigerian American* is a recent designation that became popular in the 2000s, as Nigeria as a country was becoming politically stable. This was the result of a successful transition to a democratically elected government as well as the smooth transition that followed the death of a democratically elected president.

Nigerians are proud of their heritage but are critical of the culture of corruption generally associated with Nigeria and its political system. This sense of pride and affinity with Nigeria is well noted and is why Nigerians in America prefer to be known as Nigerian Americans instead of African Americans. This love of Nigeria is reminiscent of a “can do” attitude that pervades every strata of Nigeria’s society, even though the dichotomy of tribalism is difficult.

In Nigeria, the suspicion of tribal loyalty is at the forefront of any national issue but seems to disappear when Nigerians come together in the United States. In the last decade, since Nigeria made improvements in establishing democratic governance, there has been an unrelenting upsurge in terrorist activities originating from the predominantly Muslim north, targeting citizens from the predominantly Christian south and east.

Despite this upsurge in terrorist activity, Nigerians who immigrate to the United States very easily overlook these tribal sentiments and undercurrent of religious tension and are always ready to unite under a patriotic, united national identity.

Nishikawa v. Dulles (1958)

Nishikawa v. Dulles (1958) is a U.S. Supreme Court ruling which held that a man who held dual citizenship in the United States and Japan could not have his American citizenship revoked because he had involuntarily served in the Japanese army during World War II. The plaintiff, Mitsugi Nishikawa, was a Nisei (second-generation Japanese American). He was born in 1916 in Artesia, California, to Japanese immigrant parents. Section 1 of the Fourteenth Amendment to the U.S. Constitution mandates that “all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.” Nishikawa was American by birth. He was also Japanese, since his parents were Japanese and registered him as Japanese in the Japanese family registry. He also was a dual-citizenship holder. Nishikawa graduated from the University of California at Berkeley with a degree in engineering. To pursue his study and Japanese-language skill, he went to Japan in 1939. In 1941, while he was in Japan, he was conscripted into the Japanese army, and he engaged in war efforts in China, Indochina, the Philippines, and Manchuria as a mechanic.

After the war, Nishikawa applied for his passport at the U.S. consulate in Japan, but his citizenship was revoked because of section 401 of the Nationality Act of 1940, which said that “a person who is a national of the United States, whether by birth or naturalization, shall lose his nationality by entering, or serving in, the armed forces of a foreign state.” Nishikawa appealed to U.S. Secretary of State John Foster Dulles to reclaim his American citizenship. When this effort failed, he took his case to court. The issue in the case was whether he “voluntarily” served in the

Japanese army. Nishikawa testified that his service was a result of coercion by the Japanese conscription law and it was not his voluntary act.

The federal district court and the federal court of appeals denied his citizenship. They argued that if Nishikawa did not want to serve in the Japanese military, he should have consulted with the U.S. consulate before his conscription. They were also suspicious of the fact that Nishikawa went to Japan when the relationship between Japan and the United States was becoming antagonistic.

In his defense, Nishikawa maintained that the U.S. consulate in Japan could not do anything for Nisei. His service in the Japanese army was an unavoidable event. Nevertheless, the lower courts concluded Nishikawa voluntarily served in the Japanese army.

Nishikawa then appealed his case to the Supreme Court. In 1958, the Supreme Court found no evidence that Nishikawa had voluntarily served in the Japanese Army, and his American citizenship was restored.

Kibei

It was a common practice among Nisei Japanese Americans to spend some time in Japan for educational purposes before World War II. Those Nisei Japanese Americans who were born in the United States and later lived in Japan for several years were called Kibei. Nishikawa was one of these Kibei. It is estimated that many thousands of Nisei went to Japan at this time.

Many Japanese immigrant parents experienced discrimination in the United States. They were impoverished and struggled to start a new life in a hostile environment. Parents sent their children to Japan so they could work full time. They also wanted their children to have a tie with Japan in case they had to return to Japan. Parents secured their children's Japanese nationality and sent their children to their grandparents or relatives. Nisei studied Japanese language and grew accustomed to Japanese culture. They eventually came back to the United States as Kibei.

During World War II, approximately 3,000 Nisei Japanese Americans were conscripted by the Japanese army. Since many Nisei had dual citizenship, once they were conscripted, it was difficult to avoid military service by claiming

their U.S. citizenship. Nishikawa attested that he was bullied by his Japanese fellows because of his connection to the United States. Torn between two countries, Kibei in the Japanese army had to fight against their fellow Americans.

Dual Citizenship

The 2000 Census for the first time allowed people to check more than one box for their racial identification. As a result, 2.4 percent of Americans identified as multiracial. The number increased to 2.9 percent in the 2010 Census. Some multiracial people are children of parents whose nationalities are different. For example, if a biracial person's mother is American and the father is Japanese, he/she can have both American and Japanese citizenship. Some multiracial people might be dual citizens.

The census results also show that the United States has a growing number of immigrants from Asia and Hispanic countries. If immigrant parents grant their mother country's citizenship to their children born in the United States, the children of these immigrants are dual citizens. As the number of multiracial people and immigrants continues to increase in the future, so will dual-citizenship holders.

U.S. immigration law in the early 21st century does not differ greatly from the law pertaining to Nishikawa. Section 349 of the Immigration and Nationality Act defines the loss of nationality of an American national and states, "a person who is a national of the United States whether by birth or naturalization, shall lose his nationality by voluntarily performing any of the following acts with the intention of relinquishing United States nationality . . . (3) entering, or serving in, the armed forces of a foreign state if (A) such armed forces are engaged in hostilities against the United States, or (B) such persons serve as a commissioned or non-commissioned officer . . ." Section 401 of the Nationality Act of 1940 essentially contained the same definition.

The United States has been continuously involved in wars during the 21st century. Dual citizens like Nishikawa may have the possibility to serve a foreign country's army, either voluntarily or by force. Under current immigration law, this military service could lead to the loss of their American citizenship. In an era of

multiculturalism, during which many dual citizens live in the United States, the execution of immigration law needs to be practiced carefully so the tragedy of Nishikawa will not be repeated.

No Child Left Behind Act (2001)

The No Child Left Behind Act of 2001 (NCLB) is a reauthorization of the previously titled Elementary and Secondary Education Act (ESEA). ESEA, an extensive statute that funds primary and secondary education, is the most far-reaching federal legislation regarding education passed by Congress. The act's original intent was to (1) forbid the establishment of a national curriculum, (2) emphasize equal access to education, (3) establish high standards and school accountability, and (4) shorten achievement gaps between particular races of students by providing each child with fair and equal opportunities to achieve an exceptional education. The government has reauthorized the act every five years since its inception. As of 2012, the No Child Left Behind Act was the most current reauthorization of ESEA.

According to Rod Paige, secretary of education from 2001 to 2005, the stated focus of NCLB is “to see every child in America—regardless of

ethnicity, income, or background—achieve high standards.” President George W. Bush and Massachusetts senator Ted Kennedy primarily sponsored the 670-page act, which was passed with a strong bipartisan backing by the House of Representatives on December 13, 2001, and by the Senate on December 18, 2001, by a vote of 87-10. Bush signed it into law on January 8, 2002.

As intended, this act was to be a powerful step toward equalizing educational outcomes for all students, thus “leaving no child behind.” However, as implemented, this act significantly changed the lives of students, teachers, parents, and other stakeholders in the U.S. educational system, and the ramifications of the act, particularly in school curriculum and the lives of students from various minority cultures, continue to reverberate throughout U.S. education.

The Act as Intended

NCLB required schools to focus on providing quality education to students who are often underserved; this includes children with disabilities, children from low-income families, non-English speakers, African American students, and Latinos. The law set a lofty goal of making all students proficient in reading and mathematics by 2014. Schools were to ensure that all students learned essential skills and gained knowledge, as defined by each state annually, using predetermined grade-level standards and benchmarks.

With the implementation of NCLB, school funding was tied directly to accountability expectations, as measured by various standardized tests. Through NCLB, states were required to assess third- through eighth-grade students annually in reading and mathematics. These tests were to be based on state standards that reflected “high expectations,” and improvement among disadvantaged children was to be demonstrated by each school's attainment of adequate yearly progress (AYP).

According to the provisions of the act, schools unable to demonstrate AYP were to be provided with assistance and would be subject to escalating corrective actions. Further, under NCLB, schools were required to ensure that they were employing “highly qualified” teachers, meaning those who were degreed, certified, and able to dispense instruction based on “scientifically based research” methods in their classrooms.

In exchange for implementing these greater accountability measures, NCLB was to provide states with flexibility and far-reaching control over how they used a generous outpouring of federal funds for needed items such as teacher retention, professional development, and technology training; states were to be given greater flexibility and control over their programs; and parents in underperforming or unsafe schools that could not meet AYP were to be provided with detailed reports of their students' achievement and given options, such as school transfers and tutoring.

The Act as Implemented

NCLB was intended to positively influence academic outcomes for all children and change U.S. education. However, as implemented to date, NCLB has not met the level of expectations stated nor fulfilled the promises it set forth. Further, it exacerbated some pre-existing educational problems and generated others, primarily for minority children and low supplemental educational services (SES) schools, the very students and schools it purported to help most. Emergent problems from implementation of the No Child Left Behind Act include funding, curriculum narrowing, cheating, and teacher qualification issues.

Funding and Curriculum Narrowing

Despite enthusiasm over what it perceived as long overdue educational reforms, the Bush administration significantly underfunded NCLB but continued to require states to comply with all provisions or risk losing federal funds. As a result, most states were forced to make deep, influential budget cuts in nontested school subjects such as science, foreign languages, social studies, and arts programs, and forgo needed items such as books, field trips, and school supplies. Since the advent of NCLB, class sizes across the country have grown larger as schools try to balance depleted budgets. The underfunding of the law has also affected parents in some school districts who, after being promised benefits such as transfers from "failing" schools and free tutoring, have found limited resources available.

Many academic subjects have been marginalized because of NCLB-driven pressure on schools to strengthen their performance on standardized tests in the areas of reading and math. As previously

mentioned, a majority of states under NCLB have made budget cuts in nontested school subjects such as science, foreign languages, social studies, and arts. Teachers, parents, and educational researchers charge that NCLB only encourages, and rewards, teaching children to score well on a test, rather than teaching with a primary goal of learning or critical thinking, resulting in curriculum narrowing. As a further result of the act, teachers, particularly teachers in low-performing schools, which are often surrounded by minority neighborhoods with low socioeconomic status (SES), have been pressured to teach a narrow set of test-taking skills and have only been allowed to promote a limited range of knowledge. This type of curriculum narrowing most often takes place in schools where curricular options are already limited.

Cheating

Because NCLB enables states to set their own standards and write their own standardized tests, some states have attempted to compensate for inadequate student performance by setting very low standards and making tests unusually easy. The omnipotent specter of NCLB outcomes also hovers over various school systems and individual schools as teachers and administrators across the country, in attempts to lose the label of "underperforming," have become embroiled in various cheating scandals. Cheating or score inflation is suspected in states such as Texas, Georgia, Michigan, New Jersey, and Pennsylvania.

Teacher Qualification

NCLB requires new teachers to possess college degrees in particular subjects. It also requires that both new and practicing teachers pass a battery of proficiency tests. These requirements have caused difficulties for some school districts, which have been unable to hire qualified teachers in "high-needs subjects" such as special education, science, or math, and many areas where school districts already have teacher shortages, such as rural or inner-city communities. In addition, NCLB's definition of what it means to be a highly qualified teacher in no way addresses multicultural knowledge or sensitivities. Only a small number of states have policies or standards for teacher preparation and certification that address the needs of diverse populations. This is cause for concern because,

despite a stated need to attract a balanced representation of teachers from various cultures, an overwhelming majority of practicing and preservice teachers are European American and female, and the numbers of teachers from minority populations are shrinking; while, as the 2010 U.S. Census shows, the United States is clearly moving from a white- and black-dominated American population to one that is multiracial and multicultural.

Current Ramifications

In 2010, President Barack Obama's administration proposed an overhaul of NCLB that encouraged states to raise academic standards, end the identification of tens of thousands of schools as failing, and refocus federal and state energy on turning around the few thousand schools in the worst shape. However, as of 2012, Congress had shown no signs of taking action. Instead, President Obama in 2012 used his executive power to issue NCLB waivers to a large number of states, freeing them from some central provisions of the act and raising the question of whether the program has been essentially nullified.

In exchange for NCLB waivers, participating states, schools, and districts have promised to set new targets aimed at preparing students for colleges and careers. They are also required to establish accountability systems that reward high-performing schools, single out low-performing schools for "rigorous and comprehensive interventions," and develop and implement plans for improving educational outcomes for underperforming groups.

A large part of the Obama plan, which revolves around a grant competition titled Race to the Top, requires school systems to link evaluations of teachers and schools to student achievement on standardized tests. The use of tests to judge teacher effectiveness is a departure from No Child Left Behind, which used test scores to rate schools and districts. Yet with this additional requirement, the continuation of NCLB-type requirements, and little sustainable funding behind it, many are asking if the Obama plan is simply NCLB 2. Will the intended purposes of this new program also be its implemented outcomes? Only time will tell.

Northern Irish Americans

Northern Irish Americans trace their heritage to northern Ireland, the part of the Irish island that is now politically separate from the Republic of Ireland to the south. The Republic of Ireland is Catholic and is the source of most of the Irish immigrants who came to the United States in the 19th and early 20th centuries, but Northern Ireland is predominantly Protestant, and most of its immigrants arrived in the colonial and early national periods. Northern Irish Americans are often Scots-Irish or Scotch-Irish Americans, a term only commonly found in the United States.

Northern Ireland is often referred to as Ulster, although Ulster is a region consisting of nine counties, three of which are in the Republic of Ireland. The term's popularity, though, is owed to many Northern Irish and Northern Irish Americans tracing their heritage to the Ulster Scots people, an ethnic group descended mainly from the

Border Reivers, a kinship-based society of raiders along the Anglo-Scottish border, as well as from northern English dissenters. During the reign of King James, the monarch of both Scotland and England, many of these border Scots relocated to the Ulster region of Ireland as part of the Plantation of Ulster, an organized colonization effort that began around 1606.

Colonization was limited to English-speaking Protestants, most of whom were Presbyterians, and the purpose of colonization was to dilute the population of Ireland in order to prevent rebellion. The Plantation of Ulster is often blamed for leading to the Partition of Ireland in 1921, which came about as a result of growing cultural, political, and religious differences between the north and south.

Though one of the goals of the government in the Plantation of Ulster was to Anglicize Ireland through colonization, the Ulster Scots faced persecution at the end of the 17th century, when the Penal Laws granted full rights only to the state-approved Church of Ireland and its members, not the Irish Catholics or the Ulster Scots Presbyterians. This began a period of immigration of Ulster Scots to the United States.

Immigration was steady until 1775, halted because of the Revolutionary War, and peaked in the early 19th century. Because Northern Irish Protestants preceded the large waves of southern Irish Catholics who immigrated later, it is possible that some of the anti-Catholic, anti-Irish sentiment those later immigrants faced was fostered by Northern Irish Americans who still harbored resentments toward their ancestors' Catholic neighbors. The term *Scotch-Irish* was coined in the mid-19th century by Northern Irish Americans—who had previously called themselves Irish—to differentiate themselves from southern Irish Catholics.

Many of the first Northern Irish American settlers were responsible for settling the frontier in New England: the regions of what are now Maine and New Hampshire, then part of the Massachusetts Bay Colony. The Northern Irish Americans were likely responsible for introducing the potato to Maine, where it became a staple crop and a key ingredient in the region's traditional clam chowder. Though indigenous to the New World, potatoes originated in South America, not North

America, and were popularized in Europe long before Americans began to cultivate them.

Northern Irish populated the western frontier of the colonies, such as the wilderness of Pennsylvania, and were key participants in the French and Indian War. Their descendants, farmers who had been largely autonomous until the federal government formed after the Revolutionary War, waged the Whiskey Rebellion against President George Washington's whiskey tax, which greatly increased their dependence on hard currency.

Some historians have argued that essential elements of the Ulster Scots and the Border Reivers before them—a desire for self-sufficiency, a distrust of and even hostility toward government, a glorification of firearms, and a self-perception deeply informed by notions of honor—became cultural characteristics of regions of the United States, especially the south (where the Northern Irish greatly outnumber the southern Irish) and the mid-Atlantic (the lands that constituted the American frontier in the colonial and early republic eras). President Andrew Jackson was born to Northern Irish immigrants. The patriarchs of the Hatfield and McCoy families of the West Virginia/Kentucky area were both Northern Irish. Scotch-Irish music and folktales have been demonstrated as the ancestors of the music and folklore of the Appalachian Mountain region.

In Castletown, Northern Ireland, in the Ulster county of Tyrone, the Ulster American Folk Park is an open-air museum celebrating the historical connections between Ulster and the United States. Many of the buildings are re-creations of 18th- and 19th-century dwellings where period-appropriate crafts are demonstrated, and there are demonstrations of Appalachian folk music and bluegrass, as well as the Fourth of July and Halloween.

Norwegian Americans

Although some Norwegians had settled in North America considerably earlier, especially in the Dutch colony of New Netherland, the era of Norwegian mass migration commenced in the 19th century. The arrival of religious dissenters on the sloop *Restauration* in 1825 serves as the symbolic starting point of this population movement, but larger numbers of Norwegians did not arrive until the 1840s and especially the end of the Civil War.

During the subsequent decades, emigration from the long-stretched country on Europe's northern periphery, whose agriculture was not overly favored by climatic and geological conditions, increased rapidly. Because of a shortage of tillable land, the continual population growth—swelling the country's population from 883,000 in 1801 to 1.7 million in 1865—could not be absorbed by a still largely preindustrial economy.

The number of arrivals from Norway to the United States peaked at 196,000 immigrants in the 1880s and over 182,000 between 1900 and 1909; but even so, the domestic population continued to expand to over 2.2 million in 1900. World War I and the subsequent U.S. immigration restrictions brought the period of Norwegian mass migration to a fairly abrupt end, however. Although the era's restrictionist movement was not directed primarily against Scandinavians, the National Origins Act in its final form allotted Norway a yearly immigrant quota of only 2,377.

Overall, 815,000 Norwegians were registered as immigrants to the United States in the period from 1820 to 1950. This number puts Norway among the larger countries of origins, which is noteworthy in view of its modest population base and draws attention to the remarkably high ratio

of emigration. The relatively low rate of return migration among Norwegians as well as for other Scandinavians, estimated at approximately 15 percent during the early decades of the 20th century, further increased the impact of Norwegians on American society. Especially important to this impact was the regional concentration of the immigrants in select states. Whereas Norwegians only accounted for approximately 2 percent of the era's total immigration, they reached much larger percentages in their areas of concentration.

At its peak in 1910, the number of foreign-born Norwegian Americans reached 404,000, with another 609,000 belonging to the second generation. More than half of them established their residence in only three neighboring states, led by Minnesota with almost 280,000 and followed by Wisconsin and North Dakota with 158,000 and 123,000, respectively; outside the midwest, only the state of Washington approached these levels in relative terms. Because of its lower overall population, North Dakota formed—and forms—the state with the highest concentration of Norwegian Americans. As late as 2000, 30 percent of North Dakotans still reported Norwegian ancestry, followed by 17 percent of Minnesotans.

In this upper-midwestern heartland, Norwegian Americans created an impressive infrastructure of religious, cultural, and social institutions, including a vibrant press. Although some Norwegians belonged or converted to other denominations, the vast majority joined Lutheran congregations. Many of these congregations were established along ethnic lines and developed into larger Norwegian American religious bodies. These churches not only served as expressions of Norwegian cultural life in their own right but also founded a variety of additional institutions, especially in the educational sector. Well-known midwestern liberal arts colleges such as St. Olaf College in southern Minnesota and Luther College in northern Iowa trace their traditions to early Norwegian ecclesial bodies.

Norwegian Culture

For several decades, committed Norwegian Americans considered it feasible to uphold and expand an autonomous cultural sphere. This expectation was reinforced by the predominantly rural

From 1820 to 1950, 815,000 Norwegians were registered as immigrants to the United States. In the upper midwest, most joined Lutheran congregations at houses of worship like this Norwegian Lutheran Memorial Church in Chicago, Illinois.

character of 19th-century Norwegian immigration that frequently sheltered its members from the cultural dominance of the majority society. At the turn of the 20th century, more than every second Norwegian American was occupied in agriculture, far exceeding the averages of most other immigrant groups. In these rural enclaves, Norwegian American activists dreamed of creating a Norwegian expression of American life to complement the older British expressions of the eastern seaboard. In the once widely read novels of Norwegian American author and educator O. E. Rolvaag, the memory of this cultural vision still lives on.

In real life, even the midwestern strongholds of Norwegian culture increasingly succumbed to Americanization. In 1910, more than a million Americans listed Norwegian as their mother tongue. By 1960, there were only 322,000 speakers of Norwegian left, of whom 141,000 were first-generation Americans, whereas 141,000 were estimated to belong to the second and 40,000 to the third generation. In spite of a continued trickle of new immigrants, only 55,000 Americans described themselves as Norwegian speakers in 2000.

Notwithstanding their successful social and cultural integration, which also expresses itself in an above-average level of educational and economic attainment, Norwegian immigrants and their descendants have left a distinct mark on American life. In the 2010 census, almost 4.5 million Americans listed full or partial Norwegian ancestry, which indicates a higher level of cultural identification in proportion to immigrant numbers than many other nationalities, including Swedes and Danes. In their upper midwestern heartland, especially, Americans of Norwegian descent have been well represented in cultural, economic, and political life, primarily on the regional level but, as exemplified by Walter Mondale, at times also on the national level. It is not by chance, therefore, that the image of the Norwegian bachelor farmer and other symbolic representations of Norwegian midwesterners have firmly established themselves in the cultural imagination of contemporary America.

Nuyoricans

The term *Nuyoricans* refers to New York City inhabitants of Puerto Rican heritage; it was first used in a pejorative sense in the 1960s and 1970s to refer to those Puerto Ricans born in New York. It has been subsequently appropriated as a name of pride.

Puerto Rican Migration to the United States

Puerto Ricans have lived in New York City since the end of the 19th century, when they were part of independence movements to free the remaining Caribbean colonies of the Spanish Empire: Cuba and Puerto Rico. Among the most famous Puerto Ricans living in New York at the turn of the century were Eugenio María de Hostos and Alfonso Arturo Schomburg.

The island came into the possession of the United States in 1898 at the conclusion of the Spanish-American War; 20 years later, inhabitants of Puerto Rico were granted U.S. citizenship, which facilitated travel to the continent. In the first decades of the 20th century, there was a relatively steady stream of workers moving from towns on the island to New York in search of employment. By 1930, there were approximately 52,000 Puerto Ricans living in the United States, 88 percent of whom (approximately 46,000) lived in New York.

Operation Bootstrap

In the 1940s and 1950s, the numbers of migrants increased dramatically, spurred by industrialization efforts on the island. Prior to the war, Puerto Rico was primarily a plantation economy that depended greatly on the production of sugar; the Great Depression, however, highlighted the problems of a single-crop economy when prices of sugar fell dramatically, affecting an already impoverished populace located primarily in rural areas.

During World War II, construction projects to improve the roads connecting military installations prompted the creation of cement factories. In the aftermath of the war, there was a sustained investment of capital from U.S. businesses to diversify the economy, changing the emphasis from rural to urban production. Laborers who had previously worked in sugar production were no longer needed. Those left without employment moved from the countryside to the cities, and after the cities were saturated, on to the continental United States. In the decade of the 1950s, 450,000 Puerto Ricans migrated to the mainland.

Island–Mainland Tensions

The moniker *Nuyorican* emerged in the 1960s and 1970s and applies to the community that settled permanently in New York. The late 1960s saw the emergence of a heightened cultural nationalism in the form of the Young Lords Party. Inspired by the civil rights movement and the Black Panther Party, the Young Lords Party called for the independence of the island from the United States as well as an educational system that taught Puerto Rican history and culture, among other demands.

The New York community continued to claim Puerto Rican, rather than an American, identity. Often, upon returning to the island, they were confronted with hostility, as the populace there claimed that the offspring of Operation Bootstrap were not genuinely or authentically Puerto Rican. Children born and raised in the United States often did not speak fluent Spanish and knew little of the history and culture of the place idealized by their parents.

Recovery as Point of Pride

Alienated from both their island counterparts and from the mainstream U.S. society that had marginalized the community as one marked by crime and poverty, these men and women were caught in a double bind. There slowly emerged the articulation of a new identity—that of the New York City Puerto Rican, or Nuyorican, best represented in the writings of the time.

In the pages of Piri Thomas's *Down These Mean Streets* (1967) and in the poetry of Sandra María Esteves, Miguel Algarín, Pedro Pietri, and Tato Laviera, among others, is a pride in surviving rampant anti-Puerto Rican discrimination,

poverty, crime, and the racism of the New York City streets. Poets came to be seen as the spokesmen and -women of the community: 1973 saw the founding of a literary gathering that would evolve to become known as the Nuyoricans Poets Cafe on the Lower East Side of Manhattan. Founded by Miguel Algarín, it continues to serve as a gathering space for artists, poets, performers, musicians, and dancers. The following year saw the staging of *Short Eyes*, a play by Miguel Piñero, a founding member of the café; it went on to win the New York Drama Critics Circle Award and the Obie Award for Best Play of the Year.

Once a pejorative, Nuyoricans now signifies pride in a distinctly “New York City” identity. According to the 2010 census, approximately 1.1 million New Yorkers self-identify as having Puerto Rican heritage; though this number accounts for inhabitants throughout the state, the New York City Puerto Rican population continues to be the largest of the multiple Hispanic communities in the city.

Occupied America: A History of Chicanos

First published in 1972, *Occupied America: A History of Chicanos* was one of the first textbooks to recount the history of Mexican Americans. The book was written by Rodolfo Acuña, a professor emeritus in the Department of Chicana and Chicano Studies at California State University, Northridge, and in 2012 was in its seventh edition. Since its initial publication, *Occupied America* has become a staple of high school and introductory-level collegiate Chicano and Mexican American Studies courses throughout the southwest.

The book has drawn considerable praise as well as criticism for both its tone and its content, with feelings running high on both sides. After the enactment of an Arizona state law prohibiting the teaching of ethnic studies courses went into effect in January 2012, *Occupied America* was designated as an allegedly inappropriate, “racist,” and “anti-American” book by supporters of the ban, and the Tucson (Arizona) Unified School District was forced to withdraw it, along with six other books that deconstruct race and ethnicity in American society, from its classrooms and libraries.

Rodolfo Acuña: Scholar and Activist

The son of Mexican immigrants, Rodolfo Acuña was born on May 18, 1932, in the Boyle Heights neighborhood of Los Angeles, California. His mother, Alicia Elias, originally hailed from Sonora, and his father, Francisco Acuña, migrated to the United States from Jalisco. Acuña attended Los Angeles State College, where he earned a bachelor of arts degree in social sciences in 1957 and a master’s degree in history in 1962. Six years later, he graduated from the University of Southern California with a Ph.D. in Latin American Studies.

Acuña has long been praised as a scholar, educator, and community activist. Amid the social activism of the Chicano movement, Acuña was hired to help establish a Chicano Studies program at California State University, Northridge, in 1968. He is one of the nation’s foremost scholars of Chicano history and identity, having earned research grants from the Ford and Rockefeller Foundations.

Acuña has authored several other books chronicling the experiences of Mexicans/Chicanos and other Latinos in the United States in addition to *Occupied America*, including *Community Under Siege: A Chronicle of Chicanos East of the Los Angeles River, 1945-1975* (published in 1984), *Anything But Mexican: Chica-*

nos in Contemporary Los Angeles (1996), and *U.S. Latino Issues* (2004).

Three of Acuña's books have won the Gustavus Myers Award for the Outstanding Book on Race Relations in North America, and the journal *Black Issues in Higher Education* named Acuña one of the 100 Most Influential Educators of the 20th century.

A Chicano Studies Textbook

Occupied America serves as an interpretive history of Mexicans and Mexican Americans/Chicanos, which Acuña begins by discussing the sociohistorical legacies of various pre-Columbian indigenous cultures of Mesoamerica, including the Olmeca, Maya, and Azteca, among others. He then analyzes the Spanish conquest of Mexico, noting the devastating impact on the indigenous population.

This is followed by analysis of the colonization of Texas, New Mexico, Arizona, and California, along with a contextualization of the Texas Revolution (1835–36) and the Mexican-American War (1846–48) and the sociopolitical fallout of these key historical events in the formation of social identity among persons of Mexican ancestry living in territory now under U.S. authority following the Treaty of Guadalupe Hidalgo (1848).

The second half of Acuña's textbook focuses on the social experiences of Chicanos throughout the 20th century, including the Mexican Revolution (1910–20); the growing demand for Mexican labor by U.S. employers in the southwest in the 1920s and the 1940s; the massive deportation campaigns of Mexican migrants and, in some cases, citizens, during the 1930s and 1950s; the rise of the Chicano movement during the 1960s; and the general transition from radical politics toward a reformist/mainstream political framework among Mexican American leaders during the 1980s and 1990s.

Acuña also discusses the rise of reactionary political initiatives in California during the 1990s, such as the passage of referenda aiming to crack down on undocumented immigrants and the banning of affirmative action and bilingual education. Acuña notes that support for these initiatives derived from economic downturns and a societal backlash toward the growing presence and visibility of Mexicans, Chicanos, and Latinos

in American society. Newer editions of *Occupied America* contain an epilogue, titled "Is Antonio Banderas a Chicano?," which discusses the growing population of Spanish-speaking persons and persons of Latin American descent in the United States, the tendency for media and academics to collectively refer to this population under the umbrella term "Latino," and the potentially problematic nature of pan-ethnic Latino identity politics.

Acuña's overarching theme throughout *Occupied America* is the evolving nature of Mexican American/Chicano identity over the course of 500 years of conquest, colonialism, and oppression. The title refers to Acuña's contention that ever since the arrival of the Spaniards in the 16th century, followed by other Europeans shortly thereafter, the American continent has been occupied, and this occupation has fostered struggles for inclusion and equality among indigenous peoples and other oppressed groups.

Critics, including conservative figures and some scholars of Mexican American/Chicano history, have expressed disagreement with the textbook's tone, arguing that Acuña focuses excessively on racism and oppression, eschews a dispassionate assessment of history, and overlooks important cases of Anglo-Mexican/Chicano collaboration throughout history. Acuña has lamented that many Chicano Studies departments have now become "ethnic studies" programs that have abandoned social justice causes.

Odawa

The Odawa are an Anishinaabe people, a group of Native American tribes indigenous to the United States and Canada, who speak closely related languages. Other Anishinaabe people include the Ojibwe and Algonquin peoples. The word *Anishinaabe* means “First People” and is an autonym used in the tribes’ creation myths. Since sometime before European contact, perhaps as early as the 8th century, the Odawa, Ojibwe, and Potawatomi (an Algonquin tribe) have dealt with each other in the Council of Three Fires, in which the Odawa are called Middle Brother (the Ojibwe are the Elder Brother) and the keepers of trade. The Council of Three Fires provided a trading network for the related tribes as well as a military alliance that fought against the Sioux, Iroquois, British (in the Seven Years’ War), and United States (during the Northwest Indian War and the War of 1812). The council also helped form the Great Lakes Confederacy, a pan-tribal confederacy, after the American Revolution.

Canadian Homeland

The Odawa homeland is Manitoulin Island, an island in Lake Huron, in the Canadian province of Ontario. One of Canada’s largest islands, Manitoulin is home to 108 freshwater lakes, and many of the islands within those lakes have ponds. Four major rivers running through the island—Blue Jay Creek, the Kagawong, Manitou, and Mindemoya—are spawning grounds for trout and salmon. Settlement on the island dates back at least 10,000 years, though it is not known for certain whether the Odawa were the original inhabitants.

Today, there are about 15,000 Odawa living in Ontario in Canada, and in Michigan and Oklahoma in the United States. The Ottawa River, for which the Ontario city of Ottawa is named, is named for the Odawa people, whose name may mean “traders.” For centuries, the Odawa people were known for their intertribal trade, principally in tobacco, corn goods, furs and skins, and medicines. Their trading connections were widespread enough and important enough that many of the tribes they dealt with became known principally by the names the Odawa used for them—such as the Sioux (who call themselves the

Lakota) and the Winnebago (who call themselves the Ho-Chunk).

Today, there are four formally recognized Odawa governments in the United States. The Grand Traverse Band of Ottawa and Chippewa (Ojibwe) Indians was formally recognized in 1980 and includes the Grand Traverse Indian Reservation, consisting of a number of noncontiguous plots in Michigan. The Little River Band of Ottawa Indians was formally recognized in the 19th century and owns land on reservations in Manistee and Mason Counties, in Michigan. The Little River Band represents nine bands of the original Grand River Bands and operates the Little River Casino and Resort.

The Little Traverse Bay Bands of Odawa Indians, with about 4,000 members, operate the Odawa Casino Resort in Michigan and have a reservation encompassing land in Charlevoix and Emmet Counties. The fourth recognized government is also the only one not located in Michigan. The Ottawa Tribe of Oklahoma is located in Ottawa County, Oklahoma, and has 2,500 enrolled members, though only 737 of them live in Oklahoma. The Ottawa Tribe operates the High Winds Casino, the Otter Stop Convenience Store, and two tribal smoke shops as well as an annual powwow on Labor Day weekend and a community health program.

The Odawa tribe ceded some of its lands in Michigan, Ohio, and Illinois for land in Kansas in the 19th century. Most of the Odawa who attempted the trip to Kansas died on the journey, and the climatic adaptation to the dry Great Plains was difficult. The town of Ottawa, Kansas, developed around the reservation, and the Odawa sold some of their reservation land in order to fund the construction of a university. Ottawa University was founded in 1865 as a private, nonprofit, Baptist liberal arts college, and today it operates multiple campuses, serving 3,000 students. Tribe members attend for free. The university’s sports teams are called the Ottawa Braves.

A number of Odawa also live in the Saginaw Chippewa Tribal Nation in Michigan. There are a number of Odawa governments that have not yet been granted federal recognition, all of them in Michigan: the Burt Lake Band of Ottawa and Chippewa Indians, Consolidated Bahweting Ojibwas and Mackinac Tribe, Grand River Bands of

Ottawa Indians, Gun Lake Band of Grand River Ottawa Indians, and Mackinac Bands of Chippewa and Ottawa Indians have state recognition; the Maple River Band and Muskegon River Band of Ottawa Indians do not. The Ottawa Colony Band of Grand River Ottawa Indians is recognized as part of the Match-E-Be-Nash-She-Wish Band of Potawatomi Indians of Michigan.

Perhaps the best-known Odawa is Chief Pontiac (1720–69), who led a rebellion against the occupation of the Great Lakes region by the British military after the French and Indian War. The rebellion began with a siege on Fort Detroit in 1763, and Pontiac was a central figure in Indian resistance to the British for the next three years. Other Native American leaders resented the authority he was granted in diplomatic negotiations, particularly given his arrogance and pomposity. He was assassinated in 1769 because of his growing unpopularity.

The French Odawa trader Petosegay (1787–1885) was a prominent merchant in 19th-century Michigan, owning much of the land that became modern-day Petoskey, Michigan. Petoskey State Park is named for him. The Grand Medicine Society, or Midewiwin, is a secret religious group consisting of Odawa tribe members as well as other Anishinaabe tribe members. Practitioners are called Midew and must be initiated into the animistic religion, after which time they may progress through four degrees of practice. Teachings are passed down orally and on birch bark scrolls. Ceremonies may use cowrie shells, bundles, and other sacred items, and are held at midwinter, at the change of the seasons, and during special festivals like the Raven Festival and the Feast of the Dead.

Office of Bilingual Education and Minority Languages

The Office of Bilingual Education and Minority Languages (OBEML) was an agency of the U.S. Department of Education (DoE) that was responsible for administering programs authorized under the Bilingual Education Act, also known as Title III of the Elementary and Secondary Education Act (ESEA) of 1965 and its subsequent amendments. In this role, the OBEML helped guide policy and to provide federal support for bilingual education programs administered by states and local school districts. The OBEML was also responsible for administering the Foreign Language Assistance Program, which was authorized by Title V of ESEA.

As a result of the No Child Left Behind legislation (NCLB), the OBEML was renamed the Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students, a change that reflected a policy change that favored the acquisition of English over the maintenance of English language learners' (ELLs) primary language.

Background

The DoE defines “bilingual education” as an education program for children with limited English proficiency. Although bilingual education entails a variety of services, most bilingual education programs focus on English acquisition, acquisition of content knowledge, and maintenance of the primary language.

Bilingual education first was addressed by legislation on a federal level through the Bilingual Education Act of 1968 (BEA, or Title VII of ESEA). The BEA established voluntary programs that encouraged school districts to consider new ways

of educating minority-language students. In *Lau v. Nichols* (414 U.S. 563 [1974]), the U.S. Supreme Court held that school districts must provide English-language instruction to students whose primary language is not English—failure to do so would deny children of their rights under § 601 of the Civil Rights Act of 1964, which prohibited discrimination based upon race, color, or national origin. After passage of the Equal Educational Opportunity Act of 1974, the BEA was amended to emphasize that bilingual education must provide children instruction in English *and* in their native language, thereby maintaining the children's native language and culture while also allowing them to progress through the educational system.

This policy shift, which greatly valued the contributions children from multicultural backgrounds make to the classroom and school community, was in many ways led by the OBEML. In 1978, additional changes were authorized by Congress, as new amendments emphasized that English-speaking children could enroll in bilingual programs, increased the number of English language learners (ELLs) that the program could serve by expanding the criteria for inclusion in the program, and emphasized that native language instruction was to be temporary. Further amendments in 1984 and 1988 as well as a reauthorization of the BEA in 1994 increased the flexibility of programming that schools could offer, expanded funding to state agencies to support bilingual education, and set up preferences for those programs that developed proficiency in two or more languages.

With the passage of No Child Left Behind (NCLB) in 2001, however, the BEA was rewritten and renamed the English Language Acquisition, Language Enhancement, and Academic Achievement Act. As the new name indicates, post-NCLB years saw increased emphasis on achievement, especially as measured by standardized testing. Although the federal government still provides funds to support compensatory education that is part of bilingual education programs, the total pool of money available to these programs is less than half the funding that was available before NCLB.

Responsibilities and Policies

The director of the OBEML served as an assistant commissioner of education in the U.S. Office of Education, a role that was elevated to assistant

secretary when the office became the secretary of education within the Department of Health, Education, and Welfare (HEW) in 1972, and became a cabinet-level position eight years later. The director of the OBEML advised the commissioner/secretary of education on matters relating to linguistically and culturally diverse students. In addition, the OBEML had responsibility for oversight of the Foreign Language Assistance program, which Congress authorized via Title V of ESEA.

The OBEML established and implemented policies and procedures related to bilingual education programs that served the United States' ELLs. Representatives of the OBEML were also responsible for the national dissemination of research that supported best practices in bilingual education. Specifically, the OBEML worked with state education agencies (SEAs) and local education authorities (LEAs) to build and enhance the capacity of teachers and schools to serve ELLs through challenge and demonstration grants.

The OBEML also worked with faculty at colleges and universities to help develop high-quality professional development activities for teachers, administrators, paraprofessionals, and other school personnel who worked with ELLs. Unlike many agencies that focused solely on English acquisition, the OBEML also worked to encourage appreciation of ELLs' primary language and to encourage respect for cultural and linguistic diversity. Significantly, the OBEML did not report to the Office of Elementary and Secondary Education (OESE) but, as a compensatory education program, reported directly to the commissioner/superintendent of education.

Since the OBEML was reconstituted as the Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students, more emphasis has been placed upon monitoring student achievement, especially as measured by standardized tests. Indeed, since the DoE began requiring ELLs to be tested in English after instruction of no more than three years in their primary language, some began to question its commitment to bilingual education. This shift was coupled with new policies favoring structured English immersion (SEI) over other forms of bilingual education, such as two-way/dual-language immersion and late-exit/developmental bilingual education.

These changes have disturbed many who advocate for students and teachers from multicultural backgrounds, since the changes are seen as ignoring the value of ELLs' home language and culture.

Office of English Language Acquisition

The Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students (OELA) was established as part of the 2001 No Child Left Behind Act (NCLB), a cornerstone of federal education reform policy. OELA addresses requirements for English language learner (ELL) student achievement as prescribed by Title III of NCLB. This agency is also responsible for coordinating, directing, and administering programs to assist ELLs via state- and local-level education agencies (SEAs and LEAs).

OELA supports the efforts of SEAs and LEAs to ensure that their districts reinforce high academic standards, accountability, teacher training,

and parental involvement. OELA also administers the Foreign Language Assistance Program (FLAP) authorized by Title V of NCLB. FLAP is a federal program that seeks to establish and enhance foreign language instruction in K–12 settings. Programs that demonstrate best practices in curriculum development, student assessment, teacher recruitment and development, and parental involvement are funded through three-year competitive, discretionary grants to state and local school districts.

OELA is supported by the National Clearinghouse for English Language Acquisition & Language Instruction Educational Programs (NCELA). Primarily a research arm of OELA, the NCELA reinforces the mission of OELA to enhance academic achievement for ELLs as outlined in Title III. The agency collects, analyzes, and coordinates research related to educational outcomes for ELLs. It also disseminates the findings of such research to SEAs, LEAs, teachers, parents, and other educational stakeholders. The NCELA is affiliated with the George Washington University Graduate School of Education and Human Development under contract from the U.S. Department of Education.

History of Federal Support for ELLs

Title VII of the Elementary and Secondary Education Act (ESEA), also known as the Bilingual Education Act of 1968, provided unprecedented academic support to students designated as Limited English Proficient (here referred to as ELLs). Regarded as one of the first official attempts to provide federally funded specialized support to ELLs, the act initially included instruction in Spanish as a native language, English as a second language instruction, and heritage Spanish cultural awareness and appreciation.

Title VII provided funding support to districts through a competitive grant system. A wide variety of curricular, teacher professional development, and student assessment programs were funded under Title VII; however, the act did not provide any specific mandates for the types of instruction that ELLs should receive. Further, though the act indicated that programs for classroom instruction and teacher professional development should be based on scientific research, there was no clear definition of who would determine which programs meet those requirements.

In 2001, the George W. Bush administration eliminated Title VII in NCLB—the administration’s name for the reauthorization of ESEA. One of the sweeping changes of NCLB mandated that ELLs simultaneously attain English language proficiency and meet the same content area standards required of their native-born peers. Though NCLB allowed for district-level flexibility in the choice of curricula for ELLs, the legislation also prescribed greater accountability for ELLs. NCLB mandated that the academic achievement of ELLs was therefore included in administrators’ evaluations of students’ mastery of academic knowledge and skills as defined by NCLB’s high-stakes testing program. For the purposes of accountability, ELLs’ test scores were included in schools’ Annual Yearly Progress calculations.

Though OELA was created through NCLB, there previously existed similar federal agencies that focused on the academic achievement of ELLs. Since OELA’s creation, however, there has been ensuing controversy regarding the nation’s commitment to ELLs.

Controversy

Bilingual education advocates say that the name change from Office of Bilingual and Minority Language to Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students signaled a change in national policy toward a more English-only approach of English immersion that disfavors bilingual education programs. Others connect this change to prevailing anti-immigrant national discourse and a rise in anti-immigrant legislation linked to immigration reform.

Although Title III does not prevent or prohibit the implementation of bilingual education, all references to “bilingual” and “bilingualism” have been removed from the bill. In contrast, advocates for ELLs point out that the 1994 authorization of the Bilingual Education Act indeed included language that supported and encouraged maintenance of ELLs’ native languages as they developed and demonstrated mastery of English.

Distancing the new Title III legislation, which focuses heavily on English language acquisition, from the former, more bilingual nature of Title VII, the statutes of NCLB have been renamed and renumbered. For example, OELA replaced

The Office of Bilingual Education and Minority Languages became the Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students after passage of the No Child Left Behind Act.

the former Office of Bilingual and Minority Language Education. The Bilingual Education Act, previously Title VII, became the English Language Acquisition, Language Enhancement, and Academic Achievement Act, now Title III. Finally, the National Clearinghouse for Bilingual Education has been renamed the National Clearinghouse for English Language Acquisition and Language Instruction Educational Programs (NCELA).

Other legislation changes are funding procedures for SEAs and LEAs. A competitive discretionary formula grant that awards monies to districts based on the size of their limited English proficiency (LEP) population replaced funding based on competitive grants under Title III. Critics argue that this change wrangles opportunities for funding away from innovative individual teachers or districts and places it in the hands of SEAs that will have greater control over district-wide dissemination of funds.

Official English Movement

The Official English movement is a political effort to establish English as the official language of the United States. Although English is overwhelmingly used in state and national governmental operations, the United States has no de jure or legal language policy, so organizations that support "English-Only" or "English as the Official Language" work to pass laws at the local, state, and national levels. Supporters believe that Official English amendments reaffirm the status of English, urge immigrants to assimilate, and caution governmental agencies against spending tax dollars on bilingual services. Critics of Official English contend that the movement, by coercing mainstream conformity, endangers the rich cultural and linguistic diversity that can be both an individual resource and a societal boon.

There are various groups that champion an English language amendment—such as U.S.

English, English First, and ProEnglish. In addition to the notion that making English the single language used in public and governmental operations would unify the nation, mission statements of Official English groups cite American patriotism, a national heritage, and the symbolic importance of having one language along with one flag. English-Only advocates maintain that multilingual policies are costly, are ineffective, and foster immigrants' tendency to segregate.

They argue that decreasing multilingual services—such as with voting ballots, drivers' exams, emergency operators, and interpreting and translating options—would encourage immigrants to integrate and in turn improve their economic prosperity. In conjunction, eliminating bilingual education in schools and increasing English proficiency requirements for citizenship would send a strong message about the importance of knowing English. Advocates of Official English fear that, without these efforts, the primacy of the English language is in danger and linguistic disunity could lead to ethnic separatism.

Opponents of the Official English movement agree that English proficiency is vital to personal and professional well-being but differ in the means to this goal. They emphasize that the United States already has a de facto language policy because the vast majority of businesses and governmental entities operate in English. Therefore, there is no need for a law to protect or promote its use. According to those opposing the Official English movement, people who are not yet proficient in English are already highly motivated to improve their fluency for both social and economic reasons.

The ideology of the Official English movement can be seen as the linguistic equivalent of the "melting pot," where cultural differences are deemphasized or erased in order for minority residents to "assimilate" and blend into the dominant society. The belief follows that minority languages interfere with English acquisition and are better "subtracted." The opposing position encourages individuals to "acculturate" into the multicultural mosaic of the United States, adding mainstream knowledge and ways-of-being to beneficial features of a home culture. The additive linguistic view sees humans as capable of utilizing multiple languages, as evidenced in Europe and countries with regional dialects. As such,

adding an additional language while developing one's native tongue is personally and professionally beneficial.

In addition to addressing speakers of minority languages, the additive philosophy extends to majority or fluent English speakers. If everyone knew English *plus* another language—the English-Plus approach—individuals and companies would be prepared for the global marketplace. Native English speakers would have more opportunities to learn a second language, especially at younger ages in K–12 dual immersion programs, while English learners would have greater access to language acquisition classes via schools, employers, and community organizations. According to English-Plus advocates, promoting multilingual skills is more effective in unifying the country and ensuring national security.

Advocates of English-Plus argue that English-Only laws and policies not only are unnecessary and counterproductive but also have negatively impacted the psychosocial and material well-being of English learners. They have restricted the individual rights of those who are not yet English-proficient and, in many cases, have been found to be unconstitutional. Even when courts overturn English-Only referenda, there can be discriminatory consequences. Misinformation or “language vigilantism” ensues, such as students being penalized for speaking their native language and employees being prohibited from using languages other than English in the workplace. Overt connections between the Official English movement and anti-immigrant efforts have spurred allegations of racism and xenophobia. Some organizations have been classified as hate groups by the Southern Poverty Law Center.

Whether the intentions of the Official English movement are a proxy for fostering anti-minority sentiment will continue to be debated, but arguably a more constructive way to promote the majority language would be to expand programs and resources to learn English. To date, no English-only bill has addressed the perpetual shortage of English as a Second Language (ESL) classes. Moreover, longitudinal data show that native language support improves the acquisition of a second or additional language. Although this may seem counterintuitive to those unfamiliar with research supporting late-exit bilingual and

dual-language education, true advocates of English proficiency recognize the benefits of utilizing—not restricting—the native language.

Ojibwe

The Ojibwe, also referred to as Chippewa, are one of the largest nations among American Indians and First Nations in North America. Twenty-two Ojibwe groups are federally recognized in the United States, located in Michigan (seven), Minnesota (seven), Montana (one), North Dakota (one), and Wisconsin (six). Over 130 groups are identified as belonging to First Nations in Canada. Numerous other Ojibwe groups exist that have not been federally recognized. Despite the ethnic conflict, poverty and disease, and assimilation that have been consistent problems for a large part of Ojibwe history and prehistory, the Ojibwe population remains vibrant and is growing.

According to an Ojibwe creation myth, the Ojibwe came into being when the Creator formed the earth and all the life that would occupy it, finishing with the creation of Ojibwe and natural laws to maintain order. The name *Ojibwe* likely refers to a stylistic component of the Ojibwe mocasin or the cultural tradition of using birch bark in the process of writing. Recorded history places the Ojibwe as originating within Algonquian

groups in northeastern North America along the Atlantic Ocean and likely becoming a distinct collective around 1,500 years ago. This collective was not a single, unified group; rather, it comprised many smaller bands that differed from one another in language and culture but were similar enough that ethnicity was recognized as Ojibwe.

Growing needs for subsistence and resulting conflict over resources led the Ojibwe to migrate west. From the northeast near present-day Newfoundland and Labrador, Ojibwe ancestors traveled west with the Odowa and Potawatomi and ultimately dispersed to the northern plains and Great Lakes regions. Around 1640, French Jesuit priests made contact with groups of Ojibwe who had moved to Sault Ste. Marie in northern Michigan.

Because they became heavily involved in the French-Canadian fur trade, the Ojibwe clashed with the Iroquois Confederacy as the Dutch and British worked to hinder French expansion in North America. The French and Indian War led to Ojibwe alliances with other groups, the introductions of new technologies into Ojibwe culture, and the extension of Ojibwe territory.

Of note is the incorporation of firearms into Ojibwe life, which was significant both in increasing the efficiency of hunting and in assisting the Ojibwe in expanding their territory through the removal of other groups from their lands. Until the mid-19th century, Ojibwe territory included parts of Michigan, Ontario, Quebec, Wisconsin, Minnesota, North Dakota, Montana, Manitoba, and Saskatchewan. As the Ojibwe migrated west, they developed a complex relationship with the neighboring Dakota. Although the Dakota and Ojibwe coexisted peacefully and promoted trade for long periods, the two nations had numerous violent engagements prior to white settlement. An influx of white settlers in the mid-19th century was met with an end to Dakota-Ojibwe conflict as each dealt with the multiplicity of changes caused by the incoming white population.

From 1781 to 1929, the Ojibwe, looking for economic gain, sold and ceded land in Minnesota, Michigan, and Wisconsin to the U.S. government, and land north of the border to Canada, through treaties and purchases. These treaties were signed with the agreement that the Ojibwe could still use the land for its resources. However, the rising population limited Ojibwe access to land, and

soon the nation, having sold most of its land in an attempt to perpetuate survival, experienced economic downturn.

Ojibwe lands were further reduced following the Dawes Allotment Act of 1887, which allowed the U.S. government to distribute “excess” land to white settlers. Ojibwe groups were moved onto developing reservations, where many of their traditions were replaced by Western customs—the placement of children in boarding schools, the introduction of Western religion and denial of Ojibwe spirituality, and alterations of tribal structure. The Ojibwe did not offer much physical resistance to these changes compared to other groups; the last violent interactions between the Ojibwe and the U.S. government occurred in 1898.

In 1934, new leadership in the Bureau of Indian Affairs led to the Indian Reorganization Act (IRA), which enabled the Ojibwe to form modern tribal governments and, ultimately, strengthened tribal sovereignty. Other legislation has since been enacted, including the Indian Child Welfare Act

An Ojibwe man known as Arrowhead in 1903. In 1910, the population of Ojibwe in the United States was about 21,000. By 2010, that number had grown to over 170,000.

and the Native American Graves Protection and Repatriation Act, which has allowed the Ojibwe to retain rights over more aspects of their culture. Further, some Ojibwe groups have challenged U.S. sovereignty by reclaiming treaty rights; successful cases have resulted in regaining rights to resources that were promised to them in earlier treaties.

Furthermore, the American Indian Movement (AIM), which became active in 1968, was founded by a group of American Indians in Minneapolis, including George Miller, Dennis Banks, and Clyde Bellecourt, all of whom belonged to Ojibwe groups.

Prior to relocation to reservations, Ojibwe kinship systems were patrilineal, with a distinct emphasis on clan, or totem, as being indicative of an individual's status. Marriage within a totem was forbidden. Many marriages were arranged, and extended family members were considered immediate and essential to a family's functionality. Elders raised children until the age of seven, when they began to learn their roles within the gendered division of labor. Male children learned hunting, fishing, and warfare; female children learned agricultural techniques and skills required for clan function, such as hide tanning and net construction.

Spiritual leaders had a significant role in Ojibwe communities. Whereas clans were predominantly led by individuals who were well suited to filling a role according to the clan's needs, spiritual leaders acted as conveyors of culture. Both members of tribal government and community members from a range of backgrounds fill present-day leadership roles.

Issues that contemporary Ojibwe face are diverse. Tribal enrollment is defined by blood quota, which is problematic because of historical recording practices that invoked racist methods of determining indigenous status. Further, Ojibwe tribes that are not federally recognized are unable to reap any benefits offered by the government. Self-determination remains constantly an issue as Ojibwe seek to have more control over their culture's future. Aside from these concerns, the Ojibwe confront numerous other problems, such as alcoholism, poverty, and crime.

Culture loss is also a serious matter. One major concern for the Ojibwe is the revitalization of their native language. As of 2010, some 50,000 to 60,000 people could fluently speak the language,

but most resided in Canada and were elderly. Because language is essential to the conduct of Ojibwe ceremonies and traditions, Ojibwe traditions are at risk. Some public schools have education programs specific to Ojibwe needs and offer language and culture courses. Ojibwe communities have formed a number of educational institutions, including Turtle Mountain Community College (North Dakota) and Fond du Lac Tribal and Community College and White Earth Reservation Tribal College (Minnesota), to specifically cater to Ojibwe students.

In addition, the rise of gaming has contributed to local economies. The incoming revenue produced by the construction of casinos and creation of jobs have funded community endeavors that benefit the tribes in important ways, most significantly in building schools and cultural centers and increasing medical care.

Notable Ojibwe include author Louise Erdrich, hockey player Henry Boucha, activist Leonard Peltier, environmentalist Walt Bresette, artist George Morrison, and activist and writer Winona LaDuke, who was also a 2000 Green Party candidate for vice president of the United States.

Population estimates vary, but the Ojibwe by 1600 likely numbered around 70,000 to 100,000. The 1910 population listed 21,000 Ojibwe in the United States and 25,000 in Canada. In 1970, the population had risen to nearly 90,000. Census data for 2000 indicate the Ojibwe population had increased to around 150,000. According to census data, as of 2010 the recorded Ojibwe population stood at 170,742, although this number is not necessarily entirely representative of all who identify as Ojibwe or have Ojibwe ancestry. Because of problematic methods of recording ethnicity and the many ways individuals can interpret their ethnic identities, the population estimate offered is likely smaller than the actual population.

"Ol' Man River"

The story of the impact—and evolution—of "Ol' Man River," the haunting gospel-tinged spiritual that became the signature song from the landmark 1927 Jerome Kern–Oscar Hammerstein musical *Show Boat*, reveals how American pop culture has had to come to terms with the implications of racial stereotyping, whether intentional or not.

At a time when American musical theater meant lightweight comedies with showy dance numbers, fluffy story lines that affirmed the uncomplicated joy of romance, and show-stopping hit songs, *Show Boat* redefined the genre: it was the first production to integrate its musical elements with an enthralling story line (itself based on an Edna Ferber best seller), the first to introduce an accomplished musical score with sophisticated lyrics, and the first to treat adult themes, in this case following the lives and loves of entertainers working a show boat along the Mississippi River during the late 19th century, exploring issues of miscegenation and racial bigotry, emotional abuse within marriage, and long-term self-destructive addictions to both alcohol and gambling.

Early in the play's first act, a chorus of long-suffering African American dockworkers, led by Joe, a stevedore from the show boat, sings of their stoic determination to maintain against the formidable burdens of their difficult lives. "Ol' Man River" uses the metaphor of the steady motion of the river itself to suggest their lot: resignation in the face of such inevitable indignities, with the only respite from such drudgery found in drinking (and an inevitable stretch in jail) and eventually in

the grateful release of death. The song, which used "the N-word" as period-appropriate, captured the plight of impoverished lives spent in thankless backbreaking routine in a (white) world indifferent to their plight, suggested by the river that keeps rolling on. Both the stately spiritual feel of Kern's simple 32-bar melody and the rich texture of the bass solo (itself unusual in musical theater, which at the time preferred to highlight the easy lilt of the tenor register) inevitably conjured the dark legacy of slavery itself.

The song, added late to the score and nearly cut in rehearsal when the production ran long, quickly became the show's most emotionally transfixing moment. Within a year, a recording of the song by the legendary Paul Whiteman Orchestra was a national phenomenon—but that recording, played as a bright foxtrot and sung by Bing Crosby, a white Irish crooner, unintentionally introduced the song's racial implications. When African American actor Paul Robeson, whose majestic voice and commanding stage presence Kern and Hammerstein had in mind when they wrote the song, debuted in the role of Joe in the 1928 London stage production, the song found its most enduring interpretation as a spiritual.

That recording, with the same Paul Whiteman Orchestra, has since become a standard of American musical theater, inducted in 2006 into the Grammy Hall of Fame that each year recognizes recordings from all genres that have historical and cultural significance. Apart from Robeson's interpretation, the song has appealed to a rich variety of artists from Frank Sinatra to Judy Garland, from Ray Charles to the Beach Boys, and in settings that range from boogie woogie to jazz, and from folk to country.

The Reality of Racial Caricature

That legacy, however, also reflects the larger process of American culture confronting the reality of racial caricature. "The n-word" was changed (initially to "darkies" but ultimately to far less offensive collectives ranging from "workers" to "them folks" to "we all"), but the tone of the song, in the early years of the civil rights movement, received vehement criticism as it was said to portray American blacks as perpetual slaves, pitiable and meek, whose only escape was the dead end of alcohol.

It was Robeson himself, as the song became part of his concert repertoire and as he emerged as a vocal advocate for civil rights, who most prominently introduced lyric changes that reflected a far more heroic perception of working-class African Americans. Robeson's lyric changes—despite initial objections of the original lyricist Oscar Hammerstein, who felt Robeson's reading missed the irony of the song—sought to empower the difficult lives of the dockworkers by suggesting that showing any kind of courageous resistance would only land the black man in jail. And instead of offering tears and the fear of death as strategies for enduring that hard life, Robeson's lyrics offered the heroic possibility of fighting for dignity and, should that fail, laughing bravely in the face of such overwhelming suffering.

Over the years, even as "Ol' Man River" became a standard in the American songbook, not only in recordings but also through allusions (and often caustic parody) in numerous films and television programs, the song has become a much broader conscience-raising anthem—overcoming the limits of racial stereotypes to expose larger issues of economic inhumanity imposed on the uneducated working class of any ethnicity. By evoking the ghost of slavery, the song brought to modern theater—and American culture—a provocative affirmation of the heroic endurance of any put-upon class.

Omaha

The Omaha are an American Indian tribe. Their reservation is located in northeastern Nebraska and western Iowa, with a total land area of just over 307 square miles. At one time, the tribe's population had declined to only 300 because of sickness and warfare with other tribes. The contemporary tribe's population is approximately 6,000. Though the Omaha faced near cultural annihilation in the late 1800s, they have enjoyed a cultural renaissance since the late 1980s.

Religion and Culture

Central to Omaha religious and cultural practices is a sacred pole made of cottonwood. It is known as Umohoti, or "the Real Omaha." The pole is considered to be a person and is believed to date back to a time before the migration of the Missouri. Umohoti is not the only sacred item crucial to the Omaha. The Cedar Pole and Sacred Shell are the oldest documented central artifacts of the Omaha. Together, they represent the regenerative properties of the universe. These are but a few of the sacred items of the Omaha, and surely many more were lost over the various migrations and hardships of the Omaha.

The pre-colonization Omaha had an intricately developed social structure that was tied to the concept of Earth being tied to sky. This relationship between Earth and sky was viewed as critical to perpetuating all living things, and this was reflected in the tribe's social structure. Sky People were responsible for the spiritual needs of the tribe, while Earth People were responsible for physical welfare. Each half-tribe was divided into five clans, for a total of 10 clans that made up the Omaha. Clans were patrilineal, and each clan had a hereditary male chief. This hereditary chief structure remained at the time of treaty negotiations with the U.S. government in the mid-1800s but had dissolved by the end of the 1800s.

Unlike other nations, the establishment of a new Omaha settlement did not typically signify expansion but the movement of people from a no-longer-habitable location. Prior to European colonization, the Omaha were a large woodland tribe that lived near the Ohio and Wabash Rivers. By 1700, the tribe had moved to the Big Sioux River area and established a village of approximately 400

dwelling and a population of about 4,000 people. In 1734, the Omaha established their first village west of the Missouri River. In 1775, the tribe founded the village of Ton-wa-tonga near Homer, Nebraska.

Decline and Near-Assimilation of the Omaha

Around 1800, smallpox swept the tribe and killed about one-third of its population. This tragedy started a century that would prove nearly fatal to the Omaha Nation. In 1815, the Omaha made their first treaty with the United States. The treaty was one of “friendship and peace,” and no land was relinquished by the tribe.

The relationship established with the United States would nearly destroy the tribe through a cascade of increasingly unfair treaties. As part of the Treaty of Prairie du Chien in 1831, the Omaha ceded their lands in Iowa east of the Missouri River, with the understanding that they would maintain hunting rights. In an 1836 treaty, the federal government took remaining hunting lands in northwestern Missouri. In the 1840s, the Omaha suffered dangerous threats to their

A late-19th-century photograph of a delegation of three Omaha men was taken at a time when the tribe was threatened with near extinction and took steps to preserve its culture for posterity.

already diminished territory through continued Sioux aggression and settler incursion.

In response to these threats, Chief Big Elk made a deal with Mormon settlers, allowing them to live on Omaha land for a period in exchange for armed protection. Unfortunately, during the two years of cohabitation, the territory’s game and wood resources were greatly diminished. Between 1854 and 1856, the tribe moved to its current location after highly contentious negotiations with the U.S. government.

In 1857, a mission school was established by funneling the tribe’s annuity to the ends of assimilation. Under the guise of mission work, the school served to strip children of Omaha heritage and replace it with “American” culture.

By the 1870s, bison were quickly disappearing. This caused the tribe to increasingly depend on the U.S. government. In 1882, an act of Congress authorized division of reservation land individually to each man, woman, and child of the tribes already established on reservations. This act completely undermined tribal authority. Further congressional action greatly reduced the total value of Omaha annuities and reserved the right to decide the distribution of those annuities.

Rebirth in the Modern Era

At the end of the 1800s, the Omaha faced what looked like cultural extinction. With the help of an anthropologist who was also a member of the tribe, a deal was made in 1888 with Harvard University to keep the Sacred Pole safe. Other crucial artifacts were protected by the families of the tribe. Further steps were taken at this time to preserve the oral history of those who participated in the last buffalo hunts, and the songs of the tribe were preserved on wax cylinders. In 1989, the Sacred Pole was returned to the Omaha. To commemorate this event, the tribe held a powwow that celebrated the Omaha as a people and marked the tribe’s rebirth in the modern world.

On the Waterfront

On the Waterfront is one of the most honored American films. It portrays life on the docks of New York Harbor, specifically Hoboken on the New Jersey side, with a great deal of fidelity to the substance of waterfront life and the people involved in it. It deals with themes of corruption and injustice, but it does not fully depict the multicultural aspects of working life on the waterfront, and this absence may be connected to when the film was made.

The film's origins lie in a series of articles published in the New York *Sun* between November 28, 1948, and February 4, 1949. The *Sun's* editors assigned their reporter, Malcolm Johnson, a story about the murder of a hiring boss at the docks, and Johnson expanded the story into an exposé of waterfront crime and the complicity of the International Longshoremen's Association in waterfront crime, winning a Pulitzer Prize for the series. Soon afterward, novelist and screenwriter Budd Schulberg was asked to write a script based on this series. Schulberg did further investigation on the issues presented by Johnson. When the rights to the script reverted to Schulberg, he and director Elia Kazan began to construct a film, as the New Jersey waterfront became known for assaults and mob activity. *On the Waterfront* was released in July 1954.

On the Waterfront stars Marlon Brando as Terry Malloy, a failed boxer who has a job on the docks through the influence of his union-connected brother (Rod Steiger). The union is run with an iron fist by Johnny Friendly (Lee

J. Cobb). Malloy runs an errand that gets one of his friends, Joey Doyle, killed (for testifying to the Crime Commission). The rest of the film shows how Malloy eventually stands up to Johnny Friendly by testifying and by enduring a ferocious beating, all with the help of Joey's sister (Eva Marie Saint) and a principled waterfront priest (Karl Malden), a character based on a real-life person, Father John Corridan, the priest at St. Francis Xavier Church on the Lower West Side of Manhattan. At the Academy Awards for 1954, *On the Waterfront* won Oscars for Best Picture, Art Direction, Cinematography, Directing, Film Editing, and Writing; in addition, Marlon Brando won Best Actor, and Eva Marie Saint won Best Supporting Actress.

Although history tells us that the waterfront has traditionally been one of the most multicultural worksites in the United States, especially as described in *The Narrative of the Life of Frederick Douglass*, *On the Waterfront* erases the ethnic variety of its subject matter. Every speaking character in the film has an Irish surname, and the priest uses the phrase "potato-eater" to describe himself.

A year after the film was released, Schulberg, who had done a prodigious amount of research on the screenplay and understood that a lot of his material did not make it onto the screen, wrote a novel that encompassed the subjects and action of the screenplay. It expanded the character of the priest and provided a thicker description of the environment in which the film had taken place. He did more with the multicultural nature of the docks, referring to the Russian caps, the Italians, and the African Americans seen at the shape-up, the daily assembly of stevedores hoping to receive assignments from the union managers who distributed labor to load and unload the ships waiting at the docks.

On the Waterfront depicts the Irish and Irish American presence on the docks of New York Harbor. The actors playing the stevedores include one African American, and the screenplay lists two Italian American actors playing characters, one of whom is named Tillio. The great majority of the people named in the newspaper articles that underlie the screenplay are also Irish. The articles also refer to both Jewish and Italian mobsters who were implicated in (and, in one case, the victim

of) the waterfront violence examined in Malcolm Johnson's articles for the *New York Sun*.

The film was made at the height of the Cold War. It was released just after the conclusion of the Army-McCarthy hearings, at a time when issues of ethnicity were considered of little significance, and when issues of race were just beginning to come to the forefront as a result of the May 1954 Supreme Court decision in *Brown v. Board of Education*. The film reflected the general American reluctance to magnify concerns of ethnicity during the 1950s.

Oneida

The Oneida call themselves *Onyota`a:ka*, or "People of the Upright Stone." The Oneida were a prosperous society living in present-day central New York (from the Lawrence River south to the Pennsylvania border), but during the 17th and 18th centuries, they suffered severe population losses as a result of European disease (smallpox)

and warfare. They are one of the five founding Haudenosaunee nations that compose the Iroquois Confederacy (along with the Mohawk, Seneca, Cayuga, and Onondaga, and later the Tuscarora).

During the American Revolution, the Oneida fought with the colonists against the British, whereas most Haudenosaunee fought for the British. In recognition of their service, the Oneida received guarantees that their claims to ancestral homelands would be protected. Soon thereafter, the state of New York ignored federal efforts to protect Oneida land and, as a result of more than two dozen treaties (many deemed unconstitutional), Oneida territory was considerably reduced. In search of land, the tribe split into three geographically separate, federally recognized, groups: the Oneida Nation of New York; the Oneida Nation of Wisconsin, near Green Bay; and the Oneida Nation of the Thames in Ontario, Canada. Oneida people also live on the Six Nations of the Grand River Reserve in Ontario, Canada.

Culture

The Oneida are a matrilineal society in which children are born into their mother's clan, deriving their identity, social status, and responsibilities from clan membership. The Oneida have three clans: Turtle, Wolf, and Bear. Traditionally, they spoke the Iroquoian language, grew crops and hunted, lived in longhouses, and, by the 19th century, practiced several religions ranging from Christianity (influenced by Protestant missionary Samuel Kirkland) to the Longhouse religion of Handsome Lake.

American Allies and Treaties

The Oneida Nation's contributions to the colonists in the American Revolution was recognized back then, as it is today in places like the Smithsonian's National Museum of the American Indian in Washington, D.C., where visitors are greeted with the sculpture *Allies in War, Partners in Peace*, which pays homage to the Oneida.

Following the American Revolution, the U.S. Continental Congress and the Oneida Nation signed the 1784 Treaty of Fort Stanwix, which guaranteed security in Oneida possession of the traditional homelands they inhabited before the war. These terms were reconfirmed in the 1789

Treaty of Fort Harmar. Nonetheless, in the years between 1784 and 1789, the state of New York forced the Oneida to relinquish some of their land through the 1785 Treaty of Fort Herkimer and the 1788 Treaty of Fort Schuyler. As a result, the Oneidas lost most of their ancestral homelands, reducing Oneida territory from 6 million acres to about 300,000 acres.

In 1790, the U.S. Congress passed the Indian Trade and Intercourse Act, making it illegal to purchase Indian land without prior federal consent. The 1794 Treaty of Canandaigua with the Iroquois Confederacy was a peace treaty that called for noninterference in the affairs of the six sovereign nations of the Confederacy and provided further protection of their existing territorial boundaries, including that of the Oneida. Despite numerous treaties that were supposed to guarantee and protect Oneida tribal claims to their land, state and local governments imposed 26 additional treaties (later deemed illegal) that further reduced Oneida territory in New York to a few hundred acres.

As a result of this severe loss of land, the Oneida were forced to relocate in search of territory. In 1822, the Oneida chief Shenandoah (Oskanondonha) purchased rights from the Menominee of Wisconsin, permitting the Oneida to settle on 4 million acres in Menominee territory (which was dramatically reduced to half a million acres by President James Monroe). Between 1832 and 1838 (during the widespread forced relocation of American Indians west of the Mississippi under the 1830 Indian Removal Act), the Oneida from New York relocated to Wisconsin. In 1838, the Treaty of Buffalo Creek called for the removal of the Iroquois, or Haudenosaunee, from New York. Meanwhile Oneida land in Wisconsin was further reduced. As a result, many Oneida remaining in New York sold their land and moved to newly purchased lands (about 5,000 acres) in Canada, near Ontario, in the 1840s (leaving behind about 200 Oneida in New York).

Modern American Indian Law and New York Land Claims

For much of the 20th century, the Oneida of New York and Wisconsin have been embroiled in legal battles to regain land taken in previous centuries and to fight the further loss of land, tribal

sovereignty, and cultural assimilation. In 1970 and 1974, the Oneida Nation of New York, the Oneida Nation of Wisconsin, and the Oneida Nation of the Thames filed a land claims lawsuit in the U.S. District Court for the Northern District of New York to repossess land illegally taken from them (illegally because it was done without appropriate approval, as required by the U.S. Constitution) by the state of New York after the Revolutionary War.

In 1974 and 1985 (*County of Oneida v. Oneida Indian Nation*), the U.S. Supreme Court ruled that the transfer of 270,000 acres of Oneida land 175 years prior violated the 1790 Indian Trade and Intercourse Act. This was considered a landmark case in American Indian law, as the court's ruling stated there was no statute of limitations, nor a legal basis to deny the Oneida's claims.

In 1998, the United States further intervened in the suit on behalf of the Oneida against New York. New York, in turn, argued immunity from the lawsuit under the Eleventh Amendment to the U.S. Constitution. Although a 2007 lower-court decision dismissed the Oneida's possessory land claims and a 2010 decision reversed an earlier ruling allowing the Oneida to pursue monetary damages from New York, there are two other outstanding lawsuits. Throughout these legal actions, litigation (involving lands held in trust, and property and sales tax) and settlements have been complex and ongoing. In addition to land and damages, what is at stake in these claims is the issue of tribal sovereignty.

O'odham Tribes

Arizona's O'odham, which means "We, the People," are a group of related desert-dwelling societies. Historically, the O'odham inhabited an enormous area, extending south into Sonora, Mexico, to the Yaqui River, north to central Arizona (around Phoenix, Arizona), west to the Gulf of California and the Colorado River, and east to the San Pedro River. This land base has been called the Papagueria, Pimeria Alta, and Pimeria Bajo, and has been home to the O'odham for thousands of years.

Scholars divide the O'odham into two main groups. The Tohono O'odham (formerly referred to as the Papago, which derives from *Ba:bawko'a*, meaning "people who eat tepary beans," which is pronounced *papago* in Spanish) are the Desert people. They are also the Two Village People because of their annual subsistence migration patterns. The Akimel O'odham (the Pima or River People in Arizona and the Pima Bajo in Sonora), who lived along the permanent rivers in rancharia-style villages, are the One Village People, who could live in one place year round. Both speak dialects of O'odham, a Uto-Aztecan language, although each group has dialects. The O'odham peoples are significant members of Arizona's multicultural population. In 2010, the Tohono O'odham had 23,478 members and the Akimel O'odham had 19,921 members with another 5,000 individuals claiming heritage, but not enrolled tribal membership, according to the U.S. Census Bureau.

O'odham people have lived in the Sonoran desert since time immemorial. The O'odham's ancestors are referred to as Huhugam ("those who have gone before"), which has been translated into English as Hohokam. For thousands of years, these people lived along the Salt, Gila, and Santa Cruz Rivers and were attuned to the desert, creating sophisticated canal systems to irrigate crops of cotton, tobacco, maize, beans, and squash. Their irrigation systems can still be seen in Phoenix; they are used as the basis for contemporary canals and roads. The Hohokam had a very complex culture; they built vast ball courts and huge ceremonial mounds, and made fine red-on-buff pottery, baskets, and exquisite jewelry of stone and shell. Meteorological

principles were used to time planting, harvesting, and ceremonial cycles.

The ancestral O'odham developed complex water storage and delivery systems, and they used the land seasonally to maintain sustainability. For O'odham who did not live on a major river, this required migrating from valley homes near washes that supported small fields of tepary beans, squash, and melons or larger irrigable fields to cooler mountain dwellings. O'odham also gathered wild plants (saguaro fruit, cholla buds, and mesquite bean pods) and hunted deer and rabbit by javelin, producing a very healthy diet. They were traders who provided baskets and cotton textiles to groups hundreds of miles from their homes. These patterns of life continued into the contact period, but the movement of Apacheans and Yavapai, Hispanic, Mexican, and Euro-American settlers into O'odham homelands meant that new adaptations were required.

Treaties With Foreign Governments

From the early 18th century to the present, the O'odham lands have been under the control of foreign governments. First came the Spanish; then, with the independence of Mexico, O'odham fell under Mexican rule. Then, through the Treaty of Guadalupe Hidalgo and the Gadsden Purchase, O'odham land was divided in half between the United States and Mexico. In the accord, the United States agreed to honor all land and citizenship rights held by Mexican citizens, including the O'odham. However, the demand for land for settlers escalated with the development of mining and the transcontinental railroad, resulting in the loss of O'odham land. Following the Plan de Iguala, O'odham lands in Mexico were nationalized at a rapid rate. In 1927, Mexico established a few small reserves for indigenous people, but not the O'odham. Today, approximately nine O'odham communities in Mexico lie proximate to the southern edge of the Tohono O'odham Nation. Groups further south are not recognized.

In the United States, the treaties had little immediate effect on the Tohono O'odham. For years, members simply traveled through their lands, practicing traditions essential to their religion, economy, and culture. In recent years, however, the border has greatly affected the Sonoran

and Tohono O'odham; it has become a deterrent to the Tohono O'odham's right to traverse their lands, impairing their ability to collect foods and materials needed to sustain their culture and/or visit family members and sacred sites. On countless occasions, the U.S. Border Patrol has detained and deported Tohono O'odham. Families are also moving away from the militarized no-man's land, leaving the area unpopulated because of an increase in trafficking of drugs and people.

While the international border was not a major issue for the Akimel O'odham, they were affected by Euro-American migrants traveling to California in the 1850s; they were known for their kindness to immigrants, as well as for supplying the Union Army with food during the Civil War. Settlers affected Akimel O'odham life in the 19th and early 20th centuries by damming Arizona's rivers, diverting water to Florence and Phoenix, and undermining the previously successful agricultural system. This drove the O'odham into poverty, which has taken years to overcome.

Division Into Four Communities

The American political division of O'odham land and the reservation system resulted in a new organization for O'odham society. O'odham bands are now structured as four federally recognized tribes: the Tohono O'odham Nation, the Gila River Indian Community, the Ak-Chin Indian Community, and the Salt River Indian Community. Each band is politically and geographically distinct. The remaining band, the Hia-C'ed O'odham, is not federally recognized; members reside on the Tohono O'odham reservation and live in Sonora. Many O'odham individuals and families also live in cities through the United States and Mexico, concentrated in Phoenix, Tucson, and Hermosillo.

The Ak-Chin Indian Community is a federally recognized tribe with 525 enrolled members in 1995. Ak-chin means "the people who live at the mouth of the arroyo," who originally lived along the Santa Cruz River. The members live on the Ak-Chin reservation, located 40 miles south of Phoenix, near Casa Grande and Maricopa in Pinal County with the Maricopa (Pee-Posh, a River Yuman people who migrated from the Colorado River in the 1830s) and a few Tohono O'odham and Yaqui (Yoeme). They were reorganized under a tribal council-style government

A 1907 portrait of a young member of the Tohono O'odham tribe. Today, the Tohono O'odham reservation is the third-largest in the country, extending over 4,453,300 square miles, with a 2010 population of 10,210 people.

in 1961 as the Ak-Chin Indian Community. The reservation was established by executive order on May 28, 1912, and covers 21,480 acres, some of which is productive, irrigated farmland. Current concerns are economic self-sufficiency, health care, and water rights.

The Gila River Indian Community was established in 1859. It has its headquarters in Sacaton, Arizona, 40 miles south of Phoenix, and controls over 550,000 acres of land that is divided into seven districts. The largest Akimel reservations, with over 16,000 enrolled members, the community has a tripartite government with a 17-member elected legislative branch. Irrigation agriculture, diversified industries, and real estate investments with monies generated from successful gaming and tourism enterprises have resulted in a diversified tribal economy. The tribe also has three industrial parks, a museum, and an arts and crafts center, and it owns the Firebird International

Raceway Park. The nation provides health, educational, and social services to its members.

The Salt River Pima-Maricopa Indian Community was established by treaty in 1879 and consists of 52,600 acres located on the eastern edge of Phoenix. Organized as a constitutionally based political entity in 1940 under the IRA, the nation has a seven-member council. It has over 5,000 members and is home to a major casino. During the 19th and 20th centuries, the two groups farmed and supplied Phoenix and Tempe with grain crops; today, living next to a highly urbanized area means that tribally owned businesses and services focus on serving a large, dense population. The Pavilions, a 140-acre retail center, is the largest commercial development on Indian lands.

The Tohono O'odham Nation consists of the Two Village peoples and the Hia C-ed O'odham (Sand Dune People, Areneños, Sand Pima) or No Village People, who are not federally recognized, although there is interest in gaining recognition and separating into two tribes. Hia C-ed families and bands live in the western and driest section of the Sonoran desert in Arizona and Sonora. These families were not able to grow many foods. Tohono O'odham individuals living in Sonora may also be members of the Tohono O'odham Nation. The descendants of the Sobaipuri live at San Xavier Mission Indian Reservation. Their reservation is part of the Tohono O'odham Nation and is administered from the capital in Sells.

The Tohono O'odham reservation is the third-largest in the country (over 4,453,300 square miles). It was established by executive order in 1874 (for San Xavier district), in 1882 (Gila Bend reservation), and 1917 (the main reservation). According to the 2010 census, 10,210 people live on reservation land. The nation is governed by a council and chairperson, who are elected by eligible adult members of the nation under a complex formula intended to ensure that the rights of small O'odham communities are protected, as well as the interests of the larger communities and families. Most of the tribe's income comes from its casinos; these monies are used to provide services for the people.

Opera and Ethnic Diversity

Classical music has long been considered the realm of performers of European descent. In Europe, artists of color have been making substantive contributions to opera since the 18th century. Moreover, there have been a number of ethnic Americans with noteworthy careers in the opera that date back to the Reconstruction. By the late 20th century, many of America's most respected opera singers and composers were people of color.

Opera in the United States

With the influx of European immigrants to America came a corresponding increase in the number of operas that focused on their lives. Although George Whitefield Chadwick's *The Padrone* (1912) and Frederick Shepherd Converse's *The Immigrants* (1914) addressed the immigrant experience, white ethnic characters continued to compose the *dramatis personae* of American operas for decades to come. Gian Carlo Menotti's 1954 opera *The Saint of Bleecker Street* featured Italian Americans in the tenements of Manhattan's Lower East Side. *Evangeline*, written by Otto Luening in 1932, concerned Greek American characters in Louisiana. Leonard Bernstein's *A Quiet Place* (1984), which examined modern notions of the American dream, prominently featured a French Canadian character. William Bolcom's 1990 adaptation of Arthur Miller's *A*

View From the Bridge depicted the lives of Italian Americans in 1950s Brooklyn.

Perhaps because of opera's great popularity outside the United States, many of America's most esteemed opera singers and composers—including Maria Callas (Greece), Plácido Domingo (Spain), Rosalind Elias (Lebanon), and Leonard Bernstein (Ukraine)—have international roots. Austria, which is home to a number of well-regarded conservatories such as the University of Vienna, the University of Music and Performing Arts in Vienna, and Mozarteum Salzburg, produced several of America's most celebrated composers and conductors, including Arnold Schoenberg, Karl Böhm, and Fritz Stiedry. Northern Europe, where the works of Richard Wagner were especially popular, produced a coterie of strong singers who were very popular in the United States, such as Kirsten Flagstad, Christina Nilsson, and Jacques Urlus. Further, Jewish Americans played pivotal roles in the early development of many of the nation's important opera companies, including Leopold Damrosch at the Metropolitan Opera, Oscar Hammerstein at the Philadelphia Opera Company, Joseph Rosentock at the New York City Opera, and Kurt Herbert Adler at the San Francisco Opera. In many ways, the artistic work of these diverse artists contributed to the mainstream of acceptance of ethnic Europeans in America, in addition to popularizing the art form in the United States.

A cultural tradition of great significance in Italy, opera was advanced in the United States by Italian immigrants who sought to preserve their love of the art form in their new homeland. Opera thrived in Italian enclaves and alongside puppet shows, concert bands, chorales, and theaters in New York, New Jersey, California, and Pennsylvania. Italian Americans compose the ranks of America's most esteemed opera composers, including Dominick Argento (a Pulitzer Prize winner for *From the Diary of Virginia Woolf*); John Corigliano, whose *The Ghosts of Versailles* was commissioned by the New York Metropolitan Opera; and Gian Carlo Menotti, who wrote on Italian American themes. Additionally, some of the nation's most successful classical vocalists have been Italian American, most notably tenor Mario Lanza, who was the first singer to make a record that sold more than 2 million copies.

Early Ethnic Composers

The first African American opera company was founded in 1873 in Washington, D.C., by a black barber, William T. Benjamin, and led by a white schoolteacher, John Esputa. Among its earliest members was Mary A. C. Coakley, a former slave who had worked for former first lady Mary Todd Lincoln. African American singer Theodore Drury founded The Theodore Drury Company in New York City in 1900 to showcase the talents of black singers. The company, which existed until 1908, performed for both African American and white audiences.

During the same period, music by African American composers Will Marion Cook and Harry T. Burleigh, and by Samuel Coleridge-Taylor, a black Briton of Sierra Leonean descent, was popular among African American classical music groups. Scott Joplin, celebrated as the “King of Ragtime,” also created two operas with African American content, *A Guest of Honor* (1903) and the jazz-infused *Treemonisha*, which was written in 1910 but not performed in its entirety until 1972. Sioux composer and activist Zitkala-Sa, also known as Gertrude Simmons Bonnin, wrote the first Native American opera, *The Sun Dance*, with William F. Hanson in 1913. *Ouanga*, an opera based on the reign of Haiti's first emperor, Jean-Jacques Dessalines, was composed by Cameron White in 1932. Many of these musicians were trained at the New England Conservatory, the Oberlin School of Music, or the National Conservatory of Music of America, which were among the few conservatories that permitted ethnic students to matriculate.

Trailblazing Ethnic Opera Singers

Sissieretta Jones was the first major African American opera star, in the late 19th century. She studied at the New England Conservatory in the 1880s and became the first black singer to perform at Carnegie Hall in 1892. At the height of her fame, between 1881 and 1909, she toured the United States, Africa, south Asia, and Europe, and sang for numerous heads of state. The first Puerto Rican opera star was Antonio Paoli, who performed on five continents and acquired the sobriquet “The King of Tenors and the Tenor of Kings.” Celebrated African American contralto Marian Anderson made history in 1939 when

This 1899 poster printed in New York features Sissieretta Jones, or "Black Patti," declaring her "the greatest singer of her race." Jones was the first major African American opera star; in 1892, she became the first black singer to perform at Carnegie Hall in New York City.

she gave a public concert at the Lincoln Memorial, facilitated by First Lady Eleanor Roosevelt. When she sang the role of Ulrica in Giuseppe Verdi's *Un Ballo in Maschera*, she became the first black performer on stage at the Metropolitan Opera in 1955, quickly followed by Robert McFerrin's debut later the same month. African American Leontyne Price, one of the most well-regarded opera singers of any ethnicity, made history as the first black performer to sing a leading role at Italy's leading opera house, La Scala, in 1960.

Despite these successes, there were very few opportunities for performers of color. Some

held the perception that although many African Americans were great musicians, they lacked the intellectual prowess and discipline necessary for classical training. Even prominent singers of color found difficulties in being cast in racially appropriate operatic roles. The convention, which still is widely practiced today, was to use makeup (blackface or "yellowface"), wigs, and costumes to alter the ethnicities of performers when they were playing characters of different ethnic backgrounds. Although some pursued careers in Europe, where race frequently mattered less than strong singing abilities, a number of classically trained ethnic singers turned to Broadway operettas.

Porgy and Bess (1935), by George and Ira Gershwin and DuBose Heyward, is perhaps the best known of any American opera; it has become the most frequently produced opera with African American subject matter. Some African Americans felt the opera presented a negative view of black life; accordingly, *Porgy and Bess* was rarely produced in the United States during the years of the racially turbulent 1960s. Nearly all of the roles require black singers, and the Gershwins were opposed to performers in blackface portraying these characters. Many of America's most renowned black opera singers, including Grace Bumbry, Leona Mitchell, Bruce Hubbard, and Gregg Baker, have appeared in *Porgy and Bess* at various points.

The Diversification of the American Opera in the Late Twentieth Century

By the second half of the 20th century, African Americans, Latinos/as, and Asian Americans had become regular fixtures in operas. In addition to company managers and audiences accepting that performers of color could excel at classical music, the proliferation of ethnic composers meant that there were new roles designated for ethnic performers. Cambodian-born composition professor Chinary Ung has written for classical singers since the early 1970s. Carlos Chávez, who employed native Mexican percussion instruments in his work, was commissioned to compose *The Tuscan Players*, also known as *Los Visitantes*, in 1953. Argentine composer Alberto Ginastera wrote three Spanish-language operas: *Don Rodrigo*, which inaugurated the New York City Opera's

new home in 1964; *Bomarzo* (1967); and *Beatrix Cenci* (1971). Param Vir, a British-born composer of Indian descent whose operas include *Snatched by the Gods* (1992) and *Broken Strings* (1992), has often been inspired by South Asian literature and folklore.

In the 1970s and 1980s, operas based on contemporary political subjects became increasingly popular and accorded a range of new opportunities for composers and/or singers of color. Among the earliest contemporary historical operas were Philip Glass's *Einstein on the Beach* (1976) and *Satyagraha* (1980), which focuses on the ideologies of Mahatma Gandhi, Leo Tolstoy, Martin Luther King, Jr., and Rabindranath Tagore. Composed by African American Anthony Davis, *X, The Life and Times of Malcolm X* (1986) blends swing, bebop, gospel, hip-hop, traditional West African rhythms, classical Western music, and improvised sections. Themes of black nationalism and activism are explored without an express political or polemical intention and are given an operatic voice for the first time.

John Adams wrote a series of operas with historical content, the best known of which is *Nixon in China* (1987). Depicting the 1972 meeting of President Richard Nixon and Chinese Chairman Mao Zedong, the innermost thoughts of the figures such as First Lady Pat Nixon and Jiang Qing are explored in a creative, depoliticized fashion. Adams's *The Death of Klinghoffer* (1991), which recounts the story of disabled Jewish American Leon Klinghoffer, who was executed by Palestinian Liberation Front members, manages to humanize its subjects and discuss Mideast politics with some objectivity.

During this period, many singers of color achieved both classical music and mainstream success. Kathleen Battle has won Grammy, Emmy, and Laurence Olivier Awards for her work. Her frequent collaborator, Jessye Norman, has had several internationally televised concerts. Maori lyric soprano Dame Kiri Te Kanawa recorded the aria "Nuns' Chorus" from Johann Strauss II's *Casanova*, which became New Zealand's first gold-certified record. The recordings of Justino Diaz, the first Puerto Rican to win the Metropolitan Opera National Council Auditions in 1963, are well known outside classical circles. Ramón Vargas's recordings of Mexican folk songs have

received great critical praise. Denyce Graves hosted *Voce di Donna* (Voice of a Lady), a popular weekly syndicated radio show.

Looking Forward: A Multiplicity of Voices

By the 2010s, opera had the lowest attendance rates of any of the performing arts, with only 2 percent of adults having attended a performance in the previous year. Further, more than 80 percent of opera-goers are white. Some studies have shown that increasing diversity in opera is key to staving off its decline in the United States. A number of this period's rising stars were nonwhite performers, including Latonia Moore, Eglise Gutiérrez, and Othalie Graham. Furthermore, particularly strong vocal music programs in Chinese, Japanese, and South Korean public schools have resulted in a new cohort of gifted singers from Asia, including Seo Jung-Hack, Liping Zhang, and Kwangchul Youn. In the Metropolitan Opera's 2006 production of *La Traviata*, both leads were sung by Koreans, tenor Woo Kyung Kim and lyric soprano Hei-Kyung Hong.

As of 2012, classical music organizations, including Hispanics for Los Angeles Opera, the National Opera Association, and the Michigan Opera Theatre, had enacted initiatives to diversify their audiences. Such groups are producing new works, including Toni Morrison and Richard Danielpour's *Margaret Garner* (2005), with Denyce Graves; Charles Lloyd, Jr.'s, *Emmett Till: The Opera* (2008), with Robert Mack; Paula M. Kimper's *Truth* (2012), with Damian Norfleet; and Jorge Martín's *Before Night Falls* (2005), with Jesus Garcia. Their performances have attracted substantial audiences of color. Many of these productions have been helmed by directors of color, such as the Tony-nominated Kenny Leon and Emmy-nominated Tazewell Thompson. Although efforts to increase the number of composers of color are becoming more frequent, statistics reflect an apprehension among opera audiences to embrace new works.

Operation Gatekeeper

On October 1, 1994, the Bill Clinton administration launched Operation Gatekeeper, an immigration enforcement initiative meant to prevent unauthorized migration across the United States–Mexico border in southern California. Based on a strategy of “prevention through deterrence” and initially focused on the 14-mile stretch between the Pacific Ocean and the base of the Otay Mountains in San Diego County, Operation Gatekeeper led to the unprecedented fortification and militarization of the United States–Mexico border.

The U.S. Immigration and Naturalization Service (INS) erected walls, employed new surveillance technologies, and more than doubled the number of U.S. Border Patrol agents stationed on the southwestern border. However, instead of deterring migration, as the INS anticipated, Operation Gatekeeper only increased the human and financial costs of crossing the border by pushing migrants out of public view and into more desolate and dangerous areas.

Background

Operation Gatekeeper was the product of both local and national factors. In the early 1990s, the westernmost part of the San Diego sector was the most heavily trafficked part of the United States–Mexico border. Although some walls and lighting did exist prior to Operation Gatekeeper, the terrain was relatively easy to traverse and migrants could reach pickup points in the United States within a matter of minutes.

As an increasing number of unauthorized Mexicans immigrants settled in San Diego—which remained majority Anglo until 2000—some Californians, including Republican governor Pete Wilson, blamed them for heightened social tensions, an uptick in crime, and the state’s economic woes. Many Californians also faulted the federal government for failing to enforce the nation’s borders.

In response to such concerns, Proposition 187, which aimed to deny unauthorized immigrants access to public education, health care, and other social service benefits, was proposed. In the hope of bolstering his reelection, Wilson quickly embraced Proposition 187, also known as the Save Our State initiative, and it quickly became a central issue in the 1994 state and national elections.

Proposition 187 and the midterm elections forced the Clinton administration to take a stronger stance on immigration enforcement than it had in the past. But Operation Gatekeeper was not entirely without precedent. In September 1993, Silvestre Reyes, head of the Border Patrol in El Paso, Texas, unilaterally implemented Operation Blockade, later renamed Hold-the-Line. Operation Blockade placed hundreds of agents along a 20-mile section of the border in west Texas and resulted in a significant drop in crossings and apprehensions. Wilson and other California politicians saw Operation Blockade as a model of immigration enforcement and called for it to be implemented in their state. Feeling political pressure to lead on immigration, and hoping that voters would strike down Proposition 187, the Clinton administration launched Operation Gatekeeper five weeks before the 1994 elections.

Impact of Operation Gatekeeper

Operation Gatekeeper marked an important shift in federal immigration enforcement policy by focusing on prevention through deterrence rather than apprehensions of migrants already in the country. The most immediate change under Operation Gatekeeper was the militarization of the San Diego sector of the United States–Mexico border. Steel landing mats left over from the Vietnam War were used to construct a 10 to 12-foot-high primary wall along the border. Secondary and tertiary walls made of concrete pillars and wire mesh, both topped with barbed wire, lined many sections of the border as well.

When Operation Gatekeeper went into effect, walls already divided 10 miles of the San Diego sector of the United States–Mexico border. Five years later, more than 50 miles divided the two countries in the San Diego sector, half of which were located in the 14-mile stretch between the Pacific Ocean and the Otay Mountains. Over the same period of time, the number of Border Patrol officers in the San Diego sector more than doubled, from 980 to more than 2,250. The INS installed stadium lighting, electronic sensors, and surveillance cameras, and the Border Patrol used infrared night vision equipment and aircraft to enhance its detection capabilities. Rather than preventing migration, Operation Gatekeeper shifted migration patterns and increased the costs and risks of migrating. The fortification of the San Diego sector under Operation Gatekeeper resulted in the number of apprehensions decreasing from 531,689 in 1993 to 248,092 in 1998. Along the entire border, however, total apprehensions increased during the same period. East of San Diego in El Centro, California, apprehensions jumped from 30,058 to 226,695. In Arizona, apprehensions in Tucson rose from 92,639 to 387,406, and in Yuma they more than tripled, from 23,548 to 76,195. Apprehensions in Texas spiked as well.

Operation Gatekeeper had severe consequences for migrants. To avoid the most heavily fortified sections of the border, migrants crossed in desolate areas, often over rugged terrain. Whereas the time it took to cross the border used to be as little as 10 minutes in the western part of the San Diego sector, it now could take up to three or four days to cross further east over mountainous terrain. As a result, after the start of Operation Gatekeeper the demand for smugglers (known as coyotes) increased and the estimated cost of crossing quadrupled, from around \$300 to \$1,200 by decade's end.

The new policy had significant human costs as well, as the number of deaths from hypothermia, dehydration, heat stroke, and drowning drastically increased. Whereas there were only 23 deaths on the California–Mexico border in 1994, by 1998 there were 145. Since Operation Gatekeeper was implemented, more than 6,000 people have died trying to cross the United States–Mexico border.

Operation Wetback

In 1954, the U.S. Border Patrol program called Operation Wetback was created to stem the tide of undocumented immigrants from Mexico. It was estimated that during the program, 1.3 million mostly undocumented Mexican immigrants were repatriated back to Mexico. The program's creation was a response in part to the overflow of Mexican immigrants who came as undocumented laborers during the late 1940s. Their numbers had exceeded those who came as documented immigrants or guest workers, and anti-Mexican sentiments in the country began to rise.

Undocumented Immigration and the U.S.-Mexico Bracero Program

One of the plausible explanations for the increasing numbers of undocumented immigrants from Mexico was the unintended effect of the U.S.-Mexico Bracero Program (1942–64). In response to perceived labor shortages by U.S. agricultural growers, it was established as a temporary guest-worker program to recruit Mexican immigrant laborers. As the United States entered World War II, U.S. workers moved from rural areas for urban military industrial employment. Women and minorities found employment in urban industrial jobs, often for the first time. This rural-to-urban migration of workers left fewer workers employed in agricultural work.

Agreeing to a bi-national treaty, the United States and Mexico established the U.S.-Mexico Bracero Program. By 1942, recruitment of Mexican workers began from the capital, Mexico City. Only 4,000 braceros (manual laborers) were included in the first lucky group selected to receive work contracts through the program, although it was suggested that many more wanted to come. In September of 1942, Stockton, California, was the first U.S. city to host the arrival of braceros. The program's initial intention was to exist for the duration of the war, but through a series of additional agreements, the program would be extended until 1964.

In the late 1940s, recruitment of undocumented workers was no longer needed. But by this time, word of mouth had reached well into Mexico, and undocumented immigrants who had not been chosen for the program were selected by some states to illegally to cross the border. Therefore, the Bracero Program unintentionally encouraged large numbers of undocumented Mexican immigrants to simply cross, without legal papers, into the United States.

Texas, one of the states that encouraged undocumented immigration, had a long history of racial discrimination toward Mexicans. The Mexican government denied access to guest workers to Texas. However, Texas growers simply looked for Mexican workers willing to work for cheaper wages. Soon, other states began to employ undocumented Mexican immigrants, especially along the border of states such as California and Arizona. Soon, the hiring of undocumented Mexican immigrants became commonplace.

Undocumented Mexican immigrants caught working in the United States were returned to the Mexican border. Mexico was unable to handle the number of captured Mexicans, and it was decided that the U.S. authorities would legalize the apprehended workers. From 1947 to 1951, this method to deal with undocumented Mexican immigrants in the country was called "drying out." After being taken to the border, these undocumented Mexican immigrants would be legally contracted to re-enter the United States as bracero workers and be returned to the farm on which they were found. By the late 1940s, the number of Mexican braceros who entered illegally and were later legalized soon exceeded the

number of braceros who had entered via actual contracts from growers.

The Start of Operation Wetback

Shortly after taking office, President Dwight D. Eisenhower had to deal with the rising number of undocumented Mexican immigrants, and Operation Wetback began in June 1954 to stem the flow. Raids conducted by Immigration and Naturalization Service (INS) officials would find thousands of undocumented Mexican immigrants. According to reports, an estimated 1,000 undocumented Mexican workers were rounded up per day in California. The growth of the U.S. Border Patrol prior to creation of Operation Wetback became useful for the success in capturing so many undocumented immigrants.

Employed as a military operation, the program was deemed a success despite its many flaws. General Joseph Swing was assigned to head the program. Apprehensions of undocumented Mexicans crossing the U.S.-Mexico border by 1949 had reached a level of 280,000. By 1953, 865,000 Mexicans had been caught as undocumented immigrants.

The hysteria of the borders being out of control created national support for the deportation of Mexican undocumented immigrants. Caught in the middle of the operation were children of Mexican immigrants born in the United States. Also rounded up were Mexican Americans who had the difficulty of proving their legal right to be in the United States. Unable to prove their legal status, Mexican Americans were simply deported to Mexico and were forced to find their way back across. In the fall of 1954, the operation trailed off as INS funding began to run out.

Oppositional Culture

The concept of oppositional culture has its roots in the work of anthropologist John Ogbu, whose research was primarily focused on educational achievement gaps between blacks and whites in the United States. According to Ogbu, minority groups become part of American society voluntarily or involuntarily. Both voluntary and involuntary minorities are likely to face various barriers, but involuntary minorities are at especially high risk of experiencing limited opportunities for success.

Ogbu further asserts that the various immigrant groups' treatment at the hands of mainstream society, as well as the different beliefs that voluntary and involuntary immigrants hold regarding the host society, leads them to develop different survival strategies. For some immigrant groups, African Americans in particular, adaptation to this experience has led to the development of an oppositional culture, which Ogbu argues further disadvantages them.

The differences in life experiences and conditions that mirror the performance gap between minority children and children of the dominant culture are well documented. Much attention is also devoted to the understanding of minority immigrants in the United States, especially in light of the enormous demographic changes driven by the global migration flow over the past few decades. Until recently, much of the debate on life quality had been limited to the dominant group and their subordinate groups' racial classification as the key determinants of various life outcomes.

According to Ogbu, contemporary theoretical explanations have failed to take into account that although race/ethnicity is an important predictor of life chances, the historical development and social forces that propel minority groups' adaptations to immigrant experiences are important determinants of successes and failures in mainstream society. This major omission ultimately limits scholars' abilities to understand the social realities of minority populations.

To counteract these shortcomings, Ogbu postulated two explanations that shape minority groups' social adjustment in America—terms of incorporation and patterns of adaptation. Also formulated to distinguish the life outcomes of voluntary versus involuntary minorities, the oppositional culture theory postulates that some racial and ethnic groups underachieve not only because they face traditional structural barriers experienced by virtually all nonwhite immigrant groups but also because they culturally adapt to these structural disadvantages in ways that exacerbate, rather than narrow, gaps in achievement between whites and nonwhites. To express their antagonism toward the socially advantaged group, Ogbu claims that historically oppressed populations, particularly native-born blacks, develop a subculture in opposition to the dominant culture. Ogbu states that there is much within-group variation when discussing racial/ethnic/immigrant groups—but his interests lie in the dominant patterns of beliefs and behaviors across minority groups.

Group Classifications

In his cultural-ecological theory, minority status is characterized by the power relations among groups, rather than their respective group size. Ogbu classifies minority populations into voluntary and involuntary minorities, who encounter different community forces from wider society. Voluntary minorities are social groups that choose to migrate to the host society in search of better life opportunities. They typically consist of immigrants from abroad, such as China, Japan, India, Mexico, and Cuba. They should be distinguished from involuntary minorities, who did not “choose” to become Americans—groups such as American Indians, whose homeland was conquered in a centuries-long drama of colonization,

and black Americans, many of whose ancestors were brought to the United States as slaves.

Although these groups of minorities face different life experiences marked by cultural and social changes over time, Ogbu particularly stresses the subtle distinctions between these two groups of minorities with respect to their frame of reference, collective identity, intergroup solidarity, and perception toward the dominant culture. These cultural dispositions/adaptations, which have significant bearing on these groups' interactions with broader society, as well as their subsequent academic and economic fate, are passed on to subsequent generations. Ultimately, the minorities bring to their respective society common experiences, values, and cultural models of adaptation. These various ways of adapting to the disadvantages of minority status, Ogbu argues, help explain the poorer outcomes faced by blacks and Native Americans, for instance, compared to immigrants from Mexico or China.

Voluntary Minorities

According to Ogbu, minority groups' motives of migration and terms of incorporation are driving factors that shape their views of their treatment at the hands of the dominant group. Immigrant minorities are incorporated into the host society voluntarily. The decision to migrate is often shaped by the search for opportunities not available in their home country. Immigrant minorities' voluntary entry into mainstream society plays a critical role in their capacities to confront structural barriers while maintaining an optimistic view regarding the future. Contrary to the non-immigrant minorities, who were brought into the destination country through slavery and/or colonization, immigrant minorities tend to regard their social relations with the host country more favorably. In other words, treatment from the dominant group is seldom perceived as a form of oppression, or if it is, it is seen as temporary, and mostly a function of their status as foreigners or their lack of language skills—both of which can be overcome with time and effort.

The life disparities between immigrant minorities and dominant groups have been linked from structural barriers to occupational opportunities and educational advances. Voluntary immigrant minorities are likely to interpret their

circumstances in their new country by using their home countries as a frame of reference. Even though they are relegated to a more subordinate position, immigrant minorities often perceive this relative disadvantage as transitory in their course of adaptation. Most are likely to attribute existing social roadblocks or economic obstacles simply as the price to pay for being foreigners. Thus, rather than seeing the dominant group as a personal threat, voluntary immigrant minorities tend to interpret their experiences as salient but inevitable steps in the process of integration.

In many cases, immigrants' strong adherence to their ethnic support network can help them develop survival strategies to combat social stigma from the dominant group. Hence, many are able to meet the demands of living in two cultures while retaining their heritage culture. This identity affiliation is not developed in opposition to the social identity of the dominant group, which acknowledges education as the mechanism of power that enables upward mobility. Rather, their emphasis on perseverance and hard work often becomes the critical piece of their identity that has life long implications for their economic trajectories.

Involuntary Minorities

Involuntary minorities are minority groups whose status as part of American culture was a result of colonization (in the case of American Indians) or coercion (in the case of blacks). This is especially true for black Americans, who are phenotypically darker and whose ancestors were colonized and brought to the United States permanently. Examples of other involuntary minorities also include Mexican Americans of southwest origins and native Hawai'ians. Like voluntary minorities, involuntary minorities encounter sociopolitical barriers to social mobility and face discrimination by the dominant group as a central aspect of their life experience. However, unlike the voluntary minorities, this social group not only forgoes the freedom that they enjoyed but also experiences greater discrimination and maladjustment.

In addition, unlike voluntary immigrant minorities, involuntary minorities do not have a reference country; therefore, they tend to compare their subordinate position in the racial socioeconomic hierarchy to the dominant (white) groups in their native country. Although most generally intend to

be successful, these caste-like minorities hold contradictory beliefs about how one achieves upward mobility. On one hand, they are fully aware that educational success produces occupational success and that the path to educational success requires hard work and commitment to school. On the other hand, they are cognizant of the reality that such hard work and commitment is less likely to translate into success for blacks than for some other groups.

Because of their cultural beliefs, Ogbu argues that involuntary minorities are more likely than voluntary immigrant minorities to develop an adaptation pattern in opposition to the dominant culture in order to cope with prolonged structural disadvantages. Those who identify with such oppositional identities tend to manifest a lower motivation toward their future, along with mistrust of white institutions—especially schools. These sets of attitudes/behaviors challenge the dominant culture and further discourage the use of conventional strategies to facilitate educational or occupational success. Further, minority group members who hold an oppositional identity are less capable of

The oppositional culture theory postulates that some racial and ethnic groups underachieve not only because they face traditional structural barriers but also because they culturally adapt to these structural disadvantages, going on to develop a subculture in opposition to the dominant culture.

translating their limited resources to overcome the social disadvantages that they encounter.

Consequently, not only do they experience greater alienation from the mainstream culture, but many also eventually come to accept structural barriers as a historical reality that reproduces the existing class structure. One of Ogbu's books included interviews of black students in an affluent Cleveland, Ohio, suburb, where he found evidence of oppositional culture among black students, suggesting that these cultural distinctions are not merely a function of structural disadvantage. However, not all involuntary minorities share the experiences of African Americans. For instance, Ogbu notes that because they became American through conquest, native-born Mexican Americans, like blacks, are "involuntary minorities." Because of their lighter phenotypical characteristics and high rates of intermarriage with Anglos, their children can "pass into white society and avoid membership in the involuntary Mexican American minority group."

Empirical Findings

The oppositional culture theory has been used to assess differences in school performance and social adaptation between voluntary and involuntary minorities. In the seminal work conducted by Ogbu, resistance to school is postulated to be racially and culturally based. Minority groups—blacks in particular—are described as possessing different worldviews concerning schooling. Ogbu notes that the mistrust toward the dominant group held by black students originates from their adverse interactions with the dominant group. Although they realize the importance of hard work and the value of education, they are ambivalent about their ability to alter their future after witnessing previous generations struggle against discrimination and prejudice.

For the black students that Ogbu studied, acting white is socially frowned upon by other black students, and school is rejected, as a domain for white people. Examples of acting white include speaking Standard English, taking honors and advanced placement classes, being smart in class, and hanging out with too many white students. The black students that Ogbu interviewed did not put as much effort into their schooling, in part because they feared peer sanctions for their academic

performance. Some simply did not understand the requirement of good education and labor market participation. Slowly, they became disengaged in the process to attain upward mobility. When black students place fewer expectations on their schooling, poor performance prevails.

In conjunction with peer pressure, negative community forces further distance black students from behaviors and attitudes that are essential for school success, leading to the emergence of an oppositional culture that devalues schooling and work. Many believe that social mobility is unlikely in an environment of educational and occupational racial discrimination. Because of prejudice and discrimination, black students believe that they will receive little gain from their efforts in school and the labor market. Although motivation for maximizing academic returns will lead to better-paying jobs and higher social status, some African Americans view that choice as a rejection of the black community. In other words, to be successful in the mainstream society, one must forgo black culture and adopt the culture of the dominant group.

The concept of oppositional culture has been used by other scholars to better understand the life experiences of other minority immigrants. Like the black students in Ogbu's studies, immigrant minorities' ascribed physical characteristics may present a roadblock on their assimilation pathway. Immigrant minorities who reside in inner-city neighborhoods, for instance, are at risk of developing an adversarial subculture. Similarly, African immigrants who possess similar phenotypical characteristics are often classified in the same category as the disadvantaged native blacks. However, not all minority immigrants are at risk of the downward assimilation trajectories in their quest for upward mobility.

Critiques of Oppositional Culture Theory

Although Ogbu's oppositional culture theory provides a blueprint for understanding power relations, intergroup dynamics, and group affiliations, the theory has generated much debate and criticism. Most empirical research does not find support for the theory's explanation for the gaps in educational outcomes between black and white students. Other theorists have argued that the theory overlooks the complex structural position that blacks are embedded in, leading to the erroneous

perception that they are turning away from opportunities to succeed and are becoming trapped in the culture of poverty. Black children, just like those in other ethnic groups, are aware of the importance of high-quality education. Likewise, they have the desire to do well in school, but they lack the necessary means to acquire the vital skills to success.

Additionally, instead of being penalized for acting white, scholars such as Douglas Downey and James Ainsworth-Darnell, as well as Angel Harris, have found that minority youth incur no penalty for being popular in school. Rather, high-achieving black students were frequently rated as more popular compared to low-achieving peers. Although their minority status affects their educational performance in school, many minority youths who demonstrate a high sense of connectedness with their ethnic group have been more successful. In spite of the contradictory findings, the theory has merits, and is a lasting contribution to the field of educational anthropology.

Oprah Winfrey Show, The

The Oprah Winfrey Show was a nationally syndicated daytime talk show that aired from 1986 to 2011. Filmed at Harpo Studios in Chicago and hosted by Oprah Winfrey, the show won 47 daytime Emmy Awards and is the highest-ranking television show in American history. *The Oprah Winfrey Show* aired in over 150 countries and reached millions of viewers every day. Winfrey utilized the show as a platform to tackle a range of issues from fashion makeovers to diet tips and celebrity interviews and also did hard-hitting shows on child sex abuse, political scandal, and racial relations. In 2011, *Time* magazine named Winfrey as one of the 100 most influential people in the world.

Oprah Winfrey was born in 1954 in Mississippi, where she lived during her early childhood years before moving to Milwaukee to live with her mother. After a turbulent adolescence, Winfrey moved to Tennessee to live with her father. At age 17, she won the Miss Black Tennessee pageant and a scholarship to Tennessee State University, where she majored in speech communications and worked at a local African American radio station, WVOL. At 19, Winfrey became the first African American woman and the youngest person to anchor the Nashville evening news.

Early Start in News Media

In 1976, Winfrey took a position co-anchoring the evening news in Baltimore. After a successful run, in 1984 Winfrey took a job in Chicago as cohost of the failing morning talk show *AM Chicago*. The show became the number one local talk show and in 1985 was expanded into an hour-long program and renamed *The Oprah Winfrey Show*. In 1986, the show went into national syndication, and in 1987 it won three daytime Emmy Awards including Outstanding Talk/Service Program and Outstanding Host. In 1988, Winfrey established Harpo Productions, Inc., and acquired the rights to *The Oprah Winfrey Show*, thus becoming only the third American woman to own her own production company and the first woman in history to own and produce her own show.

During its early years, *The Oprah Winfrey Show* followed the standard talk show model

that relied on sensationalism to attract viewers. However, even in its early episodes, Winfrey did not shy away from hard-hitting topics related to race relations in the United States. With its large viewership, the show played a pivotal role in exposing the American public to issues concerning multiculturalism, in particular, issues related to racial tension. Six months after going on the air in 1987, she traveled to Forsyth County, Georgia, where she filmed a tension-filled town hall meeting with the all-white residents. The county had not had a black resident since before World War I, and Winfrey interviewed residents who said they were afraid of black people. During the show's final season, Winfrey returned to Forsyth County, where she found an affluent mixed-race community.

In 1992, the 25th anniversary of *Loving v. Virginia*, a ruling that removed bans on interracial marriages, she produced "I Hate Your Interracial Relationship." That year, she also devoted an episode to viewer reactions to the Rodney King verdict. In 1994, she interviewed a biracial family whose members at times chose to pass as white for an episode titled "Denying My Race." In 1995, audiences were introduced to college student Josh Solomon, who detailed his experiences of living as a black man for a week. In 1996, Winfrey spoke with members of the Little Rock Nine, the African American students who made history in 1957 when they integrated the public high school in Little Rock, Arkansas.

In addition to discussing tough issues concerning race, Winfrey used the show as a platform for launching several campaigns—including a successful drive to establish a national database of convicted child abusers and an ongoing movement to stop texting while driving, the No Phone Zone. Oprah's Book Club, started in 1996, reinvigorated American audiences' interest in contemporary fiction and quickly became a major influence in the publishing world. Each month, Winfrey selected a novel, and viewers read along with Winfrey. Selection for Oprah's Book Club pushed a novel's sales into the millions, creating the "Oprah Effect." Other regular segments included Oprah's Favorite Things, which showcased Oprah's favorite gifts; Oprah's Angel Network, a charity network in which viewers' contributions were used to help others; and Oprah

and Gayle's Big Adventure, episodes that followed Winfrey and best friend Gayle King on a series of adventures.

By the late 1990s, Winfrey had initiated a shift in the programming and aired episodes designed to help viewers "lead their best lives." Winfrey incorporated a series of friends/experts who appeared regularly on the show, including personal finance expert Suze Orman, interior decorator Nate Berkus, therapist/counselor Dr. Phil McGraw, spiritual teacher Iyanla Vanzant, and physician Dr. Mehmet Oz. McGraw, Berkus, and Oz now have their own talk shows. In January 2011, Winfrey and Harpo launched the Oprah Winfrey Network (OWN), and *The Oprah Winfrey Show* ended three months later, in May. Oprah pledged to appear a minimum of 70 hours per year and hosts two new shows, *Oprah's Next Chapter* and *Oprah's Life-Class*.

Order Sons of Italy in America

The Order Sons of Italy in America is the oldest and largest national organization for men and women of Italian heritage in the United States. It was organized and founded in 1905 as a mutual aid society for the early Italian immigrants of the great migration (1880–1923). According to the

2010 U.S. Census, there are more than 17 million Americans of Italian descent in the United States.

History

Italy can claim one of the world's oldest civilizations, but at the same time, Italy is one of Europe's youngest nations. Although the history of its people dates back over 2,000 years, the nation with geographical borders operating under a central government was formed only about 150 years ago. In 1859, what today we call Italy existed as several separate states. In the south, the Bourbons of Spain ruled the Kingdom of the Two Sicilies, comprising Sicily, Naples, and southern Italy. The northern regions of Lombardy, Veneto, and the Grand Duchy of Tuscany were under the rule of Austria. To the west and the far north lay the Kingdom of Sardinia, which included the island of Sardinia and the regions of Piedmont, Savoy, Nice, and Liguria. In the center of the land were the Papal States. Rome and Catholic were nearly synonymous, and the geographical region known as the Papal States was situated in the center region.

It was in 1859 that a young military tactician, Giuseppe Garibaldi, began to work for the unification of the separate kingdoms through political maneuvering and military force. Garibaldi realized his goal on September 20, 1870, by attacking and annexing Rome. The invading "red shirts" army seized the Catholic Church, interrupting the First Vatican Council (1868–70), causing bishops to flee and the pope to become a prisoner of the Vatican, and leading 19th century Austrian statesman Klemens von Metternich to have famously scoffed, "Italy is only a geographical expression."

The Sons of Italy in America had a difficult task: creating two new identities for the immigrants—one of being Italian and the other of being American. Originally established as *Figli d'Italia*, the Order Sons of Italy in America was founded by Dr. Vincenzo Sellaro and five other Italian immigrants living in the Little Italy neighborhood of New York City. Their aim was to create a support system for all Italian immigrants that would provide basic education and health and insurance benefits, and that would assist them with their adjustment to America. Old World families had been large enough for each to look after its own, but in the New World, many Italian immigrants were single men, and when families did come

over, rarely were they as full or as extended as in their native land. Newcomers soon realized that their families were unable to effectively deal with most of the problems encountered in the urban setting. Mutual aid societies provided a sense of community, provided nostalgia and encouragement, paid sick benefits and insurance, or otherwise assisted newcomers in their adjustment.

Group Culture and U.S. Impact

In the United States, mutual aid societies of the 19th century were originally based on place of origin, often the town or province of one’s family. Early groups were small, financially weak, and mostly short-lived. The Sons of Italy encouraged small groups to consolidate and shifted members’ focus from towns of origin to a crafted sense of Italian heritage. By 1923, the Sons of Italy were nationwide in scope, numbering nearly 300,000 members within 1,190 lodges.

Immigrants who joined mutual benefit societies contributed small amounts monthly, generally between 25 and 60 cents. In return, the society guaranteed to assist them when they inevitably became injured and to bury them when they died. Eventually, free schools were established to teach the immigrants how to speak and write English and to assist in the paperwork and training necessary to become U.S. citizens.

By the middle of the 20th century the Sons of Italy were expanding their services, offering Italians assistance with their assimilation into America. Sons of Italy began opening community centers with various entertainments, from Italian language newspapers and magazines to sports, theater, and puppet shows. Soon, other mutual aid societies followed suit, expanding their services to provide access to recreational facilities, sporting events, and religious celebrations.

Contemporary Scene

Status anxieties engendered by negative stereotypes generated efforts for second- and third-generation Italian Americans to highlight the contributions of Italians to the development of American culture. Perhaps the most vigorously fought campaign was the effort to have Columbus Day declared a federal holiday. Columbus Day served as a symbolic expression of the dual identity of being Italian American by placing an

Italian at the discovery of the New World and the beginning of American history. The new federal holiday legitimized their claims to being authentically American while allowing them to take pride in being Italian.

This developing sense of pride in being Italian American took the form for the Sons of Italy of an aggressive anti-defamation campaign designed to counter discrimination and prejudice found in the media and in American culture. The Commission for Social Justice was launched in 1979 to fight the negative stereotyping of Italian Americans by the entertainment, advertising, and news industries. Further, a second subsidiary group, the Sons of Italy Foundation, was created as a philanthropic arm of the Sons of Italy, preserving Italian culture, offering scholarships, and promoting a positive identity.

Organization of Chinese Americans

The Organization of Chinese Americans (OCA) was founded in 1973 to bring together Chinese American communities across the United States and to focus on issues in the United States rather than in China. The original concept for the

organization was to create a voice for Chinese Americans, analogous to the National Association for the Advancement of Colored People for African Americans or the Japanese American Citizens League for Americans of Japanese descent.

The OCA held its first national convention on June 9, 1973, and K. L. Wang was elected the organization's first president. Today, there are over 80 chapters and affiliates of the OCA across the United States, and the organization's focus has broadened to include the interest of Americans from all Asian and Pacific countries.

The mission of the OCA, according to its Web site, is to advance "the social, political, and economic well-being of Asian Pacific Americans." Specific goals include fostering cultural heritage; advancing community building and coalitions; promoting civic participation, education, and leadership; and advocating for social justice. The OCA explicitly refrains from taking positions on the politics of any foreign country. The OCA is headquartered in Washington, D.C., where it monitors national legislation and policy issues and also works in coalition with other Asia-Pacific organizations. The current president is Ken Lee, a 2008 retiree from UPS, where he was the first Asian American to achieve the rank of vice president and where he also served on the corporate diversity committee.

The OCA is engaged in several efforts to draw attention to America's past history with regard to immigrants and to push for reforms in the current immigration system. The 1882 Project takes its name from the 1882 Chinese Exclusion Act, a federal law that prohibited Chinese laborers from immigrating to the United States and that led to passage of many state and local laws restricting the rights of Chinese living in the country. The 1882 Project aims to educate Americans about the 1882 Chinese Exclusion Act and to achieve passage of a congressional statement recognizing the wrongs done to Chinese Americans by this act. The OCA opposes current attacks on *jus soli*, or birthright citizenship, which guarantees the right of anyone born in the United States to claim citizenship, and supports the DREAM Act, which provides several pathways for undocumented citizens under the age of 18 to achieve citizenship. The OCA also supports the Reuniting Families Act to help

family members of U.S. citizens receive visas to enter the United States.

The OCA runs several programs to help Asian-Pacific Americans attend an institution of higher education, develop their leadership skills, and advance in their chosen careers. The OCA created its first scholarship program in 1993, and it partners with various companies and foundations to fund scholarships for Asian-Pacific Americans attending institutions of higher education.

In 2011, 10 OCA-AXA scholarships were awarded in recognition of students' academic achievement, leadership, and community service; 15 OCA-UPS Gold Mountain Scholarships to students who were the first in their family to attend college; and 15 OCA-Verizon College Scholarships went to students demonstrating financial need, leadership, achievement, and commitment to community service. The OCA runs a paid summer internship program in Washington, D.C., to introduce students to public policy issues and to help them develop their leadership skills. It also provides a free mentorship program, sponsored by UPS, which pairs Asian American professionals with leaders in their field for a three-month period that includes four one-on-one mentoring sessions and two mentoring networking sessions. The B³ program, created in 2009, aids Asian-Pacific American professionals advance their careers through networking, mentoring, and professional development. The "3 B's" of the program's name stand for Build, Breakthrough, and Believe, and the program provides a number of workshops and seminars on topics such as personal branding and corporate success strategies.

The OCA holds an annual convention, such as the one in Las Vegas, Nevada, August 2–5, 2012. Five individuals received the OCA's Pioneer Award for making important contributions to their professional fields and to the community: Major Kurt Chew-Een Lee, the first Asian American to be commissioned as a regular officer in the Marine Corps and the first to be assigned command of a combat unit; Maxine Hong Kingston, award-winning author of books including *The Woman Warrior*, *China Men*, and *The Fifth Book of Peace*; J. D. Hokoyama, a consultant and retired board member of Leadership Education for Asian Pacifics, Inc.; Shiro Floyd Mori, a leader of the Japanese American Citizens League

and member of the executive council of the Leadership Conference on Civil Rights; and Karen Narasaki, a national authority on immigration and civil rights, a member of the Asian American Center for Advancing Justice, and immediate past president of the Asian American Justice Center. The OCA also holds leadership summits in partnership with the Japanese American Citizens League; the first such conference was held in 1984, and the most recent in 2012.

Osage

The Osage call themselves *Wazhazhe*, or "the People." They are divided into two basic moieties (social divisions): the *Tzi-sho* (Sky People) and *Hunkah* (Earth People). The unity of the sky and earth peoples is symbolized by a perfect man who faces east in times of peace and west in times of war. The Osage speak a language that is part of the Eastern Siouan-Catawban (Dhegiha Siouan branch) family and are related to the Omaha, Ponca, and Quapaw. Only a handful of elders still speak Osage but the Osage Nation has an

active revitalization program, and young people are striving today to learn their heritage language. Several groups such as the Four Directions Institute are active in promoting language fluency.

The Woodland ancestors of the Osage lived along the banks of the Ohio River and points east. They were descendants of sedentary farmers (Indian Knoll and Mississippian Oneota cultures) who made yearly migrations onto the Great Plains to hunt buffalo. They probably separated from the Quapaw and Kansa around 1500 as they migrated to what is now Missouri and Arkansas. The horse changed their culture and permitted the Osage to make yearly migrations farther onto the Plains; they also became known as the greatest traders in the Mississippi Valley region. Although the Osage spent more time on the Plains hunting buffalo and trading, they still had agricultural villages. They were encountered by European traders and explorers beginning in 1673; Jacques Marquette called them the "Ouchage" on his maps. French traders came regularly to their 17 villages on the Osage River. After the Spanish took control of the region, Osage trade expanded.

Population movements from the east affected the Osage by the middle of the 18th century. They expanded west into Caddoan territory in the 1760s, forcing the abandonment of the last Caddo village on the Arkansas River in 1870. This gave them access to large buffalo herds and changed their seasonal economic cycle. Next, a series of forced removals pushed the Osage west, then south, although they actively fought each incursion into their territories.

Their first treaty with the U.S. government (1808) established Fort Osage and provided some services in return for peace, giving the federal government authority and eminent domain over most Osage lands—basically half of Arkansas and seven-eighths of Missouri. Their compensation was one-sixth of a cent per acre. The treaty of 1818 forced the Osage to recognize Cherokee and Euro-American settler incursions on their lands. Called the Lovely Purchase, 600,000 acres were presented to tribes removed from the east. The U.S. government gave the Osage \$4,000 for 1.8 million acres of land, which amounted to \$0.045 per acre, then immediately sold it to Cherokee for \$2 million. The U.S. government made a profit from Indian removal.

As part of the Indian removal acts of the 1820s, the Osage “lost” more of their territory to the Cherokee; the two groups fought when the Cherokee arrived under military escort. Overwhelmed by the sheer numbers of Native immigrants, the Osage retreated. Under the Treaty of 1825, “the People” were “assigned” the southeastern portion of what became Kansas Territory as a bounded reservation. The rest of their land was ceded to the Cherokee. They were forced out in 1871. Based on the 1865 treaty, they purchased their old lands from the Cherokee in the northeastern part of Indian Territory and settled in five villages. Government officials estimated that there were about 3,680 “full-bloods” and 280 “mixed-bloods” (primarily people of Osage-French ancestry who were Catholics) at the time. This was probably only 5 percent of their earlier population.

Smallpox and measles epidemics continued to decimate the population, and by 1906, the Osage numbered 2,230, half of whom were classified

as mixed-bloods, a result of increasing intermarriage with non-Indians. This affected Osage religion and healing practices. Some of the 24 clans lost their “Little Old Men” (*nóhžika*) who served as each clan’s religious leader and historian and whose responsibility was to remember all the sacred rites and prayers and pass this knowledge on to their apprentices, many of whom also had died or been forced to attend distant boarding schools. As a result, the religious ceremonies and prayers associated with clans were curtailed.

The Osage belonged to 24 clans organized under a moiety system, which determined who lived where in each village. Each clan possessed its own set of “life symbols,” and its name was taken from the most important of these. Each clan had a unique relationship to particular sacred powers and could influence only that part of the supernatural world. In terms of political organizations, the clans joined to form a confederacy. Each clan had responsibilities: one was responsible for peace and diplomacy, one for

Three members of an Osage group photographed in December 1920. The 2010 U.S. Census found 9,900 tribal members living on the Osage reservation, but they were outnumbered by 37,500 non-Indians also residing within their reservation boundaries. The Osage tribe benefited from the discovery of oil on their land in 1897 and has maintained a thriving economy since 1880.

determining migrations, and another for war. The leaders met for grand councils.

The 2010 U.S. Census lists 9,900 members living on their reservation. Like other reservations that were affected by the Dawes and Curtis Acts (allotment), 37,500 non-Indians also reside within their reservation boundaries. By 1889, due to tenant farmers working Osage lands, the Osage had become the minority population on their lands. Other Osage live throughout the United States and return to their home periodically to visit relatives and participate in dances and social gatherings.

The Osage Nation has been a thriving business, cultural, and economic entity since 1880. Under its first constitution, the council had an elected chief, an assistant chief, 15 legislators, a judiciary system, and an elected police force for each of the five districts. Its most recent constitution was ratified in 2006. By the 1890s, the Osage had over \$8 million banked in the U.S. Treasury. They used some funds to buy rations and livestock (because their last buffalo hunt had been in 1876) and later gave per capita payments to members.

Oil was found on Osage lands in 1897, and title to the natural resource remained with the tribe; the tribal members became essentially stockholders in their nation. Growth from oil remained low until after World War I, and then it led to a boom. Natural gas production is also important to the tribe. Although the Osage technically still have a reservation, when Oklahoma became a state in 1907, it was renamed Osage County. Their large casino is located in Pawhuska.

Other America, The

Michael Harrington published *The Other America: Poverty in the United States* in 1962. His study helped ignite a national debate on the persistence of poverty amid an otherwise strong and sustained period of economic growth. Indeed, following World War II, the United States had indisputably become the world's most powerful and wealthiest nation. Still, as *The Other America* effectively conveyed, not all shared in the prosperity.

In *The Other America*, Harrington argued that despite a rising standard of living, over a fifth of the population—or about 25 million people—remained deeply impoverished. He found the problem most acute among several specific demographics. First, he claimed that many rural whites, living primarily in Appalachia and the Ozarks, had failed to secure any of the postwar bounty. Their physical isolation from the nation's great cities and the decline of such rural industries as mining and logging left them in a perpetual state of economic depression. Next, he described so-called “rejects,” those who worked in big cities and small towns but who were hopelessly stuck in low-wage employment, unable to find higher-paying union jobs in industry. They lacked basic job protections, had no contract or health care, and had bosses who effectively acted as “monarchs” on the shop floor, according to Harrington.

Beyond what he described as the “invisible” poverty of rural whites, Harrington described several other populations of impoverished people. He found pervasive racism to be a serious impediment for African Americans trying to exit poverty. Racism, according to Harrington, also accounted for their inability to secure well-paid employment. Housing discrimination also ghettoized poor people of color, limiting their opportunities even further. Additionally, poverty plagued older citizens; illness, disease, and hopelessness often typified the experience of growing old in the United States.

With meager old-age benefits, many retired people in the United States lived the final years of their lives in destitution—ill-housed, forgotten, and cast aside by upwardly mobile, younger members of society. For different reasons, Harrington also found widespread poverty among young adults. Unlike older Americans, Harrington

believed that many young people were poor by choice. These “bohemians,” artists, graduate students, and writers—whom Harrington categorized as creative workers—lived in the slums of cities, often at odds with an older generation of ethnic whites.

Beyond a description of who in the United States was poor, *The Other America* advanced the controversial “culture of poverty thesis,” first articulated by anthropologist Oscar Lewis in 1959. Like Lewis, Harrington proposed that poverty was the result of structural economic forces, but perhaps more important, it was also the result of a culture whereby poor people allegedly knew no better and thus showed little initiative to move beyond the social class of their birth.

Harrington believed this was especially true of poor rural whites and urban African Americans. Many of these families had lived in impoverished communities for decades and seemed unable and unwilling to advance into the middle class. Entrenched, generational poverty, maintained Harrington, presented the most intractable problem.

Despite its critics, *The Other America* was nevertheless the most successful and influential study on poverty to come out of the decade, even if it was not the first (John Kenneth Galbraith’s *The Affluent Society* broached the topic as early as 1958). Curiously, *The Other America* was met mostly with ambivalence and failed to create much of a stir. It was not until Dwight Macdonald, a well-known reporter for *The New Yorker*, wrote an extensive review of the book months after its release that it gained a widespread readership. The review, highlighting poverty among poor whites in Appalachia and migrants in the southwest, garnered the attention of the John F. Kennedy administration and liberals throughout the nation.

By the end of 1962 and into 1963, Kennedy, along with key advisers such as Adam

Yarmolinsky, Sargent Shriver, Stewart Udall, and others, crafted a policy to address poverty in the United States. Harrington joined the ranks of other so-called “poverty warriors” such as Galbraith and Harry Caudill, whose *Night Comes to the Cumberland* (1962) provided an accompaniment to *The Other America*.

At the time of Kennedy’s assassination in late 1963, a liberal coalition had already crafted the Area Redevelopment Act as a response to the widespread poverty that Harrington had so thoroughly detailed. In 1964, Lyndon B. Johnson’s presidential campaign echoed many of the book’s themes. Most ambitiously, the Texan called for a “war on poverty.” With his landslide election, Johnson had the electoral mandate and congressional votes to enact sweeping legislation that sought to eradicate impoverishment.

Although debates continue as to how effective the war on poverty truly was, poverty rates indeed declined throughout the 1960s and much of the 1970s. In 1999, *Time* magazine declared *The Other America* one of the 10 most influential nonfiction books of the century, affirming the powerful impact the study had upon politics, public policy, and society in the 1960s.

P

Pacific Islander Americans

“Pacific Islander” is a complex, socially constructed ethnic category. Pacific Islander Americans are defined as residents of the United States who have ancestral ties to islands within the Pacific Ocean. Traditionally, Pacific Islanders are grouped into one of three ethnic categories based on the regions of Polynesia, Melanesia, and Micronesia. Although conceptualizing Pacific Islanders in this way aids classification, it neglects the long history of migration within the Pacific Ocean and creates perilous dichotomies between the three ethnicized groups. Migration within the Pacific is an interesting, and pertinent, counternarrative to the black/white racial paradigm. Pacific Islander Americans are the least common ethnicity in the United States, and prior to the 1960 U.S. Census, Pacific Islanders were lumped with Asians, when included at all. The recent option to identify as multiracial allows for a more nuanced examination of the Pacific Islander experience.

A History of Migration

The first Pacific Islanders are thought to have left Asia at least 2,000 years ago. Sailing in small boats from southeast Asia, the early Pacific Islanders settled in the area we know as Micronesia and

Melanesia. As island populations increased, people began to disperse on longer trips in larger vessels, venturing to the more isolated islands of Polynesia, eventually reaching Hawai‘i and Rappa Nui (Easter Island) in the middle and southeast Pacific, respectively. The journeys were long and dangerous, but those who survived prospered until foreign disease and technology ravished the Pacific.

During the 16th century, European and American voyagers “made contact” with “natives” of the Pacific. In a colonial fashion, Western explorers laid claim to sovereign land, destroyed native culture, and introduced diseases that ravished the island population. By the time ships from Europe reached the Pacific, they needed fresh bodies to man their voyages, and the Pacific Islands became a spot for corporal replenishing.

During World War II, some Pacific Islanders were forced to leave their island homes because of nuclear weapon testing. The Marshall Islands in Micronesia were the site of many nuclear tests and remain one of the most radioactive places in the world. The U.S. government provides special migration and monetary aid to the governments of former test regions because of the nuclear contamination. The extent to which the United States provides enough care for these displaced Pacific Islanders is contested.

As the jet plane has replaced the ship as the primary means of oceanic transportation, migration

within the Pacific has increased and stratified. Whereas a common passenger jet can fly the span of the Pacific Ocean in less than 16 hours, a steamship would require multiple months to travel the same distance. Research has suggested that jet travel creates a migration gap where only the most privileged can out-migrate.

The largest threat to the Pacific Islanders is brain drain. Brain drain occurs when intelligent, high-achieving young adults leave their home islands to pursue an education or career on the U.S. mainland. When these Pacific Islanders wish to return home, they find that attractive jobs are not available and the quality of life is lower in the Pacific, while the cost of living is higher. As a result of these factors, many Pacific Islanders remain in the United States and contribute to the Pacific Islander American population.

Pacific Islander Americans in the U.S. Census

Pacific Islanders first appeared on the census in 1910. The 1910 Census reported eight Maori living in the west. In 1920, the census included Samoan and Hawai'ian categories. The 1930 Census removed the Maori category, and the 1940 and 1950 data have no information on Pacific Islanders; they are presumably aggregated with the "Other Asian" category. The 1960 Census had two categories for Pacific Islanders—Hawai'ian and Part-Hawai'ians—but no other Pacific Islander categories. In 1970, the part-Hawai'ian category was removed, and the 1980 Census added Samoan and Chamorro to the racial categories.

The 1990 Census was the first to racially delineate Asians and Pacific Islanders. The 1990 Census kept the same three categories but added an Other Pacific Islander category distinct from Other Asian. This addition permits extrapolation of Pacific Islanders from the Asian race in census data.

The last two censuses, 2000 and 2010, best illustrate the multiracialism of Pacific Islanders. The 2000 Census was the first census to allow for multiracial identification. This is significant because approximately 54 percent of Pacific Islanders identified as two or more races in 2000. The 2010 Census shows a drastic 40 percent increase in Pacific Islanders. While the population of Pacific Islanders increased, the ratio of mono to multiracial Pacific Islanders remained constant at 56 percent.

Conclusion

The Pacific Ocean accounts for approximately 31 percent of the world's surface area, yet Native Hawai'ian and Other Pacific Islanders (the U.S. census aggregate of Pacific Islander Americans) accounts for only 0.4 percent of the U.S. population. To contextualize the Pacific Islander American experience, we must examine the social construction of Pacific Islanders, the history of migration within the Pacific, and the ways in which Pacific Islanders are incorporated into the U.S. census.

"Pacific Islander" is a socially constructed pan-ethnic group. The Pacific Islander identity becomes important when lobbying for political and economic resources. On a day-to-day basis, Pacific Islanders are more likely to identify with cultural, religious, island, and kin identities than with panethnic labels.

Paiute

The Paiute, also spelled Piute, comprise three distinct linguistic and cultural groupings within the Numic branch of the Uto-Aztecan language family: the Northern Paiute, the Southern Paiute,

and the Owens Valley Paiute. Despite their linguistic and cultural differences, the Paiute generally consider themselves a collective group, referring to themselves simply as Paiute, or as Numu or Numa, meaning “the People.” The Paiute live within the western and southwestern United States. Like other Native Americans, many reside on reservations and are fighting to maintain their cultural heritage.

The Northern Paiute are located within the western United States in California, Idaho, Nevada, and Oregon; the Southern Paiute are located in Arizona, California, Nevada, and Utah; and the Owens Valley Paiute are located in California and Nevada. Other names for the Paiute include Snakes and Bannocks. The desert, steppe, and forest highlands environments shaped a traditional nomadic hunter-gatherer lifestyle. Foods included fish, ducks, rabbits, mountain sheep, antelope, deer, lizards, insects and grubs, piñon

A Paiute woman weaving baskets in a photograph from around 1902. In 2010, the U.S. Census found 13,767 people of full or partial Paiute ancestry out of a total of more than 5.2 million Native Americans living in the United States.

(pine nuts), grass seeds, roots, rice grass, and berries. Their residences were portable huts of willow and brush. Traditional dress consisted of breechcloths or aprons, dresses, belts, leggings, moccasins or sandals, hats, and winter robes or capes.

The central traditional social unit was the extended family, which was economically and politically independent. Families separated for part of the year but would also gather seasonally into bands. Families and larger groupings were fluid in membership. Decisions were generally made by consensus. Religion played a central role in Paiute life and was polytheistic and animistic. Traditional Native American religious movements that had Paiute participation included the Native American Church, the use of sweat lodges, and the Sun Dance. Some Paiute adopted Christian religions as a result of mission efforts led by the Mormons in Utah, among others.

Cultural adaptations related to contact with other Native Americans included trading, the use of horses, and the cultivation of corn and other agricultural products. Contact with U.S. settlers did not immediately begin to significantly alter traditional Paiute culture but would soon have a devastating impact. Infectious diseases to which the Paiute lacked immunity, such as smallpox and cholera, were the leading cause of death resulting from intercultural encounters. The introduction of cattle and agriculture to the region disrupted hunting and led to conflicts over water resources.

Large-scale U.S. intrusion into the area occupied by the Northern Paiute began in the 1840s, although sporadic, largely peaceful earlier contact with explorers, hunters, and trappers occurred. Paiute territory included the path followed by settlers heading west along the Oregon Trail and by miners headed to California and Nevada after discoveries of gold and silver. Pony Express riders also crossed the region. Mormon settlement in Utah also brought large populations of U.S. settlers in contact with the Paiute.

Property disputes were often at the center of frictions between the Paiute and U.S. settlers. The Paiute also led raids on Euro-American camps, settlements, and mines, facilitated by the acquisition of guns and horses. Fighting between the Paiute and U.S. settlers and military forces included the Pyramid Lake War (1860), the Paiute

(Pah-Ute) War (1860), the Owens Valley Indian War (1861–64), the Snake War (1864–68), and the Bannock War (1878).

The federal government established reservations for the Paiute, as it did for many Native Americans, in order to separate them from surrounding settlements. Reservations housing Paiute populations included the Pyramid Lake, Walker River, Duck Valley, Moapa, and Malheur Reservations. Other Paiute gathered in Indian colonies, some located on abandoned military posts such as Oregon's Fort Bidwell and Fort McDermitt.

The federal government later divided the Paiute reservations into small individual allotments under the General Allotment Act (Dawes Act) of 1887, with remaining lands sold to non-Indian owners. Some reservations and Indian colonies housed schools for varying lengths of time, whereas at others, Paiute children were sent to Native American boarding schools, such as the Stewart Institute in Nevada. Southern Paiute religious leader Wovoka founded the Ghost Dance religion, promoting a harmonic pan-Indian future free of white domination. Western tribes such as the Sioux adopted the Ghost Dance as symbolic resistance to white cultural influences, sparking clashes in the late 1800s as the U.S. military sought to suppress the movement.

The Paiute received increased federal government recognition, tribal self-governance, land protection, and federal aid under the Wheeler-Howard Act (Indian Reorganization Act) of 1934 and the Indian Self-Determination and Education Assistance Act of 1975. In the 1950s, a number of Paiute tribes faced termination of earlier federal recognition, losing land, education, and health benefits. Most regained recognition and services in the 1980s and 1990s after successful lawsuits against the federal government. They have also been involved in western disputes over water rights.

Today, there are numerous federally recognized Paiute tribes living on modernized reservations or in colonies or communities in Arizona, California, Idaho, Oregon, Nevada, and Utah. The Native American population grew from the 2000 to 2010 U.S. Census. The 2010 figures count 13,767 people who identified themselves as of full or partial Paiute ancestry out of a total of over 5.2 million Native Americans. The total U.S. population in 2010 was 1.7 percent Native American,

22 percent of whom lived within American Indian areas such as reservations.

Traditional tribal political leadership exists alongside the federally recognized Western-style tribal governments formed under the Indian Reorganization Act of 1934. Businesses include the federal tax-exempt sale of cigarettes, fish hatcheries and permit sales, sales of traditional Paiute crafts, and livestock grazing. Ties to their cultural heritage are maintained through arts and crafts, language, music, religion, and oral histories and tales.

Pakistani Americans

People from the areas that are now Pakistan have been coming to America since the 18th century to work in agriculture, logging, and mining. Between 1947 (when Pakistan was created) to the mid-1960s, only 2,500 Pakistanis, mostly students, entered the United States. This trickle changed to a steady stream after the per country immigration quotas were eliminated in 1965, and many Pakistanis started coming to the United States for higher educations.

The first wave of Pakistani immigrants were largely Punjabis and Sindhis, with fewer Pashtuns and Balochis. Most of them were Sunni Muslims. Since 2007, over 50,000 Pakistanis have immigrated to the United States. The majority of

Pakistani Americans today—about 65 percent—were not born in the United States. Despite their relatively brief history in their new country, they have made notable contributions to its culture and economy.

For several historical and political reasons, the United States has remained the country of choice for most Pakistanis. Pakistan's close political alliances with the United States and the absence of any colonial baggage in the United States–Pakistan relationship explain the attraction that Pakistanis have felt to America. Immigration of Pakistanis peaked in the 1980s. The 2010 U.S. Census figures put the number of Pakistani Americans at 363,699.

The areas with significant Pakistani American populations are New York (22.1 percent), California (13.1 percent), Texas (12.4 percent), Illinois (7.6 percent), and New Jersey (7.2 percent). Since most Pakistanis who come to the United States are educated, speak English, and have had prior exposure to Western cultures, they tend to assimilate into American society quickly. A study that was based on the 1990 census data gives an idea of the distribution of occupations among Pakistani Americans: managerial and professional (33.5 percent); technical, sales, or administrative (35.2 percent); services (10.2 percent); production, manufacture, and labor (20.5 percent); self-employed (7.9 percent).

The Asian American Center for Advancing Justice reported that the 2011 median household income of Pakistani American families was about \$63,000, compared with \$51,369 for the national average. About 55 percent of Pakistani Americans hold at least a bachelor's degree, compared with the national average of 28 percent. At the same time, 15 percent of Pakistani Americans (the same percentage as for the total population) fall below the poverty line. Their unemployment rate of 8 percent is the same as the national average, but only 55 percent own homes, compared to 66 percent of the total population. Their per capita income of about \$24,700 is lower than the national average of \$27,100. Blue-collar workers, particularly taxicab drivers, earn low wages. About 23 percent of Pakistani Americans have no health insurance—higher than any other Asian American group and much higher than the national figure of 15 percent.

Family and Religion

Family is very important to Pakistani Americans. About 76 percent live in households with both parents—among the highest in Asian American groups and much higher than the national average. Nuclear households are the norm, but extended kinship remains strong. Only 36.9 percent of Pakistani American women are in the workforce. Among the younger generation, however, more women are preparing for and holding professional jobs.

With Islam the faith of over 90 percent in the country of their origin, religion is important to Pakistani Americans. Mosques are used for worship and cultural activities. Since September 11, 2001, mosques have come under strict surveillance and have sometimes been vandalized. Most Pakistani American Muslims believe this Islamophobic phase may pass like similar anti-immigrant eras in this country. To reduce prejudice, Islamic studies programs are being created across the nation, notably the Sohaib and Sara Abbasi Program in Islamic Studies at Stanford University, in California. Pakistani American organizations such as the American Muslim Alliance and Pakistan American Cultural Center are promoting interfaith understanding to improve United States–Pakistan relations.

The Contemporary Scene

Pakistani Americans have made significant contributions in the areas of culture, science, and technology. Research readily yields names of award-winning educators, authors, physicians, scientists, musicians, actors, and filmmakers. In education, the name of the Khan Academy has become a household word across the globe for providing free, top-class online instruction in many academic disciplines.

Pakistani American engineers invented the software tools to help design the iPad and structures like the Olympic Bird's Nest Stadium in Beijing, the cable-stayed Centenario Bridge over the Panama Canal, the Taipei 101 Tower in Taiwan, and the Freedom Tower in New York. Another Pakistani American, Kazi Mobin-Uddin, invented the umbrella that is deployed in the inferior vena cava to prevent embolism during heart surgery.

Among Pakistani Americans in politics have been mayors, city council members, state legislators, and

close advisors to the secretary of state. In a short period of time, Pakistani Americans have made their mark and, from all indications, will continue to contribute to American culture.

Palestinian Americans

Palestinian Americans are one of the major Arab American population groups. However, they are relatively difficult to count via federally collected data. The 2010 American Community Survey estimated 82,744 people of Palestinian ancestry in the United States, which would make them just under 6 percent of the Arab population and 0.026 percent of the total U.S. population. However, nearly 18 percent of the Arab American population identified themselves as simply “Arab,” which likely includes many Palestinians, and it is also possible that some of the 55,000 people identifying as having Jordanian ancestry are of mixed Jordanian–Palestinian ancestry, given that half of Jordan’s population is ethnically Palestinian.

The data collected by the Detroit Arab American survey suggests that approximately 12 percent of southeast Michigan’s Arab population is Palestinian or Jordanian, making them the third-largest population group of Arab Americans; it is unclear if this is representative of the Arab population of the United States as a whole. Of people who identified as Palestinian in the 2006 to 2010

American Community Surveys, 55.5 percent were U.S. born. The largest Palestinian American populations are located in California, Florida, Illinois, Michigan, New Jersey, New York, Ohio, and Texas; like other Arab Americans, Palestinian Americans tend to be concentrated in urban areas and the near suburbs.

Demographically, Palestinian Americans compare well to the rest of the American population. Twenty-three percent of Palestinian Americans over 25 have a bachelor’s degree, and 15.7 percent have a graduate degree, as opposed to 17.6 percent and 10.3 percent, respectively, of the total population. This education is reflected in their high household incomes; the median Palestinian American household has an income of \$55,950, more than \$4,000 higher than the median American household. However, 16 percent of Palestinian American families are below the poverty line, which is greater than the American average (10.1 percent).

Palestinian Americans have larger families than the American average (4.12 persons per family, as opposed to 3.17). Over a quarter of Palestinian Americans speak only English at home, and of the remainder, over 80 percent speak English very well. The picture that emerges from the demographic data is of a highly educated, professionally successful, and well-integrated ethnic group.

Although the first waves of migration from the Arab world to North America were mostly from what is now Lebanon, there have been small Palestinian communities in the United States since the early 20th century. However, migration increased prodigiously after World War II, when tensions between Zionists and other European Jews immigrating to Palestine and the native population began to increase.

The war between the newly created state of Israel and its neighbors in 1948 led to the creation of the Palestinian diaspora, consisting both of Palestinian individuals who left their homes during the 1948 war and lived as refugees in Jordan, Lebanon, Syria, Kuwait, and elsewhere and of those who remained within historical Palestine, either in the territory that became Israel or in the West Bank and Gaza, held by Jordan and Egypt until 1967 and by Israel since. Palestinian immigration to the United States increased again after 1967, when the West Bank and Gaza were

occupied, and has remained high. Because of the geographic dispersal of Palestinians, Palestinian Americans have roots in a variety of nation-states, hold different legal statuses, and have different historical and political experiences. They may have emigrated directly from Israel, the West Bank, or Gaza from a neighboring Arab country or from another location, particularly Latin America. However, most people who have at least some Palestinian ancestry identify strongly with that heritage, despite any previous family migrations.

The Palestinian American community is organized in two major ways: first, through hometown associations such as the American Federation of Ramallah (Palestine), and second, through political action in support of Palestinian rights and an independent Palestinian state. Advocacy for Palestine began in the early 20th century, parallel with anti-Zionist organizing in Palestine, and has continued until the present, with a variety of local and national pro-Palestine activist groups that include not only Palestinians but also Jews, non-Palestinian Muslims, and others.

Many diaspora Palestinians have become involved in nationalist politics in Palestine, such as Edward Said, a Palestinian American professor who was a part of the Palestinian Liberation Organization before the Oslo Accords. Palestinian Americans are also active in religious communities, particularly Arab Christian churches such as the Maronite and Melkite churches and the Muslim community in general.

Famous contemporary Palestinian Americans include Ali Abunimah, pro-Palestine activist and journalist and founder of the Electronic Intifada; Suheir Hammad, spoken-word poet; Naomi Shihab Nye, poet; and John Sununu, former governor of New Hampshire.

Palmer Raids

During the first Red Scare after World War I, the U.S. government conducted a series of raids to capture and deport foreign-born radicals. Named after Attorney General A. Mitchell Palmer, the Palmer Raids of 1919 and 1920 led to the arrest of approximately 5,000 immigrants, many of whom came from either southern or eastern Europe. When planning the raids, the Department of Justice targeted members of organizations that it deemed subversive, such as the Union of Russian Workers, the Communist Party, and the Communist Labor Party. Although the raids resulted in relatively few deportations, they disrupted immigrant community life and were a significant episode in the history of American nativism.

Causes

As the U.S. government mobilized the population during the World War I, officials emphasized the importance of 100 percent Americanism. Many Americans feared that immigrants might undermine the war effort and needed to demonstrate their loyalty to the nation. After Vladimir Ilyich Lenin and the Bolsheviks came to power in Russia during the 1917 October Revolution, U.S.

government officials feared that a communist revolution could take place in the United States. They were especially concerned that immigrants from the former Russian Empire may have brought foreign ideas about anarchism, socialism, and communism with them from their homeland.

After the war ended, the United States experienced a period of labor unrest that began with the Seattle General Strike in January 1919 and included major strikes in the coal and steel industries. In April 1919, radicals tried to send bombs to prominent Americans through the mail, and in July bombs exploded in several cities. One destroyed the front porch of Palmer's home, where investigators found radical leaflets in Italian as well as the remains of the bomber at the scene.

The incidents convinced many Americans that the government needed to root out foreign-born radicals to prevent a violent revolution. Palmer believed that if left alone, subversive immigrants would destroy American democracy, undermine religious belief, and threaten the well-being of American families.

Raids and Deportations

The Immigration Act of 1918 enabled the government to deport immigrant anarchists and those who supported the violent overthrow of the U.S. government. Since the act also permitted the government to deport members of any organization that supported violent revolution, the Department of Justice decided to focus on proving that immigrants belonged to organizations that it considered dangerous. J. Edgar Hoover, the head of the Bureau of Investigation's Radical Division, coordinated the government's efforts. In November 1919, on the second anniversary of the Bolshevik revolution, the Department of Justice raided branches of the Union of Russian Workers, a radical organization that also served as a mutual aid society, and arrested hundreds of alleged radicals.

After the first set of raids, antiradicals eagerly awaited the beginning of the deportations. Newspaper reporters emphasized the threat of radical beliefs to American society as they followed the cases of notorious radicals, including anarchists Emma Goldman and Alexander Berkman, long-time collaborators. Berkman had spent 14 years in prison for the shooting of Henry Clay Frick, and

both Goldman and Berkman had served prison sentences for opposing the draft during World War I. The government began its experiment with mass deportation by shipping 249 immigrants including Berkman and Goldman, aboard the U.S.S. *Buford* to Hangö, Finland, so they could cross the border into Soviet Russia. The Department of Justice hoped that more deportations would soon follow.

The November raids against the Union of Russian Workers served as practice for a much larger set of raids against the Communist and Communist Labor Parties, two newly formed organizations with revolutionary principles. Bureau of Investigation agents began the second set of raids on January 2, 1920, and focused on arresting foreign-born members. The government detained and interviewed thousands of alleged radicals in cities nationwide, including New York, Chicago, and Detroit, with the intention of deporting them en masse.

Although the raids targeted radical organizations, immigrant communities felt the effects of the raids more broadly. Immigrants feared attending meetings of mutual aid societies and other groups because of possible arrest. They also complained that employers discriminated against hiring immigrants from the former Russian Empire, believing that they were all dangerous radicals.

The End of the Red Scare

During the months following the raids, accused radicals had hearings in front of immigration inspectors in which Bureau of Investigation agents tried to prove that they belonged to illicit organizations. However, the Department of Justice's antiradical campaign depended on the cooperation of the Department of Labor, which made the final decisions about whom to deport. In the spring of 1920, an opponent of the government's plans, Assistant Secretary of Labor Louis Freeland Post, began cancelling immigrants' warrants. Of the over 2,000 cases that went before the Department of Labor, the Department of Justice succeeded in deporting only 556 immigrants. For his role in ending the deportations, Post had to defend himself against charges of radicalism and was nearly impeached.

Opposition to the raids grew during 1920 as notable Americans like Felix Frankfurter, a future Supreme Court justice, spoke out against the

government's conduct. Opponents noted civil liberties violations such as the government arresting immigrants without warrants and charging excessively high bail. The government also conducted illegal searches and used agent, provocateurs to ensnare targets. After May 1, 1920, passed without the predicted outbreaks of revolutionary violence, the public outcry against the dangers of immigrant radicals began to subside.

and other demographic shifts. Pan-Africanism believes in unity and solidarity of Africans and people of African descent across regions, while considering the continent as its homeland.

Pan-Africanism dates back at least to the mid-19th century. Both Martin Delany and Edward Wilmot Blyden advocated remigration to Africa. Around the turn of the century, Henry Sylvester Williams organized the first Pan-African conference in London in 1900. However, the expansion of Pan-Africanism happened when black intellectuals and leaders began to voice the need for black solidarity during the World War I period. Prominent thinkers such as Marcus Garvey, George Padmore, Kwame N'krumah, and others were the pioneers of this movement.

One of the most influential American figures was W. E. B. Du Bois, who stated that Pan-Africanism was not simply social idealism but also a political and economic platform for black autonomy. Du Bois went on to help organize the Pan-African Congresses in 1919 and 1921. During this period, leaders from Africa and its diasporas gathered to discuss the impact of Western colonization and ways to mend the suffering of blacks.

Pan-Africanism developed as the general global environment changed. Between two world wars, people of African descent and Africans interacted with each other more than ever, and they collectively experienced Western imperialism. As a result, the movement grew to involve not only racial solidarity, as Du Bois called for, but also literal or symbolic repatriations and radical liberation. For example, Marcus Garvey, who was born in Jamaica and later immigrated to the United States, considered Liberia as the homeland of all Africans and people of African descent. He encouraged re-Africanization by the Universal Negro Improvement Association (UNIA), entrepreneurship to achieve economic autonomy, educational programs, and other activities.

George Padmore, from Trinidad, was more radical, claiming that both Du Bois and Garvey lacked resistance against capitalist empires. He advocated the demise of all colonial regimes by, for example, defending Ethiopia from Italian invasion, establishing the International African Service Bureau, collaborating with C. L. R. James, and working closely with African independence leaders. Despite some disagreements, Padmore's concept of "United

Pan-Africanism

Pan-Africanism is an international political, cultural, ideological, and economic movement based on the belief that Africans and people of African descent share the same heritage and must work for the liberation of Africa and Africans. Although its multifacetedness and different conceptions make it difficult to reach its singular definition, it is a form of black internationalism that encompasses both the African continent and its diaspora, which has expanded through slavery, immigration, trade,

A supporter of Marcus Garvey photographed outside a Garvey Club and Universal Negro Improvement Association (UNIA) office in New York City in April 1943. Garvey founded the UNIA in 1914 to encourage re-Africanization, entrepreneurship, and educational programs.

States of Africa” reflected Garvey’s “Africa for the Africans” idealism. Both leaders believed that political awareness among Africans and people of African descent would eventually result in the reestablishment of the homeland.

Kwame N’krumah is one of the Pan-Africanists who worked with Padmore. Centering his activism in Ghana, N’krumah encouraged nonviolent civil disobedience. He resisted British colonialism and worked to combine Islamic, Christian, and African theologies and traditions. N’krumah argued that Ghanaian liberation alone was meaningless unless accompanied by the removal of imperialism, colonialism, and racism from the continent.

It was in 1963 that Pan-Africanism grew into the Organization of African Unity. This completed a two-decade-long shift from the U.S.- and Europe-centered Pan-Africanism to the Caribbean- and African-centered movement, which started with the Pan-African Congress in Manchester in 1945. Over this period, Du Bois, Padmore, and other Pan-Africanists moved to Africa. The new organization encouraged the promotion of African cooperation to eliminate colonialism from the entire African continent. This collectivist approach reflected the earlier activism of Garvey, Padmore, N’krumah, and Julius Nyerere. Nyerere, of Tanzania, was also a believer in the reestablishment of the homeland. He supported the liberation of Angola, Mozambique, South Africa, and Zimbabwe through guerrilla action. African unity, however, did not happen without problems. The 1960s experienced many conflicts between African nations, especially because of the border disputes from the colonial period.

In the meantime, the United States saw Pan-Africanism take shape in various forms. In addition to its political expressions, as were observed from Du Bois, Garvey, Malcolm X, and Stokely Carmichael, black culture also advanced around the idea of Pan-Africanism. The New Negro Movement, the Harlem Renaissance, the Chicago Renaissance, and other cultural movements gave birth to African American artists who expressed Pan-Africanism. Additionally, academic institutions began to offer courses in black studies. In 1969, Temple University established the Afro-Asian Institute, later renamed as the Department of Pan-African Studies.

Pan-Africanism continues to be relevant to many blacks to this day, especially within the context of globalization. Economic and financial cooperation between African and Arab nations has been on the rise since the 1970s. The significance of oil as a natural resource has affected the relationship among countries. The sixth and seventh Pan-African Congresses, in Tanzania in 1974 and in Uganda in 1994, underscored the need for unity within Africa but also with Arab and Latin American nations that experienced economic exploitation. Furthermore, after the end of apartheid in South Africa, the new African Union was established in Libya in March 2001 to address human immunodeficiency virus

and acquired immune deficiency syndrome (HIV/AIDS), economics, Africa's marginalized position within the world, and other issues.

Panamanian Americans

Panama is a small country, carved from Colombia, and Panamanian Americans are the second-smallest Central American ethnic group, numbering 165,456 as of the 2010 U.S. Census. Part of the Spanish colonial empire, Panama became independent in 1821 and was part of Colombia until 1903. It seceded from Colombia under American pressure, so that the new nation would allow the U.S. Army Corps of Engineers to build and operate the Panama Canal. Control of the canal was eventually ceded to Panama in 1999, in accordance with a 1977 treaty. Panama is primarily mestizo (about 70 percent), with a large West Indian black population (14 percent), followed by a 10 percent white population and 6 percent indigenous tribes (the Bribri, Embera, Guna, Naso, and Ngobe Bugle peoples). Over half of the population lives in the Panama City metropolitan area.

Although many Panamanians settled in the United States in the 19th century, they were all but unrecorded. Immigration officials and the census did not differentiate among the many nations of

Central and South America at the time. As of the 1940 Census, 7,000 Americans were of Central American extraction; several hundred were likely Panamanian or descended from Colombians from the lands that became Panama. Immigration slowed down in the early 20th century but accelerated quickly after World War II. In 1960, the Census Bureau began differentiating among South and Central American countries. At the time, Panamanians were one of the largest Central American groups in the country. About twice as many women immigrated to the United States as men, a curious statistic that tends to be found only in Central and South American groups.

Many of the women took jobs as maids, as housekeepers, in other domestic professions, or in the service or restaurant industry, and many sent remittances home to take care of their families. Some were low-level white-collar workers, like typists, data entrants, and clerks. The number of Panamanian immigrants who work in the domestic field is still quite high, at about a fifth of the total. Panamanian immigration increased after U.S. immigration regulations were adjusted in order to encourage relatives of American residents to immigrate, but other Central American groups began to overtake Panamanian Americans, particularly as turmoil in countries like Nicaragua drove refugees into the country.

Brooklyn and the Miami area are home to the largest Panamanian American communities. Panamanian Americans are also found in many cities with military bases: San Antonio; Hampton Roads, Virginia; Jacksonville, Florida; San Diego; Tampa; Fayetteville, Arkansas; Killeen, Texas; Columbus, Georgia; Colorado Springs, Colorado; Clarksville, Tennessee; and El Paso, Texas. Many immigrants were also drawn to the existing Spanish-speaking communities in Florida and California. Large numbers, though, settled along the Gulf Coast and in New England. The largest communities are in New York (29,619); Miami (13,529); Washington, D.C. (7,322); Los Angeles (6,353); Atlanta (5,599); Orlando (4,234); Tampa (3,772); Houston (3,350); Dallas (3,162); Philadelphia (2,841); San Antonio (2,663); Virginia Beach (2,658); Riverside, California (2,556); Chicago (2,300); San Diego (2,144); Seattle (2,002); Baltimore (1,877); Fayetteville (1,788); and Boston (1,749).

The Second Generation

Second-generation Panamanian Americans are likely to pursue an education after high school, whether at a four-year institution or a vocational school. Compared to other immigrant groups, there are very few farm or factory workers, which has held true through most of Panamanian American history. The dawn of the 21st century has seen a rise in Panamanian American prosperity and the white-collar workforce, as more Panamanian American young people obtain college degrees.

A disproportionate number of Panamanian Americans are West Indian, despite the mestizo majority in Panama, which may explain why Panamanians settle in many areas not known for their Spanish-speaking communities—like New England, which does have a strong West Indian and Caribbean community, as well as a number of migrant workers. New England is also home to large Dominican and Puerto Rican populations, many members of which are of African descent. The New England Panamanian American community tends to be spread out among the region's small towns, though there is a community clustered around the greater Boston area as well.

Prominent Panamanian Americans include fashion model Tyson Beckford, salsa singer Ruben Blades, singer Jeff Buckley, Major League Baseball player Rod Carew, jockey Eddie Castro, wrestler and personality Hulk Hogan, writer Sigrid Nunez, and actor J. August Richards of the TV show *Angel*.

Pan-Indianism

Pan-Indianism is a term used to describe an identity, culture, and philosophy, as well as organizations and movements comprising intertribal Native Americans united by common goals, usually aimed at expanding judicial, legislative, and political influence.

There are 565 federally recognized, culturally distinct tribes in the United States. Pan-Indianism fosters a new collective identity, what some call supratribal identity or Pan-Indian ethnicity, that is larger than individual tribal affiliations, thereby revealing the possibility of an inclusive American Indian or Native American group whose communal identity is based upon a shared colonial history and ongoing relationship with the United States. Pan-Indianism promotes group solidarity among all Native American members of American society regardless of tribal membership or heritage.

Although Pan-Indianism is thought to be a 20th-century urban phenomenon, it existed in 18th- and 19th-century religious movements like the Ghost Dance; in political organizations in the form of intertribal leagues or confederacies, like the Iroquois Confederacy; and in the failed attempt to create an Indian state in Oklahoma.

The development of a modern Pan-Indian identity was also facilitated by the boarding school experience (at such places as Carlisle Indian Industrial School in Pennsylvania and Haskell Indian Industrial Training Institute in Kansas), which forced Native American students to speak English. Establishing a common language made it possible for students to interact and bond as a result of shared interests and experiences.

Although the primary goal of these institutions was acculturation into American society by eradicating tribal identity, the school setting combined students from many different tribes and initiated the trend toward a new, mixed tribal or Pan-Indian identity. Some of the earliest Pan-Indian leaders, like Dr. Charles A. Eastman (Sioux), attended these intertribal schools.

Pan-Indian Religious Movements

One of the largest Pan-Indian religious movements is the Native American Church (NAC), related to the Peyote Cult from which it evolved, both of

which are known for the religious consumption of peyote (used for thousands of years). The NAC began in the 1870s on reservations in Indian Territory (now Oklahoma) and gained legal protection when it became incorporated in 1918. The NAC combines a range of American Indian traditions and practices along with Christian imagery and theology. Repeatedly attacked for the sacramental use of peyote, the NAC gives members a Pan-Indian identity that allows them to maintain traditional beliefs within modern society.

Pan-Indian Organizations

The Society of American Indians (SAI) was founded in 1911 and existed until 1923. Headquartered in Washington, D.C., SAI was the first national American Indian organization developed and run by a membership that was exclusively American Indian, primarily middle class, and educated, rather than European American advocates for American Indian rights (so-called Friends of the Indians).

SAI pursued the goals of national Indian reform through education and government policy, which also included securing Indian citizenship. The organization had its first annual conference in 1911 and published a journal from 1913 until 1920 (originally titled the *Quarterly Journal of the American Indian*, later renamed the *American Indian Magazine*).

The National Congress of American Indians (NCAI) was founded at a meeting in Denver, Colorado, in 1944. There, 80 delegates from 50 tribes united in opposition to the U.S. government's termination policy that encouraged assimilation by abolishing tribal governments, undermining treaty rights and tribal sovereignty. The NCAI is the oldest and one of the most influential Pan-Indian national political organizations; its principal aim is to improve the quality of Indian life by monitoring federal Indian legislation and contributing to the formation of federal policy that protects tribal sovereignty. The opening of the Embassy of Tribal Nations in the U.S. capital in 2009 is a testimony to the organization's efforts. In the 21st century, the NCAI has also expanded its role by collaborating with indigenous peoples around the globe.

The National Indian Youth Council, Inc. (NIYC), the second-oldest national Indian

organization, was created in 1961 in Gallup, New Mexico, after 10 of its original members, college students at the time, attended the American Indian conference at the University of Chicago earlier that year.

In Chicago a youth caucus was formed to voice their opinions regarding federal American Indian policy and self-determination. Early on NIYC was an activist-oriented Indian rights organization, preserving treaty rights that impacted fishing through "fish-ins" and protecting the environment through lawsuits against mining on Native American lands. The NIYC published a newsletter and copublished the periodical *Americans Before Columbus*. Founded and operated by Native Americans, the NIYC continues its mission of bettering the lives of Native Americans by protecting treaty rights, traditional religious practices, and sacred sites, and through voting rights, public education, and job placement and training.

Representatives from the National Congress of American Indians hold a press conference outside the U.S. Capitol building during "Tribal Unity Impact Week" in October 2011.

Pan-Indianism has also contributed to the development of academic programs and museums dedicated to the preservation and promotion of American Indian art, culture, and history.

Paraguayan Americans

A landlocked South American country, Paraguay is bordered by Argentina, Bolivia, and Brazil, and bisected by Rio Paraguay, the "parrot river." Over 90 percent of the population lives in one of the major cities, the largest of which is the capital port city of Asuncion. Most Paraguayans are mestizo, and Paraguay has adopted the native language of Guarani as one of its two official languages, along with Spanish. Guarani is a critical element of Paraguayan identity; Paraguay is the only country in the Americas in which a European language is the less-spoken language.

The Guarani are a group of indigenous South American people, native not only to Paraguay but also to Uruguay, Brazil, Argentina, and Bolivia. The increasing prestige attached to the Guarani

language, which today is spoken even by those with no Guarani heritage, is an important part of the changes that have occurred in Paraguay since the end of Spanish colonialism.

During the colonial era, the Spanish made a point of using their language as a way to drive assimilation. Through the 19th and much of the 20th century, speaking Guarani was a lower-class marker. However, the seed for today's construction of Guarani fluency and Paraguay's bilingualism was planted in the 17th century, when the Jesuit missionaries tasked with converting the indigenous population elected to learn Guarani and preach to the natives in that language, rather than teach them Spanish. This removed some of the motivation to abandon Guarani, because the natives could obtain the social status and privileges associated with becoming Christian without having to learn Spanish to do so. The Jesuits' use of Guarani also gave implicit approval to the language.

The Jesuits also helped develop a writing system for the language, which again contributed to its longevity. Guarani has contributed many words to Spanish and Portuguese, as well as several to English, including jaguar, tapir, acai, and piranha.

Paraguayans in the United States

The smallest Hispanic group in the United States, Paraguayan Americans number only 20,023. They are concentrated heavily in the northeast, Miami, California, and Maryland. The largest population by far is in the New York metropolitan area, where 7,500 Paraguayan Americans live, almost 40 percent of the total Paraguayan American population and more than the next 10 largest communities put together.

There are also Paraguayan communities in Washington, D.C. (1,793); Miami (1,531); Los Angeles (509); Chicago (375); Philadelphia (358); Bridgeport, Connecticut (336); Boston (301); Atlanta (267); Houston (264); Dallas (236); Minneapolis (229); San Francisco (191); Baltimore (158); Orlando (144); Richmond, Virginia (131); Phoenix (128); Tampa (113); Las Vegas (109); and Riverside-San Bernardino, California (108). There are only five communities in which Paraguayan Americans make up more than 1 percent of the population, all of them in New Jersey.

Paraguayan immigration to the United States began in the 19th century, but at the time neither

immigration nor the U.S. Census differentiated among the countries of South and Central America. Most of the earliest Paraguayan immigrants had first migrated to another South American country, typically Argentina, Brazil, or Uruguay, or were the children of such immigrants. By far, most Paraguayan immigration to the United States came in the 20th century, beginning in the aftermath of the 1947 civil war. The mid-20th-century immigrants were a mix of refugees from the turmoil, members of defeated political factions, and young Paraguayans seeking better economic fortunes in North America.

More than half of Paraguayan immigrants were unskilled. Slightly more women immigrated than men; domestic work and some white-collar jobs, like answering telephones, doing data entry, or filing, were more open to women than men, and Paraguayan women in such fields would typically send remittances home. Hotel and residential housekeeping is an especially common job among Paraguayan American women, while Paraguayan American men, especially in California and the Great Plains, often work in agriculture. Paraguay and Kansas produce similar agricultural products, and skills acquired in Paraguay are broadly transferable to growing wheat, raising cattle, or other agricultural activities in Kansas.

As a whole, Paraguayan Americans are less well educated than the general U.S. population, with only about 10 percent possessing a college degree. By extension, they are less prosperous than most other groups. Paraguayan Americans are predominantly Catholic, and because they tend to live in heavily Hispanic areas where Spanish-language service and media are available, they are not always fluent in English, especially recent arrivals or older family members. Family support networks are important, and newly arrived immigrants often settle in areas where relatives have already established themselves. In addition to Catholic holidays, Paraguayan Americans may observe Dia de San Blas, the saint day of Blas, the patron saint of Paraguay, and Paz del Chaco, the June 12th celebration of the end of the Chaco War. Paraguay's independence day is May 15.

Passing/Covering

Many contexts in the United States tend to favor, or implicitly adhere to, standards associated with race, religion, ability, sexuality, gender, and/or socioeconomic status. These standards are often considered, or informed by, white, Christian, able-bodied, heterosexual, male, and/or middle-class standards, for example, having easy-to-pronounce names and easy-to-access spaces, "God" being printed on the currency, and English being the language in which most "official" business is conducted (that is, in the government, on Wall Street, and in many universities).

When a person does not meet these standards in particular contexts, then the person might be expected to hide or minimize possible deviations, such as a man changing his (Hispanic) name from Jorge to George, a woman in a wheelchair who does not mention that she cannot comfortably and privately access a (able-bodied) bathroom, a man downplaying the (Islamic) holidays he celebrates, or a woman who fears letting people know that she does not, or cannot, speak English.

When a person tries to hide or minimize perceived, nonstandard differences, the person negotiates possible stigma. Many people think of stigma as either socially taboo classifications or obtrusive physical disabilities or defects. However, according to Erving Goffman,

stigma applies to any identity that people might find undesirable or offensive. The perception of stigma varies with context—an identity that is stigmatized in one situation may not be a stigma in another, according to Amir Marvasti. Furthermore, a person can manage stigma through passing and covering.

Passing involves hiding, lying, and/or invisibility. According to Harold Garfinkel, passing happens when a person has, or is perceived to have, an identity that the person does not claim as her or his own; she or he exudes a false or inaccurate self and may even try to convince others of this self by keeping particular information secret. Examples of passing could include a lesbian who lies to her parents about her same-sex attraction, a man not talking about his color blindness at work, or parents choosing not to discuss their atheism with their child's teacher. In these situations, people pass—that is, withhold information—in order to escape ridicule from others.

Covering happens when a person feels pressure to conform to (perceived) contextual standards. Covering can apply to identities that are either obtrusive or generally known but that are minimized out of a desire or need to assimilate. Unlike passing, secrecy does not necessarily exist with covering, in that a person allows others to know about her or his nonstandard identity; rather, the person cannot or does not care to emphasize this identity with these others.

Examples of covering could include a woman rarely mentioning her children in (male-dominated) corporate environments, a man who is deaf limiting his affiliation with deaf others, or an interracial couple who downplay their status as a couple by refraining to hold hands in public out of a fear of others' negative responses to their relationship. In these situations, persons cover by minimizing or not calling attention to particular identities.

Passing and covering intersect in a variety of ways. Both involve two identities—one (perceived) nonstandard identity and one (perceived) standard identity. Both require the management of personal information, and both rely on personal and social awareness; a person must recognize not only her or his difference but also that the difference is contextually marginal, and devalued, and that there might be risks in talking about this

difference with others. What makes passing and covering difficult to distinguish between, however, is the challenge of determining intentionality, a difficulty that Goffman marks as “in effect or by intent.”

For instance, consider a man born to a Mexican father and a Caucasian mother. Based on contemporary labeling practices in the United States, this person would be part Mexican, part Caucasian. If the man tried to hide his Mexican ethnicity even to the point of denial, and instead identified only as Caucasian, then the man would attempt to pass as Caucasian. However, if the man were comfortable with others knowing about his Mexican ethnicity and chose to not talk about or emphasize this ethnicity because of particular Caucasian standards, then the man would engage in covering; he would be okay with people knowing about his Mexican-ness, but the identity would not need to be discussed.

However, if a woman felt that the man were hiding his Mexican ethnicity (even though he did not intend to hide it), then the woman might think that the man was trying to pass as Caucasian. Inversely, if the man did not ever claim his Mexican ethnicity, wanting instead to pass as Caucasian, but a family member knew of the man's ethnicity, then the family member might perceive the man as trying only to cover—that is, minimize—his Mexican-ness, not hide from it. As such, while a person may intentionally try to pass or cover, other people may, in effect, perceive the person differently.

Although the benefits of passing and covering include safety, a (false) sense of acceptance and belonging, and material benefits such as employment or citizenship, passing and covering can also be detrimental for a person. With passing, a person might, as Goffman says, “pay a great psychological price” and have a “high level of anxiety” of “living a life that can be collapsed at any moment.” Furthermore, should the person's secret ever become known, others might consider the person dishonest or manipulative.

With covering, a person might feel, or be perceived by others as, dishonest and manipulative for trying to conform too much; as a form of (coerced) assimilation, Kenji Yoshino writes that covering can seem like an “assault on our civil rights,” given that people are able to be different

as long as they do not talk about or call attention to their differences.

Patrón System

A patrón system is used when political officials fill government positions with employees they select personally. When a candidate wins political office, that person often has the right to appoint people to a number of jobs. The patrón system proves problematic when people are appointed to positions solely for their political support or loyalty, rather than for their merit or qualifications to fill a given position. Unique among state governments in the United States, the state government of New Mexico operated under a patrón system of appointments during the state's first 50 years.

At the federal level, a system of checks and balances prevents some negative consequences of the patrón system. For example, requiring Senate approval for many presidential appointments serves as a check on the president's power to appoint unqualified candidates. In most states, government is composed of a mix of elected officials and employees who have risen through a civil merit system. However, under the patrón system in New Mexico, regional political bosses controlled hiring of local and state employees, with

no civil merit system in place. This meant significant turnover after each local election, as campaign supporters were rewarded with positions. One legacy of this system is that it kept the qualifications for many government jobs artificially low in New Mexico, so that favored appointees would meet the hiring requirements.

New Mexico's governmental patrón system was rooted in the older landowning patrón system that had dominated Spanish American cultural arrangements for centuries in what would become the American southwest. In that system, the patrón provided employment, community leadership, and financial security to the *peons* who worked for him. In such cases, the patrón-peon relationship resembled traditional lord-vassal relations. The peons were kept in debt to their patrón, who addressed the community's financial needs from his vast resources in return for loyalty and communal labor.

Some patróns were landowners who employed peons as farm workers or ranchers. Most, however, were village patróns who were social and financial leaders in their small communities. The village patrón's role largely consisted of political leadership, and his power was based primarily on loyalty and respect from local independent farmers who looked to their patróns when village needs arose, from the building of churches and schools to care for the sick and elderly.

After New Mexico gained statehood in 1911 and moved toward political independence, the traces of the older landowning and village patrón systems appeared within the framework chosen for state government. Instead of directly exchanging labor for economic resources, as in the past landowner patrón system, though, a new emphasis arose on exchanging political resources for economic resources, more similar to the village patrón.

Political resources in this context involve community support, loyalty, and respect in ways less tangible than typical in other patrón system relations. Political patróns created societal bonds, which existed because of their clients' dependence on them for political and economic gain. The dark side of the patronage system was that it was grounded in an imbalance of power, in which the clients had no access to valuable resources, except through the advocacy of a political patrón.

Socioeconomic class disparities in the southwest also contributed to the rise of the patrón system. Wealth and resources were concentrated in the hands of the local, wealthy political elite, while many recent immigrants from Central and South America came from countries with similar patrón–client systems. As they settled in the American southwest, they looked to re-create the political systems with which they were most familiar. These new immigrants sought local patrones who could help them gain employment and housing, and in some cases provide grants or loans for businesses and land ownership. The patrones knew that building and maintaining relationships with the local Hispanic population was key to continued success in political office.

Arguments in favor of the political patrón system were that it encouraged political engagement and participation, and that it was the right of a political victor to appoint loyal supporters to choice positions within the system. The appointment system also had the side effect of reducing bureaucracy, since it rendered complex human resources systems unnecessary because of the relative simplicity of the appointment process.

However, in practice, this system had several undesirable results. It caused frequent turnover in political positions, leading to an ill-trained government workforce. It also re-inscribed problematic race relations into government service. Anglo American candidates for office, in addition to their practical qualifications, often had the deep financial resources and broad political networks needed to run successfully for office against Hispanic candidates with less access to such campaign resources. Once appointed, they tended to fill positions with their Anglo American supporters. Thus, the patrón system resulted in few Hispanics being elected or appointed to mid-level and entry-level positions, in spite of the significant percentage of Hispanics in the local population.

In 1961, the Personnel Act created a merit-based system of hiring and promotion, meant to replace the former patrón system. Objective examinations were required to demonstrate a candidate's qualifications and merit for particular positions. Current employees in the system at the time of the Personnel Act, however, maintained significant influence in local and state government, well into the early 1970s.

By 1976, roughly a dozen state agencies were directly overseen by a single individual appointed by the governor, resembling a traditional cabinet system. Yet boards and commissions, over which the governor had no power, oversaw more than 100 agencies. This mixed approach to governance, meshing the patrón system with other models of governance, has persisted to the present day in New Mexico.

Patterson v. Alabama (1935)

Patterson v. Alabama (294 U.S. 600, 1935) was a landmark decision of the U.S. Supreme Court that, along with the companion case *Norris v. Alabama* (294 U.S. 587, 1935), established that systematic and arbitrary exclusion of African Americans from jury service was a denial of a defendant's right to equal protection of the laws as guaranteed by the Fourteenth Amendment to the Constitution. The case was one of three "Scottsboro Boys" cases heard by the U.S. Supreme Court, which held in *Powell v. Alabama* (287 U.S. 45, 1932) that failure to provide adequate and timely counsel to defendants in capital cases, as provided for by the Sixth Amendment,

was a violation of the “due process” clause of the Fourteenth Amendment. Collectively, these decisions advanced the cause of black equality in the United States by opening cracks in the segregated and discriminatory system of justice in the American south.

Background

The Scottsboro Boys saga began in 1931, when two white women falsely accused nine African American young men of raping them aboard a southbound train in northeastern Alabama. The accused narrowly escaped a lynching and subsequently languished in prison while their case evolved into a long legal struggle that revealed the depths of institutionalized racism and white supremacy in the south.

The nine young men, ranging in age from 19 to 12, were hoboing on the Memphis-bound freight train out of Chattanooga, as were their two accusers. All were feeling the effects of the ever-deepening Great Depression, and most were looking for work. A fight between some of the blacks aboard the train and a group of white young men resulted in the whites being forced off just ahead of Paint Rock, Alabama. When word spread of the ouster, a group of white vigilantes assembled in the town, ready to mete out some sort of justice to the group of blacks. It was there that two young white women, Victoria Price and Ruby Bates, fearful of being arrested for vagrancy under the Mann Act, agreed upon their rape story and accused the nine.

That the accused were subsequently taken to the county seat of Scottsboro and actually tried in a court of law for their alleged crime was seen by most whites in Alabama as a progressive step. Whites in Alabama, as across the south, had “redeemed” their state from Reconstruction rule and had, beginning in the 1870s, reestablished white supremacy by way of legally codified racial segregation, black disenfranchisement, and extra-legal violence, including the lynching of blacks accused of heinous crimes, especially rape. The sanctity of white southern womanhood was tantamount to the purity of the white race, and its violation was a blow to the heart of white supremacy. Thus, when black men were accused by white women of rape, the result was generally death, often by mob justice in the form of lynching.

The Trials

Most whites were satisfied that justice had been even more properly done when an all-white jury hastily convicted the nine of rape on the sole basis of their accusers’ testimony. Eight of the nine were sentenced to death as an angry would-be lynch mob gathering outside the courtroom was held back by the Alabama National Guard. The jury could not unanimously agree to sentence 12-year-old Roy Wright to death, and the judge declared a mistrial. An eventual appeal to the U.S. Supreme Court resulted in a reversal in the *Powell* decision, on the grounds that the defendants had only had the benefit of a 20-minute meeting with reluctantly appointed counsel prior to their trial. The cases were remanded, and a new round of trials was held in nearby Decatur, Alabama.

The Scottsboro case then quickly became a cause célèbre. The National Association for the Advancement of Colored People (NAACP) sought to represent the accused, but it was muscled out by the Communist Party–affiliated International Labor Defense (ILD). The ILD convinced celebrated New York attorney Samuel Leibowitz to conduct the defense and embarked, itself, on a propaganda campaign to expose the injustice of American capitalism. The ensuing trials thus brought national and international attention to Alabama as the state sought to reconvict the accused, again with juries culled from all-white jury lists.

Heywood Patterson was tried first, convicted, and sentenced to death in the Alabama electric chair, but the trial judge, James E. Horton, sacrificed his career in public office by setting the verdict aside in light of the overwhelming evidence of Patterson’s innocence presented by his defense. Leibowitz tore holes in the testimony of all of the prosecution’s witnesses, most especially by forcing an examining doctor to agree that neither Price nor Bates showed any signs of rape after the alleged incident. When the trials resumed, the new trial judge, William W. Callahan, routinely frustrated the efforts of the defense and helped ensure that the result of the new trials would be the same as the first. Patterson and subsequently Clarence Norris were yet again convicted and sentenced to death. The Alabama Supreme Court upheld the convictions.

Supreme Court Decisions in *Norris and Patterson*

The Supreme Court heard the *Norris* and *Patterson* appeals in February 1935. Leibowitz brought in the relevant jury rolls to show not only exclusion of blacks but an egregiously fraudulent attempt to add black citizens' names after the defense had raised the issue at trial. The court unanimously concluded that the rolls had been tampered with and that the defense had provided adequate evidence of the systematic and arbitrary exclusion of qualified African Americans from jury service, which deprived the defendants of their right to equal protection as provided by the Fourteenth Amendment.

The court refused to accept the argument of local registrars that they had carried out their duties faithfully and that 30 or more years of exclusion of African Americans was simply a matter of there being none qualified to serve. The absence of qualified blacks on the lists for such a period of time was deemed in *Norris* to be a prima facie case for exclusion and grounds for a reversal. In *Patterson*, the justices had to, with some effort, dispense with a technicality (a deadline that Patterson's attorneys had unexpectedly missed) before applying the logic of *Norris* and suggesting that the Alabama Supreme Court should, itself, vacate the judgment against the defendant.

The Fate of the Scottsboro Boys

The Supreme Court decisions did not result in immediate exoneration and freedom for the Scottsboro Boys. The original indictments were quashed, and new indictments were issued. Ruby Bates recanted her testimony and admitted to fabricating the rape story. Victoria Price clung to her story for life, however, despite giving absurdly contradictory and often completely incredible testimony throughout the many trials, and despite the general evisceration of much of the prosecution's case. Even if Alabama jurors knew Price was lying, she was still a white southern woman.

Leibowitz, on the other hand, was a Jewish lawyer from New York who apparently did not respect her. Price's dubious testimony and Leibowitz's unpopularity remained enough to secure guilty verdicts, but the Alabama state authorities began to realize that the negative publicity generated by the cases was too damaging to the state's

image. By 1937, the state had agreed to a compromise by which the charges against the most obviously innocent defendants were dropped. Patterson, Norris, and two others, meanwhile, were reconvicted with a token black presence on each jury and given lengthy prison terms or, in Norris's case, another death sentence.

Ultimately, four of the reconvicted five were quietly paroled after the furor of the cases had died down, allowing the state to avoid the sort of publicity that would have surrounded outright acquittals. Powell and Norris were released in 1946. Patterson escaped to Michigan, where the governor refused to extradite him back to Alabama. Each of the defendants suffered the psychological effects of over a decade's imprisonment in some of the most notorious prisons in the country. None ever led what might be considered a normal life upon his release.

The Legacy of the Cases

When the Scottsboro Boys cases reached the U.S. Supreme Court, due process and equal protection were a myth for blacks in southern state justice systems. With *Powell*, *Norris*, and *Patterson*, the court signaled its intention to scrutinize this situation. This was a departure from a century and a half of Supreme Court jurisprudence and a significant development in the history of the American system of federalism. The court's intervention in the state's criminal process was, in these cases, indicative of just how egregiously spurious the trials had been.

The Scottsboro decisions were a significant contribution to the American system of criminal justice. They certainly did not result in immediate equal justice for African Americans in the south. When Alabama governor Bibb Graves responded to them by warning local officials to reconstitute their jury rolls to prevent widespread vacation of indictments, the results were probably token. But in time and through further litigation based on the *Norris* and *Patterson* precedent, blacks took their places on jury lists and on juries themselves. Also, the right to counsel established in *Powell* was subsequently extended to indigent defendants in all felony cases.

Extrajudicially, these decisions, along with those obtained through the NAACP's campaign to dismantle segregation, were an early rallying point for

civil rights awareness and organization in the inter-war period. In popular culture, the cases have been represented in such works as Harper Lee's *To Kill a Mockingbird* and are still a powerful reminder to many Americans of the reaches of national prejudice in the first half of the 20th century.

Pawnbroker, The

In outline, *The Pawnbroker*, a film directed by Sidney Lumet and released in 1964, has little that is unusual in the way of plot. Sol Nazerman (actor Rod Steiger), a Jewish Holocaust survivor, runs a pawnshop in East Harlem with help from his Puerto Rican assistant, Jesus Ortiz (Jaime Sánchez). However, the shop is a money laundering front for racketeer Rodriguez (Brock Peters). Jesus's plan to have the neighborhood gang raid the safe goes awry when he takes a bullet intended for Sol. Jesus dies, and grief-stricken Sol stumbles into the street as the film ends inconclusively.

This simple synopsis is complicated by the fact that Sol is a survivor of Auschwitz—this was the first American film made from the point of view of a concentration-camp survivor—and from this challenging starting point, Lumet explores

recurring issues of inhumanity, prejudice, and the human condition against the backdrop of contemporary multicultural America. *The Pawnbroker* is not only a commentary on the horrors of the Holocaust, which in itself would have been a remarkable subject in the mid-1960s, but also does not spare the viewer in its conclusion that modern America has its share of parallel atrocities.

A viewer watching *The Pawnbroker* for the first time with no prior knowledge of its content has to work hard to piece together Sol's story. It opens with a sequence before the credits, aestheticized by slow motion, showing a family—a boy and girl, their parents (the father is a youthful Sol), and grandparents (whose European Judaism is denoted by their traditional garb) enjoying a rural picnic. The change in soundtrack from joyous music to harsh cacophony connotes an end to the idyll, but this is not yet seen.

Instead, the film moves to the present day, when Sol is visiting his sister-in-law's family, in a scene of affluent Long Island suburban life. We know Sol is with his sister-in-law because she laments about her beautiful sister and that it is almost the 25th anniversary. The anniversary of what is not expressly told, but at this point the film begins its most radical technique, a series of parallel cutting, as Sol sees flickering images of his wife taken from the idyllic precredits scene. From now on, parallel cutting will occur at key moments, sometimes too brief to be fully perceptible, sometimes long sequences that answer narrative puzzles.

The story really begins with the next sequence, as Sol drives to work in Harlem. Again, the film shows its innovation, with its authentic location shooting presenting a grimy city with a dense ethnic and racial mix. Three contrasting cross-cut scenes establish interlinking relationships, showing the details of Sol's pawnshop; Jesus's cramped apartment, in which he shows his aspiration, telling his mother not to speak Spanish; and Rodriguez's palatial home.

As Sol leaves the pawnshop that evening, a dog barking triggers a full-blown flashback to Auschwitz. He is plunged into the memory of a fellow inmate and friend, Rubin, trying to escape but being pulled down by a guard's dog; in Harlem, a gang is beating a man, who clings to fencing in an identical pose. In this way, *The Pawnbroker* is far more than a film that dares

to criticize the Holocaust; man's inhumanity to man has been transposed from 1930s Germany to 1960s New York, and this applies also to women. Jesus's girl (Thelma Oliver), trying to make money for Jesus's dreams of his own pawnshop, tries to seduce Sol. As she bares her breasts (this nudity is another pioneering element of the film), the parallel cutting virtually superimposes an identical image of Sol's wife. As the girl, in the present moment, beseeches him to "look," in a flashback Sol is forced by the commandant to look as various members of the "joy division," and then specifically his wife, service SS guards. The point is made by the editing that past and present are interchangeable while exploitation goes on.

Although the film explores religious, racial, and ethnic prejudice, more significantly, it also examines how economic exploitation underpins all prejudice. Sol has earlier told Jesus that "money is all" (ironically framing himself as a Jewish stereotype), but upon discovering that the girl works for Rodriguez, he is forced to recognize that he is part of an exploitation racket harming other women as the Nazis harmed his wife. From this point, Sol begins to tentatively thaw from his emotional deep freeze, and when Jesus is mortally wounded in the pawnshop raid, Sol holds his hands and caresses his face.

However, the film is too prescient a commentary on modern life to provide a palliating happy ending. The parallel cutting is not merely a technique but also a metaphor for the film's worldview. Sol remains not just a victim but also by the haunting image of Jesus's blood on his hands, a perpetrator too.

Penitentes

This secret religious society is found in northern New Mexico and southern Colorado and is also known as Los Hermanos Penitentes ("The Penitent Brothers"). Members of these Hispanic Catholic all-male societies practice penances, including flagellation and carrying heavy wooden crosses, in order to atone for their sins. At one time, there may have been as many as 20,000 members in these groups; today, membership is estimated at around 1,000.

Origins

The Penitentes' historical roots are most likely in the Third Order of St. Francis, a religious order for non-ordained Catholic men and women established in 1221. Franciscan missionaries from Spain had established Third Order Fraternidades (fraternities) in New Mexico and elsewhere in North America by the 1680s. Participants in these brotherhoods were not ordained men. Rather, these laypeople vowed to live by a set of rules, including simplicity in dress, fasting, daily prayer, regular confession, and works of charity and penance. Because they believed that sin could be atoned for in part through suffering, one penitential practice the Franciscans approved was self-flagellation (whipping) without loss of blood.

As Franciscan missionaries spread their order and the Catholic faith throughout Latin America, local fraternities took on their own structure and shape, adapting faith practices to fit their own cultural framework. Historical records are imprecise, but evidence suggests that the Penitentes grew out of one or more of these fraternities. When Mexico gained independence in 1821, many of the missionary orders pulled out of Mexico and the southern United States for a time. The resulting

shortage of local parish priests left fraternities to continue praying in their community while developing their own worship practices.

Throughout the 19th and early 20th centuries, a series of archbishops tried to repress the activities of the Penitentes, denouncing their practices as barbaric and ordering them to desist with their practices and processions. In 1846, the United States took over the territory of New Mexico, and shortly thereafter, the first Bishop of Santa Fe, Jean Baptiste Lamy, was installed. He tried to put an end to the Penitentes by barring them from local Catholic churches and denying the sacraments to their leaders. This drove the groups into hiding, but meetings and ritual practices continued in secret. The conflict between the Penitentes and Catholic Church leaders continued until 1947, when Archbishop Edwin Byrne officially recognized them as a lay order.

Group Structure and Initiation Rite

Each chapter of Penitentes is locally based, and there is no central authority overseeing all the groups. Their meetings are held in buildings known as *moradas*, usually stone or adobe one-room buildings with a single entrance and a simple cross over the door. The leader of each chapter is known as the *hermano mayor*, or chief brother. Primarily, the societies focus on the virtues of humility and charity by providing monetary and spiritual support based on the needs in their local communities.

Initiation into a Penitente fraternity takes place over a yearlong period, culminating during Holy Week, when all new members are marked with a cross cut into their flesh on their backs with a sharp piece of flint. There are three degrees of membership, each with its own initiation ceremony. Members of the most advanced Third Degree are expected to inflict various forms of self-punishment as part of their penitential rituals.

Related female auxiliary organizations were variously known as the Veronicas or Auxiliares. Their work was largely to support the men in their Holy Week processions and activities, rather than participating directly in the Penitentes' ritual practices.

Rituals and Holy Week Practices

Historical information suggests that the Penitentes took the Franciscan practices of bodily

punishment to extremes in their early years. They were also once expected to shed a small amount of their own blood as part of penance, but these physical self-woundings ceased within the groups around the time of World War II. However, since most writings about the Penitentes include sensational details from the late 1800s and early 1900s, they are perhaps best known for their approach to seeking forgiveness through physical pain.

Holy Week each year marks the height of their ritual practices. Members meet at the *morada* to sing and pray around the clock. On Holy Tuesday, some of the men dress in special white pants called *calzones* and are whipped outside the *morada* as they ask forgiveness from all the observers. On Holy Wednesday night, they form a public procession, the Procession of Sorrow. The members divide into two groups—the Brothers of Light, who carry candles and serve as a choir, and the Brothers of Blood, who strip to the waist and carry heavy wooden crosses or scourge themselves with whips made from yucca. The procession goes along a predetermined route, marking the traditional Stations of the Cross. It concludes at a hill chosen by each chapter as the local site of Calvary, the place where the historical Christ is believed to have been crucified. On Holy Thursday, they reenact the arrest and trial of Jesus.

The processions culminate on Good Friday, the Catholic feast of Christ's crucifixion, with a procession called the Encuentro ("encounter"). Each chapter performs its Encuentro differently, but all include a meeting of men and women who walk several miles between the *morada* and a local church while recalling the events of Jesus's crucifixion and death in song and prayer.

Until 1896, the penitents marked Good Friday with human crucifixions that drew public attention and eventually the anger of Catholic Church authorities. The Penitente chosen to represent Jesus in the crucifixion was usually bound rather than nailed to the cross. Modern-day versions of this Good Friday procession often include the raising of an empty cross adorned with symbols including a barbed-wire crown, which represents Jesus's crown of thorns; a spear such as the one used to pierce Jesus's side; and steel railroad spikes to represent the nails used to fasten Christ to the cross.

The Penitentes' membership numbers have dropped over time, but the intensity of their communal ritual practices still inspires believers' devotion and scholars' contemporary study.

A Pennsylvania Dutch barn decorated with two traditional circular painted hex signs in Lehigh County, Pennsylvania, in 2009. The Pennsylvania Dutch (or "Deutsch") are actually descended from German settlers who arrived in the area before 1800.

Pennsylvania Dutch

A distinctive group of immigrants who settled in southeastern Pennsylvania before 1800, the Pennsylvania Dutch are known for their ideal of independence gained from private ownership of farms. The region prides itself on its early posture against slavery and its diversity in religion. The title *Pennsylvania Dutch* is something of a misnomer. Although it seems to indicate an association with the Netherlands, it is in fact a transliteration of the German word *Deutsch*, meaning German. Although often associated with the Amish, there is no one religious affiliation of the area; many Pennsylvania Dutch are Lutheran, members of the Evangelical and Reformed Church, as well as Amish or Mennonite. Until

World War II, many spoke a dialect of German known as Pennsylvania German, but since that time, most now speak English.

Before the American Revolution, thousands of German immigrants had found a home in Pennsylvania. Germany as it is known today did not exist at that time; it was a group of independent states without a centralized government. After the Thirty Years' War, the Palatinate region of southwestern Germany became inhospitable to members of Protestant faiths. William Penn, a Quaker, had been granted a tract of land by Charles II in payment for a debt; Penn vowed to undertake the creation of a land of religious freedom.

Having heard of Penn's utopia, in 1683, the first 34 German Mennonites sailed to Philadelphia on the *Concord* and founded Germantown (now a neighborhood of Philadelphia). From that time until 1727, about 8,000 immigrated to the colonies, with about 700 going to North

Carolina, 2,300 going to New York, and the rest settling in Pennsylvania.

The resettlement of Palatines from 1727 for the next 28 years resulted in 58,000 Germans settling in Pennsylvania. From the outbreak of war between Great Britain and France in 1756, immigration slowed. Nevertheless, by 1790, the German settlers went from being a small minority to being a major factor in the new nation, gaining a reputation for their agricultural work, religious outlook, and political acumen.

Social groups organized around Pennsylvania Dutch ancestry often require members to trace their heredity to immigrants who arrived before 1800. Although there was significant immigration from Germany to the United States after this period, these later immigrants came from different areas in Germany and tended to move to cities in the west.

The first attempt to calculate the size of this population by the U.S. Bureau of the Census was in 1909, in the study titled "A Century of Population Growth." By examining surviving census records, the researchers attempted to use their inexact knowledge of surnames to count the German settlers in Pennsylvania in 1790. This process was stymied, however, because they failed to recognize names similar to British names (Mann, Peters) and also simplifications of spelling (Baumann to Bowman, and Albrecht to Allbright). This study determined that Germans made up 5.6 percent of the country's population and 26.1 percent of Pennsylvania's population in 1790.

A more recent study, however, shows that 38 percent of the 1790 population was of German origin. Thomas Purvis compares the frequency of German American surnames from 1727 to 1808, providing a better method of calculating the number of people of German descent. This study shows that the southeastern corner of Pennsylvania was the primary stronghold of the Pennsylvania Dutch in 1790, with Montgomery County having 57 percent German population. Northampton, Berks, Lancaster, Dauphin, and York Counties had at least 50 percent of residents who were of German descent. The high percentage of Pennsylvania's white population of German extraction had no equivalent anywhere else in the United States.

Although the people of this region have a faith rooted in Christianity, they are also known for

their folk traditions that border on magic. *Spelwerk* can be counted as one of the oldest traditions of European magic in the United States. John George Hoffman published a collection of home remedies and invocations in 1820, *Pow-Wows*. Growing out of this tradition are painted barn signs, aimed to please tourists, with images of stars, roses, and stylized birds. Certainly before 1800, barns would not have been painted; decorating barns is a more modern pastime. Nevertheless, the barn decorations draw from a panoply of earlier designs.

The Pennsylvania Dutch are easy to recognize in popular culture. The 1955 Broadway musical *Plain and Fancy*, named after the "plain" Amish and other austere groups and the "fancy" immigrants such as Catholics, depicts a barn-raising in a traditional Amish community. The region was also portrayed in the 1985 movie *Witness*, starring Harrison Ford and Kelly McGillis.

Tourists today are encouraged to experience the Pennsylvania Dutch area in Lancaster County as a slower lifestyle. The folk wisdom of this region is highlighted, as are its hardworking residents, who shy away from the enticements of modern life and choose instead a plainer way of living. Handcrafts, such as cabinetmaking, weaving, masonry, wheelwrighting, and millinery, are highlighted for visitors. Pennsylvania Dutch cuisine, including egg noodles, red beet eggs, soups, birch beer, funnel cakes, shoofly pie, apple dumplings, apple butter, pretzels, and scrapple, is well known.

People of Color

People of color is a phrase that is commonly used in America to refer to nonwhites in the population. It is an all-encompassing expression that expands upon and may eventually replace the term *minorities* when referring to racial minorities in aggregate. As a generalized concept, “people of color” frames the sociological, political, and enumerative racial dynamics of nonwhites. “People of color” is a shorthand way of referring to Latinos, African Americans, Asians, American Indians, and myriad other racial/ethnic categories in the United States, all as a group.

For centuries, race has been a key issue around which American institutions and social relations have been constructed and sustained. The term *people of color* reflects one way of framing how groups are organized around race and how, in the very broad sense, there have been unequal distributions of power, privilege, and status between whites and other groups in the population. This relatively new expression stems from an attempt to articulate progressive ideas about race and power in which whites (as a race) have historically held power and privilege, and nonwhites have been excluded.

Collectively, people of color in the United States constitute 27.6 percent of the population. The U.S. census distinguishes six categories of race/ethnicity, as defined by the U.S. Office of Management and Budget’s classification system: white; Latino or Hispanic; black or African American; American Indian or Alaskan Native; Asian; and Native Hawai‘ian or other Pacific Islander. The latter five, singularly and collectively, are generally considered people of color.

The largest group of people of color in the population during 2010 was Hispanic/Latino. African Americans (or black, Negro) is a second subset of people of color who were 12.6 percent of the population in 2010. The Asian race was the third-largest, at 4.8 percent of the 2010 population. American Indians/Alaska Natives comprised less than 1 percent of those who lived in America at this time, and Native Hawai‘ians and other Pacific Islanders were the smallest group, constituting just 0.1 percent of those living in the United States in 2010. The 2000 census was the first in American history to allow people to self-identify with multiple racial categories.

Approximately 9 million people, or 2.4 percent of the population, claimed two or more races in 2010. Bi-racial and multiethnic people are often considered people of color because it is likely that one or both of their parents are nonwhite.

Minority, Colored, and People of Color

In contemporary America, people of color are in the minority. Popular and social science narratives have expanded so that the term *minority* can refer to religion, sexual preference, and disability. When used to describe blacks, Latinos, Asians, Hawai‘ians, American Indians, and other nonwhites, “minorities” is slowly falling out of favor for several reasons. First, “minority” primarily connotes the fact that a group is few in number relative to the majority. Although people of color are the numerical minorities in the overall population in most areas of the country, they constitute the majority, or a very large visible minority, in many others. Various urban areas, schools, and workplaces throughout the United States contain greater numbers of nonwhites than whites, and thus in a purely quantitative sense, people of color are not minorities in many places.

Second, people of color have made significant strides politically and economically throughout the country and are represented in positions of governance within universities, corporations, government, and law. This challenges the concept of minority when it refers to power and political status, as it often does, because the term is a broad sociological concept that can describe ethnicity, gender, sexual, age, and religious categories of people who are poorly or rarely represented in prestigious and powerful positions. Third, although the word *minority* is still frequently used as a synonym for people of color, there is a growing sense that its meaning is constrained by a relation to “minor,” meaning “less than.” Finally, the term *majority* is not interchangeable with “white.” One usually says “whites” and “minorities,” often in the same sentence, to refer to whites and nonwhites, making it illogical to refer to one group by their racial designation and others by their numbers, sociopolitical status, or legacy of oppression.

Racial identities change, and the ways in which people think of themselves in terms of race evolve over time. Consequently, racial categories and the words used to describe those categories are

changing to examine the complexities of race in America; by framing race as a social construct, rather than a biological designation; and to provide context for viewing race as a mechanism for negotiating social relations. “People of color” is the upshot of constructing language that helps examine the politics of racial identity, shifting dynamics of power among racial groups, and complex conversations about people’s shared experiences of racial subjugation.

Debate

Many people are unsettled about the term *people of color*, for various reasons. First, many assert that among Latinos, blacks, Pacific Islanders, Asians, and other people of color, there is neither a collective identity nor a shared history. Thus, to use one expression to describe many groups is to suggest falsely that they have solidarity in terms of their consciousness and culture, or at the least a common history. Second, it has been argued that the term *people of color* has meaning only in relation to whites and has no significance as a stand-alone concept. In this way, the term supports a racial binary: white people, and everyone else. As a third point of contention, many are uncertain about how it differs from “colored people.” Although most are familiar with the segregation and discrimination of the Jim Crow era, in which the words *colored people* were punctuated throughout the south to designate distinct spaces for whites and blacks, many believe that the phrases sound alike, and therefore mean the same thing. Finally, the term seems to situate skin color at the center of racial discourse.

In addressing the first point, advocates and adversaries of the term discuss whether it is a suitable way to describe nonwhites—culturally and politically. The primary issue is whether a collective identity or shared history exists among people of color. Every race has had a distinct migratory trajectory to America, and each group’s experience of racial oppression has been different. Blacks were forced into slavery, American Indians were colonized in their native land, and the Chinese migrated as exploited workers. This first point, thus, centers on whether people of color hold a perception of their racial identity and social location in ways that are similar to and linked with other people of color.

“People of color” is a point of departure for examining the shared experience of being relegated as “other” because of one’s race. Oppression can be measured in many ways and has manifested differently for every group. The consequences of creating and enforcing laws that restricted access to resources was one form; another was through the use of violence and internment; another was in the refusal to allow citizens to participate in the political process—simply because of their racial or ethnic status. To refer to all groups of nonwhites in the aggregate sense as people of color is to recognize that they share historical experiences of subjugation based on their race, even though those histories are not the same.

The phrase is seen to create an us-versus-them model for analyzing race in America. Rather than addressing and redressing racial oppression by focusing on each racial group singularly, the expression *people of color* seems to oversimplify the complexities of race by classifying people in binary and/or oppositional terms. This bifurcated approach to distinguishing racial categories also raises questions about the consequences of a binary, which may include perpetuating racial divisions rather than seeking a way to end them.

As a response, some would argue that whether or not there is language to frame race relations beyond a whites-and-everyone-else model, many people in the United States think in these terms.

The term people of color, while problematic, is one relatively modern way to conceptualize racial groups. In addition, the term women of color emerged in the 1970s as a similarly all-encompassing way to describe diverse women who had had comparable experiences with racism.

Racism, and the sense of disconnect it caused for hundreds of years, has influenced people's ideas and expressions, which reflect a binary set of relations. Moreover, the phrase *people of color* is very often used beyond the dialogue about the relationships between whites and nonwhites. It is also utilized to examine sociological phenomena such as poverty rates, educational attainment, and voting trends—not in relation to whites, but as variables with distinct sociopolitical and cultural implications.

Colored People Versus People of Color

The third dimension of the debate is concerned with what the term actually means and how it is distinct from “colored people.” During the first 12 U.S. census data collections, from 1790 to 1900, “colored” was used to enumerate the racial group known today as African American/black. In 1909, when the National Association for the Advancement of Colored People was created, “colored” was a non-offensive term to describe persons of African ancestry. The organization is still active and continues to include “colored people” in its name. In the decades that followed, and as “Negro” became a more polite term to describe blacks, “colored people” developed negative connotations.

In spite of the term's negative implications, or perhaps because of them, “colored” was still widely used in the U.S. south. Signs designating separate public spaces for whites and “colored people” peppered the American south during the Jim Crow era, beginning in 1890, and many of the laws supporting segregation remained through the mid-1960s. Also, it was normative in everyday conversation—especially among southern whites—to refer to blacks as “colored people” through the late 1960s.

In his 1963 “I Have a Dream” speech, Martin Luther King, Jr., used the term *citizens of color*, referring to black people. “Citizens of color” did not catch on, though. Toward the end of the civil rights movement in the mid- to late 1960s, the Black Power movement emerged. Spurring shifts in the identity politics of black Americans, the Black Power movement was largely responsible for African Americans adopting the term *black* to identify themselves. Still, it is unclear what the exact distinction is between “colored people” and “people of color,” except that there has been a

significant shift away from a very specific historical era marked by racial segregation, toward an era of multiculturalism—and the journey along the way has been rife with new racial classifications, social movements, and identity politics. “People of color” represents a modern way to conceptualize racial groups, and there is a distinction between the two terms.

The feminist movement gained momentum alongside the civil rights movement, and solidarity between various oppressed peoples became a common form of resistance against oppression. White feminists borrowed from and supported protest strategies used in the civil rights movement. Black women, urged to choose between woman-centered and race-based struggles, were at the fore of reframing social oppression as a multiplicative, intersectional struggle—hence, they constructed organizations comprising marginalized heterogeneous groups as they positioned themselves as a collective body.

In 1977, an organization known as the Black Women's Agenda was founded to delineate the particular needs of black women within the broader feminist movement. Presented at the International Women's Year Conference in Houston, Texas, a document known as the Black Women's Action Plan was approved by most of the delegates. At that event, women from various ethnic groups wanted to adopt the Black Women's Agenda and its principles. Participants then sought an all-encompassing term to envelop the multi-layered oppression of nonwhite women. The term *women of color* emerged as a way to describe diverse women who shared similar challenges with racism in and beyond the mainstream feminist movement.

As a final issue in the debate surrounding the term *people of color* is that the word *color* seemingly frames race as a biological designation. Social scientists have always noted that race is a construct that centers on the meanings that people attach to skin complexion and hair texture. Contrary to politics that undergirded the Racial Integrity Act of 1924, racial categories are not quantifiable. The law required that each person born in the United States be assigned to a racial category—at a time when the only two classifications were white and colored. As socially constructed notions, racial classifications are political, historical, and upheld by definitions such as

the “one-drop rule” from that era, which defined colored people as having any African or Indian ancestry. Just as the law was overturned in 1967 and the U.S. census continues to change its classification system, people’s ideas about what distinguishes one race from another also change.

Members of the Asian race who have origins in the southern region of India, for example, sometimes have complexions as dark as many or most African Americans. Their skin color does not distinguish them as black, though. Other examples are rooted in the fact that people with bi-racial parents, one of whom may be white, may choose to identify as a person of color, or not. Thus, as a sociological ideal, the term is a concept, a way to understand race relations and phenomena affecting groups of people. It is not meant to focus pointedly on skin color or any other biological fact. In sum, race is a social phenomenon that is about shared meanings among people, social arrangements between people, and constructed notions of how people see themselves.

People of color have made tremendous contributions to every segment of American society. Many have challenged and enhanced ideas about race relations, ethnic identity, multicultural politics, and normative assumptions about race. As the number of people of color in the population grows, the multicultural nature of the nation will intensify and define the limitless possibilities of future generations.

Pérez v. Sharp (1948)

A critical forerunner to the landmark 1967 *Loving v. Virginia* case (whereby the United States Supreme Court rendered state statutes against interracial marriages unconstitutional), the lesser-known but historically significant *Andrea D. Pérez and Sylvester Davis, Jr. v. A. W. Sharp* lawsuit of 1948 marked the end of antimiscegenation law in California by overturning the state’s ban on interracial marriage that had been established in 1850, shortly after California gained statehood.

The plaintiffs in the case, Andrea Pérez and Sylvester Davis, were of Mexican American and African American heritage, respectively. Pérez and Davis had met at work in Los Angeles during World War II and quickly fell in love, but a county clerk refused to issue a marriage license to the couple on the grounds that their wedding would violate California’s antimiscegenation law. Forty states have enacted antimiscegenation laws at some point in their histories, and 38 states still maintained such statutes by the end of World War II. California’s statute, enacted in 1850 and revised in succeeding decades, declared, “no license may be issued authorizing the marriage of a white person with a Negro, mulatto, Mongolian or member of the Malay race.” Although ensconced in since-discarded racial terminology, the California statute essentially prohibited whites (including Mexicans) from marrying blacks, Asians, and Filipinos.

On their marriage application, Pérez identified her race as “white” and Davis as “Negro.” At the time, the U.S. government officially recognized Mexicans as racially white, even though the American public popularly viewed and treated Mexican Americans as a nonwhite minority group, as anti-Mexican prejudice and discrimination were commonplace across the southwest. Such a contradiction reveals the inconsistencies between race as a politically defined category and race as a popularly constructed sociocultural concept.

Following the rejection of their marriage application, the couple sought the intervention of the California Supreme Court to overrule the county clerk’s denial. The court ruled narrowly, 4–3, in favor of Pérez and Sharp, ruling that marriage is a fundamental human right and that the state cannot interfere with this right by imposing

race-based restrictions. The court also found California's antimiscegenation law to violate the Fourteenth Amendment of the U.S. Constitution, which prohibits states from denying life or liberty to its population and guarantees equal protection of laws to all persons. Writing for the majority, Associate Justice Robert Traynor commented, "A member of these races may find himself barred from marrying the person of his choice, and that person to him may be irreplaceable."

Legacy

With the ruling in *Pérez v. Sharp*, California became the first state of the 20th century to rescind its antimiscegenation law. California also became the first state to overturn its ban on interracial marriage in more than 60 years, since Ohio had done so in 1887. Other states followed suit in the aftermath of *Pérez v. Sharp*, and by 1967, 14 other states had rescinded their antimiscegenation statutes. The U.S. Supreme Court's ruling in *Loving v. Virginia* struck down bans on interracial marriage in the remaining 16 states that still had such laws on the books.

Although interracial marriage was highly taboo at the time of the *Pérez v. Sharp* ruling, social attitudes have changed significantly since the court's ruling in 1948. Today, interracial marriage in the United States has reached an all-time high, and the 2010 study by the Pew Research Center found that 15 percent of all marriages in the United States are between persons of different racial or ethnic backgrounds.

This trend is particularly common in the western states. For example, more than 40 percent of all marriages in Hawai'i and approximately a quarter of all marriages in California, New Mexico, and Nevada are interracial marriages. The Pew study revealed that support of interracial marriage is highest among racial-ethnic minority groups, younger adults, the college educated, self-described liberals, and residents of the northeast and west coasts.

Perspectivism

Perspectivism claims that what exists and how we can know what exists are experienced only from a particular point of view. It denies that there is an objective reality independent from the perspectives of individuals or groups. Perspectivism is often mentioned in connection with multiculturalism because beliefs and values vary from one culture to another. Even within the same culture, people with varying religious, racial, ethnic, or gender identities may see issues of truth or justice differently. If each person has a different vision of acceptable beliefs or behavior, then it seems there is no way to privilege one set of practices over another. This dilemma is called relativism; it is an objection to perspectivism that various theorists answer differently.

Perspectivism was developed in the 1700s, and by 1882, the term was used to describe the theory that the world consists of different, equally valid points of view, each offering a unique perspective that is indispensable to the whole. Some aspects of perspectivism appear in many philosophical approaches, including phenomenology, existentialism, pragmatism, and analytic and process philosophy. What these approaches have in common is a move away from an external standard of reality and truth, such as God or a realm of eternal truths or universal concepts. They also include the idea that our interaction with the physical world adds an important dimension—for some, the only dimension—to truth and reality.

German philosopher Friedrich Nietzsche used a comparison with perception. The way we see things is influenced by our perspectives—not only our physical connection with what we are looking

at but also the internal concepts that we use to organize our experience of reality. People who have different organizing concepts (such as cultural influences) have different views of the world.

An example of this can be found on a small triangular island in Hawai'i. The native Hawai'ians thought the island looked like the fluke at the end of a lizard's tail and called it Mokoli'i (little lizard). Westerners named the island Chinaman's Hat. Either way, one has a clearer perception of the island when one is physically near to it, and one has a fuller perspective of the island when one knows that it has two names.

But there is a way that perception and perspective are unrelated. With perception, one can point to a physical object that exists apart from one's view of it, and one can consult laws of optics to determine the accuracy of one's perception. If a person is colorblind or using binoculars, the way that that person sees the island is affected in predictable ways, and he or she can determine which perception is more accurate. However, there is no way for a person to experience the world without internal concepts. One's beliefs influence the way that one sees things, and someone's belief that something is true captures only how it appears from that person's perspective. With no objective reality and no neutral standard of truth, each perspective is relative.

Nietzsche suggested that although perspectives are unique to the individual, they overlap sufficiently that we can communicate. The idea of a triangle-shaped island was common to Hawai'ians and Westerners, and they could each understand why the other chose its name, even though they saw something different when they looked offshore. One way that people can broaden their own perspective is to try to see things from other points of view. There may still be times when perspectives are incommensurable and have views of truth that are incompatible. In these cases, there is no way to automatically select one over the other.

Because there is no privileged perspective, the best one can do is to compare different perspectives to one another to expose limitations or evaluate strengths. If many perspectives hold the same view, that view can be said to be "truer." Nietzsche was comfortable with the idea that there is no such thing as objective truth. It is possible to make a

weaker claim by saying that we simply can't know what is true, given our limited perspectives.

Spanish philosopher José Ortega y Gasset added social and historical dimensions to the idea of individual perspective. Humans relate to the world in a dynamic process of becoming, rather than being. This means that we have no fixed "nature" but rather a history—the set of circumstances into which we are born and within which we create ourselves. For Ortega, each life is a point of view about the universe; each perspective is a part of reality. Conflicts may arise because one perspective is reduced or limited, but it is not false in an absolute sense. It takes the combination of perspectives to arrive at reality, which is the world as it is being created by our individual lives. If we could collect all the perspectives of all the individuals who ever lived and will live, we would have what there is of truth. Rather than there being an objective, neutral, "God's eye view" of the world, Ortega said that God sees the world through humans, that we are the eyes of divinity.

Peruvian Americans

The home of the ancient Inca Empire and later conquered by Spanish colonists, Peru lies on the west coast of South America. It became

independent from Spain in 1821. Spanish is the most common and official language, but 13.2 percent speak Quechua, the most common of the indigenous languages.

As in most countries in Central and South America, mestizos of mixed heritage outnumber people of purely European descent, but not by as great a margin as in other countries. Mestizos are a plurality, not a majority, at about 47 percent; both the indigenous population (30 percent) and the European population (18.5 percent) are larger than in most of South and Central America.

The European population is mainly descended from the Spanish colonists, but Peru attracted a number of French, British, German, Croatian, and especially Italian immigrants in the 19th century. Compared to many other countries on the continent, Peru also has more Asians (3 percent, including the largest Chinese community in the region and the second-largest Japanese community) and fewer blacks, though Afro-Peruvians are an important minority.

Peruvians in the United States

There are 435,363 Peruvian Americans as of the 2010 Census, a large figure given that most immigration has occurred in the last 30 years. Two waves of immigration preceded the late 20th century. Along with many other groups, some Peruvians flocked to San Francisco in the 1840s and early 1850s in response to the gold rush, and many remained in the country thereafter; and in the 1950s, a Peruvian American community developed in the Detroit area.

From the 1980s on, a larger number of Peruvian immigrants began to arrive, fleeing economic turmoil in Peru. They settled principally in New Jersey, Florida, and New York. Nine of the 10 communities with the highest percentage of Peruvian Americans are in New Jersey (East Newark, 10.1 percent; Harrison, 7.01 percent; Paterson, 4.72 percent; Kearny, 3.82 percent; and Prospect Park, 3.22 percent) or Florida (The Hammocks, 3.36 percent; Virginia Gardens, 3.24 percent; Bay Harbor Islands, 3.11 percent; and Doral, 2.95 percent). The remainder is in Port Chester, New York (3.3 percent).

The Peruvian consulate is located in Paterson, New Jersey, and Market Street in Paterson has been nicknamed Little Lima for the number

of bodegas, travel agencies, markets, and Peruvian restaurants serving the Peruvian American community.

Peruvians are predominantly Catholic and tend to settle in areas where there is a strong Catholic community, especially a Spanish-speaking Catholic community. The church has been instrumental in helping immigrants pursue citizenship and find employment, as well as providing social networking.

Peruvian American Culture

Some elements of Peruvian culture preceded the main wave of Peruvian immigration, having been passed on to other Latino communities and then to the United States. The soda Inca Kola, for instance, is a Peruvian brand that has long been carried in Latin American grocery stores. “Kola” or “Cola” in Latin American countries more often denotes a sweet cream soda than the acid-heavy spiced colas of North America; Inca Kola was introduced in Peru in 1935 and is intensely flavored with lemon verbena. It has since become a Peruvian cultural icon. Also preceding most Peruvians is Pisco, a clear, unaged brandy developed by the Spanish colonists after they imported grape vines from the Canary Islands. Pisco remains one of the few distilled liquors made in Peru and the only one commonly exported; it has been available in the United States since at least the 19th century and in fact was once more common.

Peruvian restaurants are rare in the United States but may be found in Los Angeles, Miami, and New York, where there are the largest Peruvian American communities. Though similar in some respects to other South American cuisines, Peruvian cuisine depends more heavily on the potato, which is native to Peru. Some of these potatoes are boiled, mashed, and air-dried in the cold, becoming chunos—dried potatoes that may be used as a staple starch throughout the year. Other potatoes are sliced and served with cheese sauce.

Peru is also known for its anticuchos—grilled meats, notably chunks of heart—and cebiche, raw seafood dressed with citrus juice and other seasonings. Peruvian American markets often sell huacatay, a black mint native to Peru and difficult to find elsewhere, and lucuma, a native fruit sometimes called the eggfruit, with a flavor similar

to maple syrup and sweet potatoes. Lucuma is a popular candy and ice cream flavor.

Prominent Peruvian Americans include actor Josh Keaton, biologist Carlos Bustamante, actor Benjamin Bratt, film and television director Miguel Arteta, rapper Immortal Technique, and painter Alberto Vargas, known for his Vargas girl pinups.

Philippine Independence Act (1934)

The Philippine Independence Act, also known as the Tydings-McDuffie Act of 1934, guaranteed the Philippines self-governance and independence from the United States following a 10-year transition period. During American colonization, Filipinos entered the United States primarily as *pensionados*, who were government scholars attending schools in the United States or as low-paid migrant workers for Alaskan fisheries and farms and plantations in California, Hawai'i, and other states. Under the Philippine Independence Act, Filipinos could be newly defined as aliens or immigrants. Under the act's provisions, the year following

the passage of the Philippine Independence Act marked the institution of the Philippine Commonwealth government and a new constitution to be effective during the transition to Philippine sovereignty. The constitution formed the basis of the Philippines' constitution after independence. However, the nature of the interim government—and particularly of its immigration and foreign policy, currency, and overseas trade—remained at the discretion of the United States during the this period, the end of which was actually delayed until 1946 because of complications relating to Philippine campaigns during World War II.

Drafted by Representative John McDuffie and Senator Millard Tydings, the Philippine Independence Act is partly a revision of the Hare-Hawes-Cutting Independence Bill, which, despite being approved by Congress in the face of President Herbert Hoover's veto, was subsequently defeated in the Philippine legislature because of what were deemed to be overly strict clauses relating to trade and immigration, as well as the presence of stipulations—particularly the establishment of a high commissioner and permanent American military bases in the Philippines—that would have resulted in merely a semblance of independence. Manuel L. Quezon, who would eventually become the second president of the Philippines, traveled to Washington, D.C., in order to ensure new terms under the Tydings-McDuffie Act, obtaining more promising conditions relating to American military presence and certain aspects of foreign policy.

Other terms were not as easily negotiated, nor could the terms of the Philippine Independence Act be deemed wholly egalitarian. For example, the annual quota of 50 Filipino immigrants to America not only represented a drastic decrease in Filipino movement to and from America but also contrasted with American immigrants, whose entry and residence in the Philippines were unrestricted. This disparity mirrored the proviso that American goods enter the Philippines without tariffs or other restrictions, while Filipino goods—most notably sugar, coconut oil, and cordage—were taxed beginning in the second half of the transition period.

The Philippine Independence Act allowed continued American sovereignty in the Philippines on multiple levels. For example, the U.S. government

had to approve all loans to the Philippines from other nations, and the U.S. Supreme Court could review all Filipino court rulings. Despite these and other restrictions, the Philippine legislature believed the bill represented the most favorable agreement that could be attained at the time, with the understanding from President Franklin D. Roosevelt that the Philippine government could later renegotiate the conditions.

While allowing for Filipinos to be considered immigrants, the act's immigration quota limited travel to and from the United States to the Philippines and would later open the way for Filipinos to be included in the restriction placed against all Asian immigration (with the exception of a 1946 clause allowing sugar plantation laborers to immigrate to Hawai'i if needed). These limitations created problems for those Filipinos in the United States, who had to either choose to remain in America, indefinitely severed from their family members in the Philippines, or risk returning to the Philippines without hope of employment or return to the United States. One year after the Philippine Independence Act was passed, Congress passed the Filipino Repatriation Act of 1935, allowing free passage for Filipinos back to the Philippines. Only around 2,000 Filipinos took advantage of the offer.

The Philippines' conversation with the United States about independence began as early as the late 1890s during the Spanish-American War, when future Philippine president Emilio Aguinaldo attempted and failed to secure a written confirmation of America's support for the future of Philippine independence. Aguinaldo's aim was not realized until 1916, when the Jones Act (or the Philippine Autonomy Act) established the Philippine Senate and provided for the possibility of independence when a more stable government was in place. The Philippine Independence Act superseded the Jones Act and created specific provisions leading to independence from the United States.

Legally recognized independence finally came for the Philippines on July 4, 1946—two years after the Tydings-McDuffie Act's intended date. This day marked the end of America's official colonization of the Philippines, which began in 1898. Just two days before the Philippines' Independence Day, President Harry S. Truman signed the Luce-Celler Act, which opened up the opportunity for

American naturalization and citizenship to Indian and Filipino Americans, while keeping a quota system in place for future immigration of both groups.

Philippine-American War

The Philippine-American War (1899–1902) was an unsuccessful rebellion by Filipinos opposing the annexation of the Philippines by the United States, to which the country had been ceded by Spain by Article 3 of the Treaty of Paris, which ended the Spanish-American War. Although Filipinos had allied with the United States against Spain, they sought sovereignty, not new masters. The American government expressed skepticism of the Philippines' ability to remain independent of foreign powers without U.S. protection but of course was also motivated by its own imperialist aims. Opposition to the annexation in the United States led to the founding of the Anti-Imperialist League on June 15, 1898, and was an important part of the ongoing dialogue on American foreign policy and the country's role in world affairs.

The Philippine archipelago had been inhabited for tens of thousands of years, and its communities had both cultural and trade relationships with other Asian countries long before the

Spanish claimed the territory in the 16th century and proceeded to colonize the islands. It was Spanish rule that led to political unity among the islands, which were governed first as part of New Spain and later as their own colonial unit. Roman Catholicism was quickly and firmly established. Although there were many revolts against Spanish rule, the organized push for independence began with dissatisfied Criollos—ethnic Spanish born in the Philippines—in the 1870s. The anti-colonialist secret society known as the Katipunan began the Philippine Revolution in 1896; American support arrived as a result of the Spanish-American War in 1898, in which the United States intervened on Cuba's behalf in that colony's war for independence.

American assistance arrived on May 1, 1898, in the form of a fleet of warships were commanded by Admiral George Dewey. Dewey negotiated an alliance with Emilio Aguinaldo, one of the leaders of the rebellion, and the U.S. Navy defeated the Spanish in Manila Bay. Aguinaldo and Dewey's men were able to take the capital city of Manila, and the Filipinos declared themselves independent on June 12.

Spain surrendered to the United States, and the Spanish-American War ended on August 13, 1898. The new Filipino government had organized itself in the meantime, convening a new congress on September 15 and approving a new constitution on November 29. Aguinaldo was elected president on January 23, 1899. Schools were set up—free public schooling had been promised by Spanish law but had not been implemented—as well as a new university and currency.

The Spark of War

The Treaty of Paris took none of this into account. It was signed on December 10, 1898, and the ratifications were exchanged on April 11, 1899, ending the Spanish Empire outside its African territories. Many in the U.S. Senate objected to the treaty's cession of the Philippines, Puerto Rico, Guam, and parts of the West Indies to the United States because it established the United States as a colonial and imperial power rather than as an ally of those who wished to declare independence from such vassalage as the United States itself had.

Many Americans called for the lands to be returned to their people. The debate transpired in

Congress and newspapers for months, motivated by fundamentally different approaches to American foreign policy. President William McKinley supported the imperialist faction, in favor of retaining and ruling the islands, and of extending the U.S. reach in the world. The Philippines were deemed incapable of self-determination, and Spain was paid \$20 million in return for the loss of its territories.

The Aguinaldo government warned the United States that any attempt to press its claim on the Philippines would be resisted. After several rounds of negotiations failed, Aguinaldo was authorized to declare war on the United States, doing so on January 20, days before his temporary revolutionary government was replaced with the new constitutional government.

The battle in Manila was fierce, and the insurgents were unprepared for the military prowess of the Americans. After fighting most of the evening, the Americans withdrew briefly, only to return, firing artillery from ships stationed in Manila Bay. The insurgents ran to the jungle to regroup but ran into more American troops. America lost 50 soldiers, and the insurgents lost 1,000 men.

The Filipinos were not deterred from their goal of independence. The Americans pushed the rebel forces into the country's interior. There was little resistance from townsfolk, and the insurgents moved quickly out of the firing line. In late summer of 1899, Aguinaldo requested a 90-day cease-fire to debate the possibility of surrender. The request was dismissed. The American commander at the time, Major General Elwell Otis, stated that only full and immediate surrender was acceptable on the American side.

Fighting slowed in 1899 as Aguinaldo rethought his strategy. The following year, a presidential election was scheduled in the United States, and Aguinaldo intended to use that fact to his advantage, knowing that many Americans disagreed with the war.

To ensure that the Philippine issue dominated American headlines, the Filipino forces adopted the tactics of guerrilla warfare, with the jungle providing cover. With the climate and the sympathy of civilians on their side, they executed surprise attacks on increasingly weary American forces. However, this led to vicious reprisals, including the capture and torture of local

villagers. Despite the American public's disapproval of these tactics, McKinley was reelected to a second term.

The Americans established a civil government in the Philippines in May 1900, replacing its military rule. Former judge William Howard Taft was appointed governor-general of the Philippines, though Taft had opposed the annexation and McKinley knew his real aspiration was the Supreme Court. Taft proved to be a popular governor with both the Filipinos and the Americans now living on the islands. He was able to convince Pope Leo XIII to sell church-owned lands to his government and Congress to give him the millions of dollars necessary to purchase those lands, which he then sold cheaply to Filipinos. In 1903, when Taft was finally offered a seat on the Supreme Court, he turned it down out of concern that his job as governor-general was not finished. The following year, he accepted a position as secretary of war, as it allowed him to remain involved in Filipino governance.

In the meantime, Filipinos adapted to the changes introduced by the American government, including the long-promised public schools and new monetary system as well as improvements to public infrastructure. However, Aguinaldo and his insurgents were not satisfied with anything less than independence, and the American military soon came to the conclusion that the solution to the war was not to defeat the Filipinos but to eliminate Aguinaldo.

American General Frederick Funston executed the plan to capture the Aguinaldo, putting an end to Filipino resistance. Funston recruited Filipinos who were openly opposed to Aguinaldo, disguised them as insurgents, and led American officers posing as prisoners of war to Aguinaldo's headquarters. Days later, in March 1901, the Americans and Filipino allies together overpowered Aguinaldo and his men and arrested him. He surrendered to the United States on April 19, and by the summer of 1902, the fighting had ended. In the end, 4,232 Americans and about 16,000 Filipino soldiers had been killed in the fighting, as well as 200,000 civilians. The Philippines remained an American territory but were allowed to elect their own government, and the 1916 Jones Act promised that independence would eventually be granted. This finally arrived in 1946, after

a four-year occupation by the Japanese during World War II.

Picture Brides

From 1908 to 1924, thousands of Japanese and Korean women came to the United States as "picture brides," marrying Japanese or Korean men whom they had never met and had seen only in pictures. The vast majority were Japanese. This practice arose in large part after the Gentlemen's Agreement of 1907 between Japan and the United States prohibited further Japanese immigration to Hawai'i and the United States, but at the same time allowed women and children to join their husbands and fathers. This practice essentially ceased in the 1920s, when, because of anti-Japanese sentiment in the United States, the Japanese government ceased issuing passports to picture brides. This practice had a large impact on Japanese immigration to the United States, and some historians believe that the majority of Japanese Americans today can trace their ancestry to a picture bride.

Japanese and Korean Immigration

Beginning in the late 1800s, several hundred thousand Japanese men traveled to Hawai'i and the west coast of the United States to work as laborers, with plans to make money and then return home. Between 1886 and 1924, almost 200,000 Japanese nationals entered Hawai'i, and 113,362 returned to Japan. Despite their plans, during this time period, many men did not make enough money to return home to Japan. Koreans first immigrated to work on Hawai'i's sugar plantations in 1903, but all Korean immigration stopped in 1905 when Korea became a Japanese protectorate. In 1910, Japan annexed Korea, and immigration resumed. Between 1910 and 1924, approximately 700 Korean women went to Hawai'i as picture brides.

In the early 1900s, for a variety of reasons, anti-Japanese sentiment flared in California. In order to address that sentiment and to allow Japanese American children to attend public schools in California, the United States and Japan entered into the Gentlemen's Agreement of 1907. (The agreement was entered into unilaterally by President Theodore Roosevelt and was never ratified by Congress.) In essence, this agreement halted the issuance of passports to Japanese laborers for travel to Hawai'i or the United States, and many Americans believed that this would stop Japanese immigration to the United States.

However, the agreement did allow for passports to be issued to individuals joining a spouse or a parent, and as a result, women and children were allowed to immigrate to Hawai'i and the United States. This provision gave rise to the practice of using picture brides, and because of it, over 25,000 picture brides arrived in Hawai'i and the west coast of United States between 1908 and the early 1920s. The vast majority were Japanese. The practice also changed the gender composition of immigrants, particularly from Japan. Prior to 1907, 87 percent of Japanese admitted to the United States were men; after 1907, 58 percent were women.

The arrival of these numbers of women, particularly those from Japan, revived anti-Japanese sentiment in the United States. The exclusionists, who opposed Japanese immigration in general and the practice of picture brides, argued that this type of marriage was immoral and also that the practice violated the Gentlemen's Agreement because the women were really immigrating to

work as laborers in the fields. The exclusionists also feared that the children of these marriages would be able to purchase land and settle down. In addition, there was some sentiment that the picture brides were actually prostitutes. As a result of this continued anti-Japanese sentiment arising out of the practice of picture brides, Japan ceased issuing passports to picture brides in 1920.

Picture Bride System

The term *picture bride* was coined because the men in Hawai'i and the United States sent pictures back to their families for use in finding a bride. Once the men's families received a picture, they began the search for a wife, often with the help of a go-between. The process of finding a picture bride was modeled on traditional Japanese and Korean arranged marriages and was not that different in practice. As in traditional marriages, the go-betweens looked at the family background, health, age, and wealth of the women and made matches. The primary difference was that, unlike a traditional arranged marriage, the men marrying a picture bride had no input into selecting a wife. Once the woman's name was entered into the family registry, the couple was considered married, despite never having met, and the woman was then eligible for travel documents to the United States. However, because the United States did not recognize these marriages, mass wedding ceremonies were held when the women arrived in the United States or Hawai'i, often on the docks or in hotels.

Women became picture brides for many reasons: some economic, some social, some rooted in family pride. Some saw the marriage as a way to send money back to their families in Japan and Korea. Some became picture brides out of family obligation and honor. Others became picture brides to escape the traditional structures of Japanese or Korean family responsibility, and to gain freedoms that they would not have had in Japan or Korea.

Upon arrival, many of the women found conditions to be vastly different from what they expected or had been led to believe. On average, the grooms were 10 to 15 years older than the women they married. The photos they had sent home were often touched up or out of date and did not accurately represent the man's wealth, class, or social status. The men often borrowed clothing to wear in the photos and/or posed in front of

A woman working in a Japanese store in Honolulu, Hawai'i, around 1910. Between 1908 and the early 1920s, over 25,000 mostly Japanese picture brides arrived in Hawai'i and the west coast of United States. Before the practice began, 87 percent of the Japanese admitted to United States had been men; after 1907, 58 percent were women.

cars, houses, or other items that they did not own. Some men even sent photos of another man. When the women arrived in the United States, they were often surprised by the men's age and their living conditions, which were not of the quality they had been led to believe by looking at the photos.

Life as a Picture Bride

Despite what they were led to believe, picture brides did not have an easy life. Many of the women did work in the fields alongside Japanese or Korean immigrant men. They worked in jobs that were similar to those of men, and those jobs included irrigating crops, weeding plantations, and cutting and stripping cane. Women sometimes worked these jobs carrying a child on their back. In 1920, 14 percent of plantation workers were women, and of those women, 80 percent were Japanese.

Despite the fact that they worked in jobs that were very similar to those of their husbands and other men, these women were paid less than men. In 1915, Japanese women plantation workers made approximately 65 cents for every \$1 made by a Japanese male plantation worker. In addition to their field work, these women were also responsible for cooking, cleaning, sewing, and

child rearing. Some picture brides left work in the fields to work for bachelor men, doing laundry or cooking.

Regardless of where they worked, these women built networks through women's groups and churches. The women worked to preserve their traditions and heritage, including the cultural values of family, obligation to community, the importance of hard work, perseverance, and the drive to succeed. Most of the women settled into their marriages or just accepted them. Japanese couples tended to have fewer marital issues since they were often from similar geographic areas of Japan, whereas the Korean couples were often from different areas of Korea.

Korean picture brides left plantation life sooner than many Japanese women, and many moved to Honolulu to start businesses. Some of the picture brides rejected their husbands and went back home. Some also eloped with another man, which damaged not only their reputation but also their ability to stay in the United States, as these women could be deported back to Japan. (Japanese law provided that men had the right to decide their wife's residency.) The practice had an enduring impact on the demographic makeup of Hawai'i in

particular. Historians believe that the majority of Japanese Americans throughout the country have a picture bride in their lineage.

Pigmentocracy

Pigmentocracy thrives in every region and culture in the world. A pigmentocracy is a society or state of affairs in which skin color determines socioeconomic and/or political status. In theory, any imbalance of power favoring people of one skin tone over another could be considered a pigmentocracy. Historically, however, pigmentocracies have consistently favored lighter-skinned groups over their darker-skinned counterparts. It is a behavior pattern and cultural norm that remains persistent and predictable across boundaries and generations.

The United States, although known worldwide as a melting pot of races and cultures, has not been immune to the phenomenon of pigmentocracy. Stark forms of pigmentocracy could first be found in colonial times, when slavery took hold in the nascent nation. The displacement and mistreatment of Native Americans could be counted as a manifestation of pigmentocracy, as could the internment of Asian Americans during World War II. Repression of these and other racial minority groups by whites persisted postwar and post-slavery. From forced Native American land cessions to the Three-Fifths Compromise to *Plessy v. Ferguson*, pigmentocracy has often left its imprint with full government consent.

Pigmentocracy does not always exist so starkly and with government sanction, however. Subtle variations of skin tone within a particular race or ethnicity have sometimes been perceived as advantageous or disadvantageous. Some have claimed that lighter-skinned African Americans have social advantages over those with darker skin; Barack Obama, Condoleezza Rice, Colin Powell, and Jesse Jackson have been cited as examples of this phenomenon. Among Asians, some have perceived preferential treatment among northeast Asians, including Chinese, Japanese, and Korean Americans, over the traditionally darker-skinned southeast Asians, including Filipinos and Hmong. Among Hispanics, some have claimed that light-skinned Cuban Americans have had socioeconomic advantages over darker-skinned individuals from Latin America.

Although the United States holds no monopoly over the phenomenon of pigmentocracy, its ethnic heterogeneity likely makes it more susceptible to perceptions of racial differences. The 2010 U.S. census data proven especially helpful in illustrating the multicultural mosaic that America has become. Census results indicate that in 2010, 12.6 percent of the U.S. population was African American, 16.3 percent was Hispanic or Latino, and 4.8 percent was Asian. Within each of these categories exists a broad range of subgroups, each with different ethnic and cultural identities. Although this magnitude of diversity is a defining attribute as well as a point of pride for America, it may also be a contributing factor to the perpetuation of pigment-based biases within groups and subgroups. In addition, 2010 Census data indicate that 2.9 percent of the U.S. population consists of individuals of two or more races; this may also have an impact on pigment-based bias among ethnic groups and subgroups.

The effects of pigmentocracy have been devastating for its victims. The ravages of slavery and postbellum civil rights violations have been well documented, but the modern effects of pigmentocracy can also prove deep and drastic. Consider, for example, the phenomenon known as the bleaching syndrome. This occurs when dark-skinned minorities feel such overwhelming pressure to assimilate into light-skinned culture that they use chemical substances in an attempt to lighten their skin tone. Some of these chemicals may be ineffective or

even toxic, and skin bleaching is often considered a drastic response to racial and cultural pressures. Recent advances in technology include laser skin treatment, a potentially less risky alternative to chemical bleaching, but this does not address the underlying forces that would cause one to attempt skin lightening in the first place.

Media-perpetuated stereotypes may constitute another persistent effect of American pigmentocracy. Some would claim that lighter-skinned actors are given preference over darker-skinned actors when television and film roles are cast. It has also been alleged that darker-skinned actors, when they are cast, are more likely to be assigned roles of unsavory characters. If this is the case, then a re-evaluation of ethnic roles and biases in popular media will be warranted to make substantial progress in combating the effects of pigmentocracy.

The most plausible explanation for pigmentocracy might be that it is an unfortunate residual effect of the historical mistreatment of ethnic minorities by whites. Thus, as colonists and their progeny oppressed those with darker skin tones for many decades, this became the norm, and lighter skin tone became equated in people's minds with higher sociopolitical standing.

Pigmentocracy has existed in America from the outset in one form or another, and some would claim that it will persist as long as there are visible differences in skin tone. Numerous factors, some patently visible and others subtle, contribute to the persistence of pigmentocracy in the United States. Blame has been cast on policymakers, the media, and even human nature for the perpetuation of pigmentocracy. The debate endures as the American narrative continues to unfold and each new generation addresses this challenging issue.

Pinky

Pinky, a popular 1949 Twentieth Century-Fox film, grapples with issues of southern racism and racial identity in the postwar United States through the story of its protagonist, Patricia (Pinky) Johnson, a light-skinned, mixed-race woman who has passed as white. At the film's opening, Pinky has returned to Mississippi after attending nursing school for several years in Boston. While in the north, she has passed as white and has become engaged to the white Dr. Thomas Adams. Her impending marriage spurs Pinky's visit to her poor, darker-skinned, African American grandmother ("Aunt" Dicey), who has presumably raised Pinky and is her only living relative.

Dicey condemns Pinky's passing, conceptualizing it as a betrayal both of her efforts to educate Pinky and of God. When Pinky visits the local town, she is involved in several incidents that highlight the community's racism, including an unwarranted arrest by white police officers. Later, she narrowly escapes being sexually assaulted by two white men. These encounters, which arise partly from confusion over her racial identity, cement her decision to leave the south immediately and to return to Tom, who has discovered her racial identity and has dismissed it as a part of her past that can be overcome. They can still marry, he argues, and she will become the white Pat Adams.

On the eve of Pinky's departure, Dicey asks her to nurse a white southern aristocrat, Miss Em, who is dying from a heart ailment. Pinky reluctantly agrees out of loyalty to Dicey. Over the following few days, the bedridden Miss Em becomes a surrogate maternal figure for Pinky, urging her always to "be herself." After Miss Em dies, her newly written will reveals that she has left the bulk of her estate to Pinky. The will is challenged by Miss Em's white

relatives. Against Tom's pleas to walk away from the lawsuit and the property, Pinky decides to go to court. The judge, after a brief trial, delivers an unexpected speech about the role of justice in the United States and upholds the will. Despite her love for Tom, Pinky chooses to embrace a black identity and to remain in Mississippi to fulfill Miss Em's belief that she will make "good use" of the estate. The film closes with Pinky at Miss Em's Clinic and Nursery School for black children, which she has opened on the property.

Pinky stars Jeanne Crain (Pinky), Ethel Barrymore (Miss Em), Ethel Waters (Dicey), and William Lundagin (Tom). Dudley Nichols and Philip Dunne adapted the story from the 1946 novel *Quality*, written by the white Mississippi author Cid Ricketts Sumner and first serialized in *Ladies' Home Journal*. The film, produced by Darryl F. Zanuck and directed by Elia Kazan, had a production budget of over \$1.5 million. During production, Zanuck brought in black activist Walter White (longtime secretary of the National Association for the Advancement of Colored People [NAACP] and his daughter, Jane White, as consultants. The Whites pushed for a more aggressive stand on race issues, but Zanuck had the final word, and the film's potential for offering a more progressive anti-racist statement was tempered.

Perhaps partly because of that tempering, *Pinky* was a box-office success, premiering in New York City on September 29, 1949, and drawing large crowds in both the north and the south. It was the second-highest grossing film of the year, bringing in over \$4 million and out-grossing the spate of other postwar "race films" premiering that year. Most reviewers praised both the film's production quality and the actors' performances, and although some had reservations about a white actress playing a mixed-race character, Crain was nominated for an Academy Award for best actress, and both Barrymore and Waters were nominated for best supporting actress for their performances.

Pinky successfully negotiated Hollywood's prohibitions against representing scenes of interracial sexual contact such as kissing (partially by casting a white actress in the role of Pinky and partially by not representing Pinky's interracial parentage); however, in the segregated south, it encountered occasional resistance from local film censors. Acting on an ordinance that aimed to

protect the community from inflammatory scenes that would disturb the peace, Atlanta's censor Christine Smith, backed by the Atlanta Library Board, had 34 seconds of film removed, including a slap, a kiss, and a threatened rape.

The film was banned outright in Marshall, Texas (the State Supreme Court later overturned the ban). While profiting from such publicity, Twentieth Century-Fox also helped counter fears of the film's potentially liberal social realism by promoting it as melodrama or as one woman's tragic love story, rather than as a chronicle of black oppression in general. Although it was groundbreaking in its day for dealing with the issue of racial passing and exposing gendered and economic racism (especially in the south), even some contemporary reviewers noted that the film relies on racial stereotypes and oversimplifies the complexity of the racial climate, making Pinky's ultimate choice too easy and unrealistic.

Pinky's resolution also essentially upholds segregation and the idea of distinct, biologically based, racial categories: Pinky renounces any claim to whiteness, refuses to marry her white fiancé, embraces her blackness, and works to uplift "her race." In 1949, however, such a resolution set well with many blacks and whites, the majority of whom understood race through the "one-drop rule" and conceptualized passing as a betrayal. Within that framework, *Pinky* was a daring triumph.

***Plessy v. Ferguson* (1896)**

Plessy v. Ferguson is the landmark U.S. Supreme Court case that established the legal precedent of the “separate but equal” doctrine in 1896. The court’s decision upheld state laws requiring racial segregation in public facilities. This doctrine had widespread implications; it was used to create a bifurcated society and has been viewed as extending constitutional sanction to Jim Crow segregation laws. This legal precedent set the stage for more than 50 years of rigidly dividing society along racial lines, especially in the deep south, where blacks were legally mandated to use separate public facilities and accommodations and attend separate schools.

In the end, the Supreme Court’s *Plessy* decision was viewed as legitimizing racism under state law and is now considered one of the most catastrophic racial decisions ever rendered. It was not until the 1954 *Brown v. Board of Education of Topeka* case that the “separate but equal” doctrine was found unconstitutional and legal racial segregation outlawed within the United States.

The Challenge

The *Plessy v. Ferguson* case was a coordinated effort to challenge the constitutionality of the segregation laws in transportation throughout the south. In 1892, Homer Plessy purchased a one-way ticket aboard the East Louisiana Railway for travel from New Orleans to Covington, Louisiana. Plessy was arrested for violating the 1890 Louisiana Separate Car Act, which obligated railway companies operating in the state to provide equal but separate accommodation for whites and blacks. This act also denied first-class

accommodations to nonwhite women and men who could afford to pay the higher fare.

Plessy was not discernibly African American based on visual physical features; his racial and ethnic background was such that he was an octaroon, given that he was seven-eighths Caucasian and one-eighth black. The great majority of the south subscribed to the “one-drop” clause, which designated as black any person with one drop of “black blood.” Based on the racial designations at the time, knowledge of Plessy’s racial descent meant that he would be treated as a black person. The segregated transportation laws impacted all blacks throughout the south and especially Louisiana Creoles, who had achieved some measure of economic and social vitality. Plessy paid the higher fare so that he could obtain a first-class ticket on the train, and he refused to move to the blacks-only car upon request. Plessy was immediately arrested and remanded for trial.

Court Case

In the initial case of *Plessy v. the State of Louisiana*, Plessy argued that the state law requiring segregated trains had denied him his rights under the Thirteenth and Fourteenth Amendments. The court ruled that segregated trains could be operated within the state in accordance with the state law at the time. As a result, Plessy was convicted.

The ruling was then appealed to the Supreme Court of Louisiana, which upheld the lower court’s order. This was followed by an appeal to the U.S. Supreme Court in 1896 in order to reverse the lower court’s decree. The primary arguments used on Plessy’s behalf were that his Thirteenth and Fourteenth Amendment rights had been violated. The Thirteenth Amendment was established in 1865 and outlawed slavery.

In effect, the main argument of Plessy’s case was based on the proper interpretation of the Fourteenth Amendment’s Equal Protection Clause and the judiciary’s historical complicity with legislative mistreatments of racial minorities. Additionally, it was argued that Plessy was not discernibly black and that the railway officials erred and had deprived him of his entitlement as a white citizen. This line of argument was based within the designations of racial classification as property.

Earlier rulings in the *Roberts v. City of Boston* (1849) and the *Dred Scott v. Sandford* (1857)

cases, both of which were decided prior to the Fourteenth Amendment, upheld the legality of state statutes requiring the separation of races, as long as blacks were given alternate facilities or accommodations. These court rulings effectively denied citizenship rights to blacks.

The *Roberts* case was especially significant to the *Plessy* ruling, as it was argued that racial prejudice was not created by law and probably could not be changed by law. In the court's ruling in *Roberts*, not only was segregation of races upheld but also the idea of racial classification. Just as important, the judiciary system was not responsible for eradicating racial prejudices that were not created by law. In the *Plessy* case, *Roberts* and several other cases were used in support of a legal tradition of state laws with regard to racial classification and segregation. Similarly, the *Dred Scott* case provided a solid example of the Supreme Court upholding state law, which was adopted as standard practice.

In the U.S. Supreme Court's decision in *Plessy*, Justice Henry B. Brown described race differences in natural biological terms; he maintained that distinctions between the two races would always exist because of skin color. Framing the argument in this way posited racial segregation as a biological fact that could not be changed or determined by government. Similar to what was written in the *Roberts* case, the Supreme Court justices in *Plessy* maintained that legislation was powerless to eradicate racial instincts or to abolish distinctions based upon physical differences. In effect, the justices argued that changing the consequences of race was not attainable with limited tools and a limited government.

Additionally, Brown asserted that segregation and the Fourteenth Amendment's equality clause were congruent in that racial segregation placed no additional burdens on black citizens because the law applied equally to both races. Brown wrote that laws permitting or requiring the separation of blacks and whites in places where they are liable to be brought into contact do not necessarily imply the inferiority of either race to the other.

Legacy

The Supreme Court's decision to uphold the "separate but equal" doctrine allowed for a government sanction of material advantages that attached to

being regarded as a white person in the United States. These benefits have extended far beyond the age of segregation and helped galvanize the rhetoric of white supremacy, the possessive investment in whites, and white property rights.

The legacy of the *Plessy* case is also evinced beyond its presumptions regarding racial differences; what was clearly at play as well was the constitutive power of law to define, construct, regulate, and maintain categories. The focus on *Plessy*'s mixed-race heritage and his racial classification clearly reveal the ways in which the U.S. government was complicit in constructing race and establishing a rigid color line in society. This color line created deep divisions in both the north and south, and it was used to bolster black codes and establish Jim Crow laws. Additionally, the *Plessy* case has held important ramifications for interpretations of the Fourteenth Amendment, the treatment of racial minorities, and the government's role in maintaining a racial order adjudicated by law. The "one-drop" rule was designed to denigrate blacks in wider society and racially assign those of mixed ancestry to a lower social status. In this way, the federal government enabled states to continue to enforce a discriminatory racial taxonomy.

Pluralism

Pluralism is a circumstance in which groups have and preserve separate social and cultural differences, identities, and structures. The term describes the ways that subgroups within a larger society maintain their unique cultural identities. When practicing pluralism, ethnic groups may maintain components of their subculture while also coexisting with relative equality in a larger society. Racial and ethnic relations in the United States are often explored through the lens of cultural pluralism.

Horace Kallen was one of the founding scholars to write about pluralism. He argued that individuals did not have to sacrifice their unique cultural identities to participate fully in American society. He stated that separate cultural groups, with separate languages, religions, and practices were in line with democratic ideals and American values. He espoused that acculturation was not necessary and that the United States instead could be comprised of a mosaic of diverse cultures and individuals.

Many pluralist theorists argue that ethnic groups can maintain their distinct cultural identities while also being able to adapt to the dominant cultural norms of mainstream society. Such theorists state that in the United States, individuals are able to maintain a state of both diversity and unity because they are able to agree on a set of basic values. However, members of minority groups may associate mainly among themselves, work similar trades, intermarry, and live in distinct communities. An equation to describe pluralism may be $A+B+C=A+B+C$, while assimilation could be described as $A+B+C=A$, and amalgamation could be described as $A+B+C=D$.

Two major distinctions exist within pluralism—cultural pluralism and structural pluralism. In cultural pluralism, groups maintain their own identity by perhaps speaking different languages, advocating differing values, and having different religious beliefs. With structural pluralism, the coexistence

of differing cultural groups may be less noticeable, but the groups may be segmented into dissimilar social positions. For example, differing groups may have the same accent and eat similar cuisine, yet they may be a part of separate social systems, such as attending different churches and schools.

There is a third type that can be described as the ability to integrate without experiencing acculturation. Such groups are able to achieve economic mobility without becoming Americanized (such as learning English and adopting norms). One example is an enclave minority group that establishes its own neighborhoods with interconnected commerce centers and businesses. Examples include Chinatowns and the Cuban American community in south Florida. Middleman minority groups, on the other hand, may be located throughout a broader area. Examples include Korean American grocers and hotels owned by Indian Americans dispersed throughout large geographic areas. Professional success among these groups is tied to support and aid among members of these subcultures.

Ethnic groups in the United States may lose aspects of their visibility when they experience acculturation. However, many may maintain a cultural identity by being prideful in their heritage and keeping relationships with fellow members of their cultural subgroup. A lack of tolerance toward diversity has been and remains a persistent problem within the United States.

The United States has been a pluralistic country since its colonial start, as early settlements were ethnic enclaves comprised of individuals of different nationalities and religions. Immigrants settled in clusters as a result of chain migration. For example, Germans and Scandinavians settled in the midwest, Polish immigrants in Chicago, French immigrants in Louisiana, Asian immigrants in California, Irish immigrants in Boston and New York, and Cuban immigrants in Miami. These groups were able to aid the adjustment of settling into a new land by establishing and living in neighborhoods that were microcosms or replicas of their homelands. There are examples of parallel social institutions, in which churches, schools, and other institutions from their original homeland are duplicated in their new homeland. Take, for instance, Dutch settlements in the 1800s, which were very similar to Holland counterparts.

Assimilation and Pluralism

When evaluating racial and ethnic relations in the United States, while America prides itself as a melting pot, Americans typically expect new residents to assimilate quickly. Many Americans view pluralism as a deterrent to assimilation and cohesion in society. When evaluating dominant–minority relations, the positivity of this relationship depends on the extent minority groups are expected to adapt. If minority groups are expected to assimilate, then pluralism, though a natural process among first- and second-generation Americans, will likely draw a negative reaction from those of the dominant culture, resulting in some who see pluralism as going too far. For example, the growing number of Spanish-speaking peoples in U.S. cities has likely led to an increase in calls for immigration reform measures and English-only policies.

Throughout American history, different ethnic groups have acculturated to the dominant culture with varying degrees of ease. African Americans have a high level of acculturation, while members of large Hispanic groups may be less acculturated, in part because of the renewal of traditions and language that are reinvigorated as a part of new immigration waves.

Ethnic identity can be considered the product of pluralism in the United States. For example, self-consciousness and culture shock lead immigrants to embrace their ethnic identities and live in communities in which they may receive support from those sharing similar experiences. These ethnic subcultures may not be known in their previous home countries. For those in the United States, immigrant groups may transition from a village mentality to a national identity. They may speak differing dialects, have lived in different regions, and have feuds back in their homelands, but they are brought together by the cohesiveness of living in a new land together. Take Italian Americans, for example. Many may have first identified with their home cities, such as Naples, Genoa, Calabria, and Salerno, yet most identify themselves as simply Italian over the course of time, in part because this is the classification attributed to them by the dominant culture. These communities are reenergized when new immigrants arrive. Contrary to what some believe, assimilation and pluralism can take place simultaneously within different groups to varying degrees.

Convergent subcultures are ethnic subcultures that tend to assimilate with relative ease. As years progress, there is less distinction between the convergent subculture and the dominant culture. Persistent subcultures, however, resist assimilation. Groups such as Hasidic Jews, the Amish, and some Hutterites choose traditional lifestyles as opposed to embracing modern advances and technology. Some groups, such as Native Americans who live on reservations and Chinese Americans who live in Chinatowns, will preserve their own particular cultural identity while integrating with few aspects of the dominant culture. This persistence to maintain one's unique cultural identity has often not been looked upon favorably by members of the dominant culture. This can lead to conflict, racism, stereotypes, and discrimination.

Multiculturalism and Pluralism

The concepts of diversity and pluralism encompass the notion of multiculturalism, which stresses mutual adaptation and initiatives of tolerance and inclusion. In K–12 curricula, multiculturalism in the United States once meant simply including references to the contributions of non-European peoples to the U.S. fabric. This has morphed over time into a new pedagogical philosophy in which an awareness and appreciation of diversity is interwoven into American education. There are some who have championed a pluralist philosophy in which various subgroup identities are stressed instead of a national cohesive identity. The United States remains a country in which pluralism is alive, yet forces for assimilation are continually strong.

***Plyler v. Doe* (1982)**

In *Plyler v. Doe* (1982), by a 5–4 vote, the U.S. Supreme Court overturned a Texas law that allowed individual school districts to charge the parents of undocumented immigrant children tuition to attend public schools. Justice William Brennan, writing for the majority in *Plyler v. Doe*, said that laws restricting the children had no state interest and were a violation of the Equal Protection Clause of the Fourteenth Amendment to the Constitution. The decision, giving undocumented children the right to a free education when offered by the states, stands after three decades, but remains controversial and is part of the discourse when access to public services for undocumented immigrants is challenged. The decision was a challenge to a Texas law, originally passed in 1975 with little discussion and debate, as part of a broader education bill. The law prohibited spending state funds on students not “legally admitted” to the United States, and allowed school districts to refuse to enroll such students. There was very little discussion or legislative history regarding the law, which was passed at the end of Texas’ biannual, 140-day legislative session.

The Tyler Independent School District began charging \$1,000 as tuition for undocumented immigrant students after passage of the bill. James Plyler was the superintendent of the Tyler Independent School District when the policy was created. Approximately 60 students out of a district of 16,000 were impacted. When children were excluded, the Mexican American Legal Defense and Education Fund (MALDEF) was contacted. MALDEF followed the path established by other

civil rights groups early in the 20th century and represented the families who were impacted by the policy.

The case was initially heard in September 1977, and a Texas federal district judge granted a preliminary injunction instructing the district to admit the children after certifying the case as a class action. Judge William Wayne Justice protected the children on the basis of the Fourteenth Amendment, which provides equal protection and due process under the law. This constitutional finding was appealed to the Fifth Circuit Court of Appeals, which affirmed that the relevant Texas statute violated the equal protection clause. The Supreme Court agreed to hear the case, combined with *In re Alien Children Education Litigation*, which represented separate challenges to the Texas law.

Plyler v. Doe was argued before the Supreme Court on December 1, 1981. In conference, the justices were closely divided and initially voted 5–4 to overturn the legislation. The majority opinion was written by Justice William Brennan, who found for a 5–4 majority after he cleverly worked with centrist judges to craft a consensus. Brennan included undocumented immigrants as a protected group under the equal protection clause of the Fourteenth Amendment. Brennan was joined by Justices Lewis Powell, Thurgood Marshall, Harry Blackmun, and John Paul Stevens.

Brennan consulted very closely with Justice Powell in order to achieve his majority, sending early drafts to him and other sympathetic justices. Powell’s views and worldview played a profound role in shaping the scope of the decision. His majority opinion in *San Antonio Independent School District v. Rodriguez* (1973) ruled that education was not a fundamental right. Powell had also become increasingly concerned about border security and undocumented migration throughout his time on the court during the 1970s. Powell had served on the Richmond, Virginia, school board during struggles with segregation and the implementation of *Brown v. Board of Education*. The swing vote of his day, Powell had a narrow rationale reflected in the opinion of the court, which focused on the concept of the innocence of the children.

The dissent in *Plyler* was authored by Chief Justice Warren Burger and was joined by Justices Byron White, William Rehnquist, and Sandra Day O’Connor. The dissent rejected the idea that

The decision in Plyler v. Doe (1982) overturned a Texas law allowing school districts to charge parents of undocumented immigrant children tuition for public schools and gave undocumented immigrant children the right to a free education when offered by the states. The decision still stands, and as a result, 65,000 undocumented children are able to graduate from high schools every year.

undocumented children were protected by the equal protection clause. Burger asserted that the majority was tailoring its interpretation to fit the case before the court.

Plyler v. Doe remains a contentious and controversial case. The legacy is reflected not so much in review by the Supreme Court doctrinally, or in school districts attempting to violate the ruling, as in continuing debate over access to public services by undocumented immigrants. Although even James Plyler now regrets the legislation and the reaction of his district, supporters of immigration restriction still on occasion call for the types of restrictions that were the basis for the legal challenge. As a result of *Plyler*, 65,000 undocumented children graduate annually from American high schools, creating a continuing challenge of what to do in terms of providing access to employment and higher education for them.

Laws restricting immigrant access to public services have been overturned or scaled back by

federal judges, most prominently the 1994 California Ballot Initiative Proposition 187, and more recent laws passed in states such as Alabama. Sitting chief justice John Roberts expressed skepticism about the opinion of the court in 1982, a fact that was brought up during his Senate confirmation hearings. The idea of innocent children who should not be made to pay for the choices of their parents continues to be significant in attempts to pass legislation such as the federal DREAM Act that Congress has considered at various points since 2001, state level legislation regarding in-state tuition rates, and broader efforts to obtain rights for undocumented immigrants. Although *Plyler* has not attracted the aggressive challenges of contentious decisions in areas such as affirmative action, it remains at the center of continuing questions for the American polity.

Pocahontas

History is currently learned, in part, through representations and portrayals in popular culture. The 1995 animated feature film *Pocahontas* is significant because it has been alternately described as an affirmative, positive delineation of American Indian culture by many in the mainstream media, or fraught with racism and sexism by just as many cultural critics. The 33rd animated film produced by Walt Disney Pictures, *Pocahontas* is the first to be based upon a historical character and an American Indian, with a subsequent video game, sequel feature, and the multimillion-dollar cross-marketing of thousands of ancillary products.

The film is noteworthy because of its international box office success, numerous Academy Awards, and showcasing of a Native American heroine. *Pocahontas* also includes mixed messages, alters historical events, and engages in commoditization. An analysis considers the multicultural perspectives of race and gender, historical inaccuracy, and Native American stereotypes.

Race and Gender Perspectives

The film was initially applauded from a gender perspective because it emphasized a strong female

character. Pocahontas's role is that of an adventurous young woman who respects the earth and communicates with trees and animals. Racially, although it depicts the Powhatan people as "generalized" Indians, the film offers a mostly positive portrayal. Disney claimed its intentions were honorable and that the production utilized Native American consultants and voice-over actors.

Several consultants, however, including Shirley "Little Dove" Custalow McGowan, had strong objections after it was evident that Disney's story was inaccurate fiction. She criticized animators for designing the lead character as a shapely woman instead of an 11-year-old Pocahontas. Physically, Disney's Pocahontas is a multicultural pastiche of four women, according to the supervising animator, having Asian eyes, flowing hair, and white supermodel Christy Turlington's face and body. The phrases "Indian Barbie" and "Poca-Barbie" were the predominant descriptors in film reviews and widely used product endorsements.

Film Plot Versus History

In the Disney version, in 1607, a ship of British settlers, including John Smith and Governor John Ratcliffe, set sail for the New World seeking gold. The Englishmen build a fortress, James Town, while Smith encounters Pocahontas, who earlier argued with her father because she did not wish to marry Kocoum, a warrior. Pocahontas teaches Smith about life; they fall in love; Kocoum and other warriors engage in a fight with the English; and Chief Powhatan declares war, captures Smith, and plans to execute him. Pocahontas successfully stops Smith's execution, and when Ratcliffe attempts to shoot Powhatan, Smith saves his life by taking the bullet instead. The final scene shows Smith sailing back to England to heal while a lovelorn Pocahontas remains to help her people.

Historians concede that a mythology of Pocahontas serving political purposes has existed. However, the verified account of Pocahontas includes her being approximately 11 years old in 1607, when John Smith arrived and never saving him from execution but instead being kidnapped by the British in exchange for prisoners held by Chief Powhatan. She subsequently was required to convert to Christianity, and marry colonist John Rolfe, a 28-year-old widower, and was used as a symbol of the potential to "civilize savages." The

non-Hollywood Pocahontas, baptized as Rebecca Rolfe, was presented to society in England as evidence of the good will between the Powhatan and the settlers, and she tragically died at 20, homesick for her people. She was buried in Gravesend, England. Many critics have questioned whether Disney had a responsibility to portray an accurate account of a true historical figure, while others appreciate an American Indian heroine in a major film production despite the fictionalization.

Stereotypes and Commoditization

For the 5.2 million people in the United States who identify as Native American or American Indian/Alaska Native in combination with one or more other races, authentic depictions in popular culture are important, given Hollywood images of the past that ranged from evil “savages” to childlike superstitious creatures. There has been criticism of the mostly white/Asian amalgamated beauty standard and physical characteristics of the Disney Pocahontas.

Equally questionable was the more than \$125 million spent on merchandising *Pocahontas* with sales of faux Native clothing, cups, underwear, kids’ meals, and Barbie-like dolls. Of particular concern to many was the film’s repetition of the terms *savages* and *primitives*. Lyrics from the song “Savages, Savages” include “What can you expect/ From filthy little heathens?! Their whole disgusting race is like a curse./ Their skin’s a hellish red/ They’re only good when dead.”

University of Texas anthropologist Pauline Turner Strong has explained that for many Native Americans “savage” is the “S” word, potent and degrading. The song, however, can also be viewed as a demonstration of racism of the past and as part of history.

As one of the most influential media production companies in the world, Disney created a film that showcased a story of American Indians to millions, but one that also raises questions about the media’s treatment of ethnicity and race.

Polish American Historical Association

The German and Soviet invasions of Poland in September 1939 spawned a wave of refugees, some of whom fled in the face of the advancing armies and some of whom were caught abroad, unable to return because of the subsequent German and Soviet occupations. A group of émigré scholars met in New York City on May 15, 1942, where they established the Polish Institute of Arts and Sciences to continue their own academic activities and to promote the Polish cause.

The Institute was divided into four scholarly sections based on discipline, one of which was the Historical and Political Sciences Section headed by the prominent historian Oskar Halecki. At a meeting on September 11, 1942, Halecki suggested the creation of a special committee to conduct research on the history of the Poles in the United States. Thus was born the Commission on Research on Polish Immigration, headquartered in the Polish Museum of America in Chicago under the leadership of Mieczysław Haiman.

The commission held its first annual meeting in New York City in December 1943, followed

Furniture and artifacts preserved in the Polish Museum of America in Chicago, Illinois. The Polish American Historical Association traces its roots to a meeting of a group of wartime Polish émigré scholars that took place in New York City on May 15, 1942.

by its second, which convened at Saints Cyril and Methodius Seminary in Orchard Lake, Michigan, in October of the following year. At this second meeting, the members voted to change the name of the organization to the Polish-American Historical Commission and to begin publishing an academic journal they named *Polish-American Studies*. Three years later, no doubt because of the negative stigma attached to “hyphenated Americans,” at its midyear meeting in June 1947, the members voted to discard the hyphens in its name and its journal and to seek membership in the American Historical Association and the Catholic Historical Association.

The early membership of the organization consisted primarily of priests and nuns, with a sprinkling of secular teachers and researchers. Most were not trained academics, and the early issues of the journal, while providing interesting information, could hardly be called scholarly in nature. Following the death of Haiman in January 1949, the organization once again changed its name to the Polish American Historical Association (PAHA). The organization also came increasingly under clerical leadership, with two of the more prominent leaders being Rev. Joseph Swastek,

who served as president and was the longtime editor of its journal, and Rev. Mieczysław J. Madaj, a president and long-term executive secretary who gradually assumed a leading role from the 1960s through the mid-1980s. Another obvious reflection of clerical influence was the removal of the headquarters from Chicago to St. Mary’s College in Orchard Lake, Michigan, in 1950.

Beginning in the 1960s, Madaj and Eugene Kusielewicz began a movement to attract more secular academics to the organization and to increase its professional nature by linking its annual meetings to those of the American Historical Association and offering an annual Haiman Award to recognize scholarship on the Polish American experience. Both of the latter changes took place in 1965. In 1969, the headquarters was again moved from St. Mary’s College to Madaj’s home base at St. Mary of the Lake Seminary in Mundelein, Illinois, but it soon migrated once again, back to the Polish Museum of America, where it was incorporated as a 501(c)(3) not-for-profit organization on October 16, 1972. In 1975, the American Historical Association accepted PAHA’s application for status as an affiliate society, and five years later, PAHA became a contributor to the National Coordinating Committee for the Promotion of History.

By the early 1970s, PAHA was attracting the attention of younger scholars interested in pursuing research on ethnic and immigration history. One of these, Frank Renkiewicz, was named editor of *Polish American Studies* in 1972, and quickly changed its appearance and professionalized its manuscript review process and content. Concurrent with these changes was a gradual shift from a primarily clerical to a primarily secular membership and leadership during the late 1970s.

With this came a renewed interest in promoting serious scholarship, leading to the establishment of the Halecki Prize for the best book on Polish American history and culture in 1981, followed by additional awards including the Swastek Prize for the best article appearing in the organization’s journal, the Stanley Kulczycki Prize for graduate and postgraduate research, a Creative Arts Prize, a Distinguished Service Award, a Civic Achievement Award for those engaged in local projects, and the Amicus Poloniae Award, bestowed on people who were not of Polish heritage but made contributions to the study of Polonia.

In 1998, PAHA returned briefly to St. Mary's College before signing an agreement for permanent offices and archival space at Central Connecticut State University in New Britain, Connecticut, in 2004. An interdisciplinary organization with members in several countries, PAHA publishes scholarship in all fields of the humanities and social sciences, sponsors an annual academic conference, provides major funding for the Ohio University Press Polish and Polish American Studies Series, and supports other worthy scholarly projects. In 2008, *Polish American Studies* joined the History Cooperative developed by the University of Illinois and became a member of the JSTOR (Journal Storage) archival project, the premier academic repository for full-text electronic history journals.

in eastern Europe between Russia and Germany, its modern borders resulted from Soviet demands for substantial portions of eastern Poland and the Allies' wish to compensate Poland to some extent with areas formerly in Germany. With a population of more than 38 million, Poland is a member of the North Atlantic Treaty Organization (NATO) and the European Union. Though historically a multicultural, multireligious state, because of the enforced border changes and the destruction of 6 million Poles, one-half of them Jews, by the Germans and Russians during the war, it is today a nation that is composed of over 96 percent ethnic Poles, while more than 88 percent of whom identify themselves as Catholics. According to the 2010 U.S. Census, nearly 10 million people claim to be of Polish descent, ranking this group as the sixth-largest overall.

Historical Development

Prior to 1870, Polish immigration was largely that of individuals or single families, with an occasional small group. The first recorded presence of Poles in America was three or four skilled artisans who arrived in Jamestown in 1608 and a handful of settlers who appeared in the Dutch colony of New Amsterdam. Most of the Poles in each colony were probably Protestants, since Catholics were banned in Jamestown, and it is known that some Poles moved to the Republic of the Seven United Netherlands to be among coreligionists.

During the American Revolution, several Poles were prominent as supporters of the colonists' quest for independence. The principal sales agent for Continental Congress securities in Europe was Pieter Stadnitski, whose family had migrated from Poland to the Netherlands. In North America, Haym Salomon, a Polish Jew, was arrested by the British at least twice for pro-revolutionary sympathies. He loaned money to the Continental Congress to keep the revolution afloat and also assisted individual members of the congress to remain in Philadelphia.

The two best-known Poles in the revolution were Kazimierz Pułaski and Tadeusz Kosciuszko. As a volunteer aide, Pułaski was cited for his role in saving the Continental Army at the Battle of Brandywine, after which General George Washington appointed him a brigadier general and Commander of the Horse, for which he is often referred

Polish Americans

Poland has existed over the centuries in various forms, with widely changing borders. Its current configuration is a result of World War II, when it was the only Allied nation to lose territory as an outcome of being on the winning side. Located

to as the Father of the American Cavalry. He was mortally wounded during the Franco-American siege of Charleston, South Carolina, in October 1779. By presidential proclamation, October 11 was established as “Pulaski Day,” and on November 6, 2009, he became only the seventh person to be accorded honorary American citizenship.

Tadeusz Kosciuszko arrived in the late summer of 1776. As a talented engineering officer, he was named chief engineer of the northern Army under General Horatio Gates. Kosciuszko played a critical role in the American victory at Saratoga that led to the French Alliance, and he was also the chief engineer for the construction of West Point, today the site of the U.S. Military Academy. He is also known for having penned a will in which he left his American estate to purchase the freedom of enslaved people and provide for their education.

Between 1783 and 1870, Polish immigration continued to be mostly that of individuals, except for three specific occasions. First, political exiles from the November Uprising of 1830–31 arrived, beginning with a group of 234 who landed in New York in March 1834. An estimated 580 arrived by 1837. To maintain contact with one another and promote the Polish cause, they formed the Association of Poles in America, the first Polish organization in America.

Similarly, in the wake of the revolution in 1846, an estimated 500 more Poles arrived by 1851. They formed the Democratic Society of Polish Exiles in America, with ties to a parent group in Paris. Among the early exiles were Marie E. Zakrzewska, who founded the New England Hospital for Women and Children; Ernestine Potocka Rose, who was largely responsible for the passage of the first married woman’s property act; Gaspar Tochman, who founded the Polish-Slavonian Literary Society; sculptor Henryk Dmochowski-Saunders, who created busts of Kosciuszko and Pułaski that were placed in the U.S. Capitol building; romantic poet Cyprian Norwid; the antislavery editor of the *Deutsche Schnellpost* Jan Tyssowski; and future Civil War Union generals Wladimir Krzyzanowski, Joseph Kargé, and Albin Schoepf.

In 1854, the first group of economic settlers arrived in Texas under the Franciscan Rev. Leopold Moczygeba. Eventually numbering some 1,500, they founded the colony of Panna Maria,

the oldest recognizably Polish settlement in the United States. By 1870, there some 50,000 Poles in 20 recognizably Polish settlements located primarily in Texas, Wisconsin, Illinois, Missouri, Pennsylvania, and New York. These settlers were the precursors of a mass migration of an estimated 1.5 million Poles “for bread,” to use the phrase popular among Polish historians, between 1870 and 1914.

During these years, 49 percent came from Russian-occupied Poland, 47 percent from Austrian Galicia, and the remaining 4 percent from German Poland. The typical immigrant was a single agricultural laborer between the ages of 14 and 44, with two-thirds being male. Although 64.5 percent had been engaged in agriculture in Poland, about 90 percent settled in urban industrial areas in America, mostly in the quadrant from New England to Pennsylvania and west to the Mississippi River.

“Polonia”

It was during this period of mass migrations that the larger infrastructure of “Polonia” was established. A deep division between a clerical faction, which promoted Polish American unity through Catholicism, and a secular faction, which promoted the idea that anyone supporting the Polish cause, regardless of ethnic or religious background, was welcome, led to the founding of the Polish Roman Catholic Union and the Polish National Alliance. Bitter disputes raged between the two for decades, preventing formation of a unified national ethnic organization, but each provided valuable benefits to its members in the form of low-cost insurance, leadership opportunities, educational benefits, and other support.

Both espoused assistance for the restoration of Poland’s independence, as did the Polish Falcons, an athletic association much like the German Turnverein, which assisted in the creation of a Polish army from among the immigrant communities in America and Canada to fight for the Allies in France during World War I.

Dissent also marked Polish religious affairs in America. Jewish Poles tended to join Jewish organizations, with only a minority identifying as Polish. Among Catholics, serious opposition arose to the Irish domination of the American Catholic hierarchy and its dismissive attitude toward

Polish customs and tradition. The latter resulted in the formation of the Polish National Catholic Church as an alternative for more nationalist-minded Poles, and in lengthy quarrels with Irish bishops within the Catholic Church.

Beginning in the first decade of the 20th century, Poles were among the stronger supporters of unionization. In large numbers, they joined the United Mine Workers, the United Textile Workers of America, the Industrial Workers of the World, and later the Congress of Industrial Organizations, where they, along with other Slavic workers, are estimated to have constituted about 40 percent of the original membership. Notable leaders included David Dubinsky, Frank Wachter, John Kikulski, Leo Krzycki, Stanisław Rokosz, Stanley Nowak, and Joseph Yablonski, as well as the later American Federation of Labor leader Richard Trumka.

Following World War II, between 1945 and 1966, some 225,000 Poles entered the United States, mostly anticommunist refugees. These included a higher proportion of intellectuals, scientists, journalists, and political leaders than in previous migrations. Occupationally, 16.3 percent were executives, 29.5 percent professionals or semiprofessionals, 16.6 percent skilled workers, and 16.3 percent unskilled workers. Beginning with the relaxation of immigration laws in 1965, some 178,000 Poles arrived as immigrants, and another 957,000 entered the United States as temporary visitors by 1990. Of these, about 35,000 were political refugees of the Solidarity movement. Again, a high proportion of these were engaged in professional, managerial, technical, and sales occupations.

Cultural Impact on the United States

Among the most important organizations promoting Polish history and culture in America are the Polish American Historical Association, the Kosciuszko Foundation, the Polish Institute of Arts & Sciences of America, the American Council for Polish Culture, and the Polish Museum of America. Polish Americans have also made major contributions to nearly all facets of American cultural life. Important political leaders have included Zbigniew Brzezinski, John Gronouski, Barbara Mikulski, Edmund Muskie, Roman Pucinski, Dan Rostenkowski, and Clement Zablocki. Film producers Samuel Goldwyn and the Warner Brothers

were major developers of the American motion picture industry, as were directors Stanley Kubrick, Joseph Mankiewicz, and Roman Polanski, along with popular performing artists Charles Bronson, Gilda Gray, Ted Knight, Linda Kozlowski, Carole Landis, Pola Negri, and Stephanie Powers. Artists such as Magdalena Abakanowicz, Władysław Benda, Richard Bolesławski, Wojciech Fangor, Sigmund Menkes, Elie Nadelman, and Korczak Ziolkowski have established national and international reputations, as have entrepreneurs Max Factor, Barbara Johnson, Edward Pizsek, Helena Rubinstein, and Martha Stewart.

Poles have contributed as scientists and engineers to everything from inventing the moon rover and the electric mixer to preventing polio. Notables include Paul Baron, Mieczysław Bekker, Richard Feynman, Casimir Funk, Ralph Modjeski, Frank Piasecki, Stephen Poplawski, Albert Sabin, Andrew Schally, Stanisław Ulam, Frank Wilczek, and Steve Wozniak. Music has been enriched by Emanuel Ax, Pat Benetar, Rik Fox, Josef Hofmann, Bronisław Kaper, Jan Kiepura, Pee Wee King, Gene Krupa, Liberace, Helena Modjeska, Karen O, Artur Rodzinski, Artur Rubinstein, Ritchie Sambora, Leopold Stokowski, and Bobby Vinton. Journalism has benefited from such well-known names as Mika Brzezinski, Robert Goralski, Michelle Kosinski, Jim Miklaszewski, Andrew Nagorski, Billy Packer, Mike Royko, and David Seymour. There is hardly a field of endeavor in which Polish Americans are not among the prominent members.

Political Correctness

The phrase “political correctness” (as well as its variant, “P.C.”) has several potential meanings but generally denotes efforts that aim to remove offensive or potentially offensive language toward African Americans, as well as other racial/ethnic minority groups, women, gays and lesbians, and other historically marginalized social groups, from print and public speech. The phrase is also used in reference to efforts designed to bring about greater visibility and inclusion of such groups within academic curricula, particularly within literature and social science courses. Critics of these efforts most often use the expression “political correctness” in a pejorative context.

Nevertheless, the principles of political correctness live on, particularly in higher education. These principles attract both supporters and opponents, depending upon one’s personal perspective as to whether such principles are regarded as desirable for American society. At its core, political correctness promotes the concept of increased awareness and sensitivity toward racial/ethnic, religious, gender, sexuality, and other minority groups as a worthwhile goal for American society, but not everyone agrees with either this principle or the manner in which this goal is implemented.

Political correctness is a relatively recent phenomenon that arose from the increased visibility and awareness of the social experiences of minority groups in American society in the wake of the civil rights, women’s rights, and gay rights movements. During the late 1960s and early 1970s, several universities across the United States sought to diversify their campuses by actively recruiting minority students and faculty, as well as designing to be more inclusive of non-white and nonmale perspectives and requiring

students to take multicultural courses as part of the general education curriculum.

Some universities implemented speech codes, which banned certain words or language deemed offensive from campus, or established disciplinary procedures for persons who uttered such language. At times, these policies constituted censorship, an unconstitutional infringement on freedom of speech, so many universities abolished speech codes by the mid- to late 1990s in favor of promoting calls for greater tolerance of diversity on campus.

Debates over political correctness reflect larger sociocultural divisions in American society over desired values and ethics, along with the general manner in which citizens envision the nation. Given this, battles over political correctness represent one dimension of the nation’s contentious “culture wars,” which have received considerable media coverage since the 1970s.

American Indian Mascots

The topic of Native American imagery and ethnic identities serving as mascots for high school, collegiate, and professional sports teams has generated considerable and passionate controversy over the past three decades. At issue are questions regarding the appropriateness, or lack thereof, of team names, mascots, and cheerleading rituals that invoke American Indian symbolism. Further compounding this matter is the fact that although numerous athletic teams have Native American-themed logos (such as the Cleveland Indians, Florida State Seminoles, Kansas City Chiefs, and Washington Redskins), the vast majority of athletes and virtually all of the coaches and owners of these teams are not of American Indian heritage.

Critics of Native American mascots, including Richard Estrada and Ward Churchill, point out the double standard of political correctness by noting that the use of other ethnic groups’ names and symbolism as mascots would be deemed highly offensive and intolerable in American society. Only when pertaining to American Indians is such behavior condoned and vehemently defended. Opponents of such mascots claim that generic team names such as “Indians,” “Braves,” and “Chiefs” homogenize the diverse experiences of indigenous people by

falsely implying the existence of a singular Native American culture. Others have claimed, specifically, that the term *Redskins* and the Cleveland Indians' logo of a reddish-complexioned and grinning, bucktoothed Native American caricature are racially offensive icons.

Supporters of American Indian mascots claim that such team names and imagery intend to honor, rather than demean, Native Americans and that attempts to stifle these mascots constitute politically correct hypersensitivity. Sports fans tend to be highly defensive of their respective teams, and discussions regarding the appropriateness of American Indian mascots have sparked fierce opposition. Still, few would assert that hypothetical sports logos such as "New York Jews" or "Washington Blackskins" pay homage to Jewish or African American history and culture.

As a result, some teams have dropped their Native American mascots. Stanford University changed its logo from "Indian" to "Cardinal" in 1970, and St. John's University modified its "Redmen" moniker to "Red Storm" in 1994. The National Collegiate Athletic Association (NCAA) banned the use of Native American mascots by sports teams during postseason competitions in 2005, although it granted certain exceptions to colleges and universities that used specific names with the permission of the respective tribal group (such as the Florida State Seminoles and Utah Utes).

Multiculturalism and Diversity Training

Since the 1980s, many colleges, universities, and workplaces have implemented mandatory diversity training programs designed to heighten student, faculty, and employee awareness of racial/ethnic, gender, religious, and sexuality differences and to cultivate a more harmonious environment. This transition toward a social philosophy of multiculturalism, as opposed to assimilation or Anglo conformity, grew out of the post-Civil Rights era, in which progressive activists began to conceptualize the United States as a "salad bowl" rather than a "melting pot."

It must be noted, however, that pluralism (ethnic, religious, cultural, and linguistic) has existed in American society since the colonial era, although prior to the 1960s, such diversity was often viewed suspiciously and as a potential

threat to mainstream Anglo-Protestant heritage and identity. Whereas Anglo conformity assimilation paradigms encouraged, or even demanded, that ethnic minority groups shed their respective cultural lifestyles as quickly as possible in order to adopt those of the dominant society, multiculturalism exalts group differences and envisions ethnic, cultural, and religious diversity as something that enriches American society.

The proliferation of mandatory cultural diversity programming and workshops throughout the 1980s and 1990s spawned a highly profitable multicultural industry, with notable diversity training agencies including the American Society for Training and Development, the Conference Board, and the Society for Human Resource Development. A variety of different approaches toward diversity training emerged as a result of competing ideas as to what constituted adequate diversity training, generating criticism.

The "isms" approach, popular in the 1980s and early to mid-1990s, attempted to make students and employees more aware of various forms of inequality and oppression in American society, such as racism, sexism, and heterosexism (homophobia), through activities and vignettes that often engaged in mock role reversal. Some critics of the "isms" approach labeled it "straight white male bashing," while others pointed out that issues of power and privilege are always relative and never absolute—a point that the "isms" approach often neglected to take into consideration. Antiracist activist Jane Elliot, famous for her "brown eyes–blue eyes" workshop, remains the most well-known proponent of the "isms" approach.

Another approach toward diversity training, known as the "cultures" approach, aimed to raise individuals' awareness of the cultural lifestyles of people different from themselves. This approach often consisted of performances that highlighted foods, dances, music, and artwork traditionally associated with particular groups, or workshops that informed participants of the ways of life of different groups. Critics noted that exposing individuals to aesthetic and colorful displays of cultural differences did little to stem intergroup conflict, as such performances centered on the "safe" aspects of group differences while allowing stereotypes, prejudices, and misunderstandings to remain unexamined and unchallenged.

Others pointed out that the “cultures” approach typically invoked superficial generalizations about specific groups. In a fast-paced and highly competitive ethnically diverse corporate setting, for example, how practical or effective would a diversity seminar that features a group of Mexican Americans wearing sombreros and dancing to mariachi music be in fostering the social knowledge necessary for employees to cultivate successful working relationships across group lines?

Criticism and Defense of Political Correctness

Those on the political right have led most of the backlash against political correctness. Conservative critics of multiculturalism and diversity programming, such as economist Thomas Sowell and political pundit Dinesh D’Souza, contend that such efforts actually exacerbate, rather than alleviate, social divisions among students at colleges and universities. Such critics claim that attempts to promote campus diversity ironically foment tensions between and among different racial and ethnic groups, despite administrative intentions to cultivate greater tolerance and tranquility.

For example, Sowell has asserted that administrators commonly treat the executive boards of ethnic minority student organizations as the de facto spokespersons for their respective ethnic student bodies. In this regard, Sowell claims, administrators assume that the demands, grievances, opinions, and agenda of a campus’s black or Latino student organizations accurately reflect and represent those of the campus’s overall black or Latino student populations. Because of the high levels of support that they receive on the part of the administration, their high degree of visibility on campus, and the prominent role they play in campus social life, ethnic student organizations become flashpoints around which the presumed authenticity of ethnic minority students’ identities are measured.

Students who do not join their respective ethnic organization or participate in its activities may face ridicule from members on the grounds that nonparticipants allegedly lack pride in their respective heritage, are “sell-outs,” or are more closely allied with whites. D’Souza has criticized efforts to diversify curricula by claiming that revising courses in order to incorporate nonwhite, non-Western, and female perspectives dilutes the

quality and intellectual rigor of such courses by rooting academia in identity politics rather than scholarship.

On the other hand, supporters of ethnic student organizations point out that the overwhelming majority of students and faculty at most liberal arts colleges and universities across the nation are white, and many have had little prior exposure to or contact with persons of color. Students of color frequently experience a certain degree of social alienation on campus and in the classroom within this context, and ethnic student organizations serve to provide minority students with a positive social outlet that addresses the emotional, academic, cultural, and recreational needs of such students by offering them a space to meet with others who share similar experiences.

Observers have noted that even with the recent move in higher education toward multiculturalism, the content of social sciences and humanities courses still focuses primarily on white, Western, male experiences and ideas. American history courses are taught largely from the perspective of white middle- and upper-middle-class males, with glaring omissions in such courses regarding the historical experiences of American Indians, African Americans, women, and other minority groups. World history courses often center heavily on the histories of, and wars waged by, western European nations, with minimal focus on the social, political, economic, and cultural consequences of European colonialism on non-European peoples in other regions of the world. Among the activities promoted by ethnic student organizations on college campuses include offering educational seminars, talks, workshops, and conferences on these traditionally neglected dimensions of humanities and social science courses.

Although conservatives vehemently decry political correctness as intolerant, undemocratic, Marxist-Leninist, and un-American, the right wing engages in its own versions of political correctness that attempt to designate appropriate and inappropriate thoughts and to stifle the free exchange of speech. During the 2003 U.S. invasion of Iraq, for example, numerous conservative political figures and television and radio pundits admonished those who opposed the war as either allegedly failing to “support the troops” or of “supporting the terrorists” in an effort to silence criticisms of the war

or of President George W. Bush and Vice President Dick Cheney's foreign policy.

In the years since September 11, 2001, wearing an American flag lapel pin has become such a standard practice among political figures that those who opt not to wear a pin have faced criticism for being "unpatriotic." This issue received considerable attention during the 2008 presidential primaries, when Barack Obama refrained from wearing a lapel flag. Others have also pointed out that discourses of the Israeli-Palestinian conflict in American society are often slanted with a pro-Israeli/anti-Palestinian bias, and those who hold other perspectives on this issue, or who draw attention to this bias, face the risk of being labeled "anti-Semitic."

Recent Issues

Controversy over the societal consequences of political correctness escalated during the spring of 2007 following the on-air remarks of talk radio host Don Imus regarding the Rutgers University women's basketball team. While contrasting the physical appearances of the University of Tennessee's female players with those of Rutgers the morning after the NCAA women's championship game, Imus described the Rutgers team—which consisted of eight African American players and two white players—as "some rough girls" and "some nappy-headed hos." Imus's comments immediately sparked protests and calls for his dismissal from CBS Radio from critics such as Al Sharpton, Jesse Jackson, and others who deemed his words both racist and sexist. CBS President Les Moonves fired Imus one week later amid a firestorm of controversy. Imus's defenders chalked up his firing to politically correct hypocrisy and countered that similar comments uttered frequently by African American rappers occur unnoticed within American society. Cultural critic Roger Kimball blogged:

I don't have much time for vulgarians like Don Imus. But I am ready to give him if not three then at least two cheers. His brand of irreverence is not everyone's cup of tea. But the idea that he should be pilloried and hounded out of his job because [Al] Sharpton and [Jesse] Jackson managed to whip up a frenzied, racially inspired campaign against him is nothing less than disgusting.

Since the mid-2000s, conservatives have challenged the alleged liberal biases of professors and the general campus culture of several colleges and universities across the nation. Spearheaded by David Horowitz, a liberal-turned-conservative activist who openly accuses higher education of promoting "leftist indoctrination," conservatives over the past decade sought to advance an Academic Bill of Rights that aimed to protect conservative-minded faculty and students from being denied promotion and tenure, or being penalized academically, respectively, for espousing points of view that ran counter to the allegedly hegemonic liberal social climates of many colleges and universities. The Academic Bill of Rights and its major proponent, the conservative organization Students for Academic Freedom, declined in size and significance by the end of the 2000s.

However, the movement did exert enough influence during its heyday to prompt the Pennsylvania state legislature in 2005 to conduct a series of hearings on whether a "politically correct" and "liberal" bias existed within the Pennsylvania State System of Higher Education and state-related universities such as Temple University and the University of Pittsburgh. Critics referred to such investigations as "right-wing witch-hunts" that were aimed almost uniformly at social sciences and humanities departments, ethnic studies, and women's studies courses. The generally conservative viewpoints of professors in economics and business administration departments did not generate criticism from Horowitz's efforts, illustrating brilliantly that what is considered to be "politicized" speech almost always consists of speech that is critical of, rather than in support of, the status quo within society.

Politics and Ethnic Diversity

The dynamics of ethnicity have long played a role in American politics, ranging from deliberate attempts by political candidates and parties to attract voters of particular racial, ethnic, and religious backgrounds, to the subtle use of racial and ethnic phenomena as “wedge issues” to polarize the electorate. The latter strategy relies on a “divide and conquer” approach aimed at pitting the dominant, majority group (white voters) against particular racial and ethnic minority groups by invoking political discourses that depict African Americans, Latinos, Asian Americans, immigrants, or others as posing an alleged threat to the interests of white voters or as incompatible with, or antithetical to, the American nation. The Republican and Democratic Parties have both engaged in racial and ethnic politics over the years, although the intended targets of such political tactics have shifted as the nation’s demographics have shifted.

The subject of politics and ethnic diversity generated significant media interest following the 2012 presidential election, in which Democratic incumbent Barack Obama won a decisive reelection victory against Republican challenger Mitt Romney. Despite widespread predictions of a close contest and strong optimism among Republicans of a Romney victory, Obama accumulated 332 electoral votes. Following the election, media analysis focused on the relative ease with which Obama defeated Romney, with much credit given to Obama’s strong level of support among African American, Latino, and Asian American voters.

The outcome of the 2012 election led media personalities and political insiders from both major parties to contemplate the future of ethnic dynamics on American politics in coming years.

Nineteenth and Early Twentieth Centuries

During the early years of the republic, ethnic politics focused primarily around issues of slavery and the subjugation and removal of American Indians from lands desired by ruling elites for settlement and development. However, the influx of millions of Irish Catholics during the 1840s and 1850s made immigration a volatile political issue for the first time in the nation’s history—a phenomenon that persists to this day. During this period, the American Party (the Know-Nothing Party) emerged.

The Know-Nothings called for restrictions on immigration and for increasing from five to 21 years the required length of residency before an immigrant could apply to become a naturalized citizen. In the 1856 presidential election, the Know-Nothings nominated former President Millard Fillmore as their candidate, but Fillmore only managed to win Maryland. The Know-Nothings disbanded over the next several years as the nation diverted its attention from immigration to the more pressing issues of slavery and the Civil War.

Following the Civil War, the ratification of the Fourteenth Amendment to the U.S. Constitution conferred American citizenship, and consequently the right to vote, to African Americans. Black voters overwhelmingly supported the Republican Party over the next 70 years, largely because “Lincoln freed the slaves,” and Republicans in Congress supported Reconstruction efforts to ensure blacks their rights in the south. Several blacks won election to public office in the south during Reconstruction. Pinckney Pinchback, the son of a mulatto slave mother and white slave master father, became the nation’s first African American governor when he briefly served as governor of Louisiana from December 1872 to January 1873.

Heavy waves of immigration during the late 19th and early 20th centuries brought large numbers of Irish, Italian, Jewish, and other European ethnic groups to American shores. Many immigrants settled in or near the large cities of the eastern seaboard, where local political machines

attempted to capture their votes in exchange for providing immigrants with food, housing, jobs, or other services.

The most well-known political machine, Tammany Hall, operated in New York City and brought thousands of Irish Americans into city politics. William Russell Grace became New York City's first Irish American and first Roman Catholic mayor in 1881. By the early 1900s, Irish Americans had become crucial in local politics in New York City, Boston, Philadelphia, and Chicago.

By 1940, Italian American mayors had been elected in New York City, New Orleans, and San Francisco. Eastern European Jews became instrumental during the U.S. labor movement of the early 20th century and have overwhelmingly supported the Democratic Party since the 1920s.

Al Smith, the first Irish Catholic presidential candidate, ran unsuccessfully for the nation's top political office in 1928, although Smith championed many of the policies and reforms that eventually became part of President Franklin D. Roosevelt's (elected in 1932) New Deal during the Great Depression. Capitalizing on the Republican Party's anti-immigrant positions of the 1920s, as espoused by Presidents Calvin Coolidge and Herbert Hoover, as well as the difficult economic times of the 1930s, Roosevelt assembled a multiethnic political coalition consisting of Irish, Italian, and Jewish Americans, working-class Anglo-Protestants, Mexican Americans, and African Americans.

Mid- to Late Twentieth Century

President Roosevelt's New Deal coalition established the Democratic Party as the dominant party in U.S. politics over the next two generations, as Democratic candidates won eight of 12 presidential elections between 1932 and 1976. However, the success of key civil rights legislation during the administration of Lyndon Johnson, such as the landmark Civil Rights Act of 1964 and the Voting Rights Act of 1965, has been cited as a major factor in turning large numbers of white voters away from the Democratic Party and toward the Republican Party. The Civil Rights Act outlawed racial segregation in public accommodations, and it effectively rescinded the widespread Jim Crow practices of the U.S. south.

The Voting Rights Act rescinded poll taxes and other tactics, also rampant in the south, aimed at

Los Angeles Mayor Antonio Villaraigosa, the city's first Mexican American mayor in more than 130 years, celebrating with the city's Chinese community at the 107th annual Golden Dragon Parade in 2006.

limiting the number of African Americans deemed eligible to vote, thereby diluting the voting power of this community in states with large black populations. Johnson remarked upon signing the Civil Rights Act into law that the Democratic Party had conceded the southern states to the Republican Party for a generation; in reality, the U.S. south today is the most solidly Republican region of the nation—a phenomenal transition, given that the “Solid South” voted almost unanimously Democratic in presidential elections prior to the 1960s. Johnson also appointed the first African American to the U.S. Supreme Court: Thurgood Marshall in 1967.

Sensing opportunity with white southerners' newfound dissatisfaction toward the Democratic Party, Republicans began a highly successful, long-term campaign to win over this constituency, beginning in the late 1960s. Designated the “southern strategy,” this initiative consisted of pandering to

white southerners' resentment of civil rights legislation and African Americans' social and political advancements. The strategy championed "states' rights" (a popular refrain from the Jim Crow era, which implied that federal efforts to bring about racial integration were unconstitutional), appealing to religious conservatism, promising to restore "law and order," and vehemently opposing school busing, affirmative action policies, and welfare.

Meanwhile, African Americans shifted their political allegiance to the Democratic Party. Roosevelt was the first Democrat to win the majority of the black vote in 1936, and the Democratic presidential candidate's share of the black vote has only increased since then. Harry Truman won 77 percent of the black vote in 1948, whereas Johnson won 94 percent of the black vote in 1964. Blacks' newfound political power enabled African American candidates to win mayoral contests in several of the nation's largest cities.

Carl Stokes became the first African American elected mayor of a metropolis in 1967, in Cleveland. In 1973, Maynard Jackson was elected mayor of Atlanta, and Ernest Morial became mayor of New Orleans in 1978. Other early African American mayors of major U.S. cities include Harold Washington of Chicago (elected in 1983), Wilson Goode of Philadelphia (1987), and David Dinkins of New York City (1989).

One of the most prominent African American political figures in U.S. history, Tom Bradley, was elected mayor of Los Angeles in 1973 and served five terms until retiring in 1993. Highlights of Bradley's administration include Los Angeles's emergence as a global financial center and the nation's second-largest city, and successfully lobbying for Los Angeles to host the 1984 Summer Olympics. However, Bradley came under criticism during the 1992 Los Angeles riots amid widespread accusations of police misconduct toward the city's black and Latino communities.

In 1982, Bradley became the first African American to run for governor of California. Although polls on the eve of the election suggested that Bradley would win the contest by a relatively comfortable margin, he lost to his Republican opponent, George Deukmejian, of Armenian heritage. Bradley's stunning defeat led to the invention of the political science term *the Bradley effect*, which implies that African Americans running against

white opponents in a predominantly white electorate experience inaccurate polling data because of white voters' alleged reluctance to indicate their underlying opposition to black candidates, out of fears of being perceived as racist.

Ronald Reagan became the nation's 40th president in 1980 after defeating Jimmy Carter in a landslide election. Reagan famously praised a delegation of Asian Americans for their "values" and "success" during a February 1984 speech at the White House, reifying the "model minority" image of Asians. Critics have challenged the "model minority" thesis for its blatant racial favoritism. Others assert that one-dimension depictions of Asian Americans overlook the tremendous socioeconomic diversity within this population while serving as a trope with which to deny the persistence of racial inequalities in society. In August 1988, Reagan signed a bill that issued a federal apology for the internment of Japanese Americans during World War II, and awarded \$20,000 as reparations to each living person who had been relocated under Executive Order 9066.

Reagan's vice president, George Herbert Walker Bush, defeated Massachusetts Governor Michael Dukakis, the son of Greek immigrants, in the 1988 presidential election. The 1988 contest featured one of the most notable political advertisements in history, the notorious "Willie Horton" ad, run by the Bush campaign. Devised by Bush campaign manager Lee Atwater, the ad criticized a Massachusetts weekend prison furlough program supported by Dukakis by focusing on an African American inmate convicted of murder. Willie Horton had raped a white woman in Maryland after stabbing her fiancé while on furlough in 1987. The ad, aired during the final weeks of the campaign, displayed a menacing mug shot of Horton and linked Dukakis to his crimes. Former presidential candidate Jesse Jackson criticized the ad as racist and pandering to white fears of black masculinity. Bush appointed Clarence Thomas, the second African American to serve on the U.S. Supreme Court, to replace the retiring Thurgood Marshall in 1991.

William Jefferson Clinton, the Democratic governor of Arkansas, defeated Bush to become the nation's 42nd president in 1992. Clinton's strong level of support among African Americans, as

well as his relatively high degree of awareness and insight into issues of importance to African American voters, earned him the affectionate designation as “the nation’s first black president” from some African American scholars. Clinton’s presidency occurred during a time in which the nation’s attention shifted from foreign policy concerns such as the Cold War and the Gulf War toward a preoccupation with domestic policy and social issues. These issues, including crime, immigration, welfare reform, and affirmative action, either implicitly or explicitly invoke racial and ethnic dimensions, and Clinton was forced to grapple with issues of race more than any president since Johnson.

During the 1994 midterm elections, the Republican Party regained control of both chambers of Congress for the first time since the 1950s, after picking up 52 seats in the House of Representatives and eight seats in the Senate. Deemed the “Year of the Angry White Male” by media outlets, the 1994 Republican revolution was spurred by the rightward shift of the American electorate on issues such as crime, taxes, gun control, and immigration, and it prompted Clinton to govern from a more centrist political stance for the duration of his presidency.

One high-profile California ballot referendum from 1994, Proposition 187, sought to exclude undocumented immigrants from public schools and hospitals, while also requiring public employees to report suspected illegal aliens to federal authorities. California voters approved Proposition 187 by a 59–41 percent margin, and its reverberations were felt nationwide. Many political experts considered that the massive public rallies against Proposition 187, staged largely by enraged Mexican American protesters in cities such as Los Angeles and San Francisco, provided a threatening scene to many white voters, contributing to the measure’s large margin of approval.

Clinton and Vice President Al Gore publicly opposed Proposition 187, whereas several key Republican figures, such as California Governor Pete Wilson, Speaker of the House Newt Gingrich, and political advisor and commentator Pat Buchanan, adamantly supported the measure. Illegal immigration and crime dominated the 1994 California gubernatorial campaign, and Wilson’s strong anti-illegal alien rhetoric and

his wholehearted support for Proposition 187 enabled him to overcome a double-digit deficit in the polls and defeat his Democratic challenger, Kathleen Brown, to win reelection.

Political scientists credit Proposition 187 as a major factor in California’s transformation from a once reliably Republican state to a solidly Democratic state in recent years. Proposition 187, along with the strong anti-illegal immigration rhetoric espoused by Governor Wilson and California Republicans, alienated large segments of the state’s growing Latino and, to a lesser extent, Asian American communities, leading the majority of voters from these backgrounds to register as Democrats since 1994.

Shortly after its passage, a federal judge blocked implementation of Proposition 187 on grounds that it was unconstitutional. In 1999, California’s Democratic governor, Gray Davis (who succeeded Pete Wilson), dropped Proposition 187 from the courts, effectively killing the measure. Nevertheless, the fallout from the 1994 California campaign damaged the Republican Party’s reputation among many within the state’s growing minority constituencies.

Although opposed to Proposition 197, Clinton increased funding for the U.S. Border Patrol and increased deportations of foreigners with criminal records. Clinton also signed the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA) into law in September 1996, one month after he approved the Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA). Popularly termed “welfare reform,” PRWORA established work requirements and job training in exchange for public assistance, and it denied public assistance to legal immigrants. Welfare reform enjoyed strong bipartisan support, driven in part by racial stereotypes of black single mothers and allegations that immigrants entered the United States to obtain publicly funded services.

Clinton initiated a “national conversation on race” in June 1997, which attempted to heal the country’s racial and ethnic antagonisms in order to bring about “one America.” The Clinton administration assembled a commission of seven members, including scholars John Hope Franklin and Ronald Takaki, to serve as advisors to this racial initiative.

Recent Years: 2000 to 2012

The early 21st century witnessed an unprecedented rise in the number of racial and ethnic minorities elected to public office at the local, state, and federal levels. The changing complexion of America's political establishment corresponded to a dramatic shift in the nation's demographics. These changes signified a rapidly transforming U.S. electorate, particularly in key electoral states such as California, Texas, New York, Florida, Virginia, and Colorado.

Al Gore selected Connecticut Senator Joe Lieberman as his running mate during the 2000 presidential campaign, making Lieberman the first Jewish vice presidential candidate in U.S. history. The 2000 election ended in controversy, with the results of ballots cast in several southern Florida counties disputed by both major political parties. The contested results in Miami-Dade County took on an angle of ethnic antagonism that was reflected in emotionally charged public demonstrations between the respective supporters of Gore and his opponent, Texas Governor George W. Bush. The vast majority of African Americans backed the Democratic candidate, while the majority of Cuban Americans supported the Republican nominee.

Eventually, Bush was declared the official winner of Florida and, consequently, the presidency, by a mere 537-vote margin. Political insiders attribute Gore's loss in the Sunshine State to President Clinton's decision earlier that year to use federal agents to forcibly remove Élian González, a 6-year-old Cuban refugee, from the custody of his relatives in Miami in order to return González to his father in Cuba. The move angered many within the local Cuban American community, prompting rallies and turning sentiments against the Clinton–Gore administration.

Bush promised to govern as a “compassionate conservative” and assembled the most racially diverse presidential cabinet to that point in American history. Bush appointed three African Americans to high-level positions during his first term, including General Colin Powell as secretary of state, Condoleezza Rice as national security advisor, and Rod Paige as secretary of education. Bush also named Elaine Chao, a Taiwanese immigrant, as secretary of labor, and former California Congressman Norman Mineta, a Japanese American,

as secretary of transportation. Spencer Abraham, an Arab American of Lebanese descent, became Bush's secretary of energy, while Cuban American Mel Martínez was appointed secretary of housing and urban development. During his second term, Bush named Alberto González, a Mexican American, as attorney general, and Carlos Guitiérrez, a Cuban American, as secretary of commerce.

Despite Bush's relatively hawkish positions on foreign policy, espoused by the “Bush Doctrine” in the aftermath of the September 11, 2001, terrorist attacks that culminated in the invasions of Afghanistan and Iraq, Bush exhibited moderate views on immigration policy and lobbied for a guest worker program with Mexico. Bush's positions on immigration enabled him to improve his standing considerably with Latino voters, as he won 44 percent of the Latino vote during his 2004 reelection over Democratic Senator John Kerry of Massachusetts. At the same time, however, advocates of stricter immigration controls within his party, such as Colorado Congressman Tom Tancredo, openly condemned Bush's views on immigration.

An outspoken critic of illegal immigration, Tancredo warned that immigration from Latin America, particularly Mexico, threatened to permanently change the ethnic composition, cultural values, and language of the United States through the alleged refusal of Latinos to acculturate into mainstream American society. As growing numbers of legal and illegal Mexican and Latin American immigrants settled in urban and suburban communities across the nation during the early 21st century, immigration emerged as a contentious political issue, reminiscent of the backlash against immigration in California during the 1990s that fostered Proposition 187.

Barack Obama, the son of a white mother and a Kenyan father, burst onto the national political scene in 2004 when he delivered the keynote address at the Democratic National Convention. He easily defeated his African American Republican challenger, Alan Keyes, to win election to the U.S. Senate in 2004 and become the only black senator at the time of his tenure. Touted as a rising star in the Democratic Party after his election, Obama generated a mass following through his persuasive rhetorical style, multicultural background and awareness, and outspoken criticism of

the war in Iraq. His quick rise through the ranks of the Democratic Party drew comparisons to John F. Kennedy, and Obama launched a historic campaign in 2008 that culminated in his landslide election over John McCain as the nation's first black president. Despite some concern within the media that Obama would suffer from the "Bradley Effect" and fail to become president, Obama won 95 percent of the African American vote, 78 percent of the Jewish vote, 67 percent of the Latino vote, and 62 percent of the Asian American vote, while capturing 43 percent of the white vote.

The milestone of Obama's successful presidential campaign overshadowed other significant political developments of the early 21st century; however, a number of other ethnic minority candidates from a variety of backgrounds won election to public office nationwide, as members of both major political parties. Michael Steele, the first black lieutenant governor in Maryland's history, served as chairman of the Republican National Committee from 2009 to 2011. Bobby Jindal, the first Indian American to serve in the U.S. House of Representatives since Dalip Singh Saund in 1963, was elected governor of Louisiana as a Republican in 2007. Jindal's election marked the first time in the nation's history that an Indian American had been elected governor of a state. In 2010, Nikki Haley, the daughter of Sikh immigrants from India, became the second Indian American to be elected governor of a state, when South Carolinians voted her to lead the Palmetto State.

After South Carolina Senator Jim DeMint resigned from the Senate in 2012, Haley appointed Congressman Tim Scott as DeMint's replacement. Scott is the first black senator since Obama, in 2008. Joseph Cao, the first Vietnamese American congressman, represented New Orleans in the U.S. House of Representatives from 2009 to 2011. Prominent Republican Mexican Americans to have won election as governor in recent years include Brian Sandoval of Nevada and Susana Martinez of New Mexico, both elected in 2010. Senators Marco Rubio of Florida and Ted Cruz of Texas, both Cuban Americans, are influential members of the Tea Party wing of the Republican Party.

Meanwhile, several prominent Democrats from underrepresented racial and ethnic backgrounds have also been elected over the past decade. During his first year in office, President

Obama nominated Sonia Sotomayor, of Nuyorican heritage, as the first Latina to serve on the U.S. Supreme Court. In May 2005, Antonio Villaraigosa, a second-generation Mexican American, became the first Latino mayor of Los Angeles in more than 130 years. As mayor of the nation's second-largest city, Villaraigosa has been touted as a promising "rising star" within the Democratic Party. Another Mexican American, Bill Richardson, served as governor of New Mexico from 2003 to 2011 and ran as a presidential candidate in 2008. Richardson previously served as U.S. ambassador to the United Nations and secretary of energy during the Clinton administration.

San Antonio Mayor Julián Castro, also Mexican American, delivered the keynote address at the 2012 Democratic National Convention, as the first Latino to deliver the keynote address at either major party's convention. Duval Patrick was elected governor of Massachusetts in 2006, becoming the first African American to be elected governor of a state since Douglas Wilder narrowly won election as governor of Virginia in 1989. Cory Booker, the African American mayor of Newark, New Jersey, has achieved nationwide recognition from his frequent media appearances on political news programming and at one time announced plans to run for the U.S. Senate.

Future Outlook

The racial and ethnic diversity of the nation's public officeholders will continue to increase as the nation's demographics diversify. During his reelection in 2012, President Obama carried 93 percent of the black vote, 73 percent of the Asian American vote, 71 percent of the Latino vote, and 39 percent of the white vote. Romney, on the other hand, won 59 percent of the white vote, and 88 percent of those who voted for Romney were white.

The low levels of support for Romney and the Republican Party among voters of various ethnic minority backgrounds during the 2012 election has evoked much political discourse as to the future of both the Republican and Democratic Parties, given the rapidly shifting demographic composition of American society.

Several media outlets, for example, repeatedly mentioned that the Republican Party's future prospects grow even dimmer, given the fact that approximately 50,000 Latinos turn 18, and thus

are eligible to vote, each month. Other political and media pundits have noted that by 2050, the U.S. population will be approximately 25 percent Latino and 10 percent Asian American. The implication is that these demographic trends spell disaster for the Republican Party, based on recent voting patterns.

Many have suggested that the Republican Party's low support among Latinos stems from its tough stance on immigration policy, opposition to the DREAM Act (a bill that would grant legalized status to persons brought to the United States illegally during childhood), and support for English-as-the-official-language legislation. Asian Americans have also shifted against the Republican Party, given that George H. W. Bush won 55 percent of the Asian vote in 1992.

Some analysts attribute the shift among Asian Americans toward the Democratic Party as a result of the Republican Party's immigration positions, as well as its recent gravitation toward the religious right, which has resulted in anti-scientific efforts to teach creationism in public schools and denial of global warming (significant because many Asian Americans are either immigrants who hold degrees in science or the children of scientists). Because of their rapidly growing numbers, Asian Americans have been described as "the next sleeping giant" in American politics.

However, one should not necessarily make bold future political calculations based on current voter preferences, because political winds shift frequently in response to changing social and cultural concerns. Furthermore, voting patterns do not stem solely from one's racial or ethnic background, but are influenced by a confluence of other factors, including social class, religious affiliation, and personal matters of importance to an individual.

Poll Taxes

Poll taxes, sometimes referred to as a tax per head, represent a specific payment required from individuals to the governing body before they are able to vote in elections. Poll taxes have existed throughout history in different nations, states, and municipalities. These taxes were first initiated during times of war as a way to generate additional revenue. Sometimes, these taxes have been unfairly used against certain groups of people, chiefly to prevent their ability to vote. In the American south, before the advent of the civil rights movement, poll taxes were often used to prevent African Americans from voting. Patterns related to poll taxes occur over time and space. When objectionable, poll taxes are frequently used along with other devices, such as literacy tests, to prevent one group from voting because of their race, color, home language, or other protected status.

Poll taxes are documented in the Book of Exodus and were also found in the Middle Ages in England and France. During the time of the Roman republic, citizens had two direct taxes to pay before they were able to vote in elections. Although the Roman taxes were different from most modern poll taxes, they were highly influential. In 1695, the French assessed the *capitation* during wartime. This tax was used to fund the

French armed forces, and the tax was assessed depending upon social class. This tax was in addition to the *taille*, the direct tax system of France. The English also used versions of poll taxes between the 13th and 17th centuries.

Often assessed during times of war, these taxes changed so that individuals were assessed an amount based on the value of their personal property. In times of war, poll taxes were often used as a means of generating needed revenue. All areas under English control, including the American colonies, were expected to contribute to this. As a way to prevent the wealthy from shirking their responsibilities, means were devised that were intended to prevent underpayment of taxes.

The hearth tax, for example, required every homeowner to pay a certain tax based on how many hearths were in the house. After the Glorious Revolution of 1689, the hearth tax was replaced with a window tax in which tax inspectors would count windows from the outside and not have to enter the privacy of people's homes. Failure to pay one's taxes precluded one's right to vote in elections.

United States

In the United States, poll taxes have played a role in attempts to preclude certain voters from exercising their rights to participate in the electoral process. Although poll taxes are not inherently discriminatory, many southern states used them as a means to prevent African Americans and other multicultural groups from voting during the late 19th century. These efforts to institute poll taxes occurred after passage of the Fifteenth Amendment to the U.S. Constitution, which gave all men, regardless of race, the right to vote. This right to vote had not previously been guaranteed, but the proposal and ratification of the Fifteenth Amendment and other legislation gave African Americans the right to vote after the Civil War. In the years immediately following the conclusion of the war, many African Americans voted, sometimes electing black members of Congress and other representatives.

During the latter half of the 19th century, many southern farmers struggled with falling prices for agricultural commodities. Seeking a scapegoat for their problems, many white voters set out to diminish the role of African Americans in elections

by removing their ability to vote. Throughout the southern states, white politicians created laws and restrictions that greatly affected people of color. These efforts included the Jim Crow laws, which segregated people of color from those who were white, creating social divides that were difficult to overcome.

During this period, poll taxes were also used as a requirement that must be met in order for an individual to vote. Poll taxes made it much more difficult for people who were poor to vote. Although there were poor whites as well as poor blacks, in some communities, the poll taxes were assessed only on African Americans. Poll taxes and other acts of segregation greatly reduced the number of African American voters participating in southern elections.

State and local governments that sought to circumvent the Fifteenth Amendment frequently did so solely to diminish the ability of African American, Latino, Asian, and other non-Caucasian people to vote. To that end, many poll tax statutes contained a "grandfather clause," which precluded any Caucasian male from the tax if his father or grandfather had voted before the tax's implementation. Poll taxes were often coupled with literacy tests, often administered only to non-whites, to effectively disenfranchise people of color.

Although many opposed poll taxes for this reason, in *Breedlove v. Suttles*, 302 U.S. 277 (1937), the U.S. Supreme Court upheld a Georgia poll tax that had been used to exclude African Americans from voting. The court made this ruling because the statute authorizing the poll tax indicated that it applied to everyone regardless of race, even though it was not assessed.

Without the right to vote, in many communities, African Americans, Asians, Latinos, Native Americans, and others were effectively excluded from the electoral process. This had the effect of ensuring that their access to schools, hospitals, government services, and colleges and universities was limited or completely curtailed. As African Americans and other people of color were unable to vote in elections for law enforcement agents or the judiciary, many believed that the criminal justice system was biased against them. The criminal justice system was unable to equitably resolve crimes against people of color or to provide them a fair hearing when accused of committing a crime.

A poll tax notice photographed in Mineola, Texas, in January 1939. The Supreme Court barred the use of poll taxes in state and local elections with its decision in *Harper v. Virginia State Board of Elections* (1966).

Civil Rights Movement

Opposition to poll taxes grew during the first few decades of the 20th century. Groups such as the National Association for the Advancement of Colored People (NAACP) began asserting that poll taxes were unconstitutional because they limited certain groups' ability to vote. In 1962, Congress proposed the Twenty-Fourth Amendment, which barred Congress or the states from imposing poll taxes in federal elections. Congress was responding to repeated complaints by many African Americans regarding disparate and discriminatory treatment that prevented them from participating in elections.

Coupled with the Voting Rights Act of 1965, the Twenty-Fourth Amendment greatly increased African American participation in federal elections, although it did nothing to regulate the use of poll taxes in state and municipal elections.

By this point, only four states had poll taxes: Alabama, Mississippi, Texas, and Virginia. The Supreme Court strengthened the protections provided by the Twenty-Fourth Amendment with its decision in *Harper v. Virginia State Board of Elections*, 383 U.S. 663 (1966), which overturned the earlier decision in *Breedlove* and barred the use of poll taxes in state and local elections. The Court

held that poll taxes were unconstitutional, pursuant to the Fourteenth Amendment's Equal Protection Clause, and that voter qualifications have no relationship to wealth.

The Voting Rights Act of 1965 also helped end electoral practices that resulted in African Americans and other multicultural groups being denied the right to vote. The Voting Rights Act mirrors the language of the Fifteenth Amendment and prohibits states from engaging in behaviors or establishing practices or procedures that result in the denial of members of any groups of the right to vote because of their race or color. Intended to ban the use of literacy tests that had been used to prevent African Americans from voting, the Voting Rights Act also established a system that established federal oversight of the voting process nationally.

States with a history of engaging in discriminatory practices that prevented individuals from multicultural backgrounds from voting were precluded from implementing changes affecting voting without first having those changes approved by the U.S. Department of Justice. Through the Twenty-Fourth Amendment and the Voting Rights Act, substantial change occurred in many southern states, where voting had traditionally been the purview of less than 50 percent of the eligible population.

Polynesian Americans

Polynesian Americans comprise Native Hawaiians, Samoans, Tahitians, Tongans, Indigenous Australians, native New Zealanders, Wallisians, Futunans, Tokelauan, Niueans, Fijians, Tuvaluans, Cook Islanders, Rotuman, Rapa Nui, and Maori, from over 1,000 islands across more than 70 million square miles (181 million square kilometers) in the central and southern Pacific Ocean region. A wide variety of languages are spoken by Polynesian Americans, including English, Hawaiian, Samoan, Fijian, Tongan, French, Tokelauan, Niuean, Rapa Nui, Spanish, and Rotuman. Anthropologists consider Polynesians to share genetic, linguistic, and cultural ancestry that dates back to the prehistoric Austronesian peoples who originated in Taiwan.

Many of the religious, navigational, agricultural, and weather-predicting customs are similar throughout Polynesia. The Polynesian American community is largely Christian, with most identifying as Mormons or Catholics. The most populous subcategories of Pacific Island Americans are Native Hawaiians, Samoans, Tongans, and Maori. The terms *Pacific Island American* and *Oceanian American* include Americans of Polynesian, Micronesian, and Melanesian descent. Historically, Polynesian Americans have been overrepresented, relative to their population, in agricultural and military careers.

According to the 2010 census, there are 540,013 Pacific Islands Americans, who account for 0.2 percent of the population of the United States. If those with partial Polynesian ancestry are included, that number more than doubles to 1,225,195, or 0.4 percent of the population. Large Polynesian American communities exist in Hawai'i, California, Alaska, Utah, Oregon, and Washington. "Samoan American" refers both to individuals from the independent nation of Samoa and to those from the U.S. territory of American Samoa. American Samoa has been an unincorporated territory of the United States since 1899. As such, American Samoans are U.S. nationals; this status accords a direct and simple path to U.S. citizenship.

During the U.S. occupation of American Samoa in World War II, American military personnel outnumbered native Samoans. This exchange

shaped the culture and encouraged emigration to the United States. As of the 2010 census, there were nearly four times as many people of Samoan descent living in the United States—primarily in Los Angeles, San Francisco, Honolulu, Las Vegas, Salt Lake City, Seattle, and Anchorage—than in American Samoa.

By the 20th century, nearly all Polynesian Americans were Christians, mostly Mormons. Many Polynesian Americans celebrate international holidays and festivals, including Diwali, Chinese New Year, and Pasifika. Polynesian American cuisine closely mirrors that of the native islands, with crayfish, seaweed, breadfruit, and coconut factoring heavily in many dishes. Rugby, Australian-rules football, and cricket are traditionally the most fashionable sports among Polynesian Americans, although American football and wrestling have gained in popularity.

Some American representations of Polynesian culture have not been initiated by Polynesian Americans—or especially authentic portrayals. After World War II, Tiki culture, which is a kitschy interpretation of various Polynesian customs, became fashionable in the United States. Some of the more successful expressions of Tiki culture include the television show *Gilligan's Island*, the fusion jazz music of Martin Denny and Les Baxter, and tropical-themed attire, nightclubs, and restaurants. Tiki culture was especially popular in the 1950s and 1960s, and a resurgence in interest occurred in the 1990s.

Cultural Influence

Significant contributions to the existing literature on the Polynesian American experience have been made by fiction writers (Kiana Davenport, Victoria Nalani Kneubuhl, Vilsoni Hereniko) and scholars (historians Lilikala Kame'eleihiwa and Herb Kawainui Kane; documentarian Haunani-Kay Trask). Polynesian American characters have been represented prominently in books (*Saturday Night at the Pahala Theatre* and *Moloka'I Nui Ahina*), on stage (*Mele Kanikau* and *Think of a Garden*), on television (*North Shore*, *Living Lahaina*, and *Hawaii Five-O*), and on film (*Lilo & Stitch* and *Princess Kaiulani*). In addition, the inspiration for Earl Derr Biggers's fictional detective Charlie Chan was a Honolulu law enforcement officer named Chang Apana.

Daniel Akaka, the first U.S. senator with Hawai‘ian ancestry, served in the House of Representatives from 1977 to 1990 and in the Senate from 1990 to 2012. John D. Waihe‘e III became the first Native Hawai‘ian elected to a major office when he became governor of Hawai‘i in 1986, a post he held until 1994.

Polynesian Americans are represented throughout the entertainment industry. Among the earliest was Tahitian-born Anne Chevalier, credited as Reri, who starred in a series of 1930s films. Filmmaker-activist Kayo Hatta, dancer-choreographer Carrie Ann Inaba, and science fiction film director Richard Earl Cunha have made significant contributions behind the scenes. Dwayne “The Rock” Johnson, Keanu Reeves, and Jason Momoa have played leading roles in major Hollywood movies. Al Harrington, Mark Dacascos, and Anthony Ruivivar have been series regulars on network and cable television programs. Yvonne Elliman, Jason Scott Lee, and Loretta Ables Sayre have essayed leading roles in Broadway and West End productions.

Polynesian Americans have populated the ranks of professional sports in the United States for decades. In particular, football (Troy Polamalu, Esera Tuaolo, and Manti Te‘o), wrestling (Sam Fatu, Peter Maivia, Afa Anoa‘i, and Sika Anoa‘i), and rugby (Vaea Anitoni, Vahafolau Esikia, and Fifita Mounga) are popular among Polynesian Americans. Greg Louganis, who won one silver and four gold medals in diving at the 1976, 1984, and 1988 Olympic Games, is also of Polynesian descent.

Popular Music and Ethnic Diversity

America’s cultural identity (comprising class, race, language, religion, and gender) has shaped understanding of American music. The sources of popular music in America prior to the American Revolution were abundant. Indigenous inhabitants—Native Americans—were the primordial musicians, creating diverse sacred ceremonial sound with singing, chants, flutes, and percussion, reflecting ghost religion relationships with nature. The musical punctuation of Native Americans was characterized by pre-Columbian cultural diversity.

European exploration brought mostly amateur musicians, as different nations sought to exploit untapped resources to create continuous wealth. Early British influences could be heard in sea chanteys, featuring call-and-response phrasing; French trappers brought paddling songs as they opened inland river routes; and Puritans brought Elizabethan and Jacobean psalms. Indeed, the first popular English-language song in North America was a nursery rhyme called “Rock-a-Bye, Baby,” thought to have been penned by a *Mayflower* traveler describing the Native American practice of keeping swaddled babies in birch-bark cradles hung on tree limbs while kinfolk worked nearby. European ballads were transplanted to New England and then migrated slowly westward. Enslaved people carried West African music to the south, and Spanish missionaries introduced church music to indigenous populations along the Pacific Coast.

Musicians and composers in early America resisted musical nationalism and passed on vernacular music from their homelands that in time blended into new sounds. Americans seemingly were conflicted in their musical tastes: “highbrow” society fostered appreciation of “good” music, transplanted as classical music from Europe, while indigenous working-class music including jazz, country music, and rock was described with the derogatory term “lowbrow.”

Prior to the American Revolution, sacred music, originating with 16th-century Protestant movements in western Europe, favored popular secular ballads rather than pentatonic tunes from English, Scottish, Irish, Welsh, and French

cultures. During the Great Awakening, individuals were encouraged to express their religious fervor more publicly, which was reflected in musical innovation as new communities opened southern and western frontiers. The Appalachians formed an important musical hearth where Scots created new ballads and love songs with the easily transported and easy-to-learn dulcimer. These influences were then carried to the Ozarks, where they further evolved. On the frontiers, working-class communities also embellished European dances by employing a form of call-and-response; British folk dances derived from the quadrille evolved with the addition of a caller, who shouted out dance steps in an improvised way, creating popular, uniquely American square dances.

Early Instruments Used in American Popular Music

The plucked Appalachian mountain dulcimer was the earliest music instrument carried into the rural south; thought to have been derived from the German *scheitholt* or the Scandinavian *langeleik*, it was introduced in Pennsylvania during the early 1700s. The fiddle, known to many religious denominations and Native Americans as “the devil’s instrument,” became the chief musical vector for preserving folk melodies as settlers carried it to the western frontiers beginning with the Meriweather Lewis and William Clark Expedition (1804–1806) to open westward water routes from the Mississippi to the Pacific Ocean.

The banjo, derived from African traditions, was brought by enslaved people to North America as early as the mid-1700s; it was an instrument whose strings were plucked, and its resonating body consisted of parchment stretched over a metal hoop. During the 1800s, an additional “drone” string was added to the banjo, and it became a favorite instrument in minstrel and hillbilly music carried by Forty-Niners to California. The guitar moved northward from Mexico through Texas and California during the early 19th century. African Americans popularized the guitar first in Texas, then carried it into the lowland south. Freed blacks carried the guitar into other regions following the Emancipation Proclamation.

The earliest American sheet music for guitar was published in California and New York during

the California gold rush. White musicians east of the Mississippi did not play the guitar until the 1880s. Prominent white musicians of the 20th century, including Hank Williams and Merle Travis, learned the guitar by studying African American techniques. The easily transportable autoharp was originally a parlor instrument. The guitar-like ukulele was introduced by Portuguese immigrants and adapted by Hawai‘ian musicians during the 1880s, and it was popularized during the 1915 International Panama Pacific Exposition in San Francisco.

Transportation and Music Migration

Some have argued that music is the slowest social trait to change, but ethnic music was exchanged on battlefields of American identity. Patriotic songs of the American Revolution derived from familiar British melodies included “Yankee Doodle,” which became the first American popular song. It also set a precedent for using new lyrics to adapt older tunes to serve American tastes.

The War of 1812 marked a turning point for the building of cultural independence from Great Britain. The story of the creation of America’s national anthem captures the early cultural fusion in popular music. Prior to the battle for Baltimore in 1814, Americans were demoralized by the dramatic defeats at Bladensburg, Maryland, and Washington, D.C., when military leaders floundered. Maryland Governor Levin Winder dramatically changed tactics by placing local authority jurisdiction over federal in Baltimore’s defense. These local militias reflected cultural diversity from the region. Normally insular German communities from Pennsylvania were thrown into a multicultural and multilingual militia, where they were exposed to new ideas and perspectives. Regular call-and-response drills to open effective communications channels with coastal watchmen and scouts, so men from different socioeconomic backgrounds bonded during ordinary fatigue duties.

The Battle for Baltimore (September 12–14, 1814) proved to be a turning point when British forces were repulsed at Fort McHenry had been instituted earlier and Baltimore was saved. “The Star-Spangled Banner,” composed of lyrics from the patriotic poem “Defense of Fort McHenry,” by Frances Scott Key, was set to the popular British

melody called “The Anacreontic Song,” and the hybrid song was published in newspapers. Played at local events, it was eventually adopted by the U.S. Navy as the official tune played to raise the flag in 1889.

Blackface Minstrelsy and the Bowery Irish

New York City’s lower Broadway and the Bowery became the epicenter for the first distinctly American form of theater in the 1830s and 1840s, which gave rise to the music industry in the United States. Blackface minstrelsy including racist burlesques and comedy featuring white performers who appropriated stereotypes of southern plantation life and black culture catering to white audiences. Minstrel music came from a number of contemporary musical trends popular on the East Coast, including medicine shows, traveling circuses, Irish dance, African rhythms, and the noisy celebration shivaree.

Minstrel tunes employed the pentatonic scale (familiar to many ethnic groups); they were catchy and quickly embellished by lyrics of quotidian boasts and hard-knock humor. The interlocutor (master of ceremonies) of a minstrel show took center stage with “Gentlemen, be seated.” His telling of the company’s history followed. The cast performed bawdy entertainment with fiddles, banjos, tambourines, and bone castanets. Two rowdy “end men” exchanged salty jokes between the songs and dances that were performed using black plantation dialect.

Stephen Foster (1826–64) pioneered multiculturalism in popular music, creating a mosaic of ethnically diverse sounds, in his songbook portfolio ranging from “Camptown Races” (1850), which featured the vocal call-and-response of military calls and African traditions; to “Ah, May the Red Rose Live Always” (1850), in the style of Scottish balladry; to “In the Eye Abides the Heart” (1851), reminiscent to a German lied; to “Oh! Susanna,” the European troubadour song transformed into an African American tune and carried west by hopeful gold seekers (it was transformed with new, ironic lyrics to become the unofficial anthem of the gold rush with “Oh California”); and to “Beautiful Dreamer” (1862), written in an Italian *bel canto* style.

California, admitted to the Union as a free state, attracted all races that traveled by land and sea

in search of opportunity, and white families often came face-to-face with African Americans for the first time. A number of Jewish American composers later shaped popular music from Broadway, including Irving Berlin, Leonard Bernstein, Aaron Copeland, George Gershwin, and Jerome Kern.

African musical traditions and idioms were integral to the evolution of popular music genres in America, including rhythm and blues and jazz, which crossed social lines, and later rock and roll, soul, and hip-hop music. Blues music began to emerge with the abolition of slavery by the Thirteenth Amendment in 1865, when work songs, spirituals, and hollers (the soulful expressions of bondage) were subordinated to religious expression and transcendence in ballad form.

Transportation advances further promoted American ethnic diversity in music as people carried music to the frontiers. Black laborers carried call-and-response chants and field hollers that subsequently fused with Native American traditions to create foundations for country blues, which were carried via the Mississippi River to New Orleans, helping make it a hub where French and Spanish music changed tempos. The earliest blues singers were born during the 1880s. By 1900, a fusion of black and white folk music mingled in a primitive form of the blues with a twelve-bar tune.

Radio Introducing Music to the Masses

Bawdy burlesque and comedy shows became popular between the mid- and late 19th century and were eclipsed by vaudeville, which was more family-oriented. Radio as a means for mass communications revolutionized American musical tastes during the 1920s. During the Great Depression, while the United States’ gross national product and newspaper and magazine advertising billings dropped dramatically, radio advertising steadily increased. “Dialers,” radio listeners, wanted variety.

For the radio industry to grow, it needed to be considered a household necessity—a home without a radio was a house without a window. “Jamborees,” lighthearted entertainment, became radio’s means to attract new audiences by attempting something novel during the 1930s. Weekly frolics started as rehearsals for shows where program formats were ironed out and then revealed during the second hours of programs.

An elderly African American man playing a banjo around 1902. The banjo's roots are in African musical traditions brought to North America by slaves in the mid-1700s.

Jamborees and frolics came and went, but some became station perennials. Dialers eagerly awaited reliable novelty entertainment, and radio offered “the ideal broadcasting bait.” Radio columnist Joseph E. “Dinty” Doyle observed, “week in and week out radio offered ‘darned good entertainment’—the *Jamboree* has become an institution.” “Oklahoma Singing Cowboy” Gene Autry launched his career in Tulsa, Oklahoma, on KVOO radio during the 1930s and 1940s. Country music is a hybrid of Anglo-Celtic ballads transplanted to the rural south during the colonial period, where they absorbed regional vocal and instrumental influences. Country music carried regional culture westward.

Improvisation in American Popular Music

Jazz originated in New Orleans from local, black, and Creole folk music in the 1890s. It evolved dramatically as it was carried to other regions over time, where it fused with local tastes: Chicago during the 1920s, New York in the 1930s, and San Francisco in the 1940s.

The musical choice of flappers was jazz, which revolutionized dance. During the period between the end of World War I and the Roaring Twenties, popular jazz music became intertwined with radical social change as adolescence was recognized as a distinct age group and gendered fashion trends of flappers focused attention on youth culture. Women across ethnic lines donned easy-care bob hairstyles, shorter skirts, and sporty fashions, and adopted masculine habits including smoking, drinking, and driving cars.

During urban-centered booms, language and sound mingled in working-class venues that turned into new kinds of musical expression. Scat singing (or specialty choruses) developed—vocal improvisation employing nonsense syllables of melodies and rhythms where the voice becomes the equivalent of an instrument used in jazz music. Scatting derived from African music tradition was first used in ragtime and was made popular by Louis Armstrong in the 1920s. Later, during the Dust Bowl drought, refugees moving westward from Oklahoma, Texas, and Arkansas included many country music artists. Oklahoma residents demonstrated a transient restlessness reflected in American mobility, and they resisted homogeneity and conformity. Bob Wills introduced western swing (western jazz) in the late 1920s in Fort Worth, Texas.

Zydeco music, popularized around 1920 and indigenous to southwest Louisiana and east Texas, blended African American and French Cajun traditions dating from the Civil War. The Big Band era (1935–56) spotlighted musicians including Louis Armstrong, Count Basie, brothers Jimmy and Tommy Dorsey, Ella Fitzgerald, Glenn Miller, Artie Shaw, and Woody Herman. Jazz enjoyed a strong Jewish influence with musicians including Benny Goodman, Artie Shaw, Stan Getz, and Al Jolson. Goodman broke down segregation in American popular music. New York was the birthplace of bebop, dance jazz featuring a lot of improvisation.

Honky-tonk roadside dance bars emerged after the repeal of Prohibition, serving truck drivers, farmers, laborers, and oil field workers. Beginning in the mid-1930s, boomtowns emerged when a single resource, commodity, or activity was discovered. Boomtowns attracted newcomers and entertainers with lucrative salaries or investment opportunities, and local entrepreneurs catered to the needs of workers to exploit newfound affluence. If a boomtown was dependent upon a single commodity and did not diversify its potential resources to sustain the original community, it experienced “bust” cycles of catastrophic economic collapse that could make its population decrease in size as fast as it had increased; in extreme situations boomtowns then became ghost towns. Honky-tonks offered “hell-raising” dance music with a heavier beat, and honky-tonk bands were the first to employ the electric guitar in the 1930s to amplify sound over rowdy dancers.

Popular Music and Modern War

Prior to World War I, jazz music belonged to black America. The war carried black soldiers, some of whom were jazz and blues musicians, throughout the United States and into parts of western Europe. During World War II, musicians changed careers when a 20 percent wartime entertainment tax for singing or dancing venues hampered the viability of jazz nightclubs. Musicians joined armed forces bands, where they obtained additional music training. American music evolved rapidly after World War II, as musicians with military training went to college on the G.I. Bill. Singing cowboys like Gene Autry and Woodward Maurice “Tex” Ritter used motion pictures and television to introduce western music to national audiences. Some African American jazzmen adapted to the musical tastes of white society.

The G.I. Bill financed the education of a generation of musicians: it entitled them to \$500 for “at least 12 months of education or training, or a refresher or retraining course.” Veterans attending San Francisco State College had professional dance band experience and wanted a course focused on dance band music that offered opportunities to experiment with innovative approaches to scoring pop tunes. They started a social movement in music when they asked a student leader to

lobby the music department for a “dance band” class. San Francisco State eventually offered the first known college-sanctioned jazz course for credit in the United States.

Percussionist Callen “Cal” Tjader (1925–82) was the first American musician to bridge traditional Latin music and jazz-pop music. His earliest Afro-Cuban recordings, captured in San Francisco in 1954, featured Jerome Richardson on flute and Richard Wyands on piano. Tjader first enrolled at San Jose State College for teacher training after serving as a medic in the U.S. Navy. Tjader found that many young musicians left San Jose State because performing or even rehearsing jazz was discouraged, “with the threat of being thrown out if caught.” Tjader built relationships with African American students at San Francisco State, including bassist Ron Crotty and hard bop pianist Wyands. Students performed and conducted their arrangements, ranging from modified bop to modern symphonic style.

Country pop emerged out of Nashville during the 1950s as a result of Hank Williams’s popularity in the 1940s. By 1953, Williams’s song “Cold, Hard Heart,” recorded by Tony Bennett, crossed over to the pop charts and sold one and a half million copies. Rock music, combining black gospel, rhythm and blues, and white country and western music, came out of Cleveland in the midwest in the early 1950s. Music remained segregated until 1953, when Bill Haley (1925–81) and Haley’s Comets recorded “Crazy Man Crazy,” which became the first rock and roll album to make the Billboard Pop charts. In Memphis, Jerry Lee Lewis and Elvis Presley (influenced by Bo Diddley) used radio, television, and film to introduce the sound to white audiences.

Latin American rhythms and dance have influenced popular music in the United States over time: the rumba in the 1930s, the mambo in the 1940s, the cha-cha in the 1950s, the *bugalu* in the 1960s, and salsa in the 1970s. In 1959, after Fidel Castro’s revolution, Cuban refugees fled to South Florida (specifically Dade County), bringing cultural sounds to Miami. A distinctive Miami music soon reflected a specific ethnic subculture fusing Cuban and North American popular music that took hold in the 1970s as Cubans became the majority in Miami. California surf rock, utilizing Mexican and Middle Eastern techniques to create

a “wet”-sounding reverb, was popular between 1961 and 1966. Acid rock was introduced during the Monterey Pop Festival in 1967 and then took hold in San Francisco during the Summer of Love.

Urban Contemporary Music

Rap music originated in Jamaica, traveling to the Bronx during the late 1960s. Clive Campbell (DJ Kool Herc) employed pioneering techniques of manually manipulating records on a turntable while performers spontaneously created lyrics. Country music, though white-dominated, was derived from European, African, Native American, and Hawai‘ian traditions. Country rock out of Austin, Texas, emerged during the 1970s with Willie Nelson and Waylon Jennings. Although the country music industry has been dominated by white male artists, women like Loretta Lynn, black artists like Charlie Pride, Cajun artists like Doug Kershaw, Latinos like Freddie Fender, and Jewish singers like Kinky Friedman have influenced its sound. American popular music will continue to evolve to reflect growing ethnic and lifestyle diversity.

Porgy and Bess

Porgy and Bess is an American opera with a score by George Gershwin, libretto by DuBose Heyward, and lyrics by Heyward and Ira Gershwin. The opera is based on Heyward’s novel *Porgy* as well as the stage adaptation of the same name he cowrote with his wife, Dorothy Heyward. Gershwin’s score is arguably the best known of any American opera. Although some have denounced the depiction of black Americans in *Porgy and Bess*, it has become the most frequently produced opera with African American subject matter. A number of the songs have become part of the standard repertoires for jazz, pop, and classical music, including “Summertime,” “I Got Plenty o’ Nuttin’,” “It Ain’t Necessarily So,” and “Bess, You Is My Woman Now.”

The Origins of *Porgy and Bess*

Porgy and Bess follows the narrative of the play more closely than that of the novel. Porgy, a disabled man who makes his living begging and gambling, falls in love with Bess in 1930s Charleston, South Carolina. The drug-addicted Bess is trying to get away from her abusive lover, Crown, and her persistent and profane drug dealer, Sportin’ Life. Porgy accidentally kills Crown while attempting to protect Bess from him. While Porgy is being questioned by the police, Sportin’ Life uses Bess’s addiction to entice her into accompanying him to New York. Upon discovering that Bess has left him, Porgy sets out to find her.

An actual native of Charleston, Samuel Smalls, was the inspiration for the title character of Heyward’s novel. He lived in an all-black slum on Church Street known as Cabbage Row, on which the fictitious Catfish Row was based. Like Porgy, he rode in a goat-driven cart due to a physical impairment. Heyward wrote some of the novel’s speeches in Gullah, an English Creole spoken in some parts of the southeastern coast of the United States. The success of the novel led the Heywards to adapt it for the stage. *Porgy* was produced twice on Broadway, once in 1927 and again in 1929.

George Gershwin first read *Porgy* in 1926, and immediately, his interest in collaborating with the Heywards on a musical adaptation was piqued. Nevertheless, scheduling conflicts did not afford the opportunity to begin work until

1933. They conducted research in Folly Beach, a small island off the coast of Charleston, before returning to New York to complete the opera. Although DuBose Heyward contributed most of the text, Ira Gershwin did write the lyrics to many of the opera's best-known songs. Gershwin was inspired by jazz, work songs, spirituals, and other genres of African American music; in fact, he stipulated in his will that performance rights were to be granted only to productions employing black singers.

Production History

To perform the score, a large group of African American classical singers was engaged, with Anne Brown, Todd Duncan, and John W. Bubbles essaying leading roles. The first performance of *Porgy and Bess* occurred in 1935, in a private concert at Carnegie Hall. Gershwin made a number of emendations prior to its Broadway opening on October 10, 1935, at the Alvin Theatre. Rouben Mamoulian assumed directing responsibilities. Noted African American choirmaster Eva Jessye was selected to direct the choristers. The production was met by a lukewarm reception from critics and audiences alike.

A much more successful truncated version of the opera, which eliminated much of the recitative in favor of a conventional musical theater style, was produced on Broadway in 1942, 1943, and 1944. Yet another, more traditionally operatic version toured the world beginning in 1952; the cast, which included Leontyne Price, Cab Calloway, and Maya Angelou, performed on Broadway at the Ziegfeld Theatre, as well as in Europe, Latin America, the Middle East, and the former Soviet Union. A 1959 movie adaptation, featuring Dorothy Dandridge, Sidney Poitier, Diahann Carroll, Brock Peters, Pearl Bailey, and Sammy Davis, Jr., performed poorly at the box office and faded into obscurity.

As some African Americans felt the opera presented a deeply negative view of black life, *Porgy and Bess* rarely was produced in the United States during the years of social upheaval in the 1960s and 1970s. However, the lavish 1976 Broadway revival, which was first produced at the Houston Grand Opera and restored the complete score, was a considerable critical and financial success. It won the Tony Award for Most Innovative

Production of a Revival and was remounted at Radio City Music Hall in 1983. *Porgy and Bess* made its Metropolitan Opera debut on February 6, 1985, with Grace Bumbry, Simon Estes, and Gregg Baker.

A 2012 Broadway revival, starring David Alan Grier, Audra McDonald, Joshua Henry, and Norm Lewis, was rechristened *The Gershwins' Porgy and Bess* and received a substantial rewrite by Pulitzer Prize winner Suzan-Lori Parks. She made a number of changes to the plot and music to make the opera more accessible to contemporary audiences. Despite receiving mixed reviews, the production won Tony Awards for Best Revival and Best Actress in a Leading Role (McDonald).

Portuguese Americans

Portuguese Americans are Americans descended from residents of Portugal and the Portuguese islands of Madeira and the Azores. The broader term Luso American refers to Americans whose heritage can be traced to the broad Portuguese-speaking community created by Portuguese colonialism and imperialism, including Brazil, Mozambique, Angola, Cape Verde, and parts of China and India. That said, Portuguese Americans and Luso Americans tend to settle in the same communities, for the same reason Spanish-speaking Americans settle in many of the same

communities despite tracing their heritage to different countries; there are still elements of shared culture, and especially language.

Portugal is a European country on the Iberian Peninsula, which it coinhabits with the much larger country of Spain. After the peninsula was conquered by Moors in the eighth century, Portugal established its independence in the 12th century, preceding Spain's independence. Portugal was a major force in the Age of Discovery, as evidenced by the geographic diversity of its colonial holdings, and established its empire before the Spanish or British established theirs.

The Azores are an archipelago of nine islands in the north Atlantic, about 930 miles off the coast of Lisbon, Portugal, and are one of the country's two autonomous regions. The other is Madeira, an Atlantic Ocean archipelago north of the Canary Islands, consisting of the islands of Madeira, Porto Santo, and the Desertas.

There were 1,477,335 Portuguese Americans as of the most recent census, about 0.5 percent of the country.

The First Portuguese Americans

Portuguese presence in North America predates the creation of the United States, though the first Portuguese to come to the continent were explorers who did not settle down. João Rodrigues Cabrilho was the first to navigate the coast of what is now California, for instance, and before Miguel Corte-Real was lost at sea around 1502, he navigated the far northeast coast. A popular theory among amateurs and the general public is that Dighton Rock, a large boulder in Berkeley, Massachusetts, covered in petroglyphs, is a testament to Portuguese presence in Massachusetts either in Corte-Real's time (shortly after Columbus's discovery of the Americas) or even from a pre-Columbian contact.

Two things are noteworthy: first, that the popularity of the Portuguese petroglyph theory owes a great deal to the prevalence of the Portuguese American and Luso American population in Massachusetts, who would be interested and gratified by the idea that their forebears preceded the Puritans to their present home state; and second, that

An April 1942 meeting of the Provincetown, Massachusetts, board of selectmen, which was made up nearly entirely of men of Portuguese descent. The Azorean and continental Portuguese of Provincetown acquired political power after experiencing anti-Catholic discrimination in the early 20th century.

the same petroglyphs have been used to support numerous other theories, including the more recent pop history theory that they were the creation of Chinese explorers in the early 15th century.

Immigration to Massachusetts did begin quite early, however, and the first Portuguese settlers in the United States came to Martha's Vineyard and Nantucket in the pre-revolutionary period. The so-called Virginia Hercules, Peter Francisco (1760–1831), was an Azorean immigrant to Virginia, and he served as a soldier in the Revolutionary War as a teenager. By age 16, at the Battle of Brandywine, he was already six and a half feet tall—in an age when people on average were several inches shorter than they are today.

Francisco was a fixture of the revolutionary period; he was in attendance when Patrick Henry gave his “Give me Liberty, or give me Death!” speech in Richmond, Virginia, and fought in several decisive battles of the war. His friends included the Marquis de Lafayette, who requested General George Washington to have a special sword made for Francisco that would befit his size.

Many of the Portuguese descendants in the United States immigrated from the Azores and Madeira, probably accounting for the majority of Portuguese Americans. Madeirans settled mainly in New England and the mid-Atlantic region, where they were active in the whaling industry in the 18th and 19th centuries. More arrived after Madeira's 1846 famine.

New Bedford, Massachusetts, celebrates an annual Feast of the Blessed Sacrament, the world's largest Madeiran heritage celebration, in Madeira Field. Tens of thousands attend, from all over New England and further afield. The city is also home to the Museum of Madeira Heritage. Madeirans also settled in Hawai'i, where they introduced the ukelele, a traditional Madeiran musical instrument that has since become heavily associated with Hawai'ian folk music.

Azoreans began immigrating to the United States in the 17th century, settling principally in Massachusetts and Rhode Island. The Californian community of Azorean Americans is populated mainly by descendants of Massachusetts's Azorean Americans who later traveled west, settling in the San Joaquin Valley and San Diego. In New England, Azoreans were, like Madeirans, very involved in the whaling industry and

commercial fishing. Some traveled further north to work the Maine lobster boats. By the end of World War I, there were a third as many Azoreans (100,000) in the United States as in the Azores.

Fall River, Massachusetts, is well known for its Portuguese culture, much of it originating with Azorean immigration during the whaling era. If not for the influx of French Canadians and Irish during the Industrial Revolution, when Fall River's was the most active textile mill city in the country, the city would have a majority Luso American population. Today, 47 percent of the population is of Portuguese background, the highest percentage of any community in the United States. The Great Holy Ghost Festival in August is a celebration of the town's Portuguese culture and attracts hundreds of thousands of participants from the Portuguese American community.

Rhode Island is the state with the highest percentage of Portuguese Americans and is consequently the only predominantly Catholic state in the country, making it a particular outlier in New England, the homeland of Boston Brahmins and other white, Anglo Saxon Protestant subgroups. Providence has a number of Portuguese restaurants and markets as well as a sizable Brazilian population. There is also a large Portuguese American community in nearby Pawtucket. Nearly all settlements in Rhode Island have some Portuguese Americans in the population; they are as prevalent and as assimilated as Irish Americans are in the rest of New England.

Potlatch

Among many Pacific Northwest Native American and First Nations cultures, a potlatch is a gift-giving festival that traditionally served as the foundation of the cultures' economies. The word itself derives from Chinook jargon, the pidgin trade language used in the region in the 19th century (with about 100 native speakers remaining today).

The word is a false cognate for "potluck," though in white communities in some parts of the country, potluck dinners are sometimes called potlatches, possibly out of the erroneous belief in an etymological connection. Potlatch nations include the Coast Salish of British Columbia, Washington, and Oregon (which includes the Snohomish, Skagit, Snoqualmie, and other peoples); Haida of British Columbia and southeast Alaska; Heiltsuk of British Columbia's Central Coast; Kwakaka'wakw of Vancouver Island; Makah of Washington; Nuuchah-nulth of British Columbia; Nuxalk or Bella Coola of British Columbia; Tlingit of Alaska, British Columbia, and the Yukon; and Tsimshian of Alaska and British Columbia.

The Kwakaka'wakw are sometimes erroneously called the Kwakiutl, and the first major anthropological work on the potlatch system was part of German American Franz Boas's in-depth study of the Kwagu'l people, a Kwakwaka'wakw tribe whose government is called the Kwakiutl First Nation. Throughout the region where the potlatch system is used, property concepts and traditions are well established, in contrast with stereotypes of Native Americans (based on tribes farther east) as being blissfully ignorant of concepts of private property or land ownership. Hunting and fishing grounds are traditionally passed down within families.

A basic barter system originally supplemented what was primarily a subsistence economy, meaning that each family or group of families provided for its own needs: hunting, fishing, growing, foraging, and preparing its own food, as well as the raw materials necessary for clothing, shelter, tools,

and other items. The barter system allowed not only for specialization and differentiation of labor but also for value to accrue according to rarity, making food and furs more valuable in hard times, and imparting extra value to well-made goods, which in turn provided the motivation for artisans to develop their skills beyond the bare necessities. Precious minerals and metals, especially copper, were an important part of the trade system.

Over time, the potlatch system supplanted this barter system, depending on surpluses of goods. In the potlatch system, social status is determined not by wealth per se but by the capacity to give wealth away. In order to demonstrate one's social status, a family would host a potlatch ceremony at which it was expected to provide gifts for all who attended. The most common unit by which wealth was measured was the wool blanket, which had several advantages for this purpose, namely, that it was nonperishable, could be produced by most families, did not exhaust a resource, and served a practical end.

Pieces of copper could be exchanged for blankets, and the value of any given coin was referred to in terms of the number of blankets it could be exchanged for, but it would be misleading to consider these coins or currency in the same sense as in Western economic systems.

The value of these pieces of copper was not static, and the fluctuations to which it was subject do not easily compare to those experienced by currency systems. Copper pieces were bid on at auctions held at potlatch ceremonies, and if a piece of copper sold for a higher value than it had previously represented, the prestige attached not to the seller—who from a Western viewpoint has earned a profit—but to the buyer, who has demonstrated his power and wealth. Further, if the host is able to hold a potlatch and still retain copper—still possess a surplus even after a party in which he gives many things away—he is accorded considerable prestige and honor. Gifts given at a potlatch ceremony might include prepared or dried foods, ingredients like sugar or flour, copper or blankets or foreign currency, and made goods. In the past, slaves were given away as well.

The potlatch system serves to redistribute wealth throughout the community, preventing serious wealth inequality and the formation of an impoverished class, as well as preventing the

formation of a wealthy class of heirs who can prosper without labor by living off inheritances. Among the Kwakwaka'wakw, there are reports of the potlatch having grown so competitive that gifts were destroyed after being received, as an extreme display of wealth—the potlatch equivalent of lighting a cigar with a hundred-dollar bill.

In different cultures, the potlatch is celebrated with various songs, dances, and other rituals. Dances may tell the story of the host family's heritage and famous ancestors, for instance. Although the potlatch is usually held in the winter, when the redistribution of surpluses is most helpful, it may also be held to celebrate a wedding, funeral, birth, or special occasion of some other sort.

The potlatch was outlawed in the late 19th century in both the United States and Canada, the government perceiving it as destructive and wasteful in part because of reports of destroyed gifts. The ban has since been repealed.

Surrounding the site of England's first permanent American colony, Jamestown, the Powhatans were the first Native American population with whom the English had sustained interaction. Despite early attempts at cooperation, cultural conflicts between the Powhatan inhabitants and English colonists eventually contributed to demographic decline and the breakup of the confederacy, though Powhatan descendants persist today.

Inhabiting the coastal plain of the Chesapeake Bay's western shore, Virginia's Algonquian peoples shared similar languages and subsistence practices. Men cleared the land on which women cultivated maize, beans, and squash. Men hunted and traded with inland communities, while women processed deerskins and gathered edible plants near villages. Seasonal mobility across a tribe's territory and a low population density discouraged Algonquian tribes from constructing permanent dwellings and accumulating personal property.

During the late 16th century, Wahunsenacawh, or Powhatan, inherited power over six tribes. Powhatan proved adept at conquest and at redirecting rivalries between Algonquian tribes, organizing defense against neighboring Siouan-speaking enemies. Combining diplomacy, warfare, and intimidation, Powhatan built the largest chiefdom on North America's Atlantic seaboard. The confederacy eventually incorporated 30 tribes into a paramount chiefdom, with individual tribes retaining some autonomy and their own chiefs while acknowledging Powhatan's supremacy. Powhatan constructed kinship relations to secure his power, adopting subordinated chiefs into his household, marrying elite women in conquered villages, and sometimes replacing defeated local chiefs with his own blood relations. Extended kin relations enabled Powhatan to gather and redistribute to build obligations and reinforce his control.

The 1607 English arrival at Jamestown met with ambivalence from the natives. Powhatans weighed the appeal of trade for metal tools and weapons, and the possibility of English allies, against prior encounters in which Europeans had raided, kidnapped, and killed Algonquins. Hoping to enlist the English as allies and trade partners, Powhatan avoided outright warfare. Accustomed to incorporating neighboring peoples as subjects,

Powhatan Confederacy

The Powhatan Confederacy was a 17th-century chiefdom comprising Algonquin-speaking tribes and centered on Virginia's Chesapeake Bay.

he ritually adopted the captured governor of the colony, John Smith, as his son and a subordinate chief, expecting the kin relationship to secure an alliance and trade relations.

English colonists misunderstood this arrangement, continuing to act in their own interests while dismissing Algonquian culture as inferior to their own, and characterizing natives as lazy, ignorant, and uncivilized. Many expected Algonquins to submit to English authority and adopt English culture by converting to Christianity, donning European clothing, reorienting economies around agriculture and private property, and establishing permanent settlements.

Cultural Exchanges

Some Virginians did cross between English and Algonquian cultures as trade partners or hostages, and colonists and natives deliberately exchanged several young men in hopes that they would acquire information and translation skills. Several colonists escaped Jamestown's poor conditions to join the Indians, but Jamestown's leaders captured and executed the deserters, fearing their example might prompt others to abandon English culture. The executions demonstrated colonial leaders' unwillingness to sanction the coexistence of alternative cultures in Virginia.

English attitudes about the incompatibility of cultures increasingly shaped Anglo-Algonquin relations. Powhatan's policy of avoiding direct conflict limited intercultural violence, though English breaches of diplomatic protocol and demands for supplies, and native harassment of the intruders, did produce some incidents. By 1610, mounting tensions between the disillusioned Powhatan and an expanding colony replenished with supplies and personnel from England generated regular skirmishes. An uneasy peace ensued when colonists captured Powhatan's daughter, Pocahontas, her subsequent marriage to John Rolfe and conversion to Christianity bolstering English confidence that Algonquins could undergo cultural transformation.

Opechancanough, who succeeded Powhatan as paramount chief in 1618, proved less reluctant to confront English settlers who continued to press cultural conversion and claim new territory. Hoping to contain the colony, the chief coordinated a 1622 attack that destroyed English livestock

and plantations and killed approximately one-third of Virginia's English population. Colonists retaliated by destroying native villages and food supplies, and hostilities continued until a 1632 peace agreement exacted major land concessions from the Powhatans. Renewed attacks on English plantations in 1644 failed to halt the spread of English power. Instead, Opechancanough's capture and death in 1646 deprived the Powhatan Confederacy of central leadership, and the sustained English campaign against the Powhatans forced survivors to flee or make peace.

By 1669, a Powhatan population that had numbered perhaps 24,000 in 1607 had been reduced to around 2,000 by decades of war and exposure to disease. Survivors were restricted to a few small reservations surrounded by English settlements, the Powhatan Confederacy's failed resistance to English expansion supporting the English views of Algonquian culture as incompatible with and inferior to English culture, and of Indians themselves as outsiders to colonial society. Powhatan descendants nonetheless maintained their ethnic identity in the wake of colonization and pressures to Anglicize, though only the Pamunkey and Mattaponi retain reservation lands today. Descendants live in North Carolina and New Jersey, and are among the 80,924 Virginians who identified as American Indians or Alaska Natives, alone or in combination, on the 2010 U.S. Census, a 53 percent increase from 2000.

POWWOW

Powwows are events that reflect upon many aspects of American Indian society. Powwows are essentially tribal, forging tribal bonds and solidifying tribal culture. This is what makes attending powwows in different regions of the United States distinct. When one attends a powwow, people representing a number of Indian nations are also recognizable, making the event intertribal. This is what makes a local event more expansive.

Indian Country Today newspaper explains the origins of the common usage of the word *powwow* as a misunderstanding by European explorers, who viewed sacred dances and thought that a word used at the dances, *pau wau*, referred to the dance itself. As the number of tribes using the English language grew, “powwow” as a reference to a tribal gathering was adopted.

What Makes a Powwow?

Essential elements of the powwow include circles, the drum, singers, dancers, head staff and emcee, and veterans. Circles are important to connect the powwow to indigenous identity. The drum is surrounded by the singers, who form two circles. The women constitute the next circle, followed by the dancers. The elders surround the dancers, with the veterans surrounding the elders. The spirits/spirit world is the final outside circle.

Representative of the nature of life, both human and mythological, cyclical ideas are present in everything from agriculture to song. Circles appear in the powwow beginning with the arena, the central location for dancing and drumming. The arena houses other concentric forms such as the drum, and in the case of an outdoor powwow, the arbor, under which many drums may be located.

The drum has often been referred to as the “heartbeat of the [Indian] nation.” The phrase *to sit on a drum* means to sing and drum at a powwow. Drumming teams are called singers. All members of the drumming team make up “the drum.” In powwow parlance, the drum also refers to the physical drum itself, but rather describes the physical drum, the singers/drummers who sit on the drum, and the ritual actions they perform. There may be anywhere from six to 12 singers sitting on a drum.

There are typically two styles of drums, referred to as northern and southern styles. There are subtle differences in song pattern and drumming patterns, as well as the obvious regional origins that mark the two styles. The northern style is usually higher in pitch and faster in beat. The southern style is usually lower in pitch and slower in beat. The styles originated regionally, but today they are found in all regions of the United States.

Specific roles are necessary for the functioning of a powwow. These roles are described in no particular order of importance. The arena director is responsible for the maintenance, upkeep, and proper actions of others in and around the arena. The master of ceremonies, or emcee, keeps the powwow moving. He may inform spectators and non-Natives attending the powwow of appropriate behavior, tribal knowledge, and tradition. He may also tell stories and histories, as well as keep the powwow moving by announcing dances that are forthcoming and which drum is in rotation to perform the next song.

The head veteran oversees and participates in many important facets of the powwow. The head veteran leads the dancers into the arena at Grand Entry, blesses and honors the arena as sacred space, and typically resolves all questions and concerns that powwow committee members and attendees may have. The head veteran is the person to consult when there is a breach in powwow protocol or if someone has a cultural question.

One of the aspects a first-time visitor to a powwow notices is the county fair-type atmosphere evoked by the traders on the outer edge of the arena. Colorful tents and awnings hold traders displaying blankets, clothing, feathers, jewelry, and other items available for sale. The traders don’t only sell crafts and souvenirs for the spectators and visitors to a powwow; they also provide tools and supplies for the dancers who make their own regalia.

A powwow attendee would also find a number of Native food booths. Food traders offer a selection of non-Native foods as well as foods linked to indigenous communities such as corn soup, Indian tacos, buffalo burgers, and fry bread. Food is often considered the glue of Indian communities. Dancers at powwows have been heard joking that if there is any conflict between two people or groups of people, just feed them and all will be well. At a

A team of three drummers surrounds a drum during a powwow; as many as 12 “singers” may play a single drum, or “sit on a drum.” Drumming is central to powwows and varies by region, with a faster northern style and a slower southern style, and when a drum is referred to in regard to a powwow, it describes the physical drum, the singers/drummers who sit on it, and the actions they perform.

majority of weekend powwows, a feast provided by the powwow committee is held to feed all participants of the powwow, and the public is invited after all powwow participants have been fed.

The Census at Powwow

The 2010 Census reached far and wide in Native America to publicize and promote participation in the data gathering. The National Congress of American Indians (NCAI) hosted an art contest open to American Indian, Native Hawai‘ian, and Alaska Native students with the theme “2010 Census: Our People, Our Nations, Our Future.” This contest became part of a larger partnership between the NCAI and the Census Bureau around the campaign “Indian Country Counts,” with the goal being to count every indigenous person in the country. NCAI advocates the importance of counting every indigenous person because the data collected contribute to the head count for health and human services provided to indigenous nations by the federal government. The largest concern in counting indigenous people is that it is estimated that more than half of Native people do not live on or near reservation communities

and are missing out on services provided to indigenous people.

The Census Bureau created an extensive list of paid tribal residents to spread the word and is attending powwows across the country to share information. As powwows attract a wide variety of American Indian people, both urban and rural, they are a good point of contact. Many nations held Census Powwows, including Southern California American Indian Resource Center in San Diego, California; Coeur d’Alene Nation in Plummer, Idaho; and the 2010 Census Drum Circle and Rally & 39th Annual Spring Powwow at the University of Washington.

Presidency, U.S.

American presidents represent much of the geographic and ideological diversity of the United States, but they fail to represent the racial, ethnic, and religious diversity of the nation. The United States has elected 44 presidents throughout its history; 42 were white Protestant males. While the occupants of the White House have been overwhelmingly homogeneous, religious and racial barriers have at times been shattered; however, major barriers remain.

Before John F. Kennedy, who was Irish Catholic, was elected in 1960, all presidents had been Protestant. In 2008, Barack Obama was the first black man elected president. Over the past two generations, an increasingly multicultural American society has played a changing role in determining the winners of presidential elections, and executive actions taken by many presidents have had a substantial impact on multicultural America.

Al Smith

Alfred E. Smith was born to Irish Catholic parents in New York City and became a career politician. Smith became the first Catholic presidential nominee in 1928. His career started by working his way up through Tammany Hall to secure backing for a seat in the New York State Assembly. Smith later won four terms as New York governor. However, Smith is best remembered for losing the 1928 presidential election badly to Herbert Hoover. Smith won only eight states and 41 percent of the vote. Although Smith tried to wage his campaign on the issues of the day, he was unable to overcome constant questions about his Catholicism and connections to Tammany Hall

in New York City. Among the questions he faced about becoming the first Catholic president was how his allegiance to the United States weighed against his allegiance to the Catholic Church and the pope. His overwhelming loss was attributed in no small part to concerns about his religion, a barrier that would not be broken until 1960, when Kennedy would become the only Catholic president ever elected. Both Herbert Hoover and Richard Nixon were Quakers, and there is some debate about whether Quakers should be considered Protestants. However, neither of these presidents faced any serious challenges during their candidacies or terms in office because of their religious affiliation.

John F. Kennedy

In 1960, John F. Kennedy was elected the 35th president of the United States. Kennedy, born to a prominent Irish Catholic family in Brookline, Massachusetts, was the first non-Protestant elected president, overcoming the concerns and discrimination against Catholics and Irish Americans that had doomed Al Smith's presidential campaign 32 years earlier. After graduating from Harvard and serving in the Navy during World War II, Kennedy was elected to the U.S. House of Representatives and served there for three terms. In 1952, Kennedy defeated Republican Henry Cabot Lodge to become a U.S. senator. Kennedy served as Massachusetts' senator for eight years before running for president in 1960.

Kennedy and his brother and campaign manager Robert were concerned about repeating the same path as Al Smith and thus sought to stay ahead of the issue of religion. Kennedy publicly confronted concerns about his religion, assuring voters that the pope would play no role in U.S. politics. Meanwhile, the discrimination that Irish Americans faced across the nation had been receding for some time, but acceptance was accelerated in part because of heroic actions taken by many Irish Americans during World War II. During the primary campaign, Kennedy outmaneuvered his main opponent, Hubert Humphrey of Minnesota, to win an improbable Democratic nomination.

On November 8, 1960, John F. Kennedy won an extremely narrow victory over Richard Nixon to become president. His election was historic

in that Kennedy became not only the first Irish American and first Catholic to be elected president, but he was also the youngest elected president in U.S. history. Kennedy's victory was a huge breakthrough in the battle against religious discrimination. His election showed how far the nation had come since Al Smith's campaign in 1928. Kennedy was assassinated in Dallas on November 22, 1963, marking the last time that a Catholic has held that office.

Groundbreaking, Yet Unsuccessful Candidates Following Kennedy

In 1968, Shirley Chisholm, a Democrat from New York, became the first African American woman elected to the House of Representatives. Four years later, Chisholm ran for the Democratic nomination to become president. Although she did not win the nomination, coming in fourth behind George McGovern, Chisholm was the first nonwhite candidate for a major party nomination in U.S. history. Though Shirley Chisholm did not run for president again, she remained a U.S. representative from the state of New York until 1983, where she was a tireless advocate for racial and ethnic minorities, women, and the underprivileged.

Jesse Jackson, a civil rights activist and Baptist minister, was the most successful nonwhite presidential candidate prior to the election of Barack Obama. Jackson, who had never been elected to public office, ran for the Democratic Party nomination in 1984 and 1988. In 1984, Jackson came in third behind former Vice President Walter Mondale and Senator Gary Hart. He ran a better campaign four years later, winning more votes and states than in 1984. At one point during the campaign, Jackson was the leading candidate in terms of pledged delegates, though ultimately he came in second to Michael Dukakis of Massachusetts.

In addition to Shirley Chisholm and Jesse Jackson, there have been two other African American candidates who have sought a major party nomination for president. Alan Keyes, a conservative activist who played a small role in the Ronald Reagan administration, ran for the Republican nomination in 2000 and 2008. Also, Reverend Al Sharpton ran for the Democratic presidential nomination in 2004. However, neither Keyes nor Sharpton were particularly competitive.

Joseph Lieberman was a four-term senator from Connecticut, serving from 1989 through 2013. In 2000, Al Gore selected Lieberman to be his vice presidential running mate, making Lieberman the first Jew to run on a major party ticket. By most accounts, Lieberman's religion did not play a major role in the course of the general election. The Gore-Lieberman ticket won 79 percent of the Jewish vote, which was within 2 percent of the Jewish vote given to the two previous Democratic tickets. Gore won the plurality of votes in 2000, but lost the electoral college battle after a chaotic and controversial recount and Supreme Court decision.

The 2012 presidential election marked another religious breakthrough when Mitt Romney became the Republican nominee. Romney, the former governor of Massachusetts, was the first Mormon nominated by a major party. Romney's Mormonism played only a minor role in the primary campaign, and even less in the general election when he lost to Barack Obama.

Barack Obama

Barack Obama became the 44th president of the United States on January 20, 2009, and remains the current president after his reelection on November 6, 2012. He is also the first nonwhite person to win the presidency. Obama was born in Honolulu, Hawai'i, on August 4, 1961, to Ann Dunham, a white woman from Kansas, and Barack Obama, Sr., a man of Luo ethnicity, born in the Nyanza Province in Kenya. Obama did not have a relationship with his father because his parents divorced when he was 2 years old, his father returning to Kenya shortly thereafter, and Obama and his father had only one additional meeting before his father's death. Nonetheless, Obama's biracial heritage was something he was well aware of at an early age, both while living in Indonesia for several years and especially after returning at age 10 to live with his maternal grandparents back in Hawai'i.

Two years after graduating from Columbia University, in 1983, Obama moved to Chicago to work as a community organizer in the Roseland and Altgeld Gardens communities on the south side, both of which were predominantly black and poor. During this time, Obama traveled to Kenya to meet his paternal family, connecting for the first time with his African ancestry and

drawing connections to his experience of race in America. After returning from Kenya, Obama entered Harvard Law School. There Obama was elected the first African American editor and president of the *Harvard Law Review*. He completed his law degree from Harvard magna cum laude in 1991 and returned to Chicago to begin working as a civil rights lawyer and part-time law professor at the University of Chicago.

Obama's political career began after his return to Chicago. He organized voter registration efforts for the Bill Clinton campaign in 1992, and he ran for and won a seat in the Illinois State Senate in 1996. After an unsuccessful bid to become a member of the U.S. House of Representatives, he became a U.S. senator in 2004, the third African American senator

in history. During the buildup to the election, Obama gained nationwide attention for the first time following his keynote address at the Democratic National Convention. In February 2007, he launched his campaign to become president. In a very close contest, Obama defeated the once heavily favored Hillary Clinton for the Democratic nomination. He then went on to win the general election, defeating Republican John McCain, becoming the first African American to be elected president.

There was substantial attention paid to the historic nature of Obama's presidency, both during the campaign and after his electoral victory. In a nation scarred by its slaveholding past and rife with racial conflict throughout its history, the first black man elected president was welcomed by

President Barack Obama and his family hosting a Passover seder dinner in the White House in April 2009. The Obama family's Seder dinners, a Jewish tradition, are believed to have been unprecedented at the White House and are now an annual tradition. Obama was the first African American and the first nonwhite person voted into the office of president of the United States.

many as a sign of progress. Many suggested that Obama's election may have started a postracial era in America. However, many were concerned about a black man becoming president.

Obama rarely commented on his race or the historic nature of his election. However, one notable exception was a speech he gave on March 18, 2008, responding to an increase in attention paid to controversial comments made by Obama's former pastor, Jeremiah Wright, severely criticizing the government and the ongoing racism he saw in America. Obama's speech, titled "A More Perfect Union," addressed the subjects of race and inequality in the United States, including white privilege and the continuing tensions between races. He ended his speech by discussing the progress that had been made and the hope that Americans could move beyond a focus on racial differences and toward a unified effort to deal with shared social problems in society. His speech was seen as one of the best of his career and was one of the most important points in the campaign, reaching a huge audience. Many pundits and politicians have suggested that it helped him to win both the primary battle and the general election.

Multicultural Voters and the Presidency

The United States, while always a nation of immigrants, has become much more multicultural over the past two generations than at any point in American history. After the Immigration Act of 1965, immigration has exploded, especially from Latin America and Asia. As a result, the racial and cultural diversity of the United States is growing quickly, with the U.S. Census Bureau predicting that whites will become the minority by 2050. This growing racial and ethnic diversity has also impacted voting patterns, and nonwhite demographic groups increasingly make up a larger and larger percentage of the voting population.

These nonwhite voters, as a whole, have voted much more often for Democratic candidates for president than for their Republican opponents, though this varies dramatically based on year and demographic group. Black voters are the most consistent in their support for the Democratic ticket, with at least 82 percent of blacks voting for the Democrat in every election since 1972. Latino

voters, the fastest-growing voting demographic, have also consistently favored the Democrats, though less overwhelmingly than blacks. Since 2000, the majority of Asian Americans have also supported the Democrats in presidential elections.

Democrats have long held the support of most racial and ethnic minorities who go to the polls. However, Obama's presidential election victories were because of an even greater level of support from racial and ethnic minorities across the nation than his Democratic predecessors. In the 2008 election, Obama won 95 percent of the black vote, 67 percent of the Latino vote, 62 percent of the Asian American vote, and 66 percent of the "other race" vote, all higher than any other Democratic candidate in modern American history. Meanwhile, Obama earned 43 percent of the white vote. Though far from a majority of whites, this mark met or exceeded every Democratic candidate's share of the white vote going back to 1972.

In 2012, Obama won the support of 93 percent of the black vote and increased his support among Latinos to 71 percent and among Asian Americans to 73 percent. His overall margin of victory was very close to his margin of victory in 2008. The demographic changes across the nation and voting trends among nonwhite voters have led to many discussions about how the Republican Party can attract more support from racial and ethnic minorities. Some politicians and academics have suggested that, without adjusting some conservative positions on issues like immigration, the Republican Party may continue to face increasing odds in presidential elections. Others have argued that Obama was uniquely suited to attract support among nonwhite voters.

Women and the Presidency

No woman has occupied the Oval Office, and only one had a reasonable shot at winning a major party nomination for president. Victoria Woodhull, a newspaper editor and strong advocate for women's rights, became the first woman to run for president when she was nominated by the newly formed Equal Rights Party in 1872. The party nominated former slave and abolitionist leader Frederick Douglass as her running mate, though he did not attend the nominating convention. This also marked the first time that

an African American was nominated on a presidential ticket. Laura Clay was the first woman to run for president on a major party ticket when she was named at the 1920 Democratic National Convention. Clay, like several women through the end of the 20th century, ran for national party nominations, but they had little support and did not have any realistic chance of earning the nomination. But two women have been nominated for vice president on major party tickets: Geraldine Ferraro, who ran on the Democratic ticket with Walter Mondale in 1984; and Sarah Palin, who was selected by John McCain to run on the Republican ticket in 2008. Both of these tickets lost their elections.

The closest that a woman has come to winning a major party nomination for president occurred during the 2008 election, when former First Lady and then New York Senator Hillary Clinton was a candidate for the Democratic nomination. Prior to the primaries, Clinton was the favorite to win the nomination. In June 2008, Clinton lost the party nomination to Barack Obama, marking the end of an extremely competitive nomination battle. Obama would go on to become the first African American elected president that November. After the election, Clinton was confirmed as Obama's secretary of state, a position she held through early 2013. There remains substantial speculation that Clinton will run for the presidency in 2016, and if she does, many suggest that she would be one of the two favorites to win the party nomination, the other being Vice President Joe Biden.

Executive Orders

Many presidents have used the power of the office, and as head of the executive branch, to affect issues pertaining specifically to racial and ethnic minorities in the United States. The foremost tool that presidents use is known as the executive order. Presidents can issue executive orders pursuant to the various roles and powers that belong to the office. Once signed, these orders have the effect and formal status of legislation. In 1948, Harry Truman issued Executive Order 9981, which established the President's Committee on Equality of Treatment and Opportunity in the Armed Services, committing the government to racially integrating the military, which was segregated at the time. This was extremely controversial within

the military but marked one of the major victories for civil rights activists before the Supreme Court's *Brown v. Board of Education* decision desegregated all public facilities on May 17, 1954. Although the desegregation of the military did not happen overnight, the military was fully integrated by the end of the Korean War.

Beyond issues of segregation, many presidents have issued executive orders prohibiting various forms of discrimination in government hiring and contracts. On June 25, 1941, President Franklin Roosevelt issued Executive Order 8802, which prohibited discrimination in the national defense industry based on race or national origin. The executive order also established the Fair Employment Practices Commission to enforce the new policy. This was the first federal action to promote equal opportunity and prohibit employment discrimination in the United States, and it pertained to federal agencies and all unions and companies engaged in war-related work. However, this executive order came about only after substantial pressure brought by A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, and other black leaders, who threatened a major march on Washington if no order was enacted supporting civil rights in the workplace. President Dwight Eisenhower amended this order when he signed Executive Order 10479 on August 13, 1953, establishing the antidiscrimination Committee on Government Contracts.

Continuing in the trend of moving toward eliminating discrimination by the federal government, President Kennedy issued Executive Order 10925 on March 6, 1961, which established the President's Commission on Equal Employment Opportunity. This executive order was a landmark event in the history of affirmative action efforts in the United States because it marked the first time that this term was used in an official capacity by the federal government.

Following Kennedy's death and the passage of the Civil Rights Act of 1964, President Lyndon Johnson issued Executive Order 11246 on September 24, 1965. This order superseded Executive Order 10925, issued four years earlier, by prohibiting employment discrimination based on race, color, religion, and national origin by those organizations receiving federal contracts and

subcontracts. It also clarified and strengthened the federal government's official efforts toward affirmative action by including a provision that government contractors "take affirmative action to ensure that applicants are employed, and employees are treated during employment, without regard to their race, creed, color, or national origin." In 1967, President Johnson amended the order to also ban discrimination based on sex.

Two years later, President Richard Nixon signed Executive Order 11478, supporting equal employment opportunity for all civilian employees of the federal government regardless of race, color, religion, sex, national origin, handicap, or age, through a continuing affirmative program in each executive department and agency. Finally, the prohibition of discrimination based on sexual orientation was added by President Bill Clinton with Executive Order 13087, issued in 1998.

Presidents have also used executive orders to enforce discriminatory actions. President Franklin Roosevelt did this during World War II, with the forced removal and internment of people of Japanese descent, many of whom were American citizens. Issued on February 19, 1942, Executive Order 9066 authorized the evacuation of all persons deemed a threat to national security from the west coast to relocation centers farther east. One month later, Executive Order 9102 was issued, which created the War Relocation Authority (WRA), the U.S. civilian agency responsible for the forced relocation and internment. After encouraging voluntary evacuation of the areas, involuntary removal and detention of these residents began. Over the next six months, approximately 122,000 men, women, and children were moved to assembly centers and eventually to guarded relocation centers, known as internment camps. Nearly 70,000 of the evacuees were American citizens.

Privilege

Privilege refers to unearned group-based advantages that some people have over others. The term is commonly used to describe situations in which some group or individual has benefits that are not based on solely, or in some cases at all, their skills and abilities, but rather because of who they are. According to professors Linda Black and David Stone, scholars differ on how precisely they define and describe privilege. There are, however, five basic commonalities in the current understanding of the concept. First, privilege is a special advantage; it is neither common nor universal. Second, it is granted, not earned or brought into being by one's individual effort or talent. Third, privilege is a right or entitlement that is related to a preferred status or rank. Fourth, privilege is exercised for the benefit of the recipient and to the exclusion or detriment of others. Finally, a privileged status is often outside the awareness of the person possessing it.

Scholars have discussed male privilege and privileges related to social class, sexual orientation, and other variables. Most frequently, however, discussions about privilege have focused on race. White privileges are advantages held by light-skinned persons in institutions such as schools, colleges, the workplace, and criminal justice. They are also manifest in each person's daily life, although they are often presented as earned, not ascribed. Acknowledging privilege is essential to understanding racism and prejudice against ethnic groups.

The idea of privilege is not new. People of color have long spoken and written about privilege in terms of advantages that European colonists held over people of color. Sociologist, historian, and

civil rights activist W. E. B. Du Bois discussed privilege in 1935, noting that it was a legacy of colonialism. Authors James Baldwin and Gloria Anzaldúa described the many advantages held by those with light skin, although they did not use the term *privilege*. In 1965, activist Theodore Allen wrote specifically about white privilege, calling on white people to “repudiate their white skin privileges.” Radical authors in the 1970s also described and critiqued privilege, reflecting not only on their white privilege but also on their class privilege, ethnic privilege, and sexual orientation privilege. In 1987, sociologist Peggy McIntosh helped popularize the concept of privilege in her essay, “White Privilege: Unpacking the Invisible Knapsack.” Since the 1980s, there has been growing interest in what has been called privilege studies. Scholars have noted that focusing only on dichotomous understandings (such as black versus white, male versus female) fails to fully recognize the many intricacies and intersections of privilege.

McIntosh’s work dramatically increased interest in the subject of privilege. Although initially reflecting on the privileges males have in a society that remains male-dominated, McIntosh focused her seminal piece on white privilege. She describes white privilege as an invisible knapsack, something white people carry around with them daily but are carefully taught not to recognize. Importantly, privilege is not something that only occurred in history. Rather, privilege is still manifest in each person’s daily life. McIntosh began thinking about these issues when she noticed that men rarely admitted that they are advantaged, even while admitting that women might be disadvantaged. Denying that one is a member of a group that receives advantages or privileges simply because of the group’s status is a way of maintaining the status quo. Once whites admit that they are privileged, they can then move toward taking individual and collective action that reduces disparities.

Invisible Advantages

According to McIntosh, in the United States, people are taught to see any advantage they may have as a sign of their hard work and good moral character. Whites are not taught to see themselves as oppressors. To acknowledge privilege would

require white people to grapple with the myth of meritocracy. McIntosh went through the process of “unpacking her knapsack,” or listing the many ways that she, as a white woman, was advantaged over those with darker skin. These are things that white people have taken for granted as normal, neutral, and universal. White privilege is far less transparent than the individual and institutional forms of racism commonly discussed. These privileges allow white people to continue to disproportionately benefit from structural arrangements and institutions while presuming that their benefits are the result of their hard work, skills, and moral character. White people come to expect certain privileges or perks as something that is due to them.

McIntosh is careful to note, however, that privileges and oppressions are interlocking. That is, while whites benefit from numerous privileges in U.S. society, poor white people, those with disabilities, and women have significantly less privileges than able-bodied, affluent white men. McIntosh notes that some privileges simply make whites feel more comfortable in the world, while others allow whites to escape insult, injury, and injustice. Most keep whites from being angry. For instance, she discusses the fact that she can go shopping without being harassed or followed, she can turn on the television and see people of her race widely represented, and her children are typically taught about their racial and ethnic groups’ contributions to U.S. history.

Although people of other racial or ethnic groups are often asked to speak for their entire group, whites are privileged to rarely, if ever, have to do so. Similarly, whites have the privilege of being able to criticize the dominant culture, with little threat of repercussions. Even things as simple as finding “flesh” colored bandages that are fairly close to a white person’s skin color is a form of white privilege. White privilege can be seen in wage differentials, housing segregation, access to mortgages and loans, the quality of schools, and more. According to professor Robert Jensen, all white people, not just those who are overtly racist, have white privileges. Jensen notes that when he seeks admission to a university, applies for a job, or looks for housing, he has the advantage of looking like those who make the decisions most of the time. He is therefore not perceived as

threatening, and even if he does or says something slightly critical or less than stellar, he is given the benefit of the doubt. The ultimate privilege is to acknowledge that whites have advantages over other racial and ethnic groups but be able to ignore the importance of those advantages.

Professors James Forrest and Kevin Dunn note that the privileges McIntosh described are not universally held by all whites. Rather, certain white ethnic and cultural groups receive the benefits of privilege while other ethnic groups, including Hispanic Americans, are left out. Similarly, professor Lawrence Blum maintains that focusing narrowly on white privilege misses the important differences among white ethnic groups.

Language of Privilege

Scholars have written much about how language and word choice reinforce privilege. For instance, a group of young black and/or Hispanic young men is often referred to as a gang, with all the negative connotations, whereas a group of white young men is far less likely to be assigned that negative label. Criminologists have described how crime reporting typically offers myriad explanations for the crimes of middle-class whites, yet few when the perpetrator is a person of color. The implication is that it is not surprising when people of color commit crime; therefore, no explanation is needed. The fact that white-perpetrated crime requires explanation suggests that white privilege is in action, because whites are not presumed to be innately criminal or violent. The spate of mass shootings in the United States in 2012 prompted discussion of the fact that most mass and spree killers are white.

David Sirota, a panelist for CNN and writer for Salon.com, asserted that although racially profiling white men would be ill advised, critical analysis is needed, given that some 70 percent of mass shootings are perpetrated by white men. Too often, Sirota maintained, white men portray themselves as victims of affirmative action and racial progress instead of recognizing the many ways they still benefit from current arrangements and policies. Instead of being labeled a “thug” (if he was black) or a “terrorist” (if he was of Arabic origin), Adam Lanza, the man who shot and killed 26 people at Sandy Hook Elementary School in Newtown, Connecticut, has not been

assigned these generalized labels. Antiracist educator Tim Wise noted that whites talk about tragedies like Sandy Hook and Columbine by saying that “it shouldn’t have happened here.” This is an example of white privilege, as Wise explains: 6-year-olds should not be murdered anywhere, either in nice, affluent white communities or in poor black and brown communities.

John Hartigan, an anthropologist, asserts that poor whites are also given labels that clearly show the boundaries of privilege. “White trash,” “hill-billy,” and “redneck” are labels that highlight the intersections of race, class, and ethnicity in terms of privilege.

Acknowledging privilege does not mean that people have no merit or have not earned their positions. It simply means that whites have advantages that help them along the way, whereas someone with differently colored skin, someone from another ethnic or national origin or social class, or a person with a disability may have had to work harder for the same accolade or accomplishment. Many white people claim that they are colorblind; that is, they do not see color, but only individuals. As many scholars and activists have noted, however, being colorblind should not be the goal. Colorblindness fails to see difference where it matters. Difference shapes people in both good and bad ways. When people fail to see differences, they continue to ignore inequalities. Some people claim to celebrate difference but do so in a very limited, superficial way, such as eating Indian cuisine. To eradicate privilege, however, allies must pay attention not just to these unique cultural practices but also to power differentials.

For example, black men in particular have to be aware of race in their interactions with law enforcement. Asian Americans are acutely aware of race in the educational system, which presumes their superiority and thereby puts huge pressure on young people. One privilege of being white, then, is to not have to think about one’s race. Research has shown that white families rarely talk about race, and when they do, they are discussing others, not themselves.

Dismantling White Supremacy

McIntosh has adapted her original work several times, focusing on specific institutions such as criminal justice, in which white privilege is

manifest. McIntosh has also written extensively about male privilege. Years after her original essay, McIntosh has reconsidered her use of the word *privilege*. She has written that she now believes it to be misleading, if not inappropriate, as privilege generally connotes a favored state, something everyone desires. Many of the conditions she lists, however, are not at all desirable and are instead divisive and disempowering to certain groups. Critics such as Lewis Gordon and Naomi Zack reject the word *privilege*, arguing instead for the term *rights*. Gordon maintains that privilege is not something people need, whereas rights are and thus should be the aspiration. Author, poet, and political activist Ewuare Xola Osayande asserts that whites should simply call privilege what it is: white supremacy.

Protected Class

Protected class is a term used in antidiscrimination law to describe the groups of persons provided protection against discrimination. The protections against discrimination are provided by a number of federal, state, and local laws. The federally protected classes were initially race, color, national origin, and sex. Additional protected classes have since been created, including age (being over the age of 40), disability, and genetic information. Some state and local governments have added sexual orientation as a protected class. If a person is denied an opportunity or treated unfavorably solely because he or she is in a protected class, he or she will have a legal cause of action against the discriminating party.

The concept of protected class grew out of, and evolved from, federal law concerning employment discrimination. Some of the earliest protections were created under Title VII of the Civil Rights Act of 1964. This law prohibited discrimination based on race, color, religion, sex, or national origin, thereby providing protection to these classes. Other statutes have added to the protected classes. For example, the Age Discrimination in Employment Act of 1967 prohibits employment discrimination based on age.

Persons with disabilities became another protected class under the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990. In the Genetic Information Nondiscrimination Act of 2008, Congress added genetic information as a protected class. Other federal laws provide discrimination protection to these classes in areas other than employment. Also, many states, counties, and local municipal governments have passed laws prohibiting discrimination and in some cases created additional protected classes (such as sexual orientation).

Legally Protected Classes

Race as a protected class does not apply only to members of minority groups or groups that have faced historical discrimination. Courts have held that the protections apply regardless of the race. For example, a policy that limited hiring or promotion to African Americans would still adversely affect a protected class because such a policy would be prejudicial against whites. The

extent to which policies can favor racial groups that have historically suffered from discrimination to the detriment of whites continues to be a subject of some debate and is sometimes referred to as “reverse discrimination.”

Color as a protected class refers to discrimination based on the relative skin complexion of an individual, generally favoring persons with lighter skin over persons with darker skin. This kind of discrimination is sometimes present within persons of the same race (e.g., favoring light-skinned African Americans over dark-skinned African Americans), or it can be a proxy for what is otherwise racial discrimination.

National origin as a protected class goes to many of the same concerns as with race and color but also recognizes that at times the place from which a person or his or her ancestors came may be a basis for discrimination. Therefore, this class prohibits discrimination because a person is Italian or Polish but also includes broader ethnic designations such as Latino or Middle Eastern. It has also been interpreted to include cultural groups, such as Gypsies, Cajuns, or Kurds.

Sex, as a protected class, refers to gender. A person is in a protected class regardless of whether male or female, so males are protected as well as females. Sex, however, has not been interpreted to include sexual preferences, sexual activity, or sexual practices. Homosexuality, bisexuality, polygamy, and other such classes are generally not considered within the parameters of the protected class of sex.

Religion as a class includes recognized and organized faiths, such as Christian, Jewish, and Muslim. It also includes subcategories, such as Baptist, Orthodox, and Sunni. In addition, religion includes moral or ethical beliefs as to what is right and wrong, if sincerely held, even if not tied to any particular religious group. The protected class includes those who question or espouse a lack of religious beliefs (e.g., agnostics or atheists). It does not include unprotected secular or political beliefs. The Ku Klux Klan has been held to be a political organization, not a religion.

More recent statutes have created age (40 and over) as a protected class. This class applies only to discrimination based on a person being over a certain age. Therefore, minimum hiring ages of less than 40 do not implicate the protected

class. Also, distinctions that favor older workers, even to the detriment of younger workers who are over the age of 40, are not prohibited. The law was designed to protect older workers from discrimination.

Disability is also a protected class, whether the disability is actual or perceived. For example, an employer cannot discriminate against an employee because he or she has diabetes or because the employer thinks the employee may have diabetes. A disability is defined as a medically recognized physical or mental condition that affects a major life activity.

The concern that information acquired by genetic (DNA) testing could lead to discrimination resulted in the passage of laws that include genetic information as a protected class. Employers are limited in their ability to request, require, or make use of this information. The inclusion of genetic testing as a protected class arose from concerns that employers might try to use this information to predict future health, thereby discriminating against an employee or applicant whose genetic tests demonstrated a likelihood of acquiring some condition or illness in the future.

Federal statutes do not place sexual orientation in a protected class, nor is sexual orientation included in the prohibition based on sex. Some states, counties, and municipalities have created statutes that prohibit discrimination based on sexual orientation. The protection provided under these laws varies widely, with the underlying objective generally being to prohibit discrimination against gays and lesbians. However, to date, efforts to make sexual orientation a protected class under federal law have not been successful.

Theories Supporting Discrimination Claims

There are two generally recognized theories that provide support for a claim of discrimination brought by a person in a protected class. First, persons in a protected class are protected from “disparate treatment discrimination.” This means that a person or entity cannot choose to treat people in the protected class less favorably.

The second kind of claim that can be brought by one in a protected class is called “disparate impact discrimination.” Disparate impact discrimination provides protection against

discrimination even when the policy that is the basis of the claim does not on its face discriminate against a protected class, but the effect is to discriminate against people in the class.

For example, if an employer had a policy stipulating that to be considered for employment, an applicant had to be over six feet in height and be able to bench press 150 pounds, the policy itself does not make any mention of race, color, national origin, or sex. However, because far fewer females than males in the population are over six feet tall and females (as a population) have less upper-body strength, such a requirement would effectively eliminate most females from consideration for the position. The impact of such a policy would be to disproportionately discriminate against females and, hence, adversely affect the protected class of sex.

Some discrimination against all protected classes, except race, is allowed if the discrimination is otherwise justified under the circumstances. The standard for permitting just discrimination can vary depending on the statute, but the governing principle is that discrimination will be tolerated when it serves a significant and necessary, nondiscriminatory purpose. For example, discrimination based on sex is justified when sex is a “bona fide occupational qualification” (BFOQ). An employer could require that an applicant be able to lift 150 pounds (even though that requirement would discriminate against female applicants) if lifting 150 pounds was an essential component of the job.

Likewise, with regard to disabilities, a person with a disability will lose the protection of being in the protected class if he or she is not “otherwise qualified” for the job. An employer would not be illegally discriminating against an applicant with a disability if the disability precluded the applicant from being able to do the job. Courts do view BFOQs and other similar allowances for discrimination with suspicion and may inquire into whether there are other nondiscriminatory means of accomplishing the same objective.

In the area of discrimination law, the protected class delineates the groups that are provided protection. The law provides relief to a person who falls into one of these groups if that categorization was the basis for discrimination by another party. This type of protection has been provided by the federal government as well as state and

local governments. The groups classified as protected classes have grown over time. The exact protections provided and the exceptions to the protection can vary from law to law.

Protocol of Querétaro (1848)

The Mexican-American War ended with the signing of the Treaty of Guadalupe Hidalgo on February 2, 1848. When representatives of the belligerents met in Santiago de Querétaro on May 30 of that year to exchange their ratifications of the treaty, they negotiated a protocol consisting of three articles explaining the treaty’s amendments.

The original treaty is historically notable for being the oldest living treaty between Mexico and the United States and for granting citizenship to Mexicans who remained in the new American lands for more than a year. The protocol, however, has also been the subject of controversy because of the American government’s refusal to honor it, claiming that the representative who negotiated it, Nicholas Trist, exceeded his authority in doing so.

The version of the treaty ratified by the U.S. Senate (as required by American law) differed from the original version by eliminating Article X, which would have required the United States to honor land grants made by the Spanish and Mexican governments in the lands now ceded to the United States. Wording in Article IX was also changed such that Mexicans would be granted citizenship “at the proper time (to be judged by the U.S. Congress)” rather than “as soon as possible.” The protocol as negotiated by Trist downplayed these changes by affirming that they did not constitute a change in the legitimacy of Mexican land grants or the rights granted to Mexican residents of the ceded lands.

Negotiation of the Treaty

Luis Cuevas, Bernardo Couto, and Miguel Atristain negotiated for Mexico on behalf of interim Mexican president Manuel de la Pena y Pena. In 1847, U.S. President James K. Polk had sent Nichols P. Trist as his emissary with a draft of the settlement, but he recalled him from service the following year. Across the continent, Trist met with Mexican negotiators anyway, hammering through the most difficult provisions regarding money, land, and recognition of Mexican citizens. Neither the Mexican nor American congresses supported the treaty signed in February 1848 but ultimately acquiesced, understanding that the only other option was a return to active warfare, which neither side wanted.

In February 1848, at the tentative end of nearly two years of war between the United States and Mexico, the Treaty of Guadalupe Hidalgo was negotiated and exchanged for ratifications in the congresses of Mexico and the United States, in both English and Spanish. Both nations were to return with original, signed, and ratified copies of the treaty within four months or less. Unfortunately for Mexico, when the representative returned with the U.S. version, important modifications and rationale were included.

To appease those in the U.S. Congress who felt that the United States should take all of Mexico and leave nothing for the losing side, Article X of the treaty was removed, which had agreed to honor the character of land grants as they had been given, the same as if they had remained within the boundaries of the newly defined Mexican nation.

Article IX was substantially shortened, taking out specific references to the Catholic Church. By removing this article, the United States wanted to clarify what it meant by taking such action. The protocol explained that land grants would be recognized if the grantees proved their legitimate title in the American legal system.

Effects of the Treaty

The protocol presented major roadblocks for Mexicans who wanted to maintain title to their land. First were the vagaries of both Spanish and Mexican land grants, which were frequently given without complete knowledge or mapping of the area in question. Second were the two types of land grants given, both *hijuela* (“person”) and *ejido* (“communal”), which did not coincide with U.S. property law or ideology about land ownership in the era of manifest destiny. Third was the challenge of possessing written documentation versus long-term tenure on the land over generations. Finally was the frequently insurmountable task and expense of negotiating the American legal system in English.

In practice, the “American tribunals,” as mentioned in the protocol, frequently failed to honor Mexican land grants in the ceded territories, even when all was in order, and despite the significant hurdles petitioners faced in even pressing their claims at that level.

The result was predictable; the majority of Mexican grantees became landless, impoverished, and politically disenfranchised. Approximately 90 percent of land grants changed hands within 50 years, often monopolized by unscrupulous squatters or land barons with access to capital and legal networks.

One such example was the Santa Fe Ring in New Mexico. Initially, grants were reviewed by surveyors general who made recommendations to Congress for ratification, which then issued a patent to grantees conveying to them the title of their landholding.

In 1891, the U.S. Congress established the Court of Private Land Claims to dispose of the remaining cases not finished by the surveyors general, complicated by the intervening War Between the States. The 1897 U.S. Supreme Court case of *United States v. Sandoval et al.* also provided an interpretation that all communal lands were

actually held by the Mexican government, not local communities, thus in signing the treaty, those lands had been conveyed by the Mexican government to the U.S. government.

By the end of the land claims court in 1904, less than 10 percent of grants had been awarded, and even those with personal holdings had now been stripped of access to water, grazing, and other natural resources on *ejido* lands, making their grants worthless in the arid southwest. Though granted citizenship sooner than other peoples displaced or disadvantaged by manifest destiny, Mexican Americans were given far fewer advantages and rights than they were initially promised. The distrust and anger over this issue manifested itself in the land grant movement in New Mexico as part of the Chicano civil rights movement.

Public Health and Ethnic Diversity

The health of the U.S. public varies greatly over time and geographic location. Diseases and health conditions of the greatest concern also change. Population health also varies greatly across ethnicities and cultures. In an effort to understand community health and promote community

health, public health is an interdisciplinary field relied on to promote a healthier society. In general, public health is the prevention and promotion of health among populations, ranging in size from small communities to entire countries. Typically, public health is defined as both the science and art of promoting health. In order to accomplish these goals, public health initiatives include analyzing population health and promoting healthy communities.

By utilizing policy and research strategies, public health professionals garner understanding of health issues and chronic diseases in populations. Public health is primarily focused on the overall population health, which can be described as the health of groups of people. Thus, paying attention to the changing demographics of the United States is imperative in preventing disease and injury while promoting healthy living.

Therefore, with the increasing ethnic diversity of the U.S. population, one cannot ignore the impact that these changes and shifts have on the health needs of individuals and the health needs of the population at large. What once may have been seen as effective public health policy and treatments now may or may not be as effective as it could be for an increasingly diverse population in which public health institutions must now answer a call to provide equitable access to all people by intersecting ethnic diversity into the practice of public health. Historical health trends and the sometimes inequitable service provided to the public in the past offers insight into the importance of creating public health services that are accessible and effective for all populations such that the existence of a healthy public is created and supported.

A healthy public gets sick less frequently. Consequently, the prevention of disease and injury is paramount. Additionally, a healthy community spends less money on health care and thereby enjoys better economic productivity and an improved quality of life. Public health attempts to help all individuals increase their well-being. For example, helping children to be healthy is of great importance because as children thrive, they miss less school and demonstrate overall better academic performance. This result not only assists a community in economic prosperity but also has an added bonus of educating citizens who

Lieutenant J. G. Cody Thornton (at right, in uniform) of the U.S. Public Health Service being interviewed during the kick-off of the Food Safety Inspection Service (FSIS) Food Safety Discovery Zone, May 6, 2010, on the National Mall in Washington, D.C., during Public Service Recognition Week. The Food Safety Discovery Zone is a mobile education center for the FSIS Food Safety Education that travels to schools and civic functions teaching safe food handling. The U.S. Public Health Service and U.S. Department of Agriculture Food Safety Education Service cooperate on the operation of the Food Safety Discovery Zone.

become resources for a community. Public health ultimately attempts to reduce human suffering, creating myriad ways to deliver public health services such as education and prevention, and preparing people for the impact of catastrophes from community-trusted sources may be important in weaving diversity into public health.

Although public health is often considered a newer scientific field in the United States, its history is traced in international societies ranging back to 2000 B.C.E. and earlier. Societal crises, typically disease states that impacted a large portion of a society, created fear and received attention. Often, the attention became the impetus for societies to intervene to reduce illness and death. When these health crises emerged, it was evident that something had to be done to stop the spread of death and disease.

Without modern medical science, the etiology and often the treatments were tied to supernatural

beliefs, but they were attempts to thwart the spread of disease. Some made great sense. Societies built drainage systems, removed bodies of the dead, and even looked for a greater understanding of the human body.

However, the contemporary roots of public health in the United States date back to 1798, when the U.S. Public Health Service was established. This federal government entity is now housed in the Department of Health and Human Services (HHS). Since the inception of the U.S. Public Health Service, health has expanded to nearly every corner of government. Components of health can be found in the Social Security Administration, Department of Labor, Department of Homeland Security, Department of Defense, and Department of Veterans Affairs. These diverse agencies realize that public health is intertwined with most public and governmental concerns and thus should be considered when

making decisions that impact the population as a whole. It was common, historically, for agencies to treat public disease and injury primarily on a responsive basis, intervening after a disease state or crisis occurred. Now, however, many policies, agencies, and educators are realizing that prevention is of great importance, both to promote healthy living and to increase financial benefits.

Public Health Today

The need for public health services to serve a multiethnic and multicultural America is immense, immediate, and real. The emerging diversity of the current U.S. population is of great concern to public health because health conditions do not equally impact various cultures within the United States. Population health differs by subpopulations and cultures, depending on such factors as gender, socioeconomic class, sexual orientation, and ethnic background.

Understanding these differences, also called disparities, and ultimately how to combat them is a focus of public health researchers. The disparities between disease states across cultures are of great concern. These differences, however, occur for many different reasons and not in isolation. Some of these differences may be attributed to such complex factors as health literacy, ethnic-based genetic precursors, financial access, access to nutritional foods, and the treatment of minority cultures.

The great diversity that occurs across populations often requires different treatments and different ways to promote prevention. Even when the causes of a disease are understood, the education and prevention strategies that work with one subpopulation may not work with the next. Although efforts might be made to address one specific public health concern or disease, the effectiveness of treating the same disease among different ethnic groups may suffer due to lack of understanding of each group's unique needs and their approach to seeking healthy habits and lifestyles. Therefore, as the ethnic diversity of the United States has increased, there is a call for increasingly diverse and equitable ways to address public health concerns among different ethnic populations.

Not only might public health need to diversify delivery of services, but diversity might also be

incorporated into public health by addressing the ability for all populations to access public health services. For example, public parks are an excellent community resource for providing opportunities to enhance public health in that parks allow people to get outdoors and be more physically active. However, not all populations have access to public areas that are safe or suitable for use. Therefore, it could be suggested that increasing public access to these kinds of public facilities might positively affect public health and well-being by taking into account the different needs of ethnically diverse populations.

Efforts to decrease ethnic stereotypes may also be of special concern to public health institutions' efforts to incorporate diversity into practice because stereotypes and misinformation could have the potential to prevent entire subgroups or populations from seeking the treatment they need. For example, some people may be under the impression that certain diseases only affect specific populations. Misinformation and beliefs among the public could be a challenge to maintaining public health. Addressing misunderstandings related to ethnic diversity in public health is essential, and it could be said that a goal of public health for now and into the future could be to utilize diverse public health service providers and trusted community members in helping address misunderstandings.

To complicate this matter, the current racial and ethnic composition of public health professionals, public health faculty, and public health workers in the United States only began appearing in the professional literature in 2003. Findings indicate that the public health workforce does not mirror the diversity inherent in either current or future U.S. population statistics. Most public health practitioners, students, and public health faculty are Caucasian. Former U.S. Surgeon General David Satcher described the need for diversity within the public health workforce as "important because it defines the parameters of opportunities for our children; it enriches the lives of our future professionals; and because if we are going to achieve the goal of eliminating disparities in health, we'll need a diverse group of health professionals to accomplish it."

The current composition of public health professionals and researchers does not mirror the

populations they most want to impact. Thus, diversity among the public health workforce needs expansion. Additionally, public health is in part a field of scientific inquiry, thus a need exists for all public health professionals to understand how to educate and intervene in cultures of which they may not be a part.

The current composition of the public health workforce and the need for attitudes, knowledge, and skills to work cross-culturally are exacerbated by a preference in some cultures to embrace education and prevention strategies that come “from the inside.”

The United States is experiencing changing demographics that require public health professionals to work with patients who are culturally different. Thus, training public health professionals to effectively work with people whose backgrounds differ from the practitioners’ is of paramount importance in providing quality care. This objective, if met, would not only increase the cultural diversity of the public health workforce, it would also help bring a greater ability to reach diverse populations and potentially increase health outcomes and eradicate health disparities.

Public Health and Ethnic Diversity

Because the U.S. population is so diverse, practicing public health professionals, public health faculty, and public health professionals in training from all backgrounds need to be equipped with cultural competence skills to serve this ever-increasingly diverse public. Several public health organizations, such as the American Public Health Association (APHA) and the Agency for Healthcare Research and Quality (AHRQ), have addressed the need for cultural competence through their organizational policies and statements. These calls to the field are attempts to not only promote professionals to work effectively with diverse populations but also to increase the diversity of the public workforce.

In addition, the accreditation bodies, such as the Council on Education for Public Health (CEPH), deem that training programs must address issues of cultural competence, health literacy, and health care disparities. Infusing such ideals into the training of new professionals will help ensure a public health workforce that is better equipped to

work with the many faces of diversity that they will encounter.

Public health is both an art and science. Differences in health states are found not only within the United States but also across the world. In the United States, many disparities occur in general health and well-being across cultures. However, these differences are not greatly understood. Though public health has a rich history of interdisciplinary study, there are few forums, think tanks, and academic homes where comprehensive research is dedicated to public health. However, public health graduate degrees and grants focusing on meeting public health needs are changing the landscape of public health. A continued focus on research that looks at first understanding where public health disparities occur is paramount to then finding intervention and prevention strategies that will meet the ever-diversifying population.

Public health is concerned with the health of populations. As the United States becomes increasingly diverse, public health professionals need the attitudes, knowledge, and skills to work with populations from a variety of cultural backgrounds. Honing these skills will allow public health professionals to more effectively reach diverse populations. Additionally, the current public health workforce does not mirror the populations for whom they are working. Thus, there is a great need to enhance the workforce diversity within public health.

Public health is concerned not only with the health of the public but also with preventing and educating populations about health issues. Prevention and education are more cost-effective than treatment of disease states. Thus, public health professionals need to influence the U.S. health care system, whereby prevention and education as well as treatment are valued and reimbursed. If this goal is accomplished, fewer disparities and better health outcomes for all U.S. populations can be anticipated.

Pueblo

The Pueblo people consist of a number of Native American tribes that are indigenous to the United States, and they are named for the villages, or *pueblos*, they were living in when they first encountered the Spanish in the 16th century. Pueblos are adobe, mud, and stone structures consisting of multilevel buildings surrounding open courtyards, and they strongly resemble modern apartment complexes. The Spanish designated certain tribes as Pueblo based on their use of these buildings. When Spanish territory was ceded to the United States, those tribes were recognized by the federal government as Pueblo.

There are 21 recognized communities: the Hopi people of Arizona; Zuni people of New Mexico; Pueblo people of Acoma, Cochiti, Jemez, Isleta, Laguna, Nambe, Ohkay Owingeh, Picuris, Pojoaque, San Felipe, San Ildefonso, Sandia, Santa Ana, Santa Clara, Santo Domingo, Taos, Tesuque, and Zia, New Mexico; and the Pueblo people of Ysleta Del Sur, Texas.

The ancient Pueblo peoples, sometimes referred to as the Anasazi from the Navajo term for "ancient enemies," are one of the four major groups of the ancient southwest, along with the Hohokam, Mogollon, and Patayan. They inhabited the Colorado plateau and large parts of New Mexico and Nevada, and they introduced adobe dwellings built along cliff walls, accessible by rope or rock climbing. Ancient Pueblo towns are notable for the clear sense of community planning and the prevalence of multi-story and multi-purpose buildings. The first Pueblo Era began around 750 C.E., during a golden age for the Pueblo peoples, during which the population grew rapidly because of amenable weather for agriculture and improvements in technology. Some pre-Columbian pueblos are still inhabited today, although modern residents generally maintain contemporary homes in addition to the pueblo. Pueblo construction has also had a considerable influence on southwestern architecture, art, and aesthetics.

The Pueblo peoples were the first to successfully revolt against the Spanish, who in 1680 had been in the New World for nearly 200 years. The Pueblo Revolt began on August 10, 1680, and was a coordinated attack by 2,500 Pueblo warriors. The Spanish withdrew for 12 years, and in abandoning their settlements, they also abandoned their horses, which became the wild mustang herds of the southwest.

There is great cultural and linguistic variation among Pueblo peoples. Some anthropologists have followed the lead of Paul Kirchhoff in considering two basic groups of Pueblo peoples. One is the Tanoan-speaking Pueblos, excluding the Jemez, who organize into nonexogamous patrilineal clans; whose traditional religious beliefs include dualism, the origin of people from under water; the ritual importance of multiples of three; and who count five directions, beginning in the west; and the other groups include the Jemez, Hopi, and Zuni, who organize into exogamous matrilineal clans; whose religious beliefs include the origin of people from underground; and the ritual importance of four and seven; and who count four or six directions, beginning with the north. Other scholars have focused primarily on linguistic differences or on the differences between the irrigating farmers of the east and the dry farmers of the west.

Pueblo youth taking part in a minority outreach natural resources science day camp in New Mexico in September 2012. They are photographing blackbrush plants alongside U.S. Department of Agriculture Forest Service lab scientists.

Many Pueblo communities today hold annual ceremonies that are open to the public. Often, it is the feast day of the Roman Catholic patron saint assigned to that pueblo by Spanish missionaries, though those saints were chosen because their feast days coincided with traditional ceremony days. Ground cornmeal is often used as a sacred substance, as well as prayer sticks.

Among the western Pueblo peoples, the *kachina* figures largely in traditional beliefs. Kachina dolls are familiar to the general public,

but the dolls represent spirit beings who are personifications of aspects of the natural world—including ancestors, elements, natural phenomena like lightning, specific places, and abstract qualities. Local Pueblo communities often have a pantheon of kachinas that include the sun, thunderstorms, corn, and the wind. The Zunis hold that kachinas live in a mythical lake, reached through the junction of the Zuni River and the Little Colorado River, whereas the Hopi believe that kachinas live in the San Francisco Peaks of Arizona. Rituals and ceremonies often involve the use of dancers in kachina masks.

Most Pueblo communities also have *kivas*, special rooms used for religious rituals. They are square walled, are usually underground, and have been found in buildings dating back as far as the Pueblo I Era, which began in 750 c.e. Kivas are often used in the veneration of kachinas, although the earliest kivas predate the earliest evidence of kachinas by several centuries. Acoma Pueblo, near Grants, New Mexico, was built in the 12th century and is the oldest continuously inhabited village in the United States. It consists of the three villages of Sky City, McCartys, and Acomita, and is inhabited by the federally recognized Acoma Pueblo Tribe.

The present size of the community consists of about 10 percent of the land that was traditionally held. The Acomas are Keres-speakers, a group of seven mutually intelligible dialects spoken by Pueblo tribes. There are about 5,000 Acomas. The pueblo has no electricity, sewage disposal, or running water, but the reservation land surrounding the mesas has modern buildings.

Pueblo Revolt (1680)

The Pueblo Revolt was an uprising by the Pueblo Indians to drive the Spanish from their homeland of New Mexico. The revolt stands as the most successful example of resistance by indigenous peoples of the New World against a European colonial power. The Spanish would not reassert their presence in the region for 12 years.

Background to the Revolt

Inspired by the riches found in other parts of the New World, Juan de Onate gained permission from the Spanish Crown to establish the colony of New Mexico in 1598 in the hope of benefiting from the great mineral wealth reportedly located in the region. Unfortunately for Onate and the Spanish and Mesoamerican colonists who accompanied him, the region's supposed wealth turned out to be a myth. The colony was a tremendous disappointment, and the Spanish Crown nearly shut it down in 1605, a mere seven years after its founding.

Though there were no vast riches to be found, the Crown allowed the colony to continue because of what the Spanish did find in the region: a group of politically distinct, yet culturally and linguistically related, indigenous communities they collectively labeled Pueblos (the Spanish word for "town"). Though the archaeological record is not complete, the Pueblos had probably lived in the locations where the Spanish encountered them for several centuries.

Unlike other Indian communities in the region, the Pueblos already lived in towns and practiced year-round agriculture, two qualities that made them more "civilized" in the eyes of the Spanish, as well as more likely candidates for Christianization. In fact, it was the vast potential harvest of souls that Franciscan missionaries saw among the Pueblos that ensured the colony's survival into the 17th century.

Spanish occupation was very difficult on the Pueblos. The Spanish insisted that the Pueblos pay tribute in the form of agricultural products, as well as labor owed to prominent Spanish colonists. Pueblo women endured assault, and Pueblo men humiliation. Perhaps most seriously, the Franciscan monks waged an all-out war on Pueblo religious practices, which they saw as inspired by Satan.

They destroyed sacred places and objects, and they severely punished religious leaders or any Pueblos found participating in the now-forbidden rites.

The Revolt

In the late 17th century, Spanish oppression was only one of the difficulties the Pueblos faced. Severe drought and other climate changes hit the region hard. Nomadic and seminomadic raiders, such as the Apache and the Navajo, stepped up their attacks on the colony, and Spanish and Pueblo suffered alike. If the Spanish were going to oppress the Pueblos, interrupt important religious practices that the Pueblos believed could affect the weather and climate, and prove incapable of stopping the raids, then perhaps their presence could no longer be tolerated.

The catalyst that finally ignited an intolerable situation was probably the arrest of 45 Pueblo leaders on charges of sorcery in 1675. The Spanish governor sentenced four men to hanging, while the rest were publicly whipped, then released. Among those released was a man from Ohkay Owingeh Pueblo (San Juan) named Pope. Pope traveled to another Pueblo community called Taos and began to plan a revolt with the help of leaders from other pueblos. Communicating through messengers carrying knotted ropes that served as countdown calendars, Pueblo leaders planned a widespread uprising on August 11, 1680. However, Spanish officials captured two messengers because of warnings from sympathetic Pueblos, so the revolt actually began a day early, on August 10. Despite the early warning, the Spanish failed to understand the seriousness of the revolt and were caught completely off guard.

Most Spanish colonists lived in isolated ranches or settlements far from the capital in Santa Fe. The colony's missionary population mostly lived in the pueblos themselves. Within a matter of days, the Pueblos had killed perhaps as many as 400 colonists and had killed 22 of the colony's 33 Franciscans. They also completely destroyed many of the colony's churches and outlying settlements.

The Spanish survivors fled to Santa Fe or to Isleta Pueblo, in the south of New Mexico, one of the few pueblos that did not participate in the revolt. Neither group of survivors was aware of the other, and each thought it was the only one left. Believing everyone else in the colony to be

dead, the survivors at Isleta Pueblo finally set out for El Paso on September 15.

Meanwhile, the survivors who had reached Santa Fe settled in for a long siege under the leadership of Governor Antonio de Otermin. By the end of September, Otermin was dangerously short on men, resources, and especially water. He decided to attempt to fight his way out of the city and head south. Surprisingly, the Pueblo besiegers allowed the Spanish to leave without further conflict, and Otermin's column of survivors began its journey toward El Paso on September 21, eventually reuniting with the survivors from the Isleta Pueblo column once they arrived. After a little over 80 years, the Spanish colony had been destroyed.

The Revolt's Aftermath and Legacy

In 1692, Diego de Vargas successfully reentered New Mexico and began reasserting the Spanish authority over the region. He encountered little resistance, as the unity that had bound the Pueblos together during the revolt had quickly disintegrated in the decade following. Still, the first few years of the renewed Spanish presence in New Mexico were tense, culminating in a minor and geographically limited second revolt in 1696. For the most part, though, the Pueblos accepted that the Spanish were a permanent part of their world. They would remain in New Mexico until Mexico declared independence in 1821 and claimed the colony as part of its territory.

The Spanish, however, had come to accept that the power they could assert over the Pueblos had real limitations. Franciscan monks, though still disapproving of Pueblo religious life, carried out their work with less arrogance and fewer demands upon the population. Colonial officials still levied resources from the Pueblos, but much of the cruelty and oppression of the colony's previous era was gone. In fact, genuine cooperation between the Spanish and the Pueblos developed as they increasingly joined forces against common enemies in the region, such as the Navajo and Apache, as well as the newly arrived Comanche.

The Pueblo Revolt and the leading figure of Pope have captivated the imagination of artists, writers, and scholars alike. The sheer scope of the uprising, as well as its tremendous if temporary success, make the revolt a fascinating subject. Some historians have even gone as far as to label

the Pueblo Revolt as the continent's first war for independence, predating the American Revolution by almost a century—a not entirely inappropriate comparison, though it has its limitations.

Perhaps the greatest legacy of the revolt, however, is the rich and unique cultural heritage of New Mexico—a blending of Hispanic and indigenous influences born out of several centuries of interaction between the Pueblos and Spanish colonists and their descendants. Without the revolt, the era of cooperation so important in such interactions might not have occurred.

Puerto Rican Legal Defense and Education Fund

One of the foremost civil rights organizations dedicated to protecting the rights of Puerto Ricans and other Latinos in the United States, the Puerto Rican Legal Defense and Education Fund (PRLDEF) is a nonprofit 501(c)(3) organization established in 1972. The organization's founders included three Puerto Rican lawyers, Jorge Batista, Victor Marrero, and Cesar Perales. The primary activities of the PRLDEF include providing legal counsel to members of the Puerto Rican and larger Latino population on behalf of

court cases that directly impact these communities and advocating local, state, and federal governments on matters of concern to the Puerto Rican/Latino communities.

Three major areas of focus within the PRLDEF include law, education, and civic participation. Additionally, the organization offers preparatory courses and scholarships for Latinos pursuing careers in the legal field. Since its founding, the organization has renamed itself LatinoJustice PRLDEF, highlighting that its mission objectives have taken on more of a pan-Latino focus rather than a singular emphasis on Puerto Rican issues.

Litigation and Bilingual Issues

The first legal action taken by the PRLDEF occurred in September 1972, when the newly formed organization joined with ASPIRA, a non-profit organization that aimed to improve educational opportunities for Puerto Rican students, in filing a class action lawsuit against the New York City Board of Education for its alleged negligence toward students who lacked English fluency. ASPIRA and the PRLDEF contended that the Board of Education had failed to take the linguistic needs of its students who lacked fluency in English into consideration with its educational policies, which thereby undermined the quality of education such students received.

This lawsuit culminated in an August 1974 consent decree, which established bilingual education classes in New York City public schools for students with limited English proficiency. Such students would be taught in their native language while they also studied English to improve their linguistic skills. *ASPIRA, Inc. v. Board of Education of the City of New York* remains one of the landmark court cases pertaining to educational rights in U.S. history, as it firmly established bilingual education within New York City and resulted in the subsequent adoption of bilingual education programs by other school districts across the nation.

The issue of language rights also factored into several other major PRLDEF court cases throughout the 1970s. The *López v. Dinkins* case (1973) procured bilingual ballots and interpreters to allow Spanish-speaking and Chinese-speaking parents to vote in New York City school board elections. In 1974, the ruling in *Torres v. Sachs* mandated the provision of bilingual ballots for

all elections held in New York City, while the outcome of *Ortiz v. New York State Board of Elections* (1974) required bilingual ballots for all elections held statewide. These voting rights cases were particularly significant in that both New York City and upstate New York were home to sizable Puerto Rican communities.

Under the Jones Act of 1917, all residents of Puerto Rico had been conferred American citizenship and were free to migrate to the mainland United States without immigration restrictions. As U.S. citizens, Puerto Ricans held the right to vote in local, state, and federal elections, although many Puerto Ricans lacked English fluency or literacy, which impeded their right to cast ballots printed exclusively in English prior to the 1974 verdicts. Following these decisions, the PRLDEF secured the right for bilingual ballots in nearby Philadelphia (*Arroyo v. Tucker*, 1974).

Other Activism

In the 1980s, the PRLDEF took legal action to protect the participation of Latino voters in the electoral process. For example, in 1981, the PRLDEF joined with the Mexican American Legal Defense and Education Fund to fight the proposed realignment of state legislative districts within Chicago that would have diluted the size and political strength of the Latino vote. This resulted in the creation of two majority-Latino voting districts.

In 2000, the organization turned its attention to the Caribbean when it joined with Robert F. Kennedy, Jr., and filed suit (*Waterkeeper Alliance v. Department of Defense*) against the United States Navy to cease its 60-year military live-fire exercises in Vieques, a small island off the eastern coast of Puerto Rico.

In 1999, the U.S. Navy admitted it had accidentally fired 263 bullets laced with depleted uranium in Vieques in violation of federal law, and further opposition to the Navy's presence intensified after David Sanes, a Vieques resident and civilian naval employee, was accidentally killed in 1999 during a routine bombing exercise. Sanes's death led to protests among the local population for the Navy's removal from the island, which prompted numerous Puerto Rican luminaries, including actress Rosie Pérez, recording artist Ricky Martin, professional boxer Félix Trinidad, and New York Congresswoman Nydia Velázquez, to join the cause.

The lawsuit filed by Kennedy and the PRLDEF called for the Navy to withdraw from Vieques, to clean up its environmental degradation of the island, and to compensate the local population for financial damages incurred from the Navy's presence. Ultimately, the Navy withdrew from Vieques in 2003. In 2007, the PRLDEF won a permanent injunction against an ordinance enacted in Hazleton, Pennsylvania, that mandated that landlords verify the citizenship status of tenants before renting out their properties.

Puerto Ricans

Puerto Ricans have a diverse ethnic heritage, that includes ancestry from the Taino people of the island, Spaniards, and Africans primarily from West Africa. Most Puerto Ricans speak Spanish at home (in 2010, 95 percent of those on the island did so as well as 65 percent in the 50 states) and identify as Hispanic or Latino. Although most Puerto Ricans are Roman Catholic, some also celebrate Santería, which survived from Yoruba beliefs in Nigeria. Puerto Ricans are U.S. citizens, but island residents do not pay federal taxes or have a voting representative in Congress; they also cannot vote for the U.S. president.

Despite Puerto Ricans' diverse backgrounds and migration throughout the United States, they have retained a sense of community and identity fueled by their history, continued use of the Spanish language and its dominance on the island, and ease of back-and-forth travel from the island to the 50 states.

The Spaniards first claimed the island for Spain in 1493. By 1511, the Taino population had declined so dramatically—from diseases and hard labor—that Spaniards then turned to enslaved people from West Africa to provide their new workforce. Puerto Ricans remained under Spanish control until 1897, when the Spaniards granted them greater autonomy; the following year, they chose their first elected officials, who served a few months until the Americans invaded the island in July 1898 at the close of the Spanish-American War.

In December 1898, Spain gave the United States the island of Puerto Rico as part of the Treaty of Paris, which formally ended the war. No Puerto Ricans participated in the proceedings, and Puerto Rico remained under U.S. military occupation, with its status uncertain, until the Foraker Act of 1900 established a civil government under the control of the United States. The following year, English became the dominant language in the school system. As with other U.S. territories, the American president appointed the territory's governor and justices, but it was not clear whether the U.S. Constitution would apply to island residents and whether or not the island was a territory similar to the continental ones.

In 1901, the U.S. Supreme Court ruled in *Downes v. Bidwell* that the islands of Puerto Rico and Guam were unincorporated territories and not on the path to statehood like previous ones. Puerto Ricans received the status of "nationals" rather than citizenship. Later decisions clarified that Puerto Ricans had the right to migrate freely to the United States but did not have voting rights or control over the government of their island; thus, they were neither foreigners nor citizens.

Politics

In 1917, the United States extended citizenship to Puerto Ricans via the Jones Act. Although they now had protection under the U.S. Constitution, islanders still did not have much say in

politics, as they could not choose their own governor, did not have voting representation in the U.S. Congress, and could not vote for the U.S. president. Even the extension of citizenship had been decided without their direct input. The new status offered some protection, but it also meant that they had to register for military service, serving in segregated units.

After some years of conflict over the island's status and movements for independence, in 1948 the United States authorized Puerto Ricans to elect their own governor. The first elected governor, Luis Muñoz Marín, supported changing the language of instruction in the schools to Spanish, although English would continue to be taught as a second language.

Four years later, the United States Congress provided Puerto Ricans with a choice between remaining a colony or choosing to become a commonwealth; they opted for the latter and became an *estado libre asociado* (associated free state), or commonwealth, which meant that they would elect their own leaders and make their own laws while remaining subject to U.S. federal courts, military service, and trade laws.

Some Puerto Ricans desired independence from the United States, whereas others wanted the island to become a state, but these options were not presented; few desire independence today, although many are interested in Puerto Rico becoming a state. Island residents remain under commonwealth status today.

Migration

Puerto Ricans migrated to the mainland United States in several waves, with the largest group coming to the states following World War II. Even before Puerto Rico came under U.S. control, there were a few Puerto Ricans, primarily merchants in coastal towns such as Boston, or working-class cigar makers who resided in cigar-rolling towns such as Tampa, Florida, or New York City, in the late 19th century. After the Spanish-American War, Puerto Ricans migrated in organized groups to places such as Hawai'i and Louisiana to perform low-wage agricultural jobs.

Following World War II, the ease and affordability of air travel dramatically increased the exodus, especially since there were few employment opportunities on the island after sugar

corporations took control of much of the land, offering primarily temporary jobs during harvest season and at very low wages. In the 1950s alone, there was a net migration of over 470,000 people leaving the island, which more than doubled the number who had left during the first four decades of the century.

Puerto Ricans on the mainland settled first primarily in East or Spanish Harlem in New York City to work in the garment industries and restaurants and at other unskilled jobs that did not require the English language. There, they experienced some ethnic tensions as they competed with African Americans and Italians in the same neighborhood for unskilled jobs and affordable housing. They also faced discrimination because of their skin color (some were considered white and others black) and language issues. As unskilled jobs disappeared in the 1960s and 1970s, many Puerto Ricans lived in poverty. Language problems—Puerto Rican students were put into regular English-language classrooms and expected to learn—contributed to their difficulties. Since the 1970s, more Puerto Ricans have moved to other states, such as Florida and Illinois, for opportunities.

Culture and Cultural Impact

Off the island, Puerto Ricans' sense of themselves as a group grew because of their experience living together in New York City and their distinct experience as a group of migrants who were citizens but who did not speak the dominant language on the mainland. During the 1950s, Puerto Ricans on the mainland established various organizations to help members of their community and to strengthen and celebrate their identity and culture. The annual Puerto Rican Day Parade, started in 1958, has become a major cultural event with over one million spectators each year.

Puerto Rican culture has influenced America especially through its music. Fusing African American music with the beats of Afro-Cuban music, Puerto Ricans contributed to the sounds of salsa or "sauce" music. Popular in the 1930s and 1950s with famous Latin jazz stars such as Tito Puente, its sounds and popularity were revived in the 1990s with singers Ricky Martin and Marc Anthony. Others famous entertainers of Puerto Rican descent include Sammy Davis, Jr., Jennifer

Lopez, Rosie Perez, and Geraldo Rivera. Puerto Rican authors have also had an impact, from Piri Thomas in the 1960s to the more recent memoir and novels by Esmeralda Santiago.

Contemporary Scene

Puerto Ricans live throughout the 50 states and on the island, although today more Puerto Ricans live off the island than on it (as of 2010, there were approximately 3.7 million on the island and well over 4 million on the mainland). Puerto Ricans are one of the largest groups of Latinos in the United States. They have remained in the public spotlight because of the size of their population, the ongoing debates over the island's status (primarily over statehood or commonwealth status), the increased recognition of the growing Latino population in the United States and attention to their interests and politics, and President Barack Obama's recent appointment, in 2009, of

Sonia Sotomayor as associate justice to the U.S. Supreme Court.

Quadroon

In an American historical context, *quadroon* is a term used to describe a person of one-quarter African descent. In most instances, quadroons had one black grandparent and three white grandparents. Quadroon is a cognate of the Spanish term *cuarterón*, with which it shares a meaning. Similarly, individuals with one black great-grandparent and seven white great-grandparents were known as octoroons, as *octo-* is a Latin-based prefix indicating eight.

Quadroons in American History

Because of policies based on hypodescent, whereby children born of mixed unions are assigned to the subordinate ethnic group, quadroons and mulattoes of African American and European lineage were considered to be black. As such, in antebellum America, quadroons were subject to existing slave laws. Even for those without African ancestry who were labeled as quadroons or mulattoes (including those of Native American and Caucasian descent), the categorization meant that they could be sold into slavery legally in the United States. Similarly, Jim Crow laws regulated the rights of quadroons, along with black Americans.

During slavery and well into the 20th century, many quadroons and mulattoes enjoyed privileges that most African Americans did not,

especially those who were closer in phenotype to white Americans. Some inherited property from their white parents, and a very small number owned enslaved people themselves. As such, some with lighter complexions and phenotypes atypical of most individuals of African descent posed as white, Native American, Arab, or Asian to avoid the discrimination African Americans faced. In addition, the phenomenon of racial passing, which occurs when a person of one ethnic background presents himself or herself as a member of a different ethnic group, may have been commonplace among multiethnic Americans in the 18th, 19th, and early 20th centuries.

In the 1910s, 1920s, and 1930s, several southern states, including Virginia, Texas, Arkansas, Tennessee, Oklahoma, and Georgia, codified laws that defined Americans with any African ancestry, irrespective of the percentage, as black. Other states, including North Dakota, Utah, Florida, Missouri, Nebraska, and Maryland, established the threshold for identification as African Americans as one black great-great-grandparent or one great-great-great-grandparent.

Quadroons in Literature

The social tribulations faced by mixed-race people—especially when they resulted in racial passing—were a common trope in 19th- and early 20th-century American literature. In particular,

in abolitionist literature beginning in the 1840s, quadroons, along with mulattoes, were used to evoke sympathy from white audiences for the plight of black Americans. These stories featured characters who looked like the white readers but suffered as African Americans did. Furthermore, this genre often featured a biracial heroine who was light-complexioned enough to pass for white, and she struggled because she was unable to find full acceptance from either black or white communities. Once her true ethnic background was made public, she lost her comfortable station in society and was reduced to bankruptcy, sexual victimization, slavery, and/or death.

These plays and novels were aimed at white women readers; their intention was to warn audiences of the dangers of racism by way of identification with a character who shared their social class and appearance. Quadroon characters, many of whom are ill-fated, are depicted in the following works: Henry Wadsworth Longfellow's poem "The Quadroon Girl" (1842); Harriet Beecher Stowe's *Uncle Tom's Cabin* (1852); "Song of Myself," an 1855 poem by Walt Whitman; Louisa May Alcott's *Little Women* (1868); George Washington Cable's *Old Creole Days* (1879); Kate Chopin's *Désirée's Baby* (1893); James Weldon Johnson's *The Autobiography of an Ex-Colored Man* (1912); Anne Rice's *The Feast of All Saints* (1979); and Gabriel Garcia Márquez's *Love in the Time of Cholera* (1985).

Quadroon Balls

During the 19th century, in some parts of the American south, including Louisiana, Mississippi, Alabama, and Florida, quadroon balls were held to facilitate an elaborate system of concubinage, called *plaçage*, between multiethnic women and wealthy white men. New Orleans, in particular, has been associated with this practice. Outside the United States, the custom also was commonplace in Haiti.

Historical Racial Terminology

Similar colonial-era terms, including *mulatto*, *mulatta*, *mulatress*, *quarteronne*, *octoroon*, *quintroon*, and *hexadecaroon*, also describe individuals partially of African descent and have fallen out of fashion. These expressions currently are used when discussing racial identification in

a historical context. In the contemporary United States, "quadroon" is considered an antiquated, and even offensive, expression. Since the 1960s, people of multiracial heritage—according to 2010 U.S. Census data, 2.9 percent of Americans, or more than 9 million people, identify as multiethnic—more commonly have self-identified as biracial, multiracial, multiethnic, or mixed-race. However, in Australia, quadroon continues to refer to individuals who are of one-quarter indigenous Australian heritage.

The term *octoroon* dates back to the 19th century, when its first recorded usage was in Dion Boucicault's melodrama *The Octoroon*, which debuted at the Winter Garden Theater in 1859. *The Octoroon*, in turn, is based on Thomas Mayne Reid's 1856 novel *The Quadroon*.

Quinceañera

In its most simple definition, a *quinceañera* refers to a young woman's 15th birthday party to celebrate her coming of age. The Spanish word *quince* (15) added to *añera* means "the 15-year-old," but the term *quinceañera* refers to both the girl turning 15 and the party associated with this

A girl in a traditional white dress poses with family members during a quinceañera—a traditional ceremony for a girl's 15th birthday celebrated by Latin Americans, Mexicans, and Latinos in the United States. In addition to family and godparents, other celebrants often include 14 female maids and their 14 male escorts. The average cost for a quinceañera is \$5,000.

birthday. Quinceañeras are observed throughout Latin America and in many areas of the United States. Some claim that the quinceañera is traditionally rooted in pre-Columbian cultural practices, with the celebration marking a young woman's entrance into womanhood or achievement of of marrying age. However, the concrete evidence for this is lacking. Contemporary roots for the quinceañera span from European (Spanish influence) to cultural heritage that has simply been "passed down" through generations. Today, the celebration marks an entrance into womanhood. It is not usually accompanied by marriage, but rather marks an opportunity to begin dating and participating in traditional womanly activities like wearing makeup and high heels.

Because they are still seen as a coming-out party these events can become quite costly and extravagant. There are several cultural practices

associated with the event that mark the young girl's entrance into being a woman in her community that may shift because of the family/community geographic location, class status, and/or religious background.

Although a quinceañera is not a religious sacrament, many parties have a strong religious influence and the members of the quinceañera party will attend a mass prior to the celebration. Due to this, as well as the large numbers of people associated with the celebrations, observers sometimes liken quinceañeras to weddings.

The Ritualized *Fiesta*

The party itself is often an elaborate event for which many community members, besides the girl's immediate parents, may help fund the extravagant *fiesta* (party). Today, the average cost for a quinceañera is \$5,000. Families with modest

incomes will save a long time to pay for the event, as well as employ the help of the girl's *padrino* (godfather) and *madrina* (godmother) or other *compadres/comadres* who share in the child care of children in their community, or those who are bonded by the system of *compadrazgo* (becoming coparents to a child, another adult, or a couple).

The young girl will traditionally wear a white dress and will select a color theme for her party. In more recent years, shades of pink, blue, and even black have become popular dress colors. The girl is accompanied by a male escort and usually 14 female maids (*las damas*) and their 14 escorts (*chambelanes*). In the months leading up to the quinceañera these 30 young people will meet to learn the traditional *folklórico* dances associated with the quinceañera, or more contemporary choreography for the staged dance that is a central aspect of the grand entrance into the party.

Other rituals during the party include giving the young woman *la última muñeca* (the last doll) to symbolize the movement from girlhood to womanhood. During the crowning ceremony, the young woman is given a tiara or another expensive piece of jewelry to celebrate her birthday and mark her status as a pure young woman ready to enter adult (chaste) relationships. There is often a ceremonial taking off of her flat shoes and replacement of them with her first pair of heels that can be facilitated by her father, followed by a father-daughter dance. If the young girl does not have a father, some of these duties may be fulfilled by a godfather, an uncle, an older brother, a male cousin, or even her mother.

Cultural Significance

For Chicanas and Chicanos, the quinceañera celebration provides Chicanas a space to perform their cultural identities beyond the constraints of mainstream, dominant U.S. culture. In the United States, by the mid-20th century, young girls from all social classes celebrated their 15th birthdays by having a quinceañera celebration. For young women learning their roles as (heterosexual) women, this event becomes, as Norma Cantú defines it, a powerful Chicana life-cycle ritual. Joined by other events, like *el cambio de vida* (the change of life—menopause) and the *cinquentañera* (the 50-year celebration), these life-cycle rituals aid in the socialization of what it means to be a woman in one's community. Additionally, celebrations such as the quinceañera

become the means through which marginalized cultures find validity in their own lives, and in the case of the quince this is a celebration that specifically honors women.

Contemporary Popular Culture Representations

As Latina/os have become a larger ethnic minority group in the United States, quinceañeras have gained popularity through contemporary cultural representations. There is a Quinceañera Barbie, and quinceañeras have been the subject of episodes of the television shows *Dora the Explorer*, *Wizards of Waverly Place*, and *Austin and Ally*. In 2006, the film *Quinceañera*, with the tag line "Fifteen is not so sweet," gained notoriety at the Sundance Film Festival, and MTV's Tr3s (the bicultural American-owned Latina/o-themed MTV network) has aired several seasons of a reality show titled *Quiero mis quince* (I want my quince). The show, which began airing in 2006, details the planning and execution of young girls' quinceañera celebrations across Latin America, the Caribbean, and the United States. Books that detail the planning for every aspect of the quinceañera are available for young girls and their parents, providing advice on such things as how to book a limousine and hire a photographer or videographer; what kinds of food, music, and dances are important; and tips on invitations and all aspects of the ritual. Countless Internet resources are also available for planning these events.

Qur'an

The Qur'an is the primary religious text of Islam, which according to Islamic tradition was revealed to Muhammad. There are several important differences between the Qur'an, the Tanakh (Old Testament), and the New Testament. The Tanakh and the New Testament both consist of multiple books that were composed independently and assembled at a later date, representing a variety of literary genres. The Qur'an is a single work, divided into 114 chapters called sura, consisting of a series of revelations given over a period of years. Originating as an oral work, it was written down during Muhammad's life and compiled into a single work shortly after his death. Further, while many Jews and Christians consider the Tanakh and the New Testament to be divinely inspired, the Qur'an is considered the literal words of God, transmitted to Muhammad by the angel Gabriel.

Divine Revelation

Islam considers the Qur'an the only uncorrupted record of divine revelation, but earlier books identified in the Qur'an are considered to have been divinely inspired, including the Scrolls of Abraham (considered lost), the Tawrat (the Torah, the five books of the Pentateuch credited to Moses), the Zabur (attributed to King David, and so probably referring to the book of Psalms), and the Injil, the gospel of Jesus, which Muslims believe survives only in piecemeal, in fragments repeated in both canonical (Matthew, Mark, Luke, John) and noncanonical (Peter, James, and others) gospels. The kitab—the holy books of Islam—includes all these books, but only the Qur'an is considered to survive in an uncorrupted form, and thus only the Qur'an represents the actual words of God rather than the work of man.

The Qur'an itself assumes some familiarity with the earlier Jewish and Christian scriptures on the part of the reader and interpolates or summarizes some of their content. Major biblical figures found in the Qur'an include Adam and Eve and their children; Abraham and the other patriarchs; Moses and his brother Aaron; prophets such as Elisha and Jonah; kings of Israel like David, Saul, and Solomon; Jesus and his parents; and John the Baptist. Later Islamic scholars have interpreted some Jewish and Christian scriptural passages

as referring to Muhammad, much as Christian theologians have reinterpreted many Jewish prophecies in a Christian context.

The Qur'an is explicit about the ways in which Islam differs from the other faiths of "People of the Book." Jesus, for instance, is believed to be the product of a virgin birth and is viewed as a prophet, but is neither the Son of God (instead, God caused him to be born to Mary just as he caused Adam to be created from dirt) nor was he resurrected (he was instead miraculously saved before he could be crucified, and "Allah raised him up unto Himself," in the words of the fourth sura). Without a divine Son, there is no Trinity, and indeed belief in Tawhid, God's indivisible Oneness and uniqueness, is the most fundamental tenet of the faith.

Abraham, the patriarch to which Judaism, Christianity, and Islam all trace their origins, is considered to have possessed a true revelation about the nature of God and God's Oneness, but no written version survived, and the oral version of his revelation became corrupted over the generations. The eldest son of Abraham, Ishmael, is the biblical figure to which the Qur'an traces the origin of the Arab people. The Qur'an considers Allah to be the same god as the god of Judaism and Christianity and promises that those Jews and Christians who were righteous and lived before Muhammad's revelation received salvation in the afterlife. These many connections to and commentaries on Judaism and Christianity explain why some of the earliest criticisms of Islam by Christian writers approached Islam not as a heathen religion but as a heretical form of Christianity (one influenced by Arianism, which was similarly nontrinitarian).

According to Islamic tradition, Muhammad received his revelation from Allah, through the angel Gabriel, beginning in 610, at the age of 40. Because the suras of the Qur'an are not arranged chronologically, it is sura 96 that records the words of the first revelation: "Proclaim! in the name of thy Lord and Cherisher, Who created —Created man, out of a clot of congealed blood. Proclaim! and thy Lord is most bountiful. He who taught the pen taught man that which he knew not." The first revelation was delivered in a cave on Mount Hira, near Mecca, where Muhammad had been praying in solitude for weeks. Muhammad

continued to receive revelations for the rest of his life, until his death in 632. According to the traditions of Sunni Islam, he responded to the first revelation with distress, and considered suicide, possibly out of fear that people would believe he was possessed; he received the Qur'an in pieces over the course of his subsequent revelations, and grew stronger in his faith and resolve. According to Shia Islam, he received the Qur'an both all at once and in subsequent revelations, and faced his revelation without fear.

According to the Qur'an, Muhammad was chosen to receive this revelation in order that unbelievers might be warned of a coming punishment that would be visited upon their communities. The Qur'an serves the purpose of

A young girl studying the Qur'an. The Qur'an consists of 114 surahs or chapters, each of which starts with the words "In the name of God, the compassionate, the merciful." Muslims consider the Qur'an to be the word of God.

correcting the corrupted revelations of the books that came before it.

Translations

The first translation of the Qur'an into English was produced by Alexander Ross in 1649, but his was a translation of a translation, using a French text as his source. Englishman George Sale produced the first translation directly from the Arabic in 1734, and a small number of translations were issued by others in England in the 19th century. Not until the 20th century were any English translations produced by Muslims themselves. But the Qur'an was known to many of the intellectual elite in early America (Washington Irving, best known for "The Legend of Sleepy Hollow," published an 1849 biography of Muhammad). Thomas Jefferson purchased a copy of George Sale's translation in 1765, while a law student at the College of William and Mary. He retained it in his library's religion section until selling it to the Library of Congress in 1815 (as part of a large collection of books assisting in the replacement of the library burned by British troops during the War of 1812), and 242 years later, it was used in the 2007 swearing-in ceremony of Keith Ellison, the first Muslim congressman.

Use in Swearing-In Ceremony

Ellison represents Minnesota's 5th district (which includes Minneapolis) and is a member of Minnesota's Democratic Party affiliate, the Democratic-Farmer-Labor Party. Ellison is an African American born in the United States to parents born in the United States. Raised as a Roman Catholic, with a brother who became a Baptist pastor, Ellison was largely nonreligious until converting to Islam as a college student in Detroit. His decision to use the Qur'an in his swearing-in ceremony was greeted with vocal criticism from some, primarily in response to a column by conservative columnist Dennis Prager and the condemnation of Ellison's choice by Congressman Virgil Goode (R-Virginia). Donald Wildmon's American Family Association supported Prager and opposed Ellison's choice.

The controversy over Ellison's choice was preceded by a similar 2005 court case, *ACLU of North Carolina, and Syidah Matteen v. State of North Carolina*. It began when computer analyst

Syidah Mateen, testifying in a hearing, asked to swear on a Qur'an rather than the Bible that was offered. When no Qur'an was available, she took her oath by affirmation, as allowed by law. Subsequently, she attempted to donate a Qur'an for courthouse use, only to have the donation refused and told that an oath sworn on the Qur'an would not be considered a legal oath. The relevant state statute requires the use of "the Holy Scriptures" for administering oaths. The American Civil Liberties Union (ACLU) took up the case when it was clear North Carolina courts were reluctant to rule that such "Holy Scriptures" could include the Qur'an. In January 2007, less than two weeks after Ellison was sworn in, the North Carolina Court of Appeals declined to judge the case's merits but allowed it to go forward. Later in the year, the Superior Court ruled that non-Christians must be allowed to swear on non-Christian religious texts.

In the actual swearing-in of representatives, members of the House take the oath of office en masse, without the use of a Bible or any other text. Such texts are used in individual reenactments after the fact, which serve a ceremonial purpose. Prager and other critics erroneously claimed an unbroken tradition of swearing in on a Bible, when in fact numerous legislators had either used a book other than the Bible or had used no book at all, while even several presidents had eschewed the use of the Bible when taking the presidential oath of office. Nevertheless, criticism of Ellison rested on the implicit claim that the United States was a Christian country, and that Muslims by extension were unwelcome participants in elected office. Goode specifically warned that a lack of stricter immigration restrictions could result in "many more Muslims elected to office and demanding the use of the Qur'an," according to a letter he sent to his constituents.

In language that was typical of 21st-century Islamophobia, other critics questioned Ellison's loyalty to the Constitution and alleged a loyalty to sharia. Much as Catholics had been condemned in the 19th and 20th centuries for the perception that their loyalty must be to the pope rather than to their country, so too was Ellison condemned for the perception that swearing-in on the Qur'an would commit him to uphold sharia law rather than the law of the United States.

Kitman

One of the Islamic concepts cited by critics of Islam in America is that of "kitman," a term originating in Persia (from the Arabic for "secrecy") but referring to passages in the hadith and the Qur'an such as that of Sura 16, which forgives those who profess disbelief in Allah while under duress. Kitman is that profession of disbelief, concealing either one's Muslim beliefs or opposition to authority in times when open opposition or open professing of those beliefs is unsafe. The idea of kitman, of this specific form of deception as one that was not sinful, developed in places where Muslims were persecuted, especially in Communist countries in the 20th century. Critics, however, have used the existence of the concept in Islamic history to paint a picture of "secret Muslims" and of avowed Muslims with secret agendas.

American Islamophobia

American Islamophobia is not endemic to the 21st century, and anti-Muslim and anti-Arab sentiments had previously been inflamed in the 20th century in response to terrorist incidents, conflicts between Israel and Arab states, and the 1970s energy crisis. Non-Muslim Americans had tended to have little contact with the Islamic world; apart from several significant groups that tended to settle in specific parts of the country, immigration from the Middle East had been sparse until late in U.S. history. The association for some Americans between Islam and terrorism was so strong that after the Oklahoma City bombing in 1995, there were numerous incidents of hate crimes committed against Muslim Americans—even though that bombing was committed by white, Christian, native-born American Timothy McVeigh. The September 11, 2001, terrorist attacks and the country's subsequent entrance into two different wars against Muslim countries, combined with an increased fear of terrorism, exacerbated these fears, and a number of hate crimes against Muslims (or victims believed by the attacker to be Muslims) have occurred.

Not all hate crimes are aimed against people or private property. In July 2010, the pastor of Gainesville, Florida's Dove World Outreach Center, Terry Jones, announced a plan to burn 200 Qur'ans on the ninth anniversary of 9/11.

Jones's statements against Islam described it as a violent religion that sought the imposition of sharia law in the United States. The Dove World Outreach Center is an evangelical Christian church with only a few dozen members; Jones had spent most of the previous decade working there part-time, spending the rest of his time overseeing a charismatic church he had founded in Cologne, Germany. Jones was widely condemned, not only in the name of religious tolerance, but also out of concern for reprisal attacks against U.S. troops. Indeed, violent demonstrations against Jones were held in Afghanistan.

Jones appeared to relent, canceling his 2010 plans. Months after the original plan, however, Jones held a mock trial of the Qur'an on March 20, 2011, and at the end of a six-hour performance, a single copy of the Qur'an was burned. Less than two weeks later, demonstrators in Afghanistan, protesting Jones's actions, attacked United Nations staff members and their guards, resulting in several deaths and more injuries.

R

Race

Anthropologists and other social scientists and humanists believe that what is known as race and racial identity is a cultural or social construct. Social scientists often use the terms *cultural* and *social* interchangeably. To anthropologists, “cultural” (culture) is broader and includes shared belief systems and other cultural knowledge. The term *social* focuses more on society, social identities, and social institutions, such as the family and the law.

To say that race is a culturally created construct is not to deny that there is no relationship between humans in a physical sense. Anthropologists talk about physical and genetic differences among the species *Homo sapiens* as human variation and not race. In other words, there are many varieties of human variation, but none of that variation constitutes separate races. For anthropologists, race is about understanding the history of the United States; the establishment of intransient, racialized social hierarchies; and the laws, customs, traditions, and behaviors that perpetuate a racial hierarchy, with European Americans at the top.

Historically, 18th-century European elites classified people in their colonies, including the colonial United States, into a hierarchy of categories that placed northern Europeans at the

top of a pseudo-evolutionary scale. They ranked the darker-skinned people in the colonial United States (Africans and Native Americans) lower on the racialized social hierarchy that developed in the colonies. The plantation political economy and the ownership of land and slaves to work the land became the paramount way in which people in the colonies achieved social and economic status.

A connection between social race and citizenship was established as early as 1790, the year the first U.S. Census was conducted. In accord with the new U.S. Constitution and in keeping with slaveholding, which was then legal, the first census counted each enslaved individual as three-fifths of a person when determining state populations. Native Americans were not even identified in censuses dating from 1790 through 1840. Sixteen U.S. marshals and 650 assistants conducted the first U.S. Census. It took the marshals 18 months to visit colonial households and compile a final tally of 3.9 million people in the new nation, including nearly 700,000 slaves.

If social scientists and biologists claim there is no such thing as biological race, but that it is instead a social construction, why does the modern U.S. Census still ask a question about race? In addition, there are laws at the federal as well as the state level that prevent discrimination on the basis of so-called race, ancestry, and

natural origin. The answer given by officials at the U.S. Office of Management and Budget is that although once used to support discriminatory practices, race data gathered by the U.S. census is now used to help enforce civil rights laws and to collect information to help the government better serve underserved populations.

Social Science

The idea that race, races, and racism are cultural inventions—that is, created historically in the United States to legitimize social inequality between groups with different ancestries, national origins, and histories—helps explain this apparent contradiction.

In this sense, race is very much real as a social and cultural construct. In short, even though human beings are clearly one species and there are no biological races, race as a social construct exists and has real consequences. In today's world, especially in multicultural America, there is a need for people to understand how cultural race operated in the past, operates now, and must change for the better in this pluralistic country. The 2010 Census illustrates this point.

Census Documentation of Social Race

The "Race: Are We So Different?" initiative developed by the American Anthropological Association posits that the concept of race is not real biologically, but that it is very much real as a social and cultural construct. The goal of anthropologists is to make sure that their students and the general public understand how the fluidity of the concept of social race has changed over time and is in the process of changing today as well. For example, there are anthropologists and other scholars who think that the race questions on the 2000 and 2010 U.S. Census forms were cumbersome, inaccurate, and inadequate, especially as they related to capturing the experiences of mixed-heritage people (the fastest-growing identity category in the United States). Kim M. Williams's book *Mark One or More: Civil Rights in Multiracial America* (2006) chronicles the political grassroots movement that resulted in the 2000 Census enabling Americans, for the first time ever, to define themselves as having more than one identity.

Even more troubling for scientists and humanists is the question of who gets to decide what is

included on the census forms and the usefulness of the census data in documenting how people in the United States actually define their identities. Research has documented the fact that people in the United States, especially the Millennial and Gen X generations, identify themselves beyond the stationary, fixed categories contained on the 2000 and 2010 census forms. It is up to the federal government (with help from the American people who perceive and live in a world of differently configured "racial identities") to design new ways of thinking about and talking about "race."

Ken Prewitt, director of the 2000 U.S. Census, has stated his belief that the race questions used on the 2010 census were "broken," especially regarding the question of race and Hispanic ethnicity. While acknowledging the need to collect census data by race and ethnicity in order to shed light on disparities and discrimination based on color, ancestry, or immigrant status, Prewitt noted that this collection should be done more carefully. He argued that if the census form asked the question, "What national origin, ethnicity, tribe, language group, or ancestry do you consider yourself to be?" and then asked respondents to list all of the identities that are important to them, the census would enable respondents to speak for themselves.

According to Prewitt, this change would finally move the census away from the archaic racial hierarchy established in 1790. In addition, Prewitt said it would finally move the nation away from the use of the term *race* itself, allow people to define for themselves who they are, and enable people to claim their multiple identities. Prewitt argued:

This question does not assume that a recently arrived Ethiopian belongs to the same (social) race as 10th-generation descendants of enslaved people from Africa's Gold Coast. It does not put fifth-generation Chinese Americans in the same box as first-generation Vietnamese. It does not count an Argentinean who speaks only English the same way it treats a Mayan immigrant.

Race may be a biological fiction, but that does not mean race does not exist. Race is a social and cultural reality and profoundly impacts

Americans' lives. Most people recognize that race in the United States is real, and most Americans probably experience race as a social (rather than biological) reality. But the idea that race is a human invention, a social construction, and a cultural creation is complex and difficult to communicate. There is particular resistance to the idea that race is only a cultural construct in some quarters, even today. Race seems to be ubiquitous. How could it be a pure invention?

Culture and Classification

What does it mean to say that race is a cultural creation? To understand this, one must understand the concept of culture and how profoundly culture shapes reality. Culture shapes every aspect of human experience. It affects what people hear, smell, taste, feel, and see. It structures the social world and social interactions. The human world is largely a cultural and social invention—but one that is very real. Race, too, is a cultural invention—but it is experientially, emotionally, and cognitively real, deeply internalized in the human psyche.

Race is a culturally and historically specific way of categorizing human beings. Like other human creations, classifications shape how people experience reality. The U.S. system of racial classification has a basic contradiction at its core: reconciling democracy and meritocracy with inequality and stratification.

There are contradictions between American ideology and the reality of class differences. The American system of racial classification emerged partially to resolve contradictions between American political rhetoric and American economic and social reality. These contradictions have existed since the founding of the republic, when “all men are created equal” excluded (besides women) those of African or Native American ancestry, along with the vast majority of nonpropertied Europeans.

But American political rhetoric also was forged in the context of attempts to create a unique American identity, one that contrasted with “old Europe.” America was “destined” to be a “democracy” and a “meritocracy,” unfettered by European notions of class, royalty, and attaining civil rights simply because of one's birth or social status. This is reflected in the language of the U.S. Constitution and Declaration of Independence,

with their emphasis on individualism, freedom (from government constraint, state-imposed religion, and aristocratic-ascribed privilege), and the pursuit of happiness.

Race, Power, and Systems of Inequality

Race is not simply a cultural or psychological phenomenon. It emerged in a context of unequal power relations as an ideology to legitimize the dominance of certain groups. Race, then, is fundamentally part of a system of stratification and inequality. People indoctrinated in American individualism often have difficulty understanding abstract notions of a social system, social stratification, and how one's social position impacts individual experiences and opportunities.

Fluctuations in racial categorization and definitions of “whiteness” reflect demands for population growth set against a backdrop of powerful elites seeking to maintain a system of social stratification and cultural dominance. A race-based system of social classification became a way of maintaining the dominance of elite white groups, politically and socially, while simultaneously recruiting new populations. Race became a central basis for organizing labor and maintaining an economically stratified system, first in the agricultural sector and then in the growing industrial sectors. Racializing the labor force helped mask the pervasive class stratification and structural inequality that have always characterized American life. The American system of racial classification is most accurately viewed as a historically and culturally specific “legitimizing ideology,” a complex and unique way of explaining, justifying, and perpetuating a system of social, economic, and political inequality.

Race Mixture in the United States

In every stage of the United States' development, the mixture of races has taken place. Driven by exploitation, oppression, war, disease, and a search for freedom, many different and often competing groups came together on the shores and farms, in the fields and factories, and in the towns and cities of what would become the United States of America. Unfortunately, the struggle for status, resources, and land has had a profound impact on the intermingling of races. The historical narrative presents a static picture of various groups interacting, but the history of race mixing is, in fact, more fluid and complex because it is littered with laws, attitudes, and practices that are antithetical to the principles of freedom, equality, liberty, and justice.

On one level, race mixing has been so prevalent in the United States that the colonial government of the British colonies, the fledgling government of the United States, and the government of the slaveholding south instituted laws, customs, and practices designed to stop African, native, and white Americans from consorting with one another across racial lines. After the 1860s, the rejoined U.S. government worked equally hard to ensure that whites did not consort with people of Asian, African, Indian, or Hispanic descent. On another level, although race mixing has been a source of conflict, violence, hatred, and pain, the mingling of races provides the rich and diverse elements that have shaped the unique culture of the United States.

Since the earliest colonists landed, race mixing was a result of different races, ethnicities, cultures, and nationalities interacting socially, culturally, economically, and sexually. Given the predominance of men as planters, settlers, soldiers, and servants in the early 17th century, the lack of suitable white females produced the long and sordid history of race mixing in the United States. Punishment, penance, ostracism, legislation, lynching, and even death could not deter people from interacting with people of a different racial group. The practice of race mixing has been prevalent throughout the history of the United States, and it has had a profound impact on the development of multicultural America.

Race Mixing in the Colonial Years

In the newly formed British colony, the first groups to intermingle were whites and Native Americans of various tribal or ethnic affiliations (i.e., Powhatan, Narragansett, Nausets, Wampanoags, and Pequots). Many Native Americans befriended both black and white men and women. In Virginia and Massachusetts, the colonists at Jamestown and the Pilgrims at Plymouth Rock would not have survived without the assistance of indigenous people. Although whites and Native Americans fought over land, they also traded and taught each other aspects of their respective cultures. In many instances, marriages between white men and Native American women were unions designed to bring peace or better trade/economic relations between whites and Native American groups. The most noteworthy of these unions was between Pocahontas and John Rolfe.

The Middle Passage

The Atlantic slave trade played a pivotal role in race mixing among enslaved Africans and white seamen, many who impregnated enslaved African women off the coast of Africa or during the long voyage, known as the Middle Passage, to the New World. These mixed children, born in transit, were the first of the mulatto class of blacks in the United States. These encounters between white men and African women led to the accompanying attitude of entitlement that would set the stage for the continued rape of enslaved African/black women in the United States until slavery ended with the conclusion of the Civil War.

Race Mixing in the Colonies

During the early colonial era of the U.S. colonies, whites, Native Americans, and blacks intermingled freely. In this era, people and status were determined by class (gender was subjugated); the three classes were planters, settlers, and servants. The servant class (which included indentured servants) consisted of both whites and blacks, and men and women, who were bonded for a determined time. The misery of working long and tedious hours, poor nutrition, living in deplorable conditions, and suffering the same brutal punishments while working for the same capricious masters forced men and women to find solace in each other's arms, irrespective of color. The close interactions between red, black, and white were a result of large numbers of white men immigrating to the British colony without a corresponding number of white women. The

number of marriage-eligible white women did not increase until the late 17th century, and it did little to thwart race mixing in the colonies. The die had already been cast. Although there were instances when black men consorted with white women, the majority of unions and/or trysts between black, white, and red involved white men and Native or black women.

In 1630, 11 years after "20 negars" disembarked from a Dutch man-of-war in Jamestown, the first instance of intermingling that created a stir in the colonial government of Virginia involved Hugh Davis's fornicating with a black woman. Ten years later, James Sweet received the punishment of penance for impregnating a black woman to whom he was not married. Ironically, the black woman did not receive penance; instead, she was "whipt" for getting pregnant. When

These people, on their way back from buying supplies near Melrose, Louisiana, in July 1940, were identified by the photographer as "mulattoes" or mixed race. In 1951, miscegenation laws remained on the books in 29 U.S. states; it was not until 2000 before all statutes against interracial marriages and race mixing were removed.

shaming, penance, ostracism, and other forms of religious sanctions failed to keep black, white, and red apart, even whipping could not stem the tide of interracial dalliances that led to the growing number of mixed-heritage peoples.

By the mid-17th century, the situation in the early colonies reached epic proportions. From a legal standpoint, each colony designed legal machinations to impede the mixing of races. Because of their large numbers of free blacks, and with a special emphasis on restricting the intermixture of the bonded and enslaved with whites, Maryland, Virginia, Massachusetts, and South Carolina were the front-runners in implementing repressive measures designed to curtail the intermingling of the races. In 1662, the colonial government made two very important decisions. The first, in Virginia, outlined specific penalties for whites (doubled the fine) if they were found guilty of having sexual relations with blacks. This law was the first of many to drive a wedge between white and black intermingling, while differentiating between black and white. In the same year, Act XII assigned the status held by the child to the mother. Originally, English common law assigned a child's status according to the station of the father.

Although black and white women both were subject to sexual violence, Act XII placed a great deal of emphasis on black women. However, women as the subjects of their masters (irrespective of color or condition—enslaved or indentured) were not free from unwarranted sexual advances. It was virtually impossible to prove one's owner guilty of rape, as such sexual activity was customarily deemed "consensual." The predominance of men in the colonies' burgeoning county court system precluded women's rights to a fair hearing/trial. In many instances, the women were deemed promiscuous. Despite the idea that religious piety and devotion to God should alleviate sexual desires, the clergy played a pivotal role in placing the onus on women, as they routinely charged women with "enticing" men into sin.

Between 1699 and 1715, each of the colonies had statutes that forbade blacks from sexually intermingling with whites. For black males, the penalty for sexual relations with a white woman was death (usually inflicted instantly, without the benefits of due process, and became the precedent

for "mob law"). Black Codes made it virtually impossible for a black man to be alone with a white woman. Also, a number of statutes were enacted to stem the growing incidence of illegitimate children among the servant class of women (irrespective of color) because they were susceptible to the men who held their indenture.

However, the laws were lenient in terms of white males impregnating black or Native women, which led to the development of the diverse hues and shades in blackness. From an economic standpoint, it stands to reason that white men were not "punished" for impregnating black women (many of whom were owned as "property" and/or in their employ). Once the international slave trade was deemed illegal, the influx of enslaved Africans diminished exponentially. The only way to increase the enslaved population was through the "natural" increase of exploiting the reproductive labor of enslaved black women.

Despite efforts to dissuade interracial relationships, Louisiana built an entire social hierarchy on the socially questionable, but sanctioned, custom of race mixing. Under Spanish rule, the legalities of race mixing were honored in the recognized racial classifications of mulatto (which would soon be expanded to include octoroon and quadroon). Even though race mixing created serious tensions concerning the growing color line between free and enslaved, these distinctions would remain, even after Louisiana became a state in 1812.

In some instances, white males sought to protect the offspring of their illicit relationships. In other instances, black women used the heartstrings of their lovers to ensure better lives for their mixed-race offspring. In most instances, the mixed-race offspring did not benefit. Unfortunately, many black women were raped by their owners, overseers, and other white men, all of which added to the growing population of mulattoes, quadroons, and octoroons. A great many of the growing numbers of "unsightly" mixed-race offspring were sold to increase profits, pay off debts, and/or bring peace to the master's household, given the displeasure of a master's wife at the sight of his mixed-race offspring.

Marriage

Marriage has played an enormous role in the formation of the United States. With the specter of

race, marriage (its position as the seedbed of society, given the stability it provides the family and the offspring it produces) becomes an extremely complicated institution. Through the proliferation of legislation, marriage played a significant role in the history of race mixing, especially for African, Asian, Hispanic, Native, and white Americans.

In 1665, Maryland banned interracial marriages, and by 1681 it had set in place an act that singled out the tawdry nature of white women consorting with black men. The subtle change in language reflected the growing disdain among “colony-born” whites for the practice of miscegenation. In 1665, black men and women were off-limits, but within a span of 16 years, black men and white women were the only ones admonished for interracial liaisons. White women were castigated for lewd and lascivious desires, whereas the sexual proclivities of white men went unpunished. Noting the incongruity of these rules, Kathleen Brown asserts, “lawmakers left little doubt that they viewed White unions with Black people as threatening to patriarchal authority, property, and the security of labor.”

By this time, slavery had become a major institution in the colonies, and efforts were made to ensure that interactions between whites and blacks (especially white women and black men) were strictly forbidden. In 1691, the Virginia Assembly addressed the issue of race mixing between blacks, mulattoes, Native Americans, and whites. It passed a provision that expelled any white man or woman from the colony within three months of marrying a black, mulatto, or Native American (provided they were not indentured to anyone at the time of the marriage). If she was not free, a white woman would be penalized if she were to bear a child (the child would be penalized for being born to a white servant mother and a nonwhite man). Also, if she was free, her penalty was 15 pounds (if she could pay); otherwise, the mother was bonded to the Church for five years, and the child for 31 years. If the female was a servant, after completing her bonded service, she would have five years added to her sentence to the Church. Conversely, during western expansion, especially in places like California, Nevada, New Mexico, and Washington, allowances were made for white and Native marriages to be constituted as legal. In the interest of whiteness, people with red, yellow, and, in some

cases, brown skin were allowed (in these western states) to legitimize the offspring of their mixed-race unions through marriage.

Amalgamation and Miscegenation

During the late 17th century through the mid-to late 20th century, much of the impetus for denying race mixing stemmed from notions of “racial purity” that undergirded the doctrine of white supremacy. Property rights, voting rights, and protecting the rights of citizens owe much to efforts aimed at maintaining the idea of racial purity between each of the distinguishable groups of people, based on the visible markers of phenotypical differences.

Fear is a major factor in the proliferation of miscegenation, or “anti-race” mixing legislation and has played a profound role in shaping the attitudes and behaviors of Americans. The United States went through a number of panics during which violence, discrimination, and legislation made newly arrived immigrant groups into economic, social, and political scapegoats. Racial purists feared that the white race would be diluted, polluted, and dumbed down with the influx of immigrants from China, Japan, and eastern Europe. These are a few of the arguments that were constant refrains in the rhetoric of miscegenation. The idea of racial purity was of special import for the expanding group of people of European descent, who would constitute the nomenclature of whites and Americans.

In addition to the miscegenation legislation designed to prohibit interracial relations and marriages, a slightly different approach was the wealth of legislation designed to keep black, white, red, yellow, and brown peoples separated from one another, irrespective of their common class concerns. The resurrection of black, brown, red, and yellow “codes” precipitated a slew of laws that were later challenged in state and federal courts during the 20th century. Slavery, with its hodgepodge of laws, and Jim Crow segregation were both designed to reinforce the hegemony and ideology of white supremacy.

The idea of the United States as a “melting pot,” a place where the “one” comprised many different cultures, began to gain traction as a unifying idea for the country. On one hand, liberals have embraced the idea of cultures melding. On

the other hand, there were white segregationists who vehemently opposed the idea of a colorful American tapestry. Red, black, brown, yellow, and white were the color designations used to identify the corresponding racial categories and legal status of those considered Indian, African, Hispanic, Asian, and “American.” These color classifications also determined who could and could not “mix” in the United States. Given the growing popularity of nativism (the idea that native-born whites were superior to the influx of immigrant groups especially), various immigrant groups were originally ostracized for fear of polluting the purity of the white American race. Eventually, Jewish, eastern European, Irish, Polish, and Italian people were melded into whiteness.

Whites’ Attitudes Toward People of Color

Buoyed by Charles Darwin’s findings, the backlash of white southerners to the advances blacks, and the growing discourse on race mixing in Europe (from nations that had embarked on colonial or imperial projects; that is, England, France, and Germany) and the growing disdain for race mixing led to even stronger prejudicial attitudes in the United States. By the dawning of the 20th century, the literature against race mixing or the intermingling of races was daunting. Miscegenation rallies and numerous treatises, texts, columns, and editorials in the United States’ growing newspaper and magazine industry heralded the dangers of “race mixing.” Academics routinely wrote about the evils of miscegenation, as countless texts were published chronicling the deficiencies in Native, African, and Asian Americans. These efforts were instrumental in ensuring that the “amalgamation of races” would fail and that opposition to miscegenation would rule the U.S. landscape well into the 20th century.

Writers of every ilk wrote about the “changing face” of America. For some, the evils that awaited the nation were too many to ignore. For others, amalgamation signaled both the end of racism’s hold on American society and the divisive discourse of race. In 1900, Charles Chesnutt published a series of articles on “The Future American” that outlined the impediments to the process of amalgamation. According to Chesnutt, the intermingling of “races” would lead to the breakdown of the color line. Conversely, C. B. Davenport

cautioned against racial intermixture, noting that these races of “immigrants” were just as dangerous as white Americans intermingling with blacks. In his humble estimation, “miscegenation commonly spells disharmony—disharmony of physical, mental, and temporal qualities and this means also disharmony with environment.”

Another issue for race purists was the confusion that race mixing caused, as it blurred racial distinctions, undermined the rhetoric of the “natural order” of the separation of the races, and threatened the “color line” in the U.S. racial hierarchy. Questions of identity, citizenship, the “one-drop” rule, and the issue of passing, gave rise to the continued calls against race mixing and the evils they would precipitate. Passing was especially troublesome because people of African ancestry whose color appeared white were allowed to participate (pass) in society as if they were white.

As Jim Crow segregation reintroduced Black Codes into U.S. society, after the 1860s, brown, red, and yellow codes became integral aspects of American culture. Like Black Codes, red, yellow, and brown codes sought to limit the rights and legal protections of each group while dictating the rules of social deference afforded to whites. The Yellow Codes made the internment of Japanese Americans after Pearl Harbor a possibility. The festering legacy of Brown Codes (steeped in the bloody struggles for California and Texas) is evident in the recent construction of a fence along the Mexican–U.S. border. Also, it has given rise to legislation aimed at targeting illegal aliens and questioning the citizenship of Hispanic Americans. The Red Codes of the early colonists and the history of hostilities between Native Americans and whites led to the escalation of hostilities between whites and Native Americans and the proliferation of duplicitous governmental policies, the Removal Act (which led to the forced removal of Native Americans from the eastern United States and the Trail of Tears), civic and civil acts of debasement, violence, overt hostility, the near eradication of Native Americans, and the eventual imprisonment of Native peoples on reservations.

Attitudes against race mixing were not the sole purview of whites. Although resistance movements all formed in response to the debilitating discourse of white supremacy, the damage of discrimination, exploitation, and oppression, a wide

variety of groups agitated for citizenship rights and protections, especially among African and Native Americans. The ideologies of the Nation of Islam, Black Nationalism, the Back to Africa movement, and the Native American movement rest on equally limiting views of race mixing, similar to those of white supremacists.

“Change Gone Come”: Legal Challenges to Miscegenation Legislation

Throughout the history of the United States, race mixing has been a hotly contested idea, and society has only relatively recently begun to ease restrictions on interracial marriages and/or relationships. Irrespective of geography, class status, ostracism, and violence, people of different racial, cultural, and ethnic groups fell in love and pursued marriage, despite the numerous social, economic, financial, and physical obstacles.

Thirteen states (Connecticut, Iowa, Illinois, Kansas, New Hampshire, New Jersey, New York, Minnesota, Washington, Wisconsin, Vermont, Hawai‘i, and Alaska) and the District of Columbia have never regulated interracial marriages or sexual relations, but the last two of these states became part of the Union after 1900. The remaining states of America, in one form or fashion, instituted antimiscegenation laws during their existence. Pennsylvania (1780) would be the first to repeal such legislation, and Massachusetts, Maine, Michigan, New Mexico, Ohio, and Rhode Island would follow, all repealing anti-miscegenation legislation before 1900. All states below the Mason-Dixon line (the line that separated slaveholding states from free states before the Civil War) forbade interracial marriages well into the 20th century.

Until the end of the 20th century, the penalties for violators of anti-miscegenation statutes ranged from expulsion from the state to imprisonment for terms ranging from six months to over two years. Despite the penalties designed to deter interracial marriages, many interracial couples, during the postwar years, challenged the legality of miscegenation legislation (all of which dated back before the late 1800s). By 1951, miscegenation laws remained on the books for 29 states. *Pérez v. Sharp* (1948) was one of the earliest cases that sought to end the restrictions of miscegenation legislation. In California, as in much of the United States, people of Hispanic descent were counted as “white” and

were held to the same standards with respect to marriage. Andrea Pérez (a Hispanic female) and Sylvester Davis (an African American male) sought to marry but were denied because of California’s miscegenation laws.

It seemed that the victory of *Pérez v. Sharp* within California’s Supreme Court would appear hollow, but it led to other cases that challenged the idea of marriage between a white and a person of color, including *Naim v. Naim* (1955, Virginia) and *McLaughlin v. Florida* (1964, Florida). Each case addressed different questions, but the case filed by Mildred Jeter (an African American female) and Richard Loving (a white male), *Loving v. Virginia*, 1967, challenged the laws in Virginia regarding marriage between a black and white American, gaining the attention of the U.S. Supreme Court. Approximately 13 years after the pivotal *Brown v. Board of Education* (1954) case, the Supreme Court’s decision that a state’s right to limit one’s ability to choose a spouse based on color or race was a violation of the Fourteenth Amendment led to the unraveling of miscegenation legislation throughout the United States. As the statutes fell, *Time* magazine heralded the victory with a cover story photo of Peggy Rusk and Guy Smith titled “An Interracial Wedding.”

It would take until 2000 for all statutes against interracial marriages and race mixing finally to be removed. Referendums in South Carolina and Alabama cleaned the slate, but although these referendums passed, in each case, more than one-third of the voting public voted to keep the laws on the books.

What Led to the Change in Attitudes?

Regardless of place of origin, previous economic status, or religious beliefs, each immigrating ethnic group had to acculturate and/or assimilate into American culture. One aspect that facilitated assimilation was the attitudes that newly arrived ethnic groups took toward subordinated groups already in U.S. society. In many instances, ethnic groups that were establishing themselves in the United States tended to interact favorably with African Americans because they were also ostracized and seen as “outsiders.”

The pull to become part of the U.S. body politic prompted many ethnic immigrants to accept

prejudicial attitudes, especially as European ethnic groups began to assimilate into U.S. society and meld into “whiteness.” After the turn of the 20th century, first-generation ethnic immigrants (from Asia, Europe, or Africa) tended to avoid race-mixing arrangements. However, second- and third-generation ethnic immigrants (especially those who were born and raised in the United States or were offspring of native-born ethnic immigrants parents) were less likely to share the prejudices of previous generations.

The civil rights movement prompted many young blacks and whites to work together for the sake of ending segregationist practices. The National Association for the Advancement of Colored People (NAACP), Congress of Racial Equality (CORE), Council of Federated Organizations (COFO), and Student Non-Violent Coordinating Committee (SNCC) all benefited from the participation of whites in their efforts, despite the awkwardness that Black Power precipitated. Freedom Riders, lunch counter demonstrators, voting registration participants, and rights educators were groups in which whites and blacks worked and bled together for the equal rights and protections of all U.S. citizens.

Despite its earlier problems, integration had a marked impact on the growing interactions among previously separated groups of people. The breaking down of racial barriers in employment, housing, education, sports, and the military has increased the interactions among people of different ethnic or racial groups. It took time, but attitudes against different groups began to change as young people interacted in the different venues of U.S. life, especially in the hallways and classrooms of elementary, middle, and high schools; in the classrooms and dorms of colleges; on the fields and courts of their sporting events; and in the barracks and foxholes of the military. Notwithstanding the prevalence of prejudice, the contact from these experiences has worked to soften prejudicial ideas. Similarly, in the past 20 years, images in popular culture (i.e., television, videos, and movies) showing the intermixture of races have led to more lenient attitudes toward race mixing.

Race Mixing in Popular Culture

The first major media to influence attitudes toward race mixing were the burgeoning newspaper and

magazine industries. Pamphlets, tracts, individual presses, and local and regional newspapers contributed articles, recurring columns, editorials, and special features addressing the ills of race mixing in the United States. The issues of mixed-race offspring, race mixing, and the consequences of races intermingling in everyday life were the subjects of many fictional and historical re-creations of the American history and culture: Victor Sejour’s “The Mulatto,” *Life and Times of Frederick Douglass*, Harriet Beecher Stowe’s *Uncle Tom’s Cabin*, Harriet Jacob’s *Incidents in the Life of a Slave Girl*, Mark Twain’s *The Adventures of Huckleberry Finn*, William Wells Brown’s *Clotel*, Charles Chesnut’s *The House Behind the Cedars* and “The Wife of His Youth,” Nella Larsen’s *Quicksand* and *Passing*, Jean Toomer’s *Cane*, Dorothy West’s *The Wedding*, George Schuyler’s *Black No More*, Danzy Senna’s *Caucasia*, and Emily Raboteau’s *The Professor’s Daughter* all address race mixing in some fashion.

In the 20th century, Hollywood took differing approaches to race mixing. Lauded for its cinematic innovations, *The Birth of a Nation* rekindled passions against race mixing, and showed it to be the bane of U.S. society. Films such as *Veiled Aristocrats*, *Pinky*, and *Imitation of Life* (both the 1936 and 1959 versions) led to more recent films giving a more balanced view of race mixing, such as *Guess Who’s Coming to Dinner*, *Guess Who*, *Crash*, and *Our Family Wedding*. Television has been a bit slower to embrace race mixing, in daytime and primetime fare. *Star Trek* only intimated a “mixed race” relationship between Captain Kirk and Lieutenant Uhura, but *The Jeffersons* put the issue of race mixing front and center as the characters Helen and Tom made the first regular primetime interracial couple a reality.

The history of race mixing is ever present in the growing interpenetration of cultures, sounds, and flavors infusing the arts in the United States. Children born of parents from different cultures and/or races have innovated and presented tantalizing taste combinations that are now standard fare on cooking shows and in restaurants. Also, the music scene has benefited from race mixing as neighborhoods and schools blend sights and sounds that have revolutionized American musical genres and broadened their appeal throughout the rest of the world.

Conclusion

Today, interracial and/or interethnic marriages are at an all-time high in the United States. Since 1967, mixed marriages (both interracial and interethnic) have continued to increase, but the largest increase has been in the past 30 years, as antagonisms have subsided, attitudes have changed, and laws are routinely enforced to protect citizens' rights to date and/or marry outside their ethnic or "racial" group. Hope Yen (2012) notes that every twelfth U.S. marriage is mixed. The result of this influx is the growing number of children who are of mixed racial/ethnic heritage.

Since the original census was compiled in 1790, the shift in categories reflects the growing sophistication of census data collection, but more so, it is a result of the impact of race mixing on U.S. society. The recent movement for the recognition of "biracial" designations has heightened the understanding of the long history of race mixing in the United States. Also, it complicates the rhetoric of racism in society as countless people, like President Barack Obama, are asked to choose which aspect of their heritage they will honor as they provide census and other relevant data. The impact of race mixing will continue to be felt in the United States because Hispanics will become the largest "racial" group in the United States, throwing the lexicon of American racism into disarray.

Had the United States not gone through its circuitous history with respect to race mixing, the stage might have been set earlier for a biracial president. With centuries of racial animus/prejudice informing the attitudes and actions of the United States, people considering crossing the taboo threshold of race mixing (via intermarriage or sexual liaisons) have come to consider/weigh the benefits and consequences of such a decision. Today, the consequences are not as severe as they were in 1691, but the persistence of prejudice still makes the future of race mixing in the United States a challenge for those who let "love be their guide."

Race Riots

Riots with an ethnoracial dynamic have been a facet of U.S. history since at least the early 19th century. The causes of these disturbances range from anti-immigration sentiments and religious differences to economic rivalry and denial of opportunity to people of color more generally. The rise of urbanization and the ghettoization of specific racial groups in the United States has historically been a major factor in urban rebellions in the 20th century. The Great Migration (1910–40) of African Americans to the northern section of the country precipitated a conflagration of riots between whites and blacks in the first three decades of the 20th century, as evidenced with the "Red Summer" of 1919 and the Tulsa Riot of 1924 that culminated in the burning of Black Wall Street in Tulsa, Oklahoma. There were hundreds of disturbances in the civil rights era, and the L.A. Riots following the Rodney King verdict in 1992 were likely one of the largest race riots in U.S. history, involving primarily whites, African Americans, and Koreans.

The history of race riots began with ethn racial rivalries between old and new immigrants from Europe. Most scholars agree that the terms *race* and *ethnic* had similar, if not the same, connotations in the 19th century. In fact, Europeans used a variety of racial labels to classify one another by region, religion, class, and color, including such terms as Teutons, Irish-Iberian, and the Jewish race. The old immigrants were primarily white Anglo-Saxon Protestants from Great Britain, constituting the first significant wave of European immigrants to populate North America after 1607 to the early 1800s. There were noticeable hostilities between second-generation immigrants of Anglo-Saxon ancestry, first-generation German immigrants, and the later influx of Irish Catholic immigrants

in the British North American colonies in places such as Pennsylvania and New York as early as the late 17th century. The anti-immigration riots and anti-Catholic riots that took place in the early nineteenth century constitute some of the earliest forms of ethn racial rioting in the United States.

Race Riots and Ethnic Conflict to the Mid-19th Century

There were conflicts between African Americans and whites, as well as attacks against Irish Catholics, and Chinese immigrants, through the 19th century. The racially tinged civilizational conflict between whites and Native Americans has been well documented in U.S. history. Many of the conflagrations between whites, blacks,

A body of a dead black man is displayed on the bed of a truck for other black men to view as they were "captured" and held at the Tulsa Convention Hall, one of the holding places for "Negros" during the Tulsa Race Riot of 1921. Although almost forgotten in American history, this deadly and costly riot began over a black man being accused of sexual assault.

and immigrants took place in major cities, as precipitated in part by global migration, industrialization, and urbanization, such as with the Cincinnati Riots of 1829 that involved rioting against African Americans. The Charlestown, Massachusetts, Anti-Catholic Riot revealed a growing hostility between the old and new immigrants. In the 1830s, public conflicts between abolitionists and anti-abolitionists also became more intensely racial. This period was marked by both anti-immigrant and anti-Catholic violence, particularly at mid-century, during the height of immigration. The Massachusetts Convent Burning (1834) and the Five Points Riot in New York (1835) are two major incidents that marked the period. In 1855, “Bloody Monday” occurred in Louisville, Kentucky, involving anti-German rioting. The San Francisco Vigilance Movements between 1851 and 1856 involved systematic attacks against the Irish.

The Second Great Awakening of the 1830s helped facilitate an increased public awareness of the call for the abolition of slavery. This in turn led to the politicization of slavery as both a moral and social reform issue with the creation of the Liberty Party and the *Liberator*. The conflicts between abolitionist and anti-abolitionists was racial in that many liberal-minded whites such as Henry Lloyd Garrison and John Brown aligned themselves with black abolitionists such as Frederick Douglass and Sojourner Truth against white anti-abolitionists. The adherents of abolitionism and anti-abolitionism were both at times willing to use violence to get their point across.

Race Riots in the Civil War and Reconstruction Era

The decade of the 1850s has often been described by historians as the “turbulent 1850s” because there was a series of racially charged incidents that helped increase the chance of a war between the states. Two major incidents of the 1850s that helped spark the Civil War are the race war at “Bleeding Kansas” and John Brown’s Raid at Harpers Ferry. The incident known as “Bleeding Kansas” was instigated by the signing of the Kansas-Nebraska Act, which called for popular sovereignty in the Kansas-Nebraska region. Both abolitionists and anti-abolitionists rushed to the Kansas territory to influence the outcome of

voting on the issue of slavery in the region. John Brown was involved in the violence that ensued in Kansas and later led the violent raid against Harpers Ferry in 1859 that was an attempt to gather arms against the supporters of slavery. The Civil War and Reconstruction period (1861–1877) was characterized by racial conflict and violence in significant ways well beyond the battlefield.

Slavery was the major cause of the Civil War, and conflicts over African American involvement in the military culminated in events such as the New York Draft Riots that took place July 11–13, 1863. In September 1862, President Abraham Lincoln announced that the Emancipation Proclamation would take effect January 1, 1863 meaning that enslaved persons in those states still in rebellion against the Union would be liberated. This was a type of formal recognition that the War Between the States was now being fought to end slavery and henceforth was a “race” war. The public announcement of the Proclamation paralleled years of support for emancipation in places such as New York City. The abolitionists involved in the New York antislavery movement garnered wide support and attracted large crowds in the city. In March of 1863, a more strict draft law was imposed, but African Americans remained exempt from the draft.

The draft riots that ensued after the first draft lottery was held on July 11, 1863, were also fueled by the labor competition between Irish, German, and black workers, as many white immigrants feared that black migrants would take jobs away from whites in the city. The riots that took place starting on July 13, 1863, lasted for six days. The rioters (mostly white immigrant mobs) attacked military and governmental buildings, black businesses, and institutions such as the Colored Orphan Asylum at Fifth Avenue. The riots ended with more than 100 killed and estimated damages of \$1.5 million. Lincoln was forced to send troops from the Army of the Potomac to restore order to the city. The army remained stationed around the city for weeks following the riots. There also were race riots in cities such as Memphis, Tennessee (1866), Opelousas, Louisiana (1868), and Camilla, Georgia (1868), following the war into the Reconstruction period, which was marred by racial violence and unparalleled lynching of African Americans.

The period between the end of the Civil War and the decline of Reconstruction (1865–90) was particularly marred by racial violence. In this period, hundreds of African Americans were made subject to extralegal violence and lynching. A series of anti-black associations that formed at the end of the war and during the Reconstruction period. These organizations, including the Klu Klux Klan (KKK), the Knights of the White Camellia, and the '76ers, used violence against both Reconstruction officials and African Americans. These organizations supported white supremacy, opposed "race mixing," and sought the restoration of white rule in the American south. There were race riots and lynchings in various parts of the country, during the late 19th century, including such places as Mississippi, Denver, and South Carolina. The records on lynching compiled by Ida B. Wells and the National Association for the Advancement of Colored People (NAACP) more generally indicate that thousands of African Americans were lynched between the late 19th century and the emergence of the modern civil rights movement in the 1950s.

In this period between the war and the end of Reconstruction, there was continued strife between immigrants and anti-immigrant factions, such as with the Ward Island Riot of 1868 and the Orange Riots (1870–71). The Ward Island Riot involved conflicts between interned German and Irish immigrants following an altercation between two internees and resulted in the wounding of 30 men and the arrest of 60. The Orange Riots involved Irish Catholics and Irish Protestants in New York City. There was an anti-Chinese riot in Los Angeles in 1871, and the Sherman Cola Riot of 1871, involved Welsh miners against Irish and German American miners. The politics of Reconstruction led to several violent outbursts between whites and African Americans in such places as Colfax, Louisiana (1873), and Yazoo City Mississippi (1875). There was also continued egregious violence against Native Americans on the Great Plains, as evidenced with the massacre at Wounded Knee (1890) following the Reconstruction period.

Race Riots In the Jim Crow Era

Segregation laws in U.S. history are often referred to as "Jim Crow" laws. Segregation constitutes a policy of physically separating socially designated

"races" in residential, educational, recreational, and public facilities. Segregation may be defined as either *de jure*, codified in legal proclamations, or *de facto*, defined as segregation in fact despite the absence of legal statutes. The phrase *Jim Crow* originated in the 1830s and is believed to have been first associated with the minstrel show performances of Thomas "Daddy" Rice. Rice (a white American) blackened his face with burnt cork and danced a jig while singing the tune "Jump Jim Crow" in an attempt to satirically emulate what he perceived to be black culture. By the 1850s, the Jim Crow character created by Rice had become a main feature in the 19th-century minstrel show while the term *Jim Crow* became utilized by writers in the late 19th century to describe the new legal system that emerged after Reconstruction.

The restoration of white home rule to the American south occurred between the years marked by the signing of the Compromise of 1877 and the Supreme Court decision in *Plessy v. Ferguson* (1896). The major feature of the Compromise of 1877 was that military Reconstruction of the south came to an end, providing for the return of white southern self-rule of the former Reconstruction governments. The Supreme Court decision in *Plessy* mandated that separate but equal public facilities were constitutional, allowing southern states and locales to enforce a policy of segregation to maintain the separation of the races in nearly every arena of southern social life. The use of violence continued to be a mechanism deployed to ensure that blacks and whites were indeed kept separate. The KKK and white citizen's councils used lynching, beatings, and intimidation to curtail the rights of black citizens across the American south in the Jim Crow era.

In this era, there continued to be ethnoracial conflict involving blacks, Irish Catholic immigrants, Italian immigrants, and various other ethnoracial groups. African American writer James Weldon Johnson labeled the 1890s "the terrible 1890s" due to the fact that on average, nearly 100 African Americans were lynched every year for the decade from 1890 to 1900. In New Orleans of 1891, several Italians, who were implicated in the murder of police Chief David Hennessy, were lynched. There were race riots in Omaha, Nebraska, and a serious battle between Irish and Italians in Buffalo, New

Riot police in Toledo, Ohio, prepare to move against protesters in October 2005. The Toledo Riot took place when a neo-Nazi organization planned a march to protest African American gang activity in Toledo.

York, in 1894. The years between 1898 and 1900 were particularly violent in that riots occurred in Wilmington, Delaware; Lake City, South Carolina; and Greenwood County, South Carolina, in the year 1898 alone. The first decade of the 20th century included riots in such places as New York City; Little Rock, Arkansas; Springfield, Illinois; and Atlanta. In 1910, there were nationwide riots after the heavyweight championship fight between Jack Johnson and Jim Jeffries that took place in Reno, Nevada, on July 4, 1910.

The Great Migration of African Americans to northern cities after 1910 came with a series of racial conflicts in the second decade of the 20th century. This is evidenced in the significant rioting that took place in East St. Louis; Chester, Pennsylvania; and Houston, Texas, in the year 1917. The Red Summer of 1919 included riots in Washington, D.C.; Chicago, Illinois; Omaha, Nebraska; Charleston, South Carolina; Longview, Texas; Knoxville, Tennessee; and Elaine, Arkansas. The impetus of many

of these riots involved issues related to work, housing, and the rising prosperity of African Americans in metropolitan centers following the first phase of the Great Migration of African Americans to northern cities. The Tulsa Race Riots of 1921 led to the burning of Black Wall Street. The Rosewood Massacre that took place in 1923 in Florida led to the nearly complete demolition of a prosperous all-black section of the town.

Race Riots and Urban Rebellions in the Civil Rights Era

There were more than 500 urban rebellions from 1960 to 1969 in the United States, during the civil rights era. This era was particularly violent in that the assassination of many people associated with the civil rights movement took place in this period. Medgar Evers was slain by white vigilantes on June 12, 1963, and this attack was soon followed by the terrorist attack against the Sixteenth Street Baptist Church in Alabama that led to the death of four little schoolgirls. In 1964, three civil rights workers—James Chaney, Andrew Goodman, and Michael Schwerner—were slaughtered by members of the KKK. This violent decade was marred by both political assassinations and race riots directed against civil rights workers. The causes included police brutality, unfair housing practices, unemployment, and racial discrimination more generally. Two of the most serious rebellions occurred in the Watts section of Los Angeles and in Newark, New Jersey.

Major cities such as Newark were also engulfed by rebellion in the 1960s. Poverty, diminishing purchasing power, and deteriorating living conditions in the Central Ward (where most of the expanding black population resided) led to the conflagration that was known as the Newark riots in 1967. On July 12, 1967, an African American taxi driver named John Smith was beaten by Newark police officers for allegedly resisting arrest. Before the riots that followed the beating of Smith, lasting through July (amid rumors that the police had killed him), then-Mayor Hugh Addonizio had offered to condemn sections of the Central Ward to make way for the building of the University of Medicine and Dentistry. The Newark riots ended with 26 killed, 1,500 wounded, as well as 1,600 arrests and the destruction of an estimated 167 groceries (many of these establishments

never returned to the city). Middle-class communities of all races fled the city in the 1970s and 1980s, along with vital industries leaving behind a city increasingly marred by political corruption, crime, and urban decay. Some 125 cities erupted in racial violence following the assassination of Martin Luther King, Jr., on April 4, 1968.

The Kerner Commission on Civil Disorders

The Kerner Advisory Commission on Civil Disorders was created by President Lyndon B. Johnson following the riots in July 1967. Governor Otto Kerner, Jr., of Illinois was the chair of this commission. This commission was created to investigate civil disorders and disturbances in the interest of providing recommendations for future legislation. The members of the commission included political figures from major metropolitan centers including Mayor John Lindsay of New York, Senator Edward Brooke from Massachusetts, Roy Wilkins of the NAACP, and Police Chief Herbert Turner Jackson of Atlanta, Georgia, among others. The core questions facing the commission, as prompted by President Johnson, included an investigation of causes, parameters of the rioting, and what could be done to prevent such disturbances in the future.

The bipartisan commission came to conclude that racism was at the root of the riots and urban disturbances. It came to conclude that denial of economic opportunity also was at the core of the rioting. The denial of opportunity led to unemployment and poor housing conditions. The commission recommended that new jobs programs, a revamped housing policy, and a stop to de facto segregation in northern metropolitan centers might serve as solutions to the problems that led to the rioting.

Race Riots and Urban Rebellions in the Post-Civil Rights Era

The post-civil rights era did not signify an end to race riots and ethnorracial conflicts. The influx of immigrants from non-Western countries after 1965 has helped reshape the social geography of the United States in significant ways. The United States is increasingly becoming a non-white society. The overwhelming majority of new Americans come from places such as Africa, Latin America, and the Caribbean. These new immigrants have begun to settle in metropolitan centers such as

New York City, Miami, Los Angeles, and Jersey City, New Jersey, among various other locales. The ethnorracial riots that have taken place in the post-civil rights era have primarily taken place in metropolitan centers across the United States. The core issues driving these racial disturbances include police brutality, economic competition, and issues related to the rights of immigrants.

In the 1980s and the 1990s, there was a series of noticeable clashes between various ethnorracial groups. There were riots between Latinos, African Americans, and Haitians in Miami between the years 1980 and 1989. These disturbances were primarily related to concerns about police brutality and economic justice. The riots in Queens and Bensonhurst in New York in 1989 involved African Americans and Italians, and that same year, African Americans clashed with whites in Virginia Beach, Virginia. The killing of an African American child by a Jewish motorist sparked the Crown Heights riots of May 1991, while hostilities between African Americans and Cubans in Miami reached a boiling point once again in the 1990s. The acquittal of several white Los Angeles Police officers for the beating of African American motorist Rodney King culminated in riots from April 29 to May 5 of 1992. These events came to be known as the L.A. riots of 1992, and were considered perhaps among the worst in U.S. history. The beating of a white truck driver, Reginald Denny, who stopped at a traffic light was caught on tape and further fueled the conflagration. This incident was soon followed by the beating of a Guatemalan immigrant by the name of Fidel Lopez. Several businesses owned by Korean Americans were targeted, and this precipitated a strong response from the Korean American community in Los Angeles as a whole.

The ever-changing social geography of the United States has often been illustrated in conflicts between ethnorracial groups. The United States is one of the most ethnically diverse nations in the world. The country continues to experience monumental changes as it becomes less white.

Racism

A widely accepted definition of racism does not exist. Instead, significant historical changes in U.S. race relations over the course of the 20th century, particularly the civil rights movement, have given rise to different conceptions of racism. Although nearly all scholars believe that racism still exists in the United States, there is considerable disagreement about its nature and extent. Some of the definitions of racism are complementary; others are incompatible. Even as the nation becomes increasingly multicultural, the topic of racism remains an important and widely debated concept.

The Historical Context

As early as the 18th century, European philosophers argued for the existence of separate races

based on certain physical differences. Physical anthropologists furthered the notion of racialism in the 19th century. As recently as the mid-20th century, a not insignificant number of well-respected members of the medical and scientific establishment maintained the belief in scientifically discernible, superior and inferior human races. This perspective, called scientific racism, placed non-Europeans between Europeans and primates on the evolutionary scale. At the dawn of the 20th-century civil rights movement, this sentiment still prevailed, as most white Americans believed that blacks and other racial minorities were biologically (i.e., intellectually) inferior to whites, and were therefore not entitled to the same rights and privileges as members of the dominant group. Today, most white Americans no longer openly endorse such beliefs. Exceptions include hate groups such as the Ku Klux Klan, neo-Nazis, and skinheads, who remain committed to the anachronistic tenets of scientific racism.

The civil rights movement was largely successful in discrediting claims that Americans of color were biologically inferior to whites. Prior to that point, the prevailing understanding of racism was one of overt racial prejudice based on the claim of essential biological difference. These purported differences were then used to justify widespread racial oppression, through both law and custom, throughout the United States. Landmark court rulings and civil rights legislation of the 1950s and 1960s finally eradicated overt, state-sanctioned racial apartheid and over time made public expressions of racial prejudice by individuals and groups socially unacceptable. Differing interpretations as to the meaning of these historical changes have caused significant disagreement among scholars. Emergent conceptions of racism in the contemporary period find their origins here.

The Traditional Perspective on Racism

Fifty years of public opinion polls show a significant decline in whites' self-reported racial prejudice. Over a similar period of time, Americans of color have increased their representation in the top half of the income and wealth distributions; they attend elite institutions of higher education in record numbers, sit at the heads of *Fortune* 500 companies, and serve at the highest levels

The November 1979 Iranian hostage crisis precipitated a wave of anti-Iranian sentiment in the United States. Even though most of these racist sentiments have gradually declined over the years, some Iranian immigrants in the United States distance themselves from their nationality and identify themselves instead by their ethnic or religious affiliations.

of elected office. The number of interracial marriages continues to grow as well. Millions of white Americans voted for Barack Obama in the 2008 and 2012 presidential elections.

Scholars who endorse a traditional definition of racism cite these types of examples as incontrovertible evidence of a widespread decline in racism. These traditionalists view racism as solely an individual-level phenomenon. Here, racism is conflated with racial prejudice. That is to say, the nature or character of racism in, say, 1812 or 1912 is essentially the same as in 2012. The major difference is that whereas racism was common and widespread during the earlier periods, it is now rare and for the most part isolated in the southern United States. Those in this camp define racism as an irrational belief concerning the biological inferiority of racial out-group members. Therefore, individuals of any race may espouse racist beliefs. For example, this

perspective suggests that whites and blacks may be racist toward one another.

Since racism is said to reside solely in the realm of individual ideas, thoughts, beliefs, and attitudes, the traditional perspective suggests that the best way to address racism is through education. One must learn that racially prejudicial beliefs are irrational, wrongheaded, and no longer socially acceptable.

Emergent Perspectives on Racism

The social customs and conventions that had stipulated a second-class citizenship for Americans of color, particularly black Americans, abated in the wake of the civil rights movement. Despite being free from the strictures of state-sanctioned racial discrimination in the areas of voting, housing, education, and the labor market, however, most Americans of color still found themselves with grossly unfavorable life chances relative to

white Americans. As a consequence, some scholars began to reexamine the traditional perspective of racism as overt racial prejudice. These individuals developed an understanding of racism that encompasses the interpersonal and the institutional, the overt and the subtle, and the intentional and the unintentional. Also fundamental to those in this second camp is the claim that racism can mutate across different historical periods and sociopolitical contexts.

This highlights a principal difference between traditional and emergent definitions of racism. The latter are more encompassing and structural; the former are more limited and psychological. Most definitions of racism within the emergent perspective tend to be sociological in nature; that is, racism is seen as a structural, group-level phenomenon. As such, racism can be a characteristic of groups, organizations, and institutions as opposed to solely one of individuals.

At the tail end of the civil rights movement, Kwame Ture (formerly known as Stokely Carmichael) and Charles Hamilton published the book *Black Power: The Politics of Liberation* (1967), in which they introduced the term *institutional racism*. Ture and Hamilton argued that overt, interpersonal forms of racism did not sufficiently account for the totality of racial oppression experienced by blacks. Rather, whites' racial prejudice could explain only the micro-level racism borne by blacks. For instance, being a victim of vitriolic racial epithets or racially motivated violence was disturbing and unacceptable, but fundamentally an individual-level phenomenon. While acknowledging the terrorizing nature of this variety of racism, Ture and Hamilton claimed that the life chances of Americans of color were also routinely constrained by laws, policies, and procedures throughout the country. They argued that the dominant interpersonal understanding of racism (that is, racism equated with racial prejudice) needed to be augmented with a more sociological (or macro-level) understanding of whites' use of power within institutional settings (public and private) to ensure that the life chances of all Americans of color (particularly blacks) remained severely limited.

Today, social scientists, as well as other scholars who study race and racism, continue to document institutional policies and practices that result in racially disparate outcomes for people of

color. For example, an organization may have a formal policy or informal practice of hiring the family members and friends of current or past employees. Given the historical and contemporary racial privilege of whites, along with the fact that most Americans' peer groups and intimate relationships are racially endogamous, these policies ensure that a disproportionate number of new hires will be white. Another example of institutional racism is the way in which students of color are significantly more likely than white students to attend schools with fewer resources, less or unqualified teachers, and dilapidated facilities. A final example consists of the large racial disparities in most criminal justice outcomes, such as arrest, conviction, and sentencing. An important component of institutional racism is that it can operate in the absence of overt racial prejudice and discriminatory intent on the part of individuals. The traditional perspective does not acknowledge this type of racism, as its focus is singularly on the conscious racial animus of individuals.

In addition to conceptualizing racism as institutional in nature, scholars working within the emergent perspective have also identified subtle or covert varieties of interpersonal racism. Here it is claimed that many whites still harbor a latent animus toward racial out-group members. However, they cannot express it overtly as such. One can no longer claim that specific racial groups have less innate intellectual ability without being stigmatized as a racist. Therefore, in the post-civil rights era, members of the dominant group communicate their racial beliefs and frustrations in other ways, most notably through claims of cultural inferiority. For example, although most whites do not publicly express and may no longer believe that Americans of color are intellectually inferior to whites, they often believe that these groups have pathological or inferior cultures. Drawing largely on negative racial stereotypes, they perceive nonwhites as responsible for their lower socioeconomic standing in society relative to whites because of their endorsement and/or tolerance of destructive behaviors such as crime, anti-intellectualism, laziness, alcohol and drug abuse, welfare dependency, anger, and sexual promiscuity. These moral and cultural attributions have been directed most strongly toward African Americans, Latinos, and reservation-bound Native Americans. This

practice of espousing negative racial stereotypes is often referred to as cultural racism.

Lastly, the failure of most whites to acknowledge the continuing reality of racism in the post-civil rights era, along with their unwillingness to support policies that would meaningfully improve the life chances of Americans of color, is seen by most scholars in the emergent tradition as a new type of racism. These contemporary definitions of subtle or covert interpersonal racism have been referred to as *laissez-faire*, color-blind, quiet, and symbolic racism.

The Future of the Traditional and Emergent Perspectives

The opportunities of Americans of color to experience their full human potential remain limited in nearly every socially meaningful sphere, from housing to the labor market, from education to the criminal justice system. Most of these disparities can be observed in data from government sources such as the 2010 Census, Federal Bureau of Investigation (FBI) Uniform Crime Reports, and the Departments of Labor, Education, and Housing and Urban Development. Most scholars of race and racism do not attribute all of these racial differences to racism; however, the weight given to the role of racism in producing these racial disparities is strongly dependent on the definition of racism used.

A generational shift is occurring among scholars of race and racism across a variety of disciplines. This may more strongly disrupt traditional conceptions of racism. The extent and durability of any major change in the prevailing understanding of racism toward the more encompassing variety will likely be mitigated by the theoretical and methodological assumptions of some disciplines. Also, beyond the scholarly debates, there is a strong countervailing sympathy among a majority of the general public, elected officials, and the media for the traditional definition of racism as racial prejudice. Whether the claims and empirical evidence in support of nontraditional definitions of racism will resonate with an increasingly racially and ethnically diverse American public is yet to be seen.

Radio

Commercial radio began in 1920 with Pittsburgh's KDKA, the first licensed commercial broadcast station in the United States. These first broadcasts were supported not by advertising or listener donations, but by a related product: newspapers operated radio stations to publicize the paper's brand, while radio manufacturers and department stores operated radio stations to give the public more reason to buy radios. In the early 1920s, radio clubs sprang up on college campuses and through community centers such as the Young Men's Christian Association (YMCA) and other civic groups.

Because most locations for radio clubs were segregated, African Americans formed separate radio clubs, primarily in urban areas. Everett Renfroe was one of the first African Americans in Chicago to get a ham radio license, in 1921, Miles

Hardy was one of the first African Americans in New York to get his license. Hardy founded the Pioneer Club in 1921; this was a group dedicated to teaching black youth about radios and electronics. Within a few years of the advent of commercial radio, there were some African American announcers and engineers working in the industry, although segregation policies narrowed their opportunities. In 1921, Black Swan Records was created, as the first African American record company. Ethel Waters, the first major recording star for Black Swan Records, also became the first African American to entertain live on radio. Jack L. Cooper was, at the time of commercial radio's rise, the only African American radio announcer. His success was widely recognized, despite the racism and segregation of the times, and by the end of the 1920s, he hosted a radio show: *The All Colored Hour*. Cooper's career in radio spanned 30 years.

Early Radio Through the 1940s

Early radio was as diverse in its subject matter as television would later become, including live and recorded music programs, news, comedy, dramas, mysteries, soap operas, and shows adapted from popular comic strips. Like television, radio primarily featured white people. This gradually became less true in music programming, beginning with the prominence of blues and jazz, which were referred to as "race music" until the end of the 1940s. Though so-called race music soon attracted nonblack audiences, jazz and blues programming was an example of radio programming aimed at a specific ethnic market. Throughout the country, there were numerous examples of such programs, including Spanish-language radio programming and foreign-language news and music aimed at recent immigrants. The Rockford, Illinois, Salvation Army produced Temple Toner in 1936, for instance, a Swedish-language program of music and religious content that was broadcast on a local AM station. It ceased broadcasting in 2011.

Ethnic music was often carried on English-language stations as well, and in some areas it was quite mainstream. Polka music, which was introduced by eastern European immigrants, was especially popular in the Milwaukee, Cleveland, Chicago, and Madison, Wisconsin, markets, where

the respective polka scenes were vibrant enough to produce well-known local musicians and distinct regional styles of polka. Although the intended audience was the eastern European immigrants who had grown up with the music, polka soon became strongly associated with the regional identity of these cities. As with jazz and blues, radio broadcasts made it easy for people to discover new forms of music or explore music without needing to attend a live performance—which might have been difficult for rural Americans in sparsely settled communities or prohibited by segregation laws for others. The broadcast of different musical traditions was a significant force in the development of American music in the later 20th-century.

Throughout the 1930s and 1940s, racial humor, as part of an outgrowth from vaudeville traditions, was commonplace. Shows like *The Amos 'n Andy Show*, used stereotypical humor as their main currency. Even so, African American announcers and other radio professionals were eventually represented in the field. Many major cities sold radio advertising blocks to African American businesses in the 1930s, and in 1949, the first African American radio station was founded in Atlanta.

Early radio also served as a political medium. In 1924, the National Association for the Advancement of Colored People (NAACP) broadcast its annual meeting over the radio. By 1947, WDIA in Memphis became the first station to program exclusively for African Americans. This trend was followed in other cities, and by the mid-1950s, there were hundreds of stations with programming targeted exclusively for African Americans. Also, in 1947, San Antonio's KCOR became the first radio station to program exclusively for a Latino audience. Throughout these years, however, minority ownership of radio stations was minimal. The advent of television in 1939 impacted radio. Many radio stations applied for television licenses in the 1940s, and the anticipation of the visual medium impacted the access given to minorities attempting to work in radio.

Most early foreign-language radio programming was offered as a block on a radio station that also broadcast other programming. The first dedicated foreign-language commercial radio station owned and operated by a Mexican American was KCOR, a San Antonio AM station run by Raoul Cortez. Although foreign-language programming has often

focused on news, music, and religious programming, KCOR was a diverse station offering as many types of programs as the English-language stations, including radio dramas the station produced. Once KCOR had demonstrated its profitability, other all-Spanish stations were founded in Texas and elsewhere in the southwest, mostly owned by non-Hispanic entrepreneurs and businesses.

The 1960s and Beyond

The 1960s and 1970s saw a growth in public radio and other educational media. Public radio tended to originate from college campuses, and it did so as various ethnic pride and power movements and the feminist movement flourished on campuses across the United States. As new ethnic minorities immigrated to the United States from cultures that were still more radio dominated, urban ethnic programming gained market power. Talk radio programs with a wide spectrum of political positioning arose nationwide, but minority- and woman-owned stations were few, and as a result, programming decisions largely remained in white male hands.

Although most foreign-language programming never went beyond the regional level and remained aimed at fairly small markets, Spanish-language radio and television had become big enough commercial concerns that a wave of Spanish-language advertising companies developed. Specialized advertising helped bring even more revenue to the sector, contributing to its growth. Hispanic ownership of radio stations remained low, and the predominantly Anglo-owned stations began to develop into conglomerates. Tichenor Media Systems, for instance, owned a large number of Spanish-language stations in Texas. It was later, in 1997, merged with the Heftel Broadcasting Corporation, and then purchased by Univision in 2003. Univision had begun as the Spanish International Network, the United States' first non-English-language television network, founded by Emilio Nicolas, Sr., the son-in-law of KCOR's Raoul Cortez. Meanwhile, in 1978, the Federal Communications Commission (FCC) made a commitment to increase minority ownership of broadcast media.

In 1990, the Supreme Court's decision in *Metro Broadcasting v. FCC* affirmed that under the 1934 Communications Act, the FCC was obligated to ensure diversity in broadcasting. The decision

came after growing complaints about the diminished decision making power of minorities in the broadcasting world and the formation of several industry and civil rights groups pursuing a change in that area. Nevertheless, by the dawn of the 21st century, minority ownership was at a nadir in both television and radio.

In 2002, the FCC instituted sweeping changes in its media ownership rules, some of which had been prompted by the FCC's stipulation that there was insufficient evidence showing that ownership impacted broadcast viewpoint. The FCC was reprimanded for these changes in 2003, in the Third Circuit Court of Appeals *Prometheus v. FCC* decision, which pointed out the FCC's failure to address the overwhelming dominance of white men in media ownership. An attempt to appeal the case to the Supreme Court was unsuccessful.

Despite this admonition, the FCC once again floated the possible elimination of media ownership limits in 2006. An in-depth study of the media consolidation issue titled *Off the Dial* was completed, and the results were discussed widely in 2007, along with criticisms that the FCC had abdicated its responsibility to regulate and support increased diversity of ownership. Various national women's rights and civil rights leaders, along with two FCC member commissioners, denounced the FCC for its failure to address the problem of lack of diversity in minority media owners, particularly in radio. They also demanded that the FCC, at a minimum, halt the media consolidation process.

Off the Dial found a variety of results that indicated that the diversity of radio by 2007 was very limited. The study found that the average local radio market has 16 white male-owned radio stations but only two minority-controlled stations and one female-owned station. It also found that women owned only 6 percent of all full-power radio stations, though they are 51 percent of the population. Similarly, people of color owned 7.7 percent of stations, although they made up 33 percent of the population. Congresswoman Hilda L. Solis of California, the National Organization for Women (NOW), the League of United Latin American Citizens, the Rainbow/PUSH Coalition, the Women's Media Center, and senior fellow at the Center for American Progress and chair of the Media and Telecommunications Task Force at

the Leadership Conference on Civil Rights Mark Lloyd all decried these numbers as contrary to the public interest.

Off the Dial was especially significant because it was the first complete assessment of all licensed commercial radio stations. This set it apart from previous reports from the National Telecommunications and Information Administration (NTIA) and the FCC summaries on these issues. *Off the Dial* was the only study to include the significant numbers of minority and female owners that had been omitted from previous analyses. *Off the Dial* found that there was almost no diversity at the top of radio station management. Only 4.7 percent of radio stations were owned by companies with a female CEO or president, and of those stations not owned by women, only 1 percent had female CEOs or presidents. Similarly,

only 8 percent of radio stations were owned by a company with a CEO or president of color, and of those companies not owned by minorities, less than 1 percent had CEOs or presidents of color.

The study showed that female- and minority-owned stations were more local, more often; this proof of localism was directly aimed at the FCC's reasoning. Minority- and female-owned stations also thrive in less-concentrated markets; as the proposed changes were designed to intensify concentration, it was likely that this condition would further negatively impact women and minorities. The study further found that even in radio markets where minorities composed the majority (23 of the 298 American markets), the number of minority-controlled stations was low. In fact, there were only seven markets in which minorities owned more than one-third of the stations.

African American students in a radio technicians' class at Bethune-Cookman College in Daytona Beach, Florida, in 1943. By the mid-1950s, there were hundreds of U.S. stations with programming targeted exclusively for African Americans. Minorities overwhelmingly prefer minority-controlled radio stations, trusting those stations to understand their concerns.

Off the Dial found that minority owners were more likely to air programming that appealed to minority audiences, even though more dominant formats were higher earners. Minority and female ownership were strongly correlated with a market that aired both conservative and progressive programming (compared to a more narrow conservative focus). This serious media consolidation and resulting market concentration kept women and minorities off the dial, and further moves in that direction would worsen the diversity situation, which was already dire. Eventually, the FCC succeeded in 2010, when the Third Circuit revisited the issues and ruled that the FCC could lift the bans on media consolidation.

Foreign-language programming continues in the 21st century, but outside Spanish-language and Spanish-English bilingual programming, it has dwindled. Of the 833 radio stations offering foreign-language programming (14,619 stations total) in a 2011 survey, only 136 offered non-Spanish programming. The diversity shown by these stations is considerable, with 34 different languages represented by those 136 stations, including Creole, Gaelic, Punjabi, and all of the Romance languages. Programming continues to serve local needs in this respect.

WFAR in Danbury, Connecticut, for instance, airs Portuguese-language programs daily, for the area's long-established Portuguese American community, much of which is bilingual. Despite the general contraction of foreign-language radio, Spanish-language radio has been on the rise in the 21st century, as the Hispanic population of the country grows. In Texas, for instance, the number of Spanish-language radio stations increased from 57 in 1990 to 150 in 2010.

Rage of a Privileged Class, The

Since the founding of the United States, there has been a social class of African Americans who have been regarded as middle to upper class. Entrepreneurs such as Paul Cuffe, a businessman in the late 1700s and early 1800s, would thrive in spite of racial barriers. During the antebellum period before the Civil War, during Reconstruction, and during Jim Crow segregation in America, the African American middle class provided much of the leadership initiative toward the eventual freedom for all members of their community. However, following the end of the civil rights movement, the tension between the individual multicultural self, the somewhat open American society, and corporate institutions would cause some in the African American community to experience a sense of “rage” regarding the fact that material and professional success could not protect them from racism.

Ellis Cose utilizes a framework for critiquing wealth, social mobility, and psychological dispositions of African Americans in his best-selling book *The Rage of a Privileged Class*. Although this framework is limited and has an inadequate conception of racism, it is useful as a device to explore the discontent of upwardly mobile African Americans. The central argument of the book is that a group that had achieved an admirable level of success, as opposed to previous generations of

African Americans, was silently angry about its perceived status in American society.

In *The Rage of a Privileged Class*, Cose followed in this vein, exposing and exploring the frustration that upwardly mobile blacks have with American society. He utilized interviews among the affluent to show that even well-to-do and successful African Americans experienced slights, insults, and biases that left them with frustration and a pessimistic outlook that was the result of historical development, a particular group culture, and an apprehensive view toward contemporary society.

In exploring these themes in the book, it is important to take a brief look at the historical development, organizational culture, contemporary scene, and future implications for the African American middle and upper classes and multiculturalism in America.

Historical Development

C. Vann Woodward noted that although a small African American, entrepreneurial, business-oriented class existed in the northern states prior to the beginning of the Civil War, the largest number of this community lived in the south and, by the 1880s, reflected their white counterparts' ideology of the "gospel of progress and wealth" in the so-called New South. This idea of progress and wealth was also reflected in the dominant ideology of racial uplift promoted by the new African American entrepreneurial/business class from the 1880s to the eve of World War I.

Rayford Logan remarked that the ideology of racial uplift was the notion that more fortunate African Americans were responsible for assisting their less fortunate brethren during a period when the civil and political rights of the African American community were under assault, during the historical period referred to as the Nadir. Although it was a self-help ideology in response to white supremacy, it was limited because without civil rights, the African American community could not protect the "fruits" of its labor; for example, thriving African American communities such as "Black Wall Street" in Tulsa, Oklahoma, were destroyed in acts of racist violence.

However, as Cose noted, following the victories of the civil rights movement, the more socially mobile privileged class of African Americans was

frustrated by the largely symbolic gains made in corporate America. Interview after interview with executives and managers recorded the insights of a generation that was frustrated with how its member were treated at work and, in the case of some, how their status did not protect them from egregious acts of racism.

Organizational Culture and Contemporary Scene

The origins of organizational group culture and the African American socially mobile class community can be traced back to the American Revolution, the founding of the Free African Society precursor of the African Methodist Episcopal church, and the founding of Prince Hall Masonic lodges and other local and national civic organizations, which attracted men and women of an emerging business class. These organizations were influential in the arena of education as a means to bring about changes in civil rights and human relations and to involve their members in social or political action.

However, as Cose remarked in *The Rage of a Privileged Class*, there was relative surprise in the 1990s at the discovery of black middle-class anger, which had grown in size during the post-civil rights era. This anger was the result not of Jim Crow policies but of the perceived glass ceiling and institutional or structural challenges during a time of conservative ascendancy, which was ushered in by the election of President Ronald Reagan and a backlash against liberal programs such as affirmative action.

Y. M. Alex-Assensoh remarked that following the civil rights movement, the African American community underwent a cultural transformation in the last decades of the 20th century. The influx of African and African-descended immigrants from the Western Hemisphere and the Caribbean region introduced a multitude of experiences to the traditional African American category of the U.S. population. For example, Kwame Appiah noted that the experience of colonialism and colonial struggles impacts personal experiences of African immigrants more than the civil rights/Black Power struggles of their African American counterparts. Ellis Cose's interview of John Ogbu, an African immigrant, supports this: ". . . the immigrants did not measure their success or

failure primarily by the standards of white Americans, but by the standards of their homelands.”

Although these success stories were salient, isolated individual victories such as electing an African American president or the existence of African American corporate chief executive officers and government officials does not necessarily imply systemic transformation.

Implications for the Future of Multicultural America

Since the turn of the 21st century, the African American community has been undergoing a change, as implied by the 2010 U.S. Census. For example, since the 2000 census, American citizens have been allowed to pick more than one racial category on their census document, and a small but growing number of African Americans have selected this option. Moreover, the practical reality behind the Barack Obama presidency and the visibly hyped success of a few African Americans is that racial problems still linger, to the point of invisibility of highly successful black Americans. So even though black educational outcomes continue to lag behind whites, subprime lending practices disproportionately affect blacks and other people of color, and prisons are overcrowded with black and brown inmates, the success of a few—especially during an age of austerity—has made such problems more difficult to discuss or redress via policy.

Raisin in the Sun, A

A Raisin in the Sun, the landmark play written by Lorraine Hansberry, opened on Broadway on March 11, 1959. It was Broadway’s first play written by an African American woman and the first directed by an African American. It was also the first play written by a black American to win the Best Play of the Year Award from the New York Drama Critics Circle. The original production ran for more than a year, playing 530 performances. Weaving a universal tale of a family seeking to realize its dreams of social equality, *A Raisin in the Sun* has come to occupy a hallowed space in the African American canon. Hansberry depicts the basic middle-class aspirations of blacks and whites as basically the same, while strongly embracing pan-Africanist and protofeminist ideologies. The title is taken from Langston Hughes’s 1951 poem “Harlem.”

Set in Chicago’s South Side, sometime between World War II and the late 1950s, *A Raisin in the Sun* chronicles the Younger family as they grapple with the receipt and subsequent loss of a \$10,000 insurance check. The close-knit clan—comprising Walter Lee; his stalwart mother, Lena; his patient wife, Ruth; his ambitious sister, Beneatha; and his adolescent son, Travis—shares a stifling, cramped two-bedroom flat. Trapped in a cycle of poverty, dead-end jobs, and missed opportunities, Lena contends that utilizing the windfall to purchase a new home in an all-white neighborhood and pay for medical school for Beneatha are the best ways to ameliorate her family’s quality of life. Conflict ensues when the Youngers disagree about how best to spend the money: on Walter Lee’s ill-conceived scheme to purchase a liquor store or on Beneatha’s unconventional aspiration to become a surgeon. Karl Lindner, a representative from Clybourne Park, the all-white neighborhood where the Youngers plan to move, offers to pay

the family not to move there. Walter Lee claims his place as head of his family when he explains to Lindner that his family is willing to endure racism for its shot at the American Dream.

The general plot was inspired by actual events from Hansberry's childhood in Chicago. Born on May 19, 1930, she was introduced to the poetry of African Americans at an early age, with the works of Countee Cullen, Waring Cuney, and Langston Hughes bearing a special influence. In 1940, when she was only 10, the U.S. Supreme Court heard *Hansberry v. Lee*, in which her father, Carl Augustus Hansberry, contested a restrictive covenant that limited the real estate that African Americans could purchase in Chicago. The family endured violent and dehumanizing treatment at the hands of their neighbors while they inhabited the suburban home in a previously all-white neighborhood.

Bringing *A Raisin in the Sun* to the Stage

Novice producer Philip Rose had a difficult time raising the funds to open a show about a black family, directed by an inexperienced African American director and written by a 29-year-old unknown black woman. However, the play eventually opened to universal acclaim and was one of the first Broadway shows to attract a considerable black audience. The production boasted an accomplished cast—including Sidney Poitier, Ruby Dee, Diana Sands, Claudia McNeil, Lou Gossett, Jr., and Glynn Turman—and was nominated for four Tony Awards in 1960. A screen adaptation, with most of the original stage cast, was produced in 1961, with Hansberry providing the screenplay and Daniel Petrie directing. The film was nominated for two Golden Globe Awards and won the Gary Cooper Award at the Cannes Film Festival that year.

Hansberry's former husband and literary executor, Robert Nemiroff, produced a musical adaptation of the play, which premiered on Broadway on October 18, 1973. *Raisin*, with a score by Judd Woldin and Robert Brittan, was the success of the season, running for 847 performances and winning the Tony Award for Best Musical. The libretto, by Charlotte Zaltzberg and Nemiroff, relies heavily on the play's text, utilizing numerous passages verbatim, as Nemiroff accorded the writers access to Hansberry's unpublished plays, journals, and diaries.

The Legacy of *A Raisin in the Sun*

Other noteworthy productions include a televised version, which aired originally on February 1, 1989, starring Esther Rolle, Danny Glover, and Helen Martin, and the play's only Broadway revival, which opened on April 26, 2004, and ran for 88 performances. That production, as well as the 2008 televised version it spawned, starred Phylicia Rashad, Sean Combs, Audra McDonald, and Sanaa Lathan. It was nominated for four Tony Awards, included Best Revival of a Play, and won Tony Awards for leading and featured actresses Rashad and McDonald.

On February 1, 2010, Bruce Norris's play *Clybourne Park* premiered to critical and commercial acclaim. It explores integration, racial relations, and gentrification in the eponymous neighborhood just prior to and then 50 years after the Youngers move in. The work won a number of honors, including the Laurence Olivier and Tony Awards and the Pulitzer Prize for Drama.

Ramadan

For Muslims throughout the world as well as for the millions of Muslims in the United States, Ramadan is the most important time of the year. Non-Muslim commentaries on Islamic culture often focus on the influence of the religion on

Each day before dawn, Muslims observe a pre-fast meal called suhoor, and at sunset, families observe a fast-breaking meal known as iftar, shown above set out on the floor. These two meals are a traditional part of the Ramadan.

Middle Eastern laws and governments, or the role of Muslim extremists in terrorism, while ignoring the faith's spiritual values that are exemplified in the celebration of Ramadan. The ninth lunar month in the Muslim calendar, Ramadan is the month in which Muslims claim the Prophet Muhammad first received his revelation from Allah, which was recorded in the form of the Qur'an. The rituals and observances held in Ramadan are in remembrance of this event. Observance of Ramadan is one of the Five Pillars of Islam, the basic obligations of all Muslims.

Specifically, Ramadan is observed with a month-long, daylight fast. Although this requires an intense level of commitment, it is a religious observance that like the fasting of Catholics during Lent, is easily accommodated by work and school schedules and so does not require any adjustments in one's public life. On the other hand, in many countries where Muslims are the majority of the population, Ramadan is very

much a part of public life, with restaurants opening before sunrise to accommodate the fasting schedule. Muslims fast from dawn until after sunset each day for the 29 to 30 days of the month. During this time each day, Muslims refrain from eating food, drinking liquids, or engaging in sexual relations. According to the practices of the Muslim faith, there are many rewards for fasting, but these rewards are multiplied during the month of Ramadan. In Muslim countries, work and school hours are usually shortened during Ramadan, both to allow more time for religious observance and to account for the low energy levels of those who are fasting. In the United States, Muslims who do not experience such accommodations may find it difficult to adjust.

As a lunar month, Ramadan does not begin on a consistent day of the 365/366-day solar calendar. Most American Muslim communities follow the lead of the Islamic Society of North America in determining the start and end dates for Ramadan. The observance always begins at sunset. In 2013, for instance, Ramadan was observed from sunset on Monday, July 8, until Wednesday, August 7.

All Muslims are to start fasting during Ramadan after they reach puberty. However, there are exemptions for those who are sick or unhealthy. In addition, there are exemptions for those who are traveling, on their menstrual cycle, ill, suffering from old age, pregnant, or breastfeeding. Although fasting during Ramadan is not compulsory for children, many Islamic children strive to complete as many fasts as possible as practice for later in life.

Although Muslims are expected to fast during the daylight hours of Ramadan, they are allowed to eat before dawn and after dark. During the month-long celebration, practitioners of Islam observe a morning meal before dawn called suhoor. Just before dawn, Muslims stop eating and get ready for the first of the five daily prayers required as another of the Five Pillars. After sundown, Muslims are able to break their fast with another ceremonial meal, known as iftar. Iftar is typically celebrated buffet style, with large numbers of people from the social group. This is a time of fellowship with family, friends, and members of the larger community. After the celebration, practitioners of the faith then stop for the fourth prayer of the day.

In the United States, iftar dinners held by mosques are often open to the public, and many mosques host interfaith events during Ramadan to encourage interfaith fellowship and discussion. Because Ramadan is the period when one's Islamic practices are made the most explicit, it is an opportune time to be open to such discussions, given the questions non-Muslim neighbors, friends, and colleagues may have. Some American non-Muslims observe the fasting of Ramadan in a show of solidarity. This has especially made headlines in the 21st century, when the Internet has made it easy for participants to blog or tweet about their Ramadan experiences, and when there has been a general increased public awareness of Islam. Sometimes these non-Muslim allies express the hope that their support shows that the anti-Muslim sentiment expressed by mosque protesters and others is not universally felt.

Charity and Personal Self-Improvement

Ramadan is also a time of spiritual reflection, self-improvement, and increased devotion to Allah. During the month of Ramadan, Muslims are expected to put more time and effort into their faith. Fasting is supposed to help Muslims to turn away from worldly things. The fast helps Muslims to cleanse the soul. It also teaches them increased self-discipline, self-control, and self-sacrifice.

Islam emphasizes empathy, and Muslims are encouraged to increase their charitable activity during Ramadan as part of spending the month living a more pious life. Since 2009, American Muslims have participated in the National Eid Toy Drive, which collects money and toys for needy Muslim children. The drive was organized by the Baitul Salaam Network in Georgia, an anti-domestic violence group. The All Dulles Area Muslim Society (ADAMS), a large mosque in the Washington, D.C., area, serves meals at homeless shelters every day of Ramadan, funded by collecting money from attendees at its iftar dinners.

It is also common to read the entirety of the Qur'an over the course of the month. Prayer meetings are held in mosques throughout the world, in which sections of the Qur'an are recited so that Muslims can complete the entire book by the end of the month. These recitations usually lead up to Laylat al-Qadr, which is considered the most holy night of the year. Laylat al-Qadr is sometimes

referred to as "the night of power" because Muslims believe that the first revelation of the Qur'an was sent down to Mohammad on Laylat al-Qadr. In Chapter 97:3 of the Qur'an, this night is described as "better than 1,000 months." Eid ul-Fitr, or the festivity of breaking the fast, is the final feast day that marks the end of the holy month of Ramadan.

American Muslims trace their origins to over 80 different countries. In many parts of the country, mosque attendance during Ramadan is an experience that highlights the pluralism of American Islam while also providing reassurance and comfort to recent immigrants and temporary visitors such as international students.

Raza C3smica, La

La Raza C3smica (the Cosmic Race) is a term coined by the late Mexican educator, politician, and philosopher Jos3 Vasconcelos in his eponymous essay published in 1925. A seminal piece of Latin American literature, "La Raza C3smica" highlights the growth and implications of multiculturalism in the Americas and elsewhere. Throughout the essay, Vasconcelos articulates the idea of an impending "fifth race," which would be a mixture of all the other acknowledged races in the world to create a new civilization: Univers3polis.

More a philosophical treatise than a purely scientific study, "La Raza C3smica" suggests that the people of Latin America have a spatial, cultural,

and sacred competency essential to profess, and to teach others about, this future universal era of humanity. In other words, Vasconcelos argues that through generations of interbreeding among what he called the black, Indian, Mongol, and white races would emerge an ultimate race that not only would bear the best traits of its predecessors, but would also be the vanguard of a new civilization. The underlying principle is that the people of the “New World” have the major racial influences of the “Old World” to fully realize the creation of a modern world.

La Raza: Historical Precedence and Modern Controversies

For Vasconcelos, La Raza C3smica would be a normative expression of a unified theory of global ethnic relations. His primary testament is the recognition of the broad social and political challenges of race in the Americas. Yet, the term *La Raza C3smica*, and the abbreviated form La Raza, have come to signal many meanings and various controversial political and politicized affirmations. At issue is that Latin America would be the birthplace of this *Univers3polis* and that the Spanish culture would be the standard-bearer of the new race. This preference ignores various issues of the physical and cultural colonization by the Spanish in the New World and arguably elevates Hispanics above others. Nonetheless, throughout his essay, Vasconcelos challenges the “abhorrent” theories of biological and racial (Aryan) purity by offering an optimistic theory of miscegenation or race-mixing.

The modern usage of the term *La Raza* is also controversial, generally because its literal English translation is “the race.” More specifically, the term is controversial because the phrase is widely used by various groups emanating from the Chicano and Mexican American civil rights movement of the 1950s and 1960s, with varying connotations of separatism and racial superiority. The term *La Raza* has its origins in Vasconcelos’s “La Raza C3smica,” which he originally wrote and published in Spanish. As such, the term is much more dynamic and fluid, with a translation much closer to meaning “the people,” or specifically the Latina/o people of the Americas born of mixed blood (a cosmic people) and not born of so-called racial purity.

Vasconcelos suggests that the term is meant to be inclusive of all races, instead of privileging just one racialized category; his is an argument for racial diversity instead of racial supremacy. Vasconcelos coined La Raza C3smica at a specific historical moment, which further complicates its significance and specifically complicates its interpretations. La Raza C3smica is a product of Mexico (a predominantly mixed-race nation), its historical trajectory (post-Mexican Revolution of 1910–20), and the political aspirations of its author, who later would unsuccessfully run for president of Mexico in 1929 as an “opposition” candidate.

Latina/os as La Raza C3smica

According to the U.S. Census, race is a broad sociopolitical, rather than biological, self-identification data item that takes into account cultural and ancestral characteristics. Respondents can choose one or more races from five categories (white, black or African American, American Indian or Alaska Native, Asian, and Native Hawai’ian or Other Pacific Islander), while also indicating whether they are of Hispanic or Latino ethnicity. The census defines race and ethnicity as separate and distinct identities, with Hispanic or Latino origin asked as a separate question.

Consequently, Hispanics or Latinos can be any part or mixture of the five racial categories. Latina/os are unique compared to other ethnic and racialized subpopulations, primarily because they are included in essentially every racialized subpopulation that society has created. This notion is similar to what Vasconcelos visualized as a future “fifth race” emerging in the Americas. This “race” would be an infinite amalgamation of all the races in the world, one beyond color, to create a new people: La Raza C3smica. Latina/os are not differentiated by perceived biological distinctions, and Latinos in the United States do not all speak the same language. Latina/os also are not a singular national origin group. No matter how one defines Latina/os, demographics show that they are the largest and fastest-growing ethnic subpopulation in the United States, composing more than 15 percent of the total U.S. population, and often challenging imposed racial categorizations.

Raza Unida, Partido de la

El Partido de la Raza Unida (the Raza Union Party or RUP) was founded in Crystal City, Texas, in January 1970, with leaders from the previously successful student organization Mexican American Youth Organization (MAYO). RUP served as a viable third Chicana/o political party to challenge the traditional two-party domination of Texas politics by Democrats and Republicans. RUP held its first political convention in 1972, creating a unique platform and running candidates under its name at the municipal and state levels. It expanded unevenly throughout the southwest and midwest, but by 1978, it had lost momentum and ceased to exist. Women formed a caucus within the party—Mujeres por la Raza.

The League of United Latin American Citizens (LULAC) was founded in Corpus Christi, Texas, in 1929 to combat discrimination. In 1948, Dr. Hector P. Garcia founded the American G.I. Forum (AGIF), also in Corpus Christi, to help veterans receive their benefits after service. PASSO (Political Association of Spanish-Speaking Organizations) grew out of the Viva Kennedy-Viva Johnson clubs of the 1960 election by merging with leaders from LULAC, the Mexican American Political Association (MAPA), and the Community Service Organization (CSO).

It had the goal of becoming a national Latina/o political body but did not succeed outside the state. PASSO experienced limited electoral

success in the city council race in 1963 in Crystal City. Mexican Americans elected five candidates, referred to as "Los Cinco," who served a single term. It was the first all-Mexican American city council and demonstrated the power of ethnic-based voter organizing. PASSO also worked with black organizations in Houston and San Antonio to elect ethnic American politicians.

Student Involvement

After Los Cinco failed to be reelected, MAYO took up the mantle of Texas politics and helped create the Raza Unida Party. MAYO fought educational segregation and discrimination from its inception in 1967. It utilized sit-ins and walkouts, and it engaged many youth not yet of voting age who were concerned about the lack of access to college preparatory classes, racially disparate school discipline, and the lack of Chicana/o role models and curriculum.

The party began when MAYO founders Jose Angel Gutierrez and Mario Compean proposed its establishment at the only national convention of MAYO. In 1970, the newly created political party won 15 city council, mayoral, and school board races in Crystal City. In 1972, RUP branched out, running Ramsey Muniz for governor and Alma Canales for lieutenant governor, along with other candidates for state treasurer, the railroad commission, and the statewide board of education. The party spread to California, Colorado, and Wisconsin.

Muniz ran again in 1974 after receiving 6 percent of the vote in 1972. The party also ran representatives for many districts in the state house of representatives. The platform and campaigns run by Raza Unida candidates emphasized their ethnic roots but often paralleled the Democratic Party in many key issues like education, health care, and transportation. Activism in RUP waned after the 1974 electoral losses and the 1976 arrest of Ramsey Muniz on drug charges. In 1978, RUP ran founder Mario Compean for the Texas governorship. Based on the low number of votes that Compean received, the party lost its state funding, from which it could not recover.

The legacy of the Raza Unida is substantial. RUP demonstrated the power of the Latina/o electorate in a way not even seen in the Viva Kennedy-Viva Johnson clubs. The promotion of

a separate political platform composed of issues concerning the community solidified the need of all future candidates to address Latina/o voters as a unique, identifiable constituency. Many civil and political organizations sprang up in its wake. In 1975, Congressman Edward R. Roybal from California founded the National Association of Latino Elected Officials (NALEO), which hoped to increase the ranks of elected officials through education, voter registration, and lobbying, which would make supportive legislation on Latina/o issues more possible. The Congressional Hispanic Caucus (CHC) was formed in 1976 with Texas congressmen Kiko de la Garza and Henry B. Gonzalez and was modeled after the Congressional Black Caucus to create unity and a voting bloc among Latina/o elected officials.

Current Efforts

RUP also trained numerous community leaders and activists. At the 2012 Democratic National Convention in Charlotte, North Carolina, Julian and Joaquin Castro addressed the delegates and the nation as the current mayor of San Antonio and Texas House Representative from the 125th District, respectively. Julian and Joaquin are the twin sons of Rosie Castro, one of the founders of Raza Unida, who ran unsuccessfully for the San Antonio City Council in 1971 on behalf of the party. Both sons acknowledged that their mother took them to meetings and rallies as young children, which influenced them and shaped their careers. Rosie Castro and her sons' central roles in the 2012 convention that re-nominated the first black president of the United States, Barack Obama, testified to the power of the Raza Unida to shape a Latina/o electorate and transcend both local and ethnic politics to speak to a wider national audience.

Reconstruction

Reconstruction was the period in U.S. history from 1865 to 1877. Following the Civil War, the nation embarked on a concerted effort to rebuild and reform the defeated south politically, socially, and economically. Ultimately, the desired result was a new, readjusted south—one that stood in political accord with the rest of the nation as well as a region that peacefully and meaningfully incorporated the 4 million newly freed slaves into its ranks at all levels.

Ultimately, Reconstruction proved to be just as much a social experiment as it was political. Although all 11 former Confederate states eventually pledged loyalty to the Union and unequivocally embraced the abolition of slavery, achieving the Reconstruction's primary goals was not easy. Widespread racial violence, political corruption, and the eventual neglect of Reconstruction policies by the federal government left much of the work undone.

Today, historians debate the overall effectiveness and success of Reconstruction and its stated aims. The general consensus, however, is that Reconstruction was a failure, particularly since racial animus further embedded itself into southern culture long after Reconstruction. In the subsequent decades, the region as a whole also failed to achieve an adequate economic and political rebirth that produced a groundswell of tangible improvements, especially for southern blacks.

Presidential Reconstruction: Lincoln's Ten Percent Plan (1863–1865)

Though the end of the Civil War marked the beginning of Reconstruction, some scholars insist

that during the early years of the Civil War, President Lincoln possessed the forethought and wisdom to draft plans for eventually reconciling the nation long before the war's outcome was known. In December of 1863, Lincoln issued the Proclamation of Amnesty and Reconstruction. Therein, the president relied primarily on his constitutional powers to grant pardons and reprieves to rebellious Confederates. Using this enumerated constitutional authority, Lincoln planned to offer pardons and amnesty to all southerners except those who had served as high-ranking military and government officials during the war. Lincoln's plan mandated at least 10 percent of a southern state's 1860 population to swear loyalty to the Union before that state could form a new state government and write a new state constitution. Once a Confederate state met Lincoln's rather lenient requirements, it could return to the Union and proceed to rebuild and recover from the war with full federal support. Since he never recognized secession or the formation of the Confederate States of America as legitimate or constitutional, Lincoln envisioned a Reconstruction plan based on forgiveness and not revenge. Lincoln's main priorities were to rehabilitate an injured south and preserve an already fragile Union.

Some in Congress, namely the Radical Republicans, saw Lincoln's Ten Percent Plan as doing little to penalize the rebellious Confederates for their seemingly indefensible actions. In fact, the Radicals refused to recognize the two reconstructed states of Arkansas and Louisiana under Lincoln's plan. Known to many as "Lincoln governments," the two states encountered bitter opposition during their relatively seamless re-entry into the Union. Some Republicans, for example, refused to recognize representatives from the two states, believing that seating those congressmen would cede too much authority to the president over Reconstruction matters. By 1864, the fact that both states were now known to many as "Lincoln governments" only drew the ire of Radical Republicans, who scoffed at Lincoln's outwardly lenient plan.

In July of that year, the Radical Republicans offered their own tougher, more punitive reconstruction program in the form of the Wade-Davis bill. After making its way through Congress, the bill required at least 50 percent of a Confederate

state's voting population to take what was known as the Iron clad Oath. By swearing their loyalty to the Union and maintaining that they had never supported secession or rebellion, southerners could then reclaim their American citizenship. Former Confederate state government officials and highly ranked military officers, however, would be banned from public office once new state constitutions were drafted and new state governments were in place. The Wade-Davis bill also stipulated that each new southern state constitution expressly abolish slavery as a condition for re-entry into the Union. Although the bill passed both houses of Congress, President Lincoln found it unnecessarily harsh. For this reason, the president used the pocket veto to effectively kill the bill.

Johnson's "Restoration" Plan

Shortly after the assassination of President Lincoln on April 14, 1865, Vice President Andrew Johnson ascended to the presidency. Johnson, a southerner whom Lincoln appointed for his loyalty to the Union during the secession crisis and subsequent war, resumed the business of reuniting the nation. On May 29, 1865, Johnson issued the Proclamations of Amnesty and Reconstruction, which required southern states to renounce secession. Johnson's well-known disregard for the south's planter class resonated in the provision that those with property valued at more than \$20,000 would be prohibited from taking the loyalty oath. Instead, these wealthy southerners would have to personally appeal to the president for amnesty, which was issued at Johnson's discretion.

The president's plan also required only 10 percent of a state's voting population to proclaim loyalty before that state could go on to draft a new constitution. Johnson's "Restoration" plan also placed civilians rather than military officials in charge of the new provisional state governments. Most noticeably, Johnson's plan did not do much to protect or provide for freedmen. It also did not provide suffrage rights. On the contrary, Lincoln's plan at least called for limited voting rights for black men of note or those with educations or demonstrated military service.

Under Johnson's plan, all except one of the former Confederate states complied with the president's requirements for readmission into the

Union. It was also under Johnson's plan that the old guard in the south, namely white Democrats, returned to power and began a bitter campaign to terrorize and discriminate against blacks through a series of restrictive laws known as the black codes. These laws varied by state and greatly curtailed blacks' civil rights and economic opportunities, mainly by ensuring black dependence on a system of labor relations that looked similar to slavery.

Northerners and Radical Republicans viewed the south's return to a form of neoslavery as an affront to their own heightened expectations for Reconstruction. They held President Johnson primarily responsible for those immediate failures, especially because they believed his efforts did little to improve the plight of southern blacks. Moreover, the fact that Johnson refused to support an extension of the Freedmen's Bureau bill and other policies aimed at ensuring the emergence of a fully reconstructed south propelled congressional Republicans to search for their own solutions.

For the remainder of his term, President Johnson would vie with Congress over the direction of his Restoration plan for the south. In many instances, Congress would also challenge the president's authority to enact certain policies. The two sides would fight with equal passion to ensure their particular vision for Reconstruction, even if it meant blocking southern representatives from taking their seats in Congress or enduring the drama of an unprecedented impeachment trial for a sitting president.

Congressional Reconstruction

By the election of 1866, tensions between newly formed southern state governments, Congress, and the president were at a high point. Because of their failure to meet all of the Reconstruction requirements set forth by Congress and the president, none of the southern states was allowed to vote in the federal election that year. The Radicals' bold maneuver incensed Johnson and helped increase the Radicals' majority in Congress, effectively placing the Reconstruction agenda in their hands. President Johnson, however, was not pleased. In retaliation, he issued his own series of proclamations that once more demanded that the former Confederate states re-establish their state governments and quickly reintegrate into the Union. Again, Johnson made no overtures to

protect black rights, a move that only placed him deeper in the Radicals' disfavor.

Pushed by the Radical Republicans, Congress in early spring 1867 passed the First Reconstruction Act, which granted a southern state readmission into the Union once it had ratified the Fourteenth Amendment (adopted in 1868) and made guarantees for black voting rights. Congress also divided the south into five military districts, to be controlled by Union commanders. Johnson balked at the legislation and threatened to veto it. When he did in fact veto parts of the Radicals' Reconstruction plans, Congress simply overrode his veto. After a few congressional sessions, more Reconstruction acts managed to escape presidential veto and, eventually, a constitutional protection of black voting rights made its way into the federal constitution in the form of the Fifteenth Amendment (1870). Still, tensions between Congress and the president increased, ultimately resulting in Johnson's impeachment in spring 1868. However, the president was able to avoid conviction and removal from office by only one vote.

The Last Days of Reconstruction

After President Johnson's intensely partisan impeachment trial, his power and authority as chief executive waned. His last days in office were neither productive nor effective, and it was not until Civil War hero Ulysses S. Grant came into office in November 1868 that the business of reconstructing the south fully resumed. Nonetheless, unlike his predecessor, Grant largely deferred to Congress on Reconstruction matters. After some resistance, he appointed military commanders to supervise the five military districts and made strong attempts to enforce both the Fourteenth and Fifteenth Amendments. His administration saw the establishment of the Justice Department and took great strides to safeguard black civil rights throughout the south. Grant's administration also acted decisively to suppress the reign of terror inflicted on southern blacks by the Ku Klux Klan and private citizens. He even signed the Civil Rights Act of 1875, which allowed blacks to gather in public and enjoy a host of public accommodations.

As the election of 1876 loomed, Grant and congressional Republicans turned their attention to other matters of national importance. Reconstruction priorities gradually fell from prominence.

Once the Democratic Party resurged all across the south and the Compromise of 1877 effectively withdrew federal troops from the south, Reconstruction ended. Within a short time, the few gains blacks achieved during Reconstruction were slowly rolled back. Jim Crow was introduced, and the south traveled down a path of long-standing racial discord and violence that lasted well into the middle of the 20th century. Though not enslaved, southern blacks endured years of sharecropping and tenant farming while seeing little to no significant economic gains brought by Reconstruction. Although the so-called Reconstruction Amendments can be credited with embedding the notions of freedom and equality deeper into the nation's consciousness, on the whole, the period bears an altogether less favorable legacy.

Red River War

The Red River War (1874–75) was a U.S. military campaign against the Comanche, Kiowa, Arapaho, and Southern Cheyenne Native American

tribes along the Red River in the Southern Plains states of Texas and Oklahoma. Tribal members angry at the poor conditions on the reservations and wholesale slaughter of buffalo herds joined those bands that had resisted relocation to reservations to raid a nearby post at Adobe Walls. The U.S. Army responded with the Red River War, a campaign that ended Native American resistance in the Southern Plains, destroying their traditional nomadic buffalo-hunting culture in the process.

The growing presence of settlers traveling west through the Southern Plains as well as federal military withdrawal from the region during the Civil War (1861–65) had resulted in conflict between settlers and the Southern Plains tribes. The U.S. government had relocated the Comanche, Kiowa, Arapaho, and Southern Cheyenne to two western Oklahoma reservations under the 1867 Treaty of Medicine Lodge.

The relocated tribes were angered by harsh living conditions on the reservations and the failure of the federal government to furnish promised services

Comanche Chief Quanah Parker in a photograph circa the 1880s or 1890s. The end of the Red River War is usually marked by the surrender of Chief Parker and his band at Fort Sill in June 1875.

and supplies. Tribes were also angered over outside encroachment on reservation land and the buffalo hunting grounds to which they were granted access as well as the widespread destruction of the Plains buffalo herds on which their culture and livelihood centered. As the buffalo herds disappeared and the reservation tribes slipped into poverty and dependence on government rations, many felt that war was the only suitable option left.

Some Native Americans discouraged by poverty and threats to their traditional culture began to leave the reservations and join bands of Native American renegades and raiders who had resisted removal. The resisters united under leaders such as renowned Comanche Chief Quanah Parker and their calls for a war against European Americans to restore their homelands and traditional way of life. A group of approximately 300 Native Americans united to attack a group of close to 30 buffalo hunters at the Adobe Walls frontier post on June 27, 1874. The better-armed hunters were able to withstand the Native American assault, forcing the Native American bands to retreat.

The Native American bands then separated and once again began raiding across the region. Meanwhile, the Adobe Walls incident drove the U.S. Army to take concerted action to end remaining Native American resistance along the Southern Plains. The U.S. Army pursued an overall military strategy of converging several columns of troops entering the area from different directions in order to surround the Native American bands and cut off any avenues of escape. The U.S. troops would then go on the offensive and force surrender. The Native Americans adopted more guerrilla-style tactics and often engaged the U.S. forces in order to divert attention from their villages or from escaping groups of women and children.

General Philip Sheridan was in command of the U.S. Army forces during the Red River War. Colonel Nelson A. Miles, Lieutenant Colonel John W. Davidson, Lieutenant Colonel George P. Buell, Colonel Ranald S. Mackenzie, and Major William R. Price led the columns of U.S. military forces. Notable Native American chiefs who participated included Quanah Parker, Lone Wolf, Satanta, and Big Tree. The U.S. forces had the advantage of superior weapons and generally favorable weather conditions. Although the Native Americans did have access to firearms,

many of them were older models. The Battle of Red River (August 30, 1874), fought between the Sixth U.S. Cavalry and Fifth U.S. Infantry under Colonel Nelson A. Miles and the Southern Cheyenne, was the first battle of the Red River War.

The U.S. Army and Native American resisters fought a series of battles estimated at between 14 and 20 along the headwaters of the Red River in northern Texas, the Texas Panhandle, and western Oklahoma over the next year. Most of these were brief skirmishes between small numbers of combatants, and casualty rates were generally low. Other notable battles included the Battle of Lyman's Wagon Train (September 9–11, 1874), the Battle of Buffalo Wallow (September 12, 1874), the Battle of Sweetwater Creek (September 12, 1874), the Battle of Palo Duro Canyon (September 28, 1874), and the Battle of Round Timber Creek (November 6, 1874).

Final Resistance

The Battle of Palo Duro Canyon played a key role in demoralizing the Native American resisters. The Fourth U.S. Cavalry under Colonel Ranald S. Mackenzie attacked and destroyed a group of Native American villages in the canyon, scattering the Native American people, destroying their supplies, and capturing over 1,400 of their horses. Many of the resisters were forced back onto the reservations by the prospect of looming starvation and defeat as winter approached.

The end of the Red River War is usually marked by the surrender of Comanche Chief Quanah Parker and his band at Fort Sill in June 1875, although isolated pockets of Native American resistance continued into 1876. The Red River War effectively ended Native American resistance to European American settlement, opening the Southern Plains region to settlement and ranching. Their defeat marked the end of the traditional nomadic buffalo-hunting culture of the Southern Plains tribes as they lost their traditional homelands and were largely confined to the Oklahoma reservations.

Refugee Act (1980)

The Refugee Act of 1980 was built upon the Immigration and Nationality Act Amendments of 1965. Its primary goal was to create a systematic, uniform, and unbiased procedure of refugee resettlement. As a result, it repealed discrimination on the basis of national origins and opened doors to refugees from all parts of the world who have played important roles in contributing to America's multiculturalism.

To achieve its goal, the legislation had five objectives regarding refugee resettlement. First, it redefined "refugee" in accordance with the United Nations, 1951 convention's definition. Prior to this legislation, the United States primarily categorized refugees as those fleeing from communist countries and repressive regimes in the Middle East. The adoption of the United Nations' definition in 1980 repealed this discrimination and applied "refugee" to any person who is unable or unwilling to remain in his or her country of nationality because of "well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion." Individuals who have "ordered, incited, assisted or otherwise participated in [such] persecution" are excluded from this definition.

This definition applied to individuals who were already present in the United States under a legal designation known as political asylum, such as Vietnamese refugees and boat people who had arrived before 1980. Moreover, it authorized granting refugee status to people in detention who may be permitted to leave their country if

accepted by other governments, such as in the Cuban political prisoner release program. Second, the Refugee Act of 1980 raised the annual limitation on regular refugee admissions from 17,400 to 50,000 each fiscal year. Third, it provided for an orderly procedure to deal with emergencies if the number of admitted refugees exceeded the regular ceiling. This provision added flexibility to the Immigration and Nationality Act of 1965. Fourth, to ensure congressional control, the act required consultation with the Congress regarding the admission of refugees and particularly the admittance ceiling. Fifth, the act provided monetary assistance, medical benefits, and a wide range of social services to refugees to facilitate the resettlement process.

In addition to these refugee provisions, the act explicitly permitted individuals within the U.S. borders to apply for "asylum" or "restriction on removal" status because of threats to life or freedom. As with refugees, such people could apply for permanent residence status after one year of living in the United States.

Historical Context

Senator Edward Kennedy, following the work left behind by his brother President John F. Kennedy, spearheaded the legislation during the 1970s. In 1981, he publicly advocated the bill as reflecting America's immigrant heritage of welcoming all migrants who contribute to its richness in culture and diversity, new economic vitality, and other American values. The bill captured the attention and concerns of the American public, who witnessed the massive exodus of people from southeast Asia as well as other communist and repressive countries. This was followed the large wave of Vietnamese "boat people" who risked their lives on boats to escape communism.

Although the American public was sympathetic to refugees, it also feared the opening of the "floodgates" to a large and sudden increase in the refugee population. To address this concern, the law established a normal ceiling of 50,000 refugees a year (which is 10 percent of immigration flow to the United States), procedures for controlling emergency cases, and congressional supervision over the admission process. Proponents of the legislation noted that many other developed countries were more generous in their refugee

admission policies than the United States, including Canada, France, and Australia. On September 6, 1979, the bill was unanimously adopted by the Senate. It remained intact until it was signed into law on March 3, 1980, by President Jimmy Carter.

Contemporary Context

In order to achieve the objectives of the Refugee Act of 1980, U.S. refugee resettlement programs have been working closely with key international humanitarian institutions, such as the United Nations High Commission for Refugees, and other countries with similar commitment to refugees. Today, the United States has welcomed more than 3 million refugees from more than 65 countries. In 2010 alone, the United States received more than 73,000 refugees and 20,000 asylum seekers.

Meanwhile, the trajectories of adaptation for refugees who arrived in earlier waves have been mixed. Some groups, such as Cubans, have shown signs of successful integration into the United States and are on their way toward becoming “Americans.” However, other refugee populations, such as Hmong and Cambodians, continue to struggle on the margins of American society. Many refugees—although they may now refer to themselves as Americans or hyphenated Americans—have reestablished ties with coethnic members in other countries and even those in their homelands. Through these transnational efforts, a number of scholars have recategorized the movements as “diasporas” or “refugee diasporas.”

Refugee Relief Act (1953)

President Dwight D. Eisenhower signed the Refugee Relief Act, originally referred to as the Emergency Migration Act, on August 7, 1953. The act was partly his response to the postwar refugee populations from Europe and those fleeing communism in the growing Cold War—especially from Italy, Greece, and the Netherlands—and various groups from the Middle East.

The 1947 Truman Doctrine had defined the post–World War II world as a struggle between two opposing ways of life and different worlds. Those fleeing communist countries were perceived more positively and welcomed as fleeing from oppression into liberty.

The Refugee Relief Act was a broad-based, non-quota refugee law providing for the admission of up to 209,000 refugees to the United States before December 31, 1956. This act earned a place in the history of U.S. immigration policy by setting factors for immigration in such categories as refugees, escapees, and German expellees, rather than by quota. The designation of “escapee” was new to the language of law.

The act provided for admissions of relatives of persons in the United States (family reunification), those with the status as a persecuted person (for race, religion, or personal opinion), those unable to return home to a communist or communist-dominated country, and those who were unable to return to their homes because of natural calamity or military operations.

Shift in Immigration Policy

The Refugee Relief Act was a significant step in immigration policy away from the quota-driven policies prescribed by several key acts. Immigration policy had been set by the National Origins Act of 1924, which established quotas for immigration,

favoring northern Europeans and almost entirely excluding Asians. In 1948, President Harry Truman signed the Displaced Persons Act, providing a quota of 202,000 refugees to be admitted to the United States, which increased to 415,744 by 1950. This act favored ethnic Germans, Baltics, and those with an agricultural background; it effectively discriminated against Jewish survivors of the Holocaust. It was set to expire in 1953.

A third controversial immigration policy was the Immigration and Nationality Act of 1952, also known as the McCarran-Walter Act, which was passed over the veto from Truman. This was considered discriminatory, favoring various racial groups by establishing annual quotas of immigrants, specifically one-sixth of one percent of the 1920 white population (154,657 visas). The majority of quota immigrants came from northern and western Europe.

Humanitarian and Political Goals

The Refugee Relief Act of 1953 set no limit on the number of visas for relatives of refugees. It also provided for the following: Chinese and Arab refugees; those expelled from Germany; Germans and Austrians escaping communists; Italian, Dutch, and Greek refugees and relatives; war orphans; and other Asian refugees. This three-year program admitted almost 190,000 refugees; 30 percent were Italians who had lost their homes in an earthquake, Yugoslavians, and Egyptians.

Public opinion favoring the admission of refugees grew with the increase of the Cold War. In 1953, almost half the Americans polled about refugees favored the admission of 240,000 displaced persons.

The Refugee Relief Act of 1953 thus addressed humanitarian and political goals. A National Security Council memorandum from March 26, 1953, called this act a means “to encourage defection of all Soviet nationals and ‘key’ personnel from the satellite countries” in order to “inflict a psychological blow on Communism” and “material loss to the Soviet Union” by providing a drain of intellectual talent of professionals.

Secretary of State Dulles named Edward Corsi as special assistant for refugee and migration problems. In 1931, President Herbert Hoover had appointed Corsi as federal commissioner of

immigration, and Dulles called him “the best qualified man in the United States” for making sense of the Refugee Relief Act. Corsi had opposed the McCarran-Walter Immigration and Nationalization Act of 1952. Representative Francis Walter, a Democrat from Pennsylvania, accused Corsi of being a communist sympathizer, a McCarthy-era ploy. Corsi was dismissed. He claimed that refugees were investigated too harshly and that the act was hampered by security fears.

The bill was amended to make it difficult for groups of refugees to be admitted, as it required all refugees to undergo a scrupulous security screening, verify their activities for two years prior to application, give evidence of a guaranteed job by a U.S. resident, as well as a home. The act became known as the “Church bill,” because so many religious organizations sponsored refugees. The Refugee Relief Act of 1953 provided legal and infrastructure means of accommodating refugees, a vital part of the story of U.S. refugee and immigration legislation that continues to unfold.

Refugees

“Refugees” refers to individuals who are forced to leave their home countries because of war, conflict, or persecution. The causes for displacement

range from ethnic, religious, and tribal violence to government upheavals and social movements. Refugees are persecuted on the basis of their race, nationality, ethnicity, religion, and membership in a social or political group. Unlike immigrants, refugees do not receive any protection from their government: In most cases, their governments are the persecuting entity. As a result, refugees have a well-founded fear of returning to their home country.

Refugees and immigrants are distinct from one another in this sense: Refugees are forced to move out of their countries for fear of their lives and freedom, whereas immigrants move of their own volition and for opportunity. For these reasons, international laws treat refugees and immigrants distinctly. Generally, the condition of the refugees' country of origin takes time to improve, and as a result, many refugees reside in refugee camps for years, even up to decades. Nations also provide aid to refugees through resettlement and humanitarian aid.

The term *refugee* emerged at the same time as the 1648 Treaty of Westphalia. The treaty assigned populations to new territories and created the concept of a sovereign state. In 1685, the Edict of Fontainebleau outlawed Protestantism in France. As a result, about 200,000 Huguenot Protestants left France, settling in non-Catholic places in Europe, such as the Netherlands and Germany. This was the first historical event of a population fleeing their home country for fear of persecution, and it brought the word *refugee* into the English language.

The United Nations High Commissioner for Refugees (UNHCR) reports that in 2010, there were 264,574 refugees living in the United States. In 2011, an estimated 800,000 people became refugees across international borders, while approximately 4.3 million individuals were displaced because of persecution or conflict.

Refugees in the United States

On March 17, 1980, Congress passed the Refugee Act, which is a commitment to provide refuge to victims of religious, political, ethnic, and other forms of persecution. The law developed the Federal Refugee Resettlement Program to grant the effective resettlement of refugees and to assist them to achieve economic self-sufficiency

A Sudanese refugee staying in a refugee camp in 2010 after her family escaped from the janjaweed in Sudan. Sudanese families such as hers are among recent refugee groups that have been admitted by the United States.

as quickly as possible after arriving in the United States. The law also created the legal status of asylum and provided the framework for resettlement programs across the world by outlining the guidelines for establishing refugee eligibility in the 1951 Convention Relating to the Status of Refugees.

Over the years, the United States has admitted refugees from conflicts, wars, and persecution. Some examples are the Vietnamese who escaped the fallouts of the Vietnam War; the Bosnians and Kosovars who fled their region's civil war and ethnic cleansing; the Rwandans, Burundians, and Congolese who escaped from the extreme

political and ethnic violence of their respective countries; the Sudanese who broke away from the attacks on the minority populations of the Darfur region; the Burmese who were displaced by the military regime's persecution; and Iraqis who worked with the United States during its military tenure in Iraq.

Refugees hail from distinct social and economic backgrounds—some come with no English language skills and little formal education; some come with college or professional degrees; some operated successful businesses in their country of origin; some join their extended family in the United States, while others arrive alone in their new country. Like immigrants, refugees contribute their skills by providing labor and entrepreneurship, stimulating economic growth and service delivery, in addition to promoting diversity and actively participating in society through volunteering and building social capital in their new countries. Albert Einstein, Elie Wiesel, Henry Kissinger, and Madeleine Albright are examples of refugees who came to the United States to start new lives and were extremely successful in their endeavors. Many refugees, after making the difficult transition of starting over, obtain financial and social success.

Regents of the University of California v. Bakke (1978)

Among all judicial decisions concerning affirmative action, *Regents of the University of California v. Bakke* (1978) is especially interesting because both opponents and supporters of affirmative action claim it as their judicial victory. *Bakke* is the landmark U.S. Supreme Court case that required medical school admission of a white applicant while also allowing race to remain as one factor in college admissions. This case affirmed the legality of affirmative action, including admissions quotas, in higher education. However, the court ruled that solely race-based quotas were not constitutional and ordered that the University of California end its dual admissions policies. *Bakke* further clarified that qualified members of the majority could not be automatically excluded from public programs receiving federal assistance. Such exclusion violates Title VI of the Civil Rights Act of 1964. The court, however, was by no means in consensus, with only a 5–4 vote deciding the case. As a sign of further dissent, there were no fewer than six differing opinions offered following Justice Lewis Powell's announcement of the split decision.

Facts of the Case

Allan Bakke, 35 years old and white, applied and was rejected in 1973 and again in 1974 for admission to the University of California Medical School at Davis. The medical school admitted 100 students each year and reserved 16 of those spots for qualified nonwhite students through a special, separate admissions process. Bakke sued in the California courts and ultimately in the U.S. Supreme Court, arguing that his rejection was based solely on his race. Bakke's test scores and GPA were higher than any of the admitted nonwhite students occupying the 16 spots reserved for them in the medical school class. Two issues are at the center of Bakke's cases in both the California and U.S. Supreme Courts. The first is the Equal Protection Clause of the Fourteenth Amendment. The second is Title VI of the Civil Rights Act of 1964, which prohibits exclusion from federally assisted programs on the grounds of race, color, or national origin.

Legal History

In the initial trial court, it was found that the medical school's program constituted a quota and, therefore, violated Fourteenth Amendment equal protection, state constitutional protections, and Title VI of the Civil Rights Act of 1964. The court noted that people applying for the 16 reserved spots were compared only against other minority applicants, and not against the entire applicant pool. This dual admissions policy had the effect of establishing two separate admissions standards—based solely on race. This dualism violated the Equal Protection Clause of the Fourteenth Amendment, which ensures that states provide “equal protection” of their laws to anyone within their jurisdiction. The trial court also banned the University of California Medical School at Davis from considering race during its admissions process. The university appealed, arguing that racial diversity was a compelling interest both for the state and regarding education. The California Supreme Court concurred with the trial court that the special admission program violated Bakke's equal protection. Then the court went one step further and ordered that the medical school admit Bakke. This part of the decision is often viewed as a victory by opponents of affirmative action.

The Supreme Court reviewed this case *in certiorari*. The only two issues considered by the Supreme Court in reviewing the California Supreme Court's case were the Fourteenth Amendment's equal protection issue and Title VI of the Civil Rights Act of 1964. The Supreme Court concurred that Bakke's equal protection and his rights under Title VI had been violated. The order that he be admitted to the medical school was upheld. However, the court overturned the ban on considering race as one part of the admissions process. This part of the U.S. Supreme Court decision is viewed by supporters of affirmative action as a judicial victory.

In his majority opinion, Justice Powell articulated the court's examination of the medical school's dual admissions program:

Racial and ethnic classifications of any sort are inherently suspect and call for the most exacting judicial scrutiny. While the goal of achieving a diverse student body is sufficiently compelling to justify consideration of race in admissions

decisions under some circumstances, petitioner's special admissions program, which forecloses consideration to persons like respondent, is unnecessary to the achievement of this compelling goal, and therefore invalid under the Equal Protection Clause.

Justices William Brennan, Byron White, Thurgood Marshall, and Harry Blackmun articulated the court's position that maintaining race as one admissions factor is necessary to overcome historic underrepresentation of nonwhites in the medical field:

Racial classifications call for strict judicial scrutiny. Nonetheless, the purpose of overcoming substantial, chronic minority underrepresentation in the medical profession is sufficiently important to justify petitioner's remedial use of race. Thus, the judgment below must be reversed in that it prohibits race from being used as a factor in university admissions.

This opinion illustrates the primary challenge inherent in affirmative action programs: remedying historic discrimination without creating a new standard of unintentional discrimination.

Relativism

Relativism is a philosophical concept claiming that there is no absolute truth. Truth is relative—a subjective value dependent upon perception.

Essentially, relativism postulates that the limits of the mind and the conditions under which knowledge can be gained affect knowledge in general. This philosophical framework is not limited to a single doctrine but is instead a myriad of views that shares one common theme: the idea that all forms of experience and even reality itself must be seen as relative to other things. Strands of relativism with this common theme turn up in virtually every area of philosophy. However, relativism has also spilled over into academic disciplines outside philosophy and into American popular culture as well. In fact, relativism plays a central role in America's culture wars.

In his *Philosophical Investigations*, philosopher Ludwig Wittgenstein claimed that we humans can understand and evaluate our own beliefs and behaviors or the beliefs and behaviors of others only within the social, historical, and cultural context out of which those behaviors or beliefs emerged. This philosophical position was taken up by anthropologists. For the discipline of anthropology, relativism is a methodology. Researchers must suspend their own beliefs and their own social, historical, and cultural biases in order to understand the beliefs and behaviors of others within their social, historical, and cultural context. The purpose of this methodology is to avoid what sociologist William Graham Sumner called ethnocentrism. Ethnocentrism involves the application of one's own cultural standards to assess the culture of others—putting one's own group at the center of the universe and evaluating all other groups based on that standard.

It is this kind of relativism—cultural relativism—that is of most importance to those studying multiculturalism. Cultural relativism was a response to the ethnocentrism that existed in the West. The Western tradition promulgates the idea that Western art is the most aesthetically sound, Western values are the most virtuous, and Western beliefs are truth with a capital “T.” According to the *Oxford English Dictionary*, the first use of the term *cultural relativism* was by Alain Locke, a philosopher and social theorist. Locke used the

term in 1924 to describe Robert Lowie's “extreme cultural relativism” in Lowie's 1917 book *Culture and Ethnology*.

Anthropologist Franz Boas introduced the principle of cultural relativism to the discipline of anthropology in his research. Boas first articulated the idea in 1887 when he wrote, “civilization is not something absolute, but . . . is relative, and . . . our ideas and conceptions are true only so far as our civilization goes.” Boas argued that one's own culture mediates perception. This, according to Boas, can limit one's perceptions. What is most interesting about Boas's work on culture is his definition of what culture entails. Boas understood culture to be much broader than one's taste in food, art, music, or social or religious practices. For Boas, culture was “the totality of the mental and physical reactions and activities that characterize the behavior of the individuals composing a social group collectively and individually in relation to their natural environment, to other groups, to members of the group itself, and of each individual to himself.”

Cultural relativism became a common term among anthropologists after the death of Boas in 1942. During the latter half of the 20th century and into the 21st century, cultural relativism was the underlying philosophical principle used to justify multiculturalism. This brand of relativism assumes that the various cultural groups in a given society have different modes of thought and standards of reasoning. Because of this, one can only describe these modes of thought and standards of reasoning and not evaluate the validity of the practices of various cultural groups.

Culture Wars

It is this application of relativism that has ignited the “culture wars” in the United States. For much of the history of the United States, the cultural norms of the dominant group were considered the standard by which all of the other groups were judged. Because of the anthropological methodology of Boas and the work that he and his students had done in cultural anthropology, the cultural norms of the dominant group could no longer be considered the standard. Instead, each culture was to be described in terms of its own modes of thought and standards of reasoning—each culture was to be seen in terms of its own social, historical, and cultural context.

The problem with Boas's methodology is it allows one only to "describe" the modes of thought and the standards of reasoning of a given culture. For much of America's history, the dominant groups were not just describing these other cultures but also evaluating them. If one were only to describe a culture, then one could not make value judgments about the cultural practices of that culture. However, if one is not able to make value judgments about the cultural practices of a given culture, can there be any values? When the values of the dominant culture clash with the values of the minority culture, how can one decide which is the greater value? Some would say that this perceived lack of values leads down a slippery slope to nihilism, where nothing is of value to anyone. Others would say that the peoples of minority cultures must be respected by the people of the dominant culture and that in order to show the proper respect, the dominant culture must be tolerant of the values of the minority cultures.

An example of how culture values can clash with one another is the controversy involving Latina author Sandra Cisneros and the San Antonio Historic and Design Review Commission. In the 1990s, Cisneros bought a 100-year-old house in the King William Historic District of San Antonio. After renovating the house, she decided to paint it bright purple. The San Antonio Historic and Design Review Commission told Cisneros that because the house was a part of the historic neighborhood, she would either have to paint the house an approved color or prove to the commission that the color she chose was historically accurate.

Cisneros claimed that Latinos had lived in and around the neighborhood for 100 years, and although purple might not have been a color that the German Americans who built the mansions in the King William Historic District would have chosen, it was a color that could have been chosen by the Mexican Americans in the Mexican neighborhood where the house had originally stood. The San Antonio Historic and Design Review Commission didn't accept Cisneros's argument. Eventually, the controversy was settled when the San Antonio Historic and Design Review Commission claimed that the paint had faded to lavender and lavender was an approved

color for the house. Cisneros had to make some minor changes to the house but was not forced to repaint it.

Although Cisneros was not forced to repaint her house, the San Antonio Historic and Design Review Commission was also not forced to make a decision about aesthetic value. The dominant group in the neighborhood (upper- to upper-middle-class whites) likely considered the bright purple house to be gauche; however, bright colors are prevalent in the Latino aesthetic. How can one make value judgments about these aesthetics if there are no absolutes or values because of cultural relativism? Does this mean that the rap music of Snoop Dogg can be on an equal footing with the poetry of Byron because there are no objective aesthetic values? Can Native Americans use peyote and Rastafarians smoke marijuana because their cultural and religious practices compel them to do so? Advocates of cultural relativism would say yes.

The detractors of cultural relativism would say that if there can be no absolutes in terms of cultural values, then there is nothing to bring people together as a society. Instead of having a society in which all Americans can live within similar social, historical, and cultural contexts, American society will be splintered into myriad groups of various cultural identities. Arthur Schlesinger, Jr., refers to this as "cultural Balkanization" in his book *The Disuniting of America: Reflections on a Multicultural Society*.

However, some would claim that America is not about one's nobility, social class, race, or ethnicity. America is an idea—an idea promulgated in the Declaration of Independence and the Constitution—and these people feel that as long as Americans believe in the ideas in those founding documents, that is enough of an absolute to hold Americans together as a people.

Religion and Ethnic Diversity

As in other regions of the world, ethnicity and religion have intertwined so closely in the United States that it is often appropriate to speak of synthetic “ethnoreligious” identifications—German-Catholic, Japanese-Buddhist, Indian-Sikh—rather than considering ethnicity and religion as entirely separate categories. On the other hand, ethnic and religious identifications have at times escalated in importance to the minimization of the other: for example, it is possible to distinguish between the independent Polish National Catholic Church, which may have at times prioritized ethnic considerations to a greater degree than did the (also intensely nationalist) canonical Polish Catholic Church. Ethnoreligious identifications have also been closely linked in the United States to processes of migration, both for indigenous peoples (Native Americans) and for so-called immigrants, who, given their broad range of migratory practices (such as permanent settlement, sojourning, cyclical migration), may more simply and aptly be called “migrants.”

Migration has proven to be at once a “theologizing” and “ethnicizing” experience, as new expressions of ethnic and religious identification have emerged in the United States, often in dialectic relationship. Yet, both “de-theologization”—in the form of religious nominalization, disaffiliation, or loss of faith—and “de-ethnicization,” through, for example, processes of assimilation, have characterized the U.S. ethnoreligious experience. In short, ethnicity and religion have intersected and diverged in widely varying patterns in U.S. history: while it is possible to discern broader

ethnoreligious trends and assert useful overarching generalities, it is also critical to consider the idiosyncrasies of particular cases.

Any discussion of ethnicity and religion in U.S. history must take into consideration the complexities and historical development of ethnic and religious classification. For most of U.S. history, hardly anyone used the terms *ethnic* or *ethnicity*, and certainly not in the current sense of a culturally and historically—as opposed to biologically—determined phenomenon: not until the 1950s did “ethnicity” gain terminological currency and begin to achieve widespread usage. Before then, “race” and “nation” provided the preferred nomenclature for individuals and groups, both those that today might be distinguished as “racial,” on the one hand, and as “ethnic,” on the other.

Thus, historical commentators referred to the “Italian,” “Slav,” or “Irish” *racess*, in much the same way as they did to the “Asiatic,” “Negro,” or “Hispanic” *racess*. Until the 1990s, it had been common to assume that, when earlier commentators used the term *race* to refer to those groups and individuals that might today be called “ethnic,” they simply meant “ethnic,” in the modern sense. Yet, revisionist historians and practitioners of “critical whiteness studies” have demonstrated convincingly that “race” often indicated both cultural and biological underpinnings, regardless of whether the term was applied to blacks, Native Americans, Poles, Greeks, or any number of other “groups.”

Given the ambiguous and evolving meanings of ethnicity alongside race and nationality in U.S. history, this article considers “ethnic,” “racial,” and “national” groups and individuals (in the commonplace, contemporary sense of those terms) together, in conjunction with religious experience. This is not to say that the experience of Asians in U.S. history was the same as for blacks or for Poles; it is merely to adopt a definition of “ethnicity” broad enough to encompass a wide range of cultural, social, and historical phenomena.

Similarly, “religion” implies certain ambiguities, stemming from the term’s origins in Western Christian society and development during the Western period of Enlightenment and afterward. Initially referring only to particular phenomena within Christianity, the term was subsequently

applied to other cultural traditions outside Christianity, along with certain presuppositions about what made religion “religion.” In other words, a dichotomy of religion (Christianity) versus paganism or superstition gradually gave way to the classification of many traditions as “religions,” with Christianity first designated as the “superior” religion, and then, even in the later, more egalitarian view of “religions,” with Christianity serving as the benchmark. Thus, religions have been denoted as such by criteria such as tangible institutional affiliation and coherent, consistent systems of belief (as opposed to practice), attended by clear and mutually exclusive boundary demarcation.

Yet many “religions” in the world do not conform so neatly to those criteria, insofar as they may exhibit low levels of institutional affiliation, the emphasis of practice over belief, and fluid, porous boundaries. “Hinduism” was actually initially a colonial British category, referring to a wide array of beliefs and practices on the Indian subcontinent, which were often not mutually exclusive to one another. Historically, Chinese have been able to blend Buddhism with Daoism or other popular “religious” practices without the dissonance that “mixing” religion might cause in the West (imagine, for example, the difficulties associated with identifying as a “Christian Muslim”). Because virtually every religious tradition in the world finds representation in the United States, thanks especially to its major role as a “receiving” migratory region, it is important to keep some of the ambiguities of the term *religion* in mind, for several reasons.

First, American Buddhism and American Judaism, as an example, may exhibit markedly distinct structural features or emphases on belief versus practice. Second, it has often occurred that traditions, which have historically exhibited low levels of institutionalism and exclusivity, have nevertheless taken on more clearly defined institutional forms (for example, a Buddhist “congregation”) and emphasized belief in the U.S. context, in a process sometimes referred to as “de facto congregationalism.” Lastly, the emphasis of some traditions—both Eastern and Western—upon “practices” can often result in the blurring of the religious with the ethnic, such that it may be difficult to distinguish the two.

The Colonial Encounter and the Early Republic

Native Americans, as a widely variegated population, maintained a wide array of religious practices and beliefs, which served as indicators of group distinctiveness. The first Europeans appearing in the New World alternately regarded indigenous peoples as “noble savages” in a type of Garden of Eden or as a racially inferior and superstitious enemy of the colonial enterprise, with the latter view becoming increasingly prominent as Europeans’ demand for land rose and a particular conception of an American nation developed.

The “white man’s burden” entailed the supposed civilization of indigenous peoples, not only in terms of their general cultural practices, but also in the sense of promoting conversion to Christianity. Yet, while this missionary impulse helped justify the harsh exploitations of colonialism, missionaries also acted at times—within limits—to check colonial excesses, including those based upon racial assumptions of the subhumanness of indigenous peoples. As generally happens in colonial processes, both colonizing and colonized populations marked each other as “other” and attributed superiority to themselves based upon distinct criteria. While the possibility for more differentiated views of the other—as “Cherokee,” “Apache,” “Seminole,” “English,” “French,” “Spanish,”—existed, more powerful was the tendency to group all “Indian heathens” and “white Christians” into homogenizing, broadly applied, and mutually exclusive categories.

Like indigenous peoples, however, Europeans settling in America exhibited a wide range of ethnic and religious identifications upon their arrival, primarily thanks to the multiple regions of migratory origin from which they hailed and the legacy of Europe’s Protestant Reformation, the origins of which (ca. 1517) came shortly on the heels of the opening of the Age of Exploration/Expansion (ca. 1492). For some of the earliest predominantly Christian explorers and later settlers, the religious mission of colonizing/settling in America was of no small import; and for some, Christianizing the Americas also meant claiming American regions for the “right kind” of Christianity.

Sir Walter Drake, for example, claimed regions of the East Coast in the name not only of the British Empire but also of Protestantism, against

Spanish and Portuguese Catholic claims, even as the Spanish sought to establish robust Catholic missions in the American southwest. English Puritans, too, saw themselves as founding in the New World a “City on a Hill,” as a shining beacon to illuminate the supposedly religiously degenerate Europe they left behind. English Methodists and Anglicans, Spanish Catholics, Dutch Reformed, Scottish Presbyterians, Lutheran Swedes, German Catholics and Reformed, French Huguenots, and others all comprised the earliest European settlers, who, as ethnically and religiously defined individuals and groups, established varying degrees of cultural and political dominance in specific American regions, accompanied also by varying degrees of religious tolerance and intolerance. At the same time, regional, urban/rural, generational, and other variations in “American” assimilation and religious nominalism served as an important counterbalance to the ethnoreligious features of European settlement. In addition to the large numbers of European Christians who arrived, much smaller numbers of Sephardic Jews (that is, of Spanish and Portuguese background), came to the United States during this period; it was not until the 1880s, however, that larger numbers began to arrive.

The ethnoreligious experience for involuntary migrants to the Americas—namely, enslaved Africans—took on a distinct trajectory in American history, which nevertheless intersected with broader trends. A considerable scholarly debate has emerged surrounding the character and significance of religion among enslaved Africans, the key components of which have been: (1) the degree to which “slave religion” entailed vestigial tribal traditions from Africa and/or the adoption of the hegemonic Christian religiosity of white American society; and (2) the role that religion played in providing a source of support and resistance in the context of enslavement, or alternatively, a mechanism of subjugation and control, wielded by masters. On the first point, most scholars agree that at least some African religious traditions persisted among first-generation slaves and continued to have at least some influence upon subsequent generations. Enslaved Africans (including, it bears mentioning, small numbers of Muslims) exhibited a wide range of distinctive religious practices. Scholars differ widely on their

assessment of the degree to which such traditions persisted.

Clearly, Christianity became the dominant religious tradition of enslaved Africans and their descendants in the United States, but it is difficult to trace which features of American black Christianity can be attributed to the pre-slavery influence, given the lack of documentation and the coincidence of many characteristics of black Christianity, such as various charismatic aspects, with forms of white Christianity—a project made more difficult by the wide range of black Christian traditions that developed. Elements within white society clearly employed Christianity both as justification for enslavement on a racial basis and as a mechanism of social control.

The Bible did not condemn slavery itself and racial supremacists found support in supposedly biblical notions of racial hierarchy. Furthermore, some scholars have argued that black Christianity’s “other-worldly” focus upon future deliverance at the end of the age shifted the focus of slaves, and later, free blacks, away from acting to resist their current subjugation. Yet black churches, by way of providing one of the few opportunities for slaves to gather together, also developed into the primary touchstones of collective black/Negro identity, both during the period of slavery and afterward, as evidenced by the positioning of black churches at the heart of the civil rights movement of the 1960s.

New Migration of the 1880s to the 1924

The age of mass migration to the Americas began in the 1880s, in conjunction with the industrialization of America, the advent of relatively fast and inexpensive steam travel across the Atlantic Ocean, the expansion of railroads in both European and American continents, and numerous other factors. As the American region receiving the largest numbers of new arrivals from previously underrepresented regions of origin, the United States witnessed a dramatic transformation in multicultural dynamics during the period. While many migrants continued to originate from northern and western Europe, for the first time, large numbers of southern and eastern Europeans began to arrive. Broader American society regarded these migrants as “new,” not only based upon region of origin, but also religion and

bioculturally defined ethnicity/race. In various segments of American society, including the press, popular culture, industry, and politics, the new immigrants were regarded as racially “other,” culturally and religiously exotic, and often backward, degenerate, and threatening.

While the Catholic Church had been the largest single denomination in the United States since the 1850s, together the various Protestant denominations far outmeasured Catholics in sheer numbers and social and political influence. They continued to do so even after the 1880s, but the arrival of the southern and eastern European Catholic masses, and, in relatively smaller numbers, Eastern Orthodox Christians, represented, for some, a threat to white Protestant hegemony and even a possible mechanism for foreign political influence in America: Catholics might submit to the will of the pope before that of the American government, so the thinking went, while adherents of Russian Orthodoxy might favor the prerogatives of the tsar. Nativist, anti-immigrant responses to perceived threats varied and issued from various sources, including media, political parties, legislation, and union policies.

While “off-white” or “provisionally white” non-Protestants encountered various forms of socioeconomic marginalization, it is also true that they could eventually assimilate into dominant white culture in a manner and at a rate that others—such as migrants from Africa, Asia, and Latin America—could not. Indeed, part of the “whitening” of southern and eastern Europeans, as well as of earlier migrants such as the Irish, entailed defining themselves against those groups who were prevented from assimilating. With the advent of the Great Migration of blacks from the American south to the north in the 1910s, economic competition between blacks and “white ethnics” produced some of the more violent racial conflicts in U.S. history (for example, the Chicago race riots), and southern and eastern European migrants and their descendants often exhibited especially strong forms of antiblack racism. Still, it must be noted that migrant sources issued some of the strongest (if not the most influential, given their limited audiences) critiques of American racial dynamics; U.S.-published Rusyn/Ukrainian Greek Catholic newspapers like *Svoboda*, for example, cited the lynching of blacks—alongside

the reporting of bloody massacres of industrial migrant laborers—as evidence of the hypocrisy of “free America.”

It is critical to avoid projecting the ultimate assimilation of white ethnics into white American society—perhaps by the 1950s—to earlier periods; furthermore, that absence of assimilation was a major “internal issue” within non-Protestant religious organizations, as well. As the largest centralized denomination, American Catholicism especially encountered major challenges with its increasingly variegated ethnic constituency. The Irish had by the 1880s wrested dominance within American Catholicism from the earlier predominant English and French, in terms of sheer numbers as well as representation in the lower and higher clergy. German Catholics had tested that dominance in the 1860s and 1870s by asserting the rights of distinctively German Catholicism. The battle with Cahenslyism (named after Peter Cahensly, an advocate of German Catholics) set the precedent for the American Catholic hierarchy’s preference for unity against particular ethnic prerogatives, as influential Catholic hierarchs championed the Americanization of the church.

Americanization gained traction as a method by which to secure greater acceptance and influence of Catholicism within American society, in response to the general suspicion and hostility of the Protestant establishment. These intersecting forces set the stage for subsequent disputes in the age of mass migration, as southern and eastern European migrants established their own ethnically defined churches, especially in the industrialized northeast, but also in smaller numbers elsewhere throughout the United States. The hierarchy’s conflicts with the new Polish, Slovak, Czech, Croat, and other types of Cahenslyism centered not only upon the threats to Catholic unity represented by strong ethnic identifications but also relatively effusive ritual practices of *festas* and processions espoused by “other” Catholics: Hispanic and Italian Catholics were singled out especially by the more reserved Irish hierarchy, but eastern Europeans, too, met with disapproval.

Even more problematic to the goal of centralization and Americanization were the Eastern Rite or “Greek” (Byzantine Rite) Catholics—who adopted a number of different ethnic identifications (Rusyn, Ukrainian, Russian, Hungarian,

Romanian, Syrian). Formerly Eastern Orthodox but now Catholic for several hundred years, these churches nevertheless retained their former Eastern rite—including not only the liturgy in non-Latin languages, such as Old Church Slavonic—but also customs such as a married clergy. In other words, while the Poles might have spoken a different language, at least—from the perspective of the American Catholic hierarchy—their celibate priests celebrated the liturgy in Latin. In part due to such hostilities, but also due to the interaction of “old country” influences and relative religious toleration extant within the United States, many of these Greek Catholics converted to the Russian, Carpatho-Rusyn, or Ukrainian Orthodox Churches (depending in part upon which ethnic option held the greatest attraction for them), while many others simply joined Latin Catholicism, especially through intermarriage. The American Greek Catholic Church itself fractured into two separate ethnically defined dioceses in the 1920s.

Such internal divisions also characterized American Judaism during the period, as the largely Sephardic Jewry that had arrived prior to the 1880s were now joined by the largely Ashkenazi Jewry of eastern Europe and Russia, which the former often regarded as culturally, perhaps even ethnically, distinct, backward, and uneducated. Whereas older generations of Jews, such as those hailing from Germany, joined emerging American Reformed Judaism in large numbers, Russian and eastern European Jews remained bastions of Orthodox Judaism, though naturally, exceptions existed on both counts.

In large part due to racial hostilities, the enactment of severe immigration restriction laws in 1921 and 1924, which set national quotas based upon the pre-1880 (pre-massive southern and eastern European migration) U.S. population distributions, effectively closed the United States to southern and eastern European migrants, who were diverted to other migratory regions in the Americas (Canada and South America), which had been destinations for substantial numbers of such migrants even before then, extending back to the 1890s. Such restrictions codified the racial inferiority that multiple segments of U.S. society had exhibited toward the New Immigration. After 1924, Americanization proceeded apace, helped

along by citizenship drives organized through ethnic churches as well as the efforts of Protestant social welfare groups, churches, and missionaries, many of which had been greeting new Catholic and Orthodox Christian arrivals since the late 19th century. The Catholic Church’s Americanization of itself also escalated, though such Americanization took place in a decidedly “Hibernian cast,” given the Irish hierarchy’s dominance. The period 1924–65 (the period of immigration restriction), then, notwithstanding the persisting strength of ethnoreligious identifications, was one of Americanization in both the ethnic and religious realms.

Migrant Transnationalism

Events in the 1960s, especially the relaxation of immigration restrictions in 1965 and the coalescence of the civil rights movement, marked significant transformations in the interaction of ethnicity and religion in U.S. history. Since the 1990s, scholars have spoken of “migrant transnationalism,” the tendency of migrants to establish and retain dense ties, including economic and social remittances, with regions of origin, through remigration and correspondence.

Scholars in this subdiscipline initially contended that migrant transnationalism represented a new dynamic, particular to post-1965 migrants; they posited it as a response to hegemonic forces of global capitalism, racialized socioeconomic marginalization directed toward these “new” new immigrants, who hailed largely from Asia and the Global South, and vastly improved travel and communication technologies in the form of air travel and telephonic/electronic communication. Many subsequent scholars, however, have provided a needed correction to this view of migrant transnationalism as entirely “new.”

Already by the 1880s, commentators derided that era’s “new immigration” not only on racial/cultural/religious bases but also based upon the temporary nature of their migration. Advances in communication and travel technologies of that era had made return and cyclical migration across the Atlantic and Pacific Oceans far more viable—a critical motivating factor, in fact, for out-migration in the first place. The vast majority of late-19th- and early-20th-century migrants came to the United States intending to return to regions of

origin, and large numbers did so—many of them multiple times. The additional motivation of racialized socioeconomic marginalization emanating from American society during the period has already been mentioned. Estimates suggest that one-fourth to one-third of all migrants between 1880 and 1924 returned to regions of origin, with that number much higher for migrants from particular regions and villages (well over half in many cases). In other words, at least as early as the 1880s, substantial numbers of migrants were engaging in what scholars now call migrant transnationalism. The distinction with the post-1965 era lies primarily in the extent, degree, and pervasiveness of migrant transnationalism: there is no denying that 20th- and 21st-century advances in technology have contracted time and space even beyond the contractions discernible in the late 19th and early 20th centuries.

Migrant transnationalism, both before and after 1965, has held great significance for intersections of religion and ethnicity in U.S. history, corresponding to the great complexities associated with various migratory practices. Haitian Catholic migrants living in Florida, for example, might gather together in prayer or participate in fund-raising events for their parish in their region of origin. Such activities are not merely “backward-oriented”: they are not directed only toward the place from which they came; instead, they are often consciously forward-oriented, toward the place to which they will go, upon return visits or ultimate remigrations.

In other words, a migrant in the United States who contributes toward the addition of church bells in a region of origin might do so knowing that he or she will hear the same bells upon their return to a native village. Over time, cultural and social transformations in regions of origin, due to the influence of migrant remittances, can also exert reciprocal impacts to regions of destination. Thus, if more regular church attendance may be the norm in the United States, remigrants might spread the impulse for regular attendance to a region of origin, with the result that subsequent waves of migrants departing for the United States may already have undergone Americanization, in particular ways—in this case, in the form of predisposition, through remigrant influence, to attend church regularly in the United States.

While the experience of post-1965 immigrants, especially from Asia and the Global South, has not fundamentally differed from the experience of late-19th- and early-20th-century migrants in either racial or religious terms, there are certainly major distinctions. In the first place, many broader societal sources tend to mark such migrants as significantly phenotypically—and therefore biologically—distinct. To be sure, earlier white ethnics were also marked as such (perhaps most famously the Irish and Italians, as seen in contemporary caricatures), but the designation of Hispanics, Asians, blacks, and Arabs as “non-white” has potentially greater longevity than for Irish, Italians, Slavs, and others, who have, by and large “become” white, in widely held American racial taxonomies. Second, because many of these migrants bring with them religious traditions that have heretofore been underrepresented in American society, they challenge the well-known assimilatory triad of American religiosity—Protestant, Catholic, and Jew.

Civil Rights

Race and ethnicity also merged closely with religion in another major phenomenon of the 1960s: the civil rights movement. The Reverend Martin Luther King, Jr., in his sermons to his constituents and in responses to his white critics in his famous “Letter From Birmingham Jail,” found inspiration for his message of racial equality in the legacy of historical African/slave/Negro/black Christianity, in themes of Mosaic liberation, the civil disobedience of Shadrach, Meshach, and Abednego, and calls for social justice in the teachings of Jesus. Religion also factored heavily in the civil rights movement’s major divisions, as Malcolm X, along with the Nation of Islam, espoused more militant black supremacist, separationist, antiwhite, and, by extension, anti-Christian rhetoric, prompting King to condemn this trend as a force for “bitterness and hatred.”

Following his later split with the Nation of Islam and its leader Elijah Muhammad, Malcolm X’s adoption of a less militantly exclusionary philosophy of civil rights also rested upon a combination of ethnic/racial and religious factors: he cited his travels in Africa and the Middle East in his realization of the broad spectrum—“all colors, from blue-eyed blonds to

black-skinned Africans”—represented as equals within global Islam.

Several other developments in American ethnoreligious dynamics emerged in conjunction with civil rights in the late 1960s and early 1970s. First, parallel civil rights movements developed, such as the American Indian Movement (AIM), which pressed the U.S. government to honor treaties that it had made and broken with America's indigenous peoples. Religion played a role, as evidenced, for example, in the writings of Leonard Peltier, a major leading figure in the AIM, convicted—unjustly, his supporters have argued—of killing two Federal Bureau of Investigation (FBI) agents in a 1975 gun battle on the Pine Ridge Reservation in South Dakota. In his *Prison Writings*, Peltier appeals to Native American religion—Sun Dance—to come to terms with the injustices perpetrated against his people, whose only guilt, he writes, consisted in the “Aboriginal Sin” of “being Indian.”

A second phenomenon, largely inspired by the black roots movements of the 1960s, was “white ethnic” revivalism in the 1970s. This development harbored the return of “hyphenated Americanism,” as Polish-, Greek-, Italian-, and other assimilated Americans sought to rediscover their ethnic heritage in demonstrations of “symbolic” or “optional” ethnicity, a project frequently incorporating the religious: community churches again provided a token of and venue for ethnic expression, as they had in the earliest migrant generations. As an example, churches became some of the most common sponsors for food and cultural booths at various nationality-day events, which emerged in the 1970s and continue today.

The Post-9/11 Context

Today, in a post-9/11 era, Muslims and Islam, more than any other religious tradition, challenge notions of which types of ethnicity and religion may be compatible with American-ness. Certain popular conceptions have equated Arab-ness and Muslim-ness with terrorism. At times, the equations have proven more facile: dark (though not “black”) skin, turbans, or burkas have meant “terrorist” or “Jihadi.” Cases of mistaken identity—not only the misidentification of innocent Arab Muslims as terrorists, but also the confusion of other religious traditions and ethnic groups for Arab Muslims—have resulted in violent

encounters, such as the targeting of Burka-wearing Muslim women immediately following 9/11, or the 2012 mass shooting at a Sikh temple in Oak Creek, Wisconsin. That many media sources felt it necessary, in the latter case, to convey the fraught message that “Sikhs are not Muslims” is telling of the complexities of contemporary racial and ethnic designations in American society, as well as the social anxieties exhibited by many Americans.

More recent debates over whether the Chechen Muslim brothers responsible for the 2013 bombing of the Boston Marathon were white (as many commentators noted, their region of origin, the Caucasus, marked them as Caucasian, par excellence) further complicate American ethnoreligious taxonomical schemes. Those discussions also serve as a reminder that such ethnic and religious classifications are by no means fixed in U.S. history, but rather will continue to evolve in response to changing social dynamics.

Repatriation Program

The Repatriation Program was a series of actions carried out by the U.S. government from 1929 to 1939 that led to the deportation or coerced emigration of hundreds of thousands of people of Mexican descent living in the United States. Mexicans and Mexican Americans were targeted because they tended to be easily identified and could be easily relocated to the Mexican border. Constitutional rights to due process, counsel,

and protection from unlawful search and seizure were often ignored and private property was forfeited. Although repatriation was voluntary and deportation compulsory, many of those classified as repatriates were de facto deportees, who were pressured or otherwise induced to leave.

Because of conflicts in statistical sources, there is disagreement over the exact number of repatriates. The low estimates are around 500,000. More recent studies suggest that the number was well over 1 million. The Apology Act for the 1930s Mexican Repatriation Program, passed by the California State Legislature in 2005, cites the figure at 2 million repatriates. Of these, more than 1 million were born in the United States as U.S. citizens, and many of the others were legal residents.

The Great Depression in the United States, between 1929 and the end of the 1930s, was one of the worst economic disasters to befall the nation. The national unemployment rate rose to 25 percent. Veterans marched on Washington, D.C., demanding the early payment of their pensions, and Dust Bowl migrants, economically ruined by drought and storms, left the Great Plains for states like California.

Private companies began withholding jobs from those they perceived as "un-American," and labor unions lobbied the government to protect their members. Mexican Americans, excluded from participation in many occupations and segregated residentially, were scapegoated as the cause of economic hardships.

Deportations

The deportations began under President Herbert Hoover, who promoted them as a cure for the high unemployment of the Great Depression, known by Mexican Americans as La Crisis. He claimed that the action would protect "American Jobs for Real Americans." This was a common theme throughout the next 10 years: Removing Mexican Americans from the country would remove them from competition for the reduced number of jobs while saving relief agencies money by reducing the number of recipients. The program was considered voluntary for legal residents but was coercive and targeted the vulnerable, such as hospital patients who needed medical care during their removal.

In 1931, the 11-member Wickersham Commission reported the practice of immigration checks and raids in various public places without warrants. Even when specific inducement was not provided, the anti-Mexican climate and the clear sense of Mexican Americans being unwelcome motivated many to leave the country. Mass-media coverage frightened those of Mexican heritage, and some immigrants of financial means voluntarily returned to Mexico with their belongings, but those were the rare exception and did not prove the rhetoric of voluntarism designed to appease Americans about the program.

In Los Angeles, the Chamber of Commerce openly encouraged the employment of men based not on legal status but on skin pigment. Los Angeles County welfare offices threatened to withhold assistance from Mexican Americans and provided inadequate food for those deported, as in a November 1932 incident in which 78 children on a train were poorly provisioned and several were deported without an adult. Those who refused to leave voluntarily were removed by police and taken by force to train stations. Once in Mexico, deportees often had no resources, often had no family, and were dumped in the desert on the other side of the border with little choice but to attempt re-entry to reclaim their lives in the United States. Obtaining a copy of a U.S. birth certificate from Mexico in the 1930s was nearly impossible. Some born in the United States did not speak Spanish and were in a country that they had never even visited. Once in Mexico, Mexican Americans faced discrimination as foreigners who were not welcome in a country even more devastated by the global economic crisis than the United States.

In 2003, the Mexican American Legal Defense and Education Fund (MALDEF) sought an apology and financial reparations from the state of California on behalf of those whose rights were violated. The Japanese American Citizens League (JACL) has worked with MALDEF in recognition of the similarities between the abuses of the Repatriation Program and the later Japanese American internment camps.

In 2005, the California State Legislature passed Senate Bill 670, authored by Democratic Senator Joseph Dunn from Orange County. SB 670 issued an apology for the unconstitutional

removal of people of Mexican ancestry from the state in the Apology Act for the 1930s Mexican Repatriation Program. Senator Dunn also promoted teaching about the episode. Some deportees have filed suit against the U.S. government, with no results.

In February 2012, the Los Angeles County Board of Supervisors, under the leadership of Gloria Molina, also voted to issue an apology to repatriates. This apology accompanied the unveiling of a monument to deportees in La Plaza de Cultura y Artes in Los Angeles, the site of a government raid in 1931 that netted hundreds of Angelenos. The U.S. federal government has not yet issued an apology or financial compensation, as it did to Japanese Americans whose rights were violated a generation later.

Repatriation is still an open chapter in American history. Less than a decade after repatriation, the U.S. government encouraged millions of young Mexican men to come into the country under the Bracero Program to do agricultural and rail work to support the Allied war effort during World War II. Young U.S. citizens removed to Mexico during repatriation received draft notices in Mexico to serve in the U.S. military because they were citizens. The flexibility and political expediency of what it meant to be a real American swung 180 degrees in less than a decade for those of Mexican heritage.

Research, Cultural Variables in

As the U.S. population changes, increasing numbers of individuals from multicultural and linguistically diverse backgrounds are participating in investigations. Commensurate with the changing population demographics, there is a need to consider a range of cultural variables that were not accounted for in the past. Previously, the dominant research designs used a standard against which diverse groups were compared. The standard typically consisted of mainstream (white) Americans. When behavioral differences were reported between the standard and underrepresented groups, the differences were often interpreted as deficits. Cultural variables were rarely used to account for why differences occurred between mainstream and minority groups.

Critical Variables

With the increase in population diversity, original data must be obtained and analyzed relative to unique characteristics of those from multicultural backgrounds. Commensurate with greater consumer participation, investigators should enhance their knowledge about critical variables that characterize experiences of multicultural individuals and ensure that results are interpreted in a culturally sensitive manner.

Culture is a multifaceted construct and evolves from the integration of experiences, social class, language, geographical location, religion, and a common history. Shared traditions, values, beliefs, customs, and rules for behavior also reflect culture. Culture is transmitted by social practices that are carried from one generation to the next and shapes a variety of everyday human behavior.

Tangible Versus Intangible

Tangible manifestations of a culture include music, dress, dance, literature, and art. Intangible reflections of a culture include sociolinguistic practices, communication patterns, kinship relations, family structure, community organization, beliefs, values, and attitudes. Beliefs, values, and attitudes are critical elements of culture. Beliefs refer to judgments, opinions, and expectations

that are accepted among a group of people as truthful. Values are inclusive of group and individual behavioral norms, ethics, religious practices, and shared attitudes. Values are perceived as abstract in nature and serve as internalized guiding principles, leading one to attach more or less regard to different types of human endeavors. Attitudes are an interrelated set of beliefs that characterize, assess, or recommend activity relative to a person, object, or situation. Collectively, values, attitudes, mores, social habits, language, and customs of a culture will distinguish one cultural group from another.

Language is one of the strongest manifestations of culture and is a primary mechanism for cultural transmission. Language varies among cultures, serves as an indicator of group membership, and is a primary means of communication.

Interpreting Data

To interpret research data, the investigator must gain insight into family cultural practices about child rearing and attitudes about schooling. Understanding how language is used to socialize children into a specific culture, and how home literacy and language practices may differ from what is expected at school, are crucial variables. Results on teacher attitudes and expectations are beneficial for interpreting data because many educators are unaware of the impact that their attitudes have on child performance. Educators' attitudes and expectations appear to be influenced by perceived intelligence, class, race/ethnicity, and oral language patterns. Data interpretation is also affected by which achievements or difficulties contribute to child and family cultural differences versus educators' perceptions, teaching methods, and assumptions about typical developmental processes.

In the process of becoming literate, children must learn interactive skills that relate to spoken and written discourse. Children's perceptions and how they receive information about the world are shaped by the social and cultural conditions in which they live. Consequently, it should be determined whether life at home is at odds with life at school. Research designs should consider the appropriateness of measurement procedures and consider whether variables are culturally valid; that is, do these variables occur in the culture of

the targeted group? Demographic and cultural variables include age, gender, primary languages spoken, ethnicity (worldview/perceptions of life), religion, education and literacy level, occupation and socioeconomic status, country of origin (traditional beliefs), transportation (access and interaction with mainstream culture), and communication patterns and practices.

Finalizing Research

Questions that an investigator should explore before finalizing a research design include: How does the target sample identify itself with respect to culture, ethnicity, or ethnic derivation? How does the cultural group view the world with respect to natural, supernatural, and metaphysical forces? What is the general time orientation of the cultural group? How are individual motivation and determination viewed by the community cultural group? How is the concept of “self” perceived and described by the cultural group? To what degree does the cultural group observe the mainstream rules, social customs, values, and practices? Do the traditional communication forms within a cultural group merge, parallel, or conflict with mainstream culture?

Culture reflects patterns of social regularities, with some aspects tangible and others intangible. To reduce ethnocentric bias in interpreting results, investigators should be knowledgeable about differing belief systems, values, and social regularities of the cultural group of interest.

Reservations, Native American

The American Indian population is not evenly distributed geographically because of the variety of federal policies that have had an impact on tribally owned land. The Indian Removal Bill was signed in 1830 by Andrew Jackson. This bill called for the removal of all American Indians east of the Mississippi. Several tribes were relocated to what is now Oklahoma, including the Creek, Cherokee, Choctaw, Seminole, and Chickasaw. This had a continuing influence on the demographic distribution of the American Indian population. According to the 2010 census, 2,123,549 American Indians who self-identify as American Indian alone, or in combination, reside in the west.

There are 326 reservations in the United States, the majority in the west. These include traditional reservations, pueblos, rancherias, missions, villages, and communities. According to the 2010 census, 15 tribes have received federal recognition since 1978, and 16 petitions for federal recognition have been denied. A reservation consists of land reserved for a tribe under treaty, executive order, or administrative or federal statute, but title to the land is held in trust by the federal government. There are 56.2 million acres that are considered trust land.

The Navajo reservation is the largest, with 16 million acres, larger than West Virginia; the smallest is the Pit River Tribe's cemetery, at 1.32 acres. Some reservations are larger than states; for example, 22 reservations are larger than Rhode Island or Delaware. Approximately 56.2 million acres are held in trust by the United States for various Indian tribes. The origins of reservations vary; some were parts of the tribal land base, some were created during the Indian removal period when the federal government established geographic areas to relocate tribes, and some are parcels of land established after re-recognition. These areas were generally land that was not fit for farming or other desirable uses.

The reservation land base has been impacted by two major federal policies: allotment and termination. A major federal policy that influenced reservation landholding was the allotment policy, or Dawes Act of 1887. During the allotment

This photograph from around 1939 shows part of the Laguna Indian reservation near Laguna, New Mexico, 45 miles west of Albuquerque. There are currently 326 reservations in the United States; many originated with land that was not fit for farming or other desirable uses, leading to generally poor conditions among the relocated tribes.

period, land within the reservation was parceled to individuals, and surplus land was sold to settlers at low prices.

As a result, the majority of residents within reservation boundaries are non-Indian. This “checkerboarding” pattern often results in conflicts that arise because non-Indians within reservation boundaries are subject to tribal policy. Tribes have jurisdiction over planning, zoning, and negotiating grazing, timber, and mineral leases, with Bureau of Indian Affairs oversight.

Tribes control economic development within their reservation boundaries and, to some extent, trust land. This has led to an increase in economic growth for some tribes through the development of destination casinos, tourism, resource development, construction, ranching, and agriculture. These economic growth opportunities have provided employment opportunities to both tribal and non-tribal members.

Reservations were also impacted by termination legislation that was passed in 1953. This governmental policy called for the end to the federal-tribal relationship. This impacted 109 tribes and 1,365,801 acres of reservation land, mostly reservation and trust land in Oregon, Washington,

and California. Some of the tribes that were terminated regained their federal recognition but did not regain their reservation land.

Indian country is diverse in terms of social and political power. Both civil and criminal laws on reservations, which are under the jurisdiction of the tribal nation, are different from the laws in the surrounding areas. American Indian reservations vary in terms of the systems of government, federal recognition (some tribes are only state recognized), and regulations. One of the most difficult jurisdictional issues surrounds crime on reservations. The Federal Bureau of Investigation (FBI) is responsible for arresting and prosecuting felony offenders within reservation boundaries. As a result, serious crimes that occur on the reservation are often not investigated or prosecuted. Often, those who are prosecuted are not investigated properly.

Until 2010, tribes could only prosecute crimes that carried sentences of less than one year. Some reservations are in states that are considered Public Law 280 states, allowing state jurisdiction within reservation boundaries. In these states, there is considerable controversy about who has jurisdiction in criminal offenses. Even though reservations are plagued by poverty,

unemployment, and other social ills, there are many positive aspects to American Indian life on the reservation. Reservations are diverse and provide a cultural milieu for American Indians to gather to participate in traditional life, interact with close-knit family and friends, and have a sense of place.

and remain. Immigrants who have settled in the United States and complied with all legal mandates for naturalization—becoming a citizen or national of a country—may become U.S. citizens.

Immigration law does not utilize the term *illegal aliens* to refer to immigrants residing illegally in the country, yet the term is used in many legal files and cases in the judicial system at large; it is also recognized in common usage. U.S. law commonly uses the term *unauthorized alien*, while the term *undocumented immigrant* is becoming more ubiquitous in common usage. Because of the laws granting personhood to corporations, the term *alien* may also be applied to corporations headquartered abroad with branches in the United States, which are known in common parlance as alien corporations. The 2010 U.S. Census states that 80 percent of U.S. residents born abroad who arrived prior to 1980 were naturalized U.S. citizens by 2010.

Antecedents

The legal use of the term *alien* was formally established in 1798 by the U.S. government when it was utilized in the Alien and Sedition Acts while the nation was engaged in hostilities with France. The four acts, signed into law during the administration of President John Adams, were created to offer protection from potentially seditious and hostile actions by French immigrants, French-sympathizing citizens, and Irish settlers. The Alien and Sedition Acts, considered by many to be oppressive and unjust, were controversial as a political point of contention in their day. They were abolished in 1802.

Thus, modern government policy considerations on the legal status of immigrant residents in the United States continued during the 19th century. Late-1700s immigration laws provided naturalization as citizens only to immigrants who were “free white persons” who had lived in the country for five years, but the Naturalization Act of 1870 was expanded to include African natives and people of African descent. As the Alien and Sedition Act of 1789 demonstrated, immigration laws have been used to bar people from entering the country, as was the case of the Chinese Exclusion Act of 1882.

In 1907, the U.S. government created the Dillingham Commission, with the purpose of

Resident Aliens

In recent years, because of the growing importance of migration movements and rights, the original and contemporary meanings of the term *alien* have attracted extraordinary attention in the jurisprudence, academic, and human rights fields.

According to Public Law 112-238, an alien is “any person not a citizen or national of the United States.” It is important to distinguish between aliens and immigrants, as the law clearly defines the term *immigrants* as a subcategory of aliens. Aliens are all people who are not U.S. nationals, and immigrants are people who move into a region or country with the intent to settle

conducting a study on the state of immigration. The commission published its extensive report on immigration in 1911, establishing that recent immigrants from southern and eastern Europe—as opposed to older immigrants from northern and western Europe—were considered undesirable. The commission's report served as the basis for the establishment of national quotas as well as the immigration reduction acts of the 1920s, which restricted the annual number of immigrants to 150,000. These acts sought to proscribe immigration from Asian countries and restrict the number of immigrant Jews.

The Magnuson Act of 1943 allowed Asians immigrants the right to become naturalized citizens and abolished the Chinese Exclusion Act of 1882. The War Brides Act of 1945 established the precedent of naturalization by marriage, and the 1952 Immigration and Nationality Act (better known as the McCarran-Walter Act), abolished restrictions based on race but kept national origin quotas in place.

The quota system was abolished by the Hart-Celler Act of 1965, which opened the door to more democratic immigration measures. This gave way to an exponential increase in immigration numbers from the 1970s onward, with the arrival of a higher percentage of non-European nationals and women. The Immigration Act of 1990 raised immigration numbers by roughly 50 percent. The U.S. Commission on Immigration Reform of 1997 recommended a significant decrease in immigration. Despite the increase in immigration numbers in the last decades, the U.S. Census reported that the labor force in the United States included proportionately fewer foreign-born people in 2007 than in 1900.

Resident Aliens in the United States Today

According to the American Community Survey (2010), 13 percent of the 307 million residents in the United States were born in another country, accounting for close to 40 million immigrant residents currently living in the United States. As of 2010, according to the U.S. Census, 44 percent of these were naturalized as U.S. citizens. Alien residents from Latin America account for 53 percent of the immigrant population overall, making it the largest immigrant group. That is followed by Asia, with 28 percent of immigrants; Europe

region with 12 percent; Africa, with 4 percent; North America with 2 percent; and Oceania, comprising less than 1 percent. Among the percentage born in Latin America, 55 percent were born in Mexico. Mexican nationals account for 29 percent of the total for all foreign-born people currently residing in the United States.

California, New York, Texas, and Florida account for over 50 percent of foreign-born residents, with California hosting over 25 percent of the overall foreign-born population. One in five residents in New York and New Jersey is foreign-born, making California, New York, and New Jersey the states with the highest foreign-born percentages of their overall population. The percentage of foreign-born residents in the midwest region—except for Illinois, which accounts for 14 percent—ranked at less than 8 percent, with North and South Dakota accounting for only 3 percent each. South-central states—with the exception of Texas and Oklahoma—also rank low, accounting for less than 5 percent of the foreign-born population.

Education, Labor, and Other Demographics

According to the 2010 census, close to 70 percent of immigrant residents are high school graduates, and over 25 percent of foreign-born residents 25 years and older have graduated with at least a bachelor's degree. The immigrant population is more likely than the U.S.-born population to be in the labor force, with over 25 percent working in professional, management, and other related occupations and approximately 25 percent working in the service and production fields. The median income of foreign-born households, however, was on average less than that of U.S.-native households, making it likelier for the foreign-born to live in poverty.

The immigrant adult population is younger than the U.S.-born population, with the median age of foreign-born residents (44.4) approximately five years lower than the median age of native residents. Over 80 percent of the foreign-born population is between the ages of 18 to 64, with approximately half that number between the ages of 18 and 44. Among the U.S.-born population, 60 percent are between the ages of 18 and 64, with only 35 percent between 18 and 44. On the other hand, nearly 27 percent of U.S.-born

residents are less than 18 years of age, compared to only 7 percent of foreign-born residents. This is because children born to foreign residents automatically join the ranks of U.S. native residents.

Among the nations of origin, alien residents from Africa have the lowest median age (38), while the European and North American foreign-born populations had the highest median age (51.3 each).

The sexes are divided almost equally among U.S.-born and foreign-born populations, at roughly 50 percent male and female each. Fifty-eight percent of foreign-born residents over 15 years of age are married, while 26 percent never married, compared to 47 percent of native residents within the same age range. Among the countries of origin, Asians have the highest proportion of married people at 66 percent, while African and Latin American nationals have the lowest, at 54 percent. U.S. natives rank higher among the separated or divorced. In general, according to the census, foreign-born women demonstrate a higher fertility rate than those born in the United States.

Restrictive Covenant

Historians of legal racism point to former Confederate states' adoption of Jim Crow laws between the 1880s and the turn of the 20th century as the most palpable enshrinement of white supremacy

into American law after the end of slavery. Yet, even as Republican-dominated northern states disavowed Jim Crow, they upheld and even advanced the notion that white Americans had an inalienable right to all-white communities through the adoption of racial restrictive covenants. Though they differed from state to state, racial restrictive covenants were provisions written into the deeds to residential property that prevented any nonwhite person from purchasing a restricted dwelling.

Restrictive covenants excluded not only blacks but also, in some cases, Italians, Jews, or Catholics. Although evidence suggests that forms of the restrictive covenant operated as early as 1852, they became a standard feature of housing deeds in the wake of the 1917 U.S. Supreme Court decision *Buchanan v. Warley*. In *Buchanan*, the Court ruled that a housing ordinance in Louisville, Kentucky, that barred African Americans from any home purchase violated the Fourteenth Amendment of the Constitution. The *Buchanan* decision dismantled one of the few examples of de jure segregation in northern and western states at the dawn of the first wave of the Great Migration of southern African Americans into large and mid-sized towns throughout the region.

Effects of the *Buchanan* Decision

As African Americans placed increasing pressure on the imagined borders of residential whiteness, during World War I, whites across the north, midwest, and west responded with a wave of terroristic violence in African American communities in defense of their "right" to white-only communities. A series of white mob attacks during the "red summer" of 1919 from Oklahoma to the nation's capital spoke to the intensity with which whites understood the possibility of racial mixture as a threat to their very survival. While working-class whites pursued violent means to maintain residential segregation, real estate professionals began to integrate racial and ethnic restrictive covenants into real estate documents in order to reassure anxious white homeowners who were convinced that proximity to black neighbors would cripple their property values.

Racial and ethnic restrictive covenants attempted to sidestep the *Buchanan* decision by privatizing the enforcement of de jure racism outside the Jim Crow south. In *Buchanan*, the court

had limited the power of legislatures to place racial conditions upon the sale or purchase of private property. Restrictive covenants, by contrast, framed racial exclusions as a component of any citizen's right to exclusive control over his or her property. However, because residential covenants, like wills of inheritance, were notarized and enforced by state officials, ostensibly "private" racial prejudices were once again backed up by the force of law. Even after the elimination of racial restrictive covenants, the logic of racial exclusion remained enshrined within notions of constitutionally protected property rights for decades to come. From suburban opposition to school busing in the 1970s to contemporary conflicts produced by the rise of all-white private subdivisions, the figure of "property rights" courses through organized opposition to racial integration.

Shelley v. Kraemer

Racial restrictive covenants proliferated throughout the northern and western states from the end of World War I until the 1948 *Shelley v. Kraemer* decision, a period that also witnessed the rise of hypersegregated black communities in the nation's largest urban areas. Racial restrictive covenants, however, not only limited where African Americans could live geographically, but also placed a glass ceiling on African American attempts to achieve upward mobility during the interwar decades. Prior to the Great Migration, nearly every city that would eventually become home to a large black "ghetto" contained a significant population of elite and middle-class African Americans, the descendants of free blacks, leaders within black reform movements, or entrepreneurs who served black customers.

As poor, southern African Americans poured into urban territory delineated for black residency during the war, middle-class and elite African Americans hoped to purchase homes in other communities in order to avoid the increasingly overcrowded urban "black belts" and to signal their economic mobility. The spatial limit on African American residency meant that black middle-class homeowners were often overtaken by and associated with the significantly more impoverished African American migrant class. Restrictive covenants, then, dissolved material class boundaries between African American communities,

making it difficult for African Americans to accrue generational wealth via property ownership.

The barriers to African American mobility that were represented by restrictive covenants were a primary target of black political organizing in the 1930s, and reverberated throughout black artistic production for most of the early half of the 20th century. The National Organization for the Advancement of Colored People's (NAACP) racial legalism strategy included lawsuits against the constitutionality of restrictive covenants. The most famous is *Hansberry v. Lee*, wherein author Lorraine Hansberry's father, Carl Hansberry, sued for the right to move into a home within Chicago's Washington Park neighborhood when neighbors balked at the previous owner's decision to sell to the Hansberry family. The events surrounding that case, in particular Carl Hansberry's single-minded investment of monetary and emotional resources, inspired the events within Lorraine Hansberry's Pulitzer Prize-winning 1959 play *A Raisin in the Sun*. African American intellectuals from St. Clare Drake to Robert Weaver wrote extensively about the way that restrictive covenants barred African Americans from a critical component of American citizenship and subjectivity—homeownership.

The Supreme Court's eradication of restrictive covenants in the 1948 *Shelley v. Kraemer* decision proved a major turning point in the manifestations of segregationism in the United States. Across the country, white homeowner groups in large cities vociferously protested the decision as both an encroachment on their property rights and an attack on the value of hard-fought wealth. Within large cities, white homeowners again turned to violence to enforce patterns of segregation no longer enforced by the law. Others decided to abandon the urban core in favor of suburban developments that promised emigrating whites freedom from the taint of racial mixture.

The spatial and economic exigencies of suburbanization made it significantly easier to uphold the architecture of residential segregation. The costs associated with suburban homeownership, including regular car maintenance, gas, and upkeep, automatically disqualified many racial minorities from attempting to move into suburban communities. Most realtor professional organizations included explicit reference to the importance of dissuading, and outright preventing, African Americans from

purchasing homes within suburban areas. Rather than ending residential segregation, the death of restrictive covenants contributed to its reconfiguration in post–World War II America.

The move away from restrictive covenants altered the nature of inter-ethnic tension between second-generation European immigrants. Prior to *Shelley*, restrictive covenants had not only limited mobility of African Americans but also often included stipulations barring sale to Italian, Jewish, or other “new” immigrants who were “not quite white” upon arrival in the early 20th century. In new suburban communities, however, white ethnics had little choice but to imagine themselves as part of a unified racial collective, one that stood in stark contrast to the increasingly black inner city, rather than as members of exclusive ethnic groups organized into intra-city ethnic enclaves. The end of restrictive covenants thus also worked to push white ethnics to coalesce into the racial identity known as “whiteness.”

the results of firefighters’ promotion examinations, when doing so denied white candidates who had done well on the examinations the right to acquire promotions. The case demonstrates how nonminorities also have rights under legislation that was designed to prohibit employers from discriminating against minority candidates.

The city of New Haven had created examinations to measure the candidates’ job-related knowledge for the purpose of ranking the candidates seeking promotions in the fire department. Efforts were made to ensure the examinations would not unintentionally favor white candidates. Many candidates spent significant time and resources preparing for the examinations. When the examinations were graded, almost all of the promotions would go to white applicants and none go to black candidates. The city became concerned that using the examinations as the basis for the promotions would have a discriminatory impact on the minority applicants and, therefore, made the decision to discard the results of the examination.

Title VII of the Civil Rights Act

Title VII of the Civil Rights Act of 1964 prohibits employment discrimination on the basis of race, color, religion, sex, or national origin. It is unlawful under Title VII for an employer to hire, refuse to hire, or otherwise discriminate against any individual with regard to compensation, terms, conditions, or privileges of employment because of that person’s race, color, sex, or national origin.

Originally, Title VII was viewed as prohibiting what is called “disparate treatment,” treating an employee or applicant less favorably because of his or her race, color, sex, or national origin. Title VII would clearly prohibit an employer having a policy that demonstrates a preference for, or a bias against, someone because of his or her race, color, sex, or national origin. For example, an employer cannot have a policy that says only whites will be hired.

In 1971, in the case of *Griggs v. Duke Power*, the Supreme Court interpreted Title VII as also prohibiting employer practices that, although facially neutral, had a discriminatory impact. In some situations, an employer may have a policy that makes no mention of race, color, sex, or

Ricci v. DeStefano (2009)

Ricci v. DeStefano is a U.S. Supreme Court case decided in 2009. The court found it was a violation of Title VII of the Civil Rights Act of 1964 for the city of New Haven, Connecticut, to discard

national origin, but in application of the policy, persons falling within one or more of the protected classes may be effectively precluded from consideration. For example, minority candidates as a group are less likely to have higher academic credentials; automatically disqualifying an applicant who does not have a bachelor's degree for consideration for a job would mean minority candidates would disproportionately be precluded from consideration for the job.

This kind of precluded discrimination is known as "disparate impact." If an employer does engage in behavior that results in a disparate impact, it will not violate Title VII if the employer can prove the action was job related.

However, if the complaining employee or applicant can show the employer could have used another practice that was just as effective that did not result in a discriminatory effect, then the employer would be still be liable. So, a disparate impact case is largely based on an initial statistical disparity and then an inquiry into whether the practice is warranted, and if so, whether there is a better way to achieve the same objective that does not result in discrimination.

The City's Dilemma

The city found itself in a difficult position. If it validated the examinations, there was a potential claim that the examinations demonstrated "disparate impact" discrimination because no blacks and very few Hispanic candidates would qualify for a promotion. In contrast, discarding the examination results because (almost) only white candidates would be eligible for promotions meant the city would be making a conscious decision to not use the tests, to the detriment of the successful white applicants solely because they happened to be white. Tossing out the examinations, therefore, would indicate "disparate treatment" against the successful white candidates.

The city believed it could engage in the disparate treatment discrimination against the white applicants (discard the examination results) if doing so was based on a good-faith belief that these actions were necessary to avoid potential disparate impact liability. The city believed it could disregard the examinations (to the detriment of the white candidates) because of the threat that the minority applicants could sue if the

city validated the examinations and promoted the white candidates.

The court found that an employer cannot engage in disparate treatment discrimination merely based upon a good-faith belief of disparate impact liability. The court, however, also rejected the notion that the disparate treatment discrimination could be justified based only upon a determination that the employer in fact was in violation of Title VII for disparate impact behavior. Rather, the court adopted the standard that disparate treatment discrimination was justified only if the employer had a strong basis in evidence in believing it would be subject to disparate impact liability. In other words, there has to be strong evidence the employer would lose the disparate impact case that could be brought by the minority applicants.

In *Ricci*, the court found the examinations were job related and consistent with business necessity, and there was no equally valid and less discriminatory way to effectively rank the candidates. Therefore, although statistically minorities were adversely impacted, that mere statistical disparity did not support a finding of actual discrimination. The court found that using the examinations to rank the candidates was consistent with the objectives of Title VII. The city could not disregard the examinations just because they resulted in minority candidates not being in the group eligible for promotion. It violated the white candidates' Title VII rights for the city to do so.

Rise of the Unmeltable Ethnics, The

The civil rights and black power movements spurred various reactions among white Americans, including the resurgence of pride in ethnic roots among European Americans. Michael Novak's book *The Rise of the Unmeltable Ethnics: Politics and Culture in the Seventies* (1972) not only described this revival but also encouraged it as an antidote to many of the problems Novak perceived with the crisis of liberalism in the late 1960s and early 1970s.

Novak proposed a "new ethnic politics" that challenged not only the White Anglo-Saxon Protestant (WASP) establishment by replacing the model of assimilation with a culturally pluralistic paradigm but also attempted to thwart the technocratic, neoliberal excesses of the Democratic Party.

Novak sensed that elite liberals were pulling away from the working-class base of the New Deal coalition and replacing it with an alliance among middle-class professionals, student activists, and racial minorities. According to Novak, this was an unsustainable marriage. Although he admitted that the liberal elites had been more receptive to black claims to full citizenship in the short run, an alliance of white ethnics and blacks would prove more durable and fruitful. He charged that middle-class liberals abhorred the gritty business of exercising power and were unwilling to actually put any of their own advantages on the line to achieve social change, especially when it came to racial integration. Novak acknowledged the visceral tensions between African Americans and the white working class but argued that they did not need to love each other, but could join together out of mutual respect, or even mutual need.

The book expressed the grievances of an increasingly hard-pressed working class. According to Novak, white ethnics believed they were losing clout as part of the New Deal coalition. They considered themselves cut out of Great Society-era social programs. Perception mattered here more than reality, as white ethnics believed that the liberal agenda was "for blacks only." Likewise, intellectuals extended a great deal of sympathy to nonwhite cultures but appeared to chastise working-class whites as hidebound. The

New Left, Novak claimed, had condemned white ethnics while glorifying racial minorities.

Though Novak's argument was disjointed and polemical, he did diagnose a serious deficiency in liberal politics. As historians argued, many liberals lost interest in economic inequality, believing the country had solved its conflicts between capital and labor. The fight for diversity was necessary, but too often it was framed as a battle for individual rights and did not address the structural economic difficulties facing the working class.

Criticism of Novak's Argument

Novak meant his book to be a warning, but by focusing on ethnicity rather than class, he offered a blinkered view of race in the United States. Novak intimated that blacks were the beneficiaries of liberalism, overlooking how whites, regardless of their ethnic history and their own struggles with discrimination, had long profited from racial privilege in comparison to African Americans and other minorities. Novak also rejected almost any white-ethnic responsibility for upholding white supremacy. "Our ancestors owned no slaves," Novak stated. "Most of us ceased being serfs only in the last two hundred years."

The correlation of racism only with slavery omitted the century of discrimination after emancipation. Racial discrimination was clearly evident in Jim Crow craft unions, New Deal programs, and even the G.I. Bill, which worsened the racial gap because black veterans could not get into many colleges and were barred from obtaining suburban homes due to discrimination from the private lenders doling out government-subsidized mortgages. These progressive efforts advanced many white ethnics into the middle class while often leaving blacks behind. Similarly, while deindustrialization and capital flight damaged the working class as a whole, racial minorities suffered disproportionately.

A great deal of the white resentment in the 1970s came from the realization that whites would have to give up these racial privileges. Rather than countering the divisive drift toward identity politics, Novak exacerbated it by urging whites to reclaim their ethnic selves and avoid confronting how they profited from racial inequality.

Novak predicted, and perhaps hastened, the rightward turn of white ethnics, and the book

hints at his own conservatism. Blue-collar whites felt threatened by the New Left and turned to the politics of conservatives such as George Wallace, Richard Nixon, and Ronald Reagan. Novak claimed that big government had undermined the family and the neighborhood, the institutions most sacred to white ethnics. He called for a return to a “politics of smallness” and chastised Democrats for believing that government could always cure injustice. Liberalism, already on the ropes due to radical dissenters, the Vietnam War, and racial polarization, was now being abandoned by people soon to be known as Reagan Democrats.

The book had a lasting effect on multiculturalism, though Novak later repudiated this link. His assertion that people aware of their own identities and backgrounds were more willing and capable to engage others became axiomatic in diversity training. Novak’s calls to acknowledge the divergent ethnicities of European Americans also contributed to changes in the census, as the U.S. Census Bureau added an “ancestry” question in 1980.

It emerged in the mid-1950s as a dominant cultural force, both in the United States and globally, through the first decade of the 21st century. The origins of rock and roll were multicultural, drawing heavily from African American, Anglo American, and Mexican musical practices.

Most historical narratives of rock and roll’s early history focus on the dual influence of country music and rhythm and blues. Since the early 1920s, southern vernacular music had been marketed primarily to white (hillbilly, and later country and western) and black (race, and later rhythm and blues) audiences. Yet, musicians and audiences gravitated to musical practices, regardless of race-based marketing strategies, and many musicians and songs moved freely between black and white communities, despite the social practice of segregation and its impact on the publishing, recording, and radio industries.

This was especially true by the late 1940s, when rhythm and blues recordings by Big Joe Turner, Ruth Brown, and others—produced and distributed primarily by independent record labels—began to garner the attention of teenagers listening to black radio stations around the United States. By the mid-1950s, white radio stations—led by such disc jockeys as Dewey Phillips (WMBB, Memphis) and Alan Freed (WJW, Cleveland, and WINS, New York), among others—were programming rhythm and blues with greater frequency, promulgating rhythm and blues and early rock and roll to a much broader audience than the often low-powered black stations could reach. As the popularity of rhythm and blues increased during the mid- to late 1950s, major record labels responded to the youth market in two ways: obtaining the contracts of popular rhythm and blues and rock and roll musicians, and releasing “cover” versions of rhythm and blues songs by white artists, with the intent of drawing sales away from independent labels.

Great Diversity

The first generation of rock and roll musicians comprised a greater degree of ethnic and racial diversity than would be evident in rock music for decades to come. African American musicians, working within the broad array of styles categorized as rhythm and blues, dominated the early rock and roll consciousness as such musicians

Rock Music and Ethnic Diversity

One of the most influential musical practices of the second half of the 20th century, rock music was forged in the crucible of multicultural exchange.

as the Platters, Little Richard, Chuck Berry, and Chubby Checker dominated radio playlists, achieved crossover success in the pop charts, and appeared in early rock and roll films and television programs.

Similarly, white rockabilly musicians hailing from the Memphis area, including most notably Elvis Presley, Jerry Lee Lewis, and Carl Perkins, dominated the pop and rhythm and blues charts during the second half of the 1950s, while other rockabilly musicians enjoyed great regional success. Still more white artists, who were associated primarily with mainstream pop music, crossed over into the rhythm and blues charts with great frequency in the late 1950s. Early rock and roll was also greatly influenced by the work of Jewish songwriters, producers, and session musicians, including songwriting team Jerry Lieber and Mike Stoller, and session bassist Carol Kaye. Similarly, Latin American influences can be heard in the underlying rhythmic pulses of much early rock and roll. Mexican American artists promoting early rock and roll included Pacoima, California's Ritchie Valens (1941–59), who scored five national singles on the Del-Fi Records label, including “Donna” and “La Bamba,” the latter of which was based on a traditional Mexican *huapango*. Valens's career was, however, short-lived, as he perished in a plane crash with Buddy Holly and J. P. “Big Bopper” Richardson at the age of 18.

Target for Persecution

In light of its multicultural influences, rock and roll was a target for white supremacists and others who opposed efforts to integrate the public sphere during the 1950s. In the American south, leaders of the Ku Klux Klan used racist rhetoric to connect the music with immoral and savage behavior, and pro-segregationist Citizens' Councils protested at rock concerts in cities throughout the region, arguing that rock and roll promoted integration. Such responses were not exclusively southern; rather, racially motivated outrage has been documented as far away as California and Massachusetts. White reaction to rock and roll was not uniform, however, and the widespread celebration of the music by white teenagers across the United States likely amplified parental concerns about the influence of African American culture on their children.

These concerns were expressed on the national stage during the “payola scandal” of 1959–60, when the Federal Trade Commission, the U.S. House of Representatives, and a federal grand jury investigated complaints—led by the American Society of Composers, Authors, and Publishers (ASCAP), a performing rights organization that was losing market share to Broadcast Music, Inc. (BMI), the performing rights organization that represented most rock and roll songwriters—that used the specter of communist infiltration of American youth to reveal a complex system of bribes and corruption in the promotion and broadcast of rock and roll music.

Rock radio in the 1960s was no less ethnically diverse than it was in the 1950s. Although national charts and publications were increasingly dominated by white artists in the 1960s,

White rockabilly musician Elvis Presley is regarded as one of the most important rock musicians of the 20th century. His voice was extremely versatile, encompassing success in many genres, including country, pop, gospel, and blues.

local music scenes fostered ethnic diversity in rock music. Several studies have documented the predominance of Latino-influenced garage rock music in mid-1960s San Antonio, the “eastside” or “Chicano” sound of such Los Angeles bands as Thee Midnites, The Village Callers, and Cannibal and the Headhunters, and the soul- and Afro-Caribbean-influenced boogaloo popular among the Nuyorican community.

Contemporary Rock and Roll

Despite the prevalence of local communities of ethnically diverse rock musicians across the United States and the international stardom of such musicians as Jimi Hendrix and Carlos Santana, rock music was increasingly cast as a predominantly white male activity by the late 1960s. By the mid-1980s and 1990s, however, African American and Hispanic rock musicians increasingly created rock music that was infused with racial and ethnic markers. Los Lobos, a Los Angeles-based band formed in 1973, performed with southern California punk bands for several years before its debut major-label release, *How Will the Wolf Survive?* reached national airwaves with songs blending *norteño* and rock sounds and discussing the experiences of illegal immigrants. It scored a number-one hit with its version of Valens’s “La Bamba” in 1987.

Similarly, as Josh Kun describes, the Mexican-born *rock en español* movement began to take root in the United States, first with Mexican immigrants, and by the 2000s with subsequent generations of Chicano/as. Finally, Maureen Mahon has documented the work of the Black Rock Coalition, which included such national touring acts as Living Colour and Me’Shell Ndegé-Ocello, to create a “postliberated black aesthetic” in rock music in the last decades of the 20th century. More recently, “gypsy punk” bands comprising members from eastern Europe and Israel based in New York—including especially Balkan Beat Box and Gogol Bordello—have drawn international attention for their efforts to express anxieties about post-Soviet and Jewish identity by appropriating Roma, Jewish, and punk iconography and musical practices.

Although rock music’s dominance in radio airplay and record sales has diminished in the past two decades following the national ascendancy of

hip-hop, rock music continues to be an important medium through which musicians and audiences articulate ethnic identities through music.

Rocky

The film *Rocky* encapsulates the American dream: With hard work, anyone can become a success. Rocky Balboa, the “Italian Stallion,” represents the experience of Italian immigrants who come to America in the hope of building a better life but come up against mounting obstacles. Although the film was overwhelmingly popular with American audiences, the cultural elite dismissed the film and its fans. The struggle over the placement of the Rocky statue highlights issues of class, ethnicity, and cultural elitism.

Rocky Balboa is an underdog club fighter who works for a loan shark, Tommy Gazzo. Rocky represents the majority of America's working-class immigrant citizens. In Philadelphia, Italian immigrants populate South Philadelphia, Bella Vista, Girard Estates, Marconi Plaza, Packer Park, and the Italian Market area. According to the 2010 census, Italian Americans compose over 50,000 households in Philadelphia. Rocky lives in a cramped Philadelphia apartment, surrounded by relics of a career that never took off.

In the movie, the current heavyweight champion is an African American named Apollo Creed. He is looking for a public relations gesture to enhance his image. For the national bicentennial, why not give some local a shot at the heavyweight title? Apollo plans on boxing a few rounds with an unknown contender, giving him a shot at the title, only to knock him out before the evening news. Flipping through a local Philadelphia boxing book, he eyes Rocky, nicknamed the "Italian Stallion," and immediately knows that he has found his patsy.

Out-of-shape Rocky is seen huffing and puffing as he attempts to jog the stairs of the Philadelphia Museum of Art. Rocky trains intensely, running, lifting, and sparring. Undergirded by Bill Conti's inspirational score, the training montage crescendos with Rocky racing up the Philly stairs with a rising sense of hope. During the fight, Rocky gives Apollo Creed more of a challenge than expected. In the end, both men look ravaged, and the decision comes down from the judges: one for Rocky and two for Apollo. Although the technical win goes to Apollo, the audience understands that merely going the distance with the champ was a victory.

The plot of *Rocky* closely mirrors the life of the man who wrote it. Sylvester Stallone was a bit actor and screenwriter who for two years attempted to break into Hollywood with little success. Living with his family in a small West Hollywood apartment, Stallone struggled to pay his bills. While watching television, Stallone saw a boxing match between Muhammad Ali and an underdog club fighter from New Jersey, Chuck Wepner. Everyone was surprised to see this small-time fighter go the distance with the champ, even though he lost by a split decision. Stallone reportedly cranked out the *Rocky* screenplay in only three days.

Steadfast Stallone

Irwin Winkler and Robert Chartoff liked the story and agreed to pay the near-starving Stallone \$75,000 for the rights to make it as a small-budget film. Stallone, contrary to their wishes, insisted on playing the lead. Winkler and Chartoff wanted to buy the rights to the script outright, and cast a recognized actor such as Burt Reynolds as its lead. Stallone remained steadfast until United Artist agreed. Because of the low budget of the film, Stallone recruited his father, brother, and wife to play minor roles; even the family dog, Butkus, was brought in. The film was shot in 28 days and came in under its \$1 million budget.

On opening day, Winkler and Chartoff read Vincent Canby's film review in the *New York Times*: "sentimental little slum movie . . . [with] an unconvincing actor." The rags to riches story stirred audience emotions and inspired people to fight for their dreams. *Rocky* became the highest-grossing film of 1976, earning over \$225 million. Rocky was nominated for 10 Academy Awards in nine categories, winning three: Best Picture, Best Director, and Best Film Editing. Sylvester Stallone became the third person in Oscar history to be nominated in a single year as both an actor and a screenwriter. The film turned Stallone into a major star and spawned five sequels: *Rocky II*, *III*, *IV*, *V*, and *Rocky Balboa*. Winkler and Chartoff framed Canby's review, which hangs next to their 1976 Academy Award.

Cultural Icon

The famous scene of Rocky running up the steps of the Philadelphia Museum of Art has become a cultural icon. In 1982, Sylvester Stallone donated the bronze statue of his Rocky Balboa character, with arms raised in victory, to the city of Philadelphia. Placement at the top of the "Rocky Steps" of the museum seemed like a natural location. A controversy ensued, which lasted 20 years, between the city's cultural elite and the heavily immigrant citizenry over the location of the statue and the definition of art. Moe Brooker declared that the statue was not art, it was a movie prop. As a member of the six-person Arts Commission, Brooker derided the statue's artistic merit. Against popular support from the citizens of Philadelphia, academics insisted that only they had the training to identify true art. Several

individuals retorted that the museum contained an assortment of cultural pieces, deemed by the Arts Commission to be art, including Duchamp's urinal. In 2006, the statue was relocated to the right side of the museum.

Today, the film is recognized as a classic. In 2006, the Library of Congress selected *Rocky* for preservation in the U.S. National Film Registry as a film that is culturally, historically, and aesthetically significant. That same year, the Writer's Guild of America selected Stallone's original screenplay as one of the top 100 best screenplays of all time. In 2008, the American Film Institute released a poll ranking *Rocky* as one of the 10 best sports films in history.

Roles, Social and Cultural

In his play *As You Like It*, William Shakespeare wrote that "All the world's a stage, and all the men and women merely players: They have their exits, and their entrances, and one man in his time plays many parts." These words highlight the essence of social role theory, an approach to understanding human behavior that is based on the metaphor of a play. This theory proposes that people learn to act in accordance with social expectations, and that these social expectations are set by membership in different social categories, such as gender, age, ethnicity, and/or

religious affiliations. Roles that shape behavioral expectations may be general, such as acting "like a man" or "like a woman," but can also be more nuanced, such as acting "like a mother" or acting "like a teacher."

Importantly, people have many different roles throughout their lives, and even at the same time. Thus, a person may simultaneously understand herself as a woman, a daughter, a mother, an employee, a friend, an athlete, a political moderate, and so on. Each social role comes with its own set of expected behaviors that people learn to abide by. These expectations are termed social norms; they are the unwritten rules about how people are expected to act given their role(s) in society. Social norms are reinforced through a process of social sanctions and rewards, usually described as socialization. Failure to conform to the behaviors expected of one's role can lead to stigmatization and social exclusion, whereas adherence to one's role brings positive social rewards. For example, if a little boy hurts himself and cries, his parents might say "Stop that! Boys don't cry" (a sanction), whereas a little girl who hurts herself and cries might get cuddles and kisses (a reward).

Gender Roles

Gender roles are a set of societal expectations placed on boys and men and girls and women based on the biological sex category they were born into. Sociologists describe gender as a "master status," referring to the extent to which one's gender role is salient in virtually every social context. Sociologists draw on the concept of "doing gender" to describe how gendered behaviors and roles must be constantly performed in order to be socially accepted. Belonging to a certain gender may also shape expectations for how to behave as a member of a certain cultural or ethnic group.

Notably, the behaviors expected of men and women have varied substantially across cultures and across the history of the United States. The nuclear family model that was common in middle- and upper-class white families in the 1950s is often referred to as a model of the "traditional gender roles" that modern gender expectations are compared to. In this traditional model, women are expected to assume all responsibilities

A 19th-century caricature by Honoré Daumier titled *A Female Author Neglecting her Family*. Gender role beliefs that men were more suited to earning a living while women should remain tied to the duties of the home persisted well into the 20th century.

within the “private sphere” of the family home, such as cleaning, cooking, and child rearing, and are expected to be less assertive, more nurturing, and less independent than men. In contrast, men are expected to be the breadwinner of the family and to take charge in the “public sphere” and dictate political matters. Men are traditionally expected to be financially responsible, strong, assertive, less emotional, and less emotionally expressive than women.

Although many people appreciate the way that traditional gender roles assign responsibilities in a seemingly straightforward manner, these traditional gender roles have also been critiqued for contributing to gender inequality and sexism; in the traditional model described above, women are taught to be less powerful than men. Luckily, gender roles have changed substantially over time, with most adult women now actively

participating in the workforce, and most men contributing more in the home than was common in the 1950s. These contemporary gender roles offer greater flexibility for both men and women to pursue different paths.

Cultural Roles

Cultural roles refer specifically to societal expectations of behavior based on cultural group memberships. For example, membership in a particular religion can be an important component of one’s cultural roles. For example, as part of their roles within a religion, priests in the Catholic Church are expected to be celibate, and Muslim women are expected to wear hijabs.

Membership in an ethnic group is another form of cultural group membership. Gender roles differ across ethnic groups. In contrast to the 1950s (white, middle-class) housewife, for women to work outside the home has been a necessity for working-class African American families for many generations. This necessity shapes gender expectations; compared to white men, black men are historically more supportive of mothers and wives working outside the home. African American women have also been stereotyped as having traits that contradict traditional notions of women’s roles, such as displaying greater strength, independence, and directness. Compared to white women, African Americans are more likely to be directly involved in caretaking of immediate and extended kin, to live in multigenerational households, to be single mothers, and to be caring for nonrelated children or grandchildren. Thus, the roles expected of women differ in some ways between African Americans and whites because this role intersects differently with marital roles, generational roles, parenting roles, and work roles.

Another frequent focus of interest has been gender roles within Latino American families. The label *Latino American* encompasses a wide range of ethnic cultures and thus it is impossible to make generalizations across all of these groups. Yet, it has been proposed that there are stronger separations of roles between men and women in Latino cultures, sometimes referred to as machismo and marianismo. The concept of machismo suggests that men should be dominant, virile, and independent. This machismo can lead

men to be protective of their families and to work hard for their families, but can also lead to controlling behaviors within the family.

The concept of *marianismo* suggests that women are expected to be passive, nurturing, and submissive to men. Within these cultures, women strongly define their roles in terms of what they are contributing to the family and direct child rearing. Despite the prevalence of the *machismo* versus *marianismo* stereotypes, the extent to which there is actual adherence to these roles is a matter of substantial debate.

Social Roles and Intercultural Communication

Perceptions of the proper social roles of speakers and listeners can also vary across gender roles and ethnic groups. Depending on one's social roles, people are expected to communicate in certain ways. For example, women are generally expected to speak more quietly and less directly than men. However, as demonstrated above, different cultures conceptualize social roles differently, which leads to cultural differences in communication.

Within the mainstream U.S. culture, the social role of the speaker in a conversation is to state a point while making eye contact and nonverbally engaging with the listener. The listener is expected to not interrupt the speaker, listen intently, and make an effort not to negate the speaker. Once the speaker has completely finished, the listener is then permitted to speak. This mode of communication is referred to as linear. However, the expectations of the speaker and listener have been found to be different across racial/ethnic groups.

For example, some studies suggest that African Americans tend to have a more dynamic mode of communication, where the listener is permitted to interrupt because interrupting the speaker conveys engagement, interest, and understanding.

The differing expectations of the social role of speaker versus listener can lead to misunderstandings and occasional conflicts during inter-ethnic interactions. For example, a Euro-American speaker may feel that an African American listener is violating his/her role as a polite listener if they interrupt them, whereas an African American speaker may feel that Euro-Americans

are not demonstrating interest if they do not interrupt!

Another interesting case involves differences in expectations or nonverbal communication. Within some Asian American ethnic communities, younger individuals are expected to avoid eye contact with an older speaker, as a sign of deference and respect, whereas a non-Asian American speaker may misinterpret a lack of eye contact as a show of disrespect or disinterest. Thus, when the different ethnic social role expectations of "speaker" and "listener" interact across cultures, we are bound to find cultural misunderstandings. And yet, when individuals are exposed to many cultures, they may learn and understand the variety of roles that are normative in different social contexts.

Roma Americans

Roma Americans (or Romani Americans) are a diverse group of people with a common history, heritage, and language (Romani) that is traced back to northern India in the 11th century. Gradually, over the following centuries, the Roma spread westward throughout all parts of Europe, adapting to and adopting from the peoples around whom they lived, all the while retaining a degree of cultural distinctiveness. In English, the Roma have popularly, though inaccurately, been called Gypsies, a name originating from a belief in their Egyptian origins. Modern linguistic, genetic, historical, and cultural studies have disproven this story of origin. Today, Roma or Romani is their preferred name, because of the inaccurate stereotypes the term *Gypsy* implies.

Although it is likely that some Roma were brought to the Americas in the 16th through 18th

centuries from a variety of European locations as servants, enslaved people, and convicts, the first verifiable wave of Roma immigration to the United States began in the 1840s and 1850s. They mainly arrived in family groups from Great Britain. More immigrated in the 1870s and 1880s, and another wave came in the early 20th century. These Roma immigrants tended to arrive from southern and eastern Europe. After 1970, increasing Roma immigration occurred from the communist countries of eastern Europe. Roma Americans have come to the United States from nearly every nation in Europe.

Early Roma immigrants listed such diverse occupations as farmer, laborer, showman, animal trainer, horse trader, musician, and coppersmith, among others, to census takers. In the 19th century Roma American men tended to pursue such nomadic European occupations, while women often practiced fortune telling. As the car replaced

After a first wave of Roma immigration to the United States in the 1840s and 1850s, another group began arriving in the 1870s and 1880s. More currently, a wave of Roma immigration has taken place since the 1989 collapse of Communism in eastern Europe. This portrait of a Roma family and their camp was likely taken near Bethesda, Maryland, in 1888.

the horse, men shifted to such work as selling and repairing cars and metalworking. Mobility has been a key trait of Roma culture, and although some Roma Americans travel or move as urban migrants in search of employment, others are no less sedentary than non-Roma Americans.

Roma have suffered extreme persecution throughout European history, including enslavement and deportation. Anti-Roma laws were the norm, and prejudice has continued through the 20th century—most deadly during the Holocaust, when 1 million Roma may have been killed. Such discrimination has likely caused increased immigration to the United States, although Roma have also emigrated for the same reasons as the non-Roma around them. In the United States as well, Roma have frequently experienced discrimination based on perceived stereotypes about them, as well as their traditional culture.

For example, laws against fortune telling or special licensing requirements in the United States have targeted Roma people. Today, Roma Americans, like the international Roma population, are becoming more politically active and better organized as they struggle to achieve their civil and human rights.

Roma Americans are a very diverse group, yet they retain a sense that they are one people. Roma have historically possessed a strong group identity, yet simultaneously adapted to the surrounding culture. They tend to maintain an exclusionary culture, likely both a cause and effect of the discrimination they have faced based on stereotypes created by the ignorance of non-Roma people. At the same time, some American Roma have exploited these stereotypes to their benefit as performers; however, the stereotype of the Gypsy as dangerous and a thief has caused more harmful results.

Although Roma social life tends to be inward-looking toward other Roma, economic life tends to center around non-Roma. Traditional Roma taboos separate not only Roma from non-Roma (*gadže*), but also contamination from purity. Despite this, each Roma group has picked up aspects of the *gadže* cultures they have lived among over the past several hundred years. Their diverse geographical history has created the different cultural characteristics between each Roma group that has come to the United States. Some

of these groups include the Romniels from Great Britain; the Ludar from Romania; the Rom—subdivided as Kalderash, Lovari, and Machvaya—from across eastern Europe; the Sinti from Germany and Italy; the Baschalde from Slovakia and Hungary; the Romungre from Hungary and Transylvania; the Horchanay from the South Balkans; and the Kale (or Gitano) from Spain. Because each of these groups had its own long history before immigration to the United States, even though they are all considered Roma Americans and share much linguistically, culturally, and historically, they are also very different from each other and have continued to consider themselves as distinct groups after their arrival in the United States. Despite this, there has recently been an increasing sense of a common identity, often fostered through the shared experience of organizing against discrimination.

Because Roma Americans have immigrated to the United States from a variety of different nations, and because most census and immigration records have recorded only nationality (and not ethnicity), their numbers are very hard to know for certain. Estimates on Roma Americans range from 500,000 to 1 million. Most Roma Americans live in the nation's biggest cities, where the greatest economic opportunities exist. Roma Americans practice many different religions, usually based on the version of Christianity common in their country of origin, but fundamentalist Christian denominations have been growing in popularity among them. Many Roma do not admit their ethnicity to non-Roma, and many non-Roma in the United States are unaware that there is an American Roma population. Americans rarely realize how Roma cultures differ from the stereotypes of the Gypsy.

Romanian Americans

Although immigration from Romania was numerically insignificant before the 20th century, it grew steadily after World War II. Whereas the Immigration Act of 1924 set a quota of 603 Romanians admitted annually, U.S. Census data after World War II shows a population of over 100,000 people of Romanian ancestry living in the United States after 1945. More recently, the 2010 Census identified 338,997 people of Romanian ancestry living in the United States today, (approximately 0.12 percent of the U.S. population), with the highest population densities in Michigan, Illinois, Oregon, Washington, New York, Ohio, Arizona, New Jersey, Florida, and California.

History of Romanian Immigration

Although there were immigrants from Romania before the 1870s, they were few and not well documented. However, two Romanians in particular were recognized for their service in the Civil War: Captain Nicolae Dunca, who fought for the Ninth New York Volunteers, and General Gheorghe Pomutz, who fought with the Fifteenth Iowa Volunteer Regiment and was promoted to the rank of brigadier general (the only Romanian in this rank to date). Between 1870 and 1900, approximately 18,000 immigrants listed Romania as their country of origin. Before 1895, most immigrants from Romania to the United States and Canada were Romanian Jews from occupied provinces, such as Bessarabia (under Russian occupation) and Bukovina (under Austrian occupation). By 1924, when Congress enacted a new immigration act, about one-third of all European Jews had resettled in America; it is estimated that approximately 50,000 Romanian Jews had immigrated to the United States before 1929. Besides Jews, other Romanian nationals who immigrated included Hungarians, Germans, Armenians, and Gypsies.

The reasons for immigration ranged from religious and ethnic persecution, to economic

hardship and the search for new economic, social, and political opportunities. Before 1895, many of the Romanian immigrants were tradesmen, who tended to immigrate with their families. After 1895, unskilled workers and peasants started to immigrate to the United States, especially from Transylvania, although Macedonian Romanians from Turkey, northern Greece, and Albania soon joined in. However, about two-thirds of the Romanian immigrants returned home during the first two decades of the 20th century. After World War II, the Displaced Persons Act made possible the immigration of Romanian refugees, and an estimated 10,000 people came to the United States.

Between World War II and 1989, immigration from Romania was caused by political circumstances, such as the occupation of Romania by Soviet troops, the Hungarian Revolution, and the heightening of restrictions during Nicolae Ceausescu's last decade of dictatorship in the 1980s. Political persecution and dissidence also motivated the immigration of political refugees and intellectuals. After 1989, the Immigration Act of 1990 and its Diversity Visa program also facilitated the immigration of Romanians to the United States. In addition to social and economic opportunities, educational opportunities have motivated the immigration of Romanians in recent decades.

Romanian American Culture

The social, economic, and political life of Romanian Americans has oscillated between reliance on local and regional organizations (like the boardinghouse or the mutual aid society) and the entrepreneurial spirit. Small entrepreneurs of Romanian origin owned immigrant banks, restaurants, saloons, and pool houses; after 1920, many Romanians joined the skilled labor market and upward mobility followed economic success. Various levels of assimilation into the host country marked several generations of Romanians in the United States, from an early-20th-century reliance on community and religious organizations, to subsequent migrations to urban and suburban areas, to nearly complete assimilation of the third and fourth generations. Besides the boardinghouse and the mutual benefit society, the Romanian Orthodox Church in the United States offered spiritual and material support. In addition to the Romanian Orthodox faith, religious

allegiance was divided between Roman Catholicism, Protestantism, and Judaism.

Over 35 Romanian newspapers, weeklies, and monthlies were published in the United States as early as 1905. *The Romanian* and *America* were the most influential Romanian newspapers, with large readerships and prominent literary contributors from the old country. Some of the most accomplished Romanian writers and historians contributed to *America* from across the Atlantic Ocean, including Nicolae Iorga, Liviu Rebreanu, Cezar Petrescu, Ioan Slavici, Victor Eftimiu, and Lucian Blaga. A number of other Romanian newspapers were published in the United States after 1912, as well as humor magazines written in Romanian and, during the 1920s, Romanian newspapers espousing radical political opinions. More recent journals (*Orizont Romanesc/Romanian Horizon* and the *Romanian American Review*) have addressed popular, literary, and scholarly audiences.

Notable Romanian Americans in the 20th and 21st centuries include Elie Wiesel, a Nobel Peace Prize-winning author; Mircea Eliade, a professor at the University of Chicago and a renowned historian of religions; George Emile Palade, a biologist and winner of the Nobel Prize in Physiology or Medicine; actor Edward G. Robinson (who changed his name from Emanuel Goldenberg); director and screenwriter Jean Negulesco; and writer, journalist, and political commentator Marcus E. Ravage.

The list of more recent notable Romanian Americans includes gymnast Nadia Comaneci; National Public Radio contributor and writer Andrei Codrescu; writers Norman Manea, Dorin Tudoran, and Nina Cassian; literary critics Marcel Cornis-Pope, Matei Calinescu, Virgil Nemoianu, and Christian Moraru; political scientist Vladimir Tismaneanu; and director and theater professor Andrei Serban.

Roots

Alex Haley's extensive 12-year research into his family genealogy produced the epic novel *Roots: The Saga of an American Family* (1976) and inspired the 1977 television miniseries of the same name. Winner of the Pulitzer Prize and National Book Award, the narrative spans 200 years and six generations, originating with Haley's male progenitor, Kunta Kinte, who Haley determined was born in Juffure, Gambia, in 1750. As a child in Henning, Tennessee, Alexander "Alex" Murray Palmer Haley (1921–92) often heard his grandmother recount fragments of their family story. The "carefully preserved" oral tradition that enabled pieces of his family history to be passed down from generation to generation foreshadowed the *griot* (historian or storyteller) whom he would eventually meet in Gambia, West Africa. The majestic narrative of this senior griot finally linked Haley's grandmother's stories to a specific forebear in the village of Juffure, Gambia, of the Kinte family.

In the process of uncovering his family history—a journey that took him to three continents and countless libraries and archives—and piecing together a narrative from his maternal line, Haley was keenly aware that his genealogical narrative would represent the "symbolic saga of the African American people." Thus, Haley conducted his research with the knowledge that the story of Kunta Kinte and his descendants in the United States embodied, to a certain extent, the story of all black Americans.

Not only did the mammoth book his research produced initiate national dialogue around heritage, history, and the painful wounds of slavery, but it also modeled a method for genealogical research, especially for Americans of African descent. No longer would black Americans futilely yearn for and dispiritedly accept an “erased” African past and lost maternal language. Haley’s narrative demonstrated the possibility of recovering an African ancestral family history, down to the very village of origin. Thus, Haley’s ambitious undertaking reclaimed an African past for the millions of Africans “exiled” in America. On a practical level, the research documented in the final chapters of the book also outlined a framework for genealogical searches that made finding one’s “roots” an essential component of black identity formation.

Given the huge swath of history the narrative covers, Haley decidedly emphasized Kunta Kinte’s complex and fulfilling life in Gambia before captivity. Although Kinte was kidnapped and enslaved as a teenage boy when he was chopping wood to build a drum, his story does not begin there. Refusing to start the narrative of his family history at the moment of his African ancestor’s capture, Haley instead devotes a considerable section of the book to Kinte’s life of freedom in Gambia before captivity and the terrors of the Middle Passage. This attention to the pre-captivity Africa years and Kinte’s fierce resistance once enslaved in the New World suggests how rich a history the “Kintes” of America’s racial past experienced in their homeland. Haley seems to refute early-20th-century scholars who lamented the absence of “Africanisms” for black Americans in the United States.

Criticism and Controversy

The main criticism leveled against *Roots* was that the novel distorted reality at best, and represented Haley’s attempt to pass off a fake as original at worse. Critics argued that the book blurred the line between fact and fiction, therefore disqualifying it as a “true” history based solely on historical facts. If anything, it should be classified, the argument continued, as a fictional multi-generational (auto)biography. Novelist Harold Courlander, author of numerous books on Africans, Americans, and Indians, including *The African* (1967), filed a lawsuit in the federal district court in New

York in 1978, claiming that Haley had plagiarized 81 passages from his book. In addition to the copied paragraphs, Courlander alleged that Haley copied his plot, characters, ideas, situations, and language in a general sense. Haley denied reading *The African* before writing *Roots*. Although the two authors reached a financial settlement out of court, the allegations of scholarly dishonesty tarnished for many readers the redeeming qualities of *Roots*. Some of Haley’s harshest critics, like the judge in the trial, called Haley’s work a “hoax.”

After reiterating his rigorous research methods, including multiple library searches, visits to archives, and other repositories, Haley addressed the fact-versus-fiction question directly in his last chapter, when he wrote: “Since I wasn’t around when most of the story occurred, by far most of the dialogue and most of the incidents are of necessity a novelized amalgam of what I know took place together with what my researching let me to plausibly feel took place.” Regarding the question of plagiarism, Haley defended himself by admitting that research assistants gave him the passages, and their appropriation was unintentional. Although allegations and doubts regarding the veracity of Haley’s claims surged after its publication, most strongly in the 10 years following its release, the compelling family narrative continued to capture the American imagination.

Roots Televised

For many Americans, the televised miniseries, *Roots*, started a national discussion around this shameful and painful moment in history and the deep contradiction on which the United States was founded. Considered the “television event of the year,” the multigenerational family saga became an instant classic and cultural touchstone. Executive producer David L. Wolper convinced ABC to approve the 12-hour miniseries, although it originally only wanted it to conform to the standard 2.5-hour format. The final production—written for television by William Blinn and Ernest Kinoy, and directed by David Greene—aired over several weeks in January 1977 in the United States and was eventually exported to countries worldwide.

Most people knew of the startling, sometimes horrific scenes of the film, even if they had not watched the miniseries in its entirety. Perhaps the

most infamous scene from the television miniseries is the one in which the pernicious slave driver forces Kunta Kinte, played by Levar Burton, to abandon his African name and accept his subjugation and renaming as Toby. The incessant questioning, “What’s your name?,” followed by the lash of the whip, imprinted itself onto the American psyche. The torture of Kinte and his forced renaming relate to Haley’s first book, *The Autobiography of Malcolm X* (1965), in which he dedicates substantial narrative space to explaining Malcolm’s renunciation of his “slave name” and its substitution with the letter “X.”

The visual idioms established in crucial scenes in the *Roots* miniseries, from the Middle Passage scenes in the foul bowels of the slave ship to the slave auction, the renaming, and relentless whippings at the hand of the diabolical slave driver, became the common imagery of slavery for the American public and the international audience. In his “Dedication,” Haley notes that *Roots* was published in the bicentennial year of the United States. This was a propitious coincidence as the experiences of the memorable cast of characters—Kunta, Bell, Kizzy, Fidder, Chicken George, and others—force the reader to reexamine the monstrous alongside the hopeful, a juxtaposition that reflects the American story. Despite the controversies around the validity of *Roots* as a historical book, both the iconic text and the provocative miniseries it spawned indelibly changed the way Americans, and readers and viewers around the world, imagined slavery and its legacy in the United States.

Russian Americans

Beginning with the first wave of Russian immigration to the United States in the 1880s and 1890s, Russian Americans have created vibrant communities in cities throughout the United States, especially in the northeast, the midwest, and along the Pacific coast. The term *Russian American* can refer to diverse groups, including migrants from territory formerly controlled by the Russian Empire and the Soviet Union as well as from Russia proper. According the 2010 Census, over 3.1 million Americans are Russian or of Russian descent.

Russia’s Colony

In the 1700s and 1800s, the Russian Empire created a colony based on the fur trade in the North American Pacific Rim. Although the Russian migrants numbered only in the hundreds, Russia’s colonial mission made an impression that lasted long after the Russians sold Alaska to the United States in 1867. Russian fur traders intermarried with native peoples. Their children, termed *Creoles* by the Russian Empire, both tied Russian migrants to the colonies and provided a source of labor for the Russian American Company, which oversaw the colony. From 1812 to 1847, the Russians operated Fort Ross, in California, to help supply their territories further north. Russians brought their language, culture, and religion to the region, making a conscious effort to spread Orthodox Christianity to the indigenous inhabitants. Many indigenous people continue to view Orthodoxy as their native religion.

The First Wave of Migration

Migrants from the Russian Empire began coming to the United States in much larger numbers in the 1880s and 1890s. During the wave of immigration from Russia that lasted until the beginning of World War I, approximately 3.2 million Russians entered the United States. Since the census listed immigrants by their country of origin, about half of those counted as Russian were actually Russian Jews fleeing religious persecution and searching for economic opportunity denied to them in Russia. After the death of Tsar Alexander II in 1881, pogroms, religiously motivated violence sanctioned by the state, forced Jews from their

homes in the Pale of Settlement, territory in Eastern Europe where they had to live.

These immigrants tended to come as family groups with the intention of making the United States their permanent home. They settled in major cities in the northeast and midwest, often working in the garment industry. New York City's Lower East Side was the most famous of these Jewish immigrant communities. Other immigrant groups classified as Russian included Ukrainians, Belarusians, and Poles, since their territory belonged to the Russian Empire. The Russian Revolution of 1905 inspired the migration of political dissidents as well as Jews who had tried to adapt to Russian society by speaking Russian instead of Yiddish and studying secular subjects.

In 1914, World War I cut off migration from Europe across the Atlantic, but migration from Russia continued to the west coast. California's Angel Island served as the point of entry for those who made their way to the United States by crossing Asia. In the 1890s and early 1900s, religious nonconformists, including Baptists, Doukhobors or Old Believers, and Molokans, began emigrating in search of religious freedom. Both the Molokans, or "milk drinkers," and the Doukhobors were persecuted in Russia for their pacifism. Although most of the 5,000 Molokans who settled in California entered through other ports, several hundred passed through Angel Island. During World War I, Russian Jews and others seeking to avoid military service and discrimination in the Russian Army also tried to immigrate to the west coast.

The Russian Revolution and Soviet Union

The October 1917 Bolshevik Revolution in Russia, which brought the Communists to power, and the ensuing civil war led to another wave of migration. Opponents of the Bolshevik takeover fled Russia, often by traveling through China and Japan. These migrants were more likely to belong to the middle and upper classes, but in the United States they faced difficulties, including a language barrier, that forced them to take jobs as laborers.

Growing concern over the spread of radicalism in the United States after the Russian Revolution led American officials to watch for Russian radicals trying to infiltrate the country by posing as refugees. The government arrested members of radical organizations including the Union of Russian Workers,

the Communist Party, and the Communist Labor Party. Although raids on radical organizations affected many immigrant groups from eastern and southern Europe, the government sometimes mistakenly classified arrestees as Russian. Also known as the Palmer Raids, the campaign disrupted Russian immigrant community life.

In the 1920s, the Soviet Union tried to gain greater control of its borders, closing off emigration. However, émigrés continued to flee Russia for the United States in smaller numbers. In the decade following World War II, 20,000 Russians classified as displaced persons entered the United States.

During the Cold War, the number of Russian immigrants increased and decreased for a variety of reasons, such as Russian–American relations and economic conditions. Beginning in the 1970s, the Soviet Union permitted Russian Jews to leave in larger numbers. Some non-Jews successfully posed as Jewish émigrés to escape. In the 1980s and after the collapse of the Soviet Union, their numbers continued to grow, reaching over 100,000 by the 1990s.

Russian Americans have established communities in the northeast, most notably in New York City's Brighton Beach neighborhood. Although many of the Russian Americans living in New York City, New Jersey, and Philadelphia have Jewish roots, these newer migrants speak Russian as their native language and often lack strong religious ties. Fears of organized crime rings and the development of a Russian mafia operating in these neighborhoods spread during the 1990s. Jewish organizations as well as government-sponsored programs have aided Russian Americans' adjustment to American life. Despite the language barrier, many Russian immigrants had access to higher education and held professional jobs before migrating and have since used these skills to become upwardly mobile in America.

S

Salvadoran Americans

El Salvador, the smallest country in Central America, is sometimes referred to as a nation of emigrants. It is estimated that as many as 20 percent of Salvadorans reside in the United States. Salvadorans have been present in the United States since the early 20th century; however, until the 1980s, they formed a relatively small group. The numbers climbed drastically after thousands of immigrants arrived, fleeing the civil war of 1980–92. The U.S. census data reflect this substantial increase—between 1980 and 1990, the foreign-born population from El Salvador grew nearly fivefold, from 94,400 to 465,400. In 2010, over 60 percent of Salvadoran immigrants had arrived after 1990 because of chain migration and environmental disasters in El Salvador.

In 2010, the Salvadoran population formed the fourth-largest Hispanic/Latino community in the United States (3.3 percent), behind Mexicans, Puerto Ricans, and Cubans. In 2000–10, it was also one of the fastest-growing groups, increasing by over 150 percent (from 655,000 to 1.6 million). Since large-scale immigration is a recent phenomenon, more than 60 percent of Salvadorans in the United States are foreign-born. However, because of the obstacles to the legalization of their status, the proportion of naturalized U.S. citizens among Salvadorans has been low (28 percent in 2010).

Although their communities are scattered all over the country, almost eight in 10 Salvadorans settled in the west and the south, mainly in California (35 percent) and Texas (13 percent). Los Angeles County is home to the largest Salvadoran community (22 percent). They also form large enclaves in the District of Columbia, where they form the largest Hispanic group, Chicago, and New York.

Immigration Since 1979

The brutal civil war in El Salvador, waged between the U.S.-supported right-wing government and the left-wing Farabundo Martí National Liberation Front (FMLN), took a devastating toll of 70,000 to 75,000 casualties (approximately 1.5 percent of the population), mostly civilians killed by the army or death squads. Another consequence of the war was a soaring number of displaced people and refugees. In total, more than one million people (over 20 percent of the population) fled the country, while over half a million were internally displaced.

As the Ronald Reagan administration refrained from categorizing Salvadoran immigrants as “political refugees,” but rather called them “economic immigrants” (overpopulation, poverty, and unemployment were cited as important factors), they were liable for deportation. This gave rise to the sanctuary movement, which sought to provide

the immigrants with shelter, transport, and legal advice. Although in the 1980s, Salvadorans constituted the largest group of asylum applicants in the United States (25 percent), only a small proportion was given asylum (2–3 percent), and the deportation rate was very high (approximately 26,300 in 1981–89). In 1989, over 136,000 eligible Salvadorans (i.e., those residing in the United States before January 1, 1982) adjusted their status under the Immigration Reform and Control Act (IRCA).

In 1990, thanks to the struggle of immigrants' rights groups, eligible Salvadorans were granted temporary protected status (TPS). At the same time, the settlement in *American Baptist Churches v. Thornburgh* (known as the ABC case) dictated the reopening of the rejected applications for asylum by Salvadorans and Guatemalans, and

encouraged others to apply. Upon the expiration of TPS, Salvadorans were granted deferred enforced departure (DED), which was later extended until they could reapply for asylum. The strict 1996 immigration law changes, the Antiterrorism and Effective Death Penalty Act (AEDPA) and Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA), made it more difficult for ABC class members to obtain permanent residency, while leading to the deportation of thousands of convicted felons on the newly broadened felony grounds for deportation of non-citizens. However, the Nicaraguan Adjustment and Central American Relief Act (NACARA) of 1997 exempted eligible Salvadorans from some provisions of IIRIRA. In 2001, Salvadorans were again granted TPS after El

Salvadoran migration to the United States brought Salvadoran cuisine to the country as well. Pupusas, thick handmade corn tortillas, are available wherever Salvadoran communities are found. Salvadoran restaurants called pupuserias have sprung up across the country, where pupusas are sold and made. This restaurant is located in Riverbend, New Orleans.

Salvador was hit by earthquakes, and about 212,000 people benefited.

Salvadorans in U.S. Society and Politics

Racially, Salvadorans are a mostly mixed-origin group. In 2010, half of them reported “some other race” (the biggest share among the Hispanic or Latino population), while 40 percent did so as “white.” They form a tight, mostly Catholic community that seeks to preserve its culture, while traditional rituals and celebrations remain important. Since Salvadorans in the United States are mostly foreign-born immigrants, in 2010, as few as one in 10 spoke only English at home; nevertheless, nearly half reported speaking English proficiently.

The Salvadoran contribution to U.S. society and culture has been growing. Authors include Mario Bencastro (novelist) and Rubén Martínez (author and Emmy Award-winning journalist). Dagoberto Reyes’s sculpture *Porque emigramos/ Why We Immigrate* (1993) stands in MacArthur Park in Los Angeles. Salvadorans are also among actors and actresses (e.g., Maurice Bernard, Emmy Award winner), musicians (e.g., Alvaro Torres, singer and 1994 BMI Songwriter of the Year; and T-Bone, Christian rapper, Grammy nominee, and GMA Dove Award winner), and sportspeople (Rosie Casals, tennis player; and Hugo Pérez, former U.S. national soccer team player). In fashion, Christy Turlington, a renowned model (e.g., for Versace and Calvin Klein) is of Salvadoran origin.

Salvadorans have not yet constituted a significant political force in the United States. However, their high concentration, as well as increasing participation in social and political life, may bring important changes. Salvadorans have been elected as officials at county and state levels, for example Ana Sol Gutierrez (Maryland State delegate), while Emanuel Pleitez was a 2013 candidate for Los Angeles mayor. Salvadoran American activists and advocates (such as Saul Solórzano, who died in 2011) have been active in building the community and helping its members to participate in American society. Numerous organizations, such as El Rescate (founded in Los Angeles in 1981), offer Salvadorans social or legal assistance.

In 2012, the national campaign for permanent residence for Central Americans holding TPS was

launched as a joint effort of such organizations as the Central American Resource Center (originally the Central American Refugee Center, established in 1981, CARECEN-DC and CARECEN-LA); the Salvadoran Humanitarian Aid, Research and Education Foundation (SHARE, Berkeley); Centro Romero (Chicago); and the Salvadoran American Leadership and Educational Fund (SALEF, Los Angeles). At the local level, the organizations offer various programs. SALEF, for example, also provides scholarships to students who want to pursue higher education, regardless of their immigration status.

The community is often associated with organized crime, as many of the gangs that originated in Los Angeles were formed by Salvadorans (Mara Salvatrucha, MS-13) or recruit Salvadorans. Because potential gang involvement poses a real threat to youth, some organizations and programs provide mentorship and work to prevent gang involvement. For example, the Los Angeles-based Homies Unidos, founded by Salvadoran Alex Sanchez, also helps former gang members reintegrate into their communities.

In 2010, Salvadorans were almost half as likely as Hispanics as a whole to have at least a bachelor’s degree (7 percent, as compared to 13 percent). Nevertheless, their income is slightly higher than that of all U.S. Hispanics, and the poverty level is lower. A majority of Salvadoran Americans work in service, production, transportation, sales, construction, and maintenance; and only one in 10 works in management, business, science, or the arts.

Samoan Americans

Samoan Americans are American citizens who are from Western Samoa (Independent State of Samoa) or American Samoa, or who have Samoan ancestry. Samoan Americans are the second-largest Pacific Islander group in the United States, second only to native Hawaiians. The Samoan archipelago of 15 inhabited islands is divided into two countries. American Samoa comprises the eastern islands, including Tutuila, home to Pago Pago, the capital. Native-born residents of American Samoa are U.S. nationals; they cannot vote in presidential elections and do not pay income tax, although immigration to the rest of the United States is much easier for American nationals than for people of other countries. Western Samoa or the Independent State of Samoa comprises the western islands in the archipelago, four of which are inhabited. Western Samoa is an independent country and is a member of the British Commonwealth. Its population is about 182,000—a little less than the number of Samoans living off the archipelago.

Like other Pacific Islanders—notably, Native Hawaiians—Samoan Americans arrived in the United States to be agricultural and factory workers in the mid-20th century. Honolulu, Hawai'i, and Long Beach, California, have the largest Samoan communities outside Samoa; Samoan Americans make up about one-third of the population of Long Beach. The Seattle-Tacoma area also has a generous Samoan American community and is home to the First Samoan Christian Congregational Church. There are approximately 184,400 Samoan Americans; this figure comes from the 2010 census and includes those of partial Samoan ancestry. Large numbers of Samoans also live in New Zealand, from which Samoans gained independence. Despite emigration from the Samoan archipelago, Samoan Americans and others of Samoan descent continue to share a unique culture that is strong inside and outside the homeland.

History and Immigration

The Samoan archipelago islands were colonized between 500 and 800 B.C.E. by the Lapita, an oceanic people who came from Indo-Malaysia via coastal New Guinea. These people also colonized Tonga, and together with Samoa and French Polynesia, these island nations formed the roots of Polynesian culture. Later settlers went from Samoa and Tonga to Tahiti, Hawai'i, and the Marquesas. Early explorers found Samoa to be populated with people who were expert shipbuilders. Explorer Louis Antoine de Bougainville came to Samoa in the 1700s; when he arrived, Samoans met his ship in their boats and brought what were most likely cocoa nuts and the root used in the making of kava; these gifts constituted a *sua*, a ceremonial sign of respect toward travelers.

These same offerings were given to explorer La Perouse in 1778. His expedition was ill fated, and 11 members of his crew were eventually killed by Samoans after the French explorers shot and killed a Samoan for allegedly trying to steal an iron bolt. This report was verified by a missionary who also reported that the French hoisted a Samoan up to a mast by his thumbs as punishment for petty thievery. However, the French role in these affairs was glossed over, and the Samoans gained a reputation for being brutish and violent. In the 1820s and 1830s, missionaries arrived in Samoa and Tonga. John Williams, their leader, received permission from the Samoan chief to leave missionaries in Samoa; two years later, a Christian faith flourished in Samoa. The highest chief agreed with the missionaries that he would avail himself of their educational opportunities. Soon thereafter, a version of the Bible was produced in Samoan.

These religious influences had an almost immediate impact and caused profound changes in Samoan culture. Samoans forfeited their religious beliefs and changed their cultural practices in significant ways; notably, warfare became frowned upon by Samoans, as did polygamy, abortion, and existing traditional clothing norms. In the 1830s, the United States began to explore the Samoan archipelago. Samoan and American co-involvement was established and quickly deepened with this contact. The geopolitical influence of Samoa was boosted by its proximity to fertile whaling grounds and the top-notch harbor of Pago Pago.

Tensions rose between the original colonists (from New Zealand), the new American arrivals, and the Germans who also sought control of the area. Eventually, these conflicts led to the division of the islands into east and west, as they are today. Samoan immigration to the United States, Australia, and New Zealand increased during the 1950s. Samoan students, soldiers, and seminarians fostered the relocations and offered support to later Samoan immigrants.

Samoan American Culture

Samoan Americans served as soldiers for the United States during the Korean conflict and the Vietnam War; their bravery and sacrifice were notable. Samoan Americans began to excel in sports and made a number of major contributions on the field. Samoans such as Governors Peter Coleman and A. P. Lutali proved influential in the formation of U.S. Pacific Rim policy. However, large numbers of Samoan American immigrants found work only as unskilled laborers and used government benefits. Samoan Americans experience prejudice and racism. This is heightened by a lack of proficiency with English that many Samoan Americans face.

Traditional Samoan diets consist of rice or taro, fresh fish, fruit, and sometimes meat. In recent years, even the diet on Samoa has become Westernized. This adoption of a high-fat diet, along with an often sedentary lifestyle, is behind the high incidence of obesity, cardiovascular illness and diabetes among Samoan Americans. Traditional Samoan healing practices include the use of local herbs by healing professionals. Samoan traditionalist healers practice in Samoan American communities. In general, Samoans and Samoan Americans accept and believe in Western medicine, but traditional healers are also still used, primarily to deal with diseases that are tied to social problems.

In Samoa, full-body tattoos applied by traditional means are common. This painful process is thought to help men appreciate the pain of childbirth. This is another example of the Samoan perception of a connectedness between physical ailments and experiences, and spiritual realities. Samoan Americans celebrate standard American holidays, as do Samoans. Christmas and Easter tend to be of the most importance in Samoan American communities. Samoans also celebrate

“White Sunday” on the second Sunday in October. On this holiday, childhood is celebrated by the entire community, and this is the one day on which children will be served first at the table, rather than their elders. Samoan Americans continue to celebrate White Sunday in their U.S. communities.

The Samoan language is a sort of Polynesian dialect. The language has three levels of formality for different uses; Common Samoan is used for everyday matters, Respect Samoan is used in more formal communication between people of different social ranks, and Rhetorical Samoan is the source of literature and intellectual communication. Most Samoan Americans speak some Samoan. Samoan Americans continue to maintain traditional Samoan family values in the United States. All members of the community are expected to honor, serve, and support their extended families, particularly their elders. For Samoan Americans, family pride is cultural pride, and breaking either familial or cultural rules can bring shame to the entire family.

These strong feelings of duty toward family members often result in Samoan Americans sending large portions of their earnings home to Samoa. These foreign earnings make up a large portion of the Samoan economy, particularly for Western Samoa. As Samoan Americans slowly assimilate, however, there is concern in Samoa about this support continuing. Education is valued in Samoa and by Samoan Americans. Many seek education in the United States and New Zealand. Common Samoan American majors at college include the social sciences and education.

Current Issues

Perhaps the best-known Samoan American today is Dwayne Douglas Johnson, better known as “The Rock.” Johnson was a college football player and went on to become one of the most successful professional wrestlers of all time. The Rock, in more recent years, has become an actor with a large following. Al Noga is a professional football player and has played for the Minnesota Vikings and the Washington Redskins. Mavis Rivers was a noted jazz vocalist in the United States, who entertained troops as a singer when she was a girl and went on to record albums for Capitol Records and Reprise.

Because “Pacific Islander” has become a U.S. census category, there is hope for greater attention to and funding for uniquely Samoan American problems, such as health issues. Samoan Americans are becoming increasingly assimilated into American life, and this leaves the economic future of especially Western Samoa in question. Historically, when Samoan Americans resisted assimilation, they remained closely tied to the island. They would often work in the continental United States to save up money, then return home or send money back for family. However, as Samoan Americans assimilate more, they bring their families with them to the mainland and are much less likely to return home. This results in a “brain drain” and lowered foreign investment and other funds in Western Samoa.

San Jacinto, Battle of

Following Mexican independence in 1821, the new government sought means of boosting the national economy. One region that appeared ripe for agricultural expansion was the state of Coahuila y Tejas, which, though rich in land, remained quite small in population. To increase the populace and promote economic activity, Mexico sought to attract Americans to the area, requiring that they become Mexican citizens and abide by Mexican law. Under these provisions, Stephen F. Austin established a colony of about 300 Americans along the Brazos River in January 1823. Over time, more immigrants arrived, attracted by

free or very inexpensive land. A survey conducted by Colonel Juan Almonte in 1834 estimated the population of Texas at about 36,000, including 15,000 Indians, 15,400 Texians (Anglo Americans), 3,600 Tejanos, and 2,000 people of African heritage. The last of these groups proved to be a growing problem because Mexican law prohibited slavery, but immigrant owners of enslaved people insisted on bringing these people with them.

History

In 1835, President Antonio López de Santa Anna Pérez de Lebrón, a veteran of the Mexican War of Independence, abolished the Constitution of 1824, disbanded the congress, and assumed dictatorial powers. Anglo settlers generally opposed this move, as did a number of the Tejanos. Hostilities broke out in October 1835 when rebels captured the Mexican positions at La Bahía and San Antonio de Béxar. The rebels forced Mexican troops out of the state, declared their independence, and proceeded to form a provisional government. As news of the outbreak spread, American volunteers began to arrive, mostly from the south, to fight for Texas independence with the long-term motive of seeing it enter the Union as a new state where slavery would be legal.

Responding to the rebellion, in early 1836 Santa Anna ordered some 6,100 troops with 20 artillery pieces to subjugate the province, divided into two columns. General José Urrea led one force north through the coastal region, while Santa Anna took command of the other column aimed at restoring Mexican authority in San Antonio de Béxar and the surrounding area. On March 6, following a 13-day siege, Santa Anna ordered an assault that overran the Alamo, offering no quarter to the defenders and executing a few who managed to survive the initial attack. Later that same month, Urrea accepted the surrender of more than 350 rebels at Goliad, after which the unarmed prisoners were slaughtered.

While Mexican forces pacified the regions around Goliad and San Antonio, politicians in Washington-on-the-Brazos debated the future of Texas, and not a few launched critical attacks on General Sam Houston, whose ill-trained army retreated eastward. Although ordered to fight, Houston knew his command would be no match for Santa Anna’s army. Overconfident in the face

of Houston's continuing retreat, the Mexican commander split his wing of the army into three main columns in an attempt to trap the Texans. Houston retreated to a position near the San Jacinto River, where skirmishes with Mexican patrols began on April 20. Santa Anna went into camp with some 1,300 men and prepared to rest his troops before continuing the pursuit.

Sensing an opportunity to catch Santa Anna by surprise before his army reunited, Houston ordered a late afternoon assault on April 21, even though his army of 910 was outnumbered. Santa Anna failed to post sufficient pickets and scouts, allowing his force to be surprised. His army attempted to form, but the swift attack overwhelmed the unprepared soldiers within a few minutes, with most sources agreeing that the battle lasted less than a half hour. Houston's troops suffered from nine killed and 30 wounded, while Santa Anna's force was mauled with some 630 killed and 730 captured, of whom 208 were wounded.

Santa Anna was captured attempting to escape dressed as a common soldier. As a condition of his release, he was forced to sign an agreement to withdraw Mexican forces from Texas and support the cause of Texas independence once back in Mexico. Although the Mexican government disavowed the agreement and continued to claim Texas, it did nothing further to subdue the wayward state. Several nations recognized Texas as independent; however, Texans who favored admission to the United States were disappointed because of northern opposition to the admission of another slave state. As a result, Texas existed as an independent republic for eight years until its admission to the Union in 1845 sparked the Mexican-American War.

Conclusion

The Battle of San Jacinto, which led to Texan independence, led ultimately to the inclusion in the United States of a large area that brought with it significant Spanish and Mexican culture, the addition of new cuisine, and additions to American English of such words as adobe, plaza, patio, lariat (*la reata*), ranch (*rancho*), empresario, villa, and loco. The popular song "The Yellow Rose of Texas" is said to have been originally written about a mulatto woman named Emily Morgan who was rumored to have distracted Santa Anna's

attention in the hours leading up to the surprise assault. In commemoration of the engagement, in April each year, a San Jacinto Day Festival is held at the San Jacinto Battleground State Historic Site, and another celebration is held in San Antonio.

San Pascual, Battle of

The Battle of San Pascual was fought near the present-day city of Escondido on December 6, 1846, during the Mexican-American War. General Stephen Watts Kearny led the U.S. forces against a group of Californios under the command of General Andres Pico. Californios were Mexican residents of California, rebelling against U.S. attempts to control the territory. It is one of the bloodiest and most well known of the California battles, and debates over the outcome have continued into the present. Today, the site is home to the San Pascual Battlefield State Historic Park.

President James Polk sent the U.S. Army, 1st U.S. Dragoons, under Kearny, also known as the Army of the West, out of Fort Leavenworth, Kansas, to march to California. Kearny had arrived in California after first occupying Santa Fe and claiming New Mexico for the United States, declaring himself military governor on August 18. Kearny's forces comprised both civilians and soldiers, including dragoons, engineers, and renowned western guides Antoine Robidoux and Jean Charbonneau. Their instructions were

to militarily take control of California from its Hispanic occupants, the Californios, claim it for the United States, and establish a civilian government, as had been done in New Mexico.

Kearny's men left New Mexico for San Diego on September 25. On October 6, western guide Kit Carson met Kearny en route and delivered word that Commodore Robert Stockton and Colonel John Frémont had gained control of California for the United States. Kearny continued toward San Diego but ordered most of his men to return to Santa Fe. Kearny would later learn that a Californio rebellion in southern California had forced the Americans to retreat to San Diego. He sent word of his arrival in California ahead to Stockton.

Stockton sent Kearny a small volunteer escort under Captain Archibald Gillespie and informed Kearny of a nearby force of approximately 150 Californios under General Andres Pico. Kearny decided to reconnoiter Pico's camp in preparation for an attack. Lieutenant Thomas Hammond led the reconnoitering group, which conflicting reports varied at three, six, or 11 dragoons. Californio deserter Rafael Machado led the party to a nearby Indian camp, whose members shared knowledge of Pico's position. The noise made by Hammond's men, however, alerted Pico's men to the Americans' presence.

The Attack

Kearny decided to launch an immediate attack on Pico's Californio forces, despite the late midnight hour, cold temperature, and exhaustion of both men and mounts. Kearny's forces became stretched out as they crossed a ridge between Santa Maria and San Pascual, as their mounts traveled at varying rates. Fighting broke out when a group of Kearny's forces prematurely charged the Californios, even though the main body of American forces was a considerable distance away. After a skirmish and Californio retreat, a group of Americans pursued and charged the Californios. The Americans were surrounded, and several officers were killed. Kearny arrived but was quickly wounded. The Californios then withdrew from the battlefield.

The battle lasted less than an hour but resulted in heavy casualties. American casualty estimates ranged from 17 to 21 dead and from 18 to over 30 wounded, including General Kearny Captains

Warner, Gillespie, and Gibson and Antoine Robidoux. General Pico reported one casualty and 12 wounded, but scholars believe the figure to be higher. The San Pascual Battlefield State Historic Park marks the site, which hosts an annual re-enactment as well as monthly living history activities.

After the Battle of San Pascual, the two sides met in other minor skirmishes as the American forces broke camp and sought to make their way to San Diego. Kearny's men were forced to take defensive positions at several points. Stockton sent a relief force under Lieutenant Gray out of San Diego, while Kearny held Mule Hill until the relief arrived on December 11. Kearny and his remaining men reached San Diego the following day. Kearny's southwestern campaign earned him a promotion for his performance, but later scholars felt that the Battle of San Pascual was both costly to the U.S. forces and unnecessary. The Mexican-American War ended in 1848 with the Treaty of Guadalupe Hidalgo ceding large tracts of Mexican land to the United States.

Both leaders claimed victory in the engagement. Kearny and his supporters claimed victory because he held the battlefield and, later, Mule Hill. Pico and his men, however, had proven better equipped and more effective. General Kearny, like many of his soldiers, had felt a cultural and military superiority over their Hispanic Californio opponents. Scholars have since criticized Kearny for his underestimation and lack of knowledge of the enemy combatants and their abilities, as well as his discounting of the poor quality of the American mounts, cold temperature, and weak condition of his men after their lengthy march.

Sanctuary Movement

Born in the early 1980s, the Sanctuary Movement was a grassroots solidarity movement that, through immediate help in the form of transport, shelter, or legal assistance, responded to the emergency situation of Central American refugees in the United States (mainly Salvadorans and Guatemalans). It grew out of a religious commitment to pursue social justice and solidarity; at the same time, it was protesting U.S. foreign policy toward the region. The movement is often regarded as one of the most important acts of civil disobedience in the United States since the 1960s.

Historical Background

The civil wars in Guatemala, Nicaragua, and El Salvador (1974–96) brought an unprecedented scale of violence that resulted in the deaths of over 250,000 people, including Archbishop of El Salvador Oscar Romero, assassinated in 1980. Central American conflicts forced hundreds of thousands of people to leave their homes in search of refuge either in other parts of their countries or abroad. It is estimated that over 2 million settled in Mexico, Canada, and the United States, mostly as unauthorized immigrants.

Although the U.S. Refugee Act of 1980 gave all those fearing persecution in their home country a right to apply for asylum, the applicants from “enemy” communist/socialist countries were favored, while those fleeing right-wing U.S.-supported regimes were usually denied asylum. Categorized as “economic immigrants,” they were, if apprehended, liable for deportation. Salvadorans and Guatemalans were thus discriminated against, as opposed to Nicaraguans, which was reflected in the asylum application approval rates.

The Development of the Movement

The Sanctuary Movement started as a mostly local interfaith initiative. It was born in Tucson, Arizona, thanks to several people of different religious denominations (such as Quaker Jim

Corbett, Catholic Frather Ricardo Elford, and Presbyterian Reverend John Fife), with the help of local immigration-rights group the Manzo Area Council and the Tucson Ecumenical Council.

Embracing the Judeo-Christian tradition and the ancient practice of sanctuary, as well as following the examples of similar initiatives in the past (such as the 19th-century Underground Railroad and the sanctuary given to those escaping the draft during the Vietnam War), the movement soon expanded into a nationwide network. Sanctuary Movement activists justified their actions as the free exercise of religion guaranteed by the First Amendment to the Constitution but also claimed that the U.S. government was violating national as well as international law.

One of the first activists was Jim Corbett, a Quaker rancher from Tucson, who in the summer of 1981, moved by the personal experience of a friend, started his struggle to bail out as many Salvadorans as possible from the Immigration and Naturalization Service (INS) detention centers, initially accommodating them in his house. Deeply disturbed by the way the administration handled Salvadorans, which often violated their rights, he soon established a network of people willing to assist the immigrants and help them cross the U.S.-Mexico border.

The first church to officially offer sanctuary to undocumented immigrants was Southside Presbyterian Church in Tucson. Reverend John Fife initially obtained the consent of the congregation’s elders to shelter the refugees in the church building, and then the church approved the idea of publicly declaring sanctuary. On March 24, 1982—the second anniversary of Archbishop Romero’s death—Fife publically opened the church for the immigrants and hung out two banners in Spanish (“This is the Sanctuary of God for the Oppressed of Central America” and “INS: Don’t profane the sanctuary”). The event, which can be considered the formal beginning of the movement, gained much media interest. Several other churches also agreed to provide sanctuary.

The movement grew steadily during the following years to include about 70,000 people in 34 states. It took the form of a loose network of faith-based communities, human rights activists, and organizations. In total, about 500 churches

and congregations participated (Quakers, Presbyterians, Roman Catholics, Baptists, Episcopalians, Methodists, Mennonites, Jews, and so on). Some congregations, such as Roman Catholics, were, however, divided on the issue. At least one state (New Mexico) and over 20 cities also symbolically declared sanctuary. Sanctuary workers also operated in Canada and Mexico.

The movement was not homogeneous, and different groups developed various strategies. The Arizona network focused on humanitarian assistance, whereas the Chicago Religious Task Force, which had helped establish the network of sanctuaries, targeted the U.S. policy by attracting public attention to the refugee problem through public appearances of refugees, marches, demonstrations, and caravans. The Arizona and Chicago groups also disagreed on which groups to assist and whether sanctuary was civil disobedience or civil initiative.

As it acted in violation of law, the movement soon came under surveillance. In one case, the undercover Operation Sojourner (1985) led to the indictment of 16 activists (including Corbett and Fife) for conspiracy and smuggling illegal immigrants. Eleven of them faced trial; eight, including Fife, were found guilty and put on probation.

The movement gained national and international attention and contributed to the changing of the refugees' legal status. The *American Baptist Churches v. Thornburgh* lawsuit, filed in 1985, charged that Salvadorans and Guatemalans were discriminated against in the asylum process. The settlement in 1990 dictated the reopening of the rejected asylum applications by these nationals and encouraged others to apply. Earlier in 1990, thanks to the struggles of various immigrants' rights groups, eligible Salvadorans were granted temporary protected status. By 1993, the movement gradually came to an end; however, the struggle for the legalization of Salvadorans continued.

The New Sanctuary Movement

Recently, a new sanctuary movement has developed across the United States. As in the 1980s, it is a network of individuals, congregations, and organizations that stand against family separations through deportations.

Sand Creek Massacre

The Sand Creek Massacre occurred on November 29, 1864, when members of the Colorado militia attacked a friendly Cheyenne and Arapaho encampment, killing over 130 people, mostly women and children. It is remembered as one of the worst atrocities of the Indian Wars.

Background to the Massacre

In 1851, the United States, the Cheyenne, and the Arapaho (along with several other Indian nations) signed the Fort Laramie Treaty, which recognized the claims of the various signatory Indian nations to a vast territory in what is now the Southern Plains. However, the discovery of mineral wealth in the conceded territory, as well as the increased demand for agricultural land by American citizens and newly arrived European immigrants, put an unbearable strain upon the treaty. In response, several Cheyenne and Arapaho chiefs agreed to sign the Treaty of Fort Wise in 1861, which greatly reduced their claims to the territory conceded in the earlier treaty. Not all of their fellow Cheyenne and Arapaho chiefs approved of the new treaty, and the decentralized nature of Native American political structures meant that these chiefs did not feel bound to honor the 1861 agreement. Thus, although some

Cheyenne and Arapaho bands on the Southern Plains accepted the new limited territory spelled out by the Treaty of Fort Wise, not all did so.

As flocks of settlers and gold rush participants flooded the Southern Plains, groups of Cheyenne and Arapaho warriors who did not hold to the Treaty of Fort Wise attacked in retaliation. U.S. military forces responded, and a series of skirmishes broke out throughout the region. Cheyenne and Arapaho warriors, like most Native American warriors, avoided direct, large-scale confrontations, preferring hit-and-run raids before disappearing back into the surrounding landscape they knew so well. The greater difficulty, however, was that it was incredibly difficult, if not impossible, to determine which bands of Indian warriors were friendly and which were not. In order to resolve this issue, military officials instructed friendly bands to camp near military forts in order to identify themselves as friendly and avoid military reprisals.

The Massacre

Black Kettle, one of the signers of the Treaty of Fort Wise, decided to move his band of Cheyenne and accompanying Arapaho closer to nearby Fort Lyon in a gesture of peace and to reaffirm his people's friendly status. His people set up camp near the Sand Creek riverbed. He flew an American flag in the midst of his camp, an action military officials had assured him would mean he would not be attacked. With no obvious threat to the camp at hand, most of the men headed out to hunt nearby buffalo. Meanwhile, Colonel John M. Chivington and 700 members of the Colorado militia set out from Fort Lyon. Chivington was under immense pressure from the governor of Colorado to utilize his militia forces before their terms ended at the end of the year. So far, Chivington and his men had seen little to no action in the Indian Wars, and they probably were greatly frustrated by that fact. Chivington soon came across the Sand Creek encampment and decided to attack, despite the obvious signs that the encampment was friendly. After purportedly drinking heavily the night of November 28, Chivington's men attacked early the next morning.

The Aftermath and Legacy of the Massacre

The attack was devastating. Some survivors managed to hide in holes dug in the sandy riverbank,

but over 130 Indians were killed, mainly women and children. Chivington's men scalped and mutilated most of the dead, taking various body parts as war trophies and displaying them for a time back in Denver. Several skulls were sent to the Smithsonian Institution for further study and were not returned to their home communities until the late 20th century.

Chivington enjoyed a temporary hero's status, but his reputation soon plummeted during congressional investigations into the massacre. He escaped formal punishment from the military only by resigning his commission. Black Kettle continued to try to seek peace, only to experience continual disappointment because of the duplicity of government and military officials, as well as the anger and retaliation of his fellow Cheyenne. Only a year after signing yet a third treaty with the United States that guaranteed peace for his people (the Treaty of Medicine Lodge in 1867), Black Kettle and his wife were shot in the back and killed while fleeing an attack on their village led by George C. Custer.

The Sand Creek Massacre remains a shocking example of the tragedy and inhumanity of the United States' treatment of indigenous peoples. Today, the site of the massacre is a National Historic Landmark.

Sanford and Son

Though not the first television program to feature African American family interactions, *Sanford*

and Son marked the beginning of an era in television history that combined a newfound cultural diversity with entertainment that crossed racial and ethnic boundaries. Along with *The Jeffersons* and *Good Times*, *Sanford and Son* brought a slice of African American life into American homes in the 1970s, all the while raising the bar for high-quality television entertainment. A weekly program focusing on an aging man and his son, *Sanford and Son* was often provocative, sometimes poignant, and always funny.

A Shift in the Landscape

The civil rights movement that jolted the nation in the 1950s and 1960s resulted in very different, and much more diverse, prime-time television fare. No longer would the small screen be solely dominated by all-white casts, as seen in such programs as *Leave It to Beaver*, *The Donna Reed Show*, and *My Three Sons*. Just as Sidney Poitier had changed the face of cinema during the 1960s, it was time for multiculturalism to emerge in American television programming. While patriarch George Jefferson of *The Jeffersons* would strut and vaunt his nouveau riche lifestyle, the grittier side of life for many African American families had yet to be portrayed properly in situation comedy format. (*Good Times* would accomplish this, but not for another two years after the debut of *Sanford and Son*.) Finally, in 1972, with a bold idea and a legend in the starring role, NBC producer Norman Lear (of *All in the Family* fame) brought *Sanford and Son* into Americans' homes.

"Family" Redefined

Although Lear made the show possible, few would disagree that the star and selling point of *Sanford and Son* was the incomparable and irrepressible Redd Foxx. Foxx, already a successful comedian in the predominantly African American comedy clubs along the so-called Chitlin' Circuit, brought unmatched charisma and comedic timing to *Sanford and Son*'s protagonist, Fred G. Sanford (the character was known for his hilarious habit of insisting on including the "G." each and every time his name was brought up). At 65 years of age, the character was a widower and junk dealer living with his son, Lamont (played by Demond Wilson) in a poor section of Los Angeles. Painting a realistic picture of ghetto life, the show featured

a father-and-son family that bickered and bantered but undeniably cared about each other. The extended family included such memorable characters as Aunt Esther, Grady, Bubba, and Rollo, to name a few. While these were not all blood relatives, they nonetheless redefined the meaning of the term *family* in a way that had not been seen on American television before.

A New Level of Diversity

Just as groundbreaking as *Sanford and Son*'s realistic depiction of struggling African American life was its cast's unprecedented ethnic diversity. One example of this was Noriyuki "Pat" Morita (later of *Happy Days* and *Karate Kid* fame), who played Lamont's Japanese American friend; another was Gregory Sierra, who played Fred's Puerto Rican next-door neighbor. Although the irascible Fred was sometimes short-tempered with these characters, the show must be credited for its unflinching portrayal of intercultural relations, which had their ups and downs on *Sanford and Son* just as they did in real life.

Irrespective of Fred's personality shortcomings, *Sanford and Son* was among the first network sitcoms to reflect the nation's growing diversity. Even in the decades since the 1970s, few television programs have represented as many races and cultures as *Sanford and Son*. Consider the fact that according to 2010 U.S. Census data, from 2000 to 2010 there was a 12.3 percent increase in the percentage of the total U.S. population that was black or African American, a 43 percent increase in the portion of the population that was Hispanic or Latino, and a 43.3 percent increase in the percentage of the population that was Asian. Although subsequent sitcoms such as *The Cosby Show*, *Diff'rent Strokes*, and *Benson* have shown varying degrees of diversity, it is *Sanford and Son* that set the stage for true multiculturalism within the sitcom format.

A Lasting Impression

Although *Sanford and Son*'s run ended in 1977, its influence on the sitcom genre and on American intercultural relations has not diminished. Verbal barbs aside, Fred and the other characters populating the show were generally portrayed as decent, family-oriented people with struggles and emotions that were decidedly human. While

millions watched and enjoyed *Sanford and Son*, the program had the effect of holding a mirror to the viewers: Though certain characters might have been black or white or Latino or Asian, they were all just like the viewers. They were all Americans, and they represented a broad mix of races, cultures, and backgrounds. Thankfully, *Sanford and Son* was able to bring Americans together through dialogue, truth, and laughter. No doubt about it: Fred G. Sanford would have been proud.

Santa Clara Pueblo v. Martinez (1978)

The 1978 *Santa Clara Pueblo v. Martinez* Supreme Court case simultaneously reaffirmed

multicultural identities for tribal nations and disaffirmed multicultural identities for members of those nations. This case is about cultural identity, equal protection under the law, and dualism for Native Americans. The intersections of recognition, redistribution, and identity politics apparent in *Martinez* demonstrate the complexities of defining and redefining tribal groups. Examined in conjunction with 2010 U.S. Census data, *Martinez* illuminates the contradictions between these intersections of American multiculturalism.

Adjudicating or Restricting Rights

This case challenged the Santa Clara Pueblo Council's right to pass an ordinance defining who can be Santa Claran. Ms. Julia Martinez and her daughter Audrey claimed the ordinance disenfranchised them in violation of civil rights guaranteed in Title I of the Indian Civil Rights Act of 1968 (ICRA). The ordinance outlined four membership rules to determine who can become a Santa Claran: all children born of Santa Claran marriages, children of marriages between male members and nonmembers, not children of marriages between female members and nonmembers, and nobody naturalized as a Santa Claran. Ms. Martinez married outside the Santa Clara Pueblo, and her children were denied Santa Claran membership in accordance with these rules. The Martinezes challenged the ordinance, with specific regard to gender, claiming discrimination on the basis of sex and ancestry.

The case was first heard by the district court, where it was determined to be the appropriate forum or jurisdiction for the case. It found in favor of the Santa Clara Pueblo. The court of appeals heard the case next, agreeing on jurisdiction but disagreeing on the result, finding in favor of Martinez. Ultimately, the case went to the Supreme Court on November 29, 1977, and was decided on May 15, 1978. The Supreme Court disagreed with both lower courts regarding jurisdiction and did not judge the case.

The court found dual objectives in the ICRA, with provisions for strengthening both the position of tribal members and tribal self-determination. It determined it was not appropriate to judge the case because it would be interfering with a sovereign nation's right to self-government.

It concluded that Congress only provided for habeas corpus relief, in ICRA, not civil relief so tribal courts were the appropriate forums for judging disputes affecting personal and property interests; therefore, the Santa Clara Pueblo and only the Santa Clara Pueblo should decide who can be a member and who cannot. Noteworthy in the only dissenting opinion is the fact that the Pueblo court and lawmaking body are one and the same, so the Martinezes were left with no authority from which to make appeal.

Recognition and Redistribution

Almost 100 years before the *Martinez* case, the Indian General Allotment Act of 1887, or the Dawes Act, demonstrated the gendered preference for tribal male property owners by allowing males larger land allotments. Without membership, the Martinez children were denied the ability to represent their tribe or to enjoy allotments of property granted by the U.S. government. Permission to be a Santa Claran allows not only for recognition of cultural identity by the tribe but also for redistribution of inheritable wealth.

Subsequent acts have been passed, authorizing the Bureau of Indian Affairs (BIA) to determine Native American identity. To this day, the BIA requires Native Americans to submit their blood for testing in preparation of Certificate of Degree of Indian Blood forms. Native American cultural identity must be certified by blood and membership in a federally recognized tribe. These conflicting paradigms further illuminate the disenfranchisement of the Martinez children. Their blood is Pueblo, but they are not. At the time that *Martinez* was decided, there were 287 recognized tribal governments, including the Santa Clara Pueblo; in 2012, there were 566. Cultural identity remains a complex dualism for Native Americans, whether recognized as tribal members or not.

Identity Politics

Additional identity discrepancies are apparent in the 2010 U.S. Census. Beginning in 2000, individuals were permitted to self-identify with more than one race. From 2000 to 2010, persons identifying as only American Indian and Alaska Native grew by more than 18 percent. However, persons identifying as either only American Indian and

Alaskan Native or a combination of races grew by 27 percent. In 1978, the Santa Clara Pueblo included 1,200 members living on the reservation and 150 members living elsewhere. In 2010, 49,695 persons identified as only Pueblo and 62,540 people identified as part Pueblo.

The 2010 Census grouping for Pueblo includes Santa Clara and 15 other Pueblo tribes; in 2000, it included the Hopi as well. People self-identify when surveyed for the census, so no blood testing or proof of membership is needed. In contrast to the restriction on identity that *Martinez* failed to judge, one can find self-identified multicultural Pueblo living throughout the United States.

Trajectories for American Multiculturalism

Martinez discusses cultural identity, equal protection, and dualism for Native Americans, revealing possible future trajectories for American multiculturalism. Conceptual frameworks of recognition, redistribution, and identity politics demonstrate the complexities of defining tribal membership. If these frameworks are in concert, multiculturalism is realized, but if dual frameworks coexist for tribal identity and self-identity, multiculturalism is realized only as an answer to a survey question, without fulfillment of equality for all cultures. Finally, 34 years after *Martinez*, in 2012, the Santa Clara Pueblo voted to allow tribal membership to the children of Pueblo women and nonmembers. The new rules will be determined by the Tribal Council. In the future, there will be more Santa Clarans in America.

Santería

Santería is a syncretized Afro-Latino religion that blends elements of Roman Catholicism with traditional elements of various West African faiths. The name *Santería* loosely translates into Spanish as "the way of the saints." *Santería* is confined largely to Latin American societies that are home to sizable populations who have descended from slaves brought to the Spanish-speaking empire from the 16th through the 18th centuries, such as Cuba, Puerto Rico, the Dominican Republic, Panama, Colombia, and Venezuela. As a result of increased immigration from these regions, the number of *Santería* adherents in the United States has grown considerably over the past 40 years. An initiate undergoing the process of conversion to *Santería* is known as an *iyawó* or *yaguó*. The highest-ranking priests within *Santería* are known as *babalawos*, a position that is reserved exclusively for males. *Santería* is one of several syncretic religious practices stemming from the original Yoruba worship of *orishas* (spirits) and other West African beliefs to have emerged within the context of the transatlantic slave trade in the Americas; others include *candomblé*, *shango*, and *vodou* (voodoo). In a similar vein to Latin being the official language of the Roman Catholic Church, the Yoruban dialect *Lucumi* is the language used in *Santería* rituals.

Historical Overview and Theology

As the conquistadors exerted their colonial influence throughout the Spanish-speaking empire in the 16th and 17th centuries, plantation-based industries harvesting tobacco, sugarcane, cotton, and other goods became mainstays of the colonial economies. These labor-intensive industries resulted in the importation of large numbers of enslaved Africans as workers to meet production demands. The vast majority of slaves taken to the Spanish colonies were ethnic Yorubans from

present-day Nigeria and Benin; more than 1 million Africans were taken to Cuba alone between 1500 and 1800. Over the course of colonial history, the Spanish clergy was generally more tolerating of the animist and polytheistic beliefs of African and indigenous peoples than their Protestant counterparts in North America, thus permitting a hybridization of traditional West African and Roman Catholic religiosity.

Santería does not feature a centralized authority (such as the Vatican) or an official written canon or dogma; as such, *Santería* practices are largely passed down orally and specific practices and beliefs vary geographically. However, basic *Santería* theology consists of a belief in one supreme deity (named *Olodumare*) who communicates to humans through a variety of *orishas*, who are akin to Catholic saints. More than 400 *orishas* exist within *Santería*. In order to receive favors or protection from evils, *Santería* worshippers sacrifice the blood of animals as offerings to various *orishas*. These sacrificial rituals (known as *obé*) are accompanied by ceremonial dancing and drumming.

Francisco "Pancho" Mora, the first-known Cuban *santero* (a low-ranking *Santería* priest) to settle in the United States, arrived in New York City in 1946. However, it was not until the 1960s and 1970s that *Santería* began to enter the United States in significant numbers with the arrival of various waves of refugees from Cuba following Fidel Castro's Communist takeover. More than 450,000 Cubans fled to the United States between 1959 and 1975.

The Mariel boatlift of 1980 resulted in approximately 125,000 additional Cuban refugees, many of whom were of Afro-Cuban descent and less affluent than their fellow countrymen who entered during the prior two decades, settling primarily in southern Florida during the spring and summer of that year. Although official statistics on the religious affiliations of these newcomers do not exist, it is generally acknowledged that this influx contained a large portion of persons who practiced *Santería*.

Today, *Santería* is commonly practiced within Afro-Latino communities in Miami, New York City, and Los Angeles. In such communities, *botánicas* (akin to spiritual healing shops) selling religious statues, candles, oils, herbs and other

medicines, and other religious objects important within Santería have become commonplace. However, it is nearly impossible to determine the number of Santería worshippers in the United States today because the Census Bureau and the office of Citizenship and Immigration Services (CIS) do not ask individuals their religious identification.

Also, the stigma against Santería within the larger society may dissuade practitioners from openly disclosing their Santería beliefs. Nevertheless, the *Los Angeles Times* estimated the number of followers of Santería in the United States to range from 1 million to 5 million in 2005.

Throughout the years, Santería has entered both Latino and mainstream Anglo pop culture via references in music, television, and movies. During various episodes of *I Love Lucy*, the quintessential American sitcom of the 1950s, the character of Ricky Ricardo (portrayed by Cuban actor Desi Arnaz) played a drum while performing the Latin ballad “Babalú,” a reference to the orisha Babalú-ayé. Arnaz’s social impact cannot be overstated, as National Public Radio has declared that “When *I Love Lucy* appeared in 1951, mainstream America knew very little about Latino culture. Ricky Ricardo changed all that; his heavily accented English—and his rapid-fire Spanish—were as new to some parts of the country as TV itself.” Additionally, Latin salsa and mambo stars such as Tito Puente, Celia Cruz, Eddie Palmieri, and La India have incorporated Santería music into their own works.

Conflict and Controversy

Santería remains a mysterious religion to most Americans and is often portrayed as an “evil,” “dangerous,” or “satanic cult” practice in television and film. Santería’s incorporation of animal sacrifice as part of its rituals has led to fierce opposition among animal rights activists and confrontations with law enforcement in various communities across the nation.

In one high-profile case (*Lukumi Babalú Ayé, Inc. v. City of Hialeah*), the local government of Hialeah, Florida, responded to the opening of the Church of Lukumi Babalú Ayé in 1987 by implementing a series of ordinances that prohibited the killing of animals. In June 1993, the U.S. Supreme Court ruled unanimously that the City of Hialeah’s

ordinances violated the First Amendment’s constitutional guarantee of religious freedom and that the state cannot prohibit the sacrifice of animals as part of religiously mandated rituals.

In early January 2013, the decapitated bodies of a goat and three chickens washed up on the shore of South Beach (Miami) after being dumped into Biscayne Bay. Although not conclusively linked specifically to either Santería or vodou, the incident generated headlines throughout the nation and provoked outrage among opponents of both of these Afro-Caribbean religions. This controversy will likely intensify in the coming years as the number of santeros will probably increase as a result of immigration from the Caribbean, a desire among U.S.-born citizens of Caribbean heritage to reclaim their cultural roots, and as part of the “new age” religious movement among mainstream, middle-class whites who adopt the spirituality of alternative religious practices within the United States.

Saturday Night Fever

Saturday Night Fever, considered one of the best movies of its time and one of the favorite movies of film critics Gene Siskel and Pauline Kael, was a 1977 story about the disco subculture in Brooklyn. Directed by John Badham, who would go on to popularize hacking with 1983’s *WarGames*, the film starred John Travolta and cemented his

fame. The soundtrack, featuring the Bee Gees and the signature song “Stayin’ Alive,” is one of the best-selling movie soundtracks of all time. The single was used to help promote the film before its release, and the popularity of both movie and soundtrack solidified the relationship between popular music and movies—pioneered by *The Graduate*—and the economic value of cross-media marketing.

The Multicultural Disco Scene

Disco was a multicultural phenomenon. The music drew from funk and soul styles, Latin salsa music, and the AM rock popular in the suburbs, for an audience that was primarily black, Latino, or gay. The signature syncopated electric bass line was featured prominently alongside soaring (and often reverberated) vocals and the steady “four on the floor” bass drum beat. The first article about disco music and disco clubs appeared in the September 1973 issue of *Rolling Stone*, and WPIX-FM in New York City aired the first disco radio show the following year. In contrast with rock music and the protest music popular with the counterculture movement, disco music was meant for dancing.

British journalist Nik Cohn was assigned to cover the New York disco scene—the capital of the scene, along with Philadelphia—by *New York Magazine* in 1976, the result of which was the article “Tribal Rites of the New Saturday Night.” The story was published as fact, and the rights were bought almost immediately, forming the basis of *Saturday Night Fever*.

Years later, Cohn admitted that the story was fabricated; he knew little about disco and less about the American working class that he covered in the story, and had in fact based the characters on his British friends from the 1960s. Knowing that the disco subculture was fashion-conscious, he drew on his experiences in the Mod subculture more than a decade earlier and based his story on a series of educated guesses.

The film draws a contrast between the two lives of Tony Manero (played by Travolta), an Italian American in a working-class family. In the disco, Tony reigns supreme. He has friends, he is admired and pursued by women, and he experiences the pleasure of being excellent at what he does best—dancing. At home, however, he is the black sheep in his family compared to his brother,

a priest, which is a circumstance that hardly changes even after his brother quits the priesthood. He deals with parents who respect neither him nor each other and endures the drudgery of a dead-end job that seems unlikely to provide him with the means to move out of Brooklyn and into the suburbs, as he dreams.

Sexual and Racial Tensions

The movie also explores the sexual and racial tensions of Brooklyn in the late 1970s. Tony’s popularity in the club gives him access to women, and the popularity of his “tribe” leads to them feeling entitled. Tony attempts to rape his dance competition partner and soon after witnesses a gang rape by his friends. Another friend deals with the pregnancy of his devout Catholic girlfriend and the prospect of a shotgun wedding.

Racial tensions play a major role in the plot. At the time, Brooklyn was undergoing a seismic shift in demographics, as traditionally Jewish and Italian neighborhoods became more heavily black and Hispanic and the borough attracted more recent immigrants. Early in the movie, one of Tony’s friends is hospitalized in an attack, establishing how dangerous these racial tensions have become. Although the friend originally blames the Barracudas, a Latino gang resented by Italian Americans whose families have deeper roots in the area, he later admits he is not sure of the identification.

Late in the movie, when Tony and his partner win the dance competition, Tony comes to believe that the Puerto Rican couple they competed against actually performed better but lost because of the judges’ ethnic prejudice. In a sign that he is outgrowing either his surroundings or the need for the disco to feed his ego, he refuses the trophy, giving it to the Puerto Ricans. However, his moral victory is undercut, as it is immediately followed by his attempted rape of his partner, Stephanie, in the parking lot of the club.

In an unusual move, the movie was re-released the following year with a PG rating. The new, edited version attracted a larger audience, as families were willing to take their children to it, as most of the profanity and nudity had been removed and the violence and sex were de-emphasized. The new version was six minutes shorter, despite adding several new scenes, including a dance number

to “Disco Duck.” Although the original R-rated version was occasionally shown on cable television in the 1990s, it was never released on videocassette and remained generally unavailable until its DVD release in 2002. The 1983 PG sequel, *Staying Alive*, was a generally more commercial movie that was widely panned by critics.

Saudi Americans

Saudi Arabia is a Middle East kingdom bordered by Iraq, Jordan, Kuwait, Bahrain, and the United Arab Emirates and occupying most of the Arabian Peninsula, which juts out from western Asia into the Red Sea and the Persian Gulf. The country’s name comes from the House of Saud, which has ruled the kingdom since its 1932 founding. An absolute monarchy, it is not a theocracy but does ground its political and legal system in the Wahhabi school of Islamic thought, which is fiercely monotheistic. Saudi Arabia’s modern importance results from its possession of the world’s second-largest oil reserves, which accounts for most of the government’s revenue and nearly all of the country’s exports.

There are 7,419 Saudi Americans, according to the 2010 Census, making them one of the smallest ethnic groups in the United States; most of those Saudis are residents who will not seek citizenship.

There is no evidence of Saudi immigration to the United States prior to World War II, and immigration to the United States by Arabs inhabiting the area before it became Saudi Arabia is a distinct but unattested possibility. The first Saudis to move to the United States did so because they were diplomats and diplomatic staff working for the Saudi embassy in Washington, D.C., in the World War II era. After the war, however, Saudi families began to send their sons to the United States for college, much as they had sent them to Britain earlier; after the war, the United States was in a better position economically than war-ravaged Europe, and perhaps as relevant, had demonstrated its prominence in the coming new world order.

The government of Saudi Arabia is wealthy, but the people for the most part are not. The government uses its wealth to provide far more for its citizens than the West would ever consider practical. Early oil wealth, for instance, paid to bring electricity and air conditioning to the country, and later financed other infrastructure improvements in order to keep the country—except for the most rural areas, which generally lagged behind—up to date with the modern world, an expensive task given the vast amount of land (one-third the size of the United States) across which its population is distributed. Another use of that oil money is to finance Saudi students’ education.

Saudi men studying abroad—almost always men, as women traveling abroad are required to be chaperoned—are provided with all the fees charged by the school (tuition, room and board, textbooks, health insurance fees), a stipend for clothes and incidental expenses, and one round-trip ticket to Saudi Arabia each year, so that they can visit their families. This had the added benefit of encouraging Saudi families to educate their children. Additional economic incentives encourage marriage—Saudi women marrying Saudi students, for instance, can have their educations paid for as well, which provides the new family with more money.

Education in the United States

Studying abroad was exceptionally common in the late 1940s and through the 1960s, and the first Saudis to settle down in the United States did so after being educated here. In the meantime, Saudi Arabia had begun opening its own universities, which eventually decreased the prevalence

of studying abroad, under pressure from Muslims who worried about sending their children to non-Muslim countries for such extended periods. The educational connection between Saudi Arabia and America has remained strong, however; in any given year, there are thousands of Saudi students in the United States, and the government of Saudi Arabia has made many grants to American colleges, including an endowment to the University of Southern California that established that school's Islamic and Arab Studies program. Saudi student houses have been an important way for Saudi students to stay connected to their culture, and many schools with large Saudi populations hold special days of cultural celebration, or open houses to connect with students of other ethnicities. Some of these groups receive funding from the Saudi government through the embassy. Saudi American students and professors have become important contributors to many fields of study.

The number of Saudis living in the D.C. area, largely connected to diplomacy, is large enough that in 1984, the Islamic Saudi Academy of Washington opened, in Alexandria, Virginia. A private preparatory school, it enrolls 1,200 students from pre-kindergarten to 12th grade. Though initially intended to serve the Saudi community, it accepts all Muslim students and offers a curriculum that includes Islamic studies, Arabic, Arabic sign language, and the standard academic subjects. The academy received funding from the Saudi government.

Saudi Americans, like Saudi Arabians, are predominantly Muslim. They are nearly always fluent in English, and adults are usually in professional fields and well educated. Most Saudis do not move to the United States permanently. Those who do, or who wish to get married in the United States before they return, have access to a database maintained by the Islamic Society of North America, which keeps track of single Saudi adults living in North America and interested in marriage. Saudis are strongly discouraged from marrying anyone who is not from Saudi Arabia or one of its immediate Arab allies: Qatar, Kuwait, Bahrain, Oman, and the United Arab Emirates. Women who are Saudi citizens, in particular, require permission from the king to do so, and men face economic disincentives. This is a large part of why the Saudi

population, though able to navigate American culture with ease, has few prospects for assimilation in the same sense as other ethnic groups.

Scandinavian Americans

Scandinavia is a cultural region of northern Europe marked by a shared heritage. The term was originally coined in the 18th century to refer to Denmark, Norway, and Sweden. Because Finland was controlled by Sweden at the time, and Iceland by Denmark, some uses include those countries as well, reflecting the common cultural heritage. This is true when referring to the meaning of “Scandinavia” in the phrase *Scandinavian American*, for instance, the more geographically accurate term *Nordic American* never having caught on. There are 11,890,524 Scandinavian Americans as of the 2010 Census, including those who self-identify as Scandinavian American or Northern European American. Such self-identifications are not uncommon—nearly as many Americans call themselves Scandinavian Americans on the census survey as Finnish Americans—and may reflect either an uncertainty about all the nooks and crannies of

one's heritage or the commonality of intermarriage among Scandinavian American groups.

Scandinavia is not just a convenient idea. The idea of a shared heritage among the Scandinavian countries was important in Scandinavism, a cultural and political movement supporting cooperation and mutual facilitation among the Scandinavian countries. At its strongest in the 19th century, when similar movements resulted in the unifications of Germany and Italy, Scandinavism was not successful in its efforts to unify Scandinavia in a single political entity, but it was an important idea in the conception of the ethnic identities of many of the Scandinavian immigrants to the United States in the 19th century. The Scandinavism movement was succeeded by a new Cold War formulation, usually called Nordism because of its inclusion of Finland, Iceland, Greenland, and the Faroe Islands, that emphasizes the economic cooperation of the Nordic Council and a sort of collaborative nationalism in which national identities are distinct but conceived within a larger model of Nordic political identity.

Viking Revival

Scandinavism was itself a product in many respects of the Viking revival of the 18th and 19th centuries. As nationalism rose in many European countries, Scandinavian countries re-embraced and rediscovered their Old Norse heritage. Norse sagas, ideas, and iconography became popular again, much as Egyptology was becoming popular in the Western world, or as ancient Greece and Rome had been rediscovered in Renaissance western Europe. Composer Richard Wagner was very taken with Norse mythology, drawing on it in the composition of his "Ring" cycle. New translations and commentaries of the Norse sagas were issued in various languages. Excavations revealed Viking ships and a complete Viking helmet (the only one unearthed to this day) in Norway. All of this emphasized and explored the common heritage of the Scandinavian region, as well as the importance and contributions of Scandinavian forebears. Again, this was the cultural context of the world in which many Scandinavian immigrants lived.

One of the ideas circulated during the Viking revival was that of a Norse pre-Columbian discovery of the New World. Identifying voyagers who had encountered the Americas before Columbus

has long been a pastime of historians both professional and amateur, and most such discoveries have little to recommend them. But the theory that Leif Ericson had landed in North America has proven to be true. Ericson left from Greenland—geographically part of North America but an extension of Scandinavia—where he had lived in a colony settled by his father, Erik the Red, in the 10th century. Around 1000, his ship landed in what is now northern Newfoundland and established a large colony known to the Norse as Vinland. Ruins of Vinland were later found in 1960, providing archaeological evidence for a theory that had been argued for over a century.

Vinland most likely means "meadowland," an etymology that fits the area in which the ruins were found; "vin" in this sense was used in many Old Norse farms. Pieces of jasper used as fire strikers have been found in the buildings of the ruins, from both Iceland and Greenland. The existence of Vinland explains a small number of artifacts found throughout Canada and Maine, which many had hypothesized were evidence of Norse settlement—including an 11th century Norwegian penny and rune stones. In this sense, the Vinlanders were the first Scandinavian Americans. It is unknown what became of them; though Vinland was clearly eventually abandoned, it isn't certain whether its inhabitants returned to Scandinavia, moved farther south, married and assimilated into Native American cultures, or simply died off.

First Settlers

Scandinavians were among the first Europeans to settle North America, in the colonies of New Sweden (which included parts of present-day Delaware, New Jersey, and Pennsylvania) as well as in New Netherland. In New Netherland, Danish immigrants were the first settlers in the Bronx and Harlem. Log cabins, strongly associated with pioneer settlements in the United States, were introduced to North America by Swedish colonists in the early 17th century. New Sweden was soon transferred to the control of the Dutch—and thence to the English—but most of the Swedish and Finnish settlers remained. English settlers on the east coast did not build log cabins, but settlers moving west were introduced to the technique. Many log cabins survived even after larger houses were built and were converted to outbuildings.

Though some amount of Scandinavian immigration always took place, it particularly accelerated after American independence and in the 19th century. In 1907, the Swedish government noted that it had become difficult to find a household anywhere in the country that did not have a relative in the United States. Scandinavian immigration in the previous century had been tremendous. Scandinavians were a key part of the settling of the ever-advancing west, and as with other immigrant groups, Scandinavians tended to settle in areas where there was an existing community speaking their language; this led to many mixed-Scandinavian settlements, which became more common than specifically Danish, Norwegian, or Swedish settlements. Scandinavian Americans, who were primarily Lutheran, settled extensively in Minnesota, where today they make up a third of the population (1.6 million) and contributed to the region's distinctive accent. The second-largest concentration of Scandinavian Americans is found in California (1.2 million), followed by Washington State (739,043), Wisconsin (728,248), Illinois (575,991), Michigan (403,888), Florida (355,458), Oregon (339,031), Iowa (338,161), and Utah (333,405).

Antislavery and the Civil War

Scandinavian Americans were largely antislavery, even those who were not active in the abolitionist movement. During the Civil War, only 19 Confederate soldiers are known to have been Scandinavian Americans, including Augustus Forsberg of Virginia, who was eventually promoted to colonel by war's end. In contrast, several thousand Scandinavian Americans served in the Union Army. Scandinavians serving the Union included U.S. Navy Admiral John Dahlgren, a Swedish American who took Savannah, participated in the siege of Charleston, and oversaw the blockade of Southern ports. Scandinavian American General Charles Stolbrand commanded forces at Vicksburg and Savannah. Of course, the northern states had more Scandinavian Americans—tens of thousands compared with the 1,000 or so of the Confederate states. It was also a period of intensive Scandinavian immigration and expansion: the Scandinavian American population increased (through both immigration and birth) by 55,000 between the 1850 and 1860 censuses.

The most famous Scandinavian American involved in the Civil War was John Ericsson, a Swedish immigrant and engineer. Having previously worked on steamships and steam locomotives, Ericsson designed the revolutionary USS *Monitor* for the U.S. Navy, in response to the news that the Confederacy was using the hull of the wrecked USS *Merrimack* to build an ironclad ram. Ericsson's team, largely Swedish Americans and Swedish immigrants, had the *Monitor* ready in only 118 days. It was a heavily armored ship with a 360-degree rotating turret equipped with cannons. The *Monitor*'s hull was submerged underwater, with an armed deck that overhung it and an additional belt of armor. The *Monitor*'s cannons were Dahlgren guns, designed by Admiral Dahlgren. The Battle of Hampton Roads, on March 9, 1862, was the first battle in the world between two ironclad ships: the *Monitor* and the CSS *Virginia*, as the rebuilt *Merrimack* was christened. The battle was indecisive, but the *Monitor* succeeded in preventing the *Virginia* from damaging the Union's blockade ships. Ericsson continued his engineering work for the Union, including a torpedo boat and new torpedo designs.

Heritage and Cultural Foundations

In the 1970s, the Scandinavian American Heritage Society (SAHS) of New Jersey was founded by a pan-Scandinavian American group of New Jersey natives to celebrate their heritage. The SAHS puts on a midsummer celebration every year on a Saturday in June, near the solstice, to celebrate the longest day of the year. In addition to food and entertainment, the midsummer celebration includes folk dances and vendors selling items imported from Scandinavia. The midsummer celebration sometimes coincides with the local Barnensdag, or Children's Day. Numerous cultures have a day they call Children's Day; in the United States, Children's Day observances actually predate both Mother's Day and Father's Day. However, the United States never adopted a nationally observed Children's Day, and most Children's Day observances are the product of local and regional cultures. Often observed in Scandinavia, Children's Day is observed through much of Scandinavian America as well. Often, the date of observation will be sometime in early summer, for reasons both of weather and to

provide activity for children during the period of school vacation. In areas where Children's Day has been observed for many years, it is most often associated with and conducted by a local church; in other parts of the country, it may be put on by the local government or a cultural organization like the SAHS.

The Scandinavian American Cultural and Historical Foundation, located in the Scandinavian Center of California Lutheran University in Thousand Oaks, California, is a major museum and library complex of Scandinavian American resources. The center offers an annual Nordic Spirit Symposium, a two-day lecture program, and since the 1970s has run the largest Scandinavian festival in the southwest. The festival celebrates the Scandinavian heritage of the Conejo Valley of California and was begun by Swedish American professor Armour Nelson and Norwegian American professor John Nordberg in 1973. The first festival, the following year, included an open house, a scholarly lecture on Scandinavian heritage, Scandinavian folk dancers, and a smorgasbord. About 600 people attended; the festival has grown considerably since and transpires in numerous venues throughout the college campus, including vendor booths, the campus chapel, and a local park. Activities include flower headwreath making, dancing around the maypole, croquet, craft and food tables, a demonstration of making bobbin lace, an extensive Scandinavian food court, and the game of Kubb.

The Maypole and Kubb

Kubb is a lawn game associated with the Vikings (and sometimes called Viking chess, especially in the United States) and originating in Sweden, with variations played in other Scandinavian countries and the Scandinavian diaspora. The goal is to knock over the king—the tallest of 11 wooden blocks (the rest of which are called “kubbs”)—by throwing batons at it. Eau Claire, Wisconsin, is the kubb capital of North America and hosts the American kubb championship. Kubb is offered as a unit in some gym classes in school districts with large Scandinavian American populations. Kubb is related to Finnish skittles, a game in which skittle bats are thrown at blocks called skittles. Although kubb is thought to be of modern origin despite its claims to be a

Viking game, Finnish skittles has been played in Finland for centuries.

The maypole is an element of many European folk festivals, especially prevalent in Scandinavia, and is usually included at Scandinavian American festivals held at the proper time of year. Traditionally that is May Day (May 1), the celebration of spring, or Whitsun, the seventh Sunday after Easter. However, as Scandinavian American festivals have tended to gravitate around one of three times of year—Christmas, harvest, and the summer—in the United States it is common for the maypole to be erected at a midsummer celebration. It is widely assumed that the maypole had significance in pre-Christian Europe and is a surviving pagan icon; however, there is no consensus about what exactly its significance or purpose was, and the many theories circulated and sometimes repeated as fact are purely speculation. The Scandinavian maypole is typically decorated with a cross and rings. Some Swedish-speaking populations refer to the maypole as a midsummer pole.

The maypole is accompanied by maypole dances, in which groups of dancers dance around the maypole. The archetypal maypole dance is the ribbon dance, in which dancers dance in a circle holding a ribbon attached to the pole. This is more common in Anglo America; in Scandinavian America, maypole dances are done to lyrical songs, with the dancers enacting dance movements based on the song lyrics, including hopping like frogs during the Swedish song “The Little Frogs.”

Cuisine

Scandinavian Americans are renowned for their traditional cuisine, including *kottbullar*, better known as Swedish meatballs. Throughout the country, there are many variations on Swedish meatballs, depending on the traditions of the Swedish Americans who settled in the area and the other groups they interacted with. Typically, they're made from a mixture of multiple ground meats, stretched with breadcrumbs and milk, and flavored with onions, white pepper, and allspice. They are notably smaller than Italian American meatballs (but roughly the same size as meatballs in Italy). Traditionally served in gravy, sometimes enriched with cream or sour cream, they may be served with boiled or mashed potatoes, lingonberry jam (a sour fruit found in far northern climates) or cranberry

sauce, or pickles. The combination of richness—the meat and gravy—with the tartness of pickles or tart fruit is especially characteristic of the cuisine.

At the holidays, Scandinavian Americans often enjoy *lefse*, flatbread made with potatoes and flour. It is often served with savory food in Scandinavia, but Scandinavian Americans are more likely to eat it buttered with sugar, fruit, or syrup, or spread with peanut butter. Throughout the Scandinavian American states, *lefse* is sold in supermarkets, but it is a tradition in some families to make it at home as a group, with children learning the task from their grandparents. *Lefse* festivals are held in many midwestern and mountain-state cities, usually sometime between November and Christmas; Fargo's *Lefse* Festival is held in August.

One food associated with all Scandinavian American celebrations is the *aebleskiver*, a spherical pancake cooked in a special pan that allows each *aebleskiver* to be turned with a skewer as it cooks, in order to achieve its shape. Traditionally unsweetened except with small pieces of apple, they are served with jam or syrup. At Christmas, they are served with mulled wine, much as cider and doughnuts are served together in other communities. They are also often sold to raise money for school or church groups.

Scarface

Scarface is the title of two American gangster films, the first (1932) directed by Howard Hawks, and the second (1983) directed by Brian De Palma. Hawks's *Scarface* was adapted from a 1929 novel of the same name by Armitage Trail, loosely based on the life of Al Capone, whose nickname was "Scarface." De Palma's *Scarface* was a remake of the 1932 film, but instead of Italian American bootleggers operating in Chicago, it features Cuban immigrants to Miami vying for control of the drug trade during the cocaine boom of the 1980s. Both films have been greatly influential in the mobster genre, also drawing criticism for their lavish portrayal of violence and excess, and for the promotion of negative stereotypes about minorities.

The 1932 Prohibition-era film stars Paul Muni as Tony Camonte, an ambitious mobster who kills the South Side's main crime boss, Big Louis Costillo (played by Harry Vejar), acting on the orders of Johnny Lovo (played by Osgood Perkins). Not satisfied with being Lovo's lieutenant, Camonte plans to rise to the top of the illegal beer business in Chicago, taking on the Irish gangs that control the North Side and stealing Lovo's girlfriend, Poppy (played by Karen Morley). Camonte ends up killing Lovo, but by then, his violent methods and the inter-gang warfare he provoked have attracted the police's attention. While holed up in his fortified apartment, Camonte is killed by the cops in a shootout.

Part of the early gangster cycle, Hawks's film was different in that it showed far more violence than other mobster movies. The high number of people killed and the use of Tommy guns in a series of montages are characteristics that set this film apart at the time, drawing attention from the Hays Office, which made repeated demands to rewrite the script. However, violence is just part of the aesthetic of excess that permeates the film, which is also lush with parties, material possessions, and

pleasure enjoyed by the mobsters. In that regard, this *Scarface* would have an enduring influence on future American crime films.

Second *Scarface*

The 1983 version of the film followed a similar plot, but it took its predecessor's exploitation of pleasure and violence much further. When released, critics were struck by the movie's extreme violence, particularly its elaborate and graphic gunplay. The film was unique in that its props were drawn from the War on Drugs, prominently featuring assault weapons like those used by both U.S. drug-enforcement agents and narcotics dealers. Thus, the film established a pattern and an aesthetic that would be emulated by a host of future drug-war and action films.

The second *Scarface* has also had a tremendous impact on U.S. hip-hop music and culture. Examples of this association include the video for the 1999 Mariah Carey song "Heartbreakers," in which Carey and rapper Jay-Z reproduce the scene where Tony Montana (played by Al Pacino) is in the tub, and his wife Elvira (played by Michelle Pfeiffer) is in the background snorting cocaine. *Scarface* was also a key influence on gangsta rap music; its idealization of selling drugs and making easy money is seen as an emulation of Montana's lifestyle.

In addition to being criticized for its glorification of violence and drugs, the 1983 *Scarface* has been the subject of much derision among the Latino community for what it regards as harmful representations. The film depicts Cuban immigrant as ruthless, criminal, and chauvinistic, in stereotypical brotherhood with other Latinos who behave in similar ways. In that regard, the film continued a long Hollywood tradition of portraying Latinos as bandits, their cruelty matched only by the ridiculousness of their exaggerated accents—with Tony Montana playing the role of the urban bandit, whose flashy clothes have substituted the hats and boots of old Westerns. Scholars have also pointed out the connection between sex and racial relations established in the film, as Tony and other Latino characters seem to be obsessed with accessing white women as much as they are with obtaining the money they feel that they need to achieve respect and prestige in the United States.

For the Cuban American community, *Scarface* was a particularly difficult film to digest. Tony Montana came to represent, in the American imagination the 125,000 people who left Cuba for the United States in 1980 as part of the Mariel Boatlift. Although a majority of these immigrants were law-abiding citizens, approximately 3,000 were serious criminals, surreptitiously placed in the boats by the Fidel Castro regime. Since Montana was shown in the film as being a Mariel immigrant, *Scarface* only added to negative mainstream perceptions about these newcomers. As part of resistance to *Scarface* in south Florida, Cuban American Miami commissioner Demetrio Perez lobbied against the movie being filmed in the city, stating in a resolution that Pacino's character promoted "the propagation of pernicious racism."

Despite these criticisms, another line of thinking claims that—particularly for inner-city youth of color and impoverished immigrants—Montana has come to depict the lurid underside of the American dream, the frustration and the obstacles they face when trying to attain material wealth and a place of respect in society. As tragic as it is, Montana's story is a rags-to-riches tale and may embody an alternative version of the American dream: one forged at all costs, by any means necessary.

As scholars such as Steven Bender have posited, even fictional narratives such as those presented in the *Scarface* films can have real consequences for groups of people because of the representational power yielded by mass media and popular culture. The overwhelmingly negative image of Italian Americans and Latinos in U.S. media during the time periods represented by these films (and beyond) point to the difficult task of counteracting this troublesome legacy.

School Desegregation

Though segregation existed in practice prior to the Civil War, state governments during Reconstruction passed a series of black codes, commonly referred to as Jim Crow laws, to enforce segregation and disenfranchise people of color throughout the United States. The Supreme Court affirmed the legality of these laws and provided an overarching justification of segregation based on race in the United States in *Plessy v. Ferguson* (1896), which stated that segregation by race was constitutional as long as the separate facilities were equal. The state and federal courts used the *Plessy* decision to justify segregation based on race as constitutional. The history and process of desegregation hinged upon the effort to overturn the decision in its theoretical manifestations, and more important, to enforce the order to desegregate institutions throughout the country.

A series of court cases in the early half of the 20th century provided the precedent for overturning *Plessy*. Charles Hamilton Houston and a notable team of lawyers, primarily educated at Howard University, eventually established the legal strategy for the National Association for the Advancement of Colored People (NAACP). This strategy relied on a series of court cases that posed a legal challenge to the “equal” portion of the “separate but equal” edict that had emerged from *Plessy*. In *Missouri v. Gaines* (1938), the Supreme Court ruled that the state of Missouri must provide African American law students with educational facilities equal to those offered to white students. Some states used the *Gaines* decision as legal justification for equalization plans across the country in which white legislators attempted to equalize the facilities and resources of segregated black schools and salaries of segregated black teachers. Often, states used this as justification

to equalize segregated systems rather than desegregate. In *Sweatt v. Painter* (1950), the Supreme Court ruled that the state of Texas failed to provide equal law facilities and therefore ordered the white law school to admit students of color. In an important precedent, the Ninth Federal District Court of Appeals ruled in *Mendez v. Westminster* (1947) that the segregation of Mexican and Mexican American children in California’s system of education was unconstitutional. Then California Governor Earl Warren, who later served as the chief justice in the monumental *Brown v. Board of Education* (1954) decision, repealed all laws requiring segregation within the state of California. These court cases, among many other similar cases, composed the legal background, history, and precedent for the decision that ultimately ruled that segregation was unconstitutional.

School desegregation popularly began with the passage of *Brown v. Board of Education*. The *Brown* case extended and built upon the precedent established in previous cases that attacked the “equal” portion of “separate but equal.” Using evidence from five cases and the first use of social scientific evidence based on Kenneth Clark’s “doll test,” which illustrated feelings of inferiority among African American children, Thurgood Marshall and the NAACP Legal Defense team argued that separate education was inherently unequal. On May 17, 1954, the U.S. Supreme Court unanimously ruled that segregation based on race was unconstitutional. The decision argued that segregation violated the Equal Protection Clause of the Fourteenth Amendment. The decision effectively overturned the *Plessy* decision. Thus, the *Brown v. Board of Education* ruling overturned the “separate but equal” doctrine that undergirded the Jim Crow legal and social codes that had dictated strict segregation in the southern states since Reconstruction and the latter part of the 19th century. At the time of the *Brown* decision, 17 states required segregation and another four states permitted varying degrees of segregation.

The *Brown v. Board of Education* decision struck down segregation by race, but the Supreme Court did not specifically address how to reconstruct educational policy throughout the country. One year later, the Supreme Court issued *Brown II*, which stated that schools must submit plans for desegregation “with all deliberate speed.” The

ruling did not specify a timetable, strategy, or other course of action for states to follow. Southern states largely interpreted this to mean an incremental process toward desegregation, and none of the southern states desegregated schools in the immediate aftermath of the *Brown* decision.

Implementing and Resisting School Desegregation Policies

Political, legal, and social resistance also demarcated the school desegregation era. “Massive resistance” was the most visible and virulent reaction to the desegregation order. Southern states reacted to the *Brown v. Board of Education* decision in ways that outright resisted the court order to desegregate. The case of the Little Rock Nine illustrated the blatant resistance of southern legislators to integrate public schools and the attendant constitutional issue of states versus federal rights. Governor Orval Faubus denied entry to nine African American students who were accepted into the previously all-white Central High School in Little Rock, Arkansas. After President Dwight Eisenhower dispatched the United States National Guard to secure students’ entry into the school, students attended and desegregated the school.

The nine students who attended Little Rock High School and the young African American students who desegregated white schools throughout the country in the wake of the *Brown* decision experienced extreme physical, mental, and emotional harassment and abuse. Another extreme example of massive resistance occurred in Prince Edward County, Virginia. When the county faced desegregation orders, the Board of Supervisors in Prince Edward County shut down the public schools in 1959. Public school closings forced African American students to attend schools outside the district or state, if they attended schools at all. White students attended one of the growing number of private schools constructed in response to desegregation. The public schools in Prince Edward County remained closed until 1964.

Subtle forms of resistance to desegregation, as opposed to visible forms of massive resistance, were more common throughout the country. African American families in local school districts, often under the leadership of the NAACP or other civil rights organizations, filed petitions to desegregate schools or to fill out applications to enroll

children in the white schools in their district. This prompted local school boards and state governments to react to desegregation in various ways. Some districts denied applications for enrollment on technical grounds; others ignored the requests, and some delayed applications until future years. Through a series of legal strategies that stalled the process of desegregation, southern states evaded the desegregation edict until the 1960s. Mississippi was the last state to experience any form of token desegregation; its public schools across the state remained segregated until the fall of 1964. States such as Mississippi also appropriated public funds for the construction of a private school system that, since it was private and outside the jurisdiction of federal oversight, barred students of color from entering the private schools. State monies were also used to cover the cost of tuition for attending state-supported private schools.

When local school boards and governments adopted desegregation plans, school districts first initiated “freedom of choice” plans to implement desegregation policies by the middle of the 1960s. In this first phase of statewide desegregation, white school boards and local governments placed the onus of desegregation on African American families. Under freedom of choice plans, individual African American families chose from a number of schools approved for desegregation and then applied to the school board for admission. The local press and media sometimes published the names and addresses of the applicants who sought to enroll in white schools. Local and state governments also began to redraw district lines through racial gerrymandering to create separate white school districts. As a result, few schools desegregated under freedom of choice plans. Though a form of token desegregation existed in all states 10 years after the *Brown v. Board of Education* decision, the ideals of integration were not achieved.

Second Phase of Desegregation

The second phase of desegregation is marked by *Alexander v. Holmes County Board of Education* (1969), in which the Supreme Court provided stronger desegregation standards that effectively terminated the freedom of choice plans throughout the south. The decision stated that “all deliberate speed” for desegregation noted in *Brown II* was no longer permissible. This called for the immediate

desegregation of all dual systems of education into one unitary system. This caused sudden and district-wide desegregation policies that had a strong impact on black and white communities. The plans also exacerbated previous patterns of political resistance and social tension across the country.

The most controversial policy connected to school desegregation was busing. After *Brown*, some school districts across the country bused students to different schools in order to achieve desegregation. Busing remained an option after courts demanded full desegregation. The Supreme Court upheld the constitutionality of busing plans to achieve higher levels of desegregation in *Swann v. Charlotte-Mecklenburg Board of Education* (1971). Under school busing plans, local school boards and governments bused African American students to white schools, and some white students were bused to black schools, to achieve more proportional levels of desegregation, which required transporting students outside neighborhood and district lines. In Boston, Massachusetts, concerned parents and community members stirred tension, public unrest, and rioting connected to local busing policies. The Supreme Court still supported but greatly curtailed *Swann*'s purview in *Milliken v. Bradley* (1974), ruling against busing across district lines unless de jure segregation policies could be proven. Under the guise of busing and the aftermath of the civil rights movement, desegregation figured prominently in national politics in the mid-1970s under the election of Richard Nixon, the silent majority, and the rise of the New Right.

White flight played a significant factor in the restructuring of education during the school desegregation era. After World War II, postwar economic growth facilitated the suburbanization of the United States, providing incentives with affordable cars and a strong infrastructure to move outside the city. Policies such as busing and the desegregation of white schools contributed to white flight, and many white families continued to move to suburban areas outside urban centers across the country. This movement caused de facto or social segregation, which defined the national landscape. Redlining and other real estate and commercial discriminatory policies denied entry to African Americans and other families of color into American suburbs. Moving well outside the urban school districts, busing policies after *Milliken v.*

Bradley generally did not reach suburban districts. Therefore, a system of public and private schools developed in the suburbs that were effectively segregated from urban and rural counterparts. Additionally, building upon the groundwork established in state-supported private schools, a network of private schools, or "segregation academies," proliferated across the country, in particular the southern United States, as white families withdrew their children from public schools facing desegregation. Though educational reformers regularly challenged the constitutionality of state-supported private schools, the system of private schools that developed during the desegregation era continued to serve many students across the country during the following era of resegregation.

Within the African American community, desegregation plans caused great harm to community schools organized and controlled by African American teachers and administrators. The pattern of desegregation generally followed one in which African American students attended all-white schools, while white school boards and government officials closed African American schools, demoted the schools to a lower level of education, and fired or professionally demoted African American teachers, administrators, and staff. Desegregation patterns often dismantled long-standing traditions of high-quality and culturally relevant schools in African American communities.

Resegregation

The era of desegregation generally ended with the era of busing in the middle of the 1970s. This period also demarcated a changing social, political, and economic context in the United States. By the 1970s, a decade generally or popularly understood to mark the end of the civil rights movement, the legal push for desegregation ended with the fall of busing from public favor. Particularly after the busing riots in the middle of the 1970s, the majority of the American public and the "silent majority" of this decade did not support the active desegregation of American public schools, in particular federal intervention of desegregation plans, such as the busing plans defended in the *Swann* decision. Civil rights activists and many public school advocates argued that desegregation policies had not produced the originally intended results of the *Brown v. Board of Education* decision.

White flight, the suburbanization of public education, and the rise of private schools, which developed over a generation after the *Brown* decision, created an unequal system of education for students of color. The achievement gap, measured by standardized test scores in math, reading, and science, illustrated the unequal nature of schools, reflected in a wide disparity in standardized scores between white students and students of color. Additionally, funding discrepancies within the public school system reflected a disparity in the distribution of resources between urban/rural and suburban schools.

Property taxes on which public school funding formulas rested generally followed patterns of racial residential segregation, which favored white and middle/upper-class school districts. For these and other reasons, educational scholars, historians, and practitioners questioned the implementation of the historic decision in providing an equal and quality education to all students on the 50th anniversary of the *Brown* decision.

In 2007, the Supreme Court issued a controversial ruling in *Parents Involved in Community Schools v. Seattle School District No. 1* and *Meredith v. Jefferson County Board of Education* that rejected the constitutionality of school redistricting plans that used race as a factor in student placement policies designed to achieve a proportional level of integration. In a 5–4 decision, the Supreme Court ruled that using race to determine pupil placement policies violated the Equal Protection Clause of the Fourteenth Amendment. The plans were voluntary and assumed that diversity through desegregation was a compelling interest for school districts, an assumption established in previous affirmative action rulings. This decision illustrates the continued implications of school desegregation in the United States.

School Segregation

The history of school segregation in America has paralleled the history of exclusion and discrimination in American society. Unequal and separate schooling for African Americans, Native Americans, Asian Americans, Jewish Americans, Irish Americans, Italian Americans, Polish Americans, Hispanics, and other immigrants and the poor has been an ongoing struggle in American society. The dissension over segregated schooling has often been as much as or more about the role of education in a democratic society than it has been about separate and unequal facilities and resources.

Alexis de Tocqueville in *Democracy in America* described the stark inequalities of Native Americans and enslaved African Americans in education, rights, and citizenship that persisted even in the face of a newly established democratic republic. The Frenchman who visited America in 1831 to examine the roots of democracy described how prejudice and segregation in American life was present not only in the schoolhouse but in all aspects of American life. Even with the passage of the Fourteenth Amendment in 1868 that greatly expanded citizenship and equal protection under the law, school segregation managed to stay intact.

School segregation in the United States was fueled by a larger system of segregation by de jure (law) and by de facto (custom). Until *Brown v. Board of Education of Topeka, Kansas* was decided by the U.S. Supreme Court in 1954, “separate but equal” was the law of the land in schooling as it was in access to all public facilities and transportation.

Therefore the history of school segregation mirrors the history of race, ethnicity, and democratic citizenship in the larger American society. Challenges to school segregation continue today as certain social, economic, and political forces exert powerful forces on education and equality.

School Segregation as Exclusion

The history of school segregation in the United States is a history of inclusion and exclusion in American society. Some children were excluded from education and interaction with their peers and cohorts through not having access to any form of schooling at all, which was the case with African Americans. Enslaved peoples were barred by law from reading and writing well into the 19th century. Once allowed to attend schools, the freed men, women, and children were trapped in poorly resourced and segregated schools due to prejudice and discrimination.

Other groups of people were excluded in segregated schools for the purposes of assimilation and Americanization. Prejudice and discrimination also played a role. Native Americans and immigrant groups from Europe, Asia, and Latin America were subjected to this type of schooling. Segregated schools serve multiple functions, including preventing children and youth from access to their peers of other races and ethnicities. Segregation also serves as a proxy for the power and privilege of the majority group.

Contradictory Visions of Segregated Schooling

Nowhere is this system of power, privilege, and exclusion more evident than in colonial America. Visions of schooling were often egalitarian and yet were designed to reinforce the status quo. Thomas Jefferson, the third president of the United States, advocated what was considered at the time a very egalitarian form of schooling. Jefferson's vision of education was formulated around the need for an educated citizenry to maintain a vibrant democracy. The system that the former slave owner and president articulated for the Commonwealth of Virginia allowed three years of public schooling to white males. Those who excelled could receive additional schooling. The system he proposed did allow poor boys who were bright to rise, increasing the fluidity

and permeability among the different classes in colonial America. He believed that an ignorant society could not remain a free society.

However, some historians have criticized Jefferson's vision of schooling as elitist, even though it allowed some class permeability. Yet Jefferson's vision of schooling for freedom and democracy was inherently segregated and unequal. Girls of any race or ethnicity were not included in Jefferson's vision. Native Americans and the enslaved were also not included. Immigrants groups and other ethnicities were also left out. They would follow a similar pattern of exclusion with each successive wave of immigration in the 19th and 20th centuries. While Jefferson's vision of education is viewed as contrary to the democratic spirit today, during his era it was believed to be a first step toward establishing the relationship between education and democracy—albeit a contradictory one.

School Segregation and Immigrants

It was the relationship between education and democracy that fueled the fires of the common school movement. The common school concept of the early to mid-1800s was mostly associated with Horace Mann, a politician and editor of the *Common School Journal*. Henry Barnard, the editor of the *American Journal of Education*, was an important collaborator. Both held that school was a place where all children might come together to receive a common moral and political education. These education reformers envisioned that an education of this kind would reduce crime and delinquency while reducing class conflict. They envisioned using common schools as a way to socialize the young into becoming good, moral citizens.

The belief that education could restore social order came at a time when massive immigration from Europe to America was beginning. In 1840, some 84,000 Irish immigrated to the United States, along with immigrants from eastern Europe and Asia. Tensions rose over the type of education that best suited each new arrival to America. The largely Irish Catholic population had concerns with the non-parochial schools they encountered. Because of their status, the Irish and other immigrants became increasingly isolated in ethnic enclaves and segregated schools. Many Irish children were educated in Catholic schools because of the hostility they encountered in schools dominated by

Protestants. Many Jews also came to the United States in the 1840s, escaping persecution in their home countries. Because of high levels of anti-Semitism in America during this time, Jewish youth attended segregated schools mostly in the northeast. The belief in the power of education to assimilate immigrants into the American fabric was a powerful force but not so powerful as to instill a system of full-fledged integration.

Native Americans and Segregated Schools

After the Civil War until the mid-to-late 19th century, the purpose of educating Native American children was for assimilation. Education for Americanization was the driving force. The Annual Report of the Commissioner of Indian Affairs published in 1886 outlined a system of segregated federal boarding schools to be implemented by the secretary of the Interior. These schools, often referred to as manual-labor schools, were not only segregated to Native American children but implemented a curriculum that bore the stamp of that segregation and exclusion. Native American children and adults were presumed to need the civilizing force of the American government. Indian children were often plucked from their homes and schooled in harsh conditions with other Native children.

For example, the Hopi Indians tried to prevent their children from being forcibly removed to the Intermountain School in Utah operated by Mormon missionaries. The Hopi's resistance was blunted by the use of federal troops by the U.S. government. The troops were dispatched to forcibly relocate Indian children to the boarding school in Utah. It became increasingly preferable to remove Native American children from the reservation and presumably from the destructive forces of their own parents and culture. Subjection unwillingly to segregated and oppressive schooling is indicative of the power arrangements in the larger society. This was the case for Native Americans as far back as the 17th century.

In 1611, Jesuit missionaries from France had developed a system of schools for Native Americans along the St. Lawrence River. Sometimes referred to as the "big waterway" by explorers, the St. Lawrence River begins in Kingston, Ontario, and crosses the interior region of North America. These schools developed for Indian children by the

Jesuits were based on the French model, designed to instill religion and civilization while suppressing the Native instinct. A similar system of Jesuit mission schools was developed in California. Native American children were taught in Spanish, suppressing their native tongues and customs. For Native Americans, like other many other oppressed groups in Americans society, school segregation was a consequence of the oppression and powerlessness imposed by the majority group.

The boarding school model for Native Americans became coupled with the mission school model. The Carlisle Indian Industrial School was a famous example of the missionary zeal of the Bureau of Indian Affairs toward the assimilation of Native American children. It was one of the first boarding schools located off the reservation. The facility was nestled among the barracks of the U.S. Army War College in Carlisle, Pennsylvania, and operated from 1879 until 1918.

School Segregation and Gender

Women and girls also faced exclusionary policies and practices at almost every level of education. For women and girls, education was at times separate, but more often designed to replicate the social roles that boys and girls would play in society. Wealthy white families in colonial America utilized private tutors to educate their sons for professions and their daughters for domesticity, if they received education at all. Private tutors grew into an elaborate system of dame schools and town schools in New England that often educated boys and girls separately and unequally. Much was the same throughout the south and other areas of the country, where schooling for girls was separate, unequal, and often engineered for their roles as mothers and inferiors to men.

However, there were notable exceptions to this rule. The Boston Latin School, which operated well into the 1940s, denied entrance to girls but welcomed boys from all races and ethnicities. The student population included male students from the following groups: Irish Americans, Italian Americans, Jewish Americans, and African Americans. The excluded group was girls. Joseph Marr Cronin, former education secretary of Massachusetts, details the history of the Boston Latin School in his *Reforming Boston Schools, 1930–2006: Overcoming Corruption and Racial Segregation*.

School Segregation and Race

The Massachusetts Act of 1789 was one of the first laws in the nation to break this tradition of educating boys and girls separately and in different curriculums. The act required municipalities with over 200 families to provide elementary and grammar schooling to both sexes and to provide the same curriculum. While this act did not specifically exclude African Americans and others from attending, education historians such as Joel Spring indicate that very few nonwhite children actually attended, due to hostility and prejudice. As a result, in 1789 African American parents requested a school of their own. This school would be publicly supported by taxes and private donors. The request was honored by the Boston School Committee. Despite efforts to provide an equal education, the segregated school for African Americans was deemed inferior to the school for whites by an 1833 report issued by a subcommittee of the Boston School Committee. Although well intentioned, the system of segregated schooling in Boston was viewed to have failed.

This was one case in the long history of racial discrimination and segregated schooling of African Americans in America. Segregated schools existed in the context of a segregated society held in place by a rigid racial caste system called Jim Crow. After slavery, the Freedmen's Bureau pieced together a system of education for the former slaves. Due to the waxing and waning of the Freedmen's Bureau support, a system of private, but segregated schooling sprang up in its wake.

According to James D. Anderson's comprehensive overview of the education of African Americans in the south, the Georgia Educational Association, comprised of African American leaders, in 1866 had 123 schools in operation and 96 were being supported by the organization. African Americans also attended Sabbath or church-sponsored schools taught by all-black staff and supported by black communities and northern white philanthropy. Gradually, a growing acceptance of universal education—that is, public school for all—began to emerge in the south. Despite a growing acceptance of universal education, that education would remain steadfastly segregated until *Brown v. Board* and beyond the landmark legislation that ended the fallacy of separate but equal schools.

Asian American School Segregation

The United States passed the Chinese Exclusion Act in 1882. The intent of the act was to halt any further Chinese immigration to America and to prevent the Chinese from becoming naturalized American citizens. The Chinese Exclusion Act stayed in force for 60 long years, and the prejudice and discrimination that supported it was gradually spread toward all Asian immigrants groups. The Chinese had been heavily recruited by the U.S. government to work as day laborers in a variety of industries. The Chinese were blamed for a downturn in wages and a depressed economy, serving as scapegoats for hard times. The anti-Chinese sentiment triggered waves of prejudice and discrimination that resulted in school boards and communities barring Chinese children's entrance to schools in California.

The exclusion of the Chinese in greater society manifested itself in exclusion in the institutions in society. From 1859 to 1871, Chinese children were barred from attending public schools in San Francisco, California. Much like African American parents had done in Boston in the late 18th century, Chinese parents resisted by making alternative education arrangements for their children, often in private segregated settings. After a successful court challenge, Joseph and Mary Tape won the right for their daughter Mamie and all Chinese children born of Chinese parents in the state of California to attend schools with non-Chinese children in integrated public school settings. The California Supreme Court struck down the exclusionary school policies in 1884. In retaliation, the San Francisco school district struck back by organizing a separate but supposedly equal Chinese Primary School the following year. Increased anti-Asian sentiment resulted in the Chinese Primary School becoming the Oriental Public School with a mandate that all Japanese and Chinese children attend the school together.

The school's name went through several more iterations that mirrored the evolving nature of school desegregation for Asian Americans in Californian. The Oriental Public School became the Commodore Stockton School, then the Gordon J. Lau Elementary School for the successful court decision in *Lau vs. Nichols*. The Chinese community had advocated and won the development of a bilingual education program in the schools. By

1971 California had mandated the desegregation of all its public schools.

Legal and De Facto Segregation

Gary Orfield is a researcher and codirector of the Civil Rights Project at the University of California, Berkeley. Orfield and his collaborators argue that segregated schools not only exist in a post-*Brown* society but are proliferating. His research suggests that institutionalized forces of discrimination and socioeconomic status are to blame.

Science and Technology

One of the hard-to-understand aspects of the founding of the United States is that a country that declared “all men are created equal” meant men in exclusion of women and only meant men of a certain race. The history of the United States is such that it runs contemporaneously with a movement to define cultural differences as the result of biological ones, the subsequent effort to detach the notion of race from biology at the start of the 20th century, and a resurgence of the racial concept in the wake of the Human Genome Project. Unlike what one would expect, however, the history of the science of difference is not that of a slow progression toward a modern, egalitarian present. In each age, retrogressive efforts seek to

use science and technology to reinscribe essentialized notions of difference.

The attitude that women and individuals of African descent had distinct biologies was in the mainstream of 18th-century science. Londa Schiebinger has, perhaps, drawn the clearest portrait of this science in her study *Nature's Body*. Coincident with the French and American revolutions, Schiebinger describes how scientific definitions of what it meant to be human thrust both people of color and women into a category that made them closer to nature than they were to civilization. As a result, only white men had the biological fitness to participate in the civic sphere. Siep Stuurman takes this one step further, linking the Enlightenment science of race articulated by François Bernier to a desire to prove that certain humans were fitted by their biology to nature. Although all humans, it was believed, drew a portion of their soul from the divine creator, a portion of their soul was influenced by history and climate. With this theory, it could be said that white people helped Africans by enslaving them; by suppressing the animal portion of their soul, the slaveholder would help the enslaved exercise that portion of the soul that brought them closer to God.

Thomas Jefferson's Thoughts

Thomas Jefferson, who wrote *Notes on the State of Virginia* in response to a questionnaire from the French government, reflects this sentiment. He states that repatriation of freed Africans is the most appropriate solution to the question of race in the New World. For one, he finds it unlikely that enslaved people will forgive the mistreatment of their masters and equally unlikely that whites will be able to overcome their deep-seated prejudices. In addition to these problems, however, he explains that there are physical differences between the races that cannot be ameliorated. Suggesting that mixing white and black always results in a black progeny, Jefferson states that Africans are a distinct race. He enumerates several common stereotypes of people of African descent in this section, concluding that the mental and emotional development of the African population is markedly inferior to the race of Native Americans.

To his credit, in the true skepticism of the Enlightenment, Jefferson holds no truth to be fixed. In the discussion of Virginia limestone

in Query VI, he is compelled to add that he has found petrified shells unlike those found on the coast high above sea level. He tries three explanations of why he would find shells there: the biblical explanation of rising seas, a rise in the bed of the ocean, and the geological formation of shell-like shapes. Jefferson reasons that proof of any of these three hypotheses is unsatisfactory and suggests that the height of wisdom would be to admit that the question was unsolved, saying that the person who does not come to a conclusion is closer to the truth than someone who holds to a mistaken belief. With a similarly open mind, when he responds to a letter from Benjamin Banneker, Jefferson remains open to the idea that he was wrong. After reviewing Banneker's almanac, he forwarded it to a correspondent in France. Such was the conduct of science in this era: a network of correspondents working as disinterested amateurs sometimes referred to as the "republic of letters."

Samuel George Morton

Jefferson held open the question of whether the races were separate species due to their separate origin or their separate circumstances, and Stuurman and others have noted that Carolus Linnaeus, Bernier, and other figures of the Enlightenment generally held the position that the human race was one species in spite of the variations between races. The situation would get worse, however, before it got better. This chapter of the science of difference is amply covered by Stephen Jay Gould in *The Mismeasure of Man*. This frequently cited study details the rise of the so-called American school of polygeny—the notion that human races were biologically distinct species. One of the most prominent American polygenists was Samuel George Morton. He used his tremendous collection of human skulls to support the notion that different human races had distinct differences. By measuring the cranial capacity of the different races, he asserted, he had found evidence that there were five distinct species of humanity: Caucasian, Mongolian, Malay, American, and Negro. Morton published his results in the 1839 text *Crania Americana*, giving the physical measurements of each skull, summaries of the skulls of each race, and an interpretation of the moral characteristics of each group. In 1844, Morton published *Crania Aegyptiaca*, based on skulls collected for him by

Samuel George Morton claimed he could define the intellectual ability of a race by the skull capacity. His book, *Crania Americana*, contained many engravings like this detailing his beliefs about skull shapes and characteristics.

the American vice-counsel in Cairo, George Robins Gliddon, stating that the different races were ancient in origin and that different human species had been created in separate geographic locations.

Although today it is easier to discount a direct tie between biology and personality, Gould uncovered an interesting insight into these measurements when he tried to replicate Morton's results. In recalculating the results, Gould found out that the differences in cranial capacities were found not in the samples but in Morton's calculations. When he came up with results that favored the white skulls, he did not correct them, but when a skull from a person of color was calculated to have a high capacity, he would retest and revise the entry. From these and other inconsistencies, Gould has shown that the differences in cranial capacity were much lower than recorded.

The notion that human races were separate species led to widespread support of legislation prohibiting mixed-raced marriages, known as anti-miscegenation laws. The southern physician Josiah Clark Nott, in an 1843 essay titled "The Mulatto a Hybrid—Probable Extermination of the Two Races If the Whites and Blacks Are Allowed to Intermarry," starts out with the admission that the reader might think it a little late to state that a person of mixed races is a hybrid. The alternative

would be for an offspring of a white and a black person to be simply a variety, especially if the white and black were not thought to be pure in the first place. Nott, however, seeks to place this mixing on the level of breeding a horse and a donkey to obtain a mule. Mulattoes, he states, have intermediate intelligence between whites and blacks, and yet they are both shorter lived and have less endurance than either. Furthermore, he states that mulatto women are more susceptible to diseases and find it difficult to conceive. His language in describing the difference between supposed Caucasian beauty and the animal features of the African more than betrays his sentiment about the status of two races, and he cites as “settled” the discussion of physiologists that the size and shape of the white skull is an indication of the superiority of the white. With this sentiment at large, it is not surprising that in 1850 the United States proposed to count mixed-race individuals in the U.S. census in an effort to support the hypothesis that they were a weakened offspring.

A Science of Racial Types

Nott and Gliddon in 1854 published their major text, *Types of Mankind*, to promote a science of distinct racial types. This polygenist notion was based on a deductive logic that acquired evidence from historical and literary texts to “prove” that human races were distinct and inviolable. In this work, Nott and Gliddon assert that the ancient Egyptians were white, and they also state that the historical evidence has shown human races to be consistent for the past 5,000 years. They assert that the difference between human races was as distinct as that between the different genera and species of animals; chimpanzees and gorillas, they say, are as different as blacks and whites. Furthermore, they state, the creator has endowed some of them with certain aptitudes, such as the tendency to form civilization, that have resulted in the spread of the white race to all corners of the globe.

The American school of polygeny was bolstered by the science of evolution. There is little in Charles Darwin’s work that could support the notion that certain groups of humans had, through the force of will, gotten farther along on an evolutionary scale than others, simply because Darwin was opposed to the teleological notion of evolution and did not assert that evolution took place

in a definite sort of progress. In his 1871 *Descent of Man*, Darwin goes so far as to argue that the different races of humans are simply varieties and that there is only one species of humanity.

Nevertheless, theories of a progressive evolution were adopted by the polygenists to support the notions that each race derived from a distinct branch of evolution and that crossing the branches would be a disaster for the offspring. In the 1899 essay “Trend of Human Progress,” based on his address to the Anthropological Society of Washington, William John McGee suggests that human culture comes in four grades: savagery, barbarism, civilization, and enlightenment. McGee states that his desire in the essay is to inspire others to determine the law of progress for a species, something like the law of conservation of matter or of conservation of energy, and reducing it to quantitative terms is a goal of the profession. He says that the position of polygeny is supported by physical evidence—like Nott, he asserts that the genus *Homo* came independently from a variety of protohuman species in at least as many centers as there are races of varieties—and some of these started on the path to enlightenment first (that is, white Europeans) and thus reached a civilization point, while red and black races came later to reach the divide between bestiality to humanity.

Using evidence of skull shapes and hand movements as well as social structures, McGee asserts that the white portion of the species has reached the level of enlightenment through the cultivation of habits of civilization and passing these down through the generations. For him, this means that they have cast off matriarchal forms of organization and embraced priestly or patriarchal leaders, have accepted the need for collective knowledge about technology, and have used intelligence to organize their affairs. The yellow and brown races, McGee writes, may be capable of further development, but at present they are still at a lower stage, where they are using mothers or fathers for leaders, can only imitate others when it comes to developing techniques of life, and express only those ideas that are relevant to the self.

Superficially, McGee sounds egalitarian; because the path from savagery to barbarism is a steady series of stages, it is not impossible for a race to start its way on the path toward a higher

existence. However, even at the late date of 1899, he was promoting the definite role of race in determining the type of culture and society an individual was suited for. He suggested that the goal-directed transformation was slow and steady and identifiable as a law of physics, which left room for philanthropic efforts at the same time as it suggested that any efforts to improve a race would be incremental and take a long time to realize. In casting human development as a teleological process with its ultimate goal as the development of a race, McGee also suggested that all humans were subject to the decisions and efforts of their race; the goals and abilities of an individual were subordinate to the history of his or her race.

Scientific Racism

As detailed by Elazar Barkan, the early 20th century had a difficult task in unraveling this scientific racism. Part of the solution was a growing understanding of the science of evolution; the so-called neo-Darwinian synthesis that brought together Darwin's theory of evolution, Mendelian notions of independently inherited characteristics, and better knowledge of human biochemistry made it clear that the idea of racially tied characteristics was untenable. Another part of the solution was found in understanding human difference from a cultural perspective.

Franz Boas, a professor of anthropology at Columbia University, was a champion of this approach. Starting first from a series of negative reviews of craniometric texts and then moving to a study of mixed-raced individuals, Boas initiated a campaign to show that the supposedly separate strains of human races were not so distinct as one would imagine. He and his students then sought to demonstrate that history, environment, and society had much more to say about a person's identity and abilities than did his or her biology. The work of the scientists, on one hand, and the anthropologists, on the other hand, culminated in the 1950 United Nations Educational, Scientific and Cultural Organization (UNESCO) statement on race, which announced that there was no reliable way to define race as a matter of biology. Even so, it was not until 1967 that the Supreme Court would decide *Loving v. Virginia*, declaring laws against mixed-race marriages unconstitutional.

Statistically Unsound

The science behind the UNESCO statement is an observation that dividing individuals into races is a statistically unsound process. The aggregate differences between two racial groups were found to be less than the probable difference between two individuals in the same racial group. In other words, there are many characteristics that one uses to separate individuals into races, but no individual has all of them. Comparing two individuals who are categorized as the same race, then, shows that they share many of the stereotypical characteristics and yet differ in a few others. Overall, those differences are greater than what one sees when comparing the races as wholes. This finding was originally demonstrated in blood factors; while some scientists in the early 20th century had hoped to find a difference in blood chemistry that would help draw biological distinctions among races, it turned out that the independence of inherited characteristics caused different combinations of the various blood factors in each individual. Although this finding was based only on blood factors at mid-century, it has been upheld in later years, most especially by the Human Genome Project.

Even after the UNESCO statement, however, there have been attempts to reassert a biological basis for the differences between groups of humans. One widespread effort was a scare related to sickle-cell anemia. Based on a sense of a definite tie between African ancestry and sickle-cell disease in the 1970s, the federal government advised that African American pilots be grounded. Several false assumptions lay behind this policy. For one, there is a higher frequency of the sickle-cell trait in people of African descent, but not every person of African descent has the sickle-cell trait, and not all people who have the sickle-cell trait are of African descent. What is more, not everyone with the trait has the disease, and reports of the numbers of people who had the disease at the time were greatly inflated, creating something of a scare.

In the wake of the Human Genome Project, there have been attempts to return to an essentialized notion of biological race. As pointed out by Troy Duster, among others, the idea that the sequencing of an individual's genome can reveal the percentages of that person's racial background is mistaken. The test for genetic markers can reveal the percentage of individuals in a company's

database who have identified as a certain race, but this is a problem of a priori definition, because the individuals in the database have identified their own racial makeup before contributing their DNA. Furthermore, although the genetic diversity of Africa is well known, Duster points out that only a small fraction of that population has been tested and would appear in the database. Although genetic testing can, of course, help identify relatedness between individuals, ascribing that affinity to larger biological groups would be as vexed as the proponents of the UNESCO statement on race would have predicted.

In each successive age, it would seem that a challenge is posed between those who wish to find strict biological differences between races and those who assert that race is a cultural and social phenomenon. As a whole, the science of difference demonstrates how science and technology can be used for social purposes. In addition, the lack of progress toward an egalitarian notion of human difference helps defeat the linear notion of scientific advance.

The Scots-Irish were originally immigrants who migrated to the south during the 17th and 18th centuries. The Scots-Irish were formerly lowland Scots from the borderlands between Scotland and England.

History

In 1610, King James began sending shiploads of Scots to Northern Ireland in an effort to subdue Ireland through social colonization rather than military conquest. This practice was later used to help rid England of its political prisoners and those captured in war. However, King James did not count on the Scots remaining connected to their clans and banding together to oppose the Irish at the Ulster Plantation in Northern Ireland. After many years of toil, the Scots-Irish were no better off in Ireland than they had been in Scotland. This prompted many of the Scots-Irish to immigrate to America.

The Scots-Irish came to the colonies in several migration streams between 1717 and 1775. The migration streams in 1754 and 1755 helped to settle the Carolinas and served as a buffer between the developing coastal cities and Native Americans living along the frontier. The Scots-Irish had a profound influence on these areas in the American south. One vignette that illustrates this influence is the story of an Englishman who observed a local stage driver singing the well-known Scotch song "Should Auld Acquaintance Be Forgot," a Celtic tune often attributed to the poet Robert Burns. The English assumed the stage driver was an immigrant from Scotland. "But to my surprise," wrote the Englishman, "I found he had not been out of North Carolina, though his feelings appeared nearly as true to the land of his forefathers, as if they had never left it." This Englishman's observations and comments help illustrate the profound influence that the Scots-Irish migrations of the 17th and 18th centuries had in terms of creating the American south.

In both historical and contemporary American culture, the Scots-Irish are an important piece of the social fabric. Their experiences in their native lands had primed them to survive in the American south. These "borderers" were accustomed to insecure land tenure, limited state capacity, conflict, and poverty, and gravitated toward the backcountry and frontier areas. Eventually, they

Scots-Irish Americans

The Scots-Irish are an important American cultural group that had a profound influence in creating the contemporary American south.

dominated much of the rural south and southwest, where their cultures had lasting and powerful effects on the social, cultural, and political landscape.

Part of the White Underclass

However, these effects have not always been characterized in positive terms. There has been retaliation against these “backcountry” individuals, who have been seen as unduly proud, distrustful of legal institutions, resentful of land-use controls, disdainful of social hierarchies, and prone to using violence to solve conflicts directly. David Hackett Fischer writes, “They were a degraded rural proletariat who had no hope of rising to the top of their society.”

The Scots-Irish were historically a part of the white underclass in America. Throughout much of America’s history, poor whites from the rural south have been little more than sharecroppers. In addition, throughout American history, those from Appalachia have also been among the poorest of the poor in America. Although the Scots-Irish have made some gains both socially and economically, many of them (who likely no longer think of themselves as Scots-Irish), still have a long way to go in terms of achieving any measurable degree of equality. Despite these negative impressions of southerners who were culturally influenced by the Scots-Irish, the Scots-Irish are an important piece of the social fabric in both historical and contemporary American culture.

Scottish Americans

Immigrants from Scotland have been present in North America since before Scotland was annexed into the United Kingdom (1707). Scotland is home to distinctive ethnic groups, with their own patterns of migration and separate cultural and linguistic identities. While further and more refined subdivisions could be drawn, the major distinction that appeared by the 14th century was between the Anglophones of the Lowlands and the Gaelic speakers of the Highlands. Scots could be found in a wide variety of locations and capacities in early America—over a quarter of a million lived here in 1776—and many exercised considerable influence. Despite this, they did not create mechanisms to preserve and develop their own languages and cultures, so little remains in modern American community life beyond symbol and sentiment.

Lowland Scots

There were close ties between England and the Scottish Lowlands from the high middle ages onward, as evident in the Scots language, derived largely from Middle English. The adoption of Protestantism (1560), the Union of the Crowns of Scotland and England (1603), and the Act of Union (1707) reinforced such connections. Scottish national institutions were based in the Lowlands and technically remained independent even after the Act of Union, but increasingly accommodated English norms. By the late 17th century, most Lowland parishes were equipped with public schools that provided universal access to education. A broad segment of Lowland society achieved high levels of literacy and education, training that qualified them well for prominent positions in the United Kingdom and lucrative opportunities in its expanding overseas empire.

Lowlanders established many early American institutions, from religion to education: a Scottish bishop conferred the apostolic succession on the Protestant Episcopal Church in America; many

churches, especially Presbyterian, were founded and served by Scottish ministers; many colleges, such as Princeton and the College of William and Mary, were founded or initially presided over by Lowland intellectuals; and so on. Despite being capable of establishing institutions, they generally did not secure cultural content within them but deferred to Anglocentric standards.

Highland Scots

Lowlanders typically perceived Highlanders as primitive and inferior to themselves. The government dismantled or provoked the decline of formal Gaelic institutions during the 17th century, and much of the rest were swept away after the defeat of the 1745 Jacobite Rising. The Gaelic world was now fully circumscribed by Anglocentric institutions that monopolized all means of social and economic advancement. Kinship networks and informal social practices remained, but they lacked elite leadership and were not sufficiently developed to withstand assimilationist policies.

Highland communities began to migrate in the 1730s, peaking at the onset of the American Revolution. After chieftains were replaced with, or simply turned into, landlords and military recruiters, estranged from and exploiting their erstwhile kinsmen, emigration was one of the only forms of protest available to Highland communities. Sporadic bursts of communal migration from Scotland continued into the 1840s, but after 1776, most migration was redirected to Canada and Australia. By the 1860s, immigrants from Gaelic-speaking communities in Canada began flowing into the booming cities of the north and west. The majority of Highland immigrants were monolingual Gaelic speakers into the 1880s; even into the mid-20th century, some immigrants spoke Gaelic far better than English.

The racial classification of Gaels was ambiguous sometimes even into the early 20th century: white when they assimilated to Anglophone society, but sometimes nonwhite when tenacious of their language and cultural traditions. Their integration into the white Anglo-Saxon Protestant majority in exchange for the privileges it provided, and the weakness of social mechanisms to maintain their distinctive traditions, effected their gradual disappearance as a distinct people.

Scottish Organizations in America

The Scots' Charitable Society of Boston was established in 1657 to aid prisoners of war deported by Oliver Cromwell; it is considered the oldest charitable society in the United States. Further charities created on behalf of immigrant Scots were known as St. Andrew's Societies: in Charleston, South Carolina (1729); Hanover County, Virginia (1738); Philadelphia (1749); and so on. These organizations were meant to alleviate poverty and had no cultural agenda.

The first American organization in honor of Lowland poet Robert Burns (1759–96) was founded in New York in 1847; many other Burns Societies were created in the 19th century, erecting statues of the poet in public spaces. The celebration of Burns's birthday (January 25) is one of the two main dates in the calendars of Scottish heritage organizations, alongside the feast day of the national saint, Saint Andrew (November 30).

Scottish heritage organizations with specific cultural focuses or geographical affiliations existed in 19th-century America, but most became defunct in the first half of the 20th century. The revival of interest that happened toward the end of the century, not least due to Hollywood, has tended to benefit clan societies, Highland games, bagpipe bands, and Scottish country dancing groups.

Culture

The Highland Society of New York held its first Sportive Meeting in 1836, but Caledonian Clubs did not begin importing modern Highland games until the 1860s. The games are not "ancient Celtic survivals" but were first invented by the Highland elite in the early 19th century to project a romantic image of themselves and their estates, and to underscore their commitment to the British Empire by promoting Highlanders as loyal soldiers. Highland games became popular social gatherings in North America and were not as governed by the imperial agenda, even if they didn't (and still don't) reflect Gaelic tradition. Highland games, along with such icons as the tartan and kilt, are classic exemplars of symbolic ethnicity, salves and sublimations for Scots abandoning their languages and cultures to the Anglocentric status quo. Many Scots also played along with stereotypes because imaginative literature has made them popular.

The modern game of golf originated in Lowland Scotland. By 1875, it was being played on designated golf courses in the United States, and in 1895 three events—the U.S. Amateur, the U.S. Open, and the U.S. Women’s Amateur—inaugurated organized competitions.

Forms of music and dance associated with Scotland enjoy periodic popularity, but as in the case of Highland games, separating the elements of genuine folk tradition known to the original immigrants from later reinvention is a complex task that deserves further academic attention. Most of what is generally claimed to be Scottish or Highland comes from 19th-century (or later) Lowland Scotland and was imported to America well after major migrations.

The fiddle, for example, was introduced to Scotland in the later 17th century and came with social dance music played elsewhere in western Europe. The style and repertoire of fiddle music eventually adapted to the musical aesthetics of various Scottish communities; the most distinctive Scottish innovations were the “Scotch snap,” probably an imitation of Gaelic speech patterns, and the strathspey. Scottish fiddle music remained similar enough to its European roots to merge with other fiddle traditions in America, but these distinctively Scottish aspects were soon lost.

Later styles of Scottish fiddling—especially that promoted by Lowland dancing master James Scott Skinner (1843–1927)—were introduced to North America via phonograph recordings, Highland games, and concert tours (by Skinner himself in 1893 and 1926). Although the music of the bagpipes and fiddle attracts many students and devotees, the style invariably changed when it met American audiences and participants (especially in the case of Highland musical tradition).

Scottish country dancing is a 1920s reformulation of social dance as practiced in the Lowlands (unknown in most of the Highlands). French-trained dancing masters created “Highland dancing,” and urban choreographers and the demands of athletic competition at Highland games effected further evolution; it owes very little to Gaelic culture.

James Macpherson’s poetry (1760–65) sparked the Romantic Movement and had many American admirers, including Thomas Jefferson.

Macpherson’s depiction of the blind Gaelic poet Ossian as “the last of his race” provided a precedent for the depiction of Native Americans. Several of the works of Walter Scott, the Scottish father of historical fiction, deal with the subordination of the “primitive” Highlanders to the demands of modernity and empire, themes that were directly applicable to narratives about the conquest of Native America. Scott’s influence is clear on James Fenimore Cooper, among others.

Contemporary Scene

The success of Mel Gibson’s film *Braveheart* and the Celtic Revival of the late 20th century provided a boost for societies and events celebrating Scottish heritage and identity, as well as the Highland games industry. These activities, however, remain peripheral and ritualized, rather than being the cultural core of any community.

Tartan Day was first proposed as a day to commemorate Scottish heritage in 1986, and in 1987 Nova Scotia became the first Canadian province to recognize it officially on April 6, the day on which the medieval Declaration of Arbroath was signed. Senator Trent Lott led the efforts that endorsed Senate Resolution 155 on March 20, 1998, establishing Tartan Day “to recognize the outstanding achievements and contributions made by Scottish Americans to the United States.” Despite alluring claims, there is no direct connection between the Scottish Declaration of Arbroath and the American Declaration of Independence.

Gaelic became defunct as the language of American immigrant communities in the early 20th century, but organizations teaching and promoting the language have enjoyed surprising popularity in recent decades, even if their impact has been limited. These often are closely linked to Gaelic-speaking communities in Scotland and/or Canada, whence many teachers come.

Scottsboro Boys Trials

In Alabama in 1931, a group of nine African American young men were accused of raping two white women and were all subsequently convicted in a series of trials marked by corruption and anti-African American sentiments. The Scottsboro Boys, as they came to be known, were between 12 and 19 years old. The incident became emblematic of the inherent racism in the American justice system.

The Incident and First Trial

On the evening of March 25, 1931, a fight broke out between two groups of young men, one black and one white, that had been traveling on the Southern Railway between Chattanooga and Memphis in Tennessee. Afterwards, a posse of white men searched the train and discovered Victoria Price and Ruby Bates, two white women who claimed to have been raped by the African American boys. Subsequently, the posse arrested Olen Montgomery, Clarence Norris, Haywood Patterson, Ozie Powell, Willie Roberson, Charlie Weems, Eugene Williams, Andrew Wright, and Roy Wright near Paint Rock, Alabama. The boys were held at a jail in nearby Scottsboro.

Retired defense attorney Milo Moody and Chattanooga real estate attorney Stephen Roddy defended the Scottsboro Boys in trials conducted at breakneck speed by Judge A. E. Hawkins. The evidence against the Scottsboro Boys ranged from circumstantial to misrepresentations of the truth. Moody and Roddy lacked the time to mount a proper defense; they found themselves unable to locate witnesses other than the defendants. Between April 6 and 9, 1931, eight of the nine defendants were convicted by all-white juries. Montgomery, Norris, Patterson, Powell, Roberson, Weems, Williams, and Andrew Wright all

had been sentenced to death by electrocution. One trial would begin as soon as the previous trial went into deliberations. Only Roy Wright, who was 12 years old at the time of the alleged incident, was spared by a mistrial; the jury was hung 11–1 in favor of the death sentence.

Reversed Convictions and Subsequent Trials

The plight of the Scottsboro Boys came to the attention of the legal arm of the American Communist Party, the International Labor Defense, which took over the case and immediately moved for new trials for all nine young men. The Alabama Supreme Court found that there were no procedural errors and upheld the death sentences of seven of the Scottsboro Boys; 13-year-old Williams was granted a new trial because of his age. This decision was appealed to the U.S. Supreme

Word quickly spread about the Scottsboro Boys and the rape story, and a lynch mob gathered at the jail, demanding the youths be surrendered. Sheriff Matt Wann ultimately called in the National Guard to protect the jail.

Court, which heard arguments in the case on October 10, 1932. Lawyers for the Scottsboro Boys argued that their clients had not received due process or a sufficient defense by their unprepared original attorneys and that African Americans had been excluded without exception from the juries. In its ruling in *Powell v. Alabama* (1932), the U.S. Supreme Court concurred, reversed the convictions, and ordered that the cases be retried.

During Patterson's second trial, Bates admitted on the stand that she and Price had fabricated their rape claims; the medical examiner confirmed her story. Defense attorney Samuel Leibowitz was also successful at getting the posse witnesses to admit that they never saw the Scottsboro Boys with Bates and Price. The jury, however, found Patterson guilty and sentenced him to death again, but Judge James E. Horton set aside that verdict and ordered a third trial for Patterson.

Judge William Callahan oversaw a new round of trials for Patterson and six other defendants; the cases of Roy Wright and Williams were remanded to juvenile court. Judge Callahan's instruction to the jury that no white woman would voluntarily have sex with a black man was an indication of lack of impartiality during the trial. All seven were convicted and condemned to death once again.

Leibowitz appealed the convictions to the Alabama Supreme Court, arguing that the defendants deserved a new trial because qualified black jurors were excluded from the juries. After the Alabama Supreme Court upheld the convictions, Leibowitz appealed to the U.S. Supreme Court. That court issued two 1935 rulings—*Norris v. State of Alabama* and *Patterson v. State of Alabama*—in which the convictions of Norris and Patterson were overturned because African Americans were excluded from serving on the trial juries. The convictions were set aside, and new trials were granted.

This final round of trials began on January 20, 1936, and none of the Scottsboro Boys was acquitted. Patterson was convicted and sentenced to 75 years in prison—the first time in Alabama history that a black man had not been sentenced to death for raping a white woman. He escaped from prison in 1948, but after an unrelated manslaughter conviction in 1951, he was returned to prison, where he died the following year. Norris's death sentence was commuted to life by Governor

Bibb Graves in 1938; he was paroled in 1946. Andrew Wright was paroled in 1950 after being sentenced to 99 years. Weems was sentenced to 105 years, but he was paroled in 1943. Powell was shot in the face during a brawl with police officers during his commute to prison in 1936. He was sentenced to an additional 20 years for the fight but was paroled in 1946. All charges against Montgomery, Roberson, Williams, and Roy Wright were dropped in 1937.

A Broadway musical based on the trials of the Scottsboro Boys opened in 2010. In addition, the Scottsboro Boys trials served as a source of inspiration for Harper Lee's 1960 Pulitzer Prize-winning novel *To Kill a Mockingbird*.

Searchers, The

Starring John Wayne and directed by John Ford, *The Searchers* is one of the most haunting and influential representations of Native Americans in Hollywood cinema. Although the film received mixed reviews when first released in May 1956, its reputation began rising among critics, filmmakers, and scholars in the 1970s. Today, it is ranked by the American Film Institute as the greatest Western film of all time. Many Native Americans applaud the film's nuanced portrayal of race relations but also wish *The Searchers* had been bolder in portraying the consequences of white racism on the American frontier.

The Searchers begins in 1868, with the arrival of Ethan Edwards at the Texas ranch of his

brother Aaron; sister-in-law Martha; nephew Ben; and nieces] Debbie and Lucy. The next morning, Ethan joins a posse to pursue alleged cattle rustlers, only to discover that Comanche warriors have lured away the men in order to attack the Edwards home. By the time Ethan returns, the Comanche have killed Aaron, Martha, and Ben, and have kidnapped Lucy and Debbie. Ethan and others—including Martin Pauley, his adopted nephew who is one-eighth Cherokee and whose parents were killed in an earlier Comanche raid—begin their quest for vengeance and their search for 9-year-old Debbie and 16-year-old Lucy.

They discover Lucy's body but later lose track of the Comanche, causing everyone but Ethan and Martin to give up the search. Much later—five or seven years, depending on varying interpretations—Ethan and Martin finally find Debbie in the tepee of Scar, the Comanche leader who had captured her. With the help of the U.S. Cavalry, Ethan and Martin attack the Comanche camp. Martin kills Scar, and Ethan retrieves Debbie, bringing her to a white homestead not far from where the story began.

The film's primary source was Alan Le May's novel *The Searchers* (1954), which had been inspired by the real-life case of Cynthia Ann Parker, a 9-year-old white girl captured by Comanche in 1836; she lived willingly among the Comanche for 24 years before being recaptured by Texas Rangers. However, Ford—along with screenwriter Frank Nugent—made several significant changes to the novel, particularly to make Ethan more sinister and to make Martin part Native American. The film version also benefited from Max Steiner's musical score, which incorporated Native American and American folk leitmotifs, and from Winton Hoch's color cinematography, which took full advantage of location shooting among the magnificent rock formations of Monument Valley on the Navajo Reservation. As was his custom, Ford cast Navajos to play the Native Americans (Comanche, in this case), but, he used a white German actor (Henry Brandon) to portray Scar.

In most Western films before *The Searchers*, the lines are clearly drawn between civilization (represented by white settlers and communities) and savagery (represented by Native Americans,

or in some cases by white outlaws). In Ethan's case, those lines are blurred. He fully understands Comanche ways and even speaks their language, as well as some Spanish when he encounters Mexican Americans in New Mexico Territory. Conversely, the film humanizes Scar by explaining that whites had previously killed his two sons. In one of the film's most memorable scenes, Ethan and Scar defiantly stand face to face, mirror images of each other.

What distinguishes *The Searchers* even more is the virulent racism of Ethan Edwards, the film's protagonist, played by no less a cinematic icon than John Wayne. Ethan mercilessly mocks Martin (played by Jeffrey Hunter) as a "half-breed" and "blanket-head"; wantonly slaughters buffalo only to deprive Native Americans of their winter food source; cruelly shoots Comanche trying to recover their dead and wounded; is intent on murdering Debbie (played by Natalie Wood) rather than rescuing her, because he believes she has cohabited with Scar; and, perhaps most shockingly, desecrates Scar's corpse by taking his scalp. In the film's final scene—after Ethan has relented and saved Debbie—he deliberately turns away from the home that represents domestic civilization and slowly walks alone into the wilderness, the door firmly shutting on him.

Seen today, the film's ending may indicate disapproval of Ethan's unapologetic racism, but there is no evidence that most audiences in the 1950s reached that same conclusion. Similarly, Ethan's obsession with miscegenation—directed at Debbie's life among the Comanche—is analogous to some of the irrational fears and civil rights struggles of the time but may have been too subtle for contemporary audiences to grasp.

Unfortunately, there are no records to indicate the reception of *The Searchers* among Native Americans in 1956. However, more recent scholarship suggests a mixed reaction among Native Americans today: approval that Ethan Edwards is ostracized for his actions and beliefs, but also frustration that the film stops short of sympathizing more fully with the Comanche and their mistreatment by white settlers. Nevertheless, the complexity of *The Searchers* clearly set the stage for subsequent films that took a more progressive, multicultural position, such as John Ford's

Cheyenne Autumn (1964), Arthur Penn's *Little Big Man* (1970), and Kevin Costner's *Dances With Wolves* (1990).

Segregation

Although the term may refer to any enforced separation (e.g., by sex, ethnicity, or language), in the United States, it is most often applied to the racial segregation of African Americans during and immediately following slavery. Both laws (*de jure*) and customs (*de facto*) enforced the division of whites from nonwhites from before the Civil War through the 1960s. Laws have changed, but housing patterns remain segregated in many areas, and many schools are once again predominantly single race. The reasons for the persistence of residential segregation are complex and are increasingly influenced by the transition from black–white divisions to multiracial and ethnic populations.

Blacks were brought to the American colonies from Africa and enslaved (10 enslaved people were listed in the first census of Jamestown in 1625). An exception was the Creoles of color and Haitian immigrants following a revolt of enslaved people (1791–1804), but their numbers were comparatively small, and they lived mostly in New Orleans. There, and in other areas of

French colonization before the Louisiana Purchase in 1803, enslaved people were subject to the 1685 Code Noir edict of Louis XIV. This black code detailed the conditions of slavery, including: the faith in which they were to be instructed (Roman Catholicism), when and whether they could marry and carry weapons (sent by their master to hunt), and to which master their children belonged. It forbade people enslaved by different masters from gathering (even under the “pretext” of a wedding), especially near major roadways; from selling anything (food, animals, or houses) without a letter from their master; and from going to court as a litigant or as a defendant. Enslaved people who attempted to escape were to have their ears cut off and be branded with a fleur-de-lis on one shoulder for a first attempt. A second warranted branding on the other shoulder and having the hamstring cut; punishment for a third escape attempt was death.

American colonies with enslaved people (including the District of Columbia) passed slave codes with similar provisions. They considered enslaved people the property of their masters, and therefore incapable of having individual rights or liberties. Anglo-British colonies looked to the Roman civil code to justify slavery, which it did—considering enslaved people as movable property. English common law court decisions also supported considering enslaved people as property in some cases and were ambiguous about the legal status of enslaved people in others, but at least they did not find the institution and condition of slavery legally unjustifiable in the colonies. The colonies retained these slave codes as they joined the United States. The federal government gave wide latitude to the laws of individual states, intervening only when it seemed that the Union was at risk.

Black Codes and Jim Crow Laws

Slavery was ended in the United States by the Emancipation Proclamation (1863) and the Thirteenth Amendment to the U.S. Constitution (1865). However, declaring that blacks were no longer slaves did not guarantee that they would be treated like whites, especially in the former Confederate states of the south. Immediately, individual states began passing black codes with provisions similar to the older slave codes. These

codes continued to regulate how black freedmen could live, marry, work, and travel. The Fourteenth and Fifteenth Amendments ended the black codes, forbidding laws that officially made black Americans unequal to white Americans.

Jim Crow laws were designed to continue to keep blacks and whites separate but avoid unconstitutionality by pretending that their conditions were equal. These state and local laws were enabled by two Supreme Court cases in the late 1800s. First, the court ruled that the Civil Rights Act of 1875 was unconstitutional, making it possible to again segregate public spaces. In 1896, it upheld a law that required separate white and colored rail cars in *Plessy v. Ferguson*. Although it was not used in either court case, the separate but equal doctrine was used to justify Jim Crow laws in the south and in northern states struggling with an influx of freed blacks.

For nearly a century and a half following the Emancipation Proclamation, Jim Crow laws segregated white and black citizens in every area of life: restaurants, drinking fountains, soda machines, phone booths, movie theaters, hotels, buses, trains, hospitals, libraries, and schools were separated into white and black sections. Segregation of residential housing was not quite so straightforward. The Supreme Court found a Kentucky law that prohibited the sale of property to African Americans unconstitutional. Whites then turned to deed restrictions and neighborhood covenants to attempt to restrict sales to nonwhites. A more powerful weapon, however, was extralegal.

The Ku Klux Klan enforced segregation through murder, violence, mob riots, and lynching. It relied not only upon the legal separate but equal doctrine but also upon the system of social customs and etiquette that prohibited any suggestion that a black person was equal to whites. These social norms included prohibitions of a black person introducing himself first, offering a handshake to a white man, or commenting in any manner upon a white woman, using a courtesy title (such as “Mr.”), laughing at a white person, hinting that a white person was lying, or in any way demonstrating superior knowledge or intelligence. Such customs were beyond the reach of law but contributed to a society that was segregated “in fact.”

De Facto Segregation

The interplay between de jure and de facto segregation was at the heart of efforts to desegregate schools in the United States. In 1954, the Supreme Court ruled in *Brown v. Board of Education* that separate state schools for black and white students were unconstitutional. Kansas allowed segregated elementary schools but did not require them. Oliver Brown’s third-grade daughter, Linda, walked six blocks to her school bus stop for transport to a black school over a mile from her house, while a white school was just seven blocks from her home. The Kansas case was combined with four others, all test cases assembled by the National Association for the Advancement of Colored People (NAACP). The court said that the policy of separating races denoted the inferiority of “the negro group” and that the impact was more severe when it had the sanction of law, holding that “Separate educational facilities are inherently unequal.”

The Supreme Court verdict did not automatically change white attitudes. Some white families moved to suburbs in “white flight.” Others sought out private or religious schools. Governments also resisted. Prince Edward County, Virginia, closed its public schools for five years (1959–64). White students were given stipends to attend private schools staffed by former public school teachers, but black students had no access to education. Arkansas Governor Orval Faubus called out the National Guard to block black students from entering Little Rock Central High School, and Alabama Governor George Wallace blocked the door to the University of Alabama to prevent the enrollment of black students, declaring “segregation now, segregation tomorrow, segregation forever.”

Faced with such resistance, courts became directly involved in drawing and overseeing school desegregation plans to achieve racial balance. Many of these plans involved busing white students to formerly black schools, and vice versa. In *Swann v. Charlotte-Mecklenburg Board of Education* (1971), the Supreme Court took note of “de facto segregation” as a condition in which racial segregation continued, despite language in the plan that appeared on its face to be neutral. Two years later, it considered the issue directly in *Keyes v. School District No. 1, Denver, Colorado*, the first high court desegregation case not from a

southern school system with a history of explicit legal segregation. It was also the first desegregation case that involved a large, non-black minority enrollment.

Parents of Latino and black students in the Park Hill neighborhood of Denver sued, saying that the school district had intentionally created segregated schools. The Denver Public Schools claimed that the racial and ethnic composition of the schools reflected neighborhood population patterns. The Supreme Court first rejected the idea that having blacks and Latinos in the same school qualified as integration, saying that both groups were disadvantaged when compared to whites. It then found that the school district had manipulated school buildings and attendance lines to keep nonwhite students out of schools with predominantly white student populations. In finding deliberate intent on the part of the school district, the Supreme Court let stand the principle that plaintiffs must prove *de jure* segregation in the form of some explicit policy to prevail—mere *de facto* segregation alone is not unconstitutional. Mandatory busing began in Denver in 1969, and enrollment in public schools dropped by a third, from 90,000 to 57,000 students. The percentage of white students dropped from 64 to 20 percent. By 2003, enrollment was up to 72,000, but the increase came from Latino students.

Studies released by the Civil Rights Project at UCLA in 2012 conclude that 15 percent of black students and 14 percent of Latino students attend “apartheid schools,” in which whites make up 0 to 1 percent of the enrollment. Approximately 43 percent of Latinos and 39 percent of blacks attend “intensely segregated” schools (0–10 percent white), and 80 percent of Latinos and 74 percent of blacks attend majority nonwhite schools (50–100 percent nonwhite). Beyond white flight from minority and/or public schools, these changes reflect a change in demographics. In 1970, nearly four out of every five students in the United States were white, but just over half were white in 2009. Over the same time period, Latino school enrollment increased from one-twentieth to nearly one-fourth of U.S. students.

In the south and west, students of color are now a majority of public school enrollments, and segregation is increasing. Most white students attend schools where three-quarters of their peers

are white. The typical Latino student in the west attends a school where two-thirds are Latino. In the Los Angeles metro area, 30 percent attend an apartheid school. School segregation for blacks is increasing most dramatically in the south (now that most school districts are no longer under court supervision), although large metro areas like Chicago and New York also report that one-half to one-third of their black students attend apartheid schools.

Multi-Ethnicity and Housing Segregation

Residential segregation has declined in the decades since the Fair Housing Act (1968), but the reasons and result are far from linear. Two significant shifts have impacted racial segregation patterns in residential housing. The first was the movement of freed blacks from the rural south to the urban north for economic opportunity, and its subsequent reversal. The second is the growth in non-black minority populations in the United States.

In the Great Migration, blacks looked to northern factories for employment and social opportunity. Many found jobs, but they were often paid lower wages than whites and were barred from all but low-level occupations. Blacks frequently lived in large, dense ghettos in northern cities such as New York, Detroit, Milwaukee, and Chicago. This migration slowed by the late 1960s, and in another 10 years, it began to reverse. During this time, manufacturing employment slowed (especially in the steel and auto industries), and the industrialized north lost ground to the Sunbelt among populations of all racial and ethnic groups. About one-half of all metropolitan blacks lived in the northeast and midwest in 1970, but fewer than 40 percent did by 2009. During the same time, the percentage of blacks living in the south increased from 41 to 52 percent.

Racial residential segregation in 1970 was as high as 79 percent. Over the next 30 years, black-white segregation declined to 65 percent, but not uniformly—there were regional differences. Larger metropolitan areas and areas with larger populations of blacks have greater segregation, as do cities devoted to retirement and manufacturing. Metro areas with more recent housing construction have lower segregation. These characteristics resulted in higher segregation in the north and lower segregation in the south and west. The

combination of regional segregation characteristics and black movement resulted in large relative declines in black populations in the northeast and midwest but small decreases in desegregation in those areas. Southern metropolitan areas saw population increases and substantial declines in segregation, as did the west.

Growing Latino and Asian populations have made segregation calculations more complex. In 1900, whites were more than 88 percent of the total U.S. population, and blacks were most of the remaining 12 percent. (Other racial and ethnic groups were less than 1 percent.) By 2000, the white population was 75 percent, blacks remained constant at 12 percent, but other racial and ethnic groups rose to 13 percent. Comparing any two groups to the exclusion of others produces results that are incomplete and even inaccurate. Researchers agree upon some preliminary indicators: fewer all-white areas exist, but that is because of the entry of Latinos and Asians; black and nonwhite segregation is lower than black–white segregation; Latino subgroups experience residential segregation based on color, with black Latinos highly segregated from non-Latino whites, and moderately segregated from non-Latino blacks; Asian ethnic groups (Chinese, Japanese, Indian, Korean and Vietnamese) have about the same levels of segregation among one another, and similar differences in segregation with whites; levels of segregation between blacks and Asians are higher than between blacks and Latinos; and most blacks no longer live in majority-black neighborhoods.

No Longer Black and White

Future segregation analysis will be further complicated by the increasing number of multiple-race citizens in the United States. The 2000 census was the first one in which an option was given to designate more than one race. Although still few in absolute terms, the people who reported multiple races in the 2010 census grew by 32 percent from 2000, while those who reported a single race grew by only 9.2 percent. Over the same decade, the total U.S. population grew 9.7 percent, but multi-race groups increased by 50 percent or more. The number of people identifying as black and white increased by 134 percent (more than one million); the next largest

multiple-race category was white and Asian, with an increase of 87 percent (75,000). The number of people reporting black in combination with one or more additional races grew faster than the rate of blacks alone.

A total of 16 states had more than 200,000 people who reported multiple races. The top three each had half a million or more: California, Texas, and New York. A total of nine states reported a change of 70 percent or greater in the number of residents identifying as multiple-race: South Carolina, North Carolina, Delaware, Georgia, Kentucky, Tennessee, West Virginia, Mississippi, and South Dakota. This combination of desegregation characteristics in the south and west, increased black movement to the south, higher populations of Latinos in the west, growing numbers of Asians and other nonwhite citizens, lower white populations, and increased multiple-race residents will create a future perspective of segregation as a mosaic rather than a black–white divide.

Seinfeld

Seinfeld is an American television comedy series created by Larry David and Jerry Seinfeld and produced by Castle Rock Entertainment. It first aired in July 1989 and ran for nine series. The last episode, "The Finale," was shown on May 14, 1998.

Synopsis

Seinfeld is a fictional series that follows the lives of a group of friends living in New York. At its center is the character Jerry Seinfeld, who is a stand-up comedian, played by stand-up comedian Jerry Seinfeld. He lives in an apartment opposite eccentric neighbor Cosmo Kramer (Michael Richards) and has frequent visits from his friends George Costanza (Jason Alexander) and Elaine Benes (Julia Louis-Dreyfus), who is also his ex-girlfriend. The series follows their daily activities but has been referred to as, and once claimed to be, a "show about nothing."

Audience, Acclaim, and Cultural Commentary

The series was acclaimed from the outset, nominated for multiple Emmy Awards every year of its production and nominated for Golden Globes each year from 1993 to 1998. The global audience for *Seinfeld* is very hard to ascertain, as its continued airings as a syndicated show on several networks ensure that it is rarely off the screen in many countries. DVD sales have been similarly successful worldwide.

Seinfeld draws on an archetype of the liberal New York Jewish lifestyle established by Woody Allen, among others. The character of George Costanza, a neurotic man unable to form and maintain a relationship, is reportedly based on Woody Allen.

Much of the commentary about *Seinfeld* focuses on the self-referential qualities of the text; that is, the way the text draws attention to its own artifice and construction as a media text. For example, in the season 4, episode 3, "The Pitch," Jerry is asked by NBC executives to develop an idea for a TV series. Together, he and George develop an idea for a show based on "nothing," in which a group of four friends like themselves do very little. Their idea, and their interaction with NBC, returns in season 4, episode 6, "The Watch," and

season 4, episode 10. "The Virgin." In the final show, "The Finale" (season 9, episode 22), NBC eventually greenlights the idea, but an incident that occurs while Jerry and his friends are traveling to a meeting with the executive team means that the show is never given the go-ahead. These self-referential qualities would later become a characteristic trait of Larry David's work, such as *Curb Your Enthusiasm* (2000–), in which Larry David stars as Larry David, the writer who created *Seinfeld*.

Criticism

Like other "quality TV" programs of the late millennium, notably HBO productions *Sex and the City* (1998–2004) and *The Sopranos* (1999–2007), *Seinfeld* has been the subject of considerable academic study. Criticism of *Seinfeld* notes that although the series is set in New York at the end of the 20th century, it represents an almost wholly white, middle-class, educated version of city life and as such has little to offer as a commentary on multicultural America. Very few intercultural references are made beyond the everyday experiences of the main characters, and where these do exist, they predominantly serve to differentiate Jerry and George as Jewish characters living in a white Anglo-Saxon Protestant world.

They particularly highlight the characters' neuroses, portray their customs as idiosyncratic, and exaggerate the gregarious nature of their two sets of parents. For example, in season 5, episode 11, "The Conversion," George decides to convert to Latvian Orthodox to impress a girl and angers his parents in the process. *Seinfeld* responds to the charges that it portrays a very limited view of New York in a typically self-reflexive manner by incorporating the criticism within the text. For example, in "The Cigar Store Indian" (season 5, episode 10), Jerry is deemed a racist when he purchases a Native American statue for Elaine. Similarly, *Seinfeld* claims to be "a show about nothing"; its seeming lack of content is parodied in several episodes; and its DVD series features a "notes about nothing" commentary track.

After Seinfeld

By finishing at the peak of its popularity, *Seinfeld* ensured that there would be a good deal of speculation about what would happen to its stars

Seinfeld was a commercial blockbuster and cultural phenomenon named the greatest television program of all time by TV Guide. It aired from July 1989 through May 1999 for nine seasons and drew on an archetype of the liberal New York Jewish lifestyle.

after the series concluded. The phrase *the Seinfeld curse* was coined to refer to the comparatively small amount of success that the four main actors have achieved since the series ended, but this relative lack of success can be seen only in comparison with the massive global popularity of the *Seinfeld* franchise.

Most of the stars have in fact achieved notable successes since the series' completion. Jerry Seinfeld has worked as a voiceover actor and returned to stand-up comedy in 2010 with a very successful world tour. Julia Louis-Dreyfus won an Emmy Award for her role in *The New Adventures of Old Christine* (2006–10) and received great critical acclaim for her role as the vice president in HBO's *Veep* (2012–). Jason Alexander has starred in numerous films and TV series. Michael Richards has achieved more qualified success, including a TV show, *The Michael Richards Show* (2000–01). Larry David continues to write, produce, and star in *Curb Your Enthusiasm*, HBO's longest-running series to date. All of the key actors from *Seinfeld* have appeared in *Curb Your Enthusiasm*.

Seminole

The Seminole are Native Americans descended from the Creek and originally of Florida. They now reside primarily in Florida and in Oklahoma, to which the majority of them were forcibly removed in the early 19th century. The Seminole Nation of Oklahoma and the Seminole Tribe of Florida (a federally recognized Indian tribe) are fully independent nations. Because they never surrendered to the U.S. government and are the only tribe in America that never signed a peace treaty with federal authorities, the Florida Seminole refer to themselves as the Unconquered People. According to the 2010 U.S. Census, 14,080 people reported themselves as "Seminole American Indian."

History

The large territory of what is now called Florida once held perhaps 200,000 Seminole ancestors in hundreds of tribes, all members of the Maskókî linguistic family, the Muscogean language of the Creek Indians. In the 1700s, as a result of growing European settlement, they had migrated to Florida from Georgia and Alabama. Originally, the Seminole occupied the wooded areas of northern Florida, but they eventually spread as far south as the Everglades. The Seminole were not a homogeneous tribe at that time, but rather disparate groups. Groups of Lower Creeks moved to Florida to get away from the domination of Upper Creeks, while others were seeking new, more fertile land for crops. In addition to the Creeks, Seminoles included Hitchiti, Apalachee, Mikisúkî, Yamasee, Yuchi, Tequesta, Apalachicola, Choctaw, and Oconee, as well as runaway black enslaved people. The Spaniards (who held

control of Florida until 1821, when they ceded the land to the United States) called these indigenous Florida people Seminoles, which, according to Richard Sattler in *The Encyclopedia of North American Indians*, is a corruption of the Spanish word *cimarrón*, meaning “wild” or “runaway.”

By the turn of the 19th century, conflicts with white settlers who wanted Indian land were becoming more commonplace. In 1817, these conflicts escalated into the first of three wars. Future U.S. president Andrew Jackson invaded Florida, attacked several key locations, and pushed the Seminole farther south. By 1823, most of Seminole tribal land had been ceded to the U.S. government, leaving about 5 million acres. After Andrew Jackson was elected president in 1828, there was a growing movement to transfer all Indians living in the United States to west of the Mississippi River, which eventually led to the passage of the Indian Removal Act in 1830, authorizing Jackson to negotiate with Indians in the south for their removal to federal territory in exchange for their homelands. Two years later, the Treaty of Paynes Landing was negotiated with Seminole representatives and called for their removal to Indian territory in Oklahoma within three years. In 1835, with removal imminent, Osceola, a Seminole leader, instigated a rebellion resulting in the Second Seminole War. Seminole medicine man Abiaka also played an important role in the Seminole wars. Although not as well-known as Osceola, he was a powerful spiritual leader who used his “medicine” to inspire Seminole warriors to battle, and he directed a number of successful battles, including the battle of Okeechobee in 1837.

The Seminole ultimately lost their armed struggle, and most of the tribe (an estimated 4,420 Seminoles and associated blacks) was moved to present-day Oklahoma. But 500 to 600 warriors under Osceola remained in Florida, hiding in the Everglades and using guerrilla tactics against 5,000 U.S. soldiers. Osceola was eventually captured in 1837 under a controversial flag of truce, and died while imprisoned in Fort Moultrie, South Carolina. Abiaka, meanwhile, was the only major Seminole leader to resist removal and remain in Florida.

Culture

The few hundred Seminole who remained in Florida after the wars hid in small, scattered hamlets

in the swamplands and developed a distinctive culture, including their unique dwelling places, called Chickees (stilt houses with open sides, a raised floor, and a thatch roof made of palmetto leaves). In the 19th century, the Florida Seminoles also began using sewing machines and would become famous for their colorful patchwork skirts and shirts, a traditional craft that several generations of mothers have now passed down to their daughters. Women were also famous for the multiple layers of elaborate beaded necklaces they wore on their necks, wrists, and ankles. One of the most important of the Seminole customs was the *apuskita*, or Green Corn Ceremony, held to celebrate the harvest of the corn. It is still observed today.

Each Seminole Indian born of a Seminole mother becomes a member of her “clan.” Husbands traditionally went to live in the wife’s clan camp. Each clan is an extended family unit and is characterized by a nonhuman entity with which it shares traits, such as courage or endurance. There are eight Seminole clans—Panther, Bear, Deer, Wind, Bigtown, Bird, Snake, and Otter.

The Seminole Indians have two languages still in use today, neither of which is traditionally written or mutually intelligible: Muscogee (Creek) and Miccosukee. Many Seminoles are fluent in both languages; some speak only one or the other. Muscogee, the more common language, is being revived and is used on the six Florida reservations. Among the Seminole of Oklahoma, it is used widely. (English is more prevalent today, especially with those under the age of 50.) Many Florida place names are derived from Seminole words, such as Ocala, Miami, and Homosassa.

Most Seminole are Christians. (Baptist missionaries came to the Oklahoma Creek and Oklahoma Seminole tribes as early as 1846), and there are several churches located on reservation land. However, Seminole continue to partake in the Green Corn Dance ritual and to engage in some aspects of traditional medicine and herbal healing practices. Medicine men and women still play active roles in the lives of Seminoles. Often, they are elders who use roots, herbs, animal parts, and other items from nature to treat a variety of physical and mental ailments.

The Florida Seminole kept largely to themselves for nearly a century. It was not until trading posts opened in the late 19th century at Fort

Lauderdale, Chokoloskee, and other places that they began to enter the world of commerce, trading in plant foods and more exotic items such as alligator hides and egret feathers. In the early 20th century, Florida Seminole began selling traditional crafts such as baskets, beadwork, patchwork clothes, and palmetto dolls.

In the 1930s, they also began to engage in cattle ranching. Along with tobacco and tourism, these were the principal industries. However, the most lucrative source of income in the last 50 years has been gambling. In 1979, the Seminole opened Hollywood Seminole Bingo, the first casino on Indian land. The gaming industry has had a significant economic impact on the Seminole; in 2001, the tribe's budget exceeded \$200 million, with 95 percent of revenues coming from the casino industry. Seminole casinos have funded other industries, such as sugarcane fields, citrus groves, cattle, ecotourism, and commercial agriculture.

Three of the more famous contemporary Seminoles are Noah Billie, an artist; Betty Mae Jumper, an author and legendary storyteller and the first female chair, or chief, of the Seminole Tribe; and James Edward Billie, who was elected chairman/president of the Independent Seminole Tribe of Florida from 1979 to 2001 and was instrumental in bringing the gaming industry to the tribe. He also won the "Living Legend" Native American Music Award in 1999.

Contemporary Scene

In the late 1950s, there was a movement among Indian tribes to organize themselves and draft their own charters. On July 21, 1957, tribal members voted in favor of a Seminole Constitution, which established the federally recognized Seminole Tribe of Florida. As established in their new constitution, the Tribal Council is the chief governing body, composed of a chairman, a vice-chairman, and council representatives from each reservation. Today, the council administers the Seminole Police Department, the human resources programs, the tribal gaming enterprises, citrus groves, the Billie Swamp Safari, the Ah-Tah-Thi-Ki Museum, and the majority of the tribe's cigarette-related enterprises.

Not all Florida Seminoles were a part of the reservation system, however. In the 1920s and 1930s, many Seminole established communities

along the Tamiami Trail, a then recently constructed roadway that ran through the Everglades. Called the Trail Indians, these Seminole were more traditional and less interested in establishing formal relations with the federal government. When reservation Seminole organized their tribal government in the late 1950s, the Trail Indians felt disenfranchised. They went on to establish their own independent tribal government, the Miccosukee Tribe of Florida, which received state recognition in 1957 and federal recognition in 1962.

Today, the Seminole Nation of Oklahoma is headquartered in Wewoka, Oklahoma, and is the largest of the three federally recognized Seminole organizations, which include the Seminole Tribe of Florida and the Miccosukee Tribe of Indians of Florida. The Seminole Tribe of Florida has six reservations in Tampa, Brighton, Fort Pierce, Big Cypress, Immokalee, and Hollywood.

In 1970, the Indian Claims Commission awarded the Seminole (of both Oklahoma and Florida, collectively) \$12,347,500 for the land taken from them by the U.S. military.

Florida Seminoles have played an active role in protecting the land and water systems in the Florida Everglades. Designed to mitigate the impacts of development on the environment, the Seminole Everglades Restoration Initiative is a multiyear project that should have a significant impact on the quality and quantity of water flowing off of the Big Cypress Reservation and into the Florida Everglades.

Seminole Wars

The Florida Seminole Wars of the mid-19th century were the result of growing conflict between U.S. settlers and the Seminoles. The Seminole Wars consisted of three separate conflicts: the First Seminole War (1818), Second Seminole War (1835–42), and Third Seminole War (1855–58). The wars reduced the Florida Seminole population from approximately 5,000 to less than 200. At their conclusion, the few hundred Seminole remaining in Florida never signed a peace treaty with the U.S. government, and their descendants within the Seminole Tribe of Florida and the Miccosukee Tribe still refer to themselves as “the unconquered.”

The First Seminole War was an integral part of the unsettled, violent nature of the Second Spanish Period of occupation in Florida, from 1789 to 1821. Seminole, in part consisting of former members of the Muscogee Creek Tribe, began migrating into Florida from Georgia and Alabama. The Spanish welcomed the new arrivals, who bolstered the territory’s sparse population, by offering land grants. The new and expanding United States was interested in the acquisition of east and west Florida, while the declining Spanish empire largely neglected its isolated colonial holding.

The Seminole who had settled in Florida were leading raids against U.S. citizens across the Florida–Georgia border. Other contentious issues were competition for farmland, cattle raids, and the harboring of escaped slaves within the Seminole camps. Many of these “Black Seminole” intermarried into the tribe.

The federal government sent a detachment under Major General Andrew Jackson into Spain’s Florida territory in 1818 in response. Jackson’s military success in the First Seminole War helped convince the Spanish government to cede the territory of Florida to the United States under the

1819 Adams-Onís Treaty. Florida reached statehood in 1845.

Inadequate Reserved Lands

The U.S. government initially sought to recognize the Spanish land grants to the Seminole through the 1823 Treaty of Moultrie Creek. The treaty, however, soon proved unpopular to both sides, as Florida’s U.S. population grew and the Seminole found their reserved land inadequate. By this time, the Indian Removal Act of 1830, stipulating removal of all eastern Native American tribes to Indian Territory west of the Mississippi River, had become national policy. Osceola assumed a leadership role among those Seminole opposed to emigration from Florida.

Osceola organized two separate incidents on December 28, 1835: the killing of federal Indian agent Wiley Thompson and the ambush of a contingent of U.S. troops under the command of Major Francis Dade, only three of whom survived the attack.

Osceola’s actions were the first organized resistance to U.S. encroachment on Seminole territory and the federal policy of forced removal of the Seminole. The U.S. Army countered with military action against the Seminole, beginning the Second Seminole War (1835–42). U.S. forces comprised a mixture of regular U.S. Army troops, Florida militia, and Native Americans allied against the Seminole. Seven U.S. officers held command during the course of the war.

The war was known for its guerrilla-style fighting in the harsh, swampy terrain. As a result, the Second Seminole War was the longest and most expensive of the Indian Wars fought between U.S. forces and Native Americans. Engagements ranged throughout Florida, from the northern Panhandle into the Florida Keys. Important battles included the Battle of Okeechobee (December 25, 1837) and the Battle of Loahatchee (January 24, 1838). General Thomas Jesup controversially captured Osceola under a flag of truce in 1837. Osceola died at Fort Moultrie, South Carolina, the following year.

At the conclusion of the Second Seminole War, approximately 300 Seminole remained in Florida, while 3,824 had been relocated to Indian Territory (modern-day Oklahoma). The federal government sought to convince the remaining Seminole

A re-enactment of a battle during the Seminole Wars at Hillsborough River State Park, Florida. The Seminole Wars were also known as the Florida Wars and consisted of three conflicts between the Seminole and the U.S. Army. Seminole is a collective name given to the amalgamation of various groups of Native Americans and African Americans who settled in Florida in the early 18th century. The first war began in 1814, with the last of the three wars ending in 1858.

to voluntarily relocate west through the use of Seminole émigrés, monetary compensation, and the establishment of a separate section of Indian Territory reserved for Seminole use. Later tactics became harsher as Seminole opposition persisted, including the sale of Seminole lands in Florida. White encroachment on Seminole territory also continued.

Chief Billy Bowlegs and Arpeika (Sam Jones) were among the Seminole who refused to leave their isolated camps within the swamps of central and south Florida. Chief Billy Bowlegs led a group of the approximately 100 remaining Seminole warriors in a last uprising, the Third Seminole War (1855–58). A combined U.S. force of approximately 1,500 men included both regular soldiers and Florida militia. Colonel John Monroe and, later, General William Harney were the commanding officers.

There were no major battles during the Third Seminole War, with most action consisting of Seminole raids on isolated settlements and military posts, and U.S. counterattacks on Seminole

encampments. A group of Florida militia attacked and destroyed Billy Bowlegs's camp in 1857. He agreed to a compensated emigration from Florida shortly thereafter. No peace treaty formally ended the Seminole Wars, as the U.S. Army simply abandoned their pursuit of the few hundred Seminole remained isolated within the Everglades for decades. Descendants of those who remained formed the Seminole Tribe of Florida and the Miccosukee Tribe, whereas descendants of the émigrés became the Seminole Tribe of Oklahoma.

Senate, U.S.

The U.S. Senate has been called the world's most exclusive club. This club has been composed mostly of white males throughout history and has yet to witness the level of ethnic and racial diversity of other political institutions in the United States. As an exclusive club, the Senate has been slower to develop with a multicultural America. The qualifications for the U.S. Senate are being 30 years of age, a U.S. citizen for nine years, and a resident of the state represented. Dozens of naturalized citizens have served in the upper chamber of Congress. There have been seven African Americans, five Asian Americans, eight Hispanic Americans, and three Native American Indians to serve in Senate history. Those 18 "minority" candidates compose 0.01 percent of the 1,943 members to serve in the Senate. In the 112th Congress of 2011 to 2013, there were two Hispanics and two Asian Americans, at four percent, the most diverse in history. The 113th Congress of 2013-15 had three Hispanics and one African American, remaining at 4 percent.

Regarding gender, 44 women have served in the Senate (29 Democrats and 15 Republicans). In 2013, 20 women (16 Democrats and four Republicans) mark the most females in history. Rebecca Felton (D-Georgia) was the first woman appointed and served only for one day. Hattie Caraway (D-Arkansas) in 1932 was the first female elected, and served for 14 years. Carol Moseley Braun, an African American from Illinois, has been the only woman of color. Tammy Baldwin (D-Wisconsin), elected in 2012, is the first openly gay member of the chamber.

The majority of senators have been Christians. Protestants collectively are the majority, whereas Catholic is currently the single largest denomination. There have been 34 Jewish senators,

including 12 who served in 2012. No Muslims, Hindus, or Buddhists have served in the Senate. There are seven Mormons in the 113th Congress. The Senate investigated the Church of Jesus Christ of Latter-Day Saints from 1904 to 1907 after Reed Smoot, a prominent Mormon, was elected. After a thorough probe of the church, senators voted against expelling Smoot. A Senate chaplain has been appointed since 1789. The official chaplains have all been of a Christian denomination. Guest chaplains from all the major faiths have also presided. Several members voluntarily participate in a weekly Senators' Prayer Breakfast.

Waves of German, Irish, and Italian immigrants transformed American cities and local politics in the late 19th century. Carl Schurz, born in Germany, became the first German American senator, representing Missouri. Although most immigrants joined the Democratic Party, Schurz joined the Whig and then the Republican parties because of their anti-slavery positions. He was an ardent supporter of President Abraham Lincoln. Schurz, who had a love of Germany and loyalty toward America, in a speech on the Senate floor, adapted the phrase "My country, right or wrong" to "My Country, right or wrong; if right, to be kept right; and if wrong, to be set right." Many of Schurz's speeches and writings focus on patriotism and on combining the best of German character with American culture.

At least 15 senators were born in Ireland, and many others were of Irish descent. The Kennedy family represents the most famous Irish Americans to sit in the Senate. John F. (D-Massachusetts), Robert (D-New York), and Edward (D-Massachusetts) each served. Most notable for his Senate achievements was Edward "Ted" Kennedy, who championed health care and immigration reforms, including the Immigration and Naturalization Act of 1965. An infamous Irish American senator was Joseph McCarthy (R-Wisconsin), whose witch-hunt to root out suspected communists from the U.S. government and society became known as McCarthyism. John Orlando Pastore (D-Rhode Island), in 1950, was the first Italian American elected to the Senate. Pastore chaired the Senate Commerce Committee during discussions over the Civil Rights Act of 1964. Although senators of these ethnic backgrounds have been involved in symbolic gestures toward their mother countries,

they tend to not push policies that protect or punish particular countries.

African Americans

Seven African Americans have served in the Senate: four Republicans and three Democrats. They represent 0.003 percent of the senators in history. Hiram Rhodes Revels (R-Mississippi, 1870–71) and Blanche Kelso Bruce (R-Mississippi, 1875–81) served during the period of Reconstruction. The Fifteenth Amendment, ratified in 1870, granted African Americans the right to vote and, in effect, to run for office. Revels and Bruce were Republicans, the post-Civil War moderate party on racial representation. Southern white Republicans built coalitions with black freedmen and newly arriving northerners to gain control of many state governments in the south.

Revels, appointed in 1870, was born a free man in Fayetteville, North Carolina, in 1827. With a Baptist preacher father and a mother of Scottish descent, Revels was of mixed African and Croatan Indian heritage. The state senate selected U.S. senators to replace the two who vacated their seats when Mississippi seceded from the Union. A deal was struck by which a black man would be appointed to serve the term expiring in 1871 and a white candidate for the term running through 1875. Southern Democrats sought to block Revels from being seated by arguing that he was not eligible because blacks were not citizens until the Fourteenth Amendment. Bruce was a former slave who became a plantation owner. He was the first African American elected to a full term in the U.S. Senate. Bruce's mother was a slave, and his father was his mother's owner and the son-in-law of her former owner. Even though a slave in youth, Bruce had educational opportunities afforded to him through his father's family.

Though initially influenced to enter politics by Mississippi politician James Alcorn, Bruce later supported Alcorn's political nemesis. While it was tradition for the senior senator from a state to escort a new senator to the Senate podium, Alcorn snubbed Bruce. Powerful New York Senator Roscoe Conkling mentored Bruce and assisted him in gaining influential committee assignments. Bruce advocated for the rights of black war veterans and promoted fair treatment in the armed forces, without success. On February 14, 1879, during a

debate on the Chinese Exclusion Act, which suspended Chinese immigration to the United States, Bruce became the first black to preside over a Senate session. He also demanded better treatment for Native Americans and criticized Indian policy.

After the election of 1876, Reconstruction ended, and blacks were kept from voting or holding public office throughout much of the United States. A variety of methods, such as gerrymandering, grandfather clauses, literacy tests, poll taxes, and intimidation and violence, were used to suppress votes. The Twenty-Fourth Amendment eliminated the poll tax, and gerrymandering was eased by Supreme Court decisions in the 1960s. The other mechanisms were curtailed by the Voting Rights Act of 1965. Edward W. Brooke (R-Massachusetts, 1967–79) became the first African American popularly elected to the U.S. Senate. Brooke, in 1966, was the first black elected to Congress from his state. Brooke served on the Kerner Commission that was charged with finding solutions to racial unrest, fought against racial discrimination in housing, and advocated for the renewal of the Voting Rights Act in 1975. He was reelected in 1972 and lost reelection in 1978.

The first African American woman elected to the Senate was Carol Moseley Braun (D-Illinois, 1993–99). Moseley Braun was elected in 1992 but lost her reelection bid in 1998 under a cloud of corruption allegations. Barack Obama (D-Illinois, 2005–08) was elected to the Senate, spurred in part by a well-received keynote address at the 2004 Democratic National Convention when he was an Illinois state senator. His speech became the basis of his second book, *The Audacity of Hope*, which pushed his career when promoted on *The Oprah Winfrey Show*. Obama attained celebrity status upon his election, and as the only African American in the Senate, he gained instant notoriety. A skilled orator, Obama launched a run for president. In 2008, he sought and won the Democratic Party nomination over Senator Hillary Rodham Clinton of New York and other challengers and was ultimately elected president of the United States. Obama had an unremarkable legislative record.

When Obama was sworn in as president on January 20, 2009, his Senate seat became vacant. Illinois Governor Rod Blagojevich was authorized to pick the replacement. Roland Burris

(D-Illinois, 2009–10), a former state comptroller and attorney general, was selected. Burriss ran unsuccessfully for the Democratic nomination for Senate in 1984, and then for governor in 1994, 1998, and 2002. Burriss promised not to run for a full term when the seat expired in 2010. Burriss claimed that his vote was crucial to the passage of the Affordable Care Act of 2010, also known as Obamacare, after President Obama assured Burriss, who supported a public option that was not included in the final legislation, that the bill would have cost accountability and promote competition.

After Burriss left the Senate, there was no African American senator in the 112th Congress. When Jim DeMint abruptly resigned his Senate seat from South Carolina at the end of 2012, Representative Tim Scott was appointed to replace him. Scott became the first southern black Republican senator since Reconstruction. John Kerry's resignation to become U.S. secretary of state in January 2013 led to the appointment of Democrat William "Mo" Cowan from Massachusetts. Cohen, an attorney, served the office of Governor Duval Patrick, who made the appointment. Scott and Cohen were the first two African American senators to serve simultaneously. Cohen joined the Congressional Black Caucus but Scott did not.

Asian Americans

There have been five U.S. senators of Asian heritage. Hiram L. Fong (R-Hawai'i) served from 1959 to 1977. Fong was Chinese American. Daniel K. Inouye (D-Hawai'i), first elected in 1962, won a ninth term in 2010. Inouye was the first Japanese American to serve in Congress and did continually after Hawai'i achieved statehood in 1959. When Robert Byrd died in 2010, Inouye became the President Pro Tempore of the Senate. When he died in December 2012, he was the second-longest-serving senator in history, behind Byrd. Samuel I. Hayakawa (R-California) served one term, from 1977 to 1983. Hayakawa, an educator and writer of Japanese heritage, was born in Canada. He did not seek a second term.

Spark M. Matsunaga (D-Hawai'i, 1977–90), a Japanese American, was detained at a Wisconsin internment camp after the Pearl Harbor attack, although he was a second lieutenant in the U.S.

Army. Matsunaga and other internees convinced President Franklin D. Roosevelt to let them form the 100th Infantry Battalion. Matsunaga was injured twice in Italy during World War II. His legislation led to the creation of the Commission on Wartime Relocation and Internment of Civilians. In 1988, Matsunaga was instrumental in gaining passage of a \$1.25 billion bill providing \$20,000 and an apology to each Japanese American who was sent to an internment camp. Matsunaga died on April 15, 1990, and was succeeded by Daniel K. Akaka (D-Hawai'i). Akaka is a native Hawai'ian of Chinese ancestry. He served in a number of state positions before his appointment and subsequent reelection to the Senate in 1994, 2000, and 2006.

Hispanic Americans/Latinos

Eight Hispanic Americans have served in the Senate. Three represented New Mexico: Octoviano Larraxolo (R, 1928–29), Dennis Chavez (D, 1935–62), and Joseph M. Montoya (D, 1964–77). Larraxolo served in the Senate from 1928 to 1929. Larraxolo, born in Mexico, became active in the Democratic Party in Texas and New Mexico. A dispute over representation of Hispanics in New Mexico led him to switch parties. He was elected governor, and later won a special election for senator but served six months before falling ill. Chavez, the first Hispanic elected to a full term, was the longest-serving Latino. He was succeeded by Montoya. Ken L. Salazar (D-Colorado, 2005–09), a Mexican American, was elected to the Senate in 2004. He resigned to accept an appointment as secretary of the interior by President Obama. Robert Menendez (D-New Jersey, 2006–), was appointed by Jon Corzine when Corzine was elected as governor.

Melquiades "Mel" R. Martinez (R-Florida, 2005–09) was the first Cuban American elected to the Senate. Martinez was born in Cuba in 1946 and immigrated to the United States in the 1962 Operation Pedro Pan program. He served until he resigned 16 months before the end of the term, citing family reasons. Florida governor Charlie Crist rejected calls to appoint another Cuban American or other minority candidate, and instead picked an advisor to hold the seat. Crist ran in 2010 but was forced out of the Republican primary when a former state house speaker from Miami, Marco

Rubio, rode a wave of anti-incumbent sentiment and pro-Tea Party support. Rubio beat Crist, who ran as an independent, and Democratic Congressman Kendrick Meek, an African American.

Rubio, who was a celebrity politician and was embraced by conservative talk radio and pundits, kept a low profile initially as a senator before emerging on the national stage in 2012. He appealed to American exceptionalism in his campaign rhetoric and described his American dream-style story. He was mentioned as a vice presidential candidate for Republican nominee Mitt Romney and was given the honor of introducing Romney at the 2012 Republican National Convention in Tampa. Rubio effortlessly grants interviews in English and Spanish, and he speaks about generational issues such as entitlement reform. Texas voters elected Rafael Edward "Ted" Cruz, a Republican, in 2012. Cruz was born in Alberta, Canada. His father is from Cuba. Cruz and Rubio have important voices in immigration reform legislation and Republican Party attempts to appeal to Hispanic voters.

Native Americans

There have been three Native Americans in the Senate. Two of them served simultaneously in the early 20th century. Charles Curtis (R-Kansas), a Kaw Indian, served from 1907 to 1913 and 1915 to 1929. Robert Owen (D-Oklahoma), a Cherokee, served from 1907 to 1925. Ben Nighthorse Campbell (Colorado) served from 1993 to 2005. Campbell's father was a northern Cheyenne Indian. Campbell was first elected as a Democrat and switched to Republican in 1995 because of disputes with the Colorado Democratic Party. He overwhelmingly won reelection in 1998 and did not run again in 2004.

Racial Controversy

The actions of southern Democrats blocked civil rights legislation from passing into law in the 1950s. The longest filibuster in Senate history was undertaken by J. Strom Thurmond of South Carolina, stalling a vote on the Civil Rights Act of 1957 for 24 hours and 18 minutes by reciting various historical documents. Several senators filibustered the Civil Rights Act of 1964 for 57 working days before it passed. Senator Everett Dirksen (R-Illinois) worked to gain bipartisan

support for the bill, along with President Lyndon B. Johnson, a former Senate president, holding personal clout with senators.

In 1991, Clarence Thomas was nominated to the U.S. Supreme Court by President George H. W. Bush. If confirmed, Thomas would be the second African American justice. During Thomas's Senate confirmation hearings, allegations of workplace sexual harassment were brought forward by Anita Hill. Three days of hearings with testimony by Hill and Thomas garnered high television ratings. During questioning by the all-white Senate panel, Hill's supporters felt that, as a black woman, she was unfairly treated. Thomas lashed out at the members of the Judiciary Committee, saying, "And from my standpoint, as a black American, it is a high-tech lynching for uppity blacks who in any way deign to think for themselves, to do for themselves, to have different ideas, and it is a message that unless you kowtow to an old order, this is what will happen to you. You will be lynched, destroyed, caricatured by a committee of the U.S. Senate rather than hung from a tree." Ultimately, Thomas was confirmed by a 52-48 vote.

Future Trajectories of American Multiculturalism

Senator Daniel Patrick Moynihan (D-New York) predicted in the 1990s that the Senate would need to address apportionment between large and small states. The larger states are more ethnically and racially diverse than some of the less populous ones, boosting the voting power of the white residents of smaller states over that of racial and ethnic groups in more heavily populated states. Ethnic and racial minority candidates face challenges to winning statewide election. Black candidates do well in winning seats in the House of Representatives, particularly if they are majority-minority districts. No black candidates were nominated by Democrats or Republicans for their party's Senate nomination in 2012. Asian Pacific candidates fare well in Alaska and Hawai'i, and can be competitive in western states. Hispanic/Latino candidates appear to have a better chance of increasing the minority representation in the Senate as their percentage of the population grows nationally and increases, particularly in many southern and western states. As both main

parties court Latino voters, more Hispanic candidates will rise to prominent political positions.

Seneca

When the Iroquois Confederacy was created, the Seneca, or Onondowahgah, were the largest of the original five nations (Iroquois, Mohawk, Cayuga, Onondaga, and Oneida). Known as the Keepers of the Western Door, which relates to their geographic location at the western end of the territory occupied by members of the confederacy, the Seneca called themselves People of the Great Hill, a name that recalls their creation from beneath a mountain.

Historically, the Seneca occupied territory extending from the Finger Lakes of present-day central New York to the Genesee Valley in western New York, and possibly farther into northwestern Pennsylvania. They lived in villages comprising

longhouses surrounded by wooden palisades for protection. They relied on agriculture (growing corn, beans, and squash), hunting, and fishing for subsistence. Skilled at warfare and diplomacy, the Seneca conquered (later adopting or assimilating) groups of neighboring Indian nations, and as a result, their population grew throughout the 16th and 17th centuries.

Today, the Seneca comprise the Seneca Nation of Indians, which has five reservations in New York (Cattaraugus, Allegany, Oil Spring, Niagara, and Buffalo), the Tonawanda Band of Seneca Indians in western New York, and the Seneca-Cayuga Tribe of Oklahoma. The U.S. government federally recognizes all three tribes. In addition, there is a large population of Seneca living on the Six Nations of the Grand River Reserve in Canada.

Culture and Political Organization

Traditionally, the Seneca were a matrilineal society divided into eight bird-animal clans or social units descending from female ancestry (Deer, Hawk, Heron, Snipe, Turtle, Beaver, Wolf, and Bear). The oldest woman of a clan, the Clan Mother, nominated, installed, and removed chiefs. In the 19th century, many of the Seneca tribes abandoned the traditional chieftainship system of government for an elected form of government established under new tribal constitutions. The Seneca Nation of New York, for example, has executive, legislative, and judicial branches of government comprising elected representatives from the Allegany and Cattaraugus Reservations, whereas the Seneca from Tonawanda Reservation have maintained their traditional practices, including hereditary chiefs.

Longhouse Religions and Handsome Lake

Handsome Lake was a Seneca religious leader responsible for reviving traditional Haudenosaunee religious beliefs and moral codes of conduct in what has come to be known as the Code of Handsome Lake. Born in 1734, Handsome Lake, named Hadawa'ko, was Giaant'waka's brother (Chief Cornplanter) and the uncle of Sagoyewatha (Red Jacket), two well-known Seneca leaders. Although he grew up in more prosperous times, he lived to see the deterioration of Seneca culture in the post-American Revolutionary era, when the Haudenosaunee were forced

onto reservations. As a young man, he was highly regarded among the Seneca, earning him the title of the legendary sachem, Sganyadaí:yoh. In 1799, after experiencing a series of visions, he began preaching four messages, sometimes referred to as the Gaiwiio (the Good Word). His four messages outlined a moral code that included prohibitions against alcohol usage, the use of negative spirit powers (often identified as witchcraft), birth control (including abortion), and the use of love potions or medicine. His message also incorporated Christian teachings, including public confession, ideas about sinfulness, and the submission of wives to their husbands.

His teachings were not always well received, particularly by Haudenosaunee women. However, as the U.S. government and Christian missionaries undermined traditional religious practices, Handsome Lake's message offered the possibility for its survival. Although his detractors forced his move to the Cold Springs, and later Tonawanda reservations, the Code of Handsome Lake was published in 1850.

Land Claims and Legal Disputes

The Seneca Nation has been embroiled in numerous legal disputes with the United States regarding land claims (such as leased land disputes, Grand Island claims, and thruway claims), the most notorious being the Kinzua Dam project. The Kinzua Dam, located in the Allegheny National Forest in Pennsylvania, is one of the largest dams in the United States east of the Mississippi River. Authorized by the Flood Control Acts of 1936, 1938, and 1941, the dam was constructed between 1960 and 1965 by the U.S. Army Corps of Engineers. The construction of the dam also required the flooding of the Allegheny Reservoir, resulting in the artificial Lake Kinzua. The dam's main purpose was flood control on the Allegheny River, while its secondary purpose was the production of hydroelectric power. The Seneca Nation fought construction of the dam for two decades; the dam condemned and flooded over 9,000 acres of their land on the Allegany Reservation (land guaranteed under the 1794 Treaty of Canandaigua) and forced the relocation of 600 Seneca families.

For the Seneca people, the inundation of the reservoir negatively impacted their culture, economy, and way of life. In addition, many sacred

sites were lost, like the grave of well-known Seneca leader Cornplanter. Despite the Seneca Nations' legal attempts to halt construction and propose alternative solutions, like the Conewango-Cattaraugus Alternatives, which would not require the flooding of Seneca lands, President John F. Kennedy denied their requests. They also lost their 1964 case against the construction of a four-lane highway, which had to be rerouted through remaining reservation land as a result of the flooding required for the dam.

In 1970 the Seneca Pumped Storage Generating Station began operations as a hydroelectric power plant. For the past 40 years, the First Energy

A Seneca woman in 1908. The Seneca traditionally lived in what is now New York State. They were the most populous of the Haudenosaunee Nations, numbering approximately 4,000 by the 17th century.

Generation Corporation of Ohio has commercially run the station (tax-free until a 1999 ruling removed the tax-exempt status).

However, in a bid to win back control over the Kinzua Dam, the Allegany watershed, and their flooded ancestral land, the Seneca Nation was awarded a preliminary permit for the license and operation of the Seneca Hydroelectric Project by the Federal Energy Regulatory Commission in 2010.

Cultural and Economic Initiatives

The Seneca have engaged in numerous activities geared toward economic advancement (construction, recreation and tourism, retail sales, and gaming) and cultural survival. Well-known Iroquois scholar and activist John Mohawk initiated the White Corn Project, which produces and markets traditional Seneca white corn. His initiative is continued under the auspices of the Ganondagan State Historic Site, which in and of itself supports and promotes Seneca art, history, and culture. The Seneca Nation has also established the Seneca Broadcasting Company, which operates radio station WGWE.

Starting in the 1940s, many Serbs left communist Yugoslavia. During the wars in the former Yugoslavia in the 1990s, Serbian migration to the United States rose once again. In the wake of these wars, many developed a dim view of all Serbs that was severely clouded by misunderstandings and some misrepresentations. Like most immigrants and refugees in the United States, Serbians and Serbian Americans reflect all aspects of the larger diaspora regarding their political views and worldviews, socioeconomic status, culture, and language.

Early Serbian Migrations

Until the 1940s, most Serbian immigrants did not come from Serbia, but from other Balkan regions. During the late 1800s and early 1900s, Serbs settled throughout the United States in places like Bisbee, Arizona; Chicago; Cleveland; Gary, Indiana; Milwaukee; Pittsburgh; St. Paul, Minnesota; and Steelton, Pennsylvania. These Serbs looked for unskilled work in heavy industries. Men made up a vast majority of this migration. Serbian professional men, including priests, doctors, lawyers, and business owners, also constituted a small portion of this immigration. The Serbian women who did come typically worked as unskilled laborers in people's homes, sweatshops, and meatpacking plants.

Early Serbian settlers in the United States created local communities by establishing churches, businesses, and cultural associations. Cleveland exemplified the route through which local Serbian community-building took place. The first Serbs settled there in 1893, and many more came after 1900. While finding jobs in local steel mills, they established themselves in Cleveland's urban neighborhoods. In the early 1900s, about 1,000 Serbs lived there. St. Sava Lodge, created in 1904 by Cleveland Serbs, supported its members by providing various benefits.

Cold War Migrations

During the Great Depression and World War II, Serbian American communities stayed relatively stable in size. After the war, Serbia and other regions that sent Serbs to the United States became part of the Socialist Federal Republic of Yugoslavia, a communist dictatorship. With the growth, maturation, and death of the Cold War, displaced Serbs and political and war refugees left their native country. Most of the Serbs who

Serbian Americans

Serbian immigrants first came to the United States in the late 1800s and in larger numbers by the early 1900s. World War I and restrictive immigration laws in the 1920s limited Serbs' immigration.

arrived in the United States in this migration were educated and middle or upper class. They were also older and included many more women than earlier contingents.

Many Serbian displaced persons and political and war refugees maintained strong ties to their homeland, hoping to shape its future. These relatively new arrivals published magazines that spoke out staunchly against communism. This anti-communism created a schism among Serbian Orthodox followers in the United States. Serbs in Washington, D.C., for example, split into two separate churches. The native-born faction did not concern itself with Balkan politics or anti-communism, whereas the recent immigrants and refugees hoped to effect change in their homeland. This split replicated itself in many Serbian Orthodox parishes throughout the United States.

Post-Communist Migration

After communist Yugoslavia devolved into bloody chaos in the 1990s, many Serbs escaped with their lives. These wars resulted in mass killings and genocide in Bosnia, Croatia, and Kosovo, among other regions. With its established Serbian institutions, Chicago became a major recipient of Serbs. These wars also were the cause of hate crimes and firebombings in places like Chicago, where Balkan enemies, such as Serbs and Bosniaks (formerly known as Bosnian Muslims), lived.

In the early 2000s, federal courts prosecuted some Bosnian Serbs living in Arizona, Florida, and North Carolina for war crimes, seeking to convict them and/or have them deported for prosecution in Europe. Controversy over these wars persisted in Serbian communities into the 2010s. For example, one Serbian American intellectual, Srdja Trifkovic, denied the genocide in Bosnia, which left thousands of Bosniaks dead.

Culture

Serbian immigrants and refugees are South Slavs who are primarily Serbian Orthodox. Serbian Orthodoxy is an ethnic church with its historic seat in Pec, Kosovo, and now in Belgrade, Serbia, the capital. These immigrants and refugees have spoken Serbian, a South Slavic language using both the Cyrillic and Latin alphabets.

Some Serbian Americans have made an impact on the national cultural and political scene.

They include politicians Melissa Bean, Dennis Kucinich, and George Voinovich; professional athletes Vlade Divac, "Pistol" Pete Maravich, Ed O'Bradovich, and Jeff Samardzija; and actor Karl Malden.

The Contemporary Scene

Ultimately, it is difficult to count the number of Serbs in the United States. Some experts estimated between 200,000 and 300,000 based on the 1970 census and a roughly similar number in 2000. Later estimates ranged from several hundred thousand to 1 million. The Serbian Unity Congress of Cleveland, which supported the latter figure, claimed most recent Serbian immigrants and refugees did not cooperate with the 2010 census. After living under totalitarian regimes, they feared any contact with the federal government.

Servicemen's Readjustment Act (1944)

On June 22, 1944, President Franklin Roosevelt signed into law the Servicemen's Readjustment Act of 1944. Informally known as the G.I. Bill, the law proved to be one of the most significant

pieces of legislation in American history. The provisions not only changed the lives of millions of veterans who directly benefited from them but it also reshaped the nation socially and economically. Although race- and gender-neutral in intent, in reality, the law supported sexism and racism. Institutions involved in implementing services, particularly at the state and local levels, privileged white males.

The American Legion, the most powerful veterans' organization at the time, strongly advocated a benefits package for veterans, and the president, well aware that his victory in 1932 owed a considerable debt to Herbert Hoover's disastrous management of the Bonus Army of World War I veterans who marched on Washington, D.C. was equally adamant that benefits would be provided. With congressional estimates at \$3 billion or more, some were concerned about the cost of such a program. Others feared that opening colleges and universities to the masses would destroy the quality of higher education. The Veterans of Foreign Wars and several other veterans' organizations argued that benefits should be extended only to those wounded in battle.

Even after the bill was introduced in Congress, it took six months for it to reach the president for his signature. Representative Harry W. Colmery of Kansas, a veteran of World War I and a former national commander of the American Legion, wrote the first draft of the bill. It was introduced in the House on January 10, 1944, and into the Senate a day later. Both houses passed a version of the bill, but it deadlocked in conference committee over unemployment benefits of \$20 a week for 52 weeks. Representative John Rankin, a white supremacist from Mississippi, refused to cast the proxy vote of Representative John Gibson of Georgia and break the deadlock. A herculean effort by the bill's supporters got Gibson back to Washington in time to cast his vote. On June 12, 1944, the Senate approved the bill by unanimous vote; the House followed on June 13. Nine days later, the president signed it into law.

Provisions

The new law included the hotly debated unemployment compensation along with a large increase in medical benefits, but the provisions that gave new meaning to the American dream were those that

underwrote the costs of education, housing, and business loans for returning veterans who had served 90 days or more. Title II provided up to \$500 a year for tuition, more than the cost of even elite institutions at that time, and a monthly subsistence allowance of \$50. Title III guaranteed a low-interest loan for a home, business, or farm. By 1956, 7.8 million of the 16 million World War II veterans had benefited from the educational program, about 15 times the predicted number. Millions more received other postsecondary training. Before World War II, home ownership was beyond the reach of most Americans. Almost 2.4 million veterans bought homes with loans secured under the act. Ironically, less than 20 percent of the unemployment funds were used.

Altruistic supporters praised the G.I. Bill for its color blindness, but the legislation in effect saw race clearly. Implementation was decentralized and vulnerable to entrenched racism. More than 1 million African American men served in the military during World War II, but many returned to the south and segregated systems of higher education. Among African American veterans who wanted to take advantage of the G.I. Bill's educational opportunities, 55 percent who applied to black colleges were turned away because the institutions lacked space for them. Only 11 percent of the 28,000 veterans who received on-the-farm training in the south under the G.I. Bill were African Americans, representing only 1 percent of the black veterans who were drafted from farms to go to war. African Americans were the largest but not the only group of veterans to experience discriminatory implementation. In 1948, Dr. Hector Garcia, an army major and medical doctor, in 1948 founded the American G.I. Forum to help Latino veterans who were having problems receiving their benefits.

Women Veterans

Of the women veterans, 332,178 were eligible for benefits. Almost 20 percent of them, compared with 15 percent of 15 million eligible men, attended college. Most of these women entered nursing or teaching, traditional professions for women, but some became lawyers, architects, and college professors, positions generally closed to them, economically and socially, before the war. The Veterans Administration made no effort

to inform women of their benefits, even though men were briefed about eligible benefits upon discharge. Educational and vocational counseling services also provided routinely to men were offered to women only sporadically. Moreover, the nine-year limitation on benefits disproportionately affected women, who often delayed their education until after childrearing years or after a husband had completed his education.

The Servicemen's Adjustment Act of 1944 ended in 1956, but its changes led to better lives for millions of veterans and the generations that followed them. College education was no longer reserved for an elite group, and a nation of renters had become a nation of homeowners. Imperfect in its implementation, the bill and later legislation modeled on it gave the United States a new middle class and 14 Nobel Prize winners, three Supreme Court justices, three presidents, and many thousands of teachers, scientists, doctors, engineers, and other professionals who productively contributed to the nation.

Sesame Street

The Emmy Award-winning *Sesame Street* first aired on public television on November 10, 1969. Today, no fewer than 8 million viewers in the United States watch the show weekly, while

millions more view it in one of 120 other countries around the world. Just as much a product of the civil rights movement as it is the brainchild of Joan Ganz Cooney and the progressive thinkers from the Children's Television Workshop (now Sesame Workshop), *Sesame Street* started as an educational experiment for television. The social climate was ripe for the Children's Television Workshop and *Sesame Street*. There was a growing awareness of the role education could play in decreasing social inequalities, and the Head Start program was beginning to be conceptualized. The Corporation for Public Broadcasting was newly created, and funding was available from government grants and foundations such as Carnegie and Ford for innovative educational projects.

Immersed in research on early childhood education and multicultural issues, the mission of *Sesame Street* was to create a new kind of television program aimed at improving children's preparedness for school. Although the program has long been enjoyed by children of all backgrounds, the creators consciously designed the show to address the needs of preschool children from low-income, inner-city, and racial and ethnic minority backgrounds.

Character Diversity

Modeled after a street in East Harlem, New York, this fictional neighborhood always showcased multiculturalism. The original cast included Gordon and Susan, an African American couple; Bob, a white male; and shop owner Mr. Hooper, who, as was shown in the 1978 special "Christmas Eve on Sesame Street" celebrates Hanukkah. Early in the show's tenure, Latino and Latina characters Luis and Maria moved in. In time Miles, son of Gordon and Susan, and Gabi, daughter of Luis and Maria, played together on *Sesame Street*. Gina, a white female, became a resident in 1987 and in 2006 adopted son Marco from Guatemala. Following Mr. Hooper's death in 1982, David, then Mr. Handford, both played by African American actors, ran the store. Alan, the current proprietor is, Asian American, and Leela, the newest neighbor on *Sesame Street*, is Indian American. *Sesame Street* also has a tradition of introducing characters, including celebrity visitors, who speak Spanish, use sign language, or otherwise embody multiculturalism.

Undoubtedly, the most recognized inhabitants of *Sesame Street* are not humans but Muppets. Jim Henson's colorful creations present diversity in human, animal, and monster form: Bert, Ernie, Big Bird, Cookie Monster, Grover, and Oscar the Grouch, for example. Race and ethnicity are not directly indicated, as Bert and Ernie are yellow and orange, but their whiteness may be assumed. In the same way, it is implied that Hoots the Owl, a jazz musician, is African American. Roosevelt Franklin and Kingston Livingston resided on *Sesame Street* for only a short time. Ironically, Roosevelt was criticized for being too stereotypical African American and Kingston for being too counter-stereotype. On the other hand, Rosita, a bilingual Muppet who introduces the Spanish word of the day, appears to have found a permanent home on *Sesame Street*. Elmo, the most popular Muppet, is red and has no apparent race, but his puppeteer, Kevin Clash, is African American, and many attribute Clash's race to Elmo.

Curriculum

Sesame Street cleverly intertwines academic instructions with lessons on kindness and cooperation while also stressing socially relevant themes. In response to growing racial and ethnic tensions in the late 1980s and early 1990s, *Sesame Street* designed a special four-year curriculum focusing on mutual understanding between racial and ethnic groups. As a result, season 22 features a vignette in which Elmo and Whoopi Goldberg compare each other's skin, fur, and hair. Elmo tells Whoopi that her brown skin is pretty, and she reciprocates by complimenting his red fur. When Elmo wants to trade, Whoopi tells him it is impossible and then asserts that she likes her physical attributes and would not want to trade.

Global Reach

From the beginning, the world embraced *Sesame Street*. Germany's *Sesamstrasse* was one of the first international coproductions of *Sesame Street*. In 1972, *Plaza Sésamo*, where Big Bird's cousin Abelard lives, was introduced to Mexico and now airs throughout Latin America. Coproductions exist in more than 18 other countries, including *Jalan Sesama* (Indonesia), *Sesamstraat* (Netherlands), *Galli Galli Sim Sim* (India),

Ulitsa Sezam (Russia), *Rue Sésame* (France), and *Sesame Street* (Japan). Each program is culturally specific and addresses issues relevant to the coproducing countries. Khokha, from *Alam Simsim*, challenges traditional gender roles in Egypt; Ollie, from *Open Sesame*, counteracts stereotypes about Australians; and Kami, from South Africa's *Takalani Sesame*, is HIV positive. Although mutual respect and understanding are central themes in Northern Ireland's *Sesame Tree*, the Israeli and Palestinian coproduction of *Rechov Sumsu/Shara'a Simsim* was not successful and resulted in separately produced programs.

The Future

Sesame Street is solidly situated in the past, present, and future of American multiculturalism. As the first show of its kind, it laid the groundwork for programs such as *Dora the Explorer* and *Ni Hao Kai-Lan*. Yet unlike these shows, *Sesame Street* has remained true to its mission and continues to air on public television to ensure it reaches children of all economic backgrounds.

Sesame Workshop will no doubt continue to bring the world to *Sesame Street* and *Sesame Street* to the world through traditional and new multimedia outlets. The latest coproduction debuted in Afghanistan in 2011, and each month more than 2 million people visit Sesamestreet.org, while another 35 million watch licensed *Sesame Street* videos on YouTube. Countless others download *Sesame Street* apps on their mobile devices every day.

Sexual Orientation and Ethnic Diversity

Sexual orientation refers to the component of a person's sexual identity that reflects one's physical and emotional attraction to the opposite or same sex. Some individuals are attracted to both males and females. Everyone has a sexual orientation. Sociologists, psychologists, anthropologists, and others have all tried to understand sexual orientation. Historically, different nontraditional sexual orientations have been both taboo and honored by different cultures. Homosexuality has been considered a mental illness or a sin, and yet in ancient Greece, armies of homosexual lovers helped Alexander to conquer the known world. In 1973, the Board of Directors of the American Psychiatric Association removed homosexuality as a mental illness from the *Diagnostic and Statistical Manual of Mental Disorders (DSM)*, yet many individuals still consider it an illness.

As with other historically oppressed groups, homosexual individuals have used other terms to self-identify, including gay, lesbian, queer, and fag. Today, Lesbian, Gay, Bisexual, and Transgendered (LGBT) is often used to identify individuals who are not heterosexual. This acronym is often expanded to LGBTQ to include those who are transsexual or questioning their sexual orientation. Non-heterosexual individuals often have more than one level of norms and expectations to address; ethnic traditions and expectations present numerous opportunities for conflict, resulting in familial and community dissonance. Many attempt to "pass," marrying and having children to present a "normal" sexual orientation to the outside world. The majority of individuals in the United States are heterosexual. It is estimated that approximately 1 in 10 Americans are LGBT. It has also been suggested that the size of the LGBT population in the United States may be underestimated because of fear of discrimination and stigma. LGBT individuals attempt to pass

until they "come out of the closet" and publicly acknowledge their sexual orientation to their family, friends, colleagues, and community. Some in traditional marriages may fear divorce and loss of child custody.

The United States is composed of ethnic groups representing virtually every global population, each with traditions and value expectations, often resulting in internal and external conflict. Different cultural groups are more or less accepting of non-heterosexual behavior, and in some cultures, unique roles have been established. Throughout Native American cultures, two-spirited individuals, who might have sexual relations with both sexes, have been healers, spiritual leaders, guardians of oral traditions and songs, foretellers of the future, and diviners of lucky names.

Family Culture

The United States is composed of individuals who are representative of all the world's races, ethnicities, and cultural groups. As a result, the family's traditional and predominant influence of values and morality provides ethnic community members with challenges to meet traditional expectations while embodying and advancing within the values legalized norms of the majority (e.g., child rearing, sexual orientation laws, and ethnic and racial coupling). Homosexuality presents challenges within cultures regarding the importance of carrying on the family name, expectations of traditional marriage and having children, and perpetuating the lineage. The variety of communities and opportunities within a nation of more than 300 million presents an expanded media and social diversity beyond that of countries/cultures of origin. Sexual orientation is a key area of difficulty for many religious groups and ethnic populations. Challenges arise of aspirations for kin, and non-heterosexual orientations bring a sense of shame, rejection, or conflict within the immediate and extended family. Research has shown that the majority of non-heterosexual individuals have heterosexual parents, and that children raised by same-sex parents are no more likely to be LGBT than their peers.

Stigma

Stigma is the rejection of members of disenfranchised social groups resulting in exclusion, shame, bias, hate crimes, self-loathing, and/or violence.

Some research has shown that gay and lesbian parents are as capable of raising children as heterosexual parents and that the children are as psychologically healthy as those reared by heterosexual parents.

Stigma is precisely what most individuals wish to avoid for themselves, those they care about, and their associates. Nontraditional lifestyles, those not held by the majority population, are often perceived as less normal or natural. The history of human immunodeficiency virus and acquired immunodeficiency syndrome (HIV/AIDS) and its association with gay males has enhanced the stigma of homosexuality. Although lesbians are unlikely to contract HIV from female-to-female contact, the label “homosexual” as translated into a native language adds HIV infection stigma. Despite the U.S. Centers for Disease Control and Prevention’s ongoing research and documentation of infection trends, such information and HIV/AIDS education is less available to minority populations, resulting in stigmatized homosexuals.

Ethnic Diversity and Sexual Orientation

Individuals who are different from most others, including their ethnicity, traditions, or sexual orientation, typically hold less social power and are less accepted. Different cultures are more or less accepting of homosexuality or nontraditional sexual orientations. In some circumstances, female homosexuality may be more readily accepted than male, whereas in others the opposite is true. Bisexuality may bring hope of a traditional self-identity

eventuality. LGBT African American individuals may experience discrimination based on both their race and sexual orientation. This occurs within and outside the African American community. Black religious groups appear to be divided; many oppose gay marriage, still viewing homosexuality as a sin. Homophobic views may be a factor in the high rates of HIV among black gay men, who may feel alienated from family and church, important social supports within the African American communities. Living traditional lifestyles, some men participate in secret same-sex activity, referred to as “being on the down low.”

The largest ethnic group in the United States is the Hispanic or Latino population, which can include any racial group and numerous cultural groups. Hispanics are 16 percent of the U.S. population, and the majority of them are Latino. The gender roles identified as *machismo* for men and *marianismo* for women often create conflicts for LGBT individuals. Among Latino men and women, the importance of marriage and family may cause many to marry and have children while maintaining secret sexual lives on the side.

This has been identified as an important factor in the transmission of HIV within this community because married men may have multiple sexual partners and fail to disclose their sexual orientation, HIV status, or use condoms, while women fail to ask because of their subservient roles. A woman’s request that her husband use a condom may be seen either as an accusation that he is unfaithful or an admission that she is unfaithful. Such situations may lead to expulsion from the family or domestic violence.

According to the U.S. census, between 2000 and 2010, the fastest-growing major race/multi-cultural group in terms of proportion of population, was Asian, which grew from 4 percent in 2000 to 5 percent in 2010. Chinese are the largest Asian group, followed by Filipinos and Asian Indians. Each group brings a unique perspective to its treatment of LGBT community members. Asian Americans upholding traditional cultures are more likely to hold stereotypical views about LGBT individuals. Chinese American LGBT youth hide their non-heterosexual behaviors to avoid alienating family and parents’ communities. Often, when they reach a certain age, their family traditions lead to an expectation of heterosexual

marriage. When confronted, some concur; others feel forced to come out. Long-term partners may be identified as “friends” and included in family events but are not given family status. It has been suggested that the Filipino culture may have a more flexible concept of gender, resulting in more tolerance. *Kasarian*, the Tagalog word for gender, reflects a more complex conceptualization of gender, rather than a dichotomy of male/female. Yet, many LGBT American Filipinos face the same issues of family and community acceptance as other LGBT individuals. The diverse combinations of individual ethnic, cultural, and social influences from groups, and from the white majority, further complicate acceptance of individuals of non-majority heterosexual orientation.

Demographics of Sexual Orientation

The U.S. Census of 2010 is a limited resource for identifying sexual orientation. It did not ask relevant and specific questions. Lesbian, gay, bisexual, and transgender partners/couples could respond to questions about marital status as “husband or wife” or “unmarried partner.” There is no option for same-sex unions, legally recognized or not. The U.S. census identifies couples of all sexual orientations by sex and marital status, leaving out much specific data regarding trends and an evolution in coupling commitments. Individuals who are transgender select the category “male” or “female” based on how they self-identify. As a result of data collection limitations, information regarding exact numbers inclusive of uncoupled non-heterosexual individuals is unavailable. Estimates suggest that approximately 10 percent of Americans are LGBT, and this rate might be higher in communities that are more tolerant, such as New York City and San Francisco.

Data analysis of census data can result in statistical errors based on how the data were collected. For example, early comparisons between results of the 2010 census and the 2010 American Community Survey (ACS) found the census data regarding same-sex households to be 52 percent higher. In addition, there are many different ways that individuals identify their sexual orientations, which may or may not match the criteria used by the census. In the United States, the range of sexual orientation identities includes, among others, gay and lesbian (homosexual), bisexual (multi-sexual,

pansexual, and omnisexual), heterosexual, and ally (LGBT). Gender identity can range from identifying with the biological/birth sex to transgender, or beyond. Individuals who do not identify with assigned birth gender, or the binary (male/female) system, include transsexuals, cross-dressers, genderqueers, drag kings, drag queens, and two-spirit or gender-bending people. Some transgender individuals do not feel that they are either male or female, but instead exist somewhere in between.

Race/Ethnicity and Same-Sex Couples

According to 2000 census data, same-sex couples were white (78 percent), Latino (9 percent), African American (8 percent), multiracial (2 percent), Asian/Native Hawaiian/other Pacific Islanders (2 percent), or American Indian/Alaska Native (less than 1 percent). Similarly, the 2010 census data identified the race of same-sex couples (including those who self-identified as Hispanic) as white (81 percent), African American (9 percent), other race (4 percent), multiracial (3 percent), Asian (3 percent), Native Hawaiian/ Pacific Islanders (0.2 percent), or American Indian/Alaska Native (1 percent); Hispanics included any race and comprised 12 percent.

Gary Gates, the Williams Distinguished Scholar at UCLA School of Law’s Williams Institute, focused on unique aspects related to ethnic and racial diversity within same-sex couples in the first analyses of the 2010 census data upon their release. He compared the 2000 data about same-sex and different-sex couples in relation to race and ethnicity with 2010 census data. The number of same-sex households increased more rapidly than different-sex households. Same-sex households increased by 80 percent from 2000 to 2010. Race was also influential, resulting in a slightly higher proportion of African American and slightly lower representation of Asian same-sex couples. Both same-sex and different-sex households included approximately equal numbers of Latinos in 2000 and 2010. Same-sex couples were more likely to be interracial or interethnic (20.6 percent) than different-sex unmarried couples (18.3 percent) or different-sex married couples (9.5 percent).

In 2011, the U.S. census released new statistics regarding same-sex couples. Revised estimates of 2010 census data of same-sex couples reflect that

131,729 were married households while 514,735 were unmarried partners. The 2010 U.S. census data were recalculated based on two questions: relationship to householder and the sex of each person. This recalculation identified more than 2.5 times the number of married same-sex couples and only a slight increase in same-sex unmarried households. A total of 11 countries recognize same-sex marriage, and individuals in such relationships who emigrate to the United States may find their families challenged. Although the federal government does not recognize gay marriage, since 2004, six states have legalized same-sex marriage, as well as the District of Columbia and two tribal jurisdictions.

Race/Ethnicity, Same-Sex Couples, and Children

LGBT individuals have always been parents. It is only within the last 20 years or so that they have used the courts to retain custody of their children after a divorce. Historically, simply being an LGBT person was grounds for declaring someone an unfit parent. Many biological/adopted children are raised in nonwhite households with same-sex parents (28 percent), versus 24 percent in different-sex married households; 36 percent of different-sex unmarried couples raising children are nonwhite. Overall, across all racial and ethnic groups, different-sex couples are more likely to have children than same-sex couples. Among same-sex couples, Latinos (33 percent) and Native Hawaiian/Pacific Islanders (33 percent) are more likely to be raising children than African American (25 percent), Asian (25 percent), and Native American (29 percent) same-sex couple households. Only 17 percent of same-sex, white, non-Hispanic households are raising children.

Intersecting Cultural Identities

A majority of social groups anticipate traditional rites of passage and unions of children comprising (heterosexual) marriage and having children. For many, the evolution of each child presents an opportunity for pride and social success for the parents, as well as a broader ethnic community, representing assurance that a new generation will follow. When such expectations are denied because of a child's sexual orientation, a choice to be single or move away, or a host of

other factors, shame may be experienced by the immediate family, resulting in isolation from the broader cultural community. Regardless of other measurable successes like professional, academic, or social triumphs and satisfaction, the standards of appropriate membership override anything else; mixed-race relationships and, in particular, same-sex relationships and resulting children can challenge the immediate and broader extended families' willingness to accept kin.

Such ethnic and sexual orientation rejection results, potentially, in isolation from history, family, community, and even a geographically identified home. Choices result, ranging from Erving Goffman's interpretation of internalized stigma and isolation, to finding another source of social support and family by integrating with welcoming, non-heterosexual communities. Such assimilation can and will likely result in a new sense of family, despite geographic distance, that relates as well to where one may choose to pursue higher education, find employment, or establish a home, reinforcing a new, separate, and different world.

Trends

U.S. census statistics document an increase in same-sex households, challenging the social norms, ranging from acceptance to complete community and familial rejection. Polling finds trends of acceptance of non-heterosexual individuals increasing annually, in particular by younger individuals who, as they age, will potentially model, as elders, acceptance of this diversity for others. A recent Pew study found rapidly growing support for same-sex marriage among Latinos, reflecting growing support among the general public. Approximately 53 percent of Latinos now favor allowing gay and lesbian couples to marry legally, while only one-third are opposed. Additional findings indicate that 59 percent of Hispanics believe that homosexuality should be accepted by society, while only 30 percent believe that it should be discouraged.

Individuals comprise a range of identities, some more accepted by the broader majority of individuals in the United States, and this is influenced by race, ethnicity, and traditional values. Sexual orientation, as well as ethnic and racial diversity, can result in family and community rejection, depending on the degree of U.S. assimilation, regional majority values, religious doctrine, and

a host of other factors. As a result, the minority non-heterosexual U.S. population is at increased risk of challenges from earliest sexual orientation self-identity throughout the stages of life, including marriage, having children, and maintaining accepting and equal relationships within families.

Trends in the United States find gay marriage, legal in some states, in court, where it has been approved by state legislatures or voters' support, increasingly supported by younger members of society who are exponentially less concerned about sexual orientation and are more accepting of contemporaries and family members than previous generations. This trend suggests that over time, the issue of sexual orientation will become legally protected regarding marriage rights, ultimately at the federal level, as interracial marriage was not so long ago.

Shaft

Released in 1971, *Shaft* is a movie directed by Gordon Parks and produced by Joel Freeman, based on the book of the same name by Ernest Tidyman. *Shaft* is generally credited with popularizing the genre of "Blaxploitation" films, a group of films released between 1970 and 1975 featuring African Americans as the main characters. *Shaft* stars Richard Roundtree as John Shaft, a black private detective hired by a Harlem mob boss to find his recently kidnapped daughter.

In the opening scenes, Shaft encounters the police lieutenant Vic Androzzi, who plays an important role as a middleman between the police force and Shaft. Throughout the movie, Androzzi provides Shaft with insider information while he tries to coerce information about the criminal underground from Shaft. Androzzi tells Shaft that Bumpy, the leader of a notorious gang, is looking for Shaft. Shaft soon sees one of Bumpy's men in the lobby of the building where Shaft works, and he subdues the man during a violent altercation. Both men go to Shaft's office, where a second gangster is waiting. A fight erupts, and Shaft kills one of the men by throwing him out of the window and onto the street several stories below. Shaft lets the other gangster leave, but only after Shaft confirms what the lieutenant previously told him.

Shaft then arranges a meeting with Bumpy, who hires Shaft to find his kidnapped daughter, Marcy. Unbeknownst to Shaft, the Italian Mafia kidnapped Marcy as part of a larger turf war between Bumpy's gang and the Mafia. Shaft enlists the help of Ben Buford, Shaft's old colleague from "the movement" (one assumes this is a reference to the Black Power movement), who still leads an informal army of black men that can assist in the rescue efforts.

Shaft learns that Marcy is being held in an apartment and attempts a reconnaissance mission to make sure she's still alive. A gunfight erupts, and Shaft is shot in the shoulder, after which Marcy is relocated to a motel. After learning the location of the new hiding spot, Shaft calls Bumpy and arranges for getaway cars should he successfully rescue Marcy. The movie ends after Shaft stages an elaborate, commando-style mission and successfully frees Marcy, who flees the scene safely in one of the getaway cars.

Throughout the movie, Shaft appears as a charismatic and independent black man whose connections in both the criminal underworld and the police force allow him to break boundaries and move freely through both white and black cultures. Shaft is also known for his sexual prowess, and he has multiple sexual encounters in the movie, including one with his black girlfriend and another with a white consort.

Franchise and Soundtrack Popularity

Shaft became the basis of a short-lived franchise based on the character John Shaft, which included two subsequent films and a television series from 1973 to 1974. In 2000, John Singleton resurrected the franchise by directing a new film, also titled *Shaft*, starring Samuel L. Jackson as John Shaft's nephew. *Shaft* (2000) received mostly positive reviews and was a commercial success, grossing over \$100 million.

The soundtrack to the original *Shaft* was also remarkably successful and helped solidify Isaac Hayes's career in the music industry. Hayes, known in the 1960s as an African American singer and songwriter, wrote the soundtrack to *Shaft*, which included the acclaimed "Theme from Shaft," for which he received several awards, including the Academy Award for Best Original Song in 1972 and multiple awards at the 14th Grammy Awards in 1972. "Theme from Shaft" also appears in several "top 100 songs" lists, including *Billboard's* Hot 100 number-one singles and the American Film Institute's "100 Years . . . 100 Songs" list.

As part of the larger Blaxploitation genre, *Shaft* represents several important trends in both American and cinematic history. *Shaft* appeared after the civil rights era and the 1960s Black Power movement, when black American activists worked for desegregation and equal standing before the law. *Shaft* and other Blaxploitation films represent one attempt for black Americans to embrace their new social standing within a still-racist America by highlighting black men and women as independent and free. *Shaft* also signals the emergence of black-themed movies as commercially viable. Movie companies produced several black-themed movies in the 1960s, but none of them received *Shaft's* level of commercial success. After *Shaft*, Hollywood invested more

money and devoted more resources to the production of black-themed movies.

Scholars have both criticized and praised *Shaft* for its portrayal of black masculinity. Some scholars embrace Shaft as a strong and uncompromising black man who defies previous cinematic stereotypes portraying black men as weak and subservient to whites. Other scholars have argued that *Shaft* embodies a stereotype of black masculinity as hypersexualized and prone to violence, and that it depicts the culture of black men displaying their historically new (at least in the American context) freedoms while oppressing black women. Scholars have also criticized the portrayal of black femininity in *Shaft*, which depicts women as passive, victims, and sex objects.

Shaman

Shamans have been found in many cultures and places, including Siberia, southeast Asia, the Arctic, South America, Australia, and throughout Native America. Shamans can play a number of roles. They are healers, diviners (predictors or shapers of the future), spiritual guides who escort the souls of the dead to their afterlife destinations, bringers of fortune, and officiates at ritual sacrifices. In the past, shamans were often stigmatized and suppressed, labeled as "primitive,"

“superstitious,” “backward,” or simply foolish. Westerners saw them as obstacles to progress in their communities, as well as threats to Christian beliefs. Shamans were subsequently often characterized as imposters, hucksters, and possessed by demons. Although no longer derided in this way today, shamans (and their work) are still frequently marginalized or discredited, as with more recent assertions that they are mentally ill.

In his book *An Introduction to Shamanism*, Thomas A. Dubois views shamanism as “a set of practices and understandings concerning the cosmos, spirits and human needs.” Shamans are usually animists, meaning that they believe that non-human entities are endowed with spirits or souls, and they also believe in multiple worlds inhabited by various (often invisible) spirits that have a palpable impact on living beings. Shamans have the ability to enter altered states of consciousness and are experts in spirit travel and negotiation.

Native Americans and Shamanism

Westerners often wrongly use the word *shaman* interchangeably with “medicine man,” whose roles within a tribe were different. Many Native Americans take exception to the word *shaman*, as it is a Western term not used by the tribes, who instead use words from their native language to describe their spiritual leaders. Although shamanism is a set of spiritual practices common to many Native American tribes, it should not be considered solely a Native American religion.

Many Native Americans believe that to use these practices—which are thousands of years old—one must be born and raised in the tradition; it is not something that can be appropriated or learned from a book. These spiritual teachings are tied to the long history of a tribe and passed down by their ancestors. As such, they should be considered sacred—both a privilege and a responsibility.

Predisposed Calling

Shamans are thought to possess certain psychic, emotional, or physical characteristics that predispose them to their vocation or that demonstrate that they have the potential for such work. Like many spiritual leaders in other traditions, shamans typically receive a “calling,” which often comes to them by means of a dream, sign, or

crisis. For the shaman, it is a summons that is difficult to resist and is fraught with challenge.

Shamans are thought to be selected against their will by otherworld spirits who take them unawares. After they are called, many shamans go through periods of initiation or transformation, which are often physically and psychologically arduous and involve entering into trances. During these initiations, neophyte shamans may be required to fast, endure hardship, or curse or combat an enemy in order to make contact with the spiritual world. In some cases, initiation is marked by the onset of an illness or a near-death experience. To survive and return from such an ecstatic journey or trance experience was to be remade as a shaman, perhaps accompanied by a new talent for foresight and healing.

Activities

Shamans engage in a variety of activities, but not all of them do the same things: some practice healing, some alter consciousness or use trance; some shape-shift and journey to other worlds; some serve as mediators between their community and the spiritual world; some become possessed by the spirits of the dead; some are priests and ritualists; and some are animists, engaging with non-human entities. One common role of the shaman is to treat and cure illnesses, both physical and psychological, caused by malevolent spirits. Shamans often possess an extensive literacy in medicinal plants, especially those native to their area, and often prescribe herbal treatments.

Public performance is often an aspect of shamanic rituals, and a variety of paraphernalia can be employed to enhance the experience, including costumes; musical instruments such as drums, gongs, and rattles; mirrors; and pipes. Many shamans also incorporate chanting in their rituals, which may involve repetitive sounds, unintelligible phrases, or recitation of epic poems. Sometimes, these chants are accompanied by drumming, rattling, or other rhythmic sounds. Many shamanic rituals also include the ingestion of plants (purgatives) that result in vomiting, which is considered an act of purification.

Qualities of “Otherness”

Shamans are typically figures of veneration and prestige in their communities, and although they

usually live out their careers within their villages, clans, and tribes, they are often outsiders, living (at least psychologically) on the periphery of the community, which helps reinforce their unique supernatural abilities, as well as their qualities of “otherness.” In some cultures, only men can serve as shamans; in others, the role is almost entirely the purview of women.

Also called “white shamanism” or “Western shamanism,” neoshamanism is the appropriation of indigenous or prehistoric shamanism by Westerners. Neoshamans, unlike the shamans of old, do not typically come to their practice out of a compulsion or calling, but rather as a conscious choice. Their view of cosmology and other spiritual beliefs is frequently a hodgepodge of philosophies lacking cohesiveness. They also do not depend upon a master or teacher for validation or instruction, relying instead upon self-scrutiny and personal revelation. Many neoshamans romanticize indigenous shamans, ignoring the fact that traditional shamans have access to malevolent, as well as benevolent, spirits. They tend to emphasize their subjective experience and growth, versus service to the greater community. Perhaps most prevalent in the United States, neoshamanism has come under harsh censure from Native American activists who regard appropriations of Native American traditions as a commoditization of their spiritual practices. Ward Churchill, a Native American activist, has referred to neoshamans as “plastic medicine men.”

Sharecropping

Sharecropping became the dominant method of organizing labor in the southern United States after the Civil War, during the Reconstruction era. Sharecropping replaced the plantation system employing gang labor, which had replaced slavery.

History

Immediately after the Civil War, slavery ended in the former Confederate states in the south. However, as plantations continued to be the main agricultural unit in the south, landowners persisted in treating freed formerly enslaved people in much the same manner as they had treated these people during slavery. Gang labor and harsh working and living conditions were maintained. The key differences were that white overseers of freed formerly enslaved people were prohibited from using corporal punishment on the workers, workers and planters negotiated labor contracts, and the workers were paid, albeit poorly.

By 1868, sharecropping emerged as a rival of the plantation system throughout the south, and within two years, sharecropping had become the norm. Typically, sharecropping is thought to be unique for the payment arrangements involved, in which sharecroppers work on a farm and are paid with a share of the crops at harvest time. However, this payment method predated sharecropping and was used by plantation owners with poor white laborers hired seasonally to supplement the labor of enslaved people in the antebellum era and also with black gang labor in the immediate post-Civil War years; some historians refer to this form of payment as the share-wage system. (Plantation owners used this payment arrangement to compensate for the lack of capital, credit, and currency available in the aftermath of the war.) Sharecroppers typically were paid one-third of the year’s crop if the landowner had provided the essentials (seed, animals, tools) and one-half if the sharecropper had used his own.

Rather than unique payment arrangements, then, the significance of sharecropping was the consequent demise of the plantation system. Sharecropping entailed breaking a large plantation up into small farms, to be worked by individual families rather than gang labor. The rise of

sharecropping resulted in the decentralization of agricultural production in the south.

Labor Shortages and the Need for Technological Innovations

Historians disagree on why sharecropping replaced the plantation system. One explanation rests on the idea that certain conditions existed in the south that predisposed the south to turn to sharecropping; according to this theory, a labor shortage, an elite that owned large parcels of land, and a lack of technological innovation rendered the south ripe for sharecropping to take hold, with its concomitant repression of workers so as to ensure an adequate workforce. A similar explanation incorporates the lack of demand for black labor in the north as an essential precondition to the rise of sharecropping, leaving the south's elite free to devise whatever system of labor they wished with minimal protest from outside the region. Still another theory

emphasizes the necessity of the state's support of the elite landowning class, leading to tacit acceptance of repressive measures to keep workers on the land, to limit workers' access to owning land, and to hamper workers' mobility to seek opportunities elsewhere.

A fourth explanation for the rise of sharecropping focuses on the agency of the newly freed people and their class conflict with plantation owners. Freed formerly enslaved people deliberately resisted the maintenance of the plantation system and gang labor, effectively preventing this remnant of the days of slavery from continuing. At the same time, plantation owners and other whites opposed black workers' efforts to rent or own their own farms, as in the case of the unsuccessful Southern Homestead Act (passed in 1866 and repealed in 1877). At one point, plantation owners who were determined to continue the plantation system attempted to recruit Chinese and European immigrants as a new workforce for plantation agriculture, in the

A sharecropping family clearing weeds from a cotton field in White Plains, Georgia, in 1941. Although the sharecropping system was primarily a post-Civil War development, it had previously existed in Mississippi and Tennessee. Sharecroppers working on portioned-out farms became the norm in the south from the 1870s to the 1950s.

hope of increasing the labor supply and causing competition with local black workers. Black men were particularly intent on shielding their wives and children from working in the fields under white supervision, a patriarchal prerogative that had been denied to black men during slavery and assumed new importance with the creation of schools for black children to attend.

Different Visions

The root of the conflict was in the diverging visions blacks and whites had for a reconstructed south. Blacks sought autonomy, land ownership, and control over their own labor. Whites wanted a return to a forced-labor system and control over blacks. In the end, neither the landowning elite nor the formerly enslaved people preferred sharecropping; instead, sharecropping developed as a de facto compromise. For blacks, sharecropping's potential to provide a measure of autonomy quickly deteriorated with the development of the credit system used by local merchants to sustain sharecroppers until harvest time; merchants charged interest at exorbitant rates on purchases made on credit, ensnaring sharecroppers in a never-ending cycle of debt and poverty. After Reconstruction ended, the plight of sharecroppers worsened, as white elites gained new leverage in laws decreeing that landowners had the first right to the crop, with sharecroppers receiving their shares only after rent and other debts had been paid. In effect, this transferred all the risk of agriculture onto the sharecroppers, who could end up with nothing in a year with a poor yield.

From the 1870s to the 1910s, blacks were joined in sharecropping by poor whites and, in some locations, Mexican immigrants; many landowners played the different groups against each other, searching for the most tractable workforce over which to assert the greatest control. In the 1930s, tens of thousands of sharecroppers were forced off the land altogether by mechanization and the federal government's encouragement of landowners to reduce crop sizes by reducing the acreage under cultivation.

Sharia

Sharia is the Islamic religious code that governs law and personal behavior. The word is of Arabic origin and denotes a "path to the water hole," implying a way of life to be followed. Sharia law is considered by Muslims to be infallible, divine law revealed through the Qur'an and the life of Muhammad as recorded by the Sunnah (contained in the hadith). Sharia is interpreted and implemented via Islamic jurisprudence, or *fiqh*, which relies upon scholarly consensus (*ijma*, or "collective reasoning") and deductive analogy (*qiyas* and *ijtihad*, or "individual reasoning"). Islamic jurisprudence contemplates most areas of substantive and procedural law, as well as personal, sexual, and religious matters. Although *fiqh* is a distinct concept from sharia, the latter term is often employed to encompass both concepts and as a shorthand to signify all Islamic law.

History

From the 9th century until the colonization of Islamic lands by European countries in the 18th and 19th centuries, Islamic nations had instituted a separation of powers that entrusted the interpretation of sharia law to Islamic scholars. As Muslim nations gained independence in the mid-20th century, the authority to interpret sharia law was less clearly delineated between scholars and political rulers. Competing sharia models were adopted in various countries, such that Muslim governments may now be classified as secular with private

sharia observances, classically sharia, or blended, with both secular and sharia legal elements.

Just as the role of sharia in Islamic countries has been a matter of great debate and conflict, the immigration of Muslims into Western nations has raised questions as to the compatibility of sharia and liberal democracy. Rejecting the United Nations' 1948 Universal Declaration of Human Rights as incompatible with sharia law, the Organisation of the Islamic Conference adopted in 1990 the Cairo Declaration on Human Rights in Islam, which stated that "all the rights and freedoms stipulated in this Declaration are subject to the Islamic Sharia." In 2003, the European Court of Human Rights upheld the Turkish Constitutional Court's dissolution of a political party that sought to introduce sharia law by holding that "sharia was incompatible with fundamental principles of democracy."

Following the terrorist attacks of September 11, 2001, and growing awareness of the civil strife accompanying massive influxes of Muslim immigrants into European nations such as France and England, Americans became increasingly concerned with the spread of sharia law in the United States. Sharia punishments are largely considered to be draconian—blasphemy, apostasy, and homosexuality are punishable by death, whereas other crimes warrant amputations or flogging. Americans also strongly objected to sharia's subordinated treatment of women and minority religions. Reactionary and, in some cases, extremist interpretations of sharia, including Islamist and fundamentalist movements such as the Muslim Brotherhood and Taliban, garnered widespread media attention through violence and a stated desire to impose sharia law throughout the world.

Last Resort Jurisdiction

U.S. courts have long been cognizant of sharia law, just as they have historically been aware of Jewish law and Catholic canon law. These religious laws are often at issue in civil cases involving commercial litigation, divorce, and custody proceedings. The U.S. legal system often serves as a jurisdiction of last resort in the event that religious tribunals or mediation fail to resolve an issue with both civil and secular consequences. Nevertheless, U.S. courts have generally refused to admit religious

law as supplanting the civil laws of the United States. Critics of sharia law responded angrily to a 2010 New Jersey case in which a Moroccan woman's request for a restraining order against her ex-husband, after he had repeatedly assaulted and raped her, was denied following the judge's determination that the ex-husband lacked criminal intent because of his belief that under sharia law, his wife was obliged to submit to his demands. Though the decision was reversed on appeal, the threat of judges accommodating Islam by enforcing sharia law galvanized a national movement.

Republican presidential candidates Newt Gingrich and Michele Bachmann signed a pledge during the 2012 campaign, promising to reject Islamic law in American courts. Vice-presidential nominee Sarah Palin also declared in 2008 that sharia law, if adopted and implemented as governing law, would bring about "the downfall of America." In November 2010, the Oklahoma Constitution was amended in order to specifically ban the use of sharia law in state courts. Although federal appeals courts later struck down the amendment as religiously discriminatory in a lawsuit filed by the American Civil Liberties Union and the Council on American-Islamic Relations, over two dozen state legislatures have since considered bills to forbid judges from consulting religious or foreign law in their decisions.

Proponents of anti-sharia legislation often contend that such laws are a means by which to raise public awareness regarding the threat of sharia law in America. Yet, as Muslim minorities expand throughout the country and bans on Islamic law multiply in state legislatures, sharia promises to remain a prominent and controversial issue.

Shawnee

The Shawnee are an Algonquian-speaking Native American tribe. The word *Shawnee* means “southerner,” identifying them as the southernmost tribe of Algonquian speakers. Shawnee have resided in an extensive region east of the Mississippi River that includes present-day Alabama, the Carolinas, Delaware, Illinois, Indiana, Kentucky, Ohio, Michigan, Pennsylvania, Tennessee, and the Virginias. Although the Shawnee are frequently described as a mobile, nomadic people, this stereotype emerges from a long history of contact with settler colonialism, which displaced and dispossessed them repeatedly for more than three centuries. In spite of this history, the Shawnee survived and maintain a strong sense of distinct tribal identity. Today, three federally recognized Shawnee tribes live in Oklahoma.

Pre-Contact and Culture

Many scholars argue that the Shawnee are one of the descendants of the Fort Ancient mound-building cultures, which abruptly disappeared around 1650, a period associated with the Beaver Wars. During this time, the Iroquois drove Shawnee and others living in present-day Ohio, West Virginia, and western Pennsylvania out of the area. For 70 years following the conquest, the Ohio Valley remained virtually uninhabited. Forced to abandon their homelands, Shawnee scattered in various directions but never surrendered their identification with and claim to the area.

The Shawnee were a loose confederacy of five divisions sharing a common language and culture. Each division had a primary village and performed a specific function on behalf of the entire tribe. Shawnee maintained a patrilineal descent kinship structure and complementary gender roles. Men were hunters and warriors, and women were planters (growing in particular the “three sisters”: maize, beans, and squash). During the summer, the Shawnee gathered in large villages; in the fall,

they separated into small hunting camps. Important ceremonies were tied to the agricultural cycle, two of which are still conducted: the bread dance and the green corn dance.

Colonial Contact

The early colonial period found the Shawnee in continual movement as various colonial powers fought for hegemony in the New World. The earliest historical records of the Shawnee occur in the 1670s in two widely distant locations: the Cumberland River and the Savannah River regions. By the early 1700s, the Shawnee began returning to their homelands in the Ohio Valley, but the transition was not a smooth one. The westward expansion of settler-colonists began to drive other Native peoples from the east into the area. Throughout the 18th century, refugee Native peoples in Ohio settled into pan-ethnic communities and grew into a large, powerful force central to trade in this area, claimed simultaneously by the Iroquois, French, and British. Numerous struggles for hegemony followed, and each military confrontation resulted in further land cessions for the Native peoples. During the French and Indian War (1754–63), encroachment upon Iroquois territory in the Hudson valley area set the stage for the treaty at Fort Stanwix (1768), which saved portions of Iroquois homeland but ceded areas in West Virginia and Kentucky to the British, lands Iroquois claimed by right of conquest. The occupants of the land, which included the Shawnee, were not signatory to the treaty, and they resisted the flood of Anglo settlers that began pouring into the Ohio River valley.

The American Revolution brought to the fore a newly formed colonial power, the Americans. The Shawnee were divided—some advocated neutrality, while others fought as British allies. Most felt the Americans were the bigger threat to their homelands. In 1791, a confederacy of Native warriors led by Little Turtle (Miami) and Blue Jacket (Shawnee) stunned and overwhelmed an American army at the Battle of the Wabash, a major victory for the Natives. In 1794, the largest assembly of Native warriors attacked Fort Recovery, but they were driven away in the Battle of Fallen Timbers. The resultant Treaty of Greenville (1795) ceded two-thirds of Shawnee lands to the United States. Large numbers of Shawnee

migrated to Missouri, still under control of Spain, and by the early 1800s, more Shawnee resided in Missouri than Ohio.

Nineteenth-Century Migrations

Settlement in the Missouri area offered only a brief respite. As a result of the Louisiana Purchase (1803), Shawnee again faced white encroachment. In 1825, they were forced to exchange the Missouri lands for lands in Kansas territory. The group scattered, as some migrated to the reserved Kansas lands and others left for Indian Territory and Texas.

The Shawnee remaining in Ohio offered a final resistance to retain their homelands under the leadership of the famous warrior Tecumseh. Although he fought at the Battle of Fallen Timbers, Tecumseh refused to sign the Greenville treaty. The cession of lands at the Treaty of Fort Wayne in 1809 became a flashpoint. Tecumseh was outraged, and during the next four years, he sought to mobilize a pan-Indian confederacy that would not only stop further land cessions but also reclaim lost lands. Allying with the British during the War of 1812, Native forces struck numerous offensives along with British forces to recover lands in the Ohio area, but their defeat at the siege of Fort Meigs marked the end of the Ohio Campaign. Tecumseh died shortly thereafter at the Battle of the Thames, effectively ending Native–British alliances. In 1817, the remaining Ohio Shawnee signed the Treaty of Fort Meigs, ceding the remainder of their lands in Ohio for three small reservations in northeastern Ohio: Lewistown, Hogcreek, and Wapakoneta.

Removal and Present Day

Reserve life in Ohio did not last long for the Shawnee, as the 1830 Indian Removal Act forced the remaining Shawnee from Ohio. From 1831 to 1832, the Lewistown, Wapakoneta, and Hog Creek bands each exchanged their Ohio lands for various lands in Kansas and Oklahoma. The Civil War further negatively impacted and scattered the Shawnee, and the Kansas Shawnee were removed yet again to Oklahoma.

Today, there are three federally recognized Shawnee tribes. The largest group, the Absentee Shawnee Tribe of Oklahoma, is located in central Oklahoma. The Eastern Shawnee Tribe of Oklahoma is located in Eastern Ottawa County, near

the Oklahoma–Missouri border. The Shawnee Tribe of Oklahoma, formally known as the Loyal or Cherokee Shawnee, resides in Miami, Oklahoma. A number of groups remaining in the eastern United States claim status as Shawnee tribes; however, these groups are recognized neither by the U.S. government nor by the federally recognized Shawnee tribes.

Shelley v. Kraemer (1948)

Shelley v. Kraemer is a U.S. Supreme Court decision rendered on May 3, 1948. The case declared residential racial covenants in housing invalid because further enforcement of racial covenants in housing deeds constituted state action. For a state to enforce the covenants on the basis of race was a violation of the Equal Protection Clause of the Fourteenth Amendment to the U.S. Constitution.

Shelley v. Kraemer began when J. D. Shelley, an African American, contracted to purchase a home with white sellers for a property that contained a racially restrictive covenant in the deed to the property. The property was located in St. Louis, Missouri, at 4600 Labadie Avenue. Shelley was married with six children. He purchased the property on September 11, 1945. As a result of the purchase in violation of a racially restrictive covenant, Louis Kraemer, who was white and who

owned a house on Labadie Avenue near the Shelley home, sued Shelley. Kraemer had been an original member of the group of homeowners, known as the Marcus Avenue Improvement Association, who signed onto the racially restrictive covenants and agreed to abide by these agreements contained in their properties. The covenant forbade African Americans from purchasing any of the properties and occupying the properties in that area.

Racially Segregated Cities

This practice, designed specifically to prevent African Americans from buying or leasing housing in segregated white areas, was a widespread practice in the United States at the time the *Shelley* case was filed. Cities across the nation remained racially segregated at least partly because of the existence and enforcement of the racial covenants. As far back as 1892, courts in the United States had been ruling on the issue of racially restrictive covenants in housing.

In 1926, in *Corrigan v. Buckley*, the U.S. Supreme Court declared racially restrictive covenants in property deeds to be legal and enforceable. *Corrigan*, like the situation in *Shelley*, involved homeowners entering into racially restrictive covenant agreements contained in the deeds to their properties that excluded African Americans from purchasing and/or occupying their homes. Irene Corrigan sold his home to an African American named Dr. Arthur Curtis. John J. Buckley filed an injunction against Corrigan asking the court to invalidate the sale in violation of the agreement. The injunction was granted by the court and ultimately upheld on appeal. This established racially restrictive covenants as legal in the United States in 1926. This remained the law, even with multiple challenges by civil rights lawyers, until 1948 and the *Shelley* case.

Racially Restrictive Covenants

In the *Shelley* lawsuit, brought by Fern and Louis Kraemer, the St. Louis State Circuit Court ruled in favor of J. D. Shelley and his family. The Marcus Avenue Improvement Association brought the suit in the name of the Kraemers and sought to enjoin the sale of the property. The Kraemers alleged that if the Shelley family were allowed to occupy the property, it would result in irreparable injury to the Kraemers' property. Although the St.

Louis State Circuit Court ruled in favor of J. D. Shelley and his family, the court did not rule that the racially restrictive covenant was a violation of the U.S. Constitution or any other federal law. The court decided the case on other grounds in upholding the sale of property to Shelley.

The Kraemers appealed the case to the Missouri Supreme Court. The Missouri Supreme Court reversed the decision of the St. Louis State Circuit Court. The Missouri Supreme Court held that the homeowners of the Marcus Avenue Improvement Association could enter into an agreement to abide by the racially restrictive covenants contained in the deeds to their homes. The court rejected all arguments of the Shelley family, including any public policy arguments. The Missouri Supreme Court followed the existing legal precedents that had been in place since the *Corrigan* case of 1926. Racially restrictive covenants in housing were constitutional according to the Missouri Supreme Court, and there was no violation of the rights of the Shelley family.

Eventually, the *Shelley* decision was appealed from the Missouri Supreme Court. It was appealed along with several racially restrictive covenant cases that had also been adjudicated in state courts around the country. The court agreed to decide racially restrictive covenant cases from Detroit, Michigan, and Washington, D.C., along with the *Shelley* case. The court heard the three cases on January 15 and 16, 1948. The court set aside seven hours for oral argument. Three of the justices of the U.S. Supreme Court, Justice Stanley Reed, Justice Robert H. Jackson, and Justice Wiley B. Rutledge, declined to participate in the racial covenant decisions. It is generally believed that the three justices declined to participate in the cases because they all owned property with racially restrictive covenants.

Final Rulings

The court issued its decisions in the three cases on May 1, 1948. The *Shelley* decision is the best known and most important of the three decisions. The court held that enforcement of the racially restrictive covenants was unconstitutional. Enforcement of the covenants constituted state action, and to allow different treatment of individuals because of these covenants constituted unequal treatment and was a violation of the Fourteenth Amendment's Equal Protection Clause.

In ruling that racially restrictive covenants were no longer legal, the court, with Justice Fred M. Vinson writing the unanimous opinion, stated the following:

We hold that, in granting judicial enforcement of the restrictive agreements in these cases, the States have denied petitioners the equal protection of the laws, and that, therefore, the action of the state courts cannot stand. We have noted that freedom from discrimination by the States in the enjoyment of property rights was among the basic objectives sought to be effectuated by the framers of the Fourteenth Amendment.

Although the Shelley case did not completely resolve the issue of racial segregation in the housing market, it did address one aspect of the issue and afforded African Americans an opportunity to gain entry into some areas of certain cities, even as residential racial segregation continued throughout much of the country.

tribe members, also referred to by early white settlers and traders as the Snake Indians, were divided into three sizable divisions: the Eastern, the Northern, and the Western. These three subtribes were very different in many ways.

The Eastern Shoshone were originally located in northern Colorado, Montana, and Wyoming. Starting around 1750, warfare and other forms of pressure from a number of tribes, including the Arapaho, Blackfoot, Cheyenne, Crow, and Lakota, forced the Eastern Shoshone southward and westward. Eventually, some Eastern Shoshone moved southward enough to merge with the Comanche in Texas.

The Northern Shoshone were originally located in eastern Idaho, northeastern Utah, and western Wyoming. Unlike the Eastern and Western Shoshone, the Northern Shoshone were largely nomadic and lived in tepees that were easily moved. They were horsemen and used the horse to hunt buffalo, which were a staple of their lifestyle.

After years of infectious diseases and some warfare, the approximate population of the Northern and Western Shoshone taken together in 1845 was 4,500. Led by Chief Pocatello, the Northern Shoshone fought their way through a turbulent 1860s, battling settlers in Idaho—hence the town of Pocatello, Idaho. As more settlers moved west, they inevitably invaded Shoshone territory. The first transcontinental railroad was completed in 1869, and this enabled unprecedented numbers of Euro-American settlers to arrive in Shoshone territory.

As a result, the Shoshone raided settlements for food and occasionally even attacked settlers. This ongoing violence finally culminated in the Bear River Massacre of 1863. The massacre saw the murder of 350 to 500 Northern Shoshone, including women and children, at the hands of U.S. forces. The Shoshone families were at their winter encampment and this massacre was the most grievous violence suffered by the Shoshone at the hands of U.S. forces.

In the coming years the Northern Shoshone allied with the Bannock, a related tribe, for battle against the U.S. military. From 1864 to 1868, the tribal alliance fought the United States in the Snake War. The Northern Shoshone and Bannock again fought U.S. forces in the 1878 Bannock War. However, the Northern Shoshone were

Shoshone

The Shoshone are a Native American tribe in the United States. Historically, the Shoshone spoke their own language, also called Shoshone, a Numic, Uto-Aztecan language. The Shoshone

A Shoshone encampment in the Wind River Mountains in Wyoming, 1870. As more settlers migrated west, tensions arose with indigenous people, and many battles were fought throughout the second half of the 19th century.

not always allied against U.S. forces. In 1876, the Shoshone fought their long-standing rivals, the Cheyenne and the Lakota, alongside the U.S. Army in the Battle of the Rosebud.

In 1879, a group of around 300 Western Sheep-eater Shoshones fought in the Sheep-eater Indian War. This conflict has the distinction of being the last Indian war fought in the Pacific Northwest.

In 1911, a Bannock leader, Mike Daggett, or “Shoshone Mike,” led a small group of Bannock in the murder of four Nevada ranchers. The rest of the area’s settlers formed a posse and, hoping for revenge, went after the Bannock group led by Shoshone Mike. The posse found their quarry on February 26, 1911, and eight Bannock were slaughtered. Ed Hogle was the sole member of the posse to die. In its more grisly acts, the posse captured three children and a woman. At a later date, a rancher donated partial remains of bodies of various ages and sexes to the Smithsonian Institution for study; this was believed to be all that remained of Shoshone Mike’s family. In 1937, there were approximately 3,650 Northern Shoshone and 1,201 Western Shoshone, according to the Bureau of Indian Affairs. In 2000, there were approximately 12,000 Shoshone counted by the census.

The Western Shoshone survive as of 2013 and are probably the best-known Shoshone. Originally, they were focused in Oregon and western

Idaho, although they ranged as far as California, central Idaho, central Nevada, and northwestern Utah. All Western Shoshone lived in grass huts without roofs and hunted for small game and birds, as well as fished. Most likely, because they survive today, we know more about this subtribe of the Shoshone. It is known that Western Shoshone centered in Idaho were known as Tukuaduka, or sheep eaters, based on their farming of sheep. Similarly, the bands of Western Shoshone located in Nevada and Utah were known as Gosiute, or Toi Ticutta, roughly translated as “eaters of cattails.”

The California Western Shoshone were and still are known as Timbisha Shoshone, Death Valley Shoshone, Panamint Shoshone, and Paiute Shoshone. Their names obviously signal where they live, and they have a federal reservation and tribal government as of this writing at Furnace Creek, California.

In 2008, the Bear River Massacre site and some land in its vicinity went to the Northwestern Shoshone. The tribe’s plan was to pay homage to the massacre and those killed there and to protect the memory of the murder of the largest number of members of the nation in history. The Northwestern Shoshone tribe worked in partnership with state leaders in Idaho and Utah as well as the American West Heritage Center to preserve the land, seen as holy ground. Since the project’s inception, the partnership has not only protected the site but also made major advances in sustainable energy.

Although the Western Shoshone may be the best-known tribal segment, the most famous Shoshone tribe member is undoubtedly Sacagawea. A Northern Shoshone of the Lemhi Band, she accompanied Meriwether Lewis and William Clark on their historic exploration of the American West from 1804 to 1806.

Show Boat

Show Boat is a 1926 best-selling novel by Edna Ferber as well as a 1927 musical play adapted by composer Jerome Kern and librettist Oscar Hammerstein II. The work marked a radical departure from the day's standard fare of musical comedies in that its songs were integrated fully into the plot. The original production's multiracial cast was one of the first ever on Broadway. Additionally, *Show Boat* was one of the first musicals to make an earnest attempt at depicting the plight of African Americans sympathetically. Between 1927 and 1997, *Show Boat* was produced on Broadway five times. In addition, there have been three screen versions of *Show Boat*: a silent one, in 1929, focusing on Ferber's novel; and two others, in 1936 and 1951, adapting the musical.

The Origins of *Show Boat*

Ferber, a former reporter, was inspired to write the novel after first hearing about show boats in 1924. While conducting research for the novel, Ferber spent weeks with the cast and crew of the James Adams Floating Theatre, which put on shows throughout the southeastern region of the United States. After two years of research and writing, *Show Boat* was published in 1926. A nostalgic, if melodramatic, examination of America's cultural, social, and racial legacies, the novel spent a number of months atop the best-seller list, and the critical response was somewhat guarded. Even still, its considerable popularity made it a perfect candidate for adaptation.

The novel, musical, and film adaptations all follow the same basic plot. *Show Boat* explores the affairs of the performers, workers, and passengers of the *Cotton Blossom* as it traverses the Mississippi River between Reconstruction and the Jazz Age. Captain Andy Hawks; his wife, Parthy; and their daughter, Magnolia, own the floating theater, which employs a number of

individuals who represent the range of people who live along the Mississippi: leading actors Julie and her husband, Steve; comedic duo Ellie and Frank, whose sobriquet is Schmaltzy; the ship's pilot, Windy; and Joe, a black stevedore, and his wife, Queenie, a cook. When Julie, who has been passing for white, is exposed as biracial, she and Steve are forced to resign. Captain Andy eventually casts Magnolia and an itinerant gambler, Gaylord Ravenal, in their places. Magnolia and Gaylord fall in love and move to Chicago, where he supports them with his betting spoils. After she becomes pregnant with their daughter, Kim, the stresses of being a father lead Gaylord to abandon his family. As Kim matures, she becomes a successful stage actress; Magnolia assumes control of the *Cotton Blossom*, continuing the work began by her parents.

Impressed by Ferber's novel, Kern wanted to adapt it into a serious musical play. He chose Hammerstein as his writing partner because of his interest in depicting social issues onstage; indeed, subsequent Hammerstein shows, notably *South Pacific*, *Flower Drum Song*, *Carmen Jones*, and *No Strings*, would address intercultural conflict. With the talents of Paul Robeson in mind, Kern and Hammerstein wrote the role of Joe, who provides the African American counterpoint to Southern life in the song "Ol' Man River." Broadway impresario Florenz Ziegfeld was so impressed with *Show Boat* that he decided to build the Ziegfeld Theatre to accommodate the grand scale of the spectacle.

Production History

The first production opened on December 27, 1927, after a monthlong tour through Washington, D.C.; Ohio; and Pennsylvania, and it played 572 performances. The critical reception to this new style of fully integrated musical was extremely positive. The score, which featured "Can't Help Lovin' Dat Man," "Make Believe," "Life Upon the Wicked Stage," "Bill," and "Hey, Feller," received universal praise.

However, many in the black community decried what were perceived as stereotypical representations of African Americans. Deemed especially offensive were the use of ethnic slurs and the dialect ascribed to African American characters. Further, Tess Gardella, a white actress in blackface,

played Queenie in the original Broadway production. Wariness around audience reactions to presenting intermarriage on stage led to the casting of Julie with white actresses, a practice that did not end until the 1971 West End revival, when jazz singer Cleo Laine assumed the role. Even prominent performer Lena Horne, who had played Julie in the Jerome Kern biopic *As the Clouds Roll By* in 1946, was passed over for Ava Gardner for the 1951 movie.

The reputation of *Show Boat* has been rehabilitated over the last several decades, during which time the libretto has undergone several successive rewrites to eliminate offensive content, including a blackface number for Magnolia called “Gallivantin’ Around.” Especially noteworthy was the five-time Tony Award–winning 1994 Broadway revival, which had the longest run of any of the New York productions at 947 performances. Harold Prince, who directed and/or produced the groundbreaking Broadway productions of *West Side Story*, *Cabaret*, *Company*, and *Evita*, helmed the production, which highlighted the manner in which interracial relations changed over time.

the Italian kingdom in 1861, Sicily had been ruled by foreign powers and did not share a history with the mainland. The traditionally strong *campanilismo* (attachment to one’s own city or region), a quasi-colonial politics of economic exploitation by the powerful elites of the north, and a diffidence toward southerners that often developed into open discrimination are the main factors that account for Sicilians’ reluctance to identify with Italy, a feeling surviving to this day.

Alongside a more general identification as Italian Americans, therefore, descendants of Sicilian immigrants nurture a distinct Sicilian American identity. Patterns of settlement in the New World replicated town or regional divisions, with Little Italies located in streets or blocks where one particular regional group was prevalent, thus reinforcing subnational loyalties.

History

Although Sicilians had been present on American soil since the 17th century, the first significant wave of immigration began in the late 1880s. It is estimated that of the 4.5 million Italians who crossed the Atlantic between 1880 and 1930, one out of four was from Sicily. However, it was only after the revolt known as Fasci Siciliani, in 1892 and 1893, that regional emigration swelled. The movement, which had the support of poor peasants and exploited miners, aimed at improving working conditions but soon grew into outright revolt toward the ruling class when its demands were ignored. The Italian government restored order using force in 1894. Peasants, even those marginally involved in the riots, saw in emigration the only hope for a better future. Many were “birds of passage,” males who planned to work temporarily and save enough money to make a decent living back home.

Sicilian immigrants scattered throughout the United States. One of the earliest destinations was New Orleans, where seasonal work in the cane fields of Louisiana was available. A sizable Sicilian community took root in Tampa, Florida, where immigrants found employment in the cigar factories. Most settled in urban centers, like San Francisco, Chicago, and New York, that offered plenty of unskilled jobs, such as bricklayers, street sweepers, bootblacks, pieceworkers, and longshoremen.

Sicilian Americans

Sicilian Americans are descendants of immigrants from Sicily, the island just off the southernmost tip of the Italian peninsula. Before annexation by

Sicilians mostly clustered together, sometimes with other Italians and in some cases on their own, creating Little Sicilies, such as the Near North Side neighborhood in Chicago where, around 1910, most of the 8,000 residents were Sicilians.

In these enclaves, the native dialects and traditions were maintained, as well as forms of entertainment (traditional songs and dances). As communities grew, Sicilians were able to stage their own religious festivities (*feste*). These occasions were the focal point of communal life, combining a religious program—a holy mass and a procession in which the statues of patron saints or the Virgin Mary were carried along the streets—with more mundane activities like games, dances, lotteries, and the puppet theater, where marionettes performed stories adapted from the popular tradition or representing the medieval epic struggles between Christian knights and Saracens. The *feste* were organized by mutual aid societies (such as the Trinacria Fratellanza Siciliana in Chicago), which also helped newcomers to find jobs and housing, and provided medical insurance.

Dark-complexioned, reserved, and reluctant to Americanize, Sicilians stood out among other Italians immigrants. The habit of emphasizing dissimilarities grew as some elements of Sicilian culture associated with crime, the Black Hand and the Mafia, leading to stereotypes of Sicilians as mafiosi and gangsters, and to their targeting as culprits of crimes involving shooting and blackmailing. In 1891, 11 Sicilians were lynched by an angry mob in New Orleans after a jury acquitted them for the murder of Police Chief David Hennessey. Another shameful episode was Chicago's 1926 anti-Sicilian hysteria that led to deportations and acts of open discrimination. Some Italian-language newspapers, as well as Italian authorities, openly supported the anti-Sicilian campaign, reinforcing divisions between regional communities.

Political activism was also characteristic of the Sicilian American experience. The legacy of the Fasci, as well as a militancy grown out of the necessity to challenge miserable working conditions, put Sicilians at the forefront of labor struggles. Activist Augusto Bellanca was one of the founders of the Amalgamated Clothing Workers of America; Victor Anfuso would become the

first Italian to enter the House of Representatives in 1950.

Literature, Film, and Popular Culture

Sicilians encouraged their offspring to obtain early employment rather than pursue education, leading to a relatively late blooming of an immigrant literature. *Mountallegro*, a 1943 memoir by Jerre Mangione, portrays the Sicilian community of Rochester, New York, where the author grew up. However, it was a non-Sicilian, Mario Puzo, who popularized Sicilian American culture in his best-selling novel *The Godfather* (1969). Toni Ardizzone paid tribute to his Sicilian heritage in the short story "Nonna" (1987), and more recent contributions include a memoir by actor Vincent Schiavelli, *Bruculinu, America* (1998).

In the popular arts, serious efforts to deal with Sicilian ancestry have been thwarted by a persistently bad ethnic reputation. Prominent Sicilian Americans such as director Frank Capra and crooner Frank Sinatra (1915–98) avoided any engagement with their heritage in order to appeal to a mainstream audience. Other performers, however, like Louis Prima and Nicola Paone, stuck to their ethnic roots and sang in Italian and Sicilian. A later generation confronted the stereotypical images of Sicilians straightforwardly in acclaimed gangster movies: Director Francis Ford Coppola weaved aspects of Sicilian folk culture into the *Godfather* trilogy (1972, 1974, 1990), and director Martin Scorsese shed light on the cultural conflicts that shaped Sicilian American experience in *Mean Streets* (1973) and *Goodfellas* (1990). Director Nancy Savoca investigated female identities in *True Love* (1989). Notable Sicilian Americans in show business include actors Al Pacino, Ben Gazzara, Joe Mantegna, and Steve Buscemi; musicians Nick LaRocca, Frank Zappa, and Jon Bon Jovi; and cartoonist Joseph Barbera.

Sicilian Americans Today

Toward the end of the 20th century, the organization Arba Sicula, Web-based Club Siciliano, and the National Sicilian American Foundation helped renew interest in Sicilian customs and fueled a celebration of a distinctive Sicilian American heritage. In addition, two recent literary collections, *Sweet Lemons* (2004, 2010), testify to an ongoing interest in exploring the literary and cultural

continuities between the Sicilian diaspora and the ancestral homeland.

Siege, The

The Siege (1998) is a 20th Century Fox controversial thriller that investigates a growing sense of terror in New York City invoked by a multilayered terrorist cell comprising a number of Arabs, Muslims, and Arab/Muslim Americans. The film carries relevance to today's America through its engagement with issues like homegrown terrorism, U.S. government antiterror measures, U.S. foreign policy, and American multiculturalism, issues that have increasingly dominated the American sociopolitical spectrum ever since the tragic attacks of September 11, 2001.

The film is directed by Edward Zwick and written by Lawrence Wright. The screenplay is cowritten by Lawrence Wright, Menno Meyjes, and Edward Zwick. The plot presents a passionate and dedicated Federal Bureau of Investigation (FBI) agent, Anthony Hubbard (Denzel Washington), wrestling with a maneuvering Central Intelligence Agency (CIA) agent, Sharon Bridger (Annette Bening), and a conceited military officer, Major General William Devereaux (Bruce Willis). Regardless of their different approaches in how to fight homegrown terrorism, the three figures—representing three various aspects of the U.S. government—are engaged in finding ways to eradicate such terror and restore peace and security to the United States.

The film calls into question whether associating homegrown terror with Arabs, Muslims, and Arab/Muslim Americans is a post-9/11 Hollywood practice. Since the 1970s, films like *Black Sunday* (1977), *Wrong Is Right* (1982), *Invasion U.S.A.* (1985), *Wanted: Dead or Alive* (1987), *True Lies* (1994), and *Executive Decision* (1996) have proposed a certain set of stereotypes that *The Siege* seems to replicate. Homegrown terrorism, the film suggests, is a phenomenon exclusively advanced through Arabs and Muslims living in the United States, who seek to secure their demands through targeting crowds of civilian Americans in public buses, movie theaters, elementary schools, and multicultural gatherings. The Arabic and Islamic identities are conflated to reinforce each other. Islamic signs and practices such as ablution, praying, wearing traditional clothing, and growing a beard are packaged as signs of extremism. The terrorists' cultural and religious affiliations are projected as significant marks of identity inherently opposed to America's cultural norms.

American Patriotism and Arabic Pride

Meanwhile, the film critically presents an Arab/Muslim American model that celebrates both a sense of American patriotism and pride in Arabic/Islamic cultural heritage. FBI agent Frank Haddad (Tony Shalhoub) does not hesitate in embracing an inclusive multicultural notion of America and in delivering a strong commitment to its security, while preserving a particular Arabic/Islamic character in his family and himself. References to positive engagement with the Arab/Muslim American community are made throughout the film, in an attempt to further dislocate it from the previously mentioned films.

The film is prophetic in its dramatization of the U.S. government response in the aftermath of a violent wave of homegrown terror, refreshingly foreshadowing the George W. Bush administration's response in the aftermath of 9/11, although the scale of the response may be different in both cases. In the film, the U.S. Army is called upon to restore order through subjecting New York City to martial law. The army, henceforth, initiates rounding-up measures that selectively target Arab/Muslim Americans, transport them in school buses, and place them in barbed-wire cells temporarily installed

in a stadium. New York City is pictorially changing as images of tanks and soldiers become prevalent while aspects of civil life are immediately withering away. The post-9/11 response included a preventive detention strategy, providing law enforcement agencies with the right to detain suspects, mostly of Arabic and Islamic backgrounds.

However, the responses in the two cases still bear striking similarities: Executive oversight increases, trumping Americans' civil liberties. Various torture techniques are considered effective and necessary to extract vital information about the terrorists. Surveillance mechanisms are introduced, and individuals' privacy is suspended. Racial profiling becomes an enforced standard in fighting terrorism.

U.S. Foreign Policy Objectives

Another message presented in the film raises concerns about the use of CIA covert operations in advancing U.S. foreign policy objectives. The technology and resources awarded to the terrorists, the audience learns, have been provided by the CIA through its agent Bridger, who works undercover with the name Elise Kraft, as part of a project aimed to empower Iraqis. This is an indirect criticism of the role that U.S. foreign policy played in promoting the Afghani anti-Soviet resistance during the 1980s, which eventually popularized Islamic jihad as a bloody alternative to securing one's demands.

A final important issue addressed in this film is the triumph of multiculturalism as America's celebrated promise to its citizens. Americans of various creeds and ethnic backgrounds rush out into the streets to reject the military control, demand an immediate restoration of law enforcement agencies' role, and decry the sense of humiliation directed against Arab/Muslim Americans, which is reminiscent of the rounding up of Japanese Americans during World War II. The stereotypical images of Arab/Muslim Americans' difference, developed throughout the film to indicate their alienation from and enmity against the United States, are now suspended. Alternatively, they are now being publicly viewed as victims by the state apparatus of the country to which they pledge allegiance.

The film concludes with a tone of rescue and relief. The American ideals of democracy, liberty, and freedom are restored. Extremists are killed, and violence comes to an end. Army control is

dismantled, while officers involved in torture and abuse of prisoners are subjected to due process of the law.

Sikhs

Estimates of the number of Sikhs in the United States range between 200,000 and 500,000. Sikhs are mainly concentrated on the east and west coasts, largely in and around New York and California, with a small presence in a number of other states, including Illinois and Texas. The Sikhs are one of the more mobile communities of India. They are scattered across a number of countries around the world. Sikhs in the United States are generally well-to-do, and they maintain a close relationship with their homeland.

Immigration to North America

Sikhs migrated to North America primarily to escape British colonial practices in India. After a mutiny against the British in 1857, the British started recruiting soldiers in large numbers from Punjab, a province in northwest India in which Sikhs are the majority community. Sikh soldiers from Punjab were sent abroad on a number of missions. In the late 19th century, a contingent of Sikh soldiers went to Canada en route to England after celebrating Queen Victoria's anniversary.

Back home, they spread the news about the huge swaths of land in Canada, which appealed to the agrarian-minded peasants in Punjab. Soon, some of the Punjabis moved to Canada. However, the xenophobic atmosphere and the anti-immigrant stance of the Canadian government led many Punjabis to settle in the United States, mainly on the west coast.

In the United States, however, Sikh immigrants were also subject to prejudice, facing an often hostile and racist atmosphere. This led them to realize that much of this prejudice resulted from the lack of support from their home government. A group of Indians in San Francisco formed the Ghadar Party; the word *ghadar* literally translates as “uprising.” The Ghadar Party aimed to overthrow the British government in India and attain independence through revolutionary means. The party was inspired by the values of the American Revolution. A number of activists from the party went back to Punjab to fight British rule.
